Management of the educational training process, its organization and results depend on teacher cadres. Tallinn Pedagogic Institute imeni Ed. Vil'de, Tartu State University, Tallinn State Conservatory and three pedagogic schools are the principal cadre preparers for general educational schools, vocational and technical schools, secondary specialized educational institutions and children's institutions.

In conformance with the directives of the 26th CPSU Congress and the 18th Congress of the Communist Party of Estonia, raising of qualifications of personnel of public education and adding to their ideological-political knowledge are done at courses of the Republic Institute for the Advanced Training of Teachers, faculties for raising of qualifications at Tallinn Pedagogic Institute and at courses of soviet personnel.

During 1975-1980, the first cycle was carried out of certification of teachers of general educational schools. Certification has promoted the spread of advanced pedagogic experience, increasing the responsibility of teachers for the results of the educational training process and improving intraschool monitoring; it has resulted in more single-minded work on raising the educational level of teachers without higher education. A second certification cycle will be carried out during the present five-year plan.

Turnover of cadres of teachers of general educational schools and vocational-technical schools, educators and experts has become a serious problem. Schools should be more concerned with directing their best graduates to pedagogic schools, industrial pedagogic tekhnikums and to VUZ's for pedagogic specialties.

Local soviet organs and public organizations should pay more attention to the formation of stable pedagogic collectives and be constantly concerned with improving the working and living conditions of pedagogic cadres.

In accordance with the Estonian SSR Law on Public Education and the tasks set in the five-year plans, the development and strengthening of the material base of educational training institutions has continued, especially in Tallinn. Here today two new schools instead of one are turned over each year. This has made it possible to reduce the number of people studying in the second shift.

The development of the material base of the schools is being continued during the 11th Five-Year Plan. In conformity with the plans of the five-year plan, the republic will acquire approximately an additional 23,000 pupils' places.

At the present time school buildings are built according to new plans, which better correspond to the specially equipped classroom system of study.

The material-technical base has been further developed within the system of vocational-technical education. In the period from 1974 to 1981, six new complexes of schools with 4,209 places were built. A decree of the Central Committee of the Communist Party of Estonia and the ESSR Council of Ministers adopted in 1979 established a concrete program of construction of vocational and technical schools up to 1985 and for the 11th Five-Year Plan. It specifies that the number of pupil places during the two five-year plans will increase in all by more than 11,000. But it should be noted that the fulfillment of construction plans for the system of vocational and technical education has been proceeding unsatisfactorily so far.

Comrade A. Gren also dwelt on questions of strengthening the material base and improving production practice. Serious attention is being paid to these problems by such base enterprises as Dvigatel' Plant, the Estonian division of the Baltic Railroad System, enterprises of the ESSR Ministry of Communications and the Electrical Equipment Plant imeni Kh. Pegel'man.

At the same time, workshops for the teaching of construction specialties are equipped unsatisfactorily; at most rural vocational-technical schools no areas exist meeting modern requirements for instructional driving and for testing grounds. The teaching material base of higher and secondary specialized educational institutions has been significantly expanded and improved. The teaching laboratory and teaching classroom space of VUZ's and secondary specialized institutions has been expanded. Educational and physics buildings have been turned over for operation at Tartu State University; the same is true of a building of the Scientific Library at the university, the sports complex at Tallinn Polytechnic Institute, the club for artistic amateur activity, a laboratory and an educational building at Tallinn Medical School, dormitories at secondary specialized educational institutions in Tallin and Tartu and a number of other facilities.

There are to be built a training building of the physical-culture department and a lecture building at Tartu State University, a computer center at Tallinn Polytechnical Institute, an educational building at Tallinn Economic Tekhnikum and a number of other facilities.

The grandiose program of further building of communism outlined by the 26th CPSU Congress presents new, more difficult and responsible tasks to educational institutions and public educational organs, Comrade A. Gren said in conclusion.

In implementing the requirements of the party and the government concerning universal compulsory secondary education, it is necessary first of all to provide high quality in the training of highly qualified workers and specialists with higher or secondary specialized education based in this connection on the principle of thriftiness of the economy and on the need of achieving the best end results under conditions of limited growth of new investment.

Estonian Supreme Soviet Education Decree

Tallinn SOVETSKAYA ESTONIYA in Russian 8 Jul 82 p 2

[Decree of the Estonian SSR Supreme Soviet--On Progress in the Fulfillment of the Estonian SSR Law on Public Education]

[Text] Having heard the report of Deputy Chairman of the Estonian SSR Comrade A. Gren "On Progress in the Fulfillment of the Estonian SSR Law on Public Education," the Estonian SSR Supreme Soviet notes that purposeful work is being done in the republic in providing to citizens rights to an education guaranteed by the Estonian SSR Constitution. As a result of the implementation of the decisions of the 25th and 26th CPSU Congresses and also of the accomplishment of state plans of economic and social development, significant successes have been achieved in the republic in the matter of raising the population's educational level on the basis of the Estonian SSR Law on Public Education and strengthening of socialist legality in this field of social relations. The network of general educational schools, vocational and technical and higher educational institutions has been expanded and improved, all citizens have been granted the possibility of obtaining an education and training has been provided of qualified workers and specialists with secondary specialized or higher education for the national economy.

Universal compulsory secondary education has been realized in the republic. In the 1981-82 educational year, 97.6 percent of the graduates of 8th-year classes entered all the educational institutions providing a secondary education.

The number of children's preschool institutions has grown. The preparation of children for school has been improved, and education from 6 years of age has been expanded in schools and children's preschool institutions.

The level of teaching and educational work has been raised at general educational schools, vocational-technical, secondary specialized and higher educational insitutions; study of fundamentals of the sciences is tied in more closely to life and the practice of building of communism.

There has been an improvement in labor education and vocational orientation as well as in the preparation of young people for labor in the sphere of material production and social activity. The participation of pupils in out-of-class and out-of-school work has been expanded.

The vocational training of teachers and the scientific level of professorial and pedagogic cadres have been raised. Scientific activities of higher educational institutions have become more effective. Self-education of citizens in the network of people's universities, lecture halls, courses, schools of communist labor and through other social forms of boosting of political and scientific knowledge has been expanded. The role of the public has grown in communist education and training of the rising generation.

At the same time defects are to be found in execution of the Estonian SSR Law on Public Education. All the possibilities are still not being utilized in the training and education of young people and in their all-round preparation for life and socially useful labor. Dropouts still exist of pupils and students from general-educational schools, vocational-technical, secondary specialized and higher educational institutions. The number of working youth without a secondary education who are not continuing further study is great. At evening and correspondence secondary schools, little use is made of forms of teaching combining obtaining a secondary education with the raising of vocational qualifications. The heads of many enterprises, institutions and organizations are still not implementing necessary measures for raising the educational level of working youth without a secondary education.

The system of planning of allocation of graduates of 8th-year classes to educational institutions providing a secondary education has not been perfected. Work on vocational orientation of pupils is not being conducted in a timely way and the Estonian SSR Ministry of Education and departments of public education of ispolkoms of soviets of people's deputies are insufficiently drawing enterprises, institutions and organizations into this work. A significant number of young people start work without vocational training.

At a number of schools, at their base enterprises and at organizations, the necessary conditions have still not been created for labor training of pupils, and a clear-cut perspective is lacking in this work.

For a number of years, plan targets for capital construction of public-education institutions have not been fulfilled by the executive committees of a number of local soviets, the Estonian SSR Ministry of Construction and other construction organizations; serious defects are to be found in the planning and carrying out of capital repair of general educational schools, vocational-technical schools and children's institutions.

Insufficient attention is being paid to uniting the efforts of schools, the public and labor collective in the matter of moral and labor education of children and young people and improving the working and living conditions of teachers.

The Supreme Soviet of the Estonian Soviet Socialist Republic

decrees:

1. To approve the work of the Estonian SSR Council of Ministers on fulfillment of the Estonian SSR Law on Public Education and to instruct the Estonian SSR Council of Ministers, while guided by the decisions of the 26th CPSU Congress and the May (1982) Plenum of the CPSU Central Committee to concentrate their chief attention in the field of guidance of public education toward raising the quality of teaching and labor and moral education, strengthening the ties of education with life, improving the preparation of pupils for socially useful labor, improving and further developing the system of public education in conformity with state plans of economic and social development and boosting the role of public educational institutions in ensuring the development of the national economy and forming of the new man under conditions of developed socialism.

2. For city and rayon soviets of public deputies, the Estonian SSR Ministry of Education, the Estonian Ministry of Higher and Specialized Higher Education, the Estonian SSR Ministry of Agriculture, the Estonian SSR Ministry of Fruit and Vegetable Industry and the Estonian SSR State Committee for Vocational and Technical Education together with other ministries, state committees and departments of Estonian SSR to provide obtaining of compulsory secondary education by all young people and to take additional measures for further improving the operation of general educational schools, vocational-technical, secondary specialized and higher educational institutions, preschool and out-of-school children's institutions, forming an optimal network of educational institutions, fulfilling plan targets for capital construction and capital repair of public educational institutions, strengthening their material base, securing pedagogic cadres and improving their work and living conditions; to improve the cooperation of educational institutions, enterprises, organizations, sovkhozes and kolkhozes in work on vocational orientation of pupils and their parents while taking into consideration local and general state needs; to improve the organization of labor training and education, to strengthen ties of schools with production and to raise the role of labor collectives in labor training and education of pupils; to expand obtaining of a general education at evening and correspondence secondary schools simultaneously with raising of work qualifications; to adopt measures for reducing the dropout rate of pupils and students.

3. For the Estonian SSR Ministry of Education, city and rayon soviets of people's deputies to provide a rise in the level of training and educational work at general educational schools and to improve the forming in pupils of a Marxist-Leninist outlook and an active life position and the qualities of a genuine patriot of the Socialist Motherland and an ardent internationalist;

to strive for improvement of the educational process and teaching work and elimination of excessive out-of-class study load of pupils;

to develop in every possible way out-of-class and out-of-school activities of pupils and to increase their socially useful direction; to encourage expansion and improvement of the work of technical and agricultural groups, to expand the possibilities of artistic creativity and physical culture and to provide for a close connection of out-of-class and out-of-school work with the teaching of educational subjects.

4. For the Estonian SSR State Committee for Vocational and Technical Education together with ministries, state committees and other departments of Estonian SSR and for local soviets of people's deputies to continue work on the further development of the system of vocational-technical education and expansion of the network of secondary vocational-technical educational institutions and technical schools for the fullest possible provision of the national economy with qualified workers;

to provide pupils of vocational-technical schools at the time of production practice with work in the best brigades and shops in conformity with the teaching program and to increase the effectiveness of the work of preceptors in vocational training and education of future young specialists.

5. For the Estonian SSR State Committee for Vocational and Technical Education to improve teaching and educational work at vocational-technical schools, to boost its efficiency, to provide training for future young workers based on modern equipment and technology and for their mastery of advanced techniques and methods of work during the learning period, to establish in the youth an interest in knowledge and skills of independent work, to inculcate in the youth high ideological-political and moral qualities, a love for their vocation and a desire to work honestly and conscientiously for the good of the Motherland;

to create in pupil collectives an atmosphere of intolerance toward violators of educational and production discipline and toward deviations from the norms of socialist morale and morality;

to expand for students of vocational-technical educational institutions opportunities of technical and artistic creative work and of physical-cultural and sports activities.

6. For the Estonian SSR Ministry of Higher and Secondary Specialized Education:

to strengthen cooperation with other Estonian SSR ministries, state committees and departments, enterprises and organizations of union subordination for the purpose of forming a contingent of students and boosting progress, especially in correspondence divisions;

to devote more attention to problems of scientific research connected with training and ideological-political education of the youth and increasing their social activity; to introduce in secondary specialized educational institutions as of 1985 instruction in all subjects according to the classroom system.

7. For the Estonian SSR State Planning Committee to improve planning in sending young people to study at secondary specialized educational institutions, general educational schools, vocational-technical and technical schools in the cities and rayons.

8. For the Estonian SSR Ministry of Justice to intensify work on coordination of dissemination of legal knowledge among students and for the Estonian SSR Ministry of Internal Affairs to improve preventive work at educational institutions for the prevention of law violations among minors.

9. To instruct the Estonian SSR Council of Ministers to examine the proposals and remarks made in the supplementary report of the Commission for Public Education and Culture of the Estonian Supreme Soviet and in the speeches of deputies at the session of the Estonian SSR Supreme Soviet on the question "On Progress in the Fulfillment of the Estonian SSR Law on Public Education" and to adopt appropriate decisions for them.

LITHUANIAN SUPREME SOVIET SESSION

Information Report

Vilnius SOVETSKAYA LITVA in Russian 4 Jun 82 p 1

[Information report on continuation of the session of the LiSSR Supreme Soviet on 3 June 1982]

[Text] On 3 June 1982 the Fifth Session of the Supreme Soviet of Lithuanian SSR, 10th Convocation, continued its proceedings.

The morning meeting of the Fifth Session of the LiSSR Supreme Soviet, chaired by L. Shepetis, chairman of the LiSSR Supreme Soviet, convened at 1000 hours.

The LiSSR Supreme Soviet continued discussion of reports on the activity of soviets of people's deputies in Lithuanian SSR concerning preparation for the 60th anniversary of formation of the USSR and the tasks of soviets of people's deputies in resolving social problems and problems of cultural and consumer services in rural areas in the light of the decisions of the May (1982) Plenum of the CPSU Central Committee concerning the growth of agricultural production.

The following took part in the discussion: V. Sinitskas, deputy from the Kazlu-Ruda Electoral District and first secretary of the Kapsukskiy Raykom of the Lithuanian CP; B. Palyulene, deputy of the Uzhvyant Electoral District and head of the livestock-raising operation of the Vayguva Kolkhoz in Kel'meskiy Rayon; V. Vazhnevichyus, deputy of the Varena Electoral District and director of the Varena Timbering Production Association.

The Supreme Soviet approved a motion to terminate discussion of the report.

The LiSSR Supreme Soviet unanimously adopted a decree entitled "On Activity of Soviets of People's Deputies of Lithuanian SSR in Preparation for the 60th Anniversary of Formation of the USSR" and a decree entitled "Tasks of Soviets of People's Deputies in Solving Social and Cultural and Consumer Service Problems in Rural Areas in the Light of the Decisions of the May (1982) Plenum of the CPSU Central Committee on Increasing Agricultural Production."

The LiSSR Supreme Soviet undertook to discuss the third item on the agenda of the session--the report of the Commission for Youth Affairs of the LiSSR Supreme Soviet.

Deputy M. Martinaytis, chairman of the Commission for Youth Affairs of the LiSSR Supreme Soviet, presented the report.

The deputies then undertook to discuss the report on the work of the Commission for Youth Affairs of the LiSSR Supreme Soviet.

The following participated in the discussion: I. Anichas, deputy of the Liglauskiy Electoral District and rector of Vilnius State Pedagogic Institute, and N. Shadzhyuvene, deputy of the Vidzgirskiy Electoral District, a woman worker in the Alitus Experimental Housing Construction Combine.

The Supreme Soviet adopted a motion to terminate discussion of the report.

The Supreme Soviet unanimously adopted a decree entitled "On the Work of the Commission for Youth Affairs of the LiSSR Supreme Soviet."

Then the Supreme Soviet undertook to discuss the fourth item on the agenda of the session--approval of ukases of the Presidium of the LiSSR Supreme Soviet.

The Supreme Soviet heard a report by Yu. Antanaytis, deputy and member of the Presidium of the LiSSR Supreme Soviet.

The Supreme Soviet unanimously adopted laws and decrees whereby it confirmed the ukases issued by the Presidium of the LiSSR Supreme Soviet in the period between the fourth and fifth sessions of the LiSSR Supreme Soviet.

The Supreme Soviet heard a report of I. Ramanauskas, LiSSR Ministry of Light Industry, on a query of deputy S. Ringis and took note of it.

Deputy L. Shepetis, chairman of the LiSSR Supreme Soviet, announced that the agenda of the session had been exhausted and declared the Fifth Session of the LiSSR Supreme Soviet, 10th Convocation, concluded.

Songayla Speech

Vilnius SOVETSKAYA LITVA in Russian 4 Jun 82 pp 2-3

[Speech by deputy R. Songayla, chairman of the LiSSR Council of Ministers, at the session of the LiSSR Supreme Soviet on 3 June 1982]

[Excerpts] Ensuring Further Growth of Production of Farm Products and Extension of More Effective Aid to Farmers by Organizations Serving Them

Unswervingly following the course of farm policy outlined by the historic March (1965) Plenum of the CPSU Central Committee and elaborated by subsequent plenums and by the 23d through the 26th CPSU Congresses, the Soviet people have achieved important successes in development of the entire agroindustrial complex, in augmenting the production of agricultural products and in raising the prosperity of the workers.

Over that period a qualitatively new material and technical base of the agro-industrial complex has been built in the country and in the republic, the number of agricultural specialists has increased, and labor productivity on kolkhozes and sovkhozes has risen substantially. The working and living conditions of the Soviet peasantry have changed essentially, and many social problems have been solved effectively.

Even though weather conditions, which have been unfavorable for a number of years, made the work of the republic's farmers much more difficult, they did manage to achieve fairly good results. For instance, the average annual output of grain in the 10th Five-Year Plan was 2.4-fold greater than in the seventh, that of sugar beets 1.6-fold greater, that of meat and eggs almost twofold greater, and that of milk 1.5-fold greater.

But we should not dwell on what has been achieved. The demand for meat and dairy products is still not being fully met, and there is a shortage of vegetables and fruit. Taking this into account, the Food Program has called for a substantial increase of production of all types of farm products. The specific figures have been set forth in that program even for our republic. To perform those tasks it will be necessary to increase both the efficiency of agricultural production and also the efficiency of operation of related branches of industry, to accomplish a resolute transition to intensive factors in the development of production. A fairly good foundation has been built in the republic for that purpose.

At the present time the value of fixed capital on kolkhozes, sovkhozes and other state farms is 6.7 billion rubles. All operations in cultivating the land and planting and most operations in caring for crops and bringing in the harvest have been mechanized. Industrial production technology is being introduced on an ever broader scale.

Relying on the base that has been created and with the mighty equipment and personnel available we must this year discharge the socialist obligations which have been assumed and achieve in the republic a grain harvest of at least 3.2 million tons and a yield of 26-27 quintals per hectare and grow more vegetables, potatoes, sugar beets and flax. We need to prepare at least 20 quintals of fodder units for the standard head of livestock and make optimum use of the entire potential for increasing the production of milk and meat and their sales to the state.

We need to continue in the future to show the necessary concern for increasing the production of agricultural produce on the subsidiary farms of individuals. Conditions have to be created for all individuals to keep livestock.

Comrade P. Grishkyavichus spoke very clearly and convincingly about all the tasks in development of agricultural production at the Third Plenum of the Lithuanian CP Central Committee.

This spring kolkhozes and sovkhozes did a good job of planting spring crops. Adequate care of the crops has been organized. In many rayons things have improved in the production of milk, meat and their sales to the state. Production indicators for milk and meat have to be intensively improved even further. Particularly large unused potential in this area exists on the lagging farms. The decisions of the May Plenum of the CPSU Central Committee are creating very favorable conditions for farms in this category and all farms for strengthening their economy and for solving social problems.

The May Plenum of the CPSU Central Committee outlined essential changes in relations among kolkhozes, sovkhozes and the organizations which serve them. Given the reduction in the size of the able-bodied population and intensification of production, more work has to be done for kolkhozes and sovkhozes by other departments and organizations. These services will be increasing year after year. That is why the farms must even now make good preparations for this: build roads and loading and unloading areas and install weighing equipment.

On behalf of more optimum utilization of the transportation capability of the farms all organizations and departments were recently ordered to service the motor vehicles of kolkhozes and sovkhozes at loading and unloading points on the same principles of treatment accorded other organizations.

Industrial enterprises and other organizations that have been building haylage and silage trenches on farms with materials that have been saved have been setting a good example in recent years. During this and the subsequent years of the 5-year period shops will be built for preparing feeds. The Lithuanian CP Central Committee and government of the republic will continue in the future to furnish incentives for this kind of aid.

Technical supervision over livestock-raising farms, feed preparation shops and machines and equipment will continue to be expanded in the future through the resources of Goskomsel'khoztekhnika. The Main Production Administration for the Fuel and Power Industry and Electrification must guarantee reliable supply of electric power to agriculture. The farms themselves must also make better use of the electric power.

Construction is one of the decisive factors guaranteeing effective and accelerated development of agricultural production and effective solution of the social and cultural and consumer service problems in rural areas. But in spite of the great effort made in this area, the basic construction organizations are still greatly in debt to graingrowers. Many construction contractors are not paying due attention to rural construction. For instance, the Alitus Construction Trust has over the last 6 years done 80 million rubles worth of construction and installation work in the city of Alitus, whereas in Alitusskiy Rayon in that same period it has not fulfilled the plan for contract work even once. And there are more such cases. This is intolerable. All our organizations have to radically alter their attitude toward building the projects of the agroindustrial complex. There are still quite a few shortcomings in the supply of equipment to rural construction sites. Various building materials are being delivered unsatisfactorily.

Speed Up the Construction of Rural Settlements and Organization of Their Amenities

The Food Program calls for many very important measures in the social transformation of rural areas, which are an inseparable part of that program. At the May Plenum of the CPSU Central Committee Comrade L. I. Brezhnev pointed out that "the more vigorously and soundly we concern ourselves with rural construction of housing, cultural and consumer service facilities and roads, the more productive peasant labor will be."

It is especially important to the performance of these tasks that the construction of rural settlements and organization of social amenities in them be speeded up further. No small effort has been made in this area in recent years. At the present time more than 60 percent of the rural population is already living in up-to-date settlements. Many of them are well-organized and comfortable. These are Labunava, Yuknaychyay, Mosedis, Erishkyay and Alksnyupyay. The central settlements of farms built in cities under rayon jurisdiction and settlements of the urban type enjoy great popularity.

But it is a matter of great concern that in recent years rates of housing construction, including private housing construction, have been dropping in rural localities. For instance, in Shilal'skiy Rayon more than 150 private dwellings were built every year over the last 10 years, but last year only 60 dwellings were built. Rates of housing construction have dropped considerably in Mazheykskiy, Shal'chininkskiy, Shirvintskiy, Trakayskiy and certain other rayons. Housing construction is going slowly this year in Moletskiy, Ionishkskiy, Pakruoyskiy, Raseynskiy and certain other rayons. In many rayons construction of private dwellings is being poorly supplied with the necessary building materials.

Gosstroy and the republic association Litmezhkolkhozstroy still have quite a bit to do in improving fabrications used in making prefabricated houses in utilizing materials more efficiently, and in seeking out possibilities for making housing cheaper. It is also necessary to speed up construction of one-family prefabricated dwellings made of keramzit-concrete slabs and other mineral materials. Broader use also needs to be made of industrial products manufactured at industrial enterprises of the Ministry of Agriculture in building small restaurants, stores, kindergartens and day nurseries and other institutions and enterprises.

In building the new village, we should strive so that rural settlements as well as cities have all the municipal services and utilities and other conveniences. But is also necessary to preserve the advantages of rural life. They are best preserved through construction of one-family dwellings in settlements and through creation of conditions favorable for individuals to carry on their own farming. This is our basic direction in carrying out housing construction in rural areas. At the same time it is indispensable that the farms which need it also build 6-8-family dwellings in promising settlements. They are extremely necessary for accommodating young specialists and other personnel when they come to work on the farm. At the present time 82 percent of sovkhoz directors and 52 percent of kolkhoz chairmen have higher education.

About 70 percent of the specialists in agriculture are working as managers of farm subdivisions. Highly qualified chief specialists of the farm are also contributing in large part to the development of agricultural production. At the present time 46,000 specialists are employed in the agricultural system, including 13,000 with higher education.

But there are cases when certain specialists are performing their duties negligently, are avoiding assuming more responsibility, and some of them are even leaving agriculture. In addition, only about half of the young specialists return to agriculture after service in the Soviet Armed Forces. The principal reason for this is that managers and chief specialists of farms are not paying due attention to the tutoring system and to young personnel, are not creating normal conditions for their work and life.

Even though a comparatively large number of specialists in the various branches of agriculture are trained every year and are employed directly in agricultural production, there is still a shortage of specialists. There is a particular shortage of specialists with higher education. In the years of the 11th Five-Year Plan, then, every year the Lithuanian Agricultural Academy and Lithuanian Veterinary Academy will each be training 1,500-1,600 highly qualified specialists every year. But concern must be paid to seeing that an absolute majority of the graduates of these higher educational institutions go directly to work in production. The rates of training of specialists with secondary education will not be dropping either.

The agriculture ministry, ispolkoms of rayon soviets of people's deputies and their agriculture administration should take steps toward more uniform distribution of these specialists among rayons. For instance, on the farms of Kapsukskiy, Kretingskiy, Panevezhskiy and Radvilishkskiy Rayons there are 36-40 specialists on the average, while on the farms of Zarayskiy, Utenskiy, Pakruoyskiy and Shirvintskiy Rayons the average is only 20.

Selection of young people to be sent to agricultural educational institutions needs to be improved. More young people should be sent for schooling on farm scholarships. In the next few years managers at the middle level should as a rule be agricultural specialists on all farms.

In the context of the technical progress in agriculture the role of skilled personnel in the most common occupations has increased particularly. For instance, the number of machine operators has increased approximately 1.5-fold over 1970. The problem of providing machine operators has been successfully worked out on these farms: "Obyaliya" in Alitusskiy Rayon, "Mosedis" in Skuodasskiy Rayon, "Vishnyunay" in Prenayskiy Rayon, the imeni S. Neris Farm in Ukmergskiy Rayon and on a number of other farms. On those farms particular attention is being paid to creating the requisite working conditions and cultural and consumer services for machine operators. These conditions, it might be said, have decisive importance in keeping machine operators in agriculture.

But in spite of that, as the fleet of machines and tractors expands and because of the considerable turnover of skilled workers on many farms, there is a shortage of machine operators, especially on the farms of Ionavskiy, Kupishkskiy, Pakruoyskiy, Radvilishkskiy and Zarasayskiy Rayons.

On certain of the republic's kolkhozes and sovkhozes there is also a shortage of stockmen, which tends to increase the amount of work they must do and lowers the quality of work. The training of animal husbandrymen has been inadequately conducted for a number of years. That is why in future these personnel should be obtained as a rule from rural vocational and technical schools in which young men and women will acquire not only secondary education, but also a specialty.

Personnel for rural areas should be trained above all from among farmers themselves and their children. Then it will be easier to settle the question of their remaining in rural areas. But there are still cases when the parents, even certain agricultural specialists, do not encourage their children to choose the farmer's occupation. Experience shows that where constant concern is paid to training a worthy replacement of agricultural personnel, where due attention is paid to vocational guidance of students in general secondary schools, and to their work training, the achievements are notable and perceptible.

However well developed the physical plant and equipment of farms, however broad the sphere of their service, man has been, is and will still be the basic producer, organizer and operative of agricultural production. But as industry develops and cities grow there is inevitably a reduction in the number of workers employed in agricultural production. But in our republic this process is developing too rapidly.

Up until last year rural young people as a rule were the source of students enrolled in vocational and technical schools training personnel for urban enterprises. Rural young people also comprise no small portion of the student body of secondary specialized educational institutions training specialists for industry. Another fact that has an adverse effect on rural areas is that girls represent a large portion of the young people leaving rural areas. That is why rayon and apilink soviets, their ispolkoms and farm managers should even today be centering their attention on concern for every rural resident. The direction young people take will depend in large part on solving social and cultural and consumer service problems in rural areas and on further improvement of living conditions.

As we know, the problems of keeping supervisory personnel, specialists and personnel in the common occupations and of adequate staffing of farms with them were discussed on 17 March 1980 in the Lithuanian CP Central Committee and LiSSR Council of Ministers, and a decree was adopted concerning them entitled "On Additional Measures To Improve the Supply of Labor Resources to Agriculture and To Keep Young People in Rural Areas."

Ministries and departments, soviets of people's deputies and their ispolkoms should exercise constant and regular surveillance over execution of this important document.

The decree recently adopted by the CPSU Central Committee and USSR Council of Ministers entitled "On Further Bolstering of the Staffing of Kolkhozes and Sovkhozes With Supervisory Personnel and Specialists, on Enhancement of Their

Role and Responsibility in Development of Agricultural Production" will have especially great importance to keeping supervisory personnel and specialists on farms. But the truth is known to everyone: if on every farm in particular the due attention is not paid to keeping all personnel, if a search is not made for ways to immediately reduce their rate of turnover, then no sort of plans for increasing the training of personnel will improve the situation. The time has come to strictly require of farm managers of farms and senior officials of rayons and republic organizations responsibility for keeping personnel on every farm.

It is especially important now to create good working conditions for rural workers, above all the personnel of livestock raising. For a number of years milkmaids have begun work very early. Now in the dairy sections of many farms work begins later--at 0700 or 0800 hours. This practical measure has fully justified itself. But in Kedaynskiy, Shvenchenskiy, Klaypedskiy, Trakayskiy and Vil'nyusskiy Rayons normal work and rest schedule has been introduced on only half or less than half of the farms. The transition to the normal work schedule needs to be speeded up, and lounges and showers need to be furnished on all livestock raising complexes and their sanitary condition improved.

Farmers have quite a few reproaches to make concerning unsatisfactory supply of special work clothes and footwear. The quality and external appearance of most of these articles do not meet the requirements of agricultural workers. Recently due attention has been paid to these matters in the republic. Agricultural workers are this year receiving clothing worth more than 10 million rubles.

Agricultural workers have high praise for the activity of health care institutions serving rural areas. But there is still a shortage of these institutions in rural areas. Efforts need to be made so that every farm would have at least a station staffed by a physician's assistant or midwife or other health care institution. The health ministry, the agriculture ministry, the fruit and vegetable ministry and rayon soviets of people's deputies have an obligation to continue to concern themselves in future with development of the network of health care institutions in rural areas and with improvement of their operation.

FIFTH SESSION OF 10TH BELORUSSIAN SUPREME SOVIET HELD

Minsk SOVETSKAYA BELORUSSIYA in Russian 4 Jun 82 p 1

[Article: "Diary of the Session"]

[Text] The Fifth Session of the Belorussian SSR Supreme Soviet's 10th Convocation was held in Minsk on 3 June amidst the nation-wide political and work enthusiasm which has been evoked by the decisions of the May 1982 CPSU Central Committee Plenum. Comrade L. I. Brezhnev's report and the plenum's decisions are taking even stronger possession of the minds and hearts of the republic's workers and are inspiring them to energetic actions.

... 10 o'clock in the morning. The deputy chairmen of the Belorussian SSR Supreme Soviet, V. P. Bulova, P. T. Demchenko, Ya. P. Pavlyuchenko, and I. I. Plavskiy, are taking their places at the chairman's table.

In the boxes are comrades T. Ya. Kiselev, A. N. Aksenov, V. G. Baluyev, V. I. Brovikov, N. I. Dementey, Yu. B. Kolokolov, A. T. Kuz'min, N. N. Polozov, I. Ye. Polyakov, L. S. Firisanov, I. F. Yakushev, V. Ye. Lobanok, N. L. Snezhkova, and V. P. Shaplyko; G. Z. Lopanik, deputy chairman of the Belorussian SSR Supreme Soviet Presidium; Ye. P. Chagina, secretary of the Belorussian SSR Supreme Soviet Presidium; members of the Belorussian SSR Supreme Soviet Presidium; deputy chairmen of the Belorussian SSR Council of Ministers; and members of the republic's government.

Deputy I. I. Plavskiy, who is presiding, declares the fifth session of the Belorussian SSR Supreme Soviet open. He reports that the Belorussian SSR Supreme Soviet Presidium is submitting the following questions for the session's review:

1. The progress in carrying out the Belorussian SSR law on health care and the measures to further improve the health care of the population.

2. The work of the Belorussian SSR Supreme Soviet's Permanent Commission for National Education and Culture.

3. Approval of the Belorussian SSR Supreme Soviet Presidium's ukases.

The Supreme Soviet unanimously included the mentioned questions on its agenda.

Deputy N. L. Snezhkova, deputy chairman of the Belorussian SSR Council of Ministers, was given the floor for the report on the progress in carrying out the Belorussian SSR law on health care and the measures to further improve the population's health care.

A discussion of the report then began. Deputies N. A. Sukhiy (Kopyl'skiy Election District, Minskaya Oblast), G. S. Tarazevich (Pushkinskiy Election District, city of Minsk), S. T. Kabyak (Dyatlovskiy Election District, Grodnenskaya Oblast), K. V. Matyushevskiy (Baranovichskiy-Yuzhnyy Election District, Brestskaya Oblast), and A. V. Maslakov, Bobruyskiy-Frunzenskiy Election District, Mogilevskaya Oblast) spoke during the debates.

After the break, deputy V. P. Bulova, deupty chairman of the Belorussian SSR Supreme Soviet, presided. The discussion of the first agenda point continued. Deputies A. I. Belyakova (Sopotskinskiy Election District, Grodnenskaya Oblast), V. S. Stepuk (Zelenochskiy Election District, Gomel'skaya Oblast), A. I. Bezlyudov (Izmaylovskiy Election District, city of Minsk), V. I. Metelitsa (Gorodokskiy Election District, Vitebskaya Oblast), N. Ye. Savchenko (Iv'yevskiy Election District, Grodnenskaya Oblast), L. K. Borodina (Brestskiy-Yuzhnyy Election District, Brestskaya Oblast), V. P. Sazanovich (Bernovichskiy Election District, Gomel'skaya Oblast). I. S. Govyadkov (Yel'skiy Election District, Gomel'skaya Oblast), and Ye. K. Stakhovskiy (Molodechnenskiy-Kupalovskiy Election District, Minskaya Oblast) spoke during the debates.

The consideration of the Belorussian SSR Supreme Soviet's draft decree entitled "Concerning the Carrying Out of the Belorussian SSR Law on Health Care and the Measures To Further Improve the Population's Health Care" was entrusted to the Belorussian SSR Supreme Soviet's Commission for Health Care and Social Security.

The morning session of the Belorussian SSR Supreme Soviet ended with this.

Deputy I. I. Plavskiy, deputy chairman of the Belorussian SSR Supreme Soviet, opened the evening session of the Belorussian SSR Supreme Soviet. The discussion of the progress in carrying out the Belorussian SSR law on health care and the measures to further improve the population's health care continued. Deputies I. M. Pavlovich (Korelichskiy Election District, Grodnenskaya Oblast), V. P. Pikulik (Rizhskiy Election District, city of Minsk), A. A. Petrov (Mogilevskiy-Gagarinskiy Election District, Mogilevskaya Oblast), and A. G. Antonov (Krynkovskiy Election District, Vitebskaya Oblast) spoke during the debates.

The debates end. Deputy N. L. Snezhkova, deputy chairman of the Belorussian SSR Council of Ministers, presented the concluding remarks.

She said that the presentations of the deputies had added a lot to the report. Using concrete examples, the elected representatives of the people had convincingly shown how the network of medical, therapeutic and sanitorium establishments is expanding and the quality of medical services is improving as a result of profound social and economic transformations. The great deal of fruitful work, which is being performed by state organs, enterprises, establishments, and public organizations to implement the Belorussian SSR law on health care, had been pointed out in the presentations.

At the same time, critical comments concerning deficiencies in the task of protecting the people's health were expressed and a number of concrete proposals to improve it were proposed. They were filled with the desire to further improve the work of medical establishments and the health care of the population. Their implementation will undoubtedly contribute to a steady rise in the people's health care in the republic.

The Belorussian SSR Council of Ministers, the Belorussian SSR Gosplan, the Belorussian SSR Ministry of Health, and other ministries and departments will carefully examine all the proposals and critical comments and will adopt the necessary decisions regarding them.

There is no doubt that the Belorussian SSR Supreme Soviet's decree on the question discussed will find the most ardent support of all health care workers, workers' collectives, the public, and the entire population; and it will assure a further improvement in the health care of the inhabitants of the republic's cities and villages.

The Supreme Soviet unanimously adopted the decree entitled "Concerning the Progress in Carrying Out the Belorussian SSR Law on Health Care and the Measures to Further Improve the Health Care of the Population".

The Supreme Soviet moved to an examination of the question "The work of the Belorussian SSR Supreme Soviet's Permanent Commission for National Education and Culture". Deputy A. T. Korotkevich, the commission chairman, presented the report.

Next, a discussion of A. T. Korotkevich's report began. Deputies N. A. Girsenok (Artemovskiy Election District, city of Minsk), M. A. Savitskiy (Vereshchaginskiy Election District, city of Minsk), and M. G. Minkevich (Svetilovichskiy Election District, Gomel'skaya Oblast) spoke during the debates.

The Supreme Soviet unanimously adopted the decree "On the Work of the Belorussian SSR Supreme Soviet's Permanent Commission for National Edcuation and Culture".

Deputy Ye. P. Chagina, secretary of the Belorussian SSR Supreme Soviet Presidium, presented the report on the third agenda item. The Supreme Soviet unanimously accepted the laws and decrees on approving the ukases of the Belorussian SSR Supreme Soviet Presidium which had been adopted after the Fourth Session of the Belorussian SSR Supreme Soviet's 10th Convocation.

The Fifth Session of the Belorussian SSR Supreme Soviet's 10th Convocation was declared closed.

BELORUSSIAN SUPREME SOVIET DECREE ON HEALTH, WELFARE

Minsk SOVETSKAYA BELORUSSIYA in Russian 4 Jun 82 pp 1,4

[Decree of the Belorussian SSR Supreme Soviet, issued 3 June: "Concerning the Progress in Carrying Out the Belorussian SSR Law on Health Care and the Measures To Further Improve the Health Care of the Population"]

[Text] The Belorussian SSR Supreme Soviet notes that the decisions of the 26th CPSU Congress and the 29th Belorussian Communist Party Congress and the instructions contained in the speeches of Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, concerning the questions of further improving industrial and agricultural production, raising the material and cultural standard of living of the people, providing health care for the population, and improving the work, living and rest conditions of city and village workers, are being consistently carried out in the republic.

The republic's workers have accepted the decisions of the May 1982 CPSU Central Committee Plenum, which approved the USSR Food Program, as a militant action program. Everywhere, energetic organizational work to explain and implement in a practical way the tasks, which flow from Comrade L. I. Brezhnev's report during the Plenum, and to insure Soviet Belorussia's worthy contribution to the country's food program is occuring. Replying to the great concern of the party and state for improving the material and cultural life of the Soviet people, the republic's workers, kolkhoz members and intelligentsia are filled with a determination to celebrate the 60th anniversary of the Union of Soviet Socialist Republics with a sucessful performance of plans and socialist obligations.

In carrying out the 4 June 1970 Belorussian SSR law entitled "Concerning Health Care" and the 22 September 1977 decree of the CPSU Central Committee and the USSR Council of Ministers entitled "Concerning Measures To Further Improve the People's Health Care", the Belorussian SSR Council of Ministers, the ministries, the state committees and departments, the councils of people's deputies, the trade unions, and the other public organizations of the republic have performed considerable work in developing and improving the system of national health care, creating everywhere conditions for the obtaining of the necessary medical help, and giving the popularion access to physical culture classes, sports and hiking.

During the period which has passed since the adoption of the Belorussian SSR law entitled "Concerning Health Care", more than 500 million rubles of capital investments have been directed toward the expansion and strengthening of the material technical base of health care establishments, physical culture and social security; and hospitals with 26,000 beds and polyclinics with 51,000 visits per shift have been put into operation. A number of republic oblast and inter-rayon specialized medical help centers have been created, and the network of first aid stations and sections has been expanded. Acceptance into medical institutes has been increased by 24 percent, and into medical schools -- 1.5-fold. A total of 2,190 hospital and ambulatory polyclinic establishments, in which 34,000 doctors and 96,000 middle level medical personnel work, are presently operating in the republic.

Special attention is being devoted to the health care of women and children. During recent years, the network of maternity homes; children's preschool establishments, hospitals and polyclinics and women's and children's consultation offices has been expanded.

The work of protecting the environment, checking on the observance of sanitation and epidemic conditions, and improving the production and living conditions of the workers has been intensified.

Measures have been adopted to further improve mass physical training and sports and to improve and expand hiking and excursions as a very important way to protect the health of the population. The network of sanitaria, sanitaria dispensaries, rest houses, pioneer and sports health camps, senior class work and rest camps, and physical training and health combines at the places where people live has been expanded.

The implementation of the health measures and the incorporation into medical practices of the achievements of modern science and new methods of prevention, diagnosis and treatment have contributed to improving the health of the republic's population. The sick rate from contageous and several other illnesses has been lowered, and the number of illnesses involving a temporary loss of working capability and absence from work because of disability has decreased.

At the same time, the Belorussian SSR Supreme Soviet notes that there are considerable deficiencies in the work of carrying out the Belorussian SSR law entitled "Concerning Health Care".

The work level of many therapeutic and preventive establishments still does not correspond to modern requirements. The development of ambulatory polyclinic aid is lagging behind. The timely carrying out of established targets for breaking up therapeutic sections into small units, creating rehabilitation treatment sections in polyclinics, and increasing the number of specialized first aid brigades is not being provided for. The quotas for opening women's consultation offices on the first floors of apartment houses are not being fulfilled in the city of Minsk and Minskaya and Mogilevskaya Oblasts. There are deficiencies in supplying the population with drugs, medicinal herbs and pharmaceutical items. The working conditions of some polyclinics, pharmacies and other health care establishments do not correspond to the needs of the population.

In a number of cities and rayons, the necessary attention is not being paid to developing the network and strengthening the material technical base of treatment and prevention establishments. Some rayon and district hospitals as well as out-patient clinics, physician assistant and obstetrician points, and boarding houses have not been provided the necessary accommodations. Insufficient work is being performed to involve the resources of enterprises and organizations in the prescribed way in the construction, reconstruction and repair of these establishments' buildings. The fulfillment of plans for the construction and commissioning of health care installations, especially in the city of Minsk and Minskaya, Vitebskaya and Brestskaya Oblasts, is not being assured.

The Belorussian SSR Ministry of Health and the executive committees of the local councils of people's deputies have not taken effective steps to eliminate the shortcomings which exist in the training, assignment and indoctrination of medical workers. The unevenness in supplying oblasts and rayons with these personnel is being maintained. A number of rural district hospitals and out-patient clinics and boarding houses for the aged and disabled have not been staffed with permanent doctors, and the turnover of medical personnel is great. The executive committees of many local councils of people's deputies are not displaying the necessary concern for creating the required housing and living conditions for young specialists. Instances of violations of the doctor's oath and of an inconsiderate attitude on the part of individual medical workers toward sick persons are being tolerated. This evokes the justified criticism and complaints of the workers. The work experience of the best medical establishments is being poorly publicized.

The network of dietary dining rooms as well as of dietary rooms and tables in public catering enterprises is insufficiently developed in the republic. Questions concerning the production of children's food items and the organization of school dining halls and buffets are not being fully solved. In a number of schools, the furniture does not correspond to the growth of the students, and the classrooms are poorly illuminated. This causes posture and vision problems in the children and teen-agers.

The central water supply system of the rural population is expanding at a slow tempo, and the plans for the construction and repair of public bath-houses are not being fulfilled.

The Belorussian SSR Ministry of Health and the organs and institutions of the sanitation and epidemiological service are still not exercising effective supervision and control over the observance of sanitation and hygiene standards and rules in children's establishments, trade and public catering enterprises and communal services installations. Under the conditions of the ever broader use of mineral fertilizers and toxic chemicals, sanitation standards and rules for handling them are not always being strictly observed. In a number of places, the pollution of the atmosphere, land and open ponds with industrial wastes and household garbage is continuing. Deficiencies exist in the performance of medical educational work among the population, especially among the students in general education schools and secondary specialized and professional technical educational institutions. The struggle against alcoholism and smoking is not being waged with sufficient persistence.

The progressive work experience of the councils of people's deputies regarding the organization of public services and amenities in population centers and regarding the organization of the struggle for high medical hygiene standards is being poorly summarized and publicized.

The Supreme Soviet of the Belorussian Soviet Socialist Republic decrees:

1. The Belorussian SSR Council of Ministers, the ministries, the state committees and departments of the republic, and the local councils of people's deputies devote unremitting attention to the work of implementing the Belorussian SSR law entitled "Concerning Health Care" and use more fully the existing capabilities for further improving the health care of the population in light of the requirements of the 26th CPSU Congress and the 29th Belorussian Communist Party Congress.

2. The Belorussian SSR Ministry of Health and the executive committees of oblast, the Minsk city, rayon, and city councils of people's deputies:

Insure an increase in the quality of the population's -- especially the rural population's -- medical services, the further expansion of specialized medical help, an improvement in the cardiological service, and an expansion of the network of stomatological polyclinics and sections, rehabilitation sections, allergy sections and offices, and centralized biochemical and clinical laboratories;

Take steps to improve the material and technical base of treatment and prevention establishments and to expand the network of ambulatory polyclinic establishments and pharmacies in rural areas; work more energetically to involve the resources of enterprises, organizations, kolkhozes, and sovkhozes in these goals in the prescribed manner;

Improve the staffing of medical establishments with qualified personnel and eliminate the unevenness in supplying the various rayons of the republic with doctors and middle level medical personnel; examine the questions of appointing medical personnel to rayon centers and rural areas and create within the next few years the necessary housing and living conditions for workers who live in rural areas;

Increase exactingness on the directors of health care organs and establishments for the effectiveness and standards of the population's medical services, further improve and perfect the preventive activity of medical establishments as the most important principle for developing national health care, and pay special attention to the work of the primary links -- the polyclinics, out-patient clinics, district hospitals, and first aid and emergency medical stations and sections; insure by the end of the 11th Five-Year Plan the complete fulfillment of the prescribed targets for breaking up the territorial therapeutic and pediatric sections into small units; and conduct an unremitting struggle against violations of the humane principles of Soviet health care and medical ethics;

Improve the forms and methods for sanitation, treatment and prevention work among women and children; expand the network of children's hospitals and polyclinics and women's and children's consultation offices;

Display constant concern for the needs and wants of Great Patiotic War invalids and participants and work veterans for medical services and medicine;

Together with social security organs, take steps to improve the medical services and medicine support of those who permanently live in boarding houses for the aged and disabled;

Satisfy more completely the population's requirements for medicine, dental prosthesis, and optics;

Establish a work schedule for polyclinics, out-patient clinics pharmacies, and other health care establishments considering the working conditions of enterprises, organizations, establishments, and training institutes;

Insure the timely and qualitative repair of medical establishments and the full and efficient use of the resources and material resources allotted for their maintenance.

3. The Belorussian SSR Ministry of Health, the Belorussian SSR Ministry of Agriculture, the other ministries and departments, and the executive committees of oblast councils of people's deputies develop and implement measures to successfully solve the questions of improving and perfecting the medical services of workers in agricultural production -- questions which flow from Comrade L. I. Brezhnev's report during the May 1982 CPSU Central Committee plenum, the USSR Food Program, and the CPSU Central Committee and USSR Council of Ministers decree entitled "Concerning Measures to Further Improve the Housing, Communal Services, Living Conditions of the Rural Population".

4. The Belorussian SSR Ministry of Industrial Construction, the Belorussian SSR Ministry of Rural Construction, the Belorussian SSR Ministry of Installation and Special Construction Work, the Belorussian republic association of inter-kolkhoz construction organizations, the Belorussian Ministry of Health, the Belorussian SSR Ministry of Social Security, and the executive committees of oblast and the Minsk city councils of people's deputies insure the unconditional fulfillment of the plans for the construction and commissioning within the prescribed periods of hospitals, polyclinics, other health care establishments, and boarding houses for the aged and disabled.

5. The Belorussian SSR Ministry of Health:

Strengthen exactingness on the directors of medical institutes and schools for the quality of the training of young specialists, the formation of high citizen maturity and responsibility, the performance of professional duty and strict observance of the oath of a doctor of the Soviet Union; and make wider practice of selecting school-leavers for medical institutes from the ranks of workers and rural youth;

Together with the Belorussian SSR Academy of Sciences, expand the scientific research on the most important problems of national health care; publicize and incorporate in medical practices more energetically the latest achievements of science and technology and the progressive work experiece of treatment and prevention establishments;

Improve the supply of medical establishments with modern equipment, gear, instruments, medicines, and bandaging materials;

along with the Belorussian SSR State Planning Committee, the Belorussian SSR State Committee for Material and Technical Supply, and the Belorussian SSR Ministry of Communications, examine the questions of further improving the supply of treatment and prevention establishments with upholstered and unupholstered items, transportation and communications systems.

6. The Belorussian SSR State Planning Committee, the Belorussian SSR State Committee for Construction Affairs, the Belorussian SSR Ministry of Health, the other ministries, the state committees and departments of the Belorussian SSR, and the executive committees of the councils of people's deputies:

When resolving questions concerning the complete building of urban and rural population centers and individual micro-rayons, provide for the creation of treatment and prevention establishments, physical training health combines, athletic fields, and other structures for the performance of mass physical training and health work at the places where people live;

Examine questions concerning the further expansion of the network and improving the construction of children's preschool establishments and their summer country homes, Pioneer camps and children's sanitoria, paying special attention to the providing of children and teenagers, who are suffering from chronic illnesses and who have deviations in their development, with these establishments;

Insure the development and implementation of plans for improving the working and living conditions in production and the medical and health measures directed toward the prevention of occupational injuries and diseases in the workers and kolkhoz members, and not allow the use of female labor in heavy production and in that harmful to health;

Intensify the struggle against drunkenness and the work to prevent alcoholism and to organize narcotic sections in industrial and agricultural enterprises and construction organizations, and wage the struggle against smoking more persistently;

Take steps to make the environment more healthy, to improve the sanitary protection of ponds, soil and the atmosphere and to intensify the struggle against noise; insure the effective operation of sewage treatment structures and gas and dust trapping assemblies.

7. The Belorussian SSR State Committee for the Protection of Nature the Belorussian SSR Ministry of Health, the Belorussian SSR Ministry of Internal Affairs, the Belorussian SSR Ministry of Land Reclamation and Water Resources, the Belorussian SSR Ministry of Housing and Municipal Services, the Belorussian republic administration for hydrometeorology and control of the natural environment, and the local councils of people's deputies strengthen their control over the execution by enterprises, organizations, establishments, officials and citizens of the laws and measures directed at improving the environment; improving the population's working, living and rest conditions; and preventing and decreasing the sick-rate; and increase the role of state sanitation supervision organs in this task.

8. The executive committees of oblast, rayon, settlement, and rural councils of people's deputies assure the fulfillment of plans and quotas for the construction and repair of water supply sources and public bath houses in rural population centers.

9. Together with the trade union organs, the ministries, state committees and departments of the Belorussian SSR implement measures to expand the network of sanitaria-dispensaries, rest bases and other establishments for the workers' treatment and rest; and practice on a wider basis the cooperation of the resources of enterprises, establishments and organizations for the construction of these establishments.

10. The Belorussian SSR Ministry of the Meat and Dairy Industry, the Belorussian SSR Ministry of the Food Industry, the Belorussian SSR Ministry of the Fruit and Vegetable Industry, the Belorussian SSR Ministry of Health, and the executive committees of the local councils of people's deputies implement measures to improve the output and raise the quality of children's food items and expand the network of dairy kitchens; and organize the output of fruit and vegetable canned goods for children in small packages in the assortment and volume which completely satisfies the demand for them both in the cities and in the rural areas.

11. The Belorussian SSR Ministry of Trade, the Belorussian republic union of consumer societies, and the executive committees of oblast and the Minsk city councils of people's deputies;

Take steps to expand the network of dietary dining halls and also of dietary rooms and tables in public catering enterprises at a rate calculated to completely satisfy the republic population's demand for them;

Supply first and foremost treatment and prevention and children's establishments with food items of the necessary variety.

12. The Belorussian SSR Council of Ministers' Committee for Physical Training and Sports, the Belorussian SSR Ministry of Education, the Belorussian SSR Ministry of Higher and Secondary Specialized Education, the Belorussian SSR State Committee for Vocational and Technical Education, the Belorussian SSR Ministry of Housing and Municipal Services, the ministries, state committees and departments of the Belorussian SSR, and the executive committees of the local councils of people's deputies together with the trade union and other public organizations make wider use of stadiums, physical training and health combines, swimming pools and other sports structures regardless of their departmental subordination for the sake of further expanding mass physical training and improving the health of the population, especially that of the workers, rural youth, pupils, and students; more actively incorporate the GTO [Ready To Work for and Defend the USSR] set of exercises, and involve the workers and students in regular physical training classes, sports and hiking.

13. The Belorussian SSR Ministry of Health and the Belorussian SSR Ministry of Education strengthen their attention toward questions concerning the observance of sanitary hygiene conditions in general educational schools and children's preschool establishments, and take steps to improve the health and preventive work among children and teenagers and to arm them with a knowledge of the basic medical standards.

14. The Belorussian SSR Ministry of Health, the Belorussian SSR State Committee for Television and Radio Broadcasting, the Belorussian SSR State Committee for Publishing Houses, Printing Plants and the Book Trade, the Belorussian SSR State Committee for Cinematography, and the editors of republic newspapers and magazines improve the publicizing of a healthy way of life and of sanitary hygiene knowledge among the population; make wider use of radio, television and the press to illuminate questions concerning the physical development and moral indoctrination of the growing generation and to explain the harm from smoking and the misuse of alcoholic beverages.

15. Oblast, city, rayon settlement, and rural councils of people's deputies increase the level of organizational work in carrying out the Belorussian SSR law entitled "Concerning Health Care" and the plans for economic and social development in the health care area, and involve the permanent commissions, deputies, and public independent organizations of the population in participating in this work.

16. Charges the Belorussian SSR Council of Ministers to examine the proposals and comments expressed during the session by the deputies of the Belorussian SSR Supreme Soviet and to adopt the appropriate decisions concerning them.

* * *

The Belorussian SSR Supreme Soviet expresses the firm conviction that the republic's local councils of people's deputies, health care workers, work collectives, and the public will insure the successful carrying out of the decisons of the 26th CPSU Congress on further improving the population's health protection and the Belorussian SSR law entitled "Concerning Health Care".

Chairman of the Presidium of the Belorussian Supreme Soviet I. Polyakov

Secretary of the Presidium of the Belorussian SSR Supreme Soviet Ye. Chagina

REGIONAL

LATVIAN SUPREME SOVIET SESSION ON RURAL CONSTRUCTION

Riga SOVETSKAYA LATVIYA in Russian 26 Jun 82 p 1

/Text/ On 25 June the fifth session of the tenth convocation of the Latvian SSR Supreme Soviet was held in Riga. The meeting hall was filled with those elected by the people--outstanding workers in industry and agricultural production, construction and transport, and party, soviet, trade union and Komsomol employees, as well as figures from scientific, cultural and educational spheres.

10 o'clock. Seats in the government box are taken by Comrades A.E. Voss, E. Ya. Aushkap, Ya.Ya. Vagris, R.O. Verro, V.I. Dmitriyev, A.E. Ikauniyek, S.I. Postinikov, Yu.Ya. Ruben, P.Ya. Strautmanis, E.M. Ozols and B.K. Pugo.

The session was opened by Deputy V.S. Klibik, chairman of the Supreme Soviet of the Latvian SSR.

The participants in the session honored the memory of the deceased deputies, N.A. Belukha, N.A. Karpov, and Zh.K. Folmanis (Zhan Grivy), with a minute of silence.

Having heard the report of the credentials committee, presented by its chairman, Deputy P.I. Valeskaln, The Supreme Soviet of the Latvian SSR moved to recognize the authority of Latvian SSR Supreme Soviet deputy, Ya.O. Blekte, elected on 7 February 1982 in the Riga 12th electoral district, and Latvian SSR Supreme Soviet deputy, N.A. Kaftaylov, elected on 20 June 1982 in the Riga 67th electoral district.

Approval is obtained for the session's agenda, which had been considered and approved at the session of the Council of Elders:

1. Concerning the tasks of the republic's local soviets of people's deputies in the improvement of residential and social construction in the countryside in the light of the decisions of the May (1982) plenum of the CC CPSU.

2. Concerning approval of the ukases of the Presidium of the Latvian SSR Supreme Soviet.

The order of work for the session was approved unanimously.

Deputy E.K. Peterson, deputy chairman of the Council of Ministers of the Latvian SSR, presented a report on the tasks of the republic's local soviets of people's deputies in the improvement of residential and social construction in the countryside in the light of decisions by the May (1982) plenum of the CC CPSU.

A supplementary report of the Committee on Construction and the Building Materials Industry of the Latvian SSR Supreme Soviet was presented by committee chairman Deputy G.V. Bagnovets.

The following deputies took part in the discussion: Ya. A. Kaleys (Kalnitsiems 205th electoral district), Ya.-V. Ya. Endzelis (Tserauks 163d electoral district), Ya. F. Rubins (Limbazhi 232d electoral district), G.M. Biksons (Zirs 325th electoral district), N.I. Dorofeyev (Tsesis 168th electoral district), A.K. Chepanis (Aglons 257th electoral district), N.A. Romanov (Yekabpils 197th electoral district), L.P. Vanag (Riga 45th electoral district), Ch.A. Bogdanovich (Salaspils 279th electoral district), O. Ya. Karklin' (Indrs 213th electoral district), Zh. V. Kholshteyn (Liyelvarde 254th electoral district) and Ya.N. Dundurs, chairman of the ispolkom of the Valmiyera Rayon Soviet of People's Deputies.

Concluding comments were made by Deputy E.K. Peterson, deputy chairman of the Latvian SSR Council of Ministers.

The session unanimously adopts the decree "Concerning the Tasks of the Republic's Local Soviets of People's Deputies in Improvement of Residential and Social Construction in the Countryside in the Light of the Decisions of the May (1982) Plenum of the CC CPSU."

The session moves on to consider the second question on the agenda.Deputy K.E. Zorin, secretary of the Presidium of the Latvian SSR presented a report on confirmation of the ukases of the Presidium of the Latvian SSR Supreme Soviet.

The deputies unanimously approve the ukases of the Latvian SSR Supreme Soviet Presidium which were adopted between sessions.

According to the regulations concerning standing committees of the Latvian SSR Supreme Soviet, members of the republic's government cannot sit on these committees. As a consequence, A.P. Rubiks, who has been appointed minister of local industry of the Latvian SSR, has been released from duties as chairman of the Committe on Legislative Proposals, and Deputy V.N. Chevachin, who has been appointed chairman of the Latvian SSR State Committee on Labor, has been freed from his duties as chairman of the Planning and Budget Committee of the Latvian SSR Supreme Soviet.

Deputy A.V. Gorbunov was unanimously elected as chairman of the Committee on Legislative Proposals, and Deputy A.P. Klautsen was unanimously elected chairman of the Planning and Budget Committee of the Latvian SSR Supreme Soviet.

The session also elected unanimously the new chairman of the Committee on Youth Affairs of the Latvian SSR Supreme Soviet, Deputy L.E. Freyberg.

With this the fifth session of the tenth convocation of the Latvian SSR Supreme Soviet concluded its work.

LATVIAN FIRST QUARTER PLAN PERFORMANCE ASSESSED

Riga SOVETSKAYA LATVIYA in Russian 30 Apr 82 p 3

/Article: "In the Latvian SSR Council of Ministers"/

/Text/ A session of the Latvian SSR Council of Ministers has been held. It examined the question of the results of the fulfillment of the State Plan for the Economic and Social Development of the Latvian SSR and the State Budget of the republic for the first quarter of 1982.

At this session it was noted that, guided by the decisions of the 26th CPSU Congress, the directives of the general secretary of the CPSU CC and chairman of the USSR Supreme Soviet Presidium, Comrade L.I. Brezhnev, by increasing the pace of socialist competition under the slogan "For high quality of labor at every workplace," the republic's labor groups directed their efforts at successfully solving socio-economic tasks. Particular fervor was imparted to this competition by the preparations for the 60th anniversary of the formation of the USSR.

The plan of this republic's economic and social development for the first quarter of 1982 was fulfilled with respect to a number of basic indicators. The republic's industry fulfilled the production plan for the majority of the most important items as expressed in physical terms. The total volume of the sales of industrial output exceeded the plan assignment by 33 million rubles. The plan for putting fixed assets into operation by means of state capital investments was over-fulfilled. More apartment houses were put into operation than in the first quarter of 1981. Kolkhozes and state-run farms prepared for the spring field operations more carefully and in a better organized manner than last year, and they are now carrying them out at full speed everywhere.

According to preliminary data, the republic's state budget was fulfilled with regard to revenues by 102.7 percent and with regard to outlays--by 89.1 percent. Also fulfilled were the plan revenues of the republican budget and all the budgets of the rayons and cities under republican jurisdiction.

Nevertheless, this session of the Latvian SSR Council of Ministers noted that with regard to certain basic indicators the plan was not fulfilled. The republic's industry did not successfully cope with the assigned production of certain individual types of extremely important output, nor with regard to its sales volume, taking into account its obligations for deliveries, with regard to the output of certain types of mass consumer goods. Some ministries did not ensure the fulfillment of the plan for producing all deficit goods, while at the same time they exceeded the assignments with regard to producing items of which there is a sufficient supply. By means of increasing labor productivity a mere 88 percent growth in commodity output was attained.

In analyzing the work of the republic's kolkhozes and sovkhozes during the first quarter the Latvian SSR Council of Ministers noted that the production of livestock-raising products declined, and the plan for purchases of milk, cattle, and poultry was not fulfilled. Moreover, particular concern was caused by the fact that the volume of purchases declined in comparison with the same period of last year.

Mention was also made at the session of serious shortcomings in the field of capital construction, where the quarterly plan likewise turned out to be unfulfilled. Herein the greatest lag, as was also the case previously, was characteristic of the building of facilities in the non-production sphere.

It was also pointed out that within the overall fulfillment of the plan for profits by enterprises and organizations certain ministries (the Ministry of Building Materials, the Ministry of the Food Industry, the Ministry of Construction) did not successfully cope with the plans with regard to this indicator.

The Ministry of Municipal Services and a number of the ispolkoms of the rayon and municipal (under republican jurisdiction) Soviets of People's Deputies did not pay sufficient attention to improving the work of sub-departmental enterprises and organizations engaged in housing and municipal services.

The Latvian SSR Council of Ministers laid an obligation on the leading officials of the republic's ministries and departments, enterprises under Union jurisdiction, and ispolkoms of local soviets to carefully and thoroughly analyze the results of the fulfillment of the plan assignments and, being guided by the decisions of the 26th CPSU Congress, the November (1981) Plenum of the CPSU CC, by the positions and conclusions contained within the speeches of the general secretary of the CPSU CC and chairman of the USSR Supreme Soviet Presidium, Comrade L.I. Brezhnev at this Plenum and at the 17th Congress of the USSR Trade Unions, to work out and implement measures for eliminating the shortcomings which have been allowed, based on improving the leadership and work organization in every section of economic activity, strengthening planned and performance discipline. It is necessary to adopt all needed measures to make up for the lag in the production of industrial output which was permitted during the first quarter, particularly that of consumer goods, to ensure their delivery to trading organizations in quantities and assortment appropriate to them.

The particular attention of the ministries and departments was drawn by the republic's Council of Ministers to a more active utilization of reserves for increasing production efficiency, work quality, guaranteeing the concentration of capital investments in construction, the on-schedule putting into operation of the most important projects now under construction, a fuller utilization of existing production capacities, a broad-based introduction of new equipment, technology, and the experience of progressive groups, to taking all kinds of measures to economize on fuel, electric and thermal energy, raw materials, and other materials.

It has been proposed that the Ministry of Agriculture, the Ministry of the Fruit and Vegetable Industry, Goskomsel'khoztekhnika, the ispolkoms of the rayon Soviets of People's Deputies ensure the operational and effective administration of field work so that the sowing be carried out within compressed time periods under the strict observance of agro-technology. Particular care must be manifested for the agricultural organs and local soviet organs so that in the very near future repairs are completed on all the hay-harvesting equipment, the storage facilities for the coarse feeds, the hay and silage facilities, and on bringing the pastures into good order.

The republic's kolkhozes and sovkhozes are confronted with the task of increasing in 1982 the production of feeds in order to increase cattle productivity.

Yu. Ya. Ruben, chairman of the Latvian SSR Council of Ministers, spoke at the session.

Also taking part in the session's work were E. Ya. Aushkap, secretary of the CP of Latvia CC, and A. K. Zitmanis, chairman of the Latvian Republican Trade-Union Council.

LATVIAN OFFICIAL DISCUSSES RURAL CONSTRUCTION

Riga SOVETSKAYA LATVIYA in Russian 26 Jun 82 p 2

/Speech by E.K. Peterson, deputy chairman of the Latvian SSR Council of Ministers, to the fifth session of the tenth convocation of the Latvian Supreme Soviet in Riga on 25 June: "Concerning the Tasks of the Republic's Local Soviets of People's Deputies in Improving Residential and Social Construction in Rural Areas in the Light of the May (1982) Plenum of the CC CPSU"7

/Excerpts7 A plenum of the Central Committee of the Latvian Communist Party was held recently; it conisidered the issue "Concerning the Results of the May (1982) Plenum of the CC CPSU and the Tasks of the Republic's party organization arising from the report of Comrade L.I. Brezhnev "Concerning the Food Program of the USSR for the Period up to 1990 and Measures to Realize It."

The report by Comrade A.E. Voss, member of the CC CPSU and first secretary of the Central Committee of the Latvian Communist Party, and the decisions of the plenum of the CC Communist Party of Latvia set out the concrete tasks which face all participants in the republic's agro-industrial complex and related sectors of the national economy. The report contains concrete and justified criticism of the inadequacies of rural capital construction, and it points to the need to impose proper order in rural construction.

In attributing exceptionally great significance to the Food Program, the Latvian SSR Council of Ministers introduced for consideration by the session one of the parts of the Food Program, the issue "Concerning the Tasks of the Republic's Local Soviets of People's Deputies in Improving Residential and Social Construction in Rural Areas in the Light of the Decisions of the May (1982) Plenum of the CC CPSU."

Comrades. The successful implementation of a large program for the further improvement of agriculture is directly related to the organization of capital construction in rural areas.

In our republic, as throughout the country, rural construction is acquiring ever greater scope. Significant work is being carried out to implement the social program set out by the Communist Party in the area of residential-civil construction. The measures which are being adopted by the soviets of people's deputies and their executive organs contribute to the most successful fulfillment of the plan targets for the construction of residential buildings, social and cultural facilities, for the improvement of the level of industrialization in construction, for the bringing together of resources from enterprises and organizations to build housing and facilities in the non-production sphere.

In the Tenth Five-Year Plan 1.636 million rubles worth of capital investment was put to work in the republic's rural economy for all types of measures excluding land reclamation; this was 12 percent more than in the Ninth Five-Year plan.

In the Tenth Five-Year Plan and the year 1981 the following were built in rural areas: residential buildings with a total area of 1,810,000 m^2, 35 general education schools with places for 21,700 pupils, children's preschool facilities with 8,400 places, clubs and cultural facilities which accommodate 6,700 people. During this same period kolkhoz's and sovkhoz's in the republic built public catering enterprises to seat 2,450 patrons and commercial enterprises with an area of 4,600 m^2.

Much work has been carried out in the republic to develop the agricultural sector of the regional scheme for settlement, which was approved on a regional basis by the Latvian SSR Council of Ministers. The settlement scheme determines the distribution of settled areas within the territory of farming units, the proposed number of residents in the planned rural settlements and the category of each settlement according to its functional significance, as well as the distribution of production centers.

The republic has a significant number of well-equipped rural settlements which are the result of much effort put forth by party organs, local soviets, individual collectives and the leaders of sovkhoz's and kolkhoz's.

In addition to definite successes in rural construction, we can see great inadequacies as well. The measures which have been carried out to transform settlements into well-equipped units possessing the necessary amount of housing and cultural-domestic facilities are still inadequate. Only a third of the rural residents are living in the proposed settlements. Out of 563 kolkhoz's, sovkhoz's and equivalent agricultural enterprises, all the main forms of service for the population have only 136 economic units. The process of establishing rural settlements in kolkhoz' and sovkhoz's is proceeding slowing; the resettlement of people from small villages which have outlived their time has been delayed, and many contracting construction organizations are still not meeting their targets.

It can be said with confidence that we have the necessary conditions to fulfill and even to achieve a certain overfulfillment of the plan for rural residential construction, taking into account its top priority status. The directive aimed at rural construction, and especially at construction of buildings of the farmstead type, which was given at the CC CPSU plenum by Comrade L.I. Brezhnev, requires that we adopt supplementary measures to increase the rate of this construction and to develop new industrial plans for residential, single-apartment dwellings and the creation of facilities needed to produce them. In addition to state funds, kolkhoz funds and Gosbank credits, the Ministry of Agriculture, the Ministry of Fruit and Vegetable Farming and other organizations can attract funds for residential construction on a broader basis from residential building cooperatives and individual home builders. But these opportunities are being poorly exploited.

In this regard, attention should be paid to the fact that individual residential construction has not been developed as fully as it could be in our area.

Interest in individual residential construction is low because little work has been done to explain and clarify to the population the procedure that is to be followed in the allocation of land allotments, the development of planning documentation, the provision of materials, as well as the granting and paying back of bank credit. The local soviets, organs of the Ministry of Agriculture and sections of the Latvian office of Gosbank have done little work in this area.

The Ministry of the Building Materials Industry does not provide for the full realization of the established limits and market funds, and the administration of the Baltic Railway does not allot the planned number of rail cars to transport brick, gas concrete and cement, and this has a negative influence on construction, especially in the eastern and northeastern regions of the republic.

It is essential to improve in a fundamental manner the organizational work of the local soviets of people's deputies and of economic units to bring working people into individual construction.

Rural dwellings frequently take too long to build. Even Lebanese, prefabricated buildings, which can be assembled in two days, in many cases are not put to use for more than a half year after the start of construction.

At present the building of villages using Lebanese residential units is acquiring ever greater scale. This yqar 690 are scheduled to be built in rural areas, and in 1985 the number expected to be built is 1,200. In addition, Valmiyera style buildings and the usual farmstead buildings made of brick and gas concrete blocks will be put up.

The majority of the officials of economic units are inclined to order multi-apartment buildings because they are cheaper. It is clear that the question of cost per square meter of living space requires study by Gosplan, Gosstroy and the Ministry of Agriculture. A dwelling consisting of one apartment should cost less.

With regard to the fact that there are various opinions about the Lebanese buildings, Latvkolkhozstroy /Latvian Kolkhoz Construction Administration/ should summarize the opinions and desires of all regions concerning these buildings and plan for alternatives models which would meet various tastes.

Much can be done by the soviets in such an important and promising matter as assistance in the development of personal farm allotments. Everyone knows that buildings of the farmstead type contribute the most to the development of personal farming, to the maintanance of cows, pigs and other livestock. And it is not just because it is convenient for the housewife when the kitchen garden and farming buildings are located alongside the living quarters. In this case there are also opportunities for other members of the family to devote an hour or two per day to the work in the personal plot. Under these conditions it is easier as well to teach young people about the work of the farm.

We have talked a lot about the fact that a rural home must have appropriate farm buildings. However, in practice these are not built in all places. In places where this mistake has been acknowledged and farm buildings are now being added or where originally only a cow shed, for example, was built and now more buildings are going up, the people are acting correctly.

Dissatisfaction has been expressed justifiably concerning the construction of farm homes built in unsuccessful locations in relation to other farm buildings and roads within the larger farm unit. There have been instances in which the farm unit's road, built among the rows of farm buildings, has been included in the area alloted to the private plot, which by our norms has been set at 1,200 square meters.

The Ministry of Agriculture should take all this criticism into account, as should our planning institutes "Latgiprozemy," Latgiprosel'stroy," and "Latkolkhozproyekt."

The problem of developing a network of rural preschool facilities remains acute. As of January 1981, public preschool education in rural regions of the republics was evaluated as providing only 25 percent coverage, which was one point lower than the national average.

All these are extremely necessary measures. However, the majority of rural construction organizations are still not coping with the work volumes set as their targets, and not all the work ordered by clients has been included in the plan.

One of reasons for this is the inadequacy of rural builders and the poor work in establishing stable collectives which has been done. The work of the local soviets in this area must be improved.

Increasing labor productivity is a second important issue related to rural construction which must be worked on. The organization of construction work at a majority of building sites leaves a lot to be desired.

Construction has a large reserve to be found in the widespread application of the brigade contract, which was highly rated by the 26th CPSU Congress. In brigades which shifted to complete cost accounting, the output per worker is 40-50 percent higher than it is throughout contracting organizations as a whole.

Mention should be made of another major and serious inadequacy, which is relatively widespread at many rural construction sites: the shipment of building parts, bricks and other heavy materials to a warehouse rather than to the actual construction site where they will be used. When this happens, materials, and this means thousands and millions of tons, are transported twice, using motor vehicles twice, loaded and unloaded twice. This is waste, which cannot be justified in any way.

The Ministry of Construction and its trusts do not show the necessary persistence and sense of purpose in their management of rural construction. There is evidence of this in the following facts: the level of fulfillment of contract construction work for the Ministry of Agriculture in the first five months of this year is lower than the average for the Ministry of Construction by eight percent. Out of nine trusts which are operating in rural areas, only two met the plan targets for the first five months of this year; out of 27 construction projects including residential and social-cultural-shopping facilities which have been worked on during the first half of the year, only at 10 has the plan been fulfilled. Comrade N.I. Kaftaylov, minister of construction, and the officials of the trusts must draw the appropriate conclusions and take the necessary measures to ensure a sharp turnaround with regard to rural construction projects.

The laws concerning the local soviets, as well as the decisions of the party and government, have imposed upon the local soviets of people's deputies and their executive committees large and urgent tasks in the area of planning and building residences and public utilities, and for providing services to settlements.

The local soviets of people's deputies and their executive committees must implement a system of strict monitoring of the fulfillment of state plans for construction and of the quality and punctuality with which they are implemented.

Recently a majority of rayispolkoms have added to their staffs a position of deputy chairman whose main function is management of construction. In the rayon agro-industrial associations there are departments of capital construction.

In every rayon a regional headquarters for leadership of construction has been established, as have standing committees and deputy posts.

Comrade deputies. The volume of non-production construction throughout the agricultural complex of the republic will amount to more than 930 million rubles in the 11th and 12th five-year plans.

With these funds it is essential to build in the public sector alone 3,282,000 m^2 of living space, schools with 15,200 places, children's preschool facilities with 25,600 places and many other cultural and service facilities.

There is no doubt that the tasks of improving the social and daily living conditions in rural areas, as set out in the five-year plan, must be viewed as the minimum. The efforts of all the participants in construction work carried out in rural areas must be clearly concentrated on the resolution of the established program with consideration for the need to overfulfill it.

REGIONAL

UKRAINIAN CENTRAL COMMITTEE CONFERENCE DISCUSSES FOOD PROGRAM

Kiev PRAVDA UKRAINY in Russian 2 Jun 82 p 1

[Unsigned article: "Conference at the Ukrainian Communist Party Central Committee"]

[Text] The CC of the Ukrainian CP held a conference attended by first secretaries of the oblast party committees to discuss organizational problems relating to the decisions of the May (1982) Plenum of the CC CPSU. The conference participants listened to the member of the CC CPSU Politburo, first secretary of the Ukrainian CP CC, comrade V. V. Shcherbitskiy.

At the conference it was noted that the decisions of the May Plenum of the CC CPSU and the report of the General Secretary of the CC CPSU comrade L. I. Brezhnev "On the USSR Food Program for the Period Until 1990 and Measures to Implement It" met with unanimous approval from the communists and all working people of Soviet Ukraine.

The republic party organization launched a broad propaganda drive to explain the decisions of the CC CPSU Plenum, aspects of the report by comrade L. I. Brezhnev, the USSR Food Program, and also the decrees of the CC CPSU and the USSR Council of MInisters that were approved by the Plenum. Those taking part in this work include candidate members and members of the Central Committee, members of the Inspection Committee of the Ukrainian CP, bureau members, and responsible workers of oblast, city, and rayon party committees as well as deputies to the people's soviets, scientists, specialists, and the broad ideological aktiv. Propaganda teams are being dispatched to local areas.

As was stressed at the conference, it is highly important to utilize the current encounters between voters and candidates to the soviets of people's deputies, as well as all the preparations for elections to the local soviets of people's deputies--which elections will take place on 20 June--in order to elucidate the decisions of the CC CPSU Plenum and the Food Program.

Plans exist to devote to the materials of the Plenum a political day on 11 June, as well as additional exercises within the system of political and economic training.

Responsible tasks are facing the mass media. They are called upon to make accessible to all working people the points and conclusions of the report by comrade L. I. Brezhnev as well as the substance of the documents of the CC CPSU

Plenum, to assist in all ways the party organizations in launching organizational and political activities to implement the Plenum's decisions, and to act as active organizers of socialist labor competition for an all-out elevation of the level of farming and animal husbandry as well as in the fullest utilization of the existing potential, production-technical resources, and everything that is and will be at the disposal of the agroindustrial complex.

The results of the May (1982) CC CPSU Plenum and the tasks of the party organizations ensuing from its decisions and the report of comrade L. I. Brezhnev "On the USSR Food Program for the Period Until 1990 and Measures to Implement It" will be discussed at the Plenum of the Central Committee of the Ukrainian Communist Party, at the plenums of the oblast, city, and rayon party committees, and also at meetings of all primary party organizations of the republic. The participants in the deliberations of the plenums, meetings, and primary party organizations will include secretaries, bureau members, and responsible workers of party committees.

It was pointed out at the conference that party committees should approve working plans for the organization of the fulfillment of the May Plenum of the CC CPSU that should clearly identify the individuals, tasks, and task schedules that must be accomplished in order to implement the targets posed by the Plenum. Appropriate measures should be drafted at the ministries and departments, the Ukrainian Council of Trade Unions, and the Ukrainian Komsomol CC.

The tasks of the soviets of people's deputies as regards implementing the decisions of the May (1982) Plenum of the CC CPSU have been defined in the speech of comrade L. I. Brezhnev at the 31 May session of the Presidium of the USSR Supreme Soviet. It was recommended to the oblast, city, rayon, rural, and settlement soviets of people's deputies that they discuss, at sessions that may be conducted following the elections, the tasks ensuing from the decisions of the May CC CPSU Plenum.

Considerable work has to be accomplished in drafting the republic's food program as well as food programs for oblasts and rayons, along with comprehensive plans for the development of the kolkhozes and sovkhozes, the formation of oblast and rayon agroindustrial associations and their councils, and improvements in the entire structure of management of the agroindustrial complex. This work must be approached with forethought, without haste.

It is important to support the initiative of the agricultural experts who currently work in the management apparatus and have expressed the wish to be transferred for work at the kolkhozes and sovkhozes, particularly at the lagging ones.

It was stressed at the conference that, while conducting organizational and political work relating to the decisions of the May Plenum of the CC CPSU and the implementation of measures to streamline the management of the agroindustrial complex, it is necessary to proceed from the directive of comrade L. I. Brezhnev that the Food Program should start bearing fruit as early as in 1982. Hence, everything must be done to fulfill the plans and tasks of the current year regarding the production and procurements of agricultural products. Party, Soviet, and economic agencies should work as never before, and they should solve smoothly and operatively all problems especially those relating to crop planting, the preparations for and conduct of harvesting and grain procurements, the silaging of fodder, the supply of vegetables to the population, and the increase in the output of animal husbandry.

The efforts of the urban labor collectives should be focused on the fulfillment of plan and further expansion of the output of agricultural equipment, spare parts, and fertilizers, as well as on improving the performance of enterprises of the processing industry and trade; developing subsidiary farms and collective orcharding and truck gardening; reducing losses, particularly those of potatoes and vegetables; building storage facilities, hothouses, and fish ponds; constructing farming and socio-cultural facilities at kolkhozes and sovkhozes; and broadening patronage aid to the countryside.

Success in fulfilling the plans outlined by the party will decisively hinge on the skill of party organizations in organizing a workable socialist labor competition among the toilers of town and country and broadly disseminating advanced knowhow. This requires intensifying the active contacts between party, Soviet, trade-union, Komsomol, and economic agencies, on the one hand, and the broad masses of workers on the other, and focusing organizational activities primarily on labor collectives, since it is they that decide the fate of the plans drafted by the party.

The participants in the conference's deliberations included members and candidate members of the Politburo of the Ukrainian CC CP.

TURKMEN SUPREME SOVIET SESSION

Information Report

Ashkhabad TURKMENSKAYA ISKRA in Russian 7 Jul 82 pp 1-2

[Text] The 10th Turkmen SSR Supreme Soviet Fifth Session was held on 6 July in Ashkhabad.

Supreme Soviet Hall of Sessions. At 10 in the morning O. Ovezgel'dyyev, chairman of the TuSSR Supreme Soviet, and E.M. Ovezova, his deputy, took their seats. The deputies and those invited to the session greeted with applause P. Annaorazov, A.S. Boyko, M.G. Gapurov, Ch.S. Karryyev, G.S. Mishchenko, A.I. Rachkov, M.A. Charyyev, M.G. Shmidt and B. Yazkuliyev, members of the Turkmen Communist Party Central Committee Bureau, and O.I. Ishankuliyeva, S.A. Niyazov and V.A. Khar'kov, candidates of the Turkmen Communist Party Central Committee Bureau.

The chair declared the session open. The deputies and guests stood in honor of the memory of Deputy A. Allamuradov, who had passed away since the previous session.

The Credentials Commission report on verification of the authority of the newly elected TuSSR Supreme Soviet deputies was delivered by Deputy Ya. Berdiyev, chairman of the commission. A decision passed on the report deemed the authority of Deputies Gennadiy Anatol'yevich Zgerskiy (Aki-Bayskiy Electoral Okrug 165) and Kurban Khandzhayev (Soyun-Aliyskiy Electoral Okrug 189) valid.

At the proposal of the chair, who spoke at the behest of the Council of Elders, the TuSSR Supreme Soviet confirmed the session agenda and work procedure.

The agenda contained the following items:

1. The state of capital construction in the republic and the tasks to improve it in the light of the requirements of the 26th CPSU Congress and the instructions and proposals contained in Comrade L.I. Brezhnev's report at the CPSU Central Committee May (1982) Plenum and his speeches at the trade union and Komsomol congresses and the celebrations in Tashkent.

2. Report of the TuSSR Supreme Soviet Public Health and Social Security Commission.

3. Ratification of TuSSR Supreme Soviet Presidium edicts.

The TuSSR Supreme Soviet heard the report of Deputy Ch.S. Karryyev, chairman of the TuSSR Council of Ministers, on the state of capital construction in the republic and the tasks to improve it in the light of the requirements of the 26th CPSU Congress and the instructions and proposals contained in Comrade L.I. Brezhnev's report at the CPSU Central Committee May (1982) Plenum and his speeches at the trade union and Komsomol congresses and the celebrations in Tashkent.

The following deputies participated in the debate on the question under discussion: O. Bayramdurdyyev (Zhdanovskiy Electoral Okrug 56), B. Tagandurdyyev (Krasnoarmeyskiy Electoral Okrug 97), I.F. Shakhov (Podvoyskiy Electoral Okrug 16), N.N. Yeremin (Burdalykskiy Electoral Okrug 317), A. Begdzhanov (Kadyr-Yabskiy Electoral Okrug 159), A. Charyyev (USSR Supreme Soviet deputy), G.G. Chizhikova (Zavodskiy Electoral Okrug 39), K. Shadyyev (Tashkentskiy Electoral Okrug 276), U.R. Shamuratov (Tomak-Yapskiy Electoral Okrug 253), V.V. Petrov (Mollakarinskiy Electoral Okrug 99), M. Aliyeva (Krachskiy Electoral Okrug 309), N. Babayev (Sukhtinskiy Electoral Okrug 179), N.V. Sheremet'yev (Bereketskiy Electoral Okrug 320), I. Chashemov (Dyshkinskiy Electoral Okrug 216), A.M. Rau (Tashrabadskiy Electoral Okrug 294), K.P. Stepanaytes (Shatlykskiy Electoral Okrug 135), and B. Khaydarov (Kelyatinskiy Electoral Okrug 57).

A big speech at the session was delivered by Deputy M.G. Gapurov, first secretary of the Turkmen Communist Party Central Committee (Grazhdanskiy Electoral Okrug 2).

The Supreme Soviet unanimously passed the decree "The State of Capital Construction in the Republic and the Tasks To Improve It in the Light of the Requirements of the 26th CPSU Congress and the Instructions and Proposals Contained in Comrade L.I. Brezhnev's Report at the CPSU Central Committee May (1982) Plenum and His Speeches at the Trade Union and Komsomol Congresses and the Celebrations in Tashkent".

The session turned to examination of the next item on the agenda--the work of the TuSSR Supreme Soviet Public Health and Social Security Commission. The report was delivered by Deputy Ye. Ovlyakuliyev, chairman of the commission. A corresponding decree was passed on the question under discussion.

The Supreme Soviet then heard the report of Deputy O. Nazarova, secretary of the TuSSR Supreme Soviet Presidium, on TuSSR Supreme Soviet Presidium edicts submitted for ratification by this session and adopted the corresponding law and decrees.

A decree on changes in the composition of certain TuSSR Supreme Soviet permanent commissions was also adopted.

The Supreme Soviet received information from B. Gul'manov, minister of rural construction of the TuSSR, presented at the request received at the previous session from Deputy K. Akhmedyarov in connection with the slow construction of an experimental community of the "40 let TSSR" Kolkhoz and passed a decree on this question.

This concluded the 10th TuSSR Supreme Soviet Fifth Session.

Gapurov Speech

Ashkhabad TURKMENSKAYA ISKRA in Russian 7 Jul 82 pp 1-2

[Speech by M.G. Gapurov, first secretary of the Turkmen Communist Party Central Committee, at 10th TuSSR Supreme Soviet Fifth Session on 6 July in Ashkhabad]

[Text] Comrade Deputies!

The working people of Turkmenistan, like all Soviet people, are working with inspiration on implementation of the historic decisions of the 26th CPSU Congress, which determined the program of our society's onward development along the path toward communism.

The past months of the current year are remarkable for many important political events in the life of the country. Congresses of the Soviet trade unions and the Lenin Komsomol have been held, and elections to the local soviets and of people's judges have been conducted on a high ideological-political level. Active work has been initiated everywhere on preparations for a fitting greeting of the upcoming 65th anniversary of the Great October Socialist Revolution and the 60th anniversary of the formation of the USSR.

But a special place in the events of the past 6 months is undoubtedly occupied by the CPSU Central Committee May Plenum and the Food Program and a number of major CPSU Central Committee and USSR Government decrees and the system of measures for the creation of uniform management of the agrarian-industrial complex and a refinement in the economic mechanism which it passed. Drawn up at the initiative and with the direct personal participation of Comrade L.I. Brezhnev, they are, it may be said, even now having no less an impact on the life of the country and its economy than was once had by the decisions of the CPSU Central Committee March (1965) Plenum.

Adopted in development of the goals of the 26th party congress, the decisions of the CPSU Central Committee May (1982) Plenum largely determine today the entire sociopolitical life of the country and Soviet people's actions and thoughts. The results of the plenum and the tasks ensuing from Comrade L.I. Brezhnev's report thereat are being extensively discussed at party committee plenums and soviet sessions and in primary party organizations and the labor collectives.

The communists and all working people of the republic unanimously and warmly approve the decisions of the May Plenum, warmly support the Peace Program put forward by the 26th CPSU Congress and undividedly approve the wise domestic and foreign policy of the Communist Party and the fruitful activity of the CPSU Central Committee and the Central Committee Politburo headed by the outstanding political figure and statesman of the present day and loyal continuer of the great Leninist cause, Comrade Leonid Il'ich Brezhnev.

It is significant that in the course of the discussion the main emphasis is being put on practical work with respect to implementation of the Food Program and the realization of intrinsic potential and reserves.

Much in this field is already being done. The republic's working people are responding to the party's concern for the growth of the people's well-being with selfless labor and a struggle for the successful fulfillment of the plans of the jubilee year and the 5-year plan as a whole. At this time many worker groups have adopted new, upgraded pledges and are striving for labor accomplishments.

The republic's industrial workers have scored pretty good successes. The 6-month plan for the production and sale of products was fulfilled by all industrial ministries and departments. Some R21.5 million worth of products were sold over and above the plan.

The agricultural workers fulfilled the socialist pledges for the sale to the state of local silkworm cocoons and the 6-month plans for animal husbandry product purchases ahead of schedule, and the harvesting of grain crops has been completed. The mass harvesting and delivery to the state of fruit and vegetable products is being performed successfully, and the quotas for the shipment of early vegetables to the country's industrial centers have been fulfilled.

An intensive struggle is being waged everywhere to obtain a high harvest of cotton and other agricultural crops. Everything is being done to ensure that this very year the working people perceive the results of implementation of the decisions of the CPSU Central Committee May (1982) Plenum. The decisions of the recent Turkmen Communist Party Central Committee Seventh Plenum, which discussed and adopted the republic food program, are also oriented toward this.

Comrade Deputies! In accordance with the Main Directions of the USSR's Economic and Social Development in 1981-1985 and the Period Through 1990, in the 11th Five-Year Plan our republic has to take a new step forward in economic and sociocultural building.

In industry it is necessary to increase the manufacture of products 21-24 percent, including a doubling of petroleum refining and a 2.8-fold increase in mineral fertilizer production. In agriculture the set task is to increase the average annual gross product 14-16 percent. The social program for the 5-year plan has been constructed in a package with the tasks of the development of the economy.

The fate of the 5-year plan, Comrade L.I. Brezhnev emphasized at the celebrations in Tashkent, will largely depend on how successfully we overcome the initial and, in some ways, most difficult section of the path.

What are the results of our work in this respect?

The majority of labor collectives coped with the quotas of the first year of the 5-year plan. Industrial production increased 2.5 percent, and more than R56 million worth of products were produced additional to the plan. The 5-year construction plan is gathering pace.

However, the party teaches us to concentrate attention on the unsolved problems. If we evaluate how we have begun the 5-year plan from this standpoint, it has to be said bluntly that the results could have been more impressive.

The results of the first year of the 5-year plan and the first 6 months of the current year have shown that not all collectives are working at a pace ensuring fulfillment of the plan and the adopted socialist pledges. Labor productivity is not growing quickly enough, full use is not being made of production capacity, many low-quality products are being manufactured and the practice of economies is being seriously disrupted. A number of industrial facilities is being constructed unsatisfactorily, and the plans for social construction are not being fulfilled. The plans for purchases of certain agricultural products are not being fulfilled in full.

These questions, problems and tasks confronting the republic in the 11th Five-Year Plan were examined in detail at the 22d Turkmen Communist Party Congress and subsequent Central Committee plenums. You know about them. The organizational-political measures passed in respect of them entrust serious and responsible duties to the republic's party and also soviet authorities. The main requirement is to ensure that the soviets perform organizing work more persistently and step up supervision of the fulfillment of plan quotas. The present session of the republic Supreme Soviet, which is discussing the tasks of the soviet and economic-planning authorities in the capital construction sphere, is also devoted to this.

The results of capital construction in the 10th Five-Year Plan and in 1981 were described in detail in the report of Ch.S. Karryyev, chairman of the republic Council of Ministers. I will cite just two figures: approximately R6 billion of capital investments were assimilated in the 5-year plan and R1.3 billion in 1981. A number of major industrial facilities was built and commissioned and a considerable amount of housing and cultural-everyday construction was carried out.

All this was the result of the great deal of organizing work of the republic's party, soviet and economic-planning authorities and the multithousand-strong detachment of skilled workers and engineering-technical personnel employed in the construction sector and many other organizations participating in the process of the construction of facilities.

But the indicators which have been achieved are still below the plans and do not satisfy us. The plans of housing construction were fulfilled neither in the 10th Five-Year Plan nor in 1981. Schools and children's establishments were built with varying success, and hospitals with clinics and vocational-technical schools have been and are now being built completely unsatisfactorily.

The construction has dragged on and the commissioning time has been postponed with respect to many production projects.

Yet it is precisely on the Chardzhou Oil Refinery, Bezmein Carpet Works, the Maryy Nitrogenous Fertilizer Plant, a nonwoven materials factory in Chardzhou and many others, which are designed to provide approximately 80 percent of the industrial output increase, that achieving the pace set by the 5-year plan depends.

Annual nonassimilation of the resources allocated for the construction of housing, schools, children's establishments, hospitals and other cultural-educational facilities is preventing us accomplishing in full the tasks of the republic's social development and satisfying the ever increasing requirements of the residents of both the cities and the countryside.

What are the reasons for this situation? They vary. They include shortcomings in the organization of construction production, lack of promptitude in the maneuvering of resources, hitches in the work of the prime contractors with the subcontract organizations, an absence of due supervision and the personnel's inadequate performance discipline. Big losses of work time are allowed to occur, inefficient use is made of construction equipment, progressive techniques are being introduced inadequately and the level of mechanization of laborious operations is insufficient at the construction sites.

I would like to dwell on the problem of trained worker personnel.

The republic's construction sites are annually reinforced by the graduates of VUZ's, higher secondary specialized institutions and vocational-technical schools. In the last 6 years the number of them has constituted approximately 13,000. Some workers improve their qualifications annually directly on the job. However, we have a shortage of construction workers. Organizations of the republic Ministry of Construction and Ministry of Rural Construction are experiencing difficulties here. Personnel turnover is high in many collectives.

The losses from this are great. People who have acquired a trade and mastered work skills and methods leave, and their place is taken by novices whose training requires time and resources.

The creation of stable labor collectives is a complex process requiring great organizing work and a responsive attitude toward people and their needs and requirements. Matters will not be rectified by bureaucratic administration and the issuing of orders. Earnings alone, however big they may be, will not keep people or rally a real collective. An analysis shows that half of the people leave construction sites owing to dissatisfaction with the work and social conditions.

Of those discharged, roughly 50 percent are workers under 30 years old. And this is not fortuitous. Young people with secondary and secondary technical education arrive at the construction sites. They make high demands on the content of the work and everyday conditions.

Where is the way out? Where can skilled manpower be found?

First, it is necessary to sharply increase the rate of mechanization of manual labor. Second, we must ensure a reduction in losses of work time, which remain considerable and are growing in places.

Extensive introduction of the brigade contract, which was evaluated highly in the decisions of the 26th CPSU Congress and Comrade L.I. Brezhnev's speech at the 17th Trade Unions Congress, is designed to improve the use of labor resources and increase labor productivity.

And, finally, an extension of the network of vocational-technical schools and the unconditional fulfillment of the plans for their construction by all construction ministries and departments.

The activity of the soviets, relying on the assertiveness, initative and personal example of the working people's empowered representatives--the people's deputies--should also be subordinated to the accomplishment of this task. It is precisely via the deputies, and there are more than 23,000 of them in the republic, that the soviets can and must directly influence the creation of proper work and social conditions for the construction workers, assistance to the base vocational-technical schools and the organization and development of socialist competition and the introduction of the brigade contract.

Comrade Deputies!

Among the conditions designed to ensure a further increase in the efficiency of the national economy as a whole and capital construction in particular the party attaches particular significance to the zealous, solicitous use of public resources. "The policy of an intensification of production which has been proclaimed by the party," Comrade L.I. Brezhnev said in Tashkent, "requires the activation of all reserves of the economy and an ability to dispose proprietorially of all our available capacity."

Yet our construction sites and industrial enterprises also are permitting considerable losses of raw material, fuel, power and building materials and structures. Erecting an insurmountable barrier against extravagance is the primary duty of the soviets and their ispolkoms, trade unions and Komsomol organizations, people's control and all state and management authorities. The achievement of the highest end results with the least labor, material and financial outlays must become a law of our economic practice.

I will not dwell in detail on other questions of an increase in construction efficiency, namely, on questions of a refinement of planning, the work of clients and contractors and the development of construction's production base, questions of the material-technical supply of the construction sites and others. Much was said about these in a manner of great concern in the report of Ch.S. Karryyev and the speeches of Comrade Deputies Shakhov, Yeremin, Bayramdurdyyev, Tagandurdyyev and others.

I would say only that their solution must be secured by the republic Council of Ministers and Gosplan and our ministries and departments. Comrade L.I. Brezhnev pointed in his speech at the 17th Trade Unions Congress precisely to the need for a more critical approach to an evaluation of the results of work, for its shortcomings and ommissions to be seen, for their speedier rectification and for us to learn to find unutilized potential.

Comrade Deputies! The circle of the soviets' concerns is immeasurably broad. But it would perhaps be no exxageration to say that the construction of housing and cultural-everyday facilities requires particular attention.

It is these questions which occupy a large place in the working people's letters and complaints received by the party and soviet authorities, the trade union and Komsomol organizations, newspaper and journal editorial offices and television and radio. Most often people request an improvement in housing conditions and point to violations of the established housing allocation procedure.

A large part of the instructions received by the deputies also concerns questions of an increase in the volume of the construction of housing and children's and medical establishments and municipal-everyday construction. Comrade minister-deputies Sheremet'yev and Gul'manov and other construction ministry and department leaders also have such instructions, evidently. However, it is these ministries which are failing to provide for the stable fulfillment of plans and an increase in the volume of the construction of housing, schools and children's establishments.

The resources allocated for municipal construction are not fully assimilated from year to year. The installation of water-supply systems, sewerage, boiler houses and gas-supply systems is lagging behind. A critical situation has arisen this year even in Tashauz and Krasnovodsk. The situation deteriorates from year to year in Mary, Bayram-Ali, Chardzhou and Ashkhabad. The leaders of local party and soviet authorities and contracting ministries and departments have been strictly cautioned in this connection. Only the unconditional fulfillment of the plans set for 1982 will ensure the possibility of housing construction in these cities.

I would like to mention in this connection that many oblispolkoms, gorispolkoms and rayispolkoms display, as a rule, great persistence and energy at the stage of development of the plans, seeking in the republic bodies the incorporation in the plan of this sociocultural facility or the other, but far from always exert the same efforts to ensure the unconditional fulfillment of the plans of capital construction.

An improvement in the state of housing construction and the accomplishment of the tasks of an increase in the amount of construction of large-panel houses with the capacity of large-panel house-building enterprises of the TuSSR Ministry of Construction having been raised to 700,000 square meters by 1985 will require of the ministry and the republic Gosstroy the maximum concentration of forces and resources on the modernization and expansion of works, the development as quickly as possible of plans of prospective-series

4-, 7-, and 9-story apartment houses and the transfer of existing works to their construction.

Discussions have been under way for a long time now and a decision has been made to switch to a 2-year cycle of planning housing construction initially in Ashkhabad and subsequently in other cities of the republic. The initative of the Orel construction workers, which was approved by the CPSU Central Committee, has been applied extensively in the construction of housing and sociocultural facilities in many cities of the Union. Here, however, there has not a step been taken. It is with good reason that it is said that whoever does not wish to do something looks for excuses, whoever wishes looks for opportunities.

It is essential that we also tackle these questions positively.

Comrade Deputies! A further couple of words about the problems of the social reorganization of the countryside. There has been a considerable increase in rural localities in recent years in the need for the construction of individual residences of kolkhoz members and sovkhoz workers. The increased material possibilities of the rural workers are contributing to a further improvement in their living conditions. At the same time the plans in accordance with which these homes are being built are faceless, do not correspond to present-day requirements and do not contain architectural elements of national traditions, and for this reason everyone builds at his own sweet will.

The republic Gosstroy should as quickly as possible provide individual construction in the countryside with new model housing plan series which take account of specific features, climatic conditions, the availability of local construction materials and the singularities of national architecture. And it is necessary to build handsome two-story houses in rural localities also. We must develop intensively the system of house-building cooperatives in the countryside, making extensive use here of kolkhoz, sovkhoz and enterprise resources and state assistance.

The measures for the social reorganization of the countryside, rayon centers and kolkhoz and sovkhoz communities are an organic part of the USSR's Food Program approved by the CPSU Central Committee May (1982) Plenum. The oblispolkoms and rayispolkoms in conjuction with the ministries, departments and agrarian-industrial associations must provide for their unconditional fulfillment.

Comrade Deputies! This session of the TuSSR Supreme Soviet will determine the most important tasks confronting capital construction in the 11th Five-Year Plan. A comprehensive decision will be adopted with respect to all questions of construction. Daily, painstaking and, I would say, detailed work is beginning which should combine the efforts of the ispolkoms, management organizations and public formations, in short, all means of organizational influence and control.

I would like particularly to emphasize once more the role of the deputies, recalling Lenin's instruction that they must themselves work, themselves execute their laws, themselves check what is happening in practice and themselves be directly answerable to their electorate.

Guided by the decisions of the 26th party congress, the CPSU Central Committee November (1981) and May (1982) plenums and the 22d Turkmen Communist Party Congress, the TuSSR Supreme Soviet Presidium and Council of Ministers, local soviets and ministries, state committees and departments of the republic must implement effective measures for a radical improvement in affairs in capital construction, particularly in the construction of housing and municipal-everyday and sociocultural facilities.

It is essential that the TuSSR Gosplan, Gosstroy and Gossnab, TuSSR ministries of construction and rural construction, the "Turkmenneftegazstroy" Association, the Glavkarakumstroy Administration and all construction and installation organizations, client ministries and departments and soviets provide for the unconditional fulfillment of the plans of capital construction for 1982 and subsequent years of the 11th Five-Year Plan.

Comrade Deputies! The examination at this session of the TuSSR Supreme Soviet of the question of the state of and tasks to improve capital construction in the republic is an integral component of the purposeful activity of the Communist Party and the Soviet state with respect to the economic and social development of our motherland.

Comrade Deputies! Permit me to assure the CPSU Central Committee, Central Committee Politburo and Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, that the communists and all deputies and working people of Turkmenistan will exert every effort for the successful implementation of the decisions of the 26th party congress and the CPSU Central Committee May (1982) Plenum and the quotas of 1982 and the 11th Five-Year Plan as a whole and will fittingly greet the 60th anniversary of the formation of the USSR.

TURKMEN EXECUTIVE COMMITTEE DEPUTY CHAIRMEN MEET

GF141922 Ashkhabad Domestic Service in Russian 1545 GMT 14 Jul 82

[Text] As we have already announced, a meeting of the deputy chairman of the republic's oblast and rayon soviet executive committees and deputy directors of kolkhozes for cultural mass work has been held in Ashkhabad. Measures for further developing cultural and living standard of the republic's population in light of the resolutions of the 26th CPSU Congress, the May 1982 CPSU Central Committee plenum, the 22d Congress of the Turkmen Communist Party and the last plenum of the Turkmen Communist Party Central Committee were discussed.

During the second day of the meeting attention concentrated on the cultural mass work experience of the republic's kolkhozes and sovkhozes. Comrade Mollayeva, secretary of the Turkmen Communist Party Central Committee, addressed the final session. She noted that by fulfilling the decisions of the 26th CPSU Congress, the May 1982 CPSU Central Committee plenum and the resolution of the CPSU Central Committee on questions related to the ideological work and [word indistinct], the Ministry of [word indistinct] and the local People's Deputies Councils led by the party organs will have contributed a great deal to developing the cultural and living conditions of the population and further promoting the ideological, political, internationalistic and atheistic upbringing of workers.

However, many shortcomings remain in the organization of cultural life of rural population. Cultural growth is slow in a number of rayons and has not been able to promote economic development in kolkhozes and sovkhozes. Deputy directors of kolkhozes for cultural mass work should encourage kolkhoz workers [words indistinct] production, intensify organized cultural mass work among them, and improve their social, cultural and living conditions.

Comrade Mollayeva drew special attention to the necessity of improving the work of the social dietary services for children in particular. Comrade Mollayeva further noted that it is necessary to secure a children's (?clinic) in every kolkhoz, sovkhoz and inhabited locality. It is necessary to control the organization of educational work, teaching of the Russian language and qualification of [word indistinct] cadres.

Comrade Mollayeva further noted that the deputy directors of kolkhozes for culture should pay attention on the rational distribution of [word indistinct], strengthening material and technical base and cultural enlightenment institutions and [words indistinct].

In conclusion Comrade Mollayeva expressed assurance that the soviet, party organizations, rural People's Deputies Councils and deputy kolkhoz directors for cultural mass work will devote all their energies to improve the cultural and living conditions of the republic's population and the ideological, political, internationalistic and atheistic upbringing of workers.

GEORGIAN CENTRAL COMMITTEE PLENUM ON SCIENCE AND TECHNOLOGY

Information Announcement

Tbilisi ZARYA VOSTOKA in Russian 15 May 82 p 1

[Passages enclosed in slantlines printed in boldface]

[Text] On 14 May the Sixth Plenum of the CP of Georgia CC began its work.

The plenum is discussing the following question: "Tasks of the party organization of Georgia with regard to concentrating efforts on the further development of science and speeding up scientific and technical progress in the republic's national economy."

The plenum is also examining the planned measures of the CP of Georgia CC for further improving party leadership of the republic's trade-union organizations in light of the speech by Comrade L. I. Brezhnev at the 17th Congress of USSR Trade Unions, as well as information about the progress of preparations for celebrating the 60th anniversary of the formation of the USSR.

Taking part in the plenum's work are the following persons: USSR Minister of Instrument Making, Automation Equipment, and Control Systems /E. K. Pervyshin/, vice-president of the USSR Academy of Sciences, Academician /V. A. Kotel'nikov/, vice-chairman of the USSR State Committee for Science and Technology /A. K. Romanov/, USSR Deputy Minister of Higher and Secondary Specialized Education /I. M. Makarov/, USSR Deputy Minister of Agriculture /V. Shevelukha/, executive of the CPSU CC /V. P. Vashchenko/.

The plenum was opened with an introductory speech by candidate member of the CPSU CC Politburo, first secretary of the CP of Georgia CC /E. A. Shevardnadze/.

The report of the CP of Georgia CC Bureau on the principal question was presented to the plenum by candidate member of the CPSU CC Politburo, first secretary of the CP of Georgia CC E. A. Shevardnadze, and other materials were considered in a preliminary manner by the plenum participants.

Speaking in the discussions on the report were the following persons: first secretary of the Tbilisi Gorkom of the CP of Georgia /T. N. Menteshashvili/, president of the Georgian SSR Academy of Sciences, academician of the republic's Academy of Sciences /Ye. K. Kharadze/, first secretary of the Abkhazian Obkom of the CP of Georgia /B. V. Adleyba/, chairman of the Georgian SSR State Comittee for Science and Technology, academician of the Georgian SSR Academy of Sciences /I. G. Gverdtsnteli/, rector of the Tbilisi State University, academician of the Georgian SSR Academy of Sciences /V. M. Okudzhava/, Georgian SSR Minister of Agriculture /G. D. Mgeladze/, first secretary of the Adzharskiy Obkom of the CP of Georgia /V. R. Papunidze/, vice-president of the USSR Academy of Sciences, academician /V. A. Kotel'nikov/, bureau member of the CP of Georgia CC, lathe operator of the Tbilisi Aircraft Plant imeni Dimitrov /T. V. Rostiashvili/, chief of the photosynthesis problem laboratory of the Tbilisi State University, corresponding member of the Georgian SSR Academy of Sciences /G. A. Sanadze/, deputy chairman of the Georgian SSR /O. Ye. Cherkeziya/, first secretary of the South Osetinskiy Obkom of the CP of Georgia /F. S. Sanakoyev/, the Georgian SSR Minister of Higher and Secondary Specialized Education, corresponding member of the republic's Academy of Sciences /D. I. Chkhikvishvili/, USSR Minister of the Communications Equipment Industry /E. K. Pervyshin/, chairman of the Georgian Republican Council of Scientific and Technical Societies, director of the All-Union Scientific-Research Institute of the Technology of Low-Capacity Electrical Machines, Doctor of Technical Sciences /G. V. Mindeli/, secretary of the party bureau of the Institute of Plant Biochemistry of the Georgian SSR Academy of Sciences, Doctor of Biological Sciences /G. I Kvesitadze/, deputy chairman of the USSR State Committee for Science and Technology /A. K. Romanov/, chairman of the Georgian SSR State Committee for Construction Affairs /Mirianashvili/, director of the Institute of Physiology imeni I. S. Beritashvili of the Georgian SSR Academy of Sciences, corresponding member of the USSR Academy of Medical Sciences /M. M. Khanashvili/, deputy chairman of the Georgian SSR Council of Ministers, chairman of the republic's Gosplan /D. L. Kartvelishvili, rector of the Georgian Polytechnical Institute imeni V. I. Lenin, academician of the Georgian SSR /T. N. Loladze/, deputy minister of higher and secondary special education of the USSR, corresponding member of the USSR Academy of Sciences /I. M. Makarov/, first secretary of the Gardabanskiy Raykom of the CP of Georgia /O. M. Bokeriya/, rector of the Tbilisi Institute for Physicians' Advanced Trainingof the USSR Ministry of Health, academician of the USSR Academy of Medical Sciences /S. N. Khechinashvili/ the general director of the Analitbor Scientific-Production Association of the USSR Ministry of Instrument Making, Automation Equipment, and Control Systems /Z. Ye. Kruashvili/, USSR Deputy Minister of Agriculture, Doctor of Biological Sciences /V. S. Shevelukha/, deputy chairman of the Georgian SSR State Committee for Science and Technology, rector of the Institute for the Administration of the National Economy /S. G. Kadagidze/, rector of the Georgian Agricultural Institute, acadmician of the All-Union Academy of Agricultural Sciences imeni V. I. Lenin /V. I. Metreveli/, first secretary of the Telavskiy Raykom of the CP of Georgia /A. V. Kobaidze/.

Today, 15 May, the plenum is continuing its work. (GruzINFORM)

Shevardnadze Remarks

Tbilisi ZARYA VOSTOKA in Russian 15 May 82 p 1

[Passages enclosed in slantlines printed in boldface]

[Text] Comrades!

Before opening the regular Plenum of the CP of Georgia CC I would like to say a few words about this plenum of ours because it is impossible not to speak about this.

In the first place, it should be noted--and this, perhaps, will not be any exaggeration--that /for no other plenary session of our CC have we prepared with such care and scrupulousness,with such a feeling of high responsibility, as we have for this plenum--a plenum on science and scientific progress./

This is testified to even in the fact that our plenum has been postponed more than once, although the time periods for its convocation were fixed. Those of us in the CC well understood this and had a good feeling for it--it was felt by the entire CC Bureau--that the first few times we were not prepared for such a plenum. For, of course, it is not just a matter of delivering a good report at the plenum. We saw our principal task as /coming to the plenum with a precisely worked-out program for the further upswing of science and the speeding up of scientific and technical progress, drawing up a scheme, well-thought-out in all its details, for further improvements in administering the process of scientific creativity, developing the basic sciences, introducing scientific achievements into life, into practice, and into the republic's national economy./

/It was necessary for us to appear at the plenum/, as it has already been stated once, with a broad-based program of activation, of stepping up the party's influence on this process. /We had to bring to the plenum/ specific proposals on ways, forms, and methods for improving the party's leadership in the activity of scientific institutions, their primary party organizations.

At first there was much that was unclear here, a great deal required profound analysis, and, as always, the need arose to confer with our party activists, with the working people, with our public, to listen carefully to its opinion, to talk, and to discuss jointly the most important, principled questions.

And we held very interesting meetings and quite lengthy conversations with prominant scientists, important leaders in science and technology, officials at academic and branch scientific-research institutes, directors of design-engineering bureaus, scientific laboratories, rectors and department heads of VUZ's, directors of ministries and departments, leaders of production, workers in industry, agriculture, construction--all sectors of the national economy, with party, soviet, trade-union, and Komsomol workers, with the most broad-based representatives of our society.

In connection with the preparations for the plenum on science and scientific-technical progress, the press published /A Letter from the CP of Georgia CC to the Communists and Komsomol Members, to Scientists and Specialists in the National Economy, and to All Working People in the Georgian SSR./ This in July of last year. But, in fact, we had begun to prepare for the present plenum long before this. It can be stated with confidence that by the time of our meeting today preparations have been going on for two and even three years.

And in the course of all this time, especially after the CC Letter was published, numerous responses came pouring in to the party CC, containing a large quantity of suggestions, wishes, critical remarks, recommendations and advice on ways to further develop science and intensify it, speeding up the pace of scientific and technical progress, further improving party and state guidance of science and scientific and technical progress.

Today, from this rostrum, I would like to express our profound gratitude to all the organizations and persons who have taken an active part in preparing our plenum and who have sent interesting proposals, advice, and recommendations which are deserving of attention. Many of them have been included in the draft report distributed to the plenum participants, or other documents which the Party CC Bureau is presenting today to the Sixth Plenum of the CC.

I thank you very much for this, Comrades, for such active participation by you in preparing for this plenum!

A particularly great and fruitful amount of work was conducted during the period of preparation for the plenum--and we consider it necessary to make special note of this--by the following: the Presidium of the Georgian SSR Academy of Sciences, the Georgian SSR State Committee for Science and Technology, the Georgian SSR State Planning Committee, the Georgian SSR State Committee for Construction Affairs, the Georgian SSR Ministry of Higher and Secondary Specialized Education, as well as other ministries and departments.

A very great deal was accomplished during all this time by the departments of the Party CC and the republic's Council of Ministers.

And here too we consider it necessary to make note of the large amount of aid rendered to us in preparing for this plenum by the Department of Science and Educational Institutions of our party's CC, by other departments of the CPSU CC, by the Presidium of the USSR Academy of Sciences, the USSR State Committee for Science and Technology, USSR Gosplan, the USSR Ministry of Higher and Secondary Specialized Education, the USSR Ministry of the Communications Equipment Industry, and the Ministry of Higher and Secondary Specialized Education of the Russian Federation.

A very great deal has been provided for us by the rich experience of the party leadership in developing science and accelerating scientific and technical progress, as accumulated by the Moscow Party Gorkom and the Leningrad Party Organization, by the Central Committees of the CP's of the Ukraine, Belorussia, Azerbaijan, Armenia, and other fraternal Union republics, as well as countries of the socialist community.

A significant event is the fact that the following persons have taken part in the work of our plenum: vice president of the USSR Academy of Sciences, Academician Kotel'nikov, Vladimir Aleksandrovich, minister of the USSR Ministry of the Communications Equipment Industry, Comrade Pervyshin, Erlen Kirikovich, deputy chairman of the USSR State Committee for Science and Technology, Comrade Romanov, Arnol'd Konstantinovich, deputy minister of the USSR Ministry of Higher and Secondary Specialized Education, corresponding member of the USSR Academy of Sciences, Comrade Makarov, Igor' Mikhaylovich, deputy minister of the USSR Ministry of Agriculture, doctor of biological sciences, Comrade Shevelukha, Viktor Stepanovich, executive of the CPSU CC apparatus, Comrade Vashchenko, Vladimir Petrovich.

As you know, the draft report on the question under discussion has been distributed well ahead of time not only to the members and candidate members of the CC, and to the members of the Auditing Commission of the CP of Georgia, but also to all the plenum participants. Furthermore, all the comrades without exception prior to the beginning of the plenum's work have examined in a preliminary way the basic positions of the report, other documents, and the plan for practical measures at the sessions of the working groups which were created along the basic lines of scientific and technical progress in the various sectors of the republic's national economy. As you know, the sessions of the working groups were led by the following secretaries of the CP of Georgia CC: Comrades G.V. Kolbin, D.I. Patiashvili, Z.A. Chkheidze, G.N. Yenukidze, as well as by the chief of the Department of Party-Organizational Work, memner of the CC Bureau, Comrade S. Ye. Khadenshvili.

According to their information, the work of these groups was extremely fruitful, the sessions passed in an interesting manner, and specific businesslike suggestions were made which will also be taken into account in the final revision of the plenum's documents.

And so, inasmuch as all the plenum participants are already familiar with the text of the report, there is obviously no necessity to read it aloud.

The only thing that I would like to do before the beginning of our work, Comrades, is to mention once more one circumstance.

The draft report which was presented to the plenum contains quite a few proposals /with regard to the labor organization/ of scientists, researchers, planners, and designers. Running like a red thread throughout the entire report is talk of a /closer, more effective integration between science and production/; proposals are made for various forms of partnership between science and production, perfecting the already-existing forms and systems of such integration; mention is made of the need to place the planning and administration of science on a more solid and genuinely scientific basis.

However, here also the following needs to be said: much of what is being introduced for the plenum's consideration is still in the experimental stage and is still, let's speak frankly, a matter for discussion. /Therefore, we call upon the entire body of the CC Plenum and all the invited comrades, as always, to frankly and openly express their own opinions on all the questions touched upon here./

We sincerely desire that our plenum be held with the /maximum amount of frank and principled discussion./ And I can assure you, Comrades, that everything which is of value even to the slightest extent, everything valuable, interesting, new, and progressive--everything which can help us to achieve a new upswing in science, to speed up scientific and technical progress, will be /attentively examined in the party's CC, profoundly studied, and included within the program of all our further work along these lines./

Comrades, let us act so that the plenum report and all the documents which will be adopted by it will indeed become the /fruit of our and your common, collective work, the common, collective work of all the participants in the plenary session of the CP of Georgia CC.

UKRAINAIN COUNCIL OF MINISTERS FORMS NEW COMMISSION

[Editorial Report] Kiev RADYANS'KA UKRAYINA in Ukrainian on 19 June publishes on page one a 300-word article reporting that the Ukrainian Council of Ministers has created a new commission of the Presidium of the Council of Ministers to deal with questions relating to the agroindustrial complex. According to the article, all ministriesk departments, organizations, enterprises and institutions are "obligated" to carry out decisions of the new commission pertaining to the agroindustrial complex and which fall within its competence. Among those listed as members of the new commission are: Yu. P. Kolomiyets', first deputy chairman of the Ukrainian Council of Ministers (chairman of the commission); V.P. Popov, first deputy chairman of the Ukrainian Gosplan (first deputy chairman of the commission); and M.V. Khorunzhyy, Ukrainian minister of agriculture (commission member).

UKRAINIAN KOMSOMOL PLENUM HELD

[Editorial Report] Kiev RADYANS'KA UKRAYINA in Ukrainian on 19 June 1982 publishes on page four a 500-word RATAU article on the Ukrainian Komsomol Central Committee plenum held in Kiev on 18 June. First Secretary A.I. Korniyenko, according to the article, delivered a report and the plenum discussed the results of the 19th All-Union Komsomol Congress and the May 1982 CPSU Central Committee plenum. Komsomol organizations and members were called upon to continue their efforts on key construction projects in western Siberia, the Non-chernozem zone and BAM and in the modernization of enterprises, particularly in the coal, metallurgy, machine building and transportation industries. The plenum also voiced the need for mobilizing youth in order to aid in reducing the duration of the harvest period and improving animal husbandry.

CONFERENCE ON STATE OF FINANCES, RESOURCES

[Editorial Report] Kiev PRAVDA UKRAINY in Russian on 22 June 1982 publishes on page 3 a 450-word RATAU article on a republic level conference-seminar held in Kiev on 21 June. The conference-seminar addressed questions concerning financial and material resources and expenditures in the Ukrainian republic. Participating in the proceedings were a number of officials from the Ministry of Finance and other governmental and party bodies of the Ukrainian SSR. According to the article, V.P. Kozerchuk, minister of finance, noted that inspections and audits of financial operations conducted by ministries and other bodies in a number of cases were of "little efficacy and did not fully meet the requirements for strengthening state discipline and averting poor management, and did not produce the required effect for improving the state of affairs". I.D. Stepanenko, deputy chairman of the Council of Ministers, said that the resolution of existing problems required the "strengthening of state discipline" and that ministries and departments must react "sharply" to violations of plan and financial discipline, poor management and abuses.

UKRAINE OBKOM PLENUMS FOCUS ON FOOD PROGRAM

[Editorial Report] Kiev PRAVDA UKRAINY in Russian on 1, 2, 4, and 8 July 1982 publishes on page 1 a series of RATAU articles (averaging 3,000-4,000 words) reporting on recent obkom plenums in the Ukrainian republic. The plenums were attended by leading Ukrainian party and government officials. The participants and speakers at the plenums focused their attention on agriculture and the measures needed to attin the goals of the new food program. They noted agriculture and related areas.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

AZERBAIJAN SSR

Political Affairs

THIRTY-FIRST AZERBAIJAN KOMSOMOL CONGRESS

[Editorial Report] Baku KOMMUNIST in Azeri 3 April 1982 pp 2-3 carries a 6,200 word report on the 31st Congress of the Azerbaijan Komsomol. "In the ranks of the Azerbaijan Komsomol there are now 1,126,000 boys and girls who are united in more than 10,000 primary Komsomol organizations." Two areas of weakness were stressed: "Komsomol committees do not everywhere relate the political and economic education of the boys and girls with life nor with the solution of modern problems" and "atheistic education of youth must be conducted in a relevant and progressive manner and individual work with certain youth and adolescents who have fallen under a religious influence must be strengthened."

FIFTIETH ANNIVERSARY OF DECREE ON REBUILDING ARTISTIC ORGANIZATIONS

[Editorial Report] Baku KOMMUNIST in Azeri 27 April 1982 carries a 1,200-word article on p 2 by Ismayyl Shykhly on the 50th anniversary of the decree "On rebuilding artistic organizations" and its role in the development of modern Azerbaijani literature. The trend established by the decree is described: "After the historical decree of the Central Committee dated 23 April 1932 the former revolutionary and Bolshevik writer M. S. Ordubadi created the novels 'Secret Baku' and the 'Fighting City' concerning the secret revolutionary movement which took place in Azerbaijan. At the same time, the writer wrote the novel 'Smoke-Covered Tabriz' which was devoted to a description of the Settarkhan movement and, in general, to the Tabriz revolution which occurred in Southern Azerbaijan."

Economics

AZERBAIJANI HEADS TYUMEN' GEOLOGICAL ADMINISTRATION

[Editorial Report] Baku KOMMUNIST in Azeri 13 April 1982 p 3 carries a 1,900-word interview with Farman Salmanov, chairman of the Tyumen' chief Geological Administration. In discussing the Azerbaijanis working in Siberia he says "they should not be afraid of difficulties, they should be brave and view the future with belief."

Social and Cultural Affairs

FRAGMENTS FROM IBRAGIMOV MEMOIRS APPEAR

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 16 April 1982 p 3 carries a 4,100-word memoir by Mirza Ibragimov on his impressions of a number of people who played a role in his life. These were: The Azerbaijani playwrite Huseyn Javid, the Russian writer Konstantin Fedin and the Armenian writer Marietta Shaginyan. The impressions, while written in 1982, concern the period of the 1930's and 1940's.

WRITERS UNION ASSESSES ACHIEVEMENTS, SHORTCOMINGS

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 23 April 1982 pp 2-7 carries a 10,000-word summary of a discussion in the Writers Union chaired by Mirza Ibragimov. Three basic points are made: "one sees that weak and mediocre poets' books have found their way to Moscow publishers"; secondly, "the works of young poets are fraught with weak and sentimental feelings, dry descriptions of nature and memory"; thirdly, on a more positive note, "in the literature of Southern Azerbaijani the life of the working man, topics arising from the needs of the day, the revolution and its heroes have been turned into a basic subject. Now a very successful literature inspired by life and in step with the time is being created."

IMPORTANCE OF RUSSIAN STRESSED

[Editorial Report] Baku KOMMUNIST in Azeri 25 April 1982 p 1 carries a 1,100-word lead editorial noting that "while preparing for the 60th anniversary of the formation of the USSR, Soviet men are noting with gratitude the unparalleled role of the Russian language in the great historical unity of peoples." With regard to Azerbaijan: "Russian has become the second mother tongue of the Azerbaijani people." To this end a number of specialized boarding schools on the middle school level are making contributions. The problem is: "Among enrollees in rural schools there are many who do not know Russian." This creates an additional complication--"because some of our children entering military service do not know Russian well, we regret their initial difficulty and confusion" writes a veteran from Nakhchyvan. The editorial asks that this situation be rectified.

RUSTEM CRITICIZES YOUNG WRITERS, PRAISES SOUTHERN AZERBAIJAN

[Editorial Report] Baku KOMMUNIST in Azeri 15 April 1982 p 3 carries a 1,200-word interview with Suleyman Rustem, the grand old man of Azerbaijani letters, on the current state of Azerbaijani literature. On young writers he says: "In discussing the successes of young writers it is appropriate to mention some of their shortcomings. It is clear that the youth are always inclined towards newness and contemporaneity. In such situations there can always be mistakes." The mistakes are unspecified. On the recent proliferation of literature from Southern Azerbaijan: "One feels in all of them a love for literature and the fine arts. Basically it has always been this way. But one must exploit this somewhat more. I consider a literary awakening in Southern Azerbaijan an historical necessity."

KHANLAROVA PERFORMS IN AFGHANISTAN

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 2 April 1982 p 7 carries a 600-word "Letter From Afghanistan" by Shahin Fazil in Kabul on Zeyneb Khanlarova's March concerts in Kabul and Kandahar. In the course of the article it is noted that an Azerbaijani, Isa Resuloghlu Memmedov, is an adviser to the Radio and Television Committee of the Afghanistan Ministry of Culture.

TEACHERS NEWSPAPER DEVOTES REGULAR COLUMN TO SOUTHERN QUESTION

[Editorial Report] Baku KOMMUNIST in Azeri 15 April 1982 p 3 carries a 650-word dispatch on the planned "Voices From the South" column which is to appear regularly in the teachers' newspaper AZERBAYJAN MUALLIMI. Its purpose is to familiarize readers with articles appearing in Southern Azerbaijani media.

CALL FOR ALPHABET, TERMINOLOGY REFORM IN THE SOUTH

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 9 April 1982 p 6 carries an 800-word article by Azeroghlu on the revival of the Azerbaijani language in Iran. He remarks: "While reading works published in the South, the writing of a number of words in a new form demands attention. Some words written in Arabic and Persian are written completely differently in Azerbaijani." Now, however, "writers are trying to write the words the way they are pronounced. Some writers are attempting to eliminate this difficulty within the Arabic alphabet itself by adding marks over certain elements." Azeroghlu notes that this could lead to "new difficulties." He also protests the usage of the terms "Azeri" and "Turkish" in reference to the language.

500 YEARS OF AZERBAIJANI-POLISH RELATIONS MARKED

[Editorial Report] Baku KOMMUNIST in Azeri 11 April 1982 p 4 carries a 1,500-word review of an article published by Lodz University press noting the establishment of Akkyoun-Polish relations in the 1470's. Polish-Azerbaijani relations are traced throughout the intervening centuries. The Lodz article was written by B. Baranowski.

AMERICAN DOCTORS IN BAKU

[Editorial Report] Baku KOMMUNIST in Azeri 14 April 1982 p 3 carries a 400-word dispatch on a delegation of medical doctors from the Buffalo (NY) Medical Institute who were visiting Baku. The delegation was headed by Professor Herbert Hauptman. He was accompanied by Dr William Dynaks (sic), director of the Molecular Physics laboratory.

ISAAC ASIMOV PROTESTS REAGAN POLICIES

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 16 April 1982 p 7 carries a letter from Zeydulla Aghayev, Candidate of Philological Sciences, who says that "I have been corresponding with Isaac Asimov since 1968....

In the last letter I sent the science-fiction writer I expressed an interest in the Reagan government and the contemporary U.S. policy. As always, I. Asimov answered immediately. As his letter expressed his interests, I submit it to the readers of ADABIYYAT VA INJASANAT." The essence of the Asimov answer is as follows: "There is no need to say that I did not vote for President Reagan and that I met his election with feelings of regret. I am not satisfied with his internal or foreign policy...and I am raising my voice often and angrily about this. I wanted to see the type of government in the United States in which it would, hand in hand with the Soviet Union, abolish all nuclear weapons and establish a firm policy of peace."

SOUTHERN AZERBAIJANI POET PUBLISHED IN BAKU

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azerbaijani 2 April 1982 p 6 carries a 2,200-word article by SIRUS on the publication of a book of poetry by Mehemmedhuseyn Shahriyar ("Aman Ayrylyg", 1981) in Baku. Shahriyar is the most famous of the modern Southern Azerbaijani poets in the AzSSR. A number of excerpts are given, including the lines "Over there is Baku/Our red Ka'ba." The publication is rather severely criticized for having omitted some lines from his poetry and not confronting the problem that many southern writers, including Shahriyar, refer to their mother tongue as "turk" (Turkish).

KAZAKH SSR

Political Affairs

KUNAYEV CRITICIZES PRIMARY PARTY UNITS FOR ECONOMIC FAILURES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 1 April 1982 carries on pages 1 and 2 a 3,900-word shortened version of a speech delivered by D.A. Kunayev, member of the Politburo of the CC CPSU and first secretary of the CC Kazakhstan CP, to the Fifth Plenum of the CC Kazakhstan CP. Much of the speech is devoted to Kazakh agriculture and animal husbandry and to the general problem of meeting the requirements of the current food program. Kunayev also examines continuing problems in industrial and residential construction, deficiencies in trade, consumer, health and communal services, plan underfulfillments in the metallurgical, chemical and coal industries and major difficulties in republic energy production. Kunayev singles out lax work by primary and some higher level party organizations as a major cause and stresses the importance of efficient and coordinated work by party units if the republic economy is to function properly.

Economics

FOOD UNAPPETIZING, SERVICE POOR IN KAZAKH CAFETERIAS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 16 April 1982 carries on page 3 a 1,200-word article by M. Tazhimuratov on food service problems in various Kazakh cafeterias serving students. The article is published under the regular rubric "First Class Service for the People."

Tazhimuratov compares service in a number of cafeterias serving students. He begins his survey with the specialized food service combine of the Kazakh State University. The combine, first of its kind in the KaSSR, operates 6 student cafeterias, 2 workers cafeterias and 15 faculty buffets, facilities capable of serving 12,000 persons a meal. The combine produces balanced, appetizing meals that are within student budgets (dinner costs 50 kopeks on the average). Food is served, moreover, in clean, pleasant surroundings with good service. Special dietary items ordered by physicians are even available by special arrangement.

In direct contrast to the state university combine, however, are many other, poorly operated food service units such as No 155 cafeteria under the cafeteria and restaurant trust of Kalinin Rayon. The cafeteria serves students of the Kazakh Polytechnical and Energy Institutes. Facilities are poor, meals monotonous, unappetizing and of poor quality. Much of what is served, moreover, is too expensive for student pocketbooks. Although surveys and consumer meetings have indicated general student dissatisfaction with the cafeteria's food and food service, little has been done to improve things. Cafeteria workers, moreover, have a bad relationship with their student patrons who, they claim, vandalize facilities, waste food and steal plates and other eating utensils.

The upshot, says Tazhimuratov, is that the poorly run cafeterias are not being patronized and students are going to others that provide better food and better service. This, in turn, overburdens the more popular establishments. He calls for a general reorganization of food services and greater attention to food service deficiencies by party and other organizations to solve these problems.

KAZAKH ACADEMY OF SCIENCES HEAD OUTLINES PAST, PRESENT RESEARCH

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 13 April 1982 carries on page 3 a 4,500-word full page interview with A.M. Kunayev, USSR State Prize Laureat, Academician of the USSR Academy of Sciences and president of the KaSSR Academy of Sciences. The interview is published under the regular rubric "60th Anniversary of the USSR" and was conducted by A. Duysenbekov and A. Alibekov.

Kunayev answers questions on the high level of scientific development in Kazakhstan compared to other parts of the world, the scope of the work of Kazakh Academy of Sciences organizations today, special tasks assigned by the 26th Congress of the CPSU and the 15th Congress of the Kazakhstan CP, international cooperation of the academy and its branches and the impact of scientific research and progress upon Kazakhstan. Kunayev stresses the benefits of Russian cooperation and sponsorship, the broad range of current research projects (22 major projects during the 11th Five-Year Plan) and the positive contributions of Kazakh Academy of Sciences research to republic and national development. Among research areas singled out for special mention are the Siberian rivers project, soil research and geological investigation. Kunayev also noted research successes in nuclear physics, complex exploitation of ores, genetic research and pharmacognosy. Kunayev was recently made a member of the USSR Academy of Sciences.

KAZAKHS EXPAND IRRIGATED FIELDS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 20 April 1982 carries on page 1 a 900-word boldface editorial on irrigated lands in Kazakhstan. Kazakhstan stands third in the Soviet Union, after the RSFSR and Uzbekistan, in irrigated lands with 1,689,000 hectares. Some 36,000 hectares were added to this total in 1981 and the efficiency of irrigated land use was improved. The editorial provides specific examples of gains from irrigated land use. Expansion of irrigated lands is urgent if the party food program is to be met.

HERBICIDE EXPERIMENTS INCREASE SUGAR BEET YIELDS, REDUCE LABOR

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 24 April 1982 carries on page 3 a 1,300-word article by Sh. Zharasov, chief of the Anti-Weed Division of the Kazakh Plant Protection Scientific Research Institute. The article discusses experimental herbicide use in KaSSR sugar beet fields and is published under the regular rubric "Science and Production."

The Basic Directions for the Development of the People's Economy and Culture during the Years 1981-1985 and in the Period up until 1990" call for strengthening the interconnection between science and production. They also call for raising the average annual production of sugar beets to 100-103 million tons with Kazakhstan providing 2.4 million tons of this total. Much effort is being put forth by the Kazakh Plant Protection Scientific Research Institute to meet these goals.

There are 122 enterprises in 17 rayon of Alma-Atinskaya, Dzhambulskaya and Taldy-Kurganskaya Oblasts with 70,000 hectares of land raising sugar beets. The struggle against weeds being waged in these enterprises is particularly important for increasing yields and quality.

Weeds are a problem during the entire growth cycle of sugar beets and reduce yields considerably. Although the proper methods of beet cultivation and hand weeding can reduce the number of weeds in the fields large numbers still remain. Additional measures including application of herbicides are called for to deal with the problem.

Zharasov describes experimentation that has taken place in recent years involving application of herbicides at various stages of sugar beet growth. Herbicides used were fenzon+TXAN, benzar+TXAN, ronit+fenazon+TXAN, fenazon+etam, betanal+lenacil, betanal+fenazon+TXAN, detanal+fenazon, piramin+ronit+TXAN and eptam+piramin. Applications have resulted in increased yields and have reduced labor. Experience gained is now being applied widely. However, Zharasov concludes, problems still remain and more research is needed to find a definitive solution to weeds in sugar beet fields.

FISH IMPORTANT RESOURCE FOR MEETING KAZAKH FOOD NEEDS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 April 1982 carries on page 1 an 800-word boldface editorial on the need to use properly, conserve and expand Kazakh fisheries resources. Animals are one source of natural riches and protection of the environment also means protection of its fauna. Increasing fish stocks and putting them to the people's use as supplementary food resources is one way to carry out the party food program. Thus we must devote special attention to the most efficient use possible of rivers and lakes as a natural resource for the development of fisheries.

The editorial reviews what is being done to this end in the KaSSR where large scale fish seeding is practiced in many areas. But to develop Kazakh fisheries fully, water is needed and the water must be pure. Fish cannot live in polluted waters such as those of the Es il River and pollution also creates a drinking water problem as well. The editorial also decries destruction of natural bodies of water through neglect.

LEAD-ZINC COMBINE'S COMPUTER INADEQUATE FOR COMPLICATED CONTROL SYSTEM

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 24 April 1982 carries on page 2 a 1,200-word article by A. Kulenov, director of the V.I. Lenin imeni Oskemen Lead-Zinc Combine, on the atuomatic control systems being introduced into his combine and the successes and problems being experienced with them. The article is published under the regular rubric "Technical Progress, a Guarantee of Success."

The resolutions of the 26th Party Congress call for refinement of the mechanization of enterprises and for improvement of the forms and means of managing production to achieve increased productivity. One means of accomplishing this is through the use of automatic control and management systems.

Kulenov describes the work that has been carried out at the combine in this area since 1977 in cooperation with a number of research agencies. He notes the considerable success that has attended the introduction of a number of automatic control and management systems into various combine operations as reflected in cost savings and increased output. However, Kulenov continues, all these new systems work through the combine's single computer which is overloaded by the traffic and often breaks down. If future goals are to be met, he says, it is urgent that combine computer capacity be expanded. To this end he proposes a fully equipped, centralized control and management point. Other problems singled out by Kulenov involve a lack of methodological guidance, instruction materials, information and other needed documentation from the USSR and KaSSR Ministries of Nonferrous Metallurgy and inadequate training.

SOVIET ECONOMY HIGHLY INEFFICIENT, SAYS KAZAKH COMMENTATOR

[Editorial Report] Alma-ata QAZAQ ADEBIETI in Kazakh 23 April 1982 carries on pages 7 and 10, a 3,100-word article by Kamal Smayylov entitled "Economy and Psychology." The article is published under the rubric "A Writer's Thoughts."

The Soviet Union has one-fifth of the world's fuel, one-ninth of the world's agricultural land and one-fourth of the world's trees but only 6 percent of the world's population. Soviet resources, moreover, are appropriately joined with a socialist planning system.

In the 10 years since 1970, fixed capital, the source of social wealth, has increased twofold to 1,742,000,000 rubles. Today the Soviet Union produces more in 1 year than in 5 years in the past. Every kopek increase per ruble of fixed productive capital means a 10 billion gain. These funds have increased fivefold, moreover, since the beginning of the 1960's.

Investment of complex funds has been enormous to achieve these gains but the gains have not always been in conformity with the investment. During the last 5-year plan productive capital increased 43 percent but national income only by 21 percent. The difference represents unutilized resources and capacities. The task now is not to expand production forces but to use existing forces as fully and profitably as possible. The intention is not to establish new mines and factories but to reequip and reorganize old for more efficient production.

Thus whereas production resource fund growth was 21 percent in the 9th Five-Year Plan, it was 13 percent in the 10th Five-Year Plan and will be only 9 percent in the 11th. The issue is now quality and productivity.

The rest of Smayylov's article is devoted to comparisons of the Soviet Union with other industrial nations and examinations of various areas of Soviet inefficiency. Smayylov notes that in comparison to the United States the Soviet Union uses more raw materials and energy to produce less. The USSR is first in many key production areas, e.g. steel and cement, but in effect throws its advantage away through waste and inefficiency. Moreover, the problem grows worse as the better ores, oils etc. are exhausted and more efficient use of what is left assumes a paramount importance.

Smayylov provides many examples to support his point such as heavier, less capable Soviet tractors, poor roads that reduce the efficiency of motor transport and use of expensive gasoline instead of diesel oil in many types of vehicles. Conservation is more economical than new production, he says, and ends by calling for a whole new psychology of production to overcome these problems.

STAGNANT PRODUCTIVITY MAJOR PROBLEM IN LAGGING KAZAKH INDUSTRY

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 2, February 1982 carries on pages 72-77 a 2,800-word article by T. Ashimbayev, corresponding member of the KaSSR Academy of Sciences, entitled "Science and Productivity." The article is published under the regular rubric "For an Economical Economy."

Science, however, can only develop properly under conditions where the means of production are a collective possession and where science is put to use for the good of the masses. So employed science becomes a major factor promoting the rapid development of a production that works for us as we progress.

For this reason scientific research is a major activity in the KaSSR where the number of scientific research workers has grown nearly fourfold since 1960. This is twice the rate of growth for the republic labor force as a whole. During the same period the number of republic PhDs grew 4.5 times and the number of candidates 5.5 times.

Although advances are being made, many problems remain. Many agencies and organizations pay little attention to introducing new technology into production or assign it secondary priority. Many proposals for technological innovation are not being acted upon at all, and fewer are being exploited than in the past. Also, many innovations are yielding smaller gains than anticipated on account of the way that they are introduced. Reduction of funds for introducing new technology has also resulted in a decline of profits.

These things are limiting productivity since productivity increase is tied in many ways to scientific and technological achievements, above all in terms of mechanization and automatization. The number of workers performing physical labor in Kazakh industry has actually increased. In some industries, moreover, productivity has actually fallen, having a negative impact upon economic growth as a whole. If only 10 percent of the physical labor jobs of republic industry were mechanized, 50,000-60,000 workers would be freed for other production sectors and yield major economic benefits. Some industries, says Ashimbaev, have more workers than comparable industries elsewhere but produce much less.

Ashimbaev also discusses the importance of new technology for economizing fuel and raw materials, a major area of current emphasis. He notes, for example, that only 43 percent of contract fuel used last year was used efficiently due to low technological levels in the nonferrous metallurgy, coal and construction materials industries in particular.

Ashimbaev criticizes research organizations also for their failure to pursue lines of practical as opposed to pure research. He notes that only about one-third of their discoveries are actually put to good and timely use and that research funds are often wasted. The connection between research and actual production must be enhanced and new planning must be developed to emphasize practical research.

OIL, GAS AT HEART OF MANGHYSHLAK REGIONAL DEVELOPMENT

[Editorial Report] Alma-Ata MADENIET ZHANE TURMYS in Kazakh No 3, March 1982 carries on pages 4-5 the first of a series of articles by B. Zhienghaliev on the Manghyshlak Territorial-Production Complex. Zhienghaliev describes the Manghyshlak environment, the miracle of Shevchenko city which is expected to reach a population of 300,000 by the end of the century, and regional oil, gas and other industries. By August 1981 oblast oil workers had delivered 200 million tons of oil and production is continuing at a rate of 15 million tons a year, 70 percent of it from the Zhangaozen fields. The Manghyshlak peninsula is also the site of the largest natural gas plant in the Central Asian republics.

COURTS OF ARBITRATION HELP FULFILL 5-YEAR PLAN GOALS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 20 April 1982 carries on page 4 a 1,000-word article by B. Zhokenov, chief counsel of the KaSSR Trade Unions Council, on the functions of courts of arbitration in the KaSSR. The article is published under the regular rubric "Man and Law."

Courts of arbitration are of the utmost importance for fighting antisocial conduct. They also strengthen the legal system, labor discipline and social order and promote mass work and legal and moral education. Today they have an even greater role than before in carrying out the historical resolutions of the 26th Party Congress.

Today more than 16,000 courts of arbitration function in various KaSSR economic and social units. More than 84,000 persons serve on the courts which decide upwards of 100,000 cases annually. Zhokenov provides examples of how courts of arbitration have improved the operations of factories and other organizations. He stresses their importance and effectiveness in achieving fulfillment of 5-year plan goals.

MINING REFUSE, INDUSTRIAL WASTE HEAPS GROWING PROBLEM

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 April 1982 carries on page 4 a 1,400-word article by E. Zhamalbekov on the problem of mining refuse, industrial and other waste heaps in the KaSSR. The article is published under the regular main rubric "Man and Nature" and the new subrubric "Economy and Ecology." The author notes the waste in present coal mining practices. Strip mining leaves behind mounds of waste coal and destroys the fertile layers of top soil. Zhamalbekov indicates that steps must be taken to restore these damaged lands. According to latest estimates there are 200,000 hectares of lands ruined by mining or industrial refuse in the republic.

Zhamalbekov evaluates some of the agencies and organizations making an effort to respond to the problem. At Karaganda, for example, where there were once more 100 refuse heaps covering 2,000 hectares of land, the land is being leveled and restored with fertile soil and vegetation. A special office for the purpose has now dealt with more than half of the heaps once existing. Zhamalbekov calls for creation of a centralized authority, preferably under the KaSSR Ministry of Agriculture, to coordinate restoration at Karaganda and at other places where refuse is a problem. Protection of the environment, he concludes, must go hand in hand with development of the economy.

LOCAL CITIZENS ACT TO SAVE VANISHING LAKE

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 April 1982 carries on page 4 a 200-word article by M. Steshenko on efforts by local people to save a vanishing lake. The article is published under the regular rubric "Man and Nature."

Malybay Lake in Pavlodarskaya Oblast supplies water to a large number of enterprises and is a favored recreation site. Until recently, however, the lake was vanishing due to clogged sources. After the presentations of local people to the authorities, however, and the on-the-spot observations of specialists, the decision was taken to save the lake; two pipes now deliver water to an expanded lake and for industrial use.

Social and Cultural Affairs

ATHEISM AGITATION DISCUSSED IN CONTEXT OF NEW SOVIET TRADITIONS

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 2, February 1982 carries on pages 45-49 a 2,300-word article by D. Aydarov, secretary of the Kzyl-Ordinskaya Oblast Party Committee on new Soviet traditions and customs and atheism agitation. The article is published under the regular rubric "Theory and Practice of Ideological Work."

Aydarov notes special atheism campaigns jointly conducted by educators, health workers and members of the Society for the Protection of the Cultural Monuments of the Past and of other societies to reveal the real nature of "holy places" esteemed by local believers. Aydarov laments, however, the persistence of older beliefs that demonstrate the ineffectiveness of current atheism agitation. Religious "people's customs," for example, are employed at burials in Kzyl-Ordinskaya Oblast; mausoleums and Islamic style tombstones are raised, often in informal competition of wealth with one another.

One reason for this, he concludes, is that there is no organization in the oblast manufacturing secular tombstones or organizing nonreligious burials. Aydarov includes creation of such an organization among a list of proposals to bring about more effective atheism agitation and more effective use of Soviet customs and traditions to educate the people.

ISLAMIC ATTITUDES DECRIED AS DIVORCE CAUSE

[Editorial Report] Alma-Ata QAZAQSTAN AYELDERI No 1, January 1982 carries on page 16 an 800-word article by Zhorabek Duysenbin on religion and the inequality of women. The article is published under the regular rubric "Atheists Club."

All religions degrade women and make women dependent upon men in all social relationships and turn them into chattels. This situation was changed in the Soviet Union by the Great October Socialist Revolution that gave women equal rights more than half a century ago. However, as Lenin himself taught, there is need for continual agitation against blind religious faith to prevent its reemergence and revitalization.

Duysenbin looks in detail at the position of women in Islamic belief which systematically discriminates against them. He decries the fact that, although Islam is no longer influential, many of the old attitudes persist today. Women, for example, are still treated in accordance with Islamic "shariyat" principles in some areas and abused, beaten and disgraced. He suggests that some seclusion of women is still being practiced and records payment of bride's price and religious weddings as common practices with Chimkentskaya Oblast singled out for particular criticism.

Duysenbin also notes the prevalence of Islamic style divorces in some rayons and suggests that the inflexible arrogance of men as fostered by Islam is in fact, a major factor bringing about divorce in general. Some women, he points out, are simply unwilling to suffer abuse and mistreatment today.

MANY TEACHERS, ADMINISTRATORS POORLY QUALIFIED, SAYS KAZAKH EDUCATION MINISTER

[Editorial Report] Alma-Ata QAZAQSTAN MEKTEBI in Kazakh No 4, April 1982 carries on pages 3-8 a 2,800-word article by V.K. Sidorov, KaSSR Deputy Minister of Education, on the problem of poorly qualified school teachers and administrators in Kazakh schools. Teaching cadres play major roles in the further development of people's education and in forming the future constructors of a communist society. Because of this special effort is being devoted during the 11th Five-Year Plan to guaranteeing highly qualified cadres to the schools and to improving their quality.

Republic teaching cadres are prepared in 20 pedagogical institutes, 2 universities and 26 pedagogical schools. During the 10th Five-Year Plan the number of teachers with a higher education reached 61 percent in republic schools, 83 percent in classes 4-10. Altogether education schools of the republic graduated 57,000 teachers during the 10th Five-Year Plan. Last year 160,000 were produced.

In spite of these achievements, however, many problems remain. First and foremost, educational levels of republic teaching cadres are still below national levels since 67 percent of all Soviet teachers have a higher education. In some parts of Kazakhstan, moreover, the problem is particularly severe. Only 46 percent of teachers in rural Severno-Kazakhstanskaya Oblast schools have a higher education, for example, and the figure is only slightly better in Kustanayskaya, Kokshetavskaya and Pavlodarskaya Oblasts.

Also problem areas are a critical shortage of teachers qualified to teach the handicapped, teaching cadre job stability and poor quality, badly trained school administrators. Sidorov repeatedly stresses the need for adequate training in the education schools and for a comprehensive retraining effort at all levels. He acknowledges the impact of housing shortage and the low status enjoyed by teachers upon teacher job stability and suggests active measures to compensate for these problems.

CULTURAL FACILITIES IN RURAL AREAS EQUAL TO THOSE IN CITIES

[Editorial Report] Alma-Ata MADENIET ZHANE TURMYS in Kazakh No 3, March 1982 carries on pages 2 and 3 a 1,400-word article by Anatoliy Cherepanov on cultural facilities and services in rural Zhangaarqa Rayon of Dzhezkazganskaya Oblast. The article is published under the rubric "Party Congress Decisions Are the Basis for New Accomplishments."

There are now operating in Zhangaarqa Rayon 30 houses of culture and clubs, 33 libraries, 5 people's museums, 7 motor clubs and 46 mobile film units providing daily service to workers. This system, in addition to entertaining the people, has major responsibilities in terms of current efforts to enrich the content of rural cultural institutions service and use the institutions themselves properly.

Cherepanov examines the quantitative and qualitative changes that have taken place in Zhangaarqa Rayon cultural services in recent years in response to the CC CPSU and USSR Council of Ministers Resolution "On Measures for the Further Improvement of Cultural Services to Rural People." He notes that as the Leninist agricultural policy is implemented the very form of rural areas is being altered. The character of work and production organization has changed, he goes on, along with living standards and the needs of the people. As a consequence of these changes the comforts of life and cultural and consumer services in rural areas are not inferior to those of the cities. Cherepanov also stresses the importance of cultural services for the productive labor of the workers.

KAZAKH EDUCATION MINISTER DESCRIBES REPUBLIC VOCATIONAL EDUCATION

[Editorial Report] Alma-Ata QAZAQSTAN MEKTEBI in Kazakh No 3, March 1982 carries on pages 3-8 a 3,000-word article by KaSSR Minister of Education K. Balakhmetov on vocational education in the KaSSR. The 26th Party Congress assigned major tasks to Soviet schools and called for refinement of the forms and methods of vocational education and for intensification of efforts to encourage students towards trade and professions. Balakhmetov shows how this demand is being met in KaSSR schools in a detailed evaluation of vocational education. The article stresses the importance of general education schools in particular as sources of the labor resources of the future that must be well and carefully trained to keep pace with scientific and technological development.

COMMENTATOR CALLS FOR CORRECT KAZAKH USAGE IN PRESS, MEDIA

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 2, February 1982 carries on pages 85-90 a 2,800-word article by Abduali Qaraghulov, KaSSR distinguished cultural worker, on the need for more attention to correct usage of the Kazakh mother tongue in the press and media. The article appears under the new rubric "The Journalistic Art."

In the years since the great October socialist revolution the KaSSR has witnessed unheard of change. Part of this has been an unparalleled development of the press and media. That demands have have been met can be seen from high quality products.

In spite of these achievements, however, there must be a continual concern in the press and media for literary form, correct orthography and correct use of the Kazakh mother tongue since any errors are disseminated. In fact, however, many authors are quite careless and much error gets past editors into print or on radio or television.

Qaraghulov discusses inconsistent orthography, incorrect vocalization, imprecise or irregular terminology, poor language use, incorrect use of words and the matter of improper dialectical use and slang. The Kazakh language, he concludes, is a treasure developed over the centuries and must be used correctly and kept pure.

DRUNKENNESS MAJOR PROBLEM IN TSELINOGRADSKAYA OBLAST

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 11 April 1982 carries on page 4 a 1,300-word article by L. Chukhliyev, vice-chief of the Tselinogradskaya Oblast Justice Department, on the problem of drunkenness and alcoholism in his oblast. The article is published under the regular rubric "Man and Law."

The 1979 CC CPSU resolution "On Improvement of Work To Maintain Law and Order and Intensify the Struggle Against Crime" called for special efforts against drunkenness and alcoholism. This is because drunkenness and alcoholism harm workers' health, promote family breakups and have a negative influence upon the rearing of children. Persons given to drink fail to take a responsible attitude towards social and state obligations and also give rise to disturbances and other crimes. Drunkenness also adversely effects production and labor discipline and can lead to accidents and deaths.

Chukliyev looks at the problem of drunkenness and alcoholism in Tselinogradskaya Oblast in detail, noting the direct connection between alcoholism and serious crime there. He calls for a general mobilization by party, state and economic organizations against alcoholism but notes a prevalence of "formalism" in this area and an unwillingness of trade organizations to heed rules against the sale of alcoholic beverages to alcoholics. He records the success of alcoholism treatment and counseling centers associated with many factories in his oblast but their complete absence or underdevelopment in other industries. Chukliyev also criticizes the ineffectiveness of anti-alcoholism agitation.

Chukhliyev devotes special attention to the problem of alcoholism among young people and notes the direct association of juvenile delinquency and alcohol abuse. He castigates poor parental training of children and a lack of responsibility of parents for the acts of their children as major factors encouraging alcoholism and delinquency in the young.

CHILDREN'S PHYSICAL CULTURE SHORT ON FACILITIES, EQUIPMENT INSTRUCTORS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 6 April 1982 carries on page 1 a 900-word boldface editorial on children's physical culture and sports in the Soviet Union and in the KaSSR. Children are the future and everything possible must be done to promote their happiness, health and development. Part of this effort involves communist education through physical culture and sports. This is currently an area of special emphasis and more than 21 million school children now take part in children's physical education and sports in their schools. In the KaSSR there are more than 2.6 million members in "zhastar" (youth) sports associations and a large facilities base including 2,200 playfields. Among problem areas are lack of facilities and equipment, inadequate facilities and equipment, shortages of sporting goods for children and an insufficient number of instructors.

KAZAKH LANGUAGE PRODUCT OF LONG HISTORICAL PROCESS

[Editorial Report] Alma-Ata QAZAQSTAN AYELDERI in Kazakh No 2, February 1982 carries on pages 12 and 13 a 1,500-word article by Professor Abduali Qaydarov, director of the KaSSR Academy of Sciences Linguistics Institute and corresponding member of the academy, on the Kazakh mother tongue and the historical processes and external influences that have shaped it. The article is published under the regular rubric "Mother Tongue, a Precious Treasure."

One of the most amazing things about human existence is language which is the device whereby men communicate with one another. Today there are more than 2,000 languages in the world with 130 belonging to a number of linguistic groupings spoken in the Soviet Union. Most important among them are languages of the Slavic grouping but the Turkic grouping is a major Soviet linguistic grouping as well.

The Turkic grouping is comprised of more than 20 related languages spoken by about one-tenth the total Soviet population. Among the Soviet Turkic languages is Kazakh, fifth in terms of number of speakers. In all 6,556,000 persons speak Kazakh as their mother tongue in the Soviet Union, 5,289,000 of them in the KaSSR. There are also 70,000 Kazakhs in Mongolia, more than 100,000 in China, nearly 20,000 in Afghanistan and 10,000 in Turkey, Iran and Pakistan. Total number of speakers is some 7 million in all not including 114,000 Kazakh speakers belonging to other ethnic groups.

The Kazakh language has a rich history and is a spiritual treasure for the Kazakh people. It is much more than a language but a whole culture in and of itself.

Qaydarov discusses in detail the historical, cultural and social environment of Kazakh linguistic development. He notes how the Kazakh past has found its reflection in the Kazakh language of the present, stresses the existence of a Kazakh community that is uniquely cohesive among the Turkic groupings. Qaydarov also evaluates the importance of loan words for the enrichment of the Kazakh mother tongue and discusses the economic, political and other relationships that loan vocabulary reflects.

The external influences that provide loan words for the Kazakh language are always at work just as the Kazakh language itself is always developing and changing. Language, however, he goes on, must always maintain its integrity and communicating ability in the face of these pressures. Language must be preserved as a social vehicle. Qaydarov calls for understanding the complexity of the Kazakh language, using it correctly and respecting it for what it is, the product of a long historical, ethnolinguistic process of development.

Political Affairs

CORRUPT KIRGHIZ KOLKHOZ CHAIRMAN TREATED TOO LENIENTLY

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 3 April 1982 page 4 carries a 2,000-word feuilleton by K. Ramatov, special correspondent for the newspaper in Issyk-Kul'skaya Oblast, describing corruption on the Lenin Kolkhoz in Tunskiy Rayon. According to the author, the chairman of the kolkhoz, Ishen Toychubayev, had for several years been extracting money from members of the kolkhoz, a practice referred to as "yntymak," a traditional type of assistance by friends and relatives in the form of livestock or money. In this case, the funds contributed as "yntymak"--in the last 3 years amounting to R 17,155--were used in part to finance Black Sea vacations for the kolkhoz chairman and a companion. It is stated that everyone on the kolkhoz from young to old knew of this practice and that representatives of the chairman did not demur from threats of harm to those who did not readily contribute to the "yntymak." One economist was reported to have been released from his job for displeasing the kolkhoz chairman in this matter. But what disturbs the writer of this article most is the fact that this and other unsavory practices had prevailed for so long before being stopped. He blames the misdeeds on the fact that because the kolkhoz was regarded as a "leading" one, no one in responsibility--specifically the party raykom, the rayon executive committee, oblast-level party and Soviet organizations and administrative organs--bothered to examine what was actually happening on the kolkhoz. Likewise the local prosecutor's office, the police, and the People's Control Committee failed to demonstrate vigilance. He thinks that such a liberal attitude must be abandoned and more control exercised over "leading" farms. As a result of the unmasking of the operations, two individuals were dropped from party membership, the kolkhoz chairman and kolkhoz party committee secretary were relieved of their duties. But the feuilleton writer feels that I. Toychubayev has been treated too leniently, maintaining that the public expects leaders who soil the name of Soviet leader to be held accountable in a principled way before the law.

KIRGHIZ INTERNAL AFFAIRS OFFICIALS PENALIZED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 15 April 1982 page 2 carries a 250-word follow-up article by the first deputy minister of Internal Affairs KiSSR, Yu. Tolonov, on the measures taken against KiSSR Internal Affairs officials who had been criticized in a 5 February 1982 article in the same newspaper. An inspector for the Sverdovskiy Rayon Office in the city of

Frunze, Meder Orozbekov, was charged with causing an accident while driving drunk and conducting himself improperly at home. Because of his repeat offenses and indifferent work, he was released from duty by order of the KiSSR Ministry of Internal Affairs, and other measures were taken to improve political-education work among the staff of the rayon office. Also, for unspecified shortcomings, S. Isakov, chief of the Katskiy Rayon Internal Affairs Office, was given a warning by the Ministry, a severe reprimand by the rayon executive committee, and a reprimand by the party's raykom bureau.

Economics

FIRST QUARTER KIRGHIZ SSR INDUSTRIAL RESULTS SUMMARIZED

[Editorial] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 8 April 1982 carries a 900-word lead article on page 1 surveying the general condition of industry in Kirghizia during the first quarter of the year. However, for certain statistics only the last 2 months, February and March are used: in those months the plan for production volume was fulfilled by 101.2 percent or in other words, 102.4 percent compared with the same period last year. In the last 2 months 33 industrial enterprises, or 10.9 percent of the total number, failed to meet the production volume target, and according to the article, it cannot but arouse serious concern that the republic produced R 2,953,000 of output less than planned. In January the plan to cut production costs in industrial output was not met throughout the republic, and R 1.4 million of higher production costs were permitted. Though according to the plan, 90.6 kopeks should have been expended to achieve a ruble's worth of commodity production, in fact 91 kopeks were spent. The republic's ministries of light industry, construction materials industry, construction, motor transport and highways and the State Committee for the Supply of Production Equipment for Agriculture permitted production costs to rise considerably. Certain enterprises, ranging from the Suluktu Cotton Administration with 48.6 percent to the Kyzyl-Kiya Canned Goods Factory with 87.3 percent, are listed as failing to fulfill the plan in production volume. The article presents general reasons for the shortcomings in industry, except to specify that one serious difficulty lies in a trend towards releasing workers from work, failing to halt absenteeism, or giving workers administrative permission not to come to work. In the industrial enterprises of Frunze alone the amount of working time lost between shifts comes to 2 percent of the total working time.

KIRGHIZ MINISTER DESCRIBES REPUBLIC'S IRRIGATION PROBLEMS

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 3 April 1982 page 2 carries a 1,300-word article by Kalkash Batyrkanov, the minister of land reclamation and water resources of the KiSSR, on the general situation of irrigation efforts in the republic. While some impressive achievements in irrigation can be cited, a great deal of waste and inefficiency can be observed on the farms of the republic. Last year 3,000 hectares of irrigable land was left unused for various reasons, but generally attributable to carelessness and lax supervision on the part of water resources workers. Because irrigation channels and drainage ditches are not being properly cleaned, they are becoming clogged with sand, stones, and various plants and becoming almost useless. Yet some farm leaders allot little or no money for the repair or reconstruction of irrigation facilities. Water is being wasted as a result of the unevenness of fields, with some parts receiving excess water and others insufficient water. Another serious problem is salinization: on some farms in the Chuy Valley and elsewhere salinization has begun to increase as underground water rises to the surface. Unless this process is checked, the land could become unsuitable for agriculture and require great expense to restore. Part of the blame for the shortcomings here rests with the water resources construction of the ministry. (As might be expected, no mention is made of the diversion of water from Siberian rivers as a means of relieving a potential water shortage in the future.)

PUBLIC TRANSPORTATION DIFFICULTIES IN FRUNZE EXAMINED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 14 April 1982 page 4 carries a 600-word article by T. Mamytov, correspondent for the newspaper, on the condition of bus transportation in the capital city of the republic, Frunze. The 96 investigations carried out in 1981 to determine how well Motor Vehicle Department No 1 was serving its customers revealed 132 violations of work procedures, including 109 instances in which the route schedule was not adhered to and 23 instances in which drivers were operating public motor vehicles for their private use. While some successes could be recorded, there were a number of serious shortcomings in the functioning of the depot. For instance, the plan had called for 680 drivers for the depot in 1982, only 578 in fact were working. The medical facility at the depot was supposed to be staffed by four people, but in fact there were only two, and neither worked on the second shift. Therefore, drivers were not prevented from operating vehicles while drunk, resulting in 15 accidents. In addition, according to the article, 30 workers were released from work for absenteeism, and 10 people were stripped of their bus-driving permits. When the depot chief was contacted about these shortcomings, he claimed that the working conditions, in particular the depot building, which was declared in 1976 unfit for anything, have had an adverse effect upon the Kollektiv. The author of the article expresses the belief that the appropriate authorities will aid in the acquisition of a new building, but that this is not the complete remedy for the depot's labor problems.

NEW PRESS COMPLEX UNDER CONSTRUCTION IN FRUNZE

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 15 April 1982 page 2 carries a 700-word article by S. Abdyldayev, special correspondent for the newspaper, on the progress of the construction of the 16-story building which upon completion will house the editorial offices of the periodical publications that are located in Frunze. According to the article, construction on the edifice started in 1979, and when completed, it will be the first time that a 16-story structure has been built in the city. The foundation framework has been set in place and the concrete poured.

KIRGHIZ COTTON GROWERS URGED TO MAKE UP LAST YEAR'S LOSSES

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 20 April 1982 on page 2 carries a 700-word article by P. Pyshnenko, chief agronomist of the KiSSR Ministry of Agriculture, containing expert advice for cotton growers in

Kirghizia. He notes that last year the republic experienced a disastrous cotton harvest, producing only 177,000 tons of cotton, or 84 percent of the plan, and that no rayon met its socialist obligations. Adverse weather conditions and the fact that crop rotation had not been carried out properly in recent years combined to produce the poor harvest. As a consequence, the cotton plan this year has been lowered somewhat, and this year Oshskaya Oblast should turn over 150,000 tons to the state. To achieve this, 27 quintals of cotton from each of the oblast's 55,800 hectares must be harvested. But still the debt of 33,000 tons left over from last year should be made up, a task that requires a redoubling of efforts. The rest of the article contains technical advice for cotton planting this spring.

PROBLEMS IN KIRGHIZ TRADE SYSTEM DECRIED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 6 April 1982 carries on page 1 a 1,000-word lead article urging that the established rules and regulations concerning trade be firmly observed. In order to provide a check on the activities of various establishments engaged in trade, inspection commissions to protect socialist property are being formed at the present time within the Ministry of Trade and various trade administrations and organizations. Yet there exist serious shortcomings within a number of trade organizations associated with the Ministry of Trade. In 9 out of 25 such organizations, unlawful losses or thefts, amounting to R 78,100 in all, have been permitted 17 times. Particularly serious offenders are the republic trading center of Kirghiz Consumer Trade and the Kyzyl-Kiya and Tash-Kumyr city trade establishments. Several individuals are cited by name as having embezzled funds or falsified credit records. On specific instructions from the KiCP CC, extensive investigations were undertaken at various points in the republic trade network. They revealed violations of trade regulations at more than 600 trade centers, and among these violations were 124 instances in which scarce goods were hidden away from customers. In some cases, people tried to cover themselves with the excuse that by hiding such goods they could "better serve" war veterans, retired people, and outstanding workers. In addition, certain food establishments were singled out for criticism for skimping on ingredients. The article concludes that the lack of supervision by responsible officials is in effect creating artificial scarcities.

KIRGHIZ YOUNG PEOPLE URGED TO JOIN CONSTRUCTION TEAMS

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 8 April 1982 page 4 carries a 150-word notice concerning the formation of shock construction detachments for All-Union and republican projects under the sponsorship of the Kirghiz Komsomol Central Committee. In the notice, young people are informed of the deadline for applying to each of nine construction projects. The projects outside of Kirghizia are located in the cities of Staryy Oskol in Belgorodskaya Oblast, Vyksa in Gor'kovskaya Oblast, Sayanogorsk in Krasnoyarskiy Kray, Volgadonsk, Surgut, and on the Kyrgyzstan Sovkhoz in Yaroslavskaya Oblast.

NATURAL PASTURES IN KIRGHIZIA SUFFER DAMAGE

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 4, April 1982 pages 71-76 carries a 2,500-word article by M. Imankulov, director of the Kirghizhia Scientific Research Technological Institute for Pastures and Fodder, on the situation of pasturage and fodder production in the republic. Pointing out that Kirghizia is number three in the USSR in the output of sheep products after the RSFSR and Kazakhstan, but number one in terms of output per unit of land, Imankulov tries to demonstrate the necessity for providing an adequate fodder base for sheep breeding. Exemplary brigades are harvesting good feed grain yields in part because of a progressive pay system, whereby, for instance, machine operators and irrigators in mechanized units earn an average of 10 to 15 rubles a day. The institute that Imankulov heads has also elaborated techniques to improve fodder production. However, the state of natural pastures in Kirghizia is quite unsatisfactory: because of overuse and lack of proper care, pastureland grass is becoming sparser, vegetation unsuitable for fodder is taking over, and the quality of pastures is deteriorating. To prevent further damage, certain organizational matters--such as fixing time limits for grazing and taking measures to preserve the ecological balance--must be worked out. This neglect can be attributed to the fact that on most farms no one takes concrete responsibility for the condition of pasturelands at the present time.

CURRENT CONSUMER GOODS OUTPUT IN KIRGHIZIA REVIEWED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 16 April 1982 page 1 contains a 900-word lead article on the output of consumer goods in Kirghizia during the current year. In the last 2 months the production plan for consumer goods was fulfilled by 101.8 percent, and all ministries and departments met their targets for producing goods for sale to the state, except for the Ministry of the Meat and Dairy Industry. However, the output of some goods in certain facilities, e.g., in the Kyrgyzavtomash [Kirghiz Motor Vehicle] Production Association, has fallen considerably, and the enterprises under the Ministry of Light Industry have failed to match last year's production of leather footwear and children's shoes. The article also notes that in a number of branches of the local and light industry, products of low quality are being made. But it is necessary to overcome all such shortcomings, particularly because the production volume of consumer goods in the republic must be raised from 19.8 percent to 30 percent for the current 5-year period. However, many enterprises, including some in the Ministry of Local Industry, have not taken on this year's raised plans. The article stresses the need for enterprises to accept the raised plans and successfully carry them out.

GREATER PRODUCTIVITY IN KIRGHIZ CONSUMER GOODS URGED

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 4, April 1982 pages 16-23 carries a 3,300-word unattributed lead article on the need to expand the production of consumer goods in Kirghizia and improve their quality. The article refers to the KiCP CC plenum in January of this year concerned with this topic, as well as with the fulfillment of the obligations accepted by workers and various organizations. While R 1.5 billion of consumer goods were produced and the plan fulfilled by 101.3 percent in 1981, the situation is not as desired. In particular, the Ministry of Light Industry, which accounts for more than one-fourth of the consumer goods produced in the republic, is singled out for criticism. The use of the productive forces in many branches of the ministry is unsatisfactory, and the profitability of enterprises under the ministry's supervision has fallen sharply in recent years to the point where 1980 profit was 3.4 times less than that in 1975. Last year 17 enterprises in the ministry, or 77 percent of the total, did not fulfill the production plan according to the obligations. In addition, while the plan for labor productivity in industry as a whole was fulfilled by 101.3 percent last year, 53 enterprises did not meet the target for this indicator. To enhance labor organization and improve the pay structure, it is necessary that the formation of new-style brigades be carried out widely. At present up to 40 percent of the workers in light and local industry perform in preparatory work and auxiliary production, in which unproductive manual labor prevails. Also, in 1981 the plan for providing domestic services to the public was fulfilled by only 98.7 percent and in the countryside by 97.2 percent.

KIRGHIZ PARTY SECRETARY ON NEW BRIGADE SYSTEM

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 4, April 1982 pages 24-32 contains a 3,800-word article by a secretary of the KiCP Central Committee, Apas Dzhumagulov, on the introduction of a new system of organizing industrial workers into brigades, a system which is often identified in the press with the achievements of the Kaluga Turbine Plant. According to the KiSSR Central Statistical Administration, 82,000 people in the republic have been formed into such brigades. Republic commissions, generally with a deputy minister in charge, have been established in ministries and departments to oversee efforts at introducing this method. However, despite some notable advances, some branches of industry have been slow in adopting the new method: according to plan, for instance, the new brigade system will encompass in 1982 only 30 percent of the workers in enterprises associated with the Ministry of Light Industry--which represents the largest industrial branch in the republic, employing one out of every three industrial workers.

Slow implementation of the new brigade system and a perfunctory approach towards it in this ministry and the Ministry of Local Industry have hurt the production of consumer goods. In more than half the industrial enterprises of the republic, the percentage of workers organized into the new brigades and the new brigades and the new pay structure that accompanies the reorganization does not exceed 15 percent. The revised pay structure provides improved financial rewards for workers: in 25 industrial enterprises investigated by a state committee, the average pay of workers in brigades exceeded the pay of individual workers by 5-10 percent. However, serious irregularities in the pay structure can be observed in some brigades. Slow conversion to the new system is also delaying completion of various construction projects.

INVESTIGATIONS OF ILLEGAL GREENHOUSES IN KIRGHIZIA CRITICIZED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 21 April 1982 carries a 1,300-word article by a special correspondent of the newspaper in Kantskiy Rayon, K. Japarov, entitled "Who Are Those Who 'Know How To Live'?". The article reveals that a merchandising specialist at a large grocery store, V.G. Piskunov, who had also been elected secretary of a shop party organization, had built a 170 square-meter greenhouse in which he grew flowers and vegetables. When the matter was investigated, he was obliged to reduce the greenhouse to 60 square meters, even though, according to the correspondent, regulations permit no more than 20 square meters. The distribution for his and other illegal greenhouses is extensive, with another CPSU member relaying "market conditions" to greenhouse owners. The article also asks where the building supplies for these greenhouses come from. Despite the fact that investigations are being conducted, the greenhouses continue to function.

Social and Cultural Affairs

KIRGHIZ LINGUISTS DEBATE RUSSIAN LANGUAGE INFLUENCE

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 29 April 1982 pages 12 and 13 carries a 1,700-word article by Maanaykul Murataliyev, a candidate of the philological sciences, on the general issue of preserving the purity of language. The article is introduced by a brief editorial notice stating that this special topic in Kirghiz linguistics has not yet been presented to the general public. The notice also points out that linguists and other scholars are not unanimous in their views on language purity and that therefore an exchange of opinions is in order. Murataliyev discusses the published views of Assistant Professor K. Dyykanov. The latter in a textbook of the Kirghiz language quotes Lenin on the adverse impact of foreign words on Russian and contends that the use of foreign words taints the lexicon. Taking as evidence of such a problem in Kirghiz the fact that a single issue of the newspaper SOVETTIK KYRGYZSTAN contains 18 to 20 percent Russian words, Dyykanov maintains that the use of so many foreign words leads to incomprehension. The author of this article, Murataliyev, agrees that it is inappropriate for Kirghiz to use in conversation Russian words and expressions that are not considered as belonging to the literary language and have standard Kirghiz equivalents. But he does not agree with another notion of Dyykanov's that the use of few indigenous words and many foreign words is a sign of the low level of a national culture. Murataliyev also disagrees with the sometimes expressed notion that words borrowed from Russian should be spelled in conformity with the way they are pronounced by Kirghiz, and not as they are spelled in Russian. According to him, the written language should serve as a "progressive phenomenon" with respect to the colloquial language and provide the norms for speakers, not the other way around.

KIRGHIZ WRITERS UNION DISCUSSES ATHEISM, EVALUATES WRITER

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 1 April 1982 page 2 carries a 400-word report on a meeting of the Presidium of the Board of the Kirghiz Writers Union. First Secretary Tendik Askarov spoke about the tasks of writers in connection with the KiCP CC decree on strengthening atheistic education among workers. Various other writers recommended relying upon folk literature and modern works to discourage religious practices among the population, including pilgrimages to holy places, and to expose the attempts by some religious sects to attract the young. The members of the Presidium also evaluated the work of prose writer and member of the USSR Writers Union Kalkanbay Ashymbayev. Some of the speakers noted that along with obtaining certain successes in delving into the life and interests of young people, K. Ashymbayev has also demonstrated some shortcomings, especially in content and artistic level. The writer expressed agreement with the criticism and stated his intention to try to eliminate his shortcomings. (No explicit connection was made between the two topics discussed at the meeting.)

MINISTER OF CULTURE SURVEYS STATUS OF KIRGHIZ HISTORICAL MONUMENTS

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 8 April 1982 carries on pages 2-3 a 3,000-word article by the Kirghiz Minister of Culture Dzhumagul' Nusupova written in connection with the issues discussed at a republican seminar-conference on historical and cultural monuments held in March. Since the passage of the first All-Union law on monuments more than 4 years ago, the problems involved in preserving and utilizing historical monuments in Kirghizia have become quite clear. For instance, a full inventory of structures according to administrative significance--All-Union, republican, etc.--has not yet been carried out, and there is still no overall archeological map of the republic. It is especially important that the historical monuments of All-Union significance be officially registered into the Code [svod] of USSR Historical and Cultural Monuments, since this places their preservation within the realm of ideological and political affairs. It is also vital to work out the appropriate documents assigning the responsibility for preventing the further deterioration of monuments. Another problem area involves the utilization of historical structures. For example, a mosque in Osh built at the beginning of the 20th century is considered an architectural monument. It had been used as a confectioner's shop, but while Nusupova approves of the fact that the shop has been moved out, she criticizes the Osh gorispolkom for giving the building to a religious society, since such a use does not serve the goal of communist upbringing. She also notes that even if the proper documentation and scientific investigations for a monument are carried out, the needed restoration work is sometimes delayed for a considerable period of time. The author cites numerous examples to support her main points.

OUTMODED KIRGHIZ CUSTOMS CREATE SOCIAL PROBLEMS

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 24 April 1982 page 4 carries an 800-word article under the rubric "Assault on Alien Phenomena" by A. Khaldarov, chairman of the Lyaylyakskiy Rayon People's Court, T. Suyorkulov, an investigator in the rayon prosecutor's office, and A. Kazakov, correspondent for the rayon newspaper ALGA. The authors state that they are writing this article about an unfortunate incident in the hope that "it may be a lesson for others." Two couples in Lyaylyakskiy Rayon met and organized a marriage on a swap basis--that is, the son of one would marry a daughter of the other, and vice versa, a traditional practice not unknown among the Kirghiz. For the marriage of one son, Abdukabi, to the daughter of the other couple, Katycha, a "kalyng," or bride-price, of R 3,500 was arranged along with the presentation of four sheep and three goats for slaughter. However, the marriage did not work out, and before a year was out, there was a divorce. Abdukabi's father and some village elders went to the other family's home to demand the bride-price back, a fight broke out, injuries were inflicted, and the case ended up in court. The groom's father was given 3 years' deprivation of freedom for giving the bride-price and the bride's father 2 years' for receiving the money. What bothers the authors of this article most is the fact that no one prevented the whole incident from taking place. The two young people were members of the Komsomol. They knew they did not love one another, and yet at the ZAGS they affirmed just that, in addition to denying that bride-price had been paid. Above all, the local authorities, the local party, Soviet, and administrative organs, were to blame. There is a special commission to struggle against such practices, and yet it does not function effectively, systematically, or decisively.

TRADITIONAL KIRGHIZ INSTRUMENTS SLIGHTED BY MODERN MUSICIANS

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 28 April 1982 page 4 carries a 1,100-word article by Saydin Isakov of Frunze on the amateur performances of popular Kirghiz music that are presented on a certain regular television program. He complains of the generally low quality of the performances, even claiming that the amateur concerts in Kirghizia are on a much lower level of artistry than those of the neighboring republics of Kazakhstan, Uzbekistan, and Tadzhikistan, at least if a judgment can be made on the basis of a comparison of television broadcasts of such performances. He also complains of a lack of variety in the musical instruments that accompany the singers. Very rarely are musicians seen playing the traditional Kirghiz instruments the ooz, komuz and choor. It seems, it is impossible to find a store where they are sold, and some musicians think that there is no "profit" to be had in learning to play them. Yet the author of this article defends these instruments and maintains that it is a demand of the time to promote them widely.

NEGLECT OF KIRGHIZ TRADITIONAL SPORTS ASSAILED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 29 April 1982 page 4 contains a 1,200-word article by Yu. Musin, an athletic official and member of the USSR Sports Federation Presidium, on the need to focus attention upon the state of traditional popular sports in Kirghizia. Musin maintains that the games of the common people and the traditional sports of a nationality, or "national sports," have a great significance, and he notes that a number of individuals have achieved successes in national sports since 1971 when republic-wide regulations and ratings for these sports were established. However, he regards it as regrettable that the state of national sports in the republic cannot be called satisfactory and that such sports have not been made truly public. Extremely few workers have been attracted to these sports. The people who participate in them regularly constitute only about 2 percent of all athletes engaged in sports and physical culture, and in fact, in the cities and rayons subordinate to republican administration, participants in national sports make up less than 0.5 percent of the total.

ANTIRELIGIOUS NOTIONS IN KIRGHIZ FOLK LITERATURE CITED

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 8 April 1982 page 10 carries a 1,000-word article by a director of a high school, N. Saliev, evidently as a contribution to a contest sponsored by the Union of Writers of KiSSR and the newspaper KYRGYZSTAN MADANIYATY for the best articles on the topic of atheism. Saliev maintains that an examination of Kirghiz people have had towards religion since ancient times and how opposed they have been to the "tricks" of religious leaders. He quotes passages from the Kirghiz epic "Manas" that express skepticism about the concept of paradise and about the motives of dishonest ishans. He also lists proverbs containing barbed criticism of religion and religious practitioners. He maintains that foreign ideological enemies at the present time are utilizing religious reaction, particularly in radio broadcasts for believers, to disrupt the fraternal harmony of the peoples of the USSR.

KIRGHIZ COMPOSERS PRODUCING SECOND-RATE MUSIC

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 15 April 1982 on pages 12-13 carries a 1,100-word article by T. Salamatov, a member of the USSR Composers' Union and a musicologist, on songs composed in recent years in Kighizia. While some new songs have great appeal, they are few and far between. The number of songs composed recently has increased, but the quality of most is disappointing. People express dissatisfaction over new songs, maintaining that most of them sound like one another and that they have deviated from the coloration of Kirghiz folk music. In fact, in a contest organized for the 21st Congress of the Kirghizhia Komsomol, nearly 50 songs on the Komsomol were submitted, but only one song was considered worthy of an award, a second-place prize. Another cause for the poor quality of new songs is the manner in which accompanying musical instruments are used. For instance, at a recent seminar of singers in Narynskaya Oblast, out of some 100 works, only 3 were written for the traditional instrument the komuz. The author of this article feels that one cannot but be grieved that a pure Kirghiz musical instrument, one that has made the Kirghiz famous, has been relegated to the background and that another instrument, the accordion, has been moved into the foreground.

International

BOOK CRITICIZES CHINESE FOR DISTORTING KIRGHIZ HISTORY

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 4, April 1982 pages 93-96 carries a 2,200-word book review by an academician in the Kirghiz Academy of Sciences, S. Il'yasov, and a senior teacher of philosophy at the same institution, A. Dononbayev. The book under review, "Protiv maoistskikh fal'sifikatorov istorii Kirgizii" [Against the Maoist Falsifiers of the History of Kirghizia], was published by Ilim Publishers in Frunze in 1981 and written by a kollektiv of authors, M. Ya. Sushanlo, B. P. Gurevich, V. M. Ploskikh, G. P. Suprunenko, under the scholarly editorship of K. K. Karakeyev. According to the reviewers, as the Maoist leadership of China draws ever closer to militarist forces and becomes ever more actively an assistant of imperialism, the need grows to expose and criticize the pseudo-historical studies used by the Beijing hegemonists to justify their expansionist policies. This book is said to address this need. The authors of this review maintain that no one 40 or 50 years ago would have thought that the historical events characterizing the relations between the peoples and states in the region the reviewers call "Middle Asia," that is, Central Asia, Kazakhstan, and Eastern Turkistan, would become the object of an extremely sharp ideological struggle. Yet it has turned out to be so. One important feature of the book is the presentation of the history of Sino-Kirghiz relations for more than 1,000 years. Essentially, the book concludes that the Kirghiz, one of the most ancient of the Middle Asian Turkic-speaking peoples, have never been politically a dependent people of the Chinese. The first chapter, entitled "Turkistan--Land of Turks," examines the turbulent history of Middle Asia, the traditional concept of a Chinese-barbarian dichotomy, and the erroneousness of the thesis that Middle Asians yearned for Chinese civilization. The second chapter, "The Struggle of the Kirghiz People Against the Expansionist Policy of the Qing," reveals the strong desire of the Kirghiz to resist the Chinese empire and seek out a voluntary association with the Russian empire. The third chapter, "The Kirghiz People's Historical Choice--To Join With Russia," expands upon the latter topic. But Maoist historians strive to deny these facts, proclaiming an ethnic commonality for the Chinese and Middle Asian peoples. The work under review refutes this claim and maintains that the peoples of Middle Asia bear no ethnic or economic similarities to the Han people. The only criticism aimed at the book by the reviewers is that while numerous works in Chinese and Russian, as well as foreign sources, were utilized, works in the Uighur language which detailed the history and national liberation struggle of the Eastern Turkistani peoples were neglected.

Political Affairs

ADMINISTRATIVE LEGAL VIOLATIONS EXPLAINED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 4 April 1982 p 2 carries a 1,200-word article by K. Mammetnazarov, member of the TuSSR Supreme Court, in which he explains the significance of the decree "Bases of the Laws on Violating the Administrative Legal Order of the USSR and the Union Republics." It "came into force at the beginning of March of this year." A crime is administrative if it involves petty hooliganism, traffic violations, alcohol violations, poaching or the passport system.

Economics

CONSTRUCTION INDUSTRY WASTES ENERGY RESOURCES

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 7 April 1982 p 3 carries a 700-word article on the "economical utilization of fuel-energy resources." It is found that "the majority of the factories of the Ministry [Construction Materials Ministry] have not established effective measures to utilize fuel-energy resources and economically expend them in achieving their quota." The problems are: "measures have not been strengthened through cost accounting" and "genuine controls have not been imposed." One consequence has been a reprimand directed at the head of the energy section of the ministry, M. S. Glubochanska.

CANAL COMPLETED IN KRASNOVODSK OBLAST

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 22 April 1982 p 2 carries a 900-word article by M. Khaladov noting that the "water of the Amu Darya has arrived in the Gazanjyk rayon of Krasnovodsk oblast'." A number of canal workers are interviewed on the economic significance of the achievement.

Social and Cultural Affairs

MONUMENT PRESERVATION WORK SURVEYED

[Editorial Report] Ashkhabad ADEBIYAT VE SUNGAT in Turkmen 2 April 1982 p 11 carries a 750-word article by Egen Atagarryev, director of the Archeological Department of the TSSR Academy of Sciences' Institute of History, in which he discusses the current status of the preservation of historical monuments. One of the problems is that "the Ministry of Agriculture and administrations like 'Turkmengosproekt' view the implementation of the law 'On the preservation and utilization of historical and cultural monuments; with indifference. Specifically, the leadership of the 'Shatlykgazgurlushyk' administration are opening the way for carelessness." A number of monuments are listed which have suffered damages resulting from these attitudes.

SHORTAGE OF TURKMEN LANGUAGE BOOKS ON ATHEISM

[Editorial Report] Ashkhabad ADEBIYAT VE SUNGAT in Turkmen 2 April 1982 p 4 carries a 750-word article by L. A. Danil'chenko, director of the Krasnovodsk Central Library system, on the work of the library in conducting atheistic propaganda. He notes that "the conduct of special work with religious believers is both complex and responsible. Thus, we conduct atheistic work in administrations and factories." Also, exhibits are set up on themes like "Islam and the Nation" and lectures, such as "The Reactionary Meaning of the Muslim Faith" are given. However, "atheistic literature in Turkmen is rather scarce. In the course of the last 2 years only two books against religion and on atheism have been added to the libraries."

CONTEST FOR CREATIVE WORKS ON ATHEISM

[Editorial Report] Ashkhabad ADEBIYAT VE SUNGAT in Turkmen 30 April 1982 p 15 announces a contest to be held for "works created on the theme of atheism." There are a number of categories: one-act plays, choral works on tradition, duets on tradition, satirical verse, the dance and multi-media works. The contest is sponsored by the TuSSR Ministry of Culture.

'SOLIDARITY WEEK' WITH AFGHANISTAN MARKED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 23 April 1982 p 4 carries a 400-word Turkmeninform report marking the 21 April beginning of a "solidarity meeting between Turkmenistan and Afghanistan. It is devoted to the third anniversary of the April Revolution in Afghanistan."

TURKMEN PRESS IN IRAN

[Editorial Report] Ashkhabad ADEBIYAT VE SUNGAT in Turkmen 2 April 1982 p 14 carries an 800-word report by Almaz Yazberdiev, director of the TuSSR Academy of Sciences Central Scientific Library, on the publishing activities of the Turkmen press "Kabus" in the city of Kummetkhovuz in Iran. "Cultural relations between that press and our library are closer every year. At the request of 'Kabus,' the Central Scientific Library has been sending them the works of Turkmen classical poets and Soviet Turkmen writers as well as research work by scholars on different topics (primarily on Turkmen language, literature and history). Beginning from 1981 Turkmen textbooks on all branches of knowledge have been sent at the publishing house's request." Soviet Turkmen writings are reprinted by "Kabus" or published in installments in the journal YNKYLAP YOLUNDA ["On the Road of Revolution," circulation 200]. Books are reprinted through the rotoprint process.

LOCALISM--A CADRE PROBLEM

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 20 April 1982 carries on page 1 a 1,100-word double-column lead editorial titled "Perfection of Cadres." The editorial deals with the party's policy toward cadres, and focuses on their desirable qualities, which include highly specialized training, management skills, Leninist leadership style, loyalty to the homeland and the party, and a deep responsibility toward assigned work. In some oblasts, where there is a clear need for more specialists, authorities are not submitting requirement forms. The editorial urges that party and soviet organs increase their attention to dealing with these problems, and others such as neglect of duty, arrogance, voluntarism, and discrimination against women among economic and party leaders. Skilled cadres, especially women of proven ability, must be raised to leadership positions. Inequities in selection and placement of cadres will not be tolerated, the editorial concludes, and the nationalities and subnationalities who live in the country will not be discriminated against.

NAMANGAN OBKOM CHIEF STRESSES NEED TO EXECUTE PARTY DECISIONS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 14 April 1982 carries on page 2 a 1,600-word article by M. Kamalov, first secretary of the Namangan Obkom, titled "Power Through Execution of Decisions." The article begins by recalling that Leonid Brezhnev recently placed special emphasis on carrying out party decisions aimed at intensifying the development of production and on the vanguard role that communists are expected to assume in this. In accordance with the CC CPSU Decree "On further developing control over and investigation of the execution of decisions of the 26th Party Congress," Kamalov has taken steps to assure that oblast, rayon and city partkoms increase their efforts in this area. Problems are being investigated and discussed at bureau meetings and partkom seminars, and the investigative role of partkom departments is being enlarged.

UZBEK PEOPLE'S CONTROL COMMITTEE INVESTIGATES AGRICULTURAL AGENCIES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 6 April 1982 carries on page 2 an 800-word report from the Uzbek SSR People's Control Committee titled "Attention to Equipment Must Be Increased." The committee reports that agencies subordinate to the Ministries of Agriculture and Land Reclamation and Water Resources have not implemented needed measures to carry out party and government decisions on the use and storage of agricultural and technical equipment. The committee's investigation revealed gross violations by a number of farms and organizations in the use, storage and maintenance of equipment and machinery. Due to poor supervision, large numbers of agricultural machines are being taken out of service ahead of schedule on collective and state farms under the Ministry of Agriculture, and the same is true of earthmoving equipment belonging to the Ministry of Land Reclamation and Water Resources. The committee directed the attention of the ministries and agencies to these problems, and various guilty officials have been reprimanded.

UZBEKISTAN MINISTRY OF PROCUREMENT INVESTIGATED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 14 April 1982 carries on page 2 a 300-word report from the Uzbek SSR People's Control Committee and Prosecutor's Office titled "No Room for Mismanagement." The committee and the Prosecutor's Office issue a joint report on the result of their investigation of the manner in which the Ministry of Procurement fights theft and mismanagement of state property. They reveal that the ministry's work in this regard is very unsatisfactory, and that instead of a decrease in theft and in volume of shortages of materials there is an increase within the system of the ministry. Petty theft is in on the rise and is not even being dealt with in many enterprises. Goods are being loaded onto railcars without first being weighed. Shortages, thefts, and misappropriations are not being reported. These findings were discussed at an assembly of the People's Control Committee and a number of guilty workers at the ministry were severely disciplined and fined. Similar investigations were conducted in eight oblasts, with the same findings and results.

UZBEK WRITERS UNION CHAIRMAN ADMONISHES JOURNAL EDITORS, YOUNG WRITERS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 23 April 1982 carries on p 7 a 400-word report titled "At the Secretariat of the Uzbek SSR Union of Writers." The report states that the Secretariat met to discuss the activities of the Writers Union journal SHARQ YULDUZI. The meeting spoke openly about certain errors and shortcomings permitted in its work of late, and outlined measures to sharply improve the quality of works being printed in it, raise its ideological and artistic level, and organizationally strengthen the work of its editorial board and its editorial collective. Sarvar Azimov, chairman of the Writers Union, headed the discussion and expressed the hope that the journal's collective would reexamine its work in the light of the historic speech made by Leonid Brezhnev during his recent visit to Tashkent, and that it would be able to greet the 50th anniversary of its publication with new achievements. OZBEKISTON ADABIYOTI VA SAN"ATI 23 April 1982 carries on page 7 a 400-word report titled "Meeting With Young [Writers]." On 14 April, Oktam Usmonov, a secretary of the Writers Union, opened a meeting of young writers with remarks about recent activities, including the publication of the journal YOSHLIK. Erkin Vohidov, chief editor of the journal, spoke about its plans, and raised several issues, including the question of providing creative work leaves for young writers who work on periodicals and the need to train editors. The critic Ibrohim Ghafurov brought up the unsatisfactory work of the young writers section of the Writers Union and the poor quality of translations of works of young writers into Russian. Sarvar Azimov assured the assembled writers that the purpose of the meeting was to listen to the thoughts and suggestions of young writers. He then stated that writers, whether young or old, must work with a sense of responsibility, and that young writers especially must shape their world-view and attitudes toward life on a Marxist-Leninist basis.

Economics

ECONOMIC PROBLEMS RAISED AT UZBEK PARTY PLENUM

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 30 April 1982 carries on page 1 a 1,600-word double-column lead editorial titled "Militant Tasks of the Distant Future." This editorial is published on the heels of the 10th convocation of the 5th Plenum of the CC CPUz and the 5th Session of the UzSSR Supreme Soviet. It notes that the recent visit of L. Brezhnev and his award of the Order of Lenin to Uzbekistan served to further increase the creative initiative and political activism of the masses. However, the editorial continues, the recent party plenum discussed a number of disturbing economic problems. Foremost of these is the 3.8 percent growth in the volume of industrial production during the first quarter of 1982, compared to 6.1 percent growth in the same period of 1981. Growth rates have sharply declined in a number of enterprises. The editorial concludes by underscoring the plenum's call for increasing the supply of skilled cadres to all economic cadres, raising their management skills and sense of responsibility toward assigned work, appointing solidly trained women to management positions, reinforcing the vanguard role of communists, and improving the leadership of primary party organizations.

PUMPING STATION IN SOUTHERN KARAKALPAKISTAN DOUBLES POWER

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 21 April capacity 1982 carries on page 4 a 200-word unsigned report titled "Capacity Doubled." The report states that the capacity of the "Ayazkala" Electric Pumping Station in the Ellikkala region of southern Karakalpakistan has now been doubled by the installment of five "OG-5-70" and "OGKh-70" experimental pumping units produced by the "Uralgidromash" Plant. With this, the station will now have the capability of pumping subsoil water flowing between the Kyzylkum collectors of the Turtkul, Beruniy and Ellikkala Rayons to the Kyzylkum desert. When started up, the station will pump 20 cubic meters of water per second instead of the former 8-10 cubic meters, and will make it possible to reclaim 11,000 hectares in the Ellikkala Massif.

UZBEKISTAN KARAKUL LAMBING SEASON PROGRESS REPORT

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 April 1982 carries on page 3 a 500-word unsigned report titled "How Is the Lambing Season Proceeding?" The report states that farms subordinate to "Uzglavkarakul'prom" are obligated to produce 200,000 karakul lambs in 1982. Thus far, 64 percent of karakul ewes have lambed, and farm collectives are paying special attention to holding back lambs for further growth while at the same time conscientiously striving to meet the plan for procurement of karakul skins. The lambing season is proceeding especially well in Bukhara Oblast (172 lambs per 100 ewes), Dzhizak Oblast (161 per 100), and Samarkand Oblast (170 twins). However, productivity is subpar in Surkhandarya Oblast (134 per 100) and Karakalpakistan (120 per 100). The report singles out a dozen farms in various oblasts where too few lambs are being taken.

NAVOI CHEMICAL PLANT TO PRODUCE NEW PESTICIDE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 April 1982 carries on page 1 a 400-word report by UzTAG correspondent A. Fozilov titled "First in the Country." The report states that a second production line has been readied for operation at the Navoi Electrochemical Plant. The line is designated to produce "akreks," a powerful new pesticide to be used against insects that harm fruit, vegetable, and citrus plants. This pesticide has lasting potency, comes in powder form, and will also be packaged in small containers for use by owners of private plots and gardens. This line, the first to produce this chemical preparation in the USSR, will turn out 4,000 tons of "akreks" annually. Fozilov also notes that the Navoi plant produces the herbicide "kotoran," a noncyanide synthetic "kotoran," and "diuron-herbicide." construction brigades of the "Yugprommontash" Trust and Navoi Construction Administration are already looking ahead to beginning construction of a third line where new and highly effective chemical preparations such as "treflan," "fazalon," and "bazutdinni" will be produced.

UZBEK VOCATIONAL, TECHNICAL EDUCATION CHAIRMAN DISCUSSES TASKS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 8 April 1982 carries on page 2 a 900-word article by P. Kayumov, chairman of the Uzbek SSR State Committee for Vocational and Technical Education, titled "Standard." Kayumov devotes much of this article to a review of accomplishments in the republic system of vocational and technical education, which includes 520 schools with 260,000 students, nine-tenths of whom are in secondary technical schools. Kayumov states that the great tasks that lie before workers in the system can be successfully discharged only with the cooperation of other branches of education. For this purpose, closer relations must be established between vocational schools and public education schools, enterprises, and VUZes. Furthermore, improvement must be made in the work of professional orientation for youths, and greater effort must be made to place young people in jobs. He also points out that there are shortcomings in the education of students in vocational and technical schools, that construction work on schools sometimes falls way behind, and that there are far too few workers coming to study in the system from enterprises.

UZBEK MINISTER OF GEOLOGY REFERS TO DEVELOPMENTAL PROGRAM

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 4 April 1982 carries on page 2 an 800-word article, published in conjunction with Geologists Day, by Kh. Tulyaganov, Uzbek SSR minister of geology, titled "The Courage of Those Who Find [Mineral] Treasures." The minister begins this article with a review of some recently discovered fuel deposits in Uzbekistan, including the 1981 discovery and mapping of the gas deposit at Shurtan. This deposit, whose reserves are larger than those of the Gazli deposit, will supply the Syrdarya GRES, Tallimardzhan GRES, and a large gas and chemical complex to be constructed in Kashkadarya Oblast. After devoting much of his space to listing the names of some outstanding brigades and organizations, Tulyaganov turns to the topic of future development. Ministry planners consider that their principal thrust must be to thoroughly analyze the mineral and raw material bases of the republic and its major mining and industrial regions. The ministry intends to invest a considerable part of its labor and capital in the task of conducting a thorough hydrological and engineering-geological survey program. Tulyaganov asserts that such a program is necessary if critical problems, such as supplying populated points in Karakalpakistan, Bukhara and Khorezm with good drinking water, or improving the meliorative conditions of irrigated and newly reclaimed lands in the Karshi and Dzhizak steppes, are to be solved.

SHURTAN GAS DEPOSIT READY FOR EXPLOITATION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 30 April 1982 carries on page 2 a 400-word report by UzTAG correspondent V. Shumaylov titled "Shurtan Treasure." The report states that the job of charting the Shurtan gas deposit, which was discovered in 1981 and turned out to be the largest deposit in Uzbekistan, has been completed a year ahead of schedule. It is estimated that the deposit has close to 500 billion cubic meters gas, surpassing the Gazli deposit which has been exploited since the mid-1950's. The Shurtan site is located in a "convenient" place 10 kilometers from Karshi, near a railroad and highways. Workers of the "Soyuzuzbekgasprom" will now begin construction work to prepare the site for extraction and processing of the fuel. Shurtan gas is slated to reach an annual flow of 16 billion cubic meters by the end of the 11th Five-Year Plan. It will provide energy to the Tashkent GRES and other large consumers like the Akhangaran and Bekabad cement combines, and result in a savings of large quantities of crude oil shipped into Uzbekistan in tank cars. Furthermore, a gas and chemical complex is to be constructed near Karshi to process gas derivatives such as ethane, propane and butane.

CENTRAL ASIAN RAILROAD CARS STAND IDLE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 24 April 1982 carries on page 2 a 300-word article by newspaper correspondent N. Sa"dullayev titled "Railroad Cars Must Not Be Kept Waiting." The correspondent notes that despite recent efforts to refine loading procedures by republic departments of the Central Asian Railroad, late deliveries and loading problems continue to mount. Cases of railcars standing idle during the loading process at entrance ways to enterprises are frequently encountered. During 1981 and the first months of 1982, the Karshi department paid almost 388,000 rubles in fines for permitting an excessive number of cars to stand idle. In another instance, the Dostlik railroad station provided the "Dostlik" Cotton Ginning Plant with 1,409 railcars, which had been carrying mineral fertilizers. Because authorities did not have these cars emptied out by the time they were reassigned, some 200-500 kilograms of various kinds of fertilizers remained in each of them. As a result, workers at the "Dostlik" plant were required to expend a lot of work hours cleaning and washing them. Such cases cause delays in loading and unloading and delivery of railcars. Sa"dullayev concludes by urging leaders of the Central Asian Railroad Administration to devote their attention to this problem.

PROBLEMS IN UZBEKISTAN CONSTRUCTION MATERIALS INDUSTRY

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 24 April 1982 carries on page 2 a 700-word unsigned economic review titled "Consistency Is the Key to Success." The review surveys 1982 first quarter results in the construction materials industry. Compared to 1981 first quarter results, this year's results include 2 percent growth in fixed capital, 5 percent growth in appropriation of capital investment, and 4 percent growth in volume of construction work. Against many construction enterprises that are functioning well, there are various enterprises and organizations that have not consistently maintained the required pace, resulting in failure to fulfill plans and a decline in construction quality. Some organizations are not finishing projects on time, and others, especially in Karakalpakistan, Kashkadarya, Tashkent, Fergana, and Korezm Oblasts, have allowed a number of construction projects to become slack.

CONTAGIOUS DISEASES IN UZBEKISTAN DISCUSSED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 6 April 1982 carries on page 3 a 600-word article by S. Muhamedov, director of the Uzbek SSR Institute of Epidemiology, Microbiology and Contagious Diseases, A. Rasulov, chief physician of the Institute's Clinic, and Sh. Shovahobov, assistant chief physician, titled "Source of Inspiration." The doctors discuss the work of this Institute on the study, containment, and prevention of contagious diseases in the republic. They note that in recent years, the incidence of typhoid, dysentary, measles, tetanus and other contagious diseases has sharply declined. As an example of the institute's services in this area, they cite its role in the implementation of measures aimed at improving the supply of good drinking water to the population of Yangiyul City and Rayon, with the result that the incidence of typhoid, paratyphoid, dysentary, and other diseases has considerably fallen in this area. They remark that measles was widespread among Uzbek children, with thousands falling ill every year and some of these dying, until the 1970's. With the help of a vaccine developed by Soviet doctors, the institute launched an immunization campaign against measles and obtained extremely good results. Institute scholars are also studying the causes of poliomyelitis, a disease that afflicts children, frequently leaving them paralyzed and permanently crippled. The institute has also promoted a program of tetanus innoculation for pregnant women, and as a result of this preventive measure, there has been a sharp decline in the incidence of this deadly disease in Uzbekistan. The doctors note that there have been many cases of virulent hepatitis (jaundice) in recent years. Institute workers have conducted seminars in every oblast on the epidemiology, diagnosis, and treatment of this disease. In conclusion, they state that the institute, which has become the republic center for coordinating measures against contagious diseases, also trains doctors for work in the oblasts in bacteriology, epidemiology, virusology, biochemistry, and contagious diseases.

UZBEK TU ROUNDTABLE ON CHILDREN'S FOOD PROGRAMS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 20 April 1982 carries on page 2 a 1,200-word article by newspaper correspondent A. Qorjovov titled "Children Are Our Future." This article reports on and quotes from the participants in a roundtable on food programs for child sponsored by the interagency commission for the protection of women and children of the republic Council of Uzbekistan Trade Unions. One of the participants, Deputy Minister of Education J. Sharipova acknowledges that there are still shortcomings in the organization of food programs for preschoolers. The requirements of many children's institutions in all regions of Uzbekistan for fish, vegetables, fruit, and milk, are not being satisfied. Variety and quality of food supplies are also low. B. Qodirov, deputy director of the Uzbek SSR Pediatrics Institute, pointed out that, despite some progress, the demand for dairy products for children is not being met. Existing dairy kitchens are not being expanded quickly enough, and their equipment either functions poorly or not at all. Furthermore, there is an insufficient supply of vegetables for the programs, despite continuing growth of vegetable production. Qodirov concludes his remarks with the statement that vegetables constitute only 5 percent of all canned goods. M. Rudenko, chief of the Food Trade Administration of the Ministry of Trade, asserted that food products for preschoolers were being supplied in sufficient quantity. He also remarked that dairy products prepared for children stand unsold on the shelves of village stores but can hardly be found in cities and settlements, a situation that he attributes to the availability of dairy products to farmers from their private livestock. D. Oleynichenko, deputy minister of the Fruit and Vegetable Industry, contradicted Qodirov with the claim that vegetables are being canned in sufficient quantity.

Social and Cultural Affairs

POOR ATTENDANCE IN UZBEKISTAN SCHOOLS EVOKES SPECIAL UzSSR MINISTRY OF EDUCATION ORDER

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 3 April 1982, p 2, 900 words: "At the Uzbekistan SSR Ministry of Education." An order was issued by the UzSSR Ministry of Education "On the Attendance Results of Pupils of General Education Schools in Tashkent City and Tashkent and Jizzakh Oblasts and by Students and Pupils of Republic Higher and Secondary Pedagogical Institutions." While an inspection of the institutions indicated in the order showed that in a few the proper attention was being given to school attendance, in most the situation was far from satisfactory. For example, at Tashkent's October Rayon School No 38, there was an average of 25-30 students skipping school for no justifiable reason every day. On the day attendance was checked at No 53 Worker Youth (ishchi-yashlar] School, attendance was 25 percent. The article also provides details of poor attendance records at other institutions. The Ministry of Education's investigation discovered that upper grade pupils in Tashkent city schools were at times taken out of class to haul documents or to work on mass projects. The order of the Ministry of Education noted insufficient attention to attendance given by the departments of education of Tashkent city's October Rayon, of Jizzakh Oblast's Kalinin and Chinaz

Rayons, as well as by Angren State Pedagogical Institute and Tashkent's Krupskaya Pedagogical Institute. It also outlined specific measures (given in the OQITUVCHILAR GAZETASI report) which these offices and institutions are charged with taking.

RECOMMENDATION TO ESTABLISH RADIO AND TV COUNCIL IN WRITERS' UNION

[Editorial Report] Tashkent GULISTON in Uzbek No 2, 1982, p 12 carries a 600-word article by Rasul Rahmonov (deputy chairman of the UzSSR State Committee of Television and Radio Broadcasting) "Meeting With Millions." This is a report on several kinds of radio and television broadcasts in the UzSSR. Rahmonov recommends that the Uzbekistan Writers' Union establish a Council on Television and Radio Broadcasting.

STUDENT TEACHERS SHOULD BE PROUD OF MOTHER TONGUE

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 9 April 1982 carries on page 3 a 1,000-word article by B. Mirzaahmedov (Docent of Tashkent Nizamiy State Pedagogical Institute, Candidate of Pedagogical Sciences) titled "Student Practice." The article tells about the importance of student practice teaching of native language in Uzbekistan. In so doing, the author emphasizes the value of the native language. "It is known that native language is considered one of the leading subjects among school academic subjects. Study of the native language not only opens the way for students' study of other subjects, but in the words of the famous political and social figure M. I. Kalinin, it allows the individual to find his appropriate place in the community of people. In order for the student teacher to be a good teacher he should first of all be proud of his love for his mother tongue, [proud of the fact that] 'language is the most important means of communication for mankind' (V. I. Lenin), and [proud of] the extraordinarily great role it plays in the progress of society; [he should] constantly point out both to himself and to students that respect for the language is respect for the people who created this language."

KOMSOMOL ROLE IN ATHEISTIC PROPAGANDA

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 24 April 1982 carries on page 2 a 1,000-word article by A. Hasanov (secretary of the Syrdar'ya Komsomol Committee) titled "Report on Strengths and Weaknesses of Komsomol Work in Spreading Atheism and New Customs." The article's starting point is the CPSU 26th Congress and the UzSSR Komsomol 22d Congress. In Syrdar'ya Oblast bringing young people up in the spirit of scientific atheism is one of the important areas of the work of Komsomol organizations. Councils have been established at the level of oblast, rayon and city committees, as well as in most primary Komsomol organizations to carry on work in order to train young people as atheists and to carry out new customs and ceremonies. Help comes from the oblast cultural office, the "Znaniye" Society's oblast office, the agitation collective "Komsomol" and the mobile lecture bureau "Girls' Discussion Group." They all attempt to spread new customs and ceremonies among young people. There are, however, problems. "The analysis of work by Komsomol organizations towards cultivating young people's active positions on life demonstrates that we are not always or everywhere managing to carry out work effectively. After all, there are not just a few among young people who observe religious ceremonies. Nor can it be said that they are ones without a strong education. One also finds among such young people those with higher education, teachers of schools and uchilishches, doctors, construction workers and those of other trades." There has been some progress in involving larger numbers in atheistic activities. A lot of young workers, kolkhoz farmers and specialists do not regularly attend classes."... "Thanks to the attention of party organizations, as the years go by the life of young people and its content are being enriched and Soviet ceremonies and customs are developing successfully. But the vestiges of the old ways do not disappear on their own. Therefore I propose to the tribune of the VLKSM 19th Congress the establishment of a council or center which would coordinate the work of scientific-atheist upbringing of young people, put out methodology manuals and popularize the most advanced experience.

FIGHTING RELIGIOUS BELIEF IN PRIMARY SCHOOL CHILDREN IN BUKHARA

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 14 April 1982 carries on p 2 a 1,100-word article by A. Abayev (lecturer-atheist, director of the Bukhara City History and Social Sciences' Teachers' Organization and Uzbek SSR outstanding public educationalist). Article concerns the way in which religious beliefs in primary school children are being fought in Bukhara. Teachers at one of Bukhara's primary schools attempt as early as the very first day of school to find out whether pupils have religious tendencies. They discover that some children's parents do not send them to school on Fridays, and some do not allow their children to participate in community activities. Most of the teachers in the Bukhara city schools meet the demands of a good teacher of atheistic attitudes. Most of them subscribe to and regularly read such journals as SCIENCE AND LIFE, KNOWLEDGE IS STRENGTH, THE ATHEIST'S CALENDAR and THE ATHEIST'S GLOSSARY. Every year at school pedagogical council meetings the questions of cultivating atheistic spirit in students and parents are discussed. Every class leader includes in his plan of study a section on cultivating atheistic spirit in students and on atheistic work with parents. Plans have been developed for improving atheistic education. They include measures for strengthening atheistic propaganda among housewives and old people, both of whom have tendencies toward superstition. Readers' conferences are held on topics of atheism; films are shown and excursions are organized to the history museum and the local branch of the republic House of Scientific Atheism. Lecturers frequently come to schools from the oblast "Zhaniye" Society, as do propagandists, atheists, and scholars from the pedagogical and polytechnic institutes. Their lectures on such topics as "Science and Religion," "Islam and the Present," "When Did Religion Come About?" "The Relation of the CPSU and the Soviet Government to Religion and Church" and "Atheistic Upbringing of Children in the Family" have aroused great interest. A Young Atheists' Circle was organized at Kuibyshev School in Bukhara. One of its first activities was to distribute a questionnaire. The results showed that most religious believers are housewives and old people. The article contains a report on a sixth grade student who was religious and at first not affected by antireligious propaganda. The boy's father would not even let his son join the Pioneers. As a result of lectures, films, discussions and visits the boy was eventually brought over to an atheistic position. Another example is given of an atheist propagandist who studied the living conditions of a believer, met regularly with him, and held discussions. Eventually he was able to win the believer over. The experience of today's propagandists is demonstrating that individual work with believers is one of the most effective forms of atheistic propaganda. An example is given of one person who turned away from his former religious beliefs as a result of individual discussions and went on to become active in antireligious activities.

FIRST UZBEK-LANGUAGE LINGUISTIC ANALYSIS MANUAL PUBLISHED

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 17 April 1982 carries on p 3 an 800-word article by A. Shermatov (chairman of General Linguistics Department, Tashkent Nizamiy State Pedagogical Institute; Doctor of Philological Sciences; professor) and I. Chariev (Docent of Qarshi State Pedagogical Institute, Candidate of Pedagogical Sciences) titled "Handbook of Linguistic Analysis." The article reviews recent Uzbek-language publication of Oqituvchi Publishers, Linguistic Analysis. The new book's authors are T. Qudratov and T. Nafasov. "The handbook has great scientific and practical significance for students and teachers of higher educational institutions preparing specialists in Uzbek language and literature." "Up until now no handbook or educational literature about linguistic analysis had existed [in Uzbek(?)]. It is here that this handbook has great significance."

SUPERVISION OF HIGHER EDUCATION IN UZBEKISTAN

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 21 April 1982 carries on page 2 a 1,000-word article by T. Khankhojaev (department chairman, UzSSR People's Control Committee) titled "The Higher School's Inspectors." The article describes the work of the People's Control Committee in the field of higher education in Uzbekistan. There are presently 43 control groups and posts in the higher educational institutions of the republic. In some of the larger higher educational institutions of the republic the number of people's controllers reaches several hundred individuals--consisting of students, laboratory assistants, workers, and candidates and doctors of science. These posts and groups exist in all faculties, large departments and other scientific and administrative offices. The people's control groups are especially active in Tashkent and Samarkand Institutes. In the last 2 years the Tashkent State University People's Control group carried out 28 investigations. The article describes six cases investigated by various control organs around the republic. Some of the cases enumerated in the article concern 1) cases of admission of weak students into institutions of higher education while stronger ones were being denied admission; 2) poor use of laboratory equipment and funds for laboratory equipment at Samarkand State University; 3) poor living conditions at dorms in Tashkent and Termez; and 4) improper payment of stipends at Andijan State Pedagogical Institute.

SUCCESSES, PROBLEMS IN PROTECTING MONUMENTS IN UzSSR

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 8 April 1982 carries on p 3 a 700-word article by Habibulla Zayniddinov (consultant of the board of the Society for Protection of Historical and Cultural Monuments of Uzbekistan) titled "Let Us Protect Them Like Our Own Eyes." The article concerns work in protecting old monuments in the UzSSR. The author emphasizes the importance of this work with a reference to the role Lenin had envisioned for cultural heritage in building socialism. Historical and cultural monuments, according to Zayniddinov, embody the creative work of the forefathers. At present there are over 7,000 various types of archeological, historical monuments recorded in the republic; they "give evidence of the high culture of the people who have lived in our area since ancient times." Some of these monuments are of world importance and are included in UNESCO's list. A great deal of work on locating monuments, recording them, studying them, restoring them and spreading information about them is conducted by local soviets, the Ministry of Culture and its local organs, architects' and artists' unions, scientific research institutions, Komsomol and trade union organizations and organs of people's education. Despite the successes achieved, however, there are numerous problems. "There is no strict supervision over proper use of funds allocated for this field. Every year some of the funds allocated by the Society [for Protection of Monuments] for the restoration of monuments are not used. Likewise, large scale projects are without any grounds carried out by construction workshops on objects which are not monuments." Another problem concerns new construction in cities. "The question of preserving monuments when cities are being constructed or reconstructed is not being properly resolved. It is necessary, along with reflecting the best national architectural traditions in the appearance of our cities, to preserve historical monuments and to harmonize them with the style of contemporary urban construction." Zayniddinov sets the membership of the UzSSR's Society for Protection of Historical and Cultural Monuments at 5.2 million.

International

FOUNDATIONS OF AFGHAN REVOLUTIONARY LITERATURE TOPIC OF UZBEK ESSAY

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 30 April 1982 carries on page 4 a 1,700-word essay by Candidate of Philology Abdurahim Mannonov titled "The April Revolution and the Literary Process." Mannonov states that the April Revolution is the main theme of all poetry and prose genres that exist in the literature of multilingual Afghanistan, and that revolutionary themes may also be found in the works of writers who began to write in the period of the 1930's-1960's. He devotes the major part of the article to the careers and works of four Afghan writers, including Dastagir Panjiriy and Bariq Shafei, both poets who began to write on revolutionary themes even before the 1978 revolution. Another major figure is Asadulla Habib, Chairman of the Afghanistan Writers Union, which was formed in 1981. Mannonov briefly describes the activities of this organization, especially in the area of developing national literatures, and notes that prior to 1978 the Uzbeks, Turkmen, Khazara, and Beluchi did not even have literary languages. The author devotes considerable space to Sulayman Laiq, president of the Afghanistan Academy of Sciences, and a poet who has written on revolutionary themes since the 1960's in both Pashtu and Dari (described as "Kabul Persian"). Mannonov terms Laiq "one of the founders of modern [Afghan] literature."

FOREIGN RECOGNITION OF UZBEK LAND RECLAMATION WORK CITED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 22 April 1982 carries on page 3 a 700-word article by Prof Dr of Economics Gh. Rizayev titled "Influential Force." Rizayev observes that the 1918 decree signed by Lenin authorizing 50 million rubles to be spent on irrigation work in Turkestan began a process that through the years of Soviet government has changed the appearance of the Mirzachol [Hungry Steppe] in Uzbekistan. The experience gained from this massive land reclamation enterprise has great significance for countries of Asia, Africa and Latin America. Foreign delegations, including from Hungary, Rumania, Cuba, Sri Lanka, India, Afghanistan, Pakistan, Turkey, Algeria, Mali, and Mexico, have come to the Mirzachol and seen what miracles can be worked by a people liberated from exploitation and oppression. The impression made on foreign observers has been powerful, according to Rizayev, and he cites "Floyd E. Domini," head of the U.S. Bureau for Irrigation and Land Reclamation, who has written of his amazement over the scale of land reclamation work being done in Central Asia and the skill of local specialists in this work. Rizayev also refers to the positive assessments of the American journalist "M. Pitmen" and the Hungarian journalist "P. Vayda."

IMPROVED SOVIET-AMERICAN RELATIONS SUPPORTED IN UZBEK COMMENTARY

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 21 April 1982 carries on page 3 a 200-word commentary in the world news section by newspaper foreign affairs commentator T. Soliyev titled "Renewing the Hope of Mankind." Soliyev addresses this commentary in support of the proposal for improved Soviet-American relations made by L. Brezhnev in a PRAVDA interview. Calling the state of Soviet-American relations the key to international peace and security, Soliyev concludes by expressing support for the Soviet policy of seeking improved relations between the two countries.

INDIAN CONFERENCES, STUDIES ON CENTRAL ASIA DESCRIBED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN'ATI in Uzbek 23 April 1982 carries on page 4 a 900-word article by Dr of Philosophy M. Khayrullayev titled "Scientific Meetings Intensify." Khayrullayev describes several conferences on Central Asian themes held in India in November 1981 in which Soviet scholars participated. The Soviet delegation included M. Osimov, president of the Tadzhik SSR Academy of Sciences, V. Tkachenko, a member of the Presidium of the USSR Academy of Sciences, and Khayrullayev, director of the Institute of Oriental Studies of the UzSSR Academy of Sciences. One of the conferences attended was held in Delhi and was dedicated to the 1,000th jubilee of the Central Asian philosopher Ibn Sina [Avicenna]. Another seminar, held in Bombay, was devoted to Central Asian and Indian relations in the Middle Ages, and led to proposals for collaborative works by Soviet, especially Uzbek and Tadzhik, and Indian historians, which would be coordinated by the Institute of Oriental Studies in Uzbekistan. The Soviet delegation also visited Kashmir University in Srinigar, where a Museum on Central Asian History has been formed, and courses on Central Asian history and Persian language and literature are given. Khayrullayev announces that university officials also proposed that a special course in Uzbek language be organized and invited a specialist from Uzbekistan to present it.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

MOSCOW TV DISCUSSION VIEWS USSR FOOD PROGRAM

OW220736 Moscow Domestic Television Service in Russian 0830 GMT 2 Jun 82

["The Food Program--Common Task for All the People"; the 1 June installment of the "Problems, Decisions, Solutions" series moderated by political observer L. A. Voznesenskiy, with Victor Petrovich Borodin, USSR first deputy minister of agriculture; Nikolay Fedorovich Vasilyev, USSR minister of land reclamation and water resources; Aleksander Aleksandroich Yezhevskiy, member of the CPSU Central Committee and USSR minister of tractor and agricultural machine building; Leonid Yakovlevich Florentyev, member of the CPSU Central Committee and RSFSR minister of agriculture; Leonid Ivanovich Khitrun, member of the CPSU Central Auditing Commission and chairman of the State Committee for the Supply of Production Equipment for Agriculture; and Petr Andreyevich Paskar, candidate member of the CPSU Central Committee and first deputy chairman of the Gosplan]

[Text] [Voznesenskiy] Good day, comrades. Each time we organize a broadcast in which you may actively take part, we try to propose topics that concern the broadest section of people. And, really, today's topic will probably leave absolutely no one indifferent, for this topic is the solution of the country's food problem.

As you know, this is a central problem of the current and subsequent 5-year plans, both in an economic and political respect. It was discussed at the recent May CPSU planum, which approved the USSR food program until 1990 and confirmed a number of accompanying resolutions of the CPSU Central Committee and the USSR Council of Ministers. Today we propose to discuss these documents with you, to assess the place and significance of the plenum's decisions in the economic and social history of our society and to give some thought to ways of fulfilling the plans outlined by the party to accelerate development of agriculture, the whole agro-industrial complex and the country as a whole.

So this would really be a joint discussion and, as has happened more than once during broadcasts of the "Problems, Decisions, Solutions" series, we again have 10 telephones in the studio by which you may ask the participants of the meeting questions of interest to you.

The first question I would like to ask you, Petr Andreyevich, is not a question but rather a request: Having taken part in the May plenum, please tell us what you regard as the main--the key--points in its work and ideas. And since obviously all the comrades present took part in the plenum, anyone who wants to may, of course, share his thoughts and feelings.

[Paskar] As you know, the May plenum of our party's Central Committee discussed an especially important question: The question of the USSR food program until 1990. Comrade Leonic Ilich Brezhnev, general secretary of the CPSU Central Committee, delivered a report at the plenum. It gave vivid picture of the development of our agriculture and other areas of the agro-industrial complex and defined the large-scale tasks in this area until 1990. The country's food program was formulated at the initiative of Comrade Leonid Ilich Brezhnev, general secretary of the CPSU Central Committee. Also, as Leonid Ilich's report says, it must bring about a fundamental improvement in the supply of foodstuffs to our country's population in the shortest possible time.

The program is made up of very important sections which stipulate the development of agriculture and the branches of the national economy called on to provide agriculture with the necessary resources. First and foremost are machinery, tractors, fertilizers and chemical agents for the protection of crops. Especially important measures are stipulated to develop branches called on to prepare, transport, preserve, process and deliver foodstuffs to the consumer. In a word, this is a complex and special purpose program implemented to mobilize the industrial and scientific and technical potential accumulated by our economy during all the years of socialist and communist construction for a coordinated solution to the food problem in our country.

If we talk about atmosphere, then, truly a businesslike atmosphere reigned at the plenum, and the discussion of questions raised by the general secretary of the CPSU Central Committee was conducted with interest. The actual decisions, the general secretary's report and the food program were published in the press. I think our viewers are familiar with the substance of these documents. From their very substance one can see they are by nature quite realistic and scientific and give direction to our economy and primarily to the branches called on to produce and deliver foodstuffs to the consumer and to develop at a more rapid pace. It should be noted that such a formulation is unprecedented in its scientific and large-scale character. This stresses even more the great optimism that reigned at the plenum, the revolutionary scope of the decision and the deep conviction, belief and the correctness of the cause we are undertaking. Thank you.

[Voznesenskiy] Comrades, is there a great desire to add something now or do you think you can do this during the course of discussion? Do it that way, perhaps? All right?

[Many voices] Yes. Yes.

[Voznesenskiy] Good. In that case one question. It seems to me that on the whole we are establishing quite a good tradition in these programs--to always try to answer the first question that succeeds in getting through on the telephone. So now this first question: Incidentally, essentially already not one but two such questions have come in. One, from Comrade (Krutov), a physician from Moscow, asks: Have these decisions come too late? Were they adopted too late? And the second question from Comrade (Gennadiy Ivanovich Ayev), also from Moscow: Why was the food program not discussed at the 1965 plenum and only in May 1982? I think these two questions have something in common and there is something to be said here in that connection. Who would like to say something? Leonid Yakovlevich, please.

[Florentyev] These decisions have not come too late. First, the decisions made by the May CPSU Central Committee Plenum are founded and rest on those decisions that were taken by the party in March 1965. The historic decisions of the March CPSU Central Committee Plenum oriented the party, all the Soviet people and all our national economies to an accelerated development of agriculture and branches of the agro-industrial complex. Leonid Ilich Brezhnev's report to the CPSU Central Committee plenum--I would like to note that the CPSU Central Committee plenum listened very attentively and enthusiastically to this report delivered with Leonid Ilich's characteristically wise and realistic approach and the deepest understanding of what is necessary in the development of the Soviet economy as a whole--analyzed the results of agricultural development since March 1965.

The comrades should be familiar with the report where data on the increase of agricultural foodstuffs in the country in the 10th Five-Year Plan, as compared to the Seventh Five-Year Plan, were presented. You see that in terms of grain this comprises almost a 160-percent increase in the average annual growth--a 150-percent increase in terms of sugarbeets, 156 percent in vegetables, 234 percent in grapes, 159 percent in meat, and so on. In a word, our party and state have been concerned with foodstuffs for the whole of this recent period, moreover, quite successfully. The new documents and decisions continue the March policy. As Leonid Ilich said: We have never given up this policy and never will. The food program laid down for the 1980's continues this policy under new conditions and in a new stage as a long-term complex program. In its noble aims and enormous scope our food program does not have analogies in history and with good reason may be called an historic program to increase the welfare of the people.

[Borodin] I have received the following question from (Aplombov): Why don't we have any grain in the country? What can one say in answer to such a question? It is, of course, quite strange. During the past 5-year plan an average of 205 million tons have been produced over 5 years.

[Voznesenskiy] Average per year.

[Borodin] Average per year. The increase amounted to 130 million tons in 1965 when the March CPSU Central Committee Plenum was held. At one time tsarist Russia produced, all in all, an average of 72 million tons over 5 years. The May plenum, which we are discussing at this roundtable, stipulated further increases in grain production. In particular, the average annual grain production during the current five-year plan must be 238-243 million tons, and during the 12th Five-Year Plan it will be 250-255 million tons. So it is not quite correct to say that we gave no grain in the country.

[Many voices] Even quite incorrect.

[Voznesenskiy] However, all the same, we do have a problem.

[Borodin] We do. The fact is that at present we do not have enough forage grain in order to sharply increase livestock breeding production. However, concerning bread grain, we have quite enough and this problem has long been solved in our country.

[Voznesenskiy] Thank you. Aledsandr Aleksandrovich, two questions for you:
1) I have a garden plot and due to circumstances I must work this plot alone. However, I am sick and already a pensioner so how can I get this plot cultivated? [signed] (Agteyeva), production design engineer, Moscow.
2) How is the problem of production of small-scale machinery for subsidiary farms being solved? [signed] (Arestov), engineer of the Moscow River Steamship Line. Please.

[Yezhevskiy] Of course, they are interesting questions. I thought that questions on high-power machinery and high-production machinery would come first. However, this is also an important question, since personal plots also play an important role in the food program. That is why it is a very important question.

Well, what can I answer? A decision has been adopted to organize production, mass production, of motor blocks with 5- to 7-horsepower engines and a selection of various agricultural machines of 11 descriptions. It is proposed to organize this production at the Kutaisi Small Tractor Plant in Georgia along with a selection of various machines, as I have already said.

As regards garden and orchard tools, large-scale measures are now also planned to significantly increase output of garden and orchard tools, particularly, selections for the gardener and the vegetable grower for a variety of crops, so to speak, for cultivating various crops. That is why output of these machines will be increased considerably in the near future and we will not only touch on the quantitative side but also the qualitative side so that these will be high quality, productive, comfortable and inexpensive tools and implements.

[Voznesenskiy] Thank you. Incidentally, you have hardly completed your address and here is another question: How long will the question of introducing small machine equipment continue; how long before it is decided? Not a single plant has turned out anything. [signed] (Berisov), engineer, Moscow. Now, you have in essence answered this question. I simply want to use this example to stress that apparently this problem worries many comrades indeed and our task is to speed up its solution in any way possible. Another question: By what principle will kolkhoz credits be repaid? Which kolkhoz will get it first? Yes. This question was put by (Valeriy Aleksandrovich Sokolov); chief of a bureau from Orenburg. True, it does not say which bureau.

[Borodin] I do not quite understand the way the question is phrased....

[Voznesenskiy interrupts] The question is not clearly phrased, correct?

[Borodin] A May CPSU Central Committee Plenum decision proposes--it has already been decided--that those debts listed against individual kolkhozes which cannot be repaid will be written off. This sum comprises approximately R11 billion.

[Unidentified speakers] [words indistinct]

[Borodin] And moreover, there will be a deferment of approximately R11 billion until after 1990, so that credit will be written off for the economically weak and insufficiently profitable farms.

[Voznesenskiy] Thank you. The problem of spare parts is very acute in agriculture. Is there a chance that this situation will improve in the near future? [signed] (Vasilyeva), Moscow. Leonid Ivanovich, please.

[Khitrun] Yes. Lev Aleksandrovich, you have given me another question here in letter form, from Dzhambul. This question is from Comrade (Kozhekanov), in which he asks about the direction of technical progress and those measures which will be implemented in the technical reequipment of the rural sector. Now here we have this question. Allow me to answer both questions at the same time.

[Voznesenskiy] Very good.

[Khitrun] The mechanization of labor-intensive processes in agricultural production and the determining factor of its intensification is the transition to an industrial basis--implementing industrial technology in cultivating agricultural crops and reducing expenditures on machinery and tractor fleet maintenance and on labor for agricultural crop cultivation. This work is being conducted in the country systematically and a machinery system has been devised for the 11th and 12th Five-Year Plans, for this 10-year period, which envisages the realization of a whole series of organizational and technical measures directed at further provision of technical equipment for agricultural production.

Figures on the provision of technical equipment for agricultural production are cited in the food program. They are impressive and I would just like to recall them: Power capacities as a whole in 1980, for example, comprised 604 million horsepower. By 1990 it is envisaged to increase them 1.6 times and to bring them up to 970 million horsepower. Power capacities will grow from 286 to 470 horsepower, or 1.7 times, per a 100-hectare unit of cultivated land. These figures convincingly establish the high rate of provision of technical equipment which was determined in accordance with the decisions of the May CPSU Central Committee Plenum.

The first stage of the machinery system devised for the 11th and 12th Five-Year Plans envisages the development of 700 new machines and mechanisms; that is 700 in the 11th Five-Year Plan period. On the whole the machinery system includes 3,600 varieties. Thus, if we compare this, for instance, with what has already been developed and is being produced, then it looks like this: 2,000 kinds of machines and mechanisms have been produced today and almost as many are being turned out by industry. It is also necessary during these two five-year plan periods--during these 10 years before 1990--to develop 1,600 varieties. In other words we are talking about doubling the rate of technical progress.

This is from the quantitative side. Of course, extensive measures for qualitatively improving the machinery and tractor fleets are provided for in the machinery system and in directions for technical progress in this period. This includes increasing individual capacities and power saturation and developing complexes and completed production lines to secure full use of the machinery and tractor fleet and on this basis obtain higher productivity from it.

As regards spare parts, there are words in the food program, as the viewers recall, which oblige both industry and us, the system of the state committee for supply of production equipment for agriculture, to improve this matter. As far as we are concerned, we are talking about organizing regeneration of spare parts on an industrial basis. Today we are regenerating spare parts to the order of R400 million per year and a significant increase is envisaged. We are talking about doubling this volume during this 10-year period.

If we concretely believe the question you just read out, then the problem of spare parts is generally being solved. We are talking about some 20 to 30 kinds of spare parts in critically short supply, that we do not have enough of. Of course measures will be taken on this, and I would like to answer affirmatively that, of course, the matter of providing spare parts for the machine and tractor fleet will be fundamentally improved. However, we must think, solve tasks and use the material resources now at our disposal as effectively as possible.

[Voznesenskiy] Comrade (Say) from Moscow asks: What are the concrete ways of realizing the food program? Well, such a broad formulation of the question really obliges literally all those present to talk about the methods with which they are most directly associated. However, I think we will essentially answer this question during the broadcast, but now, since such a question has come up, I would like to ask Nikolay Fedorovich to say a few words about land reclamation as one of the decisive means of obtaining stable and guaranteed harvests.

[Vasilyev] Why is so much significance attached to land reclamation in our country? The fact is that there is no land in our country that does not require improvement. More than 75 percent of our land is on zones of insufficient moisture and this land suffers from drought very much. Approximately one-fourth of the land lies in zones of excess moisture; here, on the other hand, we are obliged to carry out work to remove this excess moisture. We have saline land, land that is acidic, land that is subject to wind and water erosion and a whole series of other problems.

That is why we have to carry out large-scale land reclamation and land improvement work to create a really stable and rapidly developing agriculture. The people call the land "land--provider of food" and "land--the mother"; the classics of Marxism-Leninism without question call it the main means of production. That is why the effectiveness of our work and the effectiveness of agricultural technology, mineral fertilizers, herbicides, toxic chemicals, and other means of intensifying agricultural production will be more effective when they stand against the background of reclaimed land.

Now concretely: We now have 31 million hectares of irrigated and drained land in our country and this land occupies 10 percent of the arable land and perennial pastures and produces one-third of the crops in cash terms. Moreover, we obtain all our rice and cotton from this land, 75 percent of our vegetables and approximately 50 percent of the grapes and now this reclaimed land also produces about 25 percent of our fodder. Hence, its role is undoubtedly very significant and therefore, proceeding from that program and those plans which are stipulated in the food program, the role of reclaimed land in our country will grow. I will cite only two figures: our arable land area must increase and reach 23 to 25 million hectares and drained land must reach 17 to 19 million hectares.

[Voznesenskiy] Thank you. A number of questions have come in on the problems of administration. Peter Andreyevich, tell us your position on this.

[Paskar] Lev Aleksandrovich, indeed many viewers are interested in administrative questions and this is rightfully so, since much of the success and realization of those far-reaching tasks that were put forward at the May CPSU Central Committee Plenum depend on how administration and economic interrelationships between agriculture and the branches that service it improve.

Comrade (Igor Aleksandrovich Bruyenskiy) from Moscow, of the Institute of Economic Problems, asks a number of questions: 1) Please concretely define the list of ministries and departments that come into the country's agro-industrial complex. 2) Please define more accurately the basic functions of the USSR Ministry of the Fruit and Vegetable Industry in producing fruit and vegetable foodstuffs--and in connection with this, what are the basic groups of foodstuffs produced and do they include potatoes or is potato production the preserve of agriculture?--and its functions in storing and processing fruit and vegetable foodstuffs? 3) Why doesn't the commission for agro-industrial complexes of the USSR Council of Ministers Presidium include, first, the heads of the Ministry of Machine Building for Light and Food Industry and Household Appliances, being the chief branch that determines the technical level of processing enterprises; the Ministry of the Meat and Dairy Industry, the Ministry of the Food Industry, the Ministry of Procurement and the Ministry of the Fish Industry and, second, the chiefs of the USSR Ministry of Trade, being the branch which ensures the distribution and marketing of the bulk of agricultural foodstuffs?

He has another two questions. I would like to answer (Igor Aleksandrovich's) questions as follows: The agro-industrial complex is composed of three spheres. The first sphere consists of the ministries and departments called on to provide agriculture with the means of production. These are the Ministry of Tractor and Agricultural Machinebuilding, the Ministry of Machinebuilding for Animal Husbandry and Fodder Production, the Ministry of Mineral Fertilizer Production and a number of others. The second sphere consists directly of agriculture and the branches which service it. These are the Selkhoztekhnika Agricultural Equipment Association, the Selkhozkhimiya Agricultural Chemicals Association, land, and veterinary and seed selection services. The third sphere consists of the branches that must conduct the procurement, processing, storage and delivery of foodstuffs to the consumer.

These are: The Ministry of the Food Industry, the Ministry of the Fruit and Vegetable Industry, the Ministry of the Meat and Dairy Industry, the Ministry of Procurement and the Ministry of Trade.

Now, what are the functions for which the newly established Ministry of the Fruit and Vegetable Industry is responsible? This ministry's main tasks are primarily to produce vegetables, fruit and potatoes at specialized farms, to provide all agriculture's requirement for vegetable and potato seeds and planting stock for perennial planting. Most important, insofar as production is also retained at nonspecialized farms and we make large-scale purchases from the population, especially in regard to vegetables, fruit and potatoes, this ministry's chief responsibility is to ensure procurement, storage and industrial processing of these products as a result of which it now has practically the entire state canning industry concentrated under it and it also conducts wholesale trade in vegetables, fruit and potatoes. In many places, this ministry has also taken on marketing functions. In other words, it conducts trade in fruit, vegetables and potatoes, through stores.

Now, the question of why the heads of the ministries named by (Igor Aleksandrovich) are not part of the commission, I would like to answer as follows: This commission has not yet been finalized in terms of personnel. This work is now going on; the individual composition of this commission will be worked out and will be confirmed by directive organs. I think its composition will be considerably enlarged and there is a possibility that the named chiefs of ministries and departments will become part of this commission.

Now, we have a question by (Artaminov), a mechanic from Moscow: Who takes personal responsibility for fulfilling the food program? Well, we have already noted that the food program is a large, special purpose program called on to solve such a cardinal question as the uninterrupted supply of valuable food products in our country and, of course, it would be probably impossible to place responsibility for such a vast program on one person who would bear personal, individual responsibility. In this connection a restructuring of administrative organs for agriculture and the whole agro-industrial complex is being carried out. Rayon agro-industrial associations, the so-called RAPO, are being set up at the rural rayon level and oblast agro-industrial associations are also being set up at the oblast level. At the republic level, commissions or other organs, at the discretion of the republic, are being set up under the Council of Ministers of the Union Republic; and a union agro-industrial commission is being set up at the union level in accordance with the decision taken at the CPSU Central Committee plenum. Undoubtedly, these bodies must bear full responsibility for solving the matter of food in our country and the uninterrupted supply of valuable food products to our population.

[Voznesenskiy] Comrades, a very interesting question has been received, not a question really, but a request, from Comrade (Kovelko), an engineer from Moscow. The question is: I want to go into agricultural work. Where should I apply and how does this affect specialists working in industry and in other large cities? How can we answer this question?

[Paskar] We welcome such a fine undertaking.

[Khitrun] Let him come in tomorrow morning.

[Voznesenskiy] To you, Leonid Ivanovich?

[Khitrun] He can come to us.

[Voznesenskiy] Well, wonderful. Wonderful.

[Paskar] In fact, it is noted in the resolution and I have to say that fairly broad measures are directed at providing incentives for those who wish to work in agriculture.

[Voznesenskiy] In that case, if I understand correctly, the comrade who decides to devote his life to the countryside, and links it with the development of the countryside, should apply to one of those ministries or departments which have a direct relationship to it and are most suitable to his background, in other words, to the person's profession. That is correct, is it not?

[Many voices] Yes. Without a doubt.

[Vasilyev] We invite everyone to come and work for the Ministry of Land Reclamation and Water Resources. The volume of work is enormous in all parts of the country, from Moscow to the farthest outlying districts.

[Voznesenskiy] Wonderful.

[Khitrun] I would like to support the substance of this letter very, very much. It is indeed a very ... [interrupted]

[Unidentified speaker] Good ...

[Khitrun] Good letter in terms of substance. There should be more such volunteers ... [interrupted]

[Voznesenskiy] A keen and practical response to the program.

[Khitrun] Yes. Not all people with an agricultural education are working directly in agriculture.

[Voznesenskiy] Good. A number of questions in connection with the role of communications, telephone communications and other forms of communications in the countryside. Can anyone answer the questions that have come in from

(Novaya Usman) in Voronezhskaya Oblast and from Comrade (Vladimir Petrovich Martynatov) from Nikolayevka in Ulyanovskaya Oblast. The comrades ask: What role will rural telephone communications play and why was nothing said about this in the food program? Furthermore, what role will the communications workers, working directly in rural areas, play in the food program and in the development of the agro-industrial complex?

Again these are questions showing obvious concern on the one hand and an obvious desire to make a personal contribution to solving these questions on the other.

[Vasilyev] Communications workers will participate very directly in solving the questions which face agriculture. The fact is that communciations workers will help solve all questions of administration more effectively. Heads of farms will be able to contact all the organizations servicing agricultural production more effectively and on the other hand there will be a great opportunity to inform heads of farms and provide them with certain information and materials, thereby making their participation most direct and immediate.

[Paskar] I would like to add that there are very interesting measures on the development of telephone installation and the means of communication as a whole in a resolution of the CPSU Central Committee and the USSR Council of Ministers which was approved by the CPSU Central Committee plenum, referring to the social tasks of developing the countryside. Together with the construction of housing, children's preschools and school facilities, health and trade institutions, it also contains quite extensive measures connected with the development of rural communications.

[Voznesenskiy] Thank you.

[Khitrun] Lev Aleksadrovich, I would add that a whole complex of measures is being implemented on introducing dispatcher communications, in other words, using wireless communications means. These corresponding dispatcher means are being specially produced and supplied and a unified dispatched communications system is being created according to the corresponding plan, and naturally attention is being paid to this question and this is the basis for control, for the use of automated control systems; there can be no automated control systems without dispatcher communications.

[Voznesenskiy] Comrades, the chairman of Pabeda Kolkhoz in Kalininskaya Oblast (Vasilyev) phoned in the following question: The creation of a solid fodder base is an important condition for the realization of the food program. In our conditions, we need efficient equipment to create such a base. The DSK-100 combine has proved itself to be very good here.

[Many voices] KSK-100, KSK-100.

[Voznesenskiy] KSK. It says DSK here. We do not have them on hand. What can we do? When can we expect to receive them? When can we hope to receive them?

[Khitrun] This question is for me.

[Voznesenskiy] This question is for you, Leonid Ivanovich, please.

[Khitrun] Yes, currently there are indeed not enough fodder harvesting means, in particular self-propelled fodder harvesting combines for procuring fodder. Approximately 8,000 of them are being produced this year at the Gomselmach Plant. They will, of course, be supplied; however, the volume of production at present is not enough to meet all requirements for fodder harvesting equipment. A special program has been worked out and a party Central Committee and government resolution has been adopted which determines increases in capacity. Large-scale construction work is underway there and the necessary capital investments have been allocated. In a word, capacities are being created at this enterprise to ease the tensions around this type of equipment in the next 3 or 4 years and completely satisfy the countryside's requirements for self-propelled forage harvesting equipment. What do we do while we do not have this? Use the same old means--KIR's and KUF's and all the other numerous types of machines which are, of course, less effective, but, well, we need to manage with what we have for a while. All of this is being used effectively. Specifically regarding these machines, this applies not only to this farm, this problem will be solved in the next 3-4 years.

[Borodin] I would like to add something if I may.

[Voznesenskiy] Yes, please.

[Borodin] Leonid Ivanovich related it correctly. However, there is a second side here, this is the question of storehouses. Even if we have sufficient equipment, if we do not provide food storehouses for storing haylage, silage, hay and other kinds of fodder, we may find ourselves in a very difficult situation. Therefore, the task before us is not only to acquire good equipment, and industry will indeed provide it in the next few years, but we agricultural workers are obliged, first of all, to build hay storage and storehouses for other types of fodder, because our losses, due to an insufficient number of storehouses, are still significant.

[Voznesenskiy] Viktor Petrovich, since we have begun talking about fodder, allow me to propose another two related questions from Comrade (Vladimir Dmitriyevich Morozov) of Leninabad and from great patriotic war invalid Comrade (Bezrukov) from Moscow. Comrade (Morozov) asks: How will the problem regarding forage grain be solved? Comrade (Bezrukov) is interested in the question that after all, so much food waste is thrown away in big city homes none of which is, or at least an insufficient amount is, used as livestock feed.

[Borodin] The questions are all correct. In the first part of my address, I said, when I spoke about grain production, that basically the question of forage grain would be decided in the food program. I have already cited the figures here. Regarding the second question about the poor collection of everyday waste in the cities, this question does in fact exist. It must be solved by municipal service workers of local soviets jointly with agricultural organs. Agricultural organs must present, or rather collect it, to a certain extent, and utilize it for feeding the pig population, especially; however, primarily they must build processing enterprises at sovkhozes somewhere close to cities. Therefore, the question exists and is being solved, but, unfortunately, it is being solved slowly at present. I think that is all I can say on this question.

[Vasilyev] If I may... [pauses]

[Voznesenskiy] Please.

[Vasilyev] Interesting questions have come for me on the protection of nature. If I may, I will now answer these questions.

[Voznesenskiy] Please, go ahead.

[Vasilyev] Two such questions have come my way. I will now read them:
1. Continuous and thoughtless reclamation of water-logged land leads to shallowing and even the disappearance of rivers. Will this harm the environment and climate of the Nonchernozem zone and the whole Volga region?
2. Dear Nikolay Fedorovich, just recently the lower reaches of the Chu River in Chimkentskaya and Dzhambulskaya oblasts were flourishing areas. Nearly 1.5 million karakul sheep and tens of thousands of other livestock were maintained here. However, as a result of large miscalculations by the entrusted Kazakh Main Administration of Rice Sovkhoz Planning [glavrissovkhozprojekt] this area has become a desert and there has been no increase in livestock numbers there. The newspaper SELSKAYA ZHIZN has commented on this twice, but has yet to receive a substantive reply. What is the ministry doing to rectify this mistake? This question was submitted by Comrade (Amos Adamovich, Adgan-Utyagonov), a journalist.

Allow me to answer the questions in the order I read them: Thoughtless land reclamation will lead to shallowing and even to the disappearance of rivers. We are talking about water-logged land reclamation. I would like to say that river flow, strange as it may seem, river flow does not decrease, but on the contrary, increases as a result of reclamation work. The whole idea here is that the surface, the open surface of water-logged land evaporates more water than drained land. Therefore, the more we drain land, the more we increase the flow of our river. I simply regard this as being a mistaken opinion, although, of course, I will not deny that there are individual deficiencies and that this work should be conducted more skillfully.

Now for the second question. The whole question amounts to this: All human life is connected to the use of nature. One cannot imagine human life if it is not engaged in using natural resources.

[Paskar] Man himself is also part of nature.

[Vasilyev] And man himself is also part of nature. Therefore, when I first spoke today about the effectiveness of land reclamation, perhaps I should also have added that each hectare of irrigated land produces 5 to 6 times more than 1 hectare of nonirrigated land and, if we compare this to reed undergrowth, then every irrigated hectare produces 10 to 100 times more products than just the reed undergrowth which is there. And in general, it is completely incompatible and impermissible to solve the question by letting the reeds remain and to somehow obtain, so to speak, cotton, rice, and other agricultural products. Therefore, our task consists of using natural resources and at the same time, making efforts to minimize negative consequences.

[Voznesenskiy] Thank you. Many questions have piled up for Leonid Yakovlevich and, moreover, I would say very contradictory ones, on private plots and subsidiary farms--quite contradictory. Moreover, I have not even been able to pass part of the questions over to you; they have accumulated here with me.

[Florentyev] Well, comrades from Togliatti write that it is necessary to solve the food problem, not by encouraging private plot holders, but by creating large livestock breeding complexes. That is one point of view. The second is to this effect: when will the squandering of arable land in the Moscow area for garden plots cease? However, the majority of questions, which amount to approximately 15, showing correct understanding of this problem's significance, talk about the necessity of developing subsidiary farms of the rural population and those of industrial enterprises, with great concern.

Well, comrades, it is quite evident that the kolkhozes and sovkhozes--that is, public production--are the basic foundation for a cardinal solution to the food problem. It was, is, and will remain this way. However, subsidiary farms of the rural population and also garden and orchard cooperatives should not be discarded. In his report, Leonid Ilich Brezhnev called personal plots an important question to which attention is deservedly paid in the food program.

What is being done about this in the RSFSR? Kolkhoz and sovkhoz workers, and the kolkhozes and sovkhozes themselves, give great assistance in the development of subsidiary farms for the rural population. Moreover, the better the kolkhoz and sovkhoz, we have noticed, the better and more developed the subsidiary activity of the kolkhoz and sovkhoz workers there. What assistance do the kolkhozes and sovkhozes render to the rural population? We annually sell 8 to 8.5 million piglets, 315 million young birds--an average of 30 young birds per kolkhoz and sovkhoz worker. Kolkhozes and sovkhozes provide 7-8 million tons of the grain and 6.5-7 million tons of the course fodder they produce to the subsidiary farms of the rural population.

Is this sufficient? We do not regard it as sufficient. Piglets still cannot be bought everywhere, and here and there they are too expensive; we will continue this work and I think in the next year or two we will bring piglet sales to 10 million head. Regarding garden and orchard cooperatives, there are many of them in the republic. Approximately 5 million families have either garden or orchard plots, moreover their number has significantly grown in the last few years. Allocation of land is also growing, as is the creation of industrial enterprises' auxiliary farms, and not only those of industrial enterprises but also of public food enterprises, and so on.

Only in the last 2 years have we apportioned more than 1.3 million hectares of land for the creation of auxiliary farms at plants and factories. This is a great help to the food program. We will develop both personal subsidary farms and auxiliary farms at plants and factories, bearing in mind, of course, that the main and general line is the development of kolkhoz and sovkhoz production.

[Voznesenskiy] Aleksandr Aleksandrovich, the task of raising the technical level, reliability and durability of machinery was put before agricultural machine building at the November 1981 CPSU Central Committee Plenum. What is being done in this regard, asks Comrade Popov from Moscow. Comrade Vorobyev, also from Moscow asks: It is known from practical life and also from the press that often the price increase of equipment often overtakes the rise in its quality and its productivity. This adversely affects the economy of those farms that buy such equipment. What is to be done here?

[Yezhevskiy] This question is really very important because mechanization in agricultural production has, of course, exceptional significance in the solution of the food program. At the 1980 October CPSU Central Committee Plenum, the 1981 November CPSU Central Committee Plenum and the just completed May CPSU Central Committee Plenum Leonid Ilich Brezhnev drew very serious attention to the necessity of steeply raising the technical level of agricultural equipment and improving its reliability and durability. Drawing conclusions from this, Minselkhozmask [the Ministry of Tractor and Agricultural Machinebuilding] worked out 62 special purpose, complex scientific and technical programs directed at a complex solution to the questions, questions of improving the construction of machines, and questions of organizing the production of machines.

Moreover, together with the quantitative side--and, it should be reiterated, Minselkhozmash will provide rural areas with 1.87 million tractors during this 5-year plan period and the increase in agricultural machines will amount to 45 percent--we mean to give special consideration to increasing the output of machines of the so-called train [shleyf] for which we are often subjected to criticism both on the spot and in the press. We are talking here about a train of machines for powerful tractors. I have to report that the increase of machines of the so-called train in this 5-year plan period will amount to 190 percent and machines for the soil protection farming system will amount to 180 percent.

Nevertheless, we see the question of steeply raising the technical level and the quality of equipment as the main and fundamental task. What is planned and what is proposed? First of all we mean to raise the productivity of basic agricultural machines already in this 5-year plan period--the basic ones--by approximately 130-150 percent, and second, to increase the operating life of engines in tractors, self-propelled machines and basic engine units from 5,000 to 6,000 motor-hours a year to 8,000, and to increase mean-cycles-between-failures of agricultural machines by approximately 150 to 300 percent. Thus all these factors plus a decrease in metal content and a decrease in specific fuel expenditures and improving factors of ergonomics, that is, creating better working conditions for machine operators, all this together should increase the operating period of machines, reduce spare parts expenditure and decrease expenditure for operating agricultural equipment.

These are, so to speak, very large questions to which the toilers of the tractor and agricultural machinery building industry have now naturally directed their attention. I understand that the workers of the tractor and agricultural machinery building industry are now at their television sets and of course they are now listening to my address. If I am delivering an address here then I think that I am expressing the general opinion of the whole, so to speak, army of workers of this industry, who I should note by the way accepted the adopted food program with enormous enthusiasm and satisfaction and regard its successful fulfillment and the application of efforts to solve these tasks as a matter of their civic duty and a matter of their party honor and conscience.

Lev Aleksandrovich, as regards the second part of the question, you spoke of the question of prices. Generally, if we compare the prices, if we make a comparison, say, with the mass of grain in kilograms per second of combines, if we take the hectares of soil worked in an hour, if we take the horsepower capacity, then the prices of equipment for farms are not rising. Although the wholesale price of equipment is rising, the price is not rising for kolkhozes and sovkhozes because of the state subsidy. There are certain questions connected with improving labor productivity that are difficult to take into consideration, that do not enter into it. These are the so-called indirect questions but they are extremely necessary. This is the question of ergonomics: better labor conditions, springed seats, improved cabins, and many other factors that create better labor conditions. They unquestionably influence labor productivity. It is difficult to measure them accurately here, but they influence a person's health and thus we consider that the question... [changes thought] If I put it like this: Take the profitability of our sectors' machinebuilding. Our profitability amounts to approximately 12-14 percent. This is not such a high percentage of profitability. We will strive further to improve the quality of machines, improve their technical level, reliability and durability, at the same time reducing the prime cost although, of course, the improvement of quality and labor conditions will require definite expenditures. This is, of course, natural, and an economic law.

[Voznesenskiy] You see, agriculture is an area of production where, I think, not only the newest technical means the ministries represented here create need be used [as printed], but traditional methods also, when and where it is rational, and in this connection I must say that I have very many questions here: Was not the horse written off too quickly from agriculture?

[Unidentified speaker] Well, that is right.

[Voznesenskiy] Who can answer this question? Here, for example, Comrade Vorobyev, a civil engineer from Moscow asks: What significance will be assigned in the near future to the work of the horse in agriculture? It is preposterous seeing how a Gaz motor vehicle or a tractor with a trailer carries one milkcan, that's right, it is preposterous. Maybe you, Leonid Yakovlevich, or... Viktor Petrovich, please.

[A number of speakers speak simultaneously]

[Borodin] The question is completely correct.

[Voznesenskiy] And it is not the only one.

[Borodin] Well, it seems that way.

[Voznesenskiy] Yes, yes, yes.

[Borodin] It was written off a little too early, if one can express it in the words of the author. In fact, the horse population in the country has not been increasing in the last few years because, first, masses of tractors and other agricultural machines, which Aleksandr Aleksandrovich just spoke about here, have appeared in the fields of kolkhozes and sovkhozes.

We know that further mechanization on a larger scale will come into the fields and farms of kolkhozes and sovkhozes. This is very well expressed in the decisions adopted in the food program. I will not talk about that here, but regarding increasing the horse population, this question is similarly being examined by the directive organs. Not long ago, the Ministry of Agriculture prepared, and the USSR Council of Ministers adopted, a resolution on developing the horse population, both of working, sports horses and others. This question exists and the USSR Ministry of Agriculture, together with the ministries of agriculture of individual republics will be working on this in the future.

[Voznesenskiy] Here is perhaps a fundamentally important question for... [changes thought] at any rate it worries many comrades, for example, Aleksandr Vasilyevich Nikanorov from Moscow and Comrade Mukhin, an agronomist from Malakhovka. The comrades ask: With what money will capital investment into agriculture be realized? And elsewhere it says: Very large measures on capital investment are outlined in the food program and large-scale construction is outlined, but the volume of production is somewhat smaller. Petr Andreyevich, probably?

[A number of voices] Yes, yes.

[Paskar] Well, how should this question be answered? The program, of course, envisages a very sharp increase in investment in both agriculture and the sectors of the agro-industrial complex. Without this, such a powerful and all-encompassing complex program would probably not have turned out. Where do we get the money? Well, first, our state has enormous production and scientific and technical potential available, and the state can meet these large-volume investments envisaged by the program.

Unquestionably, a process of redistribution and reorientation of the direction of capital investments in the whole national economy will be going on for the benefit of agriculture and other sectors of the agro-industrial complex. In particular, safeguarding the specific weight of capital investments from the general investments in the national economy on the level of 27-28 percent is envisaged in the food program. In ministries like the Ministry of Tractor and Agricultural Machinebuilding the increase amounts to about 150-160 percent. The dynamics will be approximately the same in the increase of capital investments in the development of enterprises of the Ministry of Machinebuilding for Animal Husbandry and Fodder Production, for the development of microbiology and other very important sectors charged with exerting direct influence on the development of agriculture itself.

Of course, nobody will give us the money and other means for nothing. We must provide for the creation of such conditions allowing us to fulfill all the indicators written into the food program until 1990 by our own means.

[Voznesenskiy] Stepen Petrovich Sokolov, a worker from the Moscow Serp i Molot Plant, was also among many television viewers undoubtedly interested in Petr Andreyevich's answer to this question, because his question arrived while Petr Andreyevich was speaking about it. It is: where will the money and allocations for fulfilling the food program come from? So you see, although our communications do not work synchronously every time, nevertheless it seems we select the right questions which really concern the comrades.

[Paskar] Lev Aleksandrovich, if I may add also that agriculture itself must also increase the effective use of that large potential which was created in rural areas in the years after the March 1965 Central Committee Plenum, and make better--as it says in Leonid Elich's report and in the program--use of the land, agricultural machines and other means of production, fully preserve of the cultivated crop; and thereby increase effectiveness and receive additional income and profits which will go towards financing the measures indicated in the program.

[Florentyev] In any case, this money will not be obtained at the expense of retail price rises.

[Voznesenskiy] Leonid Yakovlevich, this is a very important question; however, since many letters and telephone calls have come in regarding this, we will return to it a little later. Now I would like to ask you comrades--I don't know which one of you will undertake to answer these questions--to answer questions in regard to roads in rural areas. Comrade (Vasilyev) a serviceman from Moscow, asks: Is an increase in road improvements in rural districts envisaged by the program? At present, roads in Smolenskaya Oblast in particular are very, very bad. Agricultural equipment, tractors and other machines are not being used according to their purpose, it seems, in transporting certain light loads. They often wear out rapidly, inopportunely and break down. Comrade (Pechorin), a pensioner from Moscow requests that we explain the transportation problem in connection with the food [program] and in connection with the construction of railroads and motor roads in some detail.

[Borodin] These are interesting questions that primarily affect agriculture. The fact is that we do not have enough improved roads, especially in the Nonchernozem zone and in other places. I particularly mean those with hard asphalt or concrete coverings. The program envisages a sharp increase in road construction. This will allow us to significantly reduce losses of agricultural foodstuffs and, I would like to add, really better safeguard and use the equipment that we receive from industry. A very large program has been drawn up; it is practically published and there are grounds for supposing that it will be unquestionably implemented because it affects almost all of the residents in rural districts and cities.

Here, I would like to--perhaps making use of the fact that I have been given the floor—continue the question connected with the issue of preserving foodstuffs. Many letters have come in on this.

[Voznesenskiy] Not as many letters as telephone calls.

[Borodin] Yes, yes. (Ustinov), a metal worker from Vidnoye, asks: Why the poor quality in storage and sales of potatoes? (Ilin), machinist's assistant from Moscow, asks about the question of improving and preserving the harvested crop examined by the May CPSU Central Committee Plenum; (Nikiforov), an engineer from Moscow, asks: What will be done to improve the preservation of agricultural foodstuffs at the storehouses of vegetable bases and what kind of mechanization will be used? And so on.

[Voznesenskiy] There you are. Comrade (Sinitsyn), a foreman from Volgograd, also asks about this. In other words, questions are coming in continuously.

[Borodin] (Sinitsyn) from Volgograd asks: Many of our vegetables are ruined at storehouses and it is no secret that the kolkhoz worker sells well-kept, preserved foodstuffs. Can't we return to the payment-in-kind system for kolkhoz workers? This would preserve vegetables better and increase their supply to the population. This is a very serious question and requires both large capital investments and large-scale efforts not only from agricultural workers but also from all the sectors connected with it. The fact is that we unquestionably have had very large losses in a series of agricultural crops during the transition to production line processing. Well, not direct losses, but very serious bruising is going on and this requires supplementary or rapid processing.

For example, we can take potatoes which are most conspicuous. At present, potatoes are grown by mechanized methods in the absolute majority of kolkhozes and sovkhozes, practically without expending manual labor. However, very often they are overloaded and badly bruised in the process of production, transportation and storage. The question lies in growing new varieties now, and in improving the quality of machines that are used in their cultivation, improvement or creation of storehouses....

[Paskar interrupts] Implementing containers.

[Borodin] Yes. Implementing containerized transportation and also, above all, implementing rapid processing of the just harvested crop in order to subsequently store it in a semipreserved or preserved state. These questions have been examined by all the central organs and the directive organs, particularly the CPSU Central Committee and the government. A special resolution has been adopted on improving the storage of agricultural products. Considerable attention is also given this question in the materials of the May 1982 CPSU Central Committee Plenum, in Leonid Ilich Brezhnev's report and a whole section in the food program itself is devoted to the preservation of agricultural products. Well, I have just received another supplementary question devoted to the preservation of livestock products. It is from a pensioner from Vilnyus in the Baltic. He asks: Today's SOVETSKAYA LITVA No 127 writes that the morning's milk is turning sour. Why is milk from sovkhozes and kolkhozes not accepted, allowed to sour and returned to the plant, while there is no milk in the stores? Why is this happening?

Well, what may be said on this question? Of course, this is a very serious shortcoming in the work of local organs. It seems that we will have to examine this with agricultural organs. We have not had many such signals, but it seems we have to draw the republic's Ministry of Agriculture and the purchasing organ's attention to this because the republic's purchasing organs use their transportation to bring products from the fields of kolkhoz and sovkhoz farms.

[Paskar] Lev Aleksandrovich, if I may....

[Voznesenskiy interrupts] Please, please.

[Paskar] I would like to add to what Viktor Petrovich has said. Calculations show that already at this level of vegetable and potato production, if they are preserved and delivered to the consumer, the level of the consumption of these products could be raised by 15-20 percent, which would of course significantly ease the tensions around the trade in these products. Incidently, Comrade Leonid Ilich Brezhnev talked about this yesterday at a meeting of USSR Supreme Soviet Presidium.

[Voznesenskiy] How will Selkhoztekhnika form relations with sovkhozes and kolkhozes in the future? This question interests Comrade Kozlitin, a driver from Stravropol. Furthermore Leonid Ivanovich, I have passed another series of questions to you. Please look them over, and perhaps you could answer at least part of them right away.

[Khitrun] All right. The first group of questions is concerned with that same topic of preservation. The comrades ask how can equipment be preserved, and pose questions about good motor pools being created everywhere, in short, so that machine and tractor fleets can be protected in enclosed buildings and that lightweight materials be used for this. In short, their own proposals.

The unquestionable anxiety and concern over protecting machine and tractor fleets and providing them with good protective facilities is unquestionably correct, and these comrades--I am not in a position here to give all their surnames--are quite rightly concerned. However, requirements must, of course, be realistically assessed, commensurate with the resources. Of course it is possible to build such buildings and they will be built some day, but one must take into account that this problem is very capital intensive. One motor pool costs at least about R500,000, and from this we may multiply the number of farms to determine the sum. In short, this is a capital intensive and a multimillion ruble problem. There are, of course, well-known methods and ways to protect equipment in open areas, such as sealed areas, especially those with necessary means for storage and for removing necessary components for winter storage, in short, appropriate preservation means and so on. We must of course, use all methods to protect machine and tractor fleets although there is quite rightly concern and anxiety over this matter because equipment must be protected as we have quite a way to go in this area.

There is another group of questions: the supply of spare parts for combines and tractors. I have answered this matter in part and would just like to add to those answers that the wording of the food program in a concrete, I would say, categorical way requires all those who produce and receive spare parts to fully meet all the requirements of spare parts for kolkhoz and sovkhoz production. However, this task must be solved in two directions: by increasing the production of those parts that are in critically short supply and by increasing the volume of restoration of spare parts and, of course, by the rational use of the material and technical resources at our disposal.

And at last the third group of questions. How will we build relations with kolkhozes and sovkhozes--the question that you read out. Fundamental changes in the responsibilities for the end result of Selkhoztekhnika, of all agricultural organizations and of the whole agro-industrial complex are envisaged in the food program and in the decisions adopted by the May CPSU Central Committee Plenum. A whole series of standardized legal documents needs to be drawn up in the near future, as has been directed in this regard by corresponding resolutions of the CPSU Central Committee and the government. We have been given a time limit for this matter, well I won't--a 2-month, 3-month period. Each question has a corresponding time limit. We are now working on all these problems and on drawing up these standardized legal documents and we will submit them for approval in the near future. However. the main direction is outlined in the decisions of the plenum, in the decisions adopted by the Central Committee and the government, namely, responsibility for the end result.

Therefore, I would like to stress that the enterprises of the Selkhoztekhnika organization and the whole thousands-strong collective of this system see their task in subordinating all the system's activity to the end result, namely, to agricultural production. In this direction the system of bonus payments used, the order of wages related to groups and a whole series of other standardized documents change. In short, so that all our activity would be built around an increase in responsibility for the end result, so that all the activities of enterprises and organizations would be subordinated to agricultural production, its volume and the increase of qualitative indicators.

[Voznesenskiy] Comrades, a series of questions has come in regard to prices. I would like to ask Petr Andreyevich to answer these questions.

[Paskar] There are indeed many questions on prices. Unfortunately, I am unable even to name the authors who addressed these questions to us.

[Voznesenskiy] Well at least the cities.

[Paskar] Well then, Comrade Davydov from Moscow; Comrade Vlasov from Moscow; Comrade Kolesnichenko from Rubezhnoye in Voroshilovgradskaya Oblast; Comrade Moiseyev from Kaliningrad in Moskovskaya Oblast; Comrade Zinayida Ivanovna Lared, an economist from Moscow; Comrade Gaburov from Salavat in Bashkiriya and many others.

As we see from the authors of the notes, many represent the working class, the intelligentsia, teachers and engineers.

I think the question of prices rightly worries our television viewers, because prices affect everyone to some extent, either through their own family budget, or, as the authors of these notes speaking as citizens of this country enjoying equal rights and as masters of their situation, the question of how those large expenditures outlined by the food program will be provided and used to increase procurement prices at kolkhozes and sovkhozes for agricultural foodstuffs unquestionably worries them.

The questions should be divided into two basic groups: the first question, or the first group of questions is concerned with the idea of is it right that procurement prices for foodstuffs at unprofitable farms are being increased or will this serve as a stimulant for them. The second group of questions concern retail prices of agricultural products. Well, the nature of this group is such that certain people ask the questions: Won't this--the rise of purchase prices of agricultural foodstuffs--influence the change, in short, the rise of retail prices of food products? And the second direction concerns this: Why do we have such low prices for bread and other products and doesn't this lead to insufficient economizing and thrift regarding these food products.

How should all these questions be answered? To the first group of questions I would like to answer as follows: Comrade television viewers, as you know, beginning from 1 January 1983 the rise of procurement prices of such products as grain, meat from large horned livestock, pigs, sheep, sugarbeets, vegetables, potatoes and other products is envisaged in the decisions to strengthen the economy of kolkhozes and sovkhozes and to improve farm operations. A surcharge on procurement prices at economically weak and low-profit farms is also envisaged. For these aims R16 billion will be allocated annually from the state budget.

Won't this encourage poor work at economically weak farms? It should be said first of all that procurement prices are being raised not only at economically weak farms but at all farms with regard to low-profit foodstuffs. Only surcharges on procurement prices will apply to lagging farms. To the question of won't this encourage poor work, I would answer that falling behind, or low profitability or losses of certain farms is not only connected with the farms management, although management is very important, and is not connected only with the work level of the sovkhoz and kolkhoz workers themselves. The differentiation of conditions in which one or another production is developing has its place also, say, poorer soil conditions, remoteness from a market for the foodstuffs and no roads. Nevertheless, I would not like to take the responsibility away from the managers and specialists because they unquestionably play a very important role.

We consider that practically for the first time in our history we have found an opportunity to create relatively equal conditions to develop production through such an important economic lever as prices, so that we can ensure profitable production in both unprofitable and economically weak farms, and profitable production is necessary in order to manage a farm successfully and to provide and extend reproduction as our economic science requires.

As regards the questions: Won't the rise in the procurement prices of agricultural products influence the retail prices of foodstuffs? Well, anyone who has carefully read the food program, Leonid Ilich's report and the resolution of the CPSU Central Committee and USSR Council of Ministers probably noticed that the question of the retail prices of food products is not mentioned or outlined here in any of the documents. In other words, our party and the CPSU Central Committee is invariably guided by the decisions of the 26th CPSU Congress where it says that we are following a course of stable prices for basic food products. Therefore, we have full reason to answer the authors of these notes that the rise in procurement prices of agricultural products will not lead to a rise in the retail prices of food products in trade.

I believe I have also already answered the question: Isn't it worth raising the retail price of bread and other foodstuffs?

[Voznesenskiy] Yes, such notes have come in and they have come in the respect that comrades are taking notice of the presently continuing very careless attitude toward this supremely important matter.

[Pastar] I think the authors of such notes are right in this respect that a sufficiently respectful and economical attitude to bread and other products has not yet been cultivated in the absolute majority of our working people, especially the relatively younger generation which did not suffer the burden of being deprived of, say, bread and other products. Victor Petrovich answered this question saying that we unquestionably still have large scope for action here and we have to create a system allowing bread to be used more economically. Incidentally, the change to small leavened bread loaves has already led to significant economy. A person doesn't cut a whole loaf but takes a half loaf or a small roll and thus substantial economy is already assured.

However, Lev Aleksandrovich and respected comrades, it should be said that there is still a lot to be done in this direction and it seems to me that schools, the family and collectives have much to do in this regard, where an economical and thrifty regard to products which do not come at an easy price, an expensive price, must be encouraged, and I think that this will unquestionably yield its positive results.

[Voznesenskiy] Many questions have come in addressed to Aleksandr Aleksandrovich Yezhevskiy and are even addressed to him personally. Aleksandr Aleksandrovich, please.

[Yezhevskiy] Yes, moreover, one question straight from Kurganskaya Oblast is interesting. The comrade asks: Aren't there too many questions from Moscow?

[Voznesenskiy] Well, unfortunately, perhaps more than from other cities, but this is already a problem of communications organization, so to speak.

[Yezhevskiy] Yes. On these questions Comrade Kolmykov from Kurgan who, asks an appropriate question; Comrade Semenov from Penzenskaya Oblast. So a number of questions from other cities have come in.

[Voznesenskiy] Not only from Moscow.

[Yezhevskiy] Yes. Not only from Moscow, but from other cities as well. The comrades once again pose the question, and I will summarize it somewhat: What else must be done to accelerate the elevation of the technical level and quality of equipment which is produced? The questions of raising the quality level of produced equipment are indeed sore and extremely important questions. A number of measures are now being taken; the responsibility of our workers for technological discipline and for technological production discipline is increasing; the work of (?automatic technical control) [ATK] is being reorganized beginning with the ministry's main quality inspectorate down to the plants. We are now working out a series of measures directed at raising production output quality jointly with the standards committee. We have worked out measures together with Goskomselkhoztekhnika which are also directed at equipment output quality. A complex quality control system based on the Lvov system and taking into account the improvements introduced by Dnepropetrovsk is being implemented.

Thus a complex quality control system has been implemented at 90 percent of our enterprises, but unfortunately it has not been implemented everywhere. An unusual number of complaints are directed at the quality of engines from the Altay engines plant, the quality of combines from Taganrog combines plant, the quality of machines from the Odessa Pochvamash Plant and certain other plants. More than anything else the crux of the matter comes to this, namely, that the poor quality of welding and assembly are cause for complaint. Speaking about assembly, the comrades ask the questions: Why, when you receive a Zhiguli car, which is produced at the Volzhskiy Motor Vehicle Plant, you can immediately press the starter and you're off, but when you receive a combine, first of all it has to go through an assembly operation.

There is, of course, a problem here. The fact of the matter is the combine cannot be dispatched from the plant in an assembled state because neither its size nor the possibilities of loading it onto different transportation permit this. But here of course we, together with Goskomselkhoztekhnika, must finish the organization of a service so that every unassembled machine that goes into agriculture can be finally assembled by Selkhoztekhnika and turned over to the kolkhozes and sovkhozes in an assembled and adjusted state and in working order. We must solve this task together with the Goskomselkhoztekhnika collective.

Thus many measures are being taken to improve quality, but at the same time, taking advantage of the opportunity presented to us here today by our meeting, I would like to stop on a very important question, Lev Aleksandrovich and comrades. The fact is that machines have now become more productive. Agriculture now quite rightly requires production of such machines that perform a number of technological operations in one run. However, by their construction these machines turn out to be fairly complex. At the same time, as their mass increases they may apply greater pressure to the soil and thus a compression of the soil takes place and soil fertility is disturbed. This means that in this case we must produce machines that are both wide-cut, multirow and lighter.

What is the way out of this situation? It is mainly to lay out our new design ideas and thoughts. A machine is created from a design. But the second part of the question, besides those plans that the designer puts into machines, we also need progressive, high quality, light and durable materials in order to create designs. I have to report here that the CPSU Central Committee and the USSR Government pay great attention to this. A special resolution has been adopted whereby the ministry and our suppliers have been obliged to ensure delivery of effective and progressive materials. I have to say that together with the Ministry of Ferrous Metallurgy, the Ministry of the Petroleum Refining and Petrochemical Industry, the Ministry of Light Industry and other suppliers we have now worked out a number of measures directed at accelerating delivery to industry of lighter, more effective and more progressive materials which will afford the opportunity to both lighten the construction of machines and at the same time increase their service time. After all, if we are making the body for a mineral fertilizer spreading machine out of ordinary metal it will work for 2 years, but if we make it out of triplex steel [troynaya stal] and use fiberglass this will increase its service time by 2 or 3 times and the machines will be lighter.

[Unidentified speaker] And the prime cost will be less.

[Yezhevskiy] And the prime cost will be less and soil fertility--the soil will not be scoured and compressed--and less fuel will be used to move heavy machines across the field. Thus we are certain that the named ministries and many other ministries which we did not name here will of course adopt the most active decisions to create the most modern machines that agriculture requires in response to fulfilling the food program.

That is it, Lev Aleksandrovich; strictly speaking I have grouped the many questions, and they are all in general terms.

[Voznesenskiy] Leonid Yakovlevich also has many questions. I passed some over to you, right?

[Forentyev] Yes. I have a number of questions.

[Voznesenskiy] If you would be so kind.

[Florentyev] Questions connected with the development of agriculture in the Nonchernozem Zone and its role in the solution of the food program--the interest in the development of agriculture in the Nonchernozem Zone is quite natural. This is a large zone and 61 million people live in it, moreover mainly city residents. There you are.

Owing to a number of reasons the Nonchernozem Zone has found itself in a more difficult and complex situation than other regions in our country and in our republic. Therefore, much attention is given to the Nonchernozem Zone, to its agricultural development and the whole agro-industrial complex of this zone. Such measures were envisaged at the March CPSU Plenum and subsequently in 1974 the first decision was adopted at Leonid Ilich Brezhnev's initiative; the second decision in 1981 envisages complex programs of accelerated development of agriculture in the Nonchernozem Zone.

More than R39 billion have been allocated--I mean state funds and kolkhoz capital investments funds--in the current 5-year plan period for the development of agriculture in this zone. What gave rise to this attention, to this increased consolidation of the material and technical base and the increase of capital investment? The first results, and they are not inconsiderable, have already been obtained. On an annual basis, the gross agricultural production in the Nonchernozem Zone amounted to R18 billion in the 10th Five-Year Plan period as against R13.5 billion in the 7th Five-Year Plan period. The output of agricultural production of kolkhozes and sovkhozes in this zone increased by 160 percent. Much has been done, but as it says in the decisions of the May CPSU Central Committee Plenum, a lot more has to be done.

In all frankness one must acknowledge that there are both problems and weak areas in this zone. The level of land cultivation efficiency is still not sufficiently high everywhere, seeds are not yet good enough, land resources are still not well utilized everywhere; therefore we see our task as significantly raising the effectiveness of kolkhoz and sovkhoz production in this zone and to better utilize the growing state investment in the agriculture of the Nonchernozem Zone.

It must be said that in this zone, perhaps more than in others, creating stable working collectives, consolidating kolkhoz and sovkhoz personnel and expanding housing, cultural and domestic services and road construction are the key to successfully implementing the food problem. This is projected for the current and subsequent 5-year plan periods, and to this, we will be paying the most serious attention.

[Voznesenskiy] Leonid Yakovlevich, here is a question which is perhaps personal compared to what you were just saying, but it is not the only question of this type. In this case it is put by Mariya Ivanovna Pleshchereva, personnel inspector from Magnitogorsk: How is the question of pastures being solved? Will they be enlarged and at the expense of what? You know that all the land is plowed up and their is nowhere for livestock to graze.

Well, I think that what is being primarily talked about is, perhaps, livestock that is being used personally.

[Florentyev] Yes, probably. Well, this question came from a region where the amount of plowed-up land is indeed high, but we do have in the RSFSR and--as we know--in other republics also such regions and farms where there are large areas of natural fodder land, and the task lies in improving this natural fodder land and raising its productivity. With regard to regions with large areas of plowed-up land, of course we will not be restoring plowland to pastureland. We will raise crop productivity of arable land, and through this we will render assistance to the rural population's auxilliary farms to provide livestock with fodder.

[Borodin] I would like to add to that.

[Voznesenskiy] Yes, please.

[Borodin] There are problems. Here and there the managers of our kolkhozes and sovkhozes up till now have not given enough consideration to this, and although they have the opportunity at times to do so they do not apportion a sufficient amount of pastureland; therefore the directive document envisages this. [Many voices ring out--yes, yes. That's right] We and you must demand this very seriously in order to render maximum assistance to the population in this question.

[Paskar] It should also be noted that we have more pastureland than plowland, and of course we could get more production from pastureland if we show more interest to ensuring that it is looked after in good time, fertilized and correctly used. Then we could get an additional quantity of fodder from these pastures for the development of public livestock breeding, not only public but also private livestock breeding.

[Voznesenskiy] Leonid Ivanovich has a number of questions to answer, but I would like you, Leonid Ivanovich, to begin answering your questions by answering the comrades from Moscow, from Tyumenskaya Oblast, Ryazanskaya Oblast and Kirovskaya Oblast. By the way, Aleksandr Aleksandrovich, that is where the telephone calls are now coming from in response to the remark that you just read. The comrades ask: How exactly will the question of supplying the leaders of kolkhozes and agricultural specialists with transport be solved?

[Khitrun] Yes, I have a similar question here from Ryazan, from Comrade Mamontov, chairman of a kolkhoz, and from a number of others. The measures for increasing the supply of motor vehicle transport means have been named in the program. I mean all motor vehicles--an additional 600,000--with increased loading capacity; that is an improvement in the supply of motor vehicle transport in the coming years and for the 10 years up to 1990. These measures have been determined and will be carried out. As for passenger cars--many questions also refer to them--these of course are restricted. Passenger vehicles must be used by those to whom they are assigned because such usage is frequently restricted. But as far as the supply of spare parts for motor vehicle transport is concerned--I have already partly answered these questions--but this topic, frankly speaking, calls for a significant improvement and these questions and the submitted proposals must be simply considered in practical work when concrete measures in fulfillment of the May plenum decisions are being worked out. Since I have the opportunity to speak I would like to answer many questions here. The questions are as follows: Vladimir Konstantinovich Ilin, engineer from Perevozskiy Rayon in Gorkiy; Subarov, chief foreman from Gorkiy Motor Vehicle Plant, asks a similar question--and a number of others, in which comrades ask and make proposals--which is also very gratifying, about improving the supply of repair technology and machine tool equipment to kolkhozes, sovkhozes, Selkhoztekhnika enterprises and to the entire agro-industrial complex.

Indeed, we have been receiving a large quantity of equipment; we really need to think about solving the problem by creating the necessary repair and operations base because our goal is to save the machine and tractor pool and ensure its function for the assigned depreciation period; we must do all of this. As for the machinery repair equipment produced at Selkhoztekhnika enterprises, we envisage a considerable increase in production of this equipment in the 11th Five-Year Plan period and improved quality; the products list has been reviewed taking into consideration the inadequate types of equipment; all this is being done A weak point of course, which the comrades justly talk about, is the supply of machine tool equipment. This must be investigated once again and decided upon together with the Minstankoprom [Ministry of the Machine Tool and Tool Building Industry] while taking into view the determining concrete measures for increasing the deliveries of metal cutting equipment. Today, in connection with the change to more improved machine tools, the all-purpose type of machine tool proved to be beyond the capability of the specialized enterprises which should be making them. We were obliged to decide on a certain repair plant in Astrakhan specializing in machine tool equipment. This is not sufficient. In brief, we can see from Petr Andreyevich that in regard to the provision of a machine tool pool these questions are still in the process of fulfillment as part of the food program, the annual plans and the 5-year plan. We must return to these questions in detail once again because they are indeed acute and to answer them simply here, or moreover to make a promise before such a multimillion audience, much more needs to be done.

In short, very thorough and concrete measures are needed to provide the necessary machine tool and machinery repair equipment.

[Paskar] Leonid Ivanovich, it says in the decisions of the May CPSU Central Committee Plenum that questions requiring decisions must be examined together with annual plans and while drafting plans for the new 12th Five-Year Plan period.

[Khitrun] The comrades are speaking quite correctly here on increasing the credit part of funds. In other words, they quite rightly propose the formation of the funds themselves and this of course concerns the repair and operations base where repair and technological and especially metal-cutting machine tools must be significantly increased and ensured.

I have not enumerated all the questions here, questions from Penza, Kalinin, in fact very many such questions on quite specific topics. In other words, this once again characterizes the necessity of solving this question; it requires a solution, but it is not simple. It is not simple and it will not be solved immediately. Concrete measures in this regard have to be worked out.

And of course, the comrades ask questions about building materials but these questions were partially dealt with; the comrades express dissatisfaction with the supply of building materials to ensure construction by economic methods. Well, I would say that these questions are also appropriate and they should be examined separately. Of course, first of all, contract construction work is provided for and, second, construction work as a whole is provided for; but it is the fact that this construction work suffers that comrades from various places in the country, from Kazakhstan, Tadzhistan and so forth quite rightly write about. In short, there are still questions here that we must work out very, very earnestly. They are not the only ones asked here; they go beyond general questions. There are still many problems on the material and technical provisions of agriculture that must be worked out very, very earnestly both in the annual and 5-year plan periods and in operational work as a whole.

[Voznesenskiy] Comrades, your wish that the number of proposals from people who want to go and work in rural areas and devote themselves to advancing agriculture is being realized to some degree. We have already received a number of such telephone messages. The comrades ask for example about where they can find out in which oblast and under what conditions a motor vehicle driver may offer his labor, knowledge and skills. Further, a comrade from (?Metis) asks: Will there be a position for a decorator in a kolkhoz and will he retain his salary, the one he has now. What privileges do city residents have when they move to a rural area, and so on. I am enumerating these questions not so that you would answer them now because our opportunity on the air is coming to an end, so to speak, and our time is running out, but there is a certain question here: I would like to know where I can find out about the conditions for recruitment and what professions rural areas require in a given field that would interest people? Where can people apply for answers to these concrete questions which concern them?

[Borodin] The oblast agricultural administration, the personnel department, the heads of the oblast's (?industry) will undoubtedly give this information as they are concerned with this question.

[Khitrun] We at Selkhoztekhnika await all those who wish to come.

[Vasilyev] Any question could probably be answered by the new administrative organs of the rayon agro-industrial association which we have in the rayon and is called differently at the oblast and republic levels.

[Voznesenskiy] Comrades, as I once had the opportunity to say, people both draw up and carry out the food program. I have to tell you that we have quite a number of questions on the problem of rural personnel: their training, their treatment, the most rational use of their knowledge, abilities and experience and so on, and so forth. However, among the questions connected with these personnel there are a number of questions that directly concern discipline and the extent of organization and responsibility.

Here Comrade Pankov from Orel conveys his viewpoint in the following way. We can fulfill the task set by the May plenum if firm labor discipline is consolidated at kolkhozes and sovkhozes, first of all among management, he writes.

Well, this is correct to a certain extent, because generally the manager has always been, is and always will be an example to those he manages. Comrades, I must tell you that of course unfortunately we cannot deal with all the questions in this program. I think that we should, first of all, carefully summarize those questions that came in today and think over on how to react to these proposals and remarks from the working people. Therefore, I would ask that our contacts and our work on these questions in today's talk not be regarded as being complete.

In a few minutes the Vremya newscast will begin. You and we will find out about the latest events and news in the life of the country. Of course, already today many of them have proved to be connected one way or the other to the food program because I hope that our talk has shown again that this program in essence affects all aspects of both rural and urban life in all the republics and all sections of the country's population. It is a program for work both today and in the future.

This program is the most important part of the party's economic strategy for the next decade as indicated in the plenum documents. It cannot be realized merely by the efforts of the branches represented here today and of the heads of the corresponding ministries and departments. This program can be realized only by the efforts of the entire party, the entire state and all the people. At the same time we must overcome to some extent also the forces of nature, the inertia in the work of management and the forces of bureaucracy and seniority concerning which we also had a number of questions and against which our party so persistently warned us in the most recent documents; we must overcome the still widespread habit of working in the old fashioned way and never beyond a definite scope.

It is not easy to overcome all this, but it is possible. Generally, it is necessary in the literal sense of the word, vitally necessary. The labor, responsibility and organization of every worker and collective--these are things that will bring success to implementing the Soviet food program and will accelerate the country's social and economic progress.

Allow me to thank you for your participation in this program and for your substantive answers which have allowed all of us to perceive the main directions of the work of implementing the food program more deeply and more clearly. Thank you, comrade television viewers for your participation and interest in the program. All the best to you.

CSO: 1800/944

FOOD PROGRAM ADMINISTRATOR NURIYEV INTERVIEWED

PM061545 Moscow LITERATURNAYA GAZETA in Russian No 28, 14 Jul 82 p 10

[Interview with Z.N. Nuriyev, deputy chairman of the USSR Council of Ministers and chairman of the USSR Council of Ministers Presidium Commission by Yuriy Poroykov, Aleksandr Nikitin and Yuriy Zarechkin, on questions of the agroindustrial complex: "Maximum Economy, Initiative..."]

[Text] [Question] The 26th Party Congress' decision to create a special food program entered the stage of direct implementation following the CPSU Central Committee May plenum. As Leonid Ilich Brezhnev said at the plenum, "It is not only the prime economic task but also a pressing sociopolitical task."

From his viewpoint, Ziya Nuriyevich, what is there that needs a qualitatively different interpretation and substantial changes in economic practice?

[Answer] Above all I would like to stress that the decisions of the party's Central Committee May plenum continued the course elaborated at the CPSU Central Committee March (1965) plenum. And this typifies better than anything the continuity of the party's Leninist agrarian policy.

In present conditions, in the period of developed socialism, the shaping of agrarian policy is inseparably linked with Leonid Ilich Brezhnev's multifaceted activity. He is the initiator and leader of the development of all the most important agricultural undertakings and makes a tremendous contribution to the creative development of agrarian theory and the practice of communist building.

In consistently implementing the course of the March plenum, the CPSU Central Committee and the USSR Council of Ministers have resolved a large range of questions. I will mention just the main ones. Capital investments allocated to the development of agriculture increased in the 8th, 9th and 10th 5-year plans owing to the expansion of capacities in the machine-building and chemical industries, deliveries of equipment and chemical agents to the countryside have increased. The production base of water resources and rural construction organizations, the mixed feed and microbiological industries and also sectors connected with the storage and processing of agricultural products has grown substantially stronger.

What effect has this had? While the country's population increased by 35 million during that time, agricultural production increased 30 percent per head.

However, the present food situation does not guarantee meeting the populations' increased demands for a number of foodstuffs. There are many reasons to explain why the demand for these products outstrips the growth in their output. They were mentioned in detail at the May plenum, and the food program adopted by it takes into account all the factors which came to light.

The preparation and implementation of this program is a fundamentally new matter both in our planning system and in the management of the socialist economy. There have been no analogies of similar large-scale national economic programs.

The program we are talking about embodies a targeted, comprehensive approach to the resolution of one of the most pressing and complex problems--the food problem. The work of agriculture itself and of the sectors which serve it are linked together and united thanks to this approach. Primarily, of course, it is a question of the sectors which provide the peasants with the means of production. But the sectors which engage in the procurement, transportation, storage, and processing of agricultural products and in the food trade are equally important. And all this taken together constitutes a huge sphere of physical production in which two-fifths of the country's workers are engaged and which provides three-fourths of our retail trade.

In other words, one of the distinctive features of the decisions adopted by the May plenum is precisely that it deemed it necessary to focus the efforts of the whole range of ministries and departments and all republics, oblasts, rayons, enterprises, kolkhozes and sovkhozes as far as possible on creating the conditions for the country's fullest possible provision with food and on achieving high end results in their activity.

[Question] The actual desire to combat departmentalism and uncoordination is understandable. But how can this unity of action which is so essential for us be backed up on the organizational level?

[Answer] By approving the food program the Central Committee plenum thereby laid the organizational foundations of the agroindustrial complex, which must now be planned, run and stimulated as a single whole at all levels of management.

You may say to me that both agriculture and its service industries existed before. So why have we begun to talk about the organizational shaping of the agroindustrial complex just now?

The fact is that right up until the sixties the countryside had a poor material and technical base. Following the CPSU Central Committee March (1965) plenum the picture began to change rapidly. Kolkhoz and sovkhoz production capital has increased 260 percent, agriculture's power capacities have increased 170 percent and deliveries of mineral fertilizers have tripled. Both the quantitative and the qualitative aspects of the countryside's productive forces have changed substantially.

At the same time the division of labor has been taking place at an accelerated pace. On the one hand more and more new sectors and organizations serving the countryside have emerged, and on the other hand highly specialized production units--associations [obyedineniya, promy], administrations and firms--have begun to appear in agriculture itself. All this has, naturally, not facilitated but complicated intersector ties and has often led to disproportions and a needless waste of time on various agreements. In a number of cases narrow departmental interests have prevented regional interests from really being taken into account, the opportunity to resolve comprehensively and efficiently tasks of stepping up production and supplies of products from fields and livestock units has been lost, and the further development of agroindustrial integration has been seriously hampered. LITERATURNAYA GAZETA has written about this several times, incidentally.

The parameters for the development of the country's food base laid down by the program and the comprehensive measures outlined to attain them presuppose the most rational use of financial, material and labor resources and are based on the increased capabilities of the country's economic, scientific and technical potential.

The implementation of the food program is a matter for our entire people, for its aim is to ensure the growth of Soviet people's well-being. Here there is a clear, direct and obvious link between the end and the means to attain it. For this reason, each Soviet person--be he miner or steelworker, machine builder or chemist, construction or transportation worker, scientist or art worker, rural or food sector worker--is fully involved in implementing the outlined program. Its task is not merely to seek to make a radical breakthrough in boosting agriculture and its related sectors. By its very nature and scale, as Leonid Ilich Brezhnev stressed, it is designed to ensure progress in the whole national economy. And this is also a factor which emphasizes the internal unity of the substantive and organizing principles of the party's current work.

[Question] Taking account of what has been said, what main points would you single out primarily in assessing the program's economic and social aspects?

[Answer] I would single out several such points.

Primarily I would single out the targets for providing the population with food and the intensiveness of these targets. A big growth in the output of arable and livestock products and also of the foodstuffs manufactured from them is planned. Suffice it to say that while the average annual output of grain increased by 44 million tons and meat by 3.9 million tons in the last decade, this decade an [annual] additional 53 million tons of grain and 4.3 million tons of meat must be ensured. A considerable increase in the production of milk, sugar beets, oilseed, fruit and vegetables and other products is envisaged.

A second main point concerns the material backup for the food program. I will note here that R233 billion of capital investments are being allocated to the development of agroindustrial complex sectors in the 11th 5-year plan, while in the 12th 5-year plan such investment will amount to 33-35 percent of overall investments in the national economy. It is planned to increase deliveries of tractors and other agricultural equipment to the countryside. Manufacturing equipment to the value of R15-17 billion will be allocated to the food sectors of industry and trade during the decade. The agroindustrial complex' provision with transportation and packaging materials--you have probably also drawn attention to this--will also be considerably improved.

It is proposed to increase fixed production capital in agriculture approximately 50 percent, kolkhoz and sovkhoz power capacities 60 percent and deliveries of mineral fertilizers to the countryside 40 percent. It is planned to commission new and renovate existing irrigation and drainage systems. To this end the May plenum deemed it expedient during the compilation of annual plans and the plans for the 12th 5-year plan to secure an increase in the volume of capital investments and material and technical resources and to ensure that the food program's indicators become more thorough and specific.

The third point which attracts special attention is the large-scale measures for the social restructuring of the countryside. Approximately R160 billion will be allocated for these purposes during the decade. What is envisaged is a radical improvement in housing quality and an increase in the volume of housing, municipal, cultural, consumer and highway construction in rural areas, and the creation thereby of conditions which will consolidate and stabilize the cadre situation.

The next key question of the program is the improvement of the management machinery. First of all, I will repeat, at all levels of administration the agroindustrial complex stands out as an autonomous [samostoyatelnyy] object of planning and management. Autonomous financing is being strengthened, and kolkhozes' and sovkhozes material interest in boosting agricultural production is being increased. For this purpose there will be a rise in purchase prices from 1 January next year, and price surcharges to the overall value of R16 billion will be additionally introduced for low-profitability and loss-making farms situated in the worst localities.

Targeted budget financing for a number of measures to the value of R3.3 billion a year is envisaged for economically weak kolkhozes, and it has been decided to write off kolkhoz and sovkhoz bank loan debts to the value of R49.7 billion and to defer the payment of debts to the value of R11 billion. Economic relations between kolkhozes and sovkhozes and the sectors serving them are being improved. The wages of rural workers are being increased.

A unified management system for agriculture and the related sectors is being created both in the center and at local level....

And, finally, a last point. The food program orients the party, Soviet and economic apparatus toward a decisive increase in the efficiency of agricultural production and of all sectors of the agroindustrial complex. We must transfer the running of the economy onto an intensive footing and ensure the better use of land, production capital, and labor, material and financial resources. Life urgently demands that we accelerate the transition from partial intensification of individual production facilities and sectors to a comprehensive and all-round intensification embracing all technological stages, all sectors of the agroindustrial complex and all aspects of the countryside's social life. In this connection scientific research must be intensified and scientific achievements brought into practice more broadly. In a word, we must work zealously and with a high return, and with consideration for the demands of scientific and technical progress.

[Question] The model for the management of agriculture has become more complex with every year. Several specialized organizations in charge of the output, processing and sale of products have emerged. Each of these organizations pursues its own narrow departmental aims, each has its own office in the rayon and oblast and its main administration in the center, and each has its own plans and reporting indicators. Yet--and this is precisely examined in the materials of the Central Committee May plenum--agriculture is by its very nature a complex, a unified organism in which there are no parts and links which exist in isolation from each other.

LITERATURNAYA GAZETA has written several times about this contradiction. Instances have been cited when small bakeries, dairy plants and consumer services workshops have been closed down in the countryside for the sake of a falsely understood "concentration" and "specialization." The departments have won here, but the kolkhozes and sovkhozes have suffered an appreciable loss.

In what direction will the management of the agroindustrial complex sectors be improved now, following the adoption of the food program?

[Answer] Indeed, the model for the management of the economy's agrarian sector has become more complex in recent years. I have already mentioned why this has happened. At the same time the effective fulfillment of the food program also depends to a tremendous degree on skillful management, on its efficient organization and the degree of coordination of the work of the different links.

Now, taking account of the experience accumulated at all levels of management, a unified organizational complex is being created and will of course be continuously improved. This is a new and highly important step on the path toward the increasingly full realization of the advantages in the development of the Soviet economy. The Central Committee May plenum demanded that departmental barriers be done away with. Measures of an organizational and economic nature have been elaborated in this context. They are contained in the well-known CPSU Central Committee and USSR Council of Ministers resolutions.

I would, however, like to warn against a simplified approach to the resolution of this question. For the departments are not being abolished, and we cannot completely do without the sector principle of production organization for individual types of agricultural products. This is the inevitable result of production specialization. Consequently the opportunities for departmental fragmentation are fundamentally preserved.

In these conditions it is very important to overcome the departmental mentality and the inertia of tradition. Matters must be organized in such a way that any instance of deviation from the national interest in favor of local or departmental interests is given a principled evaluation from the viewpoint of the state.

Here I will note that in a number of places the passion for creating all sorts of narrow specialized associations has resulted in a multiple increase in the size of the management apparatus in the last 15 years. At the same time excessive centralization of the management of specialized farms has in many regions--for instance, in Voronezhskaya, Lipetskaya, Penzenskaya and other oblasts--resulted in almost all sovkhozes being subordinated to organizations located outside the region. All this could not fail to weaken the rayon link.

The experience accumulated in individual regions of the RSFSR, the Ukraine and Estonia is evidence of the promising nature of the creation of agroindustrial associations.

In particular the Talsinskiy Rayon Agroindustrial Association in the Latvian SSR, to which the paper recently gave detailed coverage, has been in operation since 1975. What has the creation of this association meant? The answer is well known: It has meant concentrating the efforts of sovkhozes, kolkhozes and rayon organizations for material and technical supply, chemicalization, land reclamation and construction, and also the efforts of the meat combine, the dairy plant, the cannery, the starch and spirit [krakhmalo-spirtovoy] plant and the mixed feed plant on fulfilling the food production targets established for the rayon.

The results of the association's 6-year operation show that the cooperation has benefited all the partners. Financial, material and technical resources have begun to be used more rationally, the plans look sounder and the economy of each production subdivision has strengthened.

The Talsinskiy and other analogous associations are unified production management complexes. We have seen for ourselves that their activity is based on the broad combination of the principles of democratic centralism and planned leadership of the countryside's economic and social development with the operational autonomy, initiative, enterprise and material interest of each member of the association. In accordance with the decisions of the CPSU Central Committee May plenum such rayon agroindustrial associations will be created extensively.

[Question] Is it right to speak of these rayons associations without distinguishing between their experience? For in general, for instance, Abasha and Georgia is one thing and Talsy in Latvia or Vilyandi in Estonia are quite another....

[Answer] In this case we are talking about the main principles of management, about unified administration. Naturally when utilizing their experience we must not act according to a stereotype but must work creatively. But the rest applies....

Corresponding agroindustrial associations are being organized along the same principles in the autonomous republics, krays and oblasts. At the same time management apparatus is being simplified and its costs reduced, and superfluous elements are being liquidated.

Councils of ministers presidium commissions on questions of the agroindustrial complex are being created in the center and in the union republics.

We are sure that the new management organs will enable questions to be resolved comprehensively and efforts to be concentrated on the main and most important avenues for the implementation of the food program.

[Question] The kolkhoz chairmen and sovkhoz directors to whom we have talked see relations with their partners--Selkhoztekhnika, land reclamation workers, the construction trusts and other specialized organizations--as one of the most vital problems of modern agriculture. Precisely in what direction will these relations be improved?

[Answer] In accordance with the May plenum decisions economic relations will be improved right at the drafting stage of annual and long-term plans by strictly orienting the partners in the agroindustrial complex toward high end results.

Stable economic conditions will--and this in our view is a fundamental point--be consistently created for the financially autonomous activity of each labor collective and for increasing responsibility for the profitable management of production.

To achieve this the agroindustrial complex association's council is invested with the right to fix the tariffs for services rendered to kolkhozes and sovkhozes regardless of the departmental affiliation of the enterprises and organizations which carry out the work, and also to establish accounting prices for the livestock, fodder and materials supplied to each other by the rayon's farms.

The association's council can if necessary redistribute part of the capital investments and material and technical resources among the enterprises and organizations and create centralized funds for material incentives, sociocultural measures and housing construction, and also for production development.

The improvement of economic relationships will also affect the system of bonuses for the leading workers and specialists of the farms and other enterprises and organizations belonging to the association.

As well as this, new proposals for the improvement of a number of other aspects of the relations between agriculture and its service sectors are currently being drafted by the USSR Gosplan, the Finance Ministry, the State Committee on Prices, the State Committee for Labor and Social Problems and the USSR Agriculture Ministry. In particular, changes will be introduced into the existing system of the planning and utilization of the profits of enterprises and organizations connected with agriculture. This means increasing the material responsibility of the enterprises and organizations of the State Committee for the Supply of Production Equipment to Agriculture, the USSR Ministry of Land Reclamation and Water Resources, the USSR Procurement Ministry and Soyuzselkhozkhimiya for the quality of and for the time taken to complete work and to render services to kolkhozes and sovkhozes.

It is planned to increase the interest of the farms' partners in achieving high end results in the production and processing of agricultural products and in their prompt delivery to the consumer and in the growth of production efficiency on kolkhozes and sovkhozes.

The system of ascribing the rayon organizations of Selkhoztekhnika and Selkhozkhimiya and groups for the payment of leading workers and specialists, and also of awarding them bonuses on annual results, is being changed. Now the level of pay and bonuses will be linked more to production output.

The responsibility of leading workers and specialists in procurement enterprises and organizations is being increased, and the system of economic incentives for them is being changed. As for the censure which has been expressed before, in the present too, about the evaluation of the quality of agricultural products, it is seemed expedient to have an intersector quality inspectorate in the rayons, oblasts and republics and in the center.

[Question] Ziya Nuriyevich, you often visit various areas and you well know that in recent years a great amount of production, housing and consumer construction has been taking place in the countryside. Everybody is pleased about this. And agriculture will continue to have considerable funds allocated to it in the future too. Tell us what is planned for the more efficient use of these funds?

[Answer] Indeed, you won't recognize many of our villages now, they have been enhanced and their appearance has changed. Many thousands of modern highly mechanized production installations--stockraising complexes, livestock units, poultry factories, mixed feed plants, hothouse combines, machine yards and servicing stations, irrigation and drainage systems--are now in operation. About 500 million square meters of housing and numerous cultural and consumer installations have been commissioned. All this--the change in the nature of the work and the improvement in leisure conditions--renders the rural workers' way of life fuller and more interesting.

In the current 5-year plan it is envisaged channeling capital investments primarily into increasing field and livestock unit productivity and eliminating bottlenecks in sectors engaged in the storage, processing and delivery of products to the consumer, with a view to achieving the greatest, and at the same time a rapid, gain. All the construction ministries must make their own contribution to rural construction. The party's Central Committee plenum deemed it necessary for party, Soviet and economic organs to resolutely improve their attitude toward construction sites of the agroindustrial complex and to regard them as nationwide shock projects.

[Question] The press has noted several times instances of the petty tutelage of farm leaders and specialists and of insufficient interest in the end results on the part of the immediate producers, machine operators and livestock unit workers. Certain writers, in particular, have mentioned this.

How will matters stand in this regard in the future?

[Answer] First about the field and livestock unit workers. Of course, among the many tens of thousands of kolkhozes and sovkhozes and the hundreds of thousands of links, teams and detachments there are cases of poorly conceived labor organization and shortcomings in labor incentives. I know of these instances and I have read about them. But I also know about the great amount of work which is being carried out at the local level to introduce progressive forms of labor organization and remuneration.

The USSR Council of Ministers has examined the results of the work of such links and teams from farms of Rostovskaya, Ryozanskaya and other oblasts. Last year when I was in the oblasts of the Volga region I familiarized myself with the experience of such collectives directly in the field.

As you know from the plenum materials, it is now envisaged introducing the collective contract into agricultural production everywhere; this will stimulate the immediate producers to a greater degree than before to attain a high yield from the fields and high productivity from livestock units, that is, high end results. For this purpose farm leaders are authorized to set for links and teams stable rates and a scale of additional payments for production obtained, based on the planned wage fund, increased up to 150 percent depending on the level of field yield and livestock productivity. Other innovations are being introduced too. In brief, farm leaders are being granted more extensive rights in organizing wages and bonus awards for workers.

But now about instances of petty tutelage of farms.

The party's Central Committee and the government have condemned such cases. In the future it will be inadmissible to foist any targets on kolkhozes and sovkhozes apart from those envisaged by the plan. But the plan only tells the farms about the volume of purchases of the main types of agricultural products, the scale of capital investments and allocations for certain types of material and technical resources. All remaining indicators of economic and social development are to be elaborated by the farms themselves.

At the same time farm leaders and specialists must conduct matters in such a way as to guarantee the fulfillment of state orders in terms of product quantity and quality. The maximum economy and initiative must be directed toward the fulfillment of state purchase plans, expenditure reduction and to growth of production profitability.

We must resolutely do awaywith excessive bureaucracy and with the imposition of unsound recommendations on farms.

[Question] LITERATURNAYA GAZETA writes a great deal about the problems of subsidiary plots. What place is devoted to citizens' individual subsidiary plots in the food program?

[Answer] I will begin my answer by stressing that the chief role in stepping up food resources belongs to kolkhozes and sovkhozes. They are resolving questions of providing the country with food today and they will continue to do so in the future.

At the same time we must not dismiss the potential of industrial enterprises and construction and transportation organizations for expanding the output of milk, meat, eggs, vegetables and potatoes. Enterprises and organizations which are capable of running subsidiary agricultural production units should have them as a rule. They are faced with the task of satisfying as far as possible from their own production the requirements of public catering for food products.

Positive experience has been accumulated in this respect at many enterprises of the USSR Coal Industry Ministry, the USSR Nonferrous Metallurgy Ministry and the Ministry of Railways.

The coal industry workers have 240,000 hectares of agricultural land, 65,000 head of cattle, 50,000 hogs and about 1 million birds. Last year they produced--these are their figures--over 50,000 tons of potatoes, 72,000 tons of vegetables, 14,000 tons of meat, 73,000 tons of milk and 84 million eggs. You must agree that this is a considerable addition to the food stocks for canteens and children's establishments.

And now about individual subsidiary plots and truck garden cooperatives. The CPSU Central Committee and USSR Council of Ministers have adopted two resolutions on this score. Many questions have been resolved on the basis of the wishes of citizens, enterprises and local management organs.

Agricultural production in the private sector has increased in the last 5 years and kolkhozes, sovkhozes, industrial enterprises and public organizations have begun to devote greater attention to citizens' subsidiary plots, cooperatives and partnerships. More land has begun to be allocated for these purposes, kolkhozes and sovkhozes are providing the population with a considerable amount of fodder and the sale of piglets, lambs, calves and young birds has sharply increased.

The food program envisages a further increase in assistance to individual subsidiary plots on the part of kolkhozes, sovkhozes, consumer cooperatives, local Soviets and the state.

In brief, all the conditions are being created for rural inhabitants to have a truck garden and keep livestock if they so wish and to provide their family with potatoes, fruit and vegetable products and also meat, milk and eggs. Kolkhozes, sovkhozes and consumer cooperatives must buy surplus products from the population, or else these same people must be helped to sell the goods they have on the kolkhoz market.

However, it must be noted that in a number of places tricksters have appeared who have begun to exploit these conditions for personal gain by organizing private enterprise for the production of flowers, furs and other popular goods on a particularly large scale and for speculative purposes. It is necessary to give such facts a principled evaluation in accordance with the laws in force in our country.

[Question] Several key and particular problems are accumulating into a general whole. And, as we understand it, they are all at different stages of solution. What would you like to warn people against and urge them to do today in implementing what has been planned? What are the immediate tasks of the food program, Ziya Nuriyevich, or as Comrade Brezhnev called them--the "urgent, pressing" tasks?

[Answer] Primarily it is necessary to speed up the compilation of food programs in the union and autonomous republics, krays, oblasts and rayons, and of comprehensive plans for increasing agricultural production on kolkhozes and sovkhozes. Appropriate measures must also be elaborated in the near future in ministries and departments. Here it is necessary to proceed from the Central Committee May plenum's instructions that the food program indicators must be regarded as the minimum.

All sectors of the national economy must make a profound breakthrough in their activity toward resolving the problems of further boosting agricultural production and developing the whole agroindustrial complex.

The introduction of the latest strains of agricultural crops and advanced technology and the advent of new machines, equipment and herbicides require an improvement in cadre training and technological and labor discipline and the heightened quality of all work. Labor and management organization in the collectives must be raised to higher level. Increased labor productivity and the efficiency of the whole food complex can be ensured only by applying what is new and improving work quality in the field and the livestock unit. There are several examples of such an approach to matters. The farms of Stupinskiy Rayon in Moskovskaya Oblast, Ust-Labinskiy Rayon in Krasnodarskiy Kray, Gusyatinskiy Rayon in Ternopolskaya Oblast and Oktaybrskiy Rayon in Aktyubinskaya Oblast are dynamically stepping up agricultural production and strengthening their economy.

The increased scale of production and the more complex technological, transportation and economic ties are making increased demands on the workers in all links of management, on kolkhozes and sovkhozes, in enterprises and organizations, and on all specialists in the agroindustrial complex sectors. And these demands are multifarious, ranging from internal production reserves, the reduction of material and labor expenditure and the improvement of enterprises' profitability.

Economic work must be improved radically. Autonomous financing must become the most important instrument of the socialist organization of production in all links of production and managerial activity. Special attention must be paid to improving production and financial activity on lagging kolkhozes and sovkhozes in all rayons.

Talking of urgent tasks, I cannot fail to mention the importance of the summer and fall periods of livestock maintenance for increasing the output of milk, meat and other livestock products. Kolkhozes and sovkhozes have all the potential at their disposal for creating a "green conveyor" at every livestock unit, improving livestock grazing and obtaining high milk yields and weight grains. The leading farms of the RSFSR's central region and the Baltic region obtain 1,400-1,500 kgs of milk per cow and 120-140 kgs weight gain per head of young cattle during the June-September period.

Fodder procurement is under way everywhere now. This year must be a turning point in the production and laying in of hay, cured hay and silage.... The chief thing here is not to delay the grass harvesting and to improve the quality of coarse and succulent fodders.

At the moment farms are preparing to gather in the harvest, and the grainfields are already being threshed in southern regions. Farmers are doing their utmost to gladden the motherland with a good harvest. This will be the very first and most important contribution to the implementation of the food program at the present time.

There is a real possibility even this year of considerably improving the population's provision with potatoes, many types of fruit and vegetable produce, hulled products, macaroni and confectionery products. The prime obligation of Soviet and economic organs is to mobilize all their efforts to make the fullest use of these opportunities and to replenish food resources.

[Question] And finally a last question, Ziya Nuriyevich. How do you view the role of writers and literary people in resolving the tasks connected with the food program?

[Answer] We have already mentioned in this conversation certain literary articles which have been of particular significance. I think that, as Gorkiy and Mayakovskiy exhorted, fighters on the literary front must continue to help fashion the civic stance of our workers just as actively and with as much interest. Human destinies, characters and deeds form the chief area whose cultivation can lead us to obtain a rich harvest in all other spheres too....

Writers, rural workers and all of us taken together must pursue one common cause. The CPSU Central Committee May plenum decisions are addressed to every Soviet person. And the party awaits our active participation in implementing the food program.

CSO: 1800/1065

MOSCOW TV ROUNDTABLE ON USSR FOOD PROGRAM

OW090400 Moscow Domestic Television Service in Russian 0832 GMT 22 Jul 82

["The Food Program--Common Task for All the People": the 22 July installment of the "Problems, Decisions, Solutions" series moderated by political observer Lev Aleksandrovich Voznesenskiy, with Sergey Fedorovich Antonov, USSR Minister of the Meat and Dairy Industry; Vladimir Mikhaylovich Kamentsev, USSR Minister of the Fish Industry; Nikolay Timofeyevich Kozlov, USSR Minister of the Fruit and Vegetable Industry; Voldemar Petrovich Lein, USSR Minister of the Food Industry; Aleksandr Ivanovich Struyev, USSR Minister of Trade, and Aleksey Alekseyevich Smirnov, chairman of Tsentrosoyuz]

[Text] [Voznesenskiy] Good day, comrades. The Central Television today offers you the scheduled program from the series "Problems, Decisions, Solutions." We invite you to continue the discussion on the country's food program. You know that this program involves the activity of many, many branches of the economy. In the previous program your questions were answered by the leaders of a number of ministries and departments which are mainly related to the production of agricultural products and the creation and usage of the necessary equipment. This time we have invited to the studio to meet you the leaders of the ministries and departments who, in many instances, accept the baton, so to speak, from the branches introduced here the last time. They process agricultural products and food products and some of them produce them as well and organize the supply and sale of these products to the population. Thus, the following people are participating in the program: Sergey Fedorovich Antonov, member of the CPSU Central Committee and USSR minister of the meat and dairy industry; Vladimir Mikhaylovich Kamentsev, candidate member of the CPSU Central Committee and USSR minister of the fish industry; Nikolay Timofeyevich Kozlov, member of the CPSU Central Committee and USSR minister of the fruit and vegetable industry; Voldemar Petrovich Lein, member of the CPSU Central Committee and USSR minister of the food industry; Aleksey Alekseyevich Smirnov, candidate member of the CPSU Central Committee and chairman of Tsentrosoyuz; and Aleksandr Ivanovich Struyev, member of the CPSU Central Committee and USSR minister of trade.

You, comrade viewers, are already familiar with the nature of our programs. You know that the questions can be asked over the telephone, the numbers of which you can see now on the screen. And while your questions are on the way, so to speak, I would like to ask a question which appeared to be urgent in the previous program and which is relevant, of course, to the ministries which are introduced here today. It is a question on the struggle with production losses all the way from the producer to the consumer. As is known, and this was noted at the May plenum of the CPSU Central Committee, which endorsed the food program, it is more and more frequently accepted that the urgent issue is not the production but the storage of processed products and their delivery to the public.

The plenum has reminded us that the shorter and simpler the communications is between a field and a shop, the better it is for the business and the consumer. And, of course, if we want to fulfill the task facing the entire agro-industrial complex and ensure that the food program bears its first fruit as soon as this year, then we probably have to first of all reduce the losses of produced products. Thus, if it is possible, literally in a few words, tell us what are your ministries' methods of struggle with losses and what are the short-term prospects?

[Lein] Lev Aleksandrovich, the question of losses is an immensely important question. It includes the fact, you understand, that a reduction of losses will ensure additional production of produce, which is extremely needed by our country and by our people. It is sufficient to give an example from our industry. We process approximately 85 million tons of sugarbeets. Due to the shortage of production capacities the period of processing sometimes lasts for 130 or more days and much longer during high yields in some oblasts. In addition, the level of sugar contained in beets is lowered each day during storage, hence the losses in sugar production. Therefore, a task was put in the decisions of the May plenum to shorten the processing period to 100-105 days in the years up to 1990. This means we must increase production capacities. Besides increasing the capacities of sugar processing plants we must increase the area of platforms having active ventilation and build more platforms. Already this year we plan to add 1.7 million square meters to our 5 million square meters of platforms with active ventilation. This reduces losses during storage by approximately 30 percent compared with existing ones. This means additional hundreds and hundreds of tons of sugar.

[Voznesenskiy] Anyone else?

[Kozlov] Lev Aleksandrovich.

[Voznesenskiy] Yes. Please.

[Kozlov] Lev Aleksandrovich, I would just like to add that the question of the safekeeping of foodstuffs bears a special relation to the fruit and vegetable industry. We have to solve a number of problems here and, first of all, we must solve problems in the qualitative harvesting of foodstuffs at the place of production, its grading, and providing producers with the necessary packing so that the harvested foodstuffs may be well packed.

[Voznesenskiy] Nikolay Timofeyevich, excuse me. I will interrupt you for a second. The first question has just come in from Comrade (Urusov) from Moscow, an individual pensioner and war and party veteran: Why do we still not have boxes for vegetables and fruit; a lot of produce is lost because of this. Your answer has literally coincided with the question which has just come in.

[Kozlov] The question is right. Our ministry and Gossnab are working on this question. Another problem we are solving is how to deliver the produce faster from the production point to the marketing point. An important factor is how to utilize our existing storehouses to establish there the necessary conditions for maintaining produce in marketable condition, and of course how salesmen treat this produce. Just to begin with, I will give an example. This year we transported by truck 15,000 tons of potatoes from Georgia to Moscow. I must say that the produce which arrived in Moscow corresponded in quality and weight with the produce which was registered there in Georgia and everything was sold. It was made possible because if it generally takes 8 days for potato deliveries from Georgia it took us 2 1/2 days by truck. This is the way we work on all the problems.

[Kamentsev] Lev Aleksandrovich, I would like to say something about how we are solving this problem. The fact is that our fish industry has some specifics compared with the food industries because we receive nothing from anybody for processing. We seek, catch, produce and process all products ourselves. Now you have just reminded us again that the plenum pointed out that the shorter the path from the field to the store, the better business is. Well, our field, generally, is the seas and oceans, the world's oceans. Therefore, we set as our main task the problem of how to shorten the path between the fishing grounds and the processing point.

Now, first of all, this demanded the reconstruction of our entire fleet, and today we have created a fleet which not only catches fish but processes directly in the area of the fishing grounds. The fish is processed, frozen and canned, while the waste is processed into meal. This considerably decreased, it practically eliminated, losses at this stage. In order to decrease losses between the fishing grounds, the refrigerator and the market place, we took the wholesale side of things into our own hands.

However, there are losses and generally this is frozen fish which has not been [words indistinct] in shipment and loses its external appearance. Therefore, there is only one solution, to build fish processing complexes directly at consumption points which will turn out good products from frozen fish on the spot. We have already built 14 such complexes and this work is continuing. I think it will lead to a decrease in losses to a minimum or they will be eliminated entirely.

[Struyev] Lev Aleksandrovich?

[Voznesenskiy] Yes, please.

[Struyev] Losses of potatoes and fruit and vegetable products during the storage and marketing process in trade are very great. The main reason, and we should state this directly, is that a very large amount of potatoes, as well as fruit and vegetable products, are delivered to trade organizations with violations in standards. Of course, when these products are placed in storage the grading, the qualitative grading, is not ensured first of all and during the storage process, taking into consideration the fact that many storages are not properly adapted, the necessary conditions for safekeeping the products are not being established. This occasions serious damage, both to the availability of resources for improving the supply to the population and in great cash losses which reflect on the financial activities of trade.

It is sufficient to say that, last year, nearly 3 million tons of products of the total amount delivered for marketing were found to be spoiled and had lost the necessary quality. This was 12.4 percent of the total delivered. What is being done? New fruit and vegetable bases are being built as well as potato storage bases, where mechanization, handling facilities, refrigeration and ventilation mechanisms are being employed and conditions are being strictly maintained. Most important of all, the control over work at fruit and vegetable bases and marketing to the retail network is being consolidated.

[Antonov] I would like to say that it is a pity that we still have losses, particularly in the meat and dairy industry. Extremely valuable products are lost from the ration, so to speak. This question was reviewed at the Central Committee plenum from the point of view of criticism and we often meet critical remarks like this now in the press and in letters we receive. This reflects the reasonable demand that these losses be reduced to a minimum.

What is being done in this regard? We consider that on the way from kolkhozes and sovkhozes, for instance, when milk and livestock are delivered to processing enterprises, the greatest losses occur. This is why in his report Leonid Ilich stressed that the enterprises should be brought closer to the rural areas. In connection with this, we have now already basically worked out a plan for siting processing enterprises and followed a course which envisages that certain enterprises already operating will have affiliates near kolkhozes and sovkhozes for the primary processing of milk, for refrigeration as well as for the processing of livestock for the personal needs of the farms.

Now the plan for transportation facilities must also be improved. Everybody knows that we have now begun hauling milk in tank trucks rather than in milk cans and this reduces losses, and even railway tank cars are being widely used for the delivery of milk to such cities as Moscow, Leningrad and others. This provides a considerable reductin in losses and brings them to a minimum.

And finally, we consider that speed is also significant. Speed, of course, raises the issue of roads. This aspect is now also being worked on, insofar as the decision stipulates the provision that milk and livestock be accepted directly at the farms. Therefore, in order to accept livestock and milk without losses, we must, of course, have good roads. Consequently, we turn to agricultural and local organs with big demands on this issue.

As far as losses at enterprises are concerned, here, of course, the question lies in packaging and the struggle against losses. The products should be packed, hermetically sealed, and supplied to trade outlets in containers avoiding absolutely all losses. But, unfortunately, there are still leaks of milk and many critical remarks are directed at this. We are changing to new kinds of packaging in rectangular containers and are searching for other means to avoid these losses.

[Voznesenskiy] Sergey Fedorovich, just now Comrade (Makov), a pensioner from Moscow has outlined his question over the phone directly to you. A few years ago (Fitili), he refers to that source, stated that 30,000 tons of milk leak from cartons--he quotes these figures; I do not know how true they are--and how do you treat this situation? What do you do to reduce these losses?

[Antonov] Well, first of all, as I have already said, we are changing to a new type of packing. We change the systems which we consider obsolete, so-called tetroids, which have insufficient strength, especially when, in separate cases, they are treated carelessly. I consider that milk is a special product. Sometimes, comrades, the containers crumple and leak. That was naturally a just question and we will fight radically with this, so to speak, evil. As I said, we have to change the packing, not excluding the possibility of grading and bottling milk in suitable containers.

[Voznesenskiy] Aleksey Alekseyevich, please.

[Smirnov] I also want to add to what my colleagues were saying. It is true that the question of struggle with and elimination of losses of production all the way between the producer and consumer is one of the most important points for a branch which is tied to an agro-industrial complex or is part of one. And it is not accidental that Leonid Ilich Brezhhev, at the plenum of the Central Committee and we, in our practical work, pay more attention to this. In our system, the group of operations which yearly procures about 15 million, and transports about 15 million, tons of various cargoes such as potatoes, vegetables and fruit has, of course, reduced the losses by half in the last 5 years. Nevertheless, last year we lost about 40,000 tons. It is a lot. It concerns us very much and we look for ways particularly to improve the transport and increase transport frequency to kolkhozes and sovkhozes and especially private farms, where we procure a significant quantity of potatoes, vegetables and fruit, in the faster movement of trains and in improvement of work in the sphere of trade. Alexsandr Ivanovich Struyev spoke about this. Therefore, our system now, from top to bottom, also adopts active measures, for the coming years, to reduce to a minimum, and in some places eliminate, the losses.

[Voznesenskiy] Comrades, we must, of course, clearly understand that today more than ever--this is obvious from the type of activities of the ministries you represent--we will receive quite a lot of questions concerning these or other shortcomings in supply. And here is one of the particular questions addressed to you, Vládimir Mikhaylovich: Why has cod-liver oil disappeared from the market and when will its production be resumed?

[Kamentsev] You see, cod-liver oil--if you have in mind edible cod-liver oil--has disappeared from the market because there is now a new requirement for this product from our Ministry of Health. They discovered in it a certain level of pesticide and hence the cod-liver oil which was previously used in food is used in medicine for external purposes only. The volume of cod-liver oil production from fish remains practically at the same level, while the oil extracted from whales is used in industry only. Therefore, there is now cod-liver oil used in medicine for external usage, veterinary cod-liver oil and industrial cod-liver oil. It appears that the Ministry of Health considers the previously used cod-liver oil unsuitable for human consumption.

[Voznesenskiy] (Nikolay Ivanovich Ivanov), engineer from Moscow, wants an answer to the following question: When will the consumer receive, in desired quantities, flour and confectionary products with a small sugar content. This is exactly what the consumer wants, and this will allow reduction in the usage of sugar--in biscuits, cakes and pastry. By the way, Voldemar Petrovich.. [interrupted]

[Lein] Lev Aleksandrovich, this question is not new, and it probably worries many people. Recently I had to reply to correspondence on this question--the views of our ministry and what do we do about it. To avoid being repetitive, I would like to say that we are working in that direction and, year after year, we increase the production of hard biscuits, such as hardtack for instance. Recently, we have commissioned the required equipment in the Moscow Bolshevik Factory and in Odessa. Similar equipment will be commissioned this year in Baku and Kazan factories. And if there is equipment which already produces the hard biscuits, this is not enough. We need three times as much and our machine builders are still producing it. I think that this problem will be solved in connection with the tasks set out in the food program. Year after year, this production will be increasing. Even now, this production is increasing annually. However, there is more demand for cookies and cream filled cakes. I think that the hard biscuits, cookies and cakes with fruit filling will, in time, receive the needed attention. This problem is of concern to the branches of the industry as much as to the consumer. There was a time when we used sugar in bread and bread products and now we must reduce the consumption of sugar in the products. We are constantly studying this problem and we will increase production considerably.

[Voznesenskiy] Tell us please, why there is a shortage of vegetables in the shops and, if they are available, they are of poor quality? This is asked by Comrade (Saranova), a pensioner.

[Kozlov] From which city?

[Voznesenskiy] Moscow. A good question from Moscow.

[Kozlov] Then I will say that in Moscow now we sell sufficient quantities of potatoes, cabbage, cucumbers, tomatoes. Young beetroots are beginning to appear, so are carrots and other green crops. Then, if we talk about crop products, the supply is just beginning. It is true that we do not have enough stone-fruit and berries. But, as far as the named crops are concerned, these in principle are in adequate supply. Maybe there is a shortage in some microrayons due to inefficiency, but I would not go as far as to say that there is shortage of these products in Moscow.

[Struyev] Lev Aleksandrovich, Nikolay Timofeyevich said that the problem is possibly in the fact that part of the fruit and vegetable products are coming from afar, from the Middle East for instance. And, of course, a portion of the produce perishes and sometimes reaches shops in poor condition and looks, like we are talking about cabbage or tomatoes we were forced to import initially.

[Kozlov] But it was not a question of quality.

[Antonov] Yes, a question of quality.

[Voznesenskiy] Yes, the problem here was, first of all, the quality, the problem which worried the comrade.

[Kozlov] As far as quality is concerned, it is possible, we do not conceal this. We adopt all necessary measures so that the produce which reaches the union fund, the republic's fund and large cities is of higher quality.

[Voznesenskiy] Aleksandr Ivanovich.

[Struyev] I want to add to Voldemar Petrovich's answers.

[Voznesenskiy] Please.

[Struyev] I quite agree with the way Comrade (Ivanov) presents his question. We, as a trade organization reflecting the population's requests, have been putting this question forward for many years already. Especially, the question with "protracted" biscuits and reducing sugar content in a number of products. But this problem with biscuits is being solved slowly, and I think that this is because the capacities are not well prepared. This probably is also relevant to the value of total production. We are joining Comrade (Ivanov) and asking Comrade Lein in front of all the people to fulfill the demands of trade.

[Antonov] I also fully agree with you.

[Lein] I can add the following. Ivan Ivanovich Pudkov, minister of machine building for light and food industry, is probably listening to us now. He will arrive at these conclusions and give us the equipment. The question of the value of total production does not concern us. We need the equipment.

[Voznesenskiy] There are so many questions, comrades, that frankly speaking, I have difficulty in orientating myself and therefore I will ask Vladimir Mikhaylovich--I have already sent you a number of questions--answer them while I am sorting out the coming questions.

[Kamentsev] I have here a number of questions. The first question is from Kiev, from (Kharlamova), war veteran. The first question: When fish is being caught, is the content of harmful elements in the ocean checked? Yes. It is checked in the ocean and, quite seriously, checked in ports where the fishing ships arrive. The second question is also from that war veteran: It is very often reported that smart people are designing machines in kolkhozes and do it primitively. What is done so that everything produced primitively goes into serial production? The question is quite reasonable. It is good that smart people produce things in kolkhozes and sovkhozes and other places. Our kolkhozes, I must say, are very powerful kolkhozes, having their own shipbuilding and repair enterprises--Kirov kolkhoz and other Baltic kolkhozes do indeed have very clever and good machines which later go into serial production. In our industry, we have a number of special machine-building plants which we now own and we are trying to organize serial production of these machines. But the question is just this--we do not have enough of these machines; they are scarce and we are considering in the 11th Five-Year Plan the measures for developing the capacity of these plants. Another question: A lot of canned fish goes bad and there are many cases of poisoning. How do you solve this problem? This was from Shikha City, from (Vasiliy Petrovich Vorobyev), engineer. (Vasiliy Petrovich), I must say I like your question very much. Because I, frankly speaking, was expecting to hear that something was scarce, but thank you for beginning with "there is a lot of something." Now I would like to say that canned food does perish, but it has only a definite storage period and one must not confuse canned food with preserved food. It is indicated on canned food how to keep it and how to store it as soon as you buy it of course, in what temperature and for how long. There are cases unfortunately, when canned food is perishing in wholesale bases, because we store it for over the specified period. Then we write it off. All the cases of poisoning, I want to tell you this now (Vasiliy Petrovich), all the cases of poisoning are the subject of serious review and if this is the fault of production, then people are punished. But we are trying to prevent this. And here is a contrasting question: Why is there shortage of fresh fish and herring in the shops? As for the fresh fish--Comrade (Emelyanov) from Moscow is asking--the herring, I will begin from that end, the problem is that the generation of high-yielding herring of the 1950's was all caught by 1965 and was followed by low-yielding herring as ocean fish have ups and downs in yield. In connection with this, a total ban was imposed on herring fishery in the Norwegian and Okhotsk seas in order to restore the schools of this type of fish so popular throughout the world. Today the herring schools are being restored, but at the same time, I want to say that when the schools of herring were reducing, schools of very high-yield sardine and salmon appeared, which replaced the herring. And if we did not have them at all in the 1940's and 1950's, we now catch a large volume of this type of fish and it can replace the herring quite well. In the coming years, I think, in 1984 we will begin fishing for herring on a rational basis. Why is fresh fish scarce in the shops? It is a good question and it worries many comrades. Fresh fish has a definite storage period and has to come from neighboring regions--pond fish, fish from fresh water reservoirs such as pike which can be kept for 7, 8 or 9 days, we supply to cities. This fish, of course, is immeasurably scarce. Significant measures have been adopted to expand pond fishing. There will probably be more questions on ponds, so I will answer them later.

[Voznesenskiy] I am not doubting that, because I am passing to you another group of questions, which are exactly relevant to these problems, but a little bit later, Vladimir Mikhaylovich.

[Kamentsev] And here is another question: Why was there no water in the lower Volga during spawning? The spawning was ruined. Comrade (Ivanov), fitter from Moscow asks. The question is right. Last year, although it was not last year but the year before, last year was a very wet year, before that were years with little water and here we have conflict between energy workers and agricultural workers, river transport workers and the fishing industry. Therefore, the question is being solved with less detriment, not totally eliminated, but less detriment for all these industries. The state has provided large funds especially for this and has built a special water separator in the lower delta of the Volga, which allows, even in the years with little water, sufficient level of water for spawning. Last year, in fact, was a very good year for spawning and for other types of production of edible fish.

[Voznesenskiy] A question for Aleksey Alekseyevich Smirnov. (Galina Alekseyevna Khaslatskaya), a commodities specialist from Lyubertsy City, asks: What are the prospects for increasing harvests of wild fruit. Shouldn't we invdlve students in these activities, combining work with rest in a natural environment?

[Smirnov] The question is very good and an interesting one. I would like to say that, indeed, in recent years, especially in the past 5 to 6 years, the procurement of products growing in the wild has somewhat decreased and the volume has stabilized. As far as the wild growing resources are concerned resources of mushrooms and berries in the European part of the country are being used reasonably well. We think that 60-70 percent of them are being used. From the total biological yield of 1.5-2.0 million tons, accessible for harvesting, which have been assessed by the specialist from the Institute of Botany of the USSR Academy of Sciences and from the Institute of Nutrition of the USSR Academy of Medical Sciences, about 1 million tons are harvested by people for their own consumption and not for sale. In addition, procurement organizations, particularly consumers' cooperatives, harvest something in the order of 15,000 to 20,000 tons of mushrooms and 10,000 to 12,000 tons of various berries, especially cranberries and cowberries. Nevertheless, we feel that considerable opportunities are not fully realized, and our food program sets out a task for the current 5-year plan to increase the procurement of mushrooms, wild berries, and other forest products 3 to 5 times.

For this purpose we have in recent years created forest camps. For instance, in the Latvian Republic, Belorussia, Vladmorivskaya Oblast and a number of oblasts in the Russian Federation, particularly in the European part, we have created about 1,500 forest camps to which we have invited vacationers from the cities. And now we invite them all to contact our oblpotrebsoyuz in oblast centers or the Tsentrosoyuz. We will give you the addresses for students and pensioners and just those people on holiday who wish to be with nature and participate in this undertaking. But we have one condition for people in those camps--they ought to bring something from the forest every day for processing and to sell to consumers' cooperative organizations.

As far as Siberia is concerned, where we consider 80 percent of all wild mushrooms, berries, nuts, especially cedar nuts, to be, we use only maximum of 10-12 percent of the resources. There, we create special harvest zones, build small huts where one can live for months, and provide hot meals. In short, we are taking this path. Naturally, we have to attract students. For instance, the Belorussian Potrebsoyuz, which for 2 years have been attracting students only from our schools of consumers' cooperatives, technical schools in particular, have shown that they have doubled or tripled the procurement of mushrooms and berries in the period of 2-3 years. We will also follow this path. We invite everybody, who is willing to visit our forests in summer or autumn to take part in harvesting wild fruit, berries and mushrooms.

[Voznesenskiy] A question for Voldemar Petrovich: Why are meringues and jellies rarely available for sale, and chocolate has totally disappeared, asks (Tatyana Petrovna Ivanova), machine operator from Moscow.

[Lein] To say that it has disappeared from the market is incorrect. Production of jellies and marmalade has practically doubled in the past years. We have concrete plans for the coming years, in accordance with the food program decisions, to increase the production of jellies and marmalade items. In particular, shops will be extended and new ones built. A whole number of enterprises, including the Kishinev Factory (Vukurye) have switched to producing fruit-only ingredients in order to produce items from fruit and berries of the rich Moldavian land. Jellied items, as well as marmalade items, are very much in demand. It must be frankly said that the base for their production is diminishing, because in order to produce marmalade, we need apple varieties with a high pectin content, particularly Antonovka for which our land was famous. We now do not have them in sufficient quantities. We use other sources, particularly, citruses and agar as well as agaroids, which are supplied by our own fishermen. We plan to increase this production, but whether a little or a lot is produced today we produce now something in the order of 200,000 tons of jellies and marmalade. Their production in the past few years has doubled and will continue to increase at other enterprises as well and at specially established shops.

[Voznesenskiy] Many questions have already come in for Sergey Fedorovich. Just a moment, Aleksandr Ivanovich, Sergey Fedorovich also has very many questions and if you could please have a look through yours now I... [interrupted]

[Struyev] I am looking. I have already looked.

[Voznesenskiy] I have also given you a few,yes. Sergey Fedorovich, you have questions both on the quanitative side of the supply of meat and dairy products to the population as well as qualitative ones. Could you please reply to at least some of them for a start?

[Antonov] I have here two questions concerning the quality of meat products, that is prepared meat products. The questions are from Comrade (Zubareva) and Comrade (Kurmanina), a physician, about the deterioration in the quality of prepared meats. Of course, I am not ruling out separate cases of poor quality products, but in our branch the matter is organized in such a way as to completely eliminate the possibility of any defective or flawed products from reaching the table. I cannot imagine how we can have food if it does not meet the necessary quality requirements. Therefore, prior to releasing products, we have developed a system of strict weight standardization. The composition of the product is regulated in terms of its main components, including fats, protein and other important elements which determine balanced nutrition. Generally now, we have taken the line of corresponding with the demands of science in terms of balanced nutrition, in other words, we do not use excess fats, for example, but use extra protein insofar as the number of calories in fat is more than double that in protein.

[Antonov] However, I repeat that such occurrences do happen, but mainly it is a case of the product becoming stale or perhaps [words indistinct] I can assume. But products, especially from Moscow meat combines where we [word indistinct] a special production routine, are turned out after laboratory analysis and tasting and are sent for sale with the appropriate certificate. Well, I do not exclude such occurrences and we will be taking the nature of this question into consideration. It is a critical one and all the more reason to increase the attention paid to quality.

Now concerning this question which has a very critical bias, so to speak: I work in the cold store of a meat combine. Many products are produced but there is nothing on the shelves. Where does it all go? I think this is a very incorrect way of putting the question, but it gives rise to the necessity for me... all the more since it concerns Moscow. The question is asked by Comrade (Lyubov Sergeyevna Petrova). I do not know; doesn't she see what we have on the shelves in Moscow? After all, Moscow--I repeat--is supplied regularly and I will cite a number of figures so that the efforts required to ensure the constant supply and sale of meat and dairy products to Moscow can be conceived. Every day 3,420 tons of meat are sold through the retail network, through trade, on the average this year. Out of that 1,150 tons are cooked meats every day, 315 tons of shortening daily and finally, 167 tons of cheese and sheep's milk products and a considerable quantity of canned milk products. Therefore, when we are confronted with such large figures, which if counted in trainloads a large number of cars, which are scheduled ahead of passenger trains, would be required every day. One may think that after mentioning such volumes it is not difficult to notice what is available behind the counter with regard to meat and milk products.

[Voznesenskiy] We are talking not only about Moscow. Of course that was an example for Moscow, but we must talk about... [interrupted]

[Antonov] The situation is worse in other regions.

[Voznesenskiy] Aleksandr Ivanovich wants to say a few words.

[Struyev] I would like to add that here is a question from (Igor Pavlovich Fomichenko) from Moscow, which states: There is an annual per capita distribution of food products. Tell me please, is this distribution equal among the major cities like Moscow and Leningrad, in the countryside and in other cities?

First, there is no such per capita distribution. The distribution consists of resources developed in each republic and each oblast on the basis of procured volumes. Unfortunately, as Comrade (Antonov) was talking about and as is further indicated in the questions, Moscow has a large influx of consumers from different towns. This, of course, is reflected in shortages of some products for Moscow residents, although the figures named by Sergey Fedorovich are correct. What is the matter? The matter is in the fact that production has to be increased. The food program is devoted to this and the tasks are determined by it. First of all, why are there shortages of livestock products in the oblasts from which people are coming? Plans for production and procurement are not fulfilled, therefore they are not supplied with the required volumes for consumption per person.

As you know, the program adopts a number of measures for increasing the production of livestock products. If we take the decision of the March 1965 plenum on the agricultural production for example then we see that there are results. Some comrades say that they cannot see any results. There are results! Leonid Ilich Brezhnev was convincing enough speaking about them at the May plenum. The same thing is explained in the food program itself. These are the problems which have to be eliminated. Since agriculture is significantly better equipped with machinery than before 1965 and supplied with a lot of chemical fertilizers, and land reclamation work is carried out, the necessary conditions are created in agriculture for increasing production. And as from 1965 results are indeed obvious. And if we take per capita consumption and availability of bread and bread products for example, these have increased and have been at a sufficient level throughout these years without irregularities, except for some varieties of these products.

As far as the livestock products are concerned, growth in this field has also been achieved in these years. For instance, if in 1970 the actual per capita consumption of meat was 48 kg, then in 1980 we reached the level of 58 kg. The fulfillment of the food program will ensure that the level by the end of the 12th Five-Year Plan will be increased to 70 kg... [interrupted]

[Kamentsev] The level of physiological norm.

[Struyev] I am not emphasizing this, but I only want to say that this would correspond with the population's demand judging by the lessons of previous years. We had times when meat was not sold out. It was before 1961 and 1962. We had to adopt additional measures. Now we adopt the measures for more rational usage of this product and first of all to ensure increases in orders which will allow a rational distribution through the order desks at industrial enterprises and through shops for war veterans.

But the problem is that not everywhere are there conditions which ensure the fulfillment of orders for items by invalids of the patriotic war. As a whole, there are shops and the orders are fulfilled in the following order of priorities: public food catering enterprises, health organizations, industrial enterprises through order desks and also through shops and order desks for the invalids of the Great Patriotic War.

The following question is associated with this: When will the food products be delivered to shops in Moscow and Moscovskaya Oblast? Because in Moscow, during weekends, there are long lines; pensioners are unable to buy 100 grams of sausages. I have already said why there is such a situation in Moscow. This will be overcome with the fulfillment of plans for as early as 1982, in the 11th Five-Year Plan, which are determined by the food program.

The same question is asked by Comrade (Kryuchkov) from the Zhelezhodorozhnyy Rayon or from Zheleznodorozhnny City in Moscovskaya Oblast, which is about satisfying food orders of invalids of the Great Patriotic War. May I answer other questions?

[Voznesenskiy] Yes, Aleksandr Ivanovich, maybe a little later. See if you have any very interesting questions left. A question for Nikolay Timofeyevich: When will vegetable shops stop stocking vegetables with useless leaves and tops? When will it stop? We pay money but we do not use these leaves. This is a question from (Zinaida Viktorovna Makonina) from Kiev.

[Kozlov] I have also a number of other questions from Moscow. Well, first of all, only bunches of carrots are sold with tops, because it is still too early to cut them off, they do not have much weight. Such carrots are only supplied for about 2-3 weeks. The same goes for young beets. Regarding beets, I will allow myself to disagree, because the leaves, not the leaves themselves but the portion above the root, the biggest portion of the leaf is used for food, for so-called beet soup. But this process does not last for long. When beets are ripe, we begin selling them without tops. Nevertheless, we have seen, in Moscow, delivered beets with tops and without. I must say that buyers buy both types, depending on what they are used to. Lev Aleksandrovich, I have here other questions from Muscovites.

[Voznesenskiy] Yes, please.

[Kozlov] Therefore, allow me to answer them. As far as tomatoes are concerned, questions are asked about large quantities of poor quality tomatoes, about the shortage of tomatoes and so on. I must say that the first batch of tomatoes we brought from the Central Asian republics was indeed of lower quality. This is explained by the product being on the road for too long. Some of the tomatoes became overripe, some are normal and some are green and have to be sorted out before sale.

As far as the European part is concerned then, procurements are taking place now in Azerbaijan, Moldavia, Astrakhan and Rostov. These tomatoes are very good. I have already said at the beginning of the program that we set a task to increase--I gave an example of potatoes. Now we have a task to bring from the European part approximately 120,000 tons of tomatoes by truck from production sites to consumption points. I think that this will considerably improve quality. As far as the shortage of tomatoes is concerned, it probably was the case, now we have reached the level of 1,000 tons of tomatoes sold every day in Moscow. This is quite enough and nobody will buy more.

The next question asked by Muscovites is why the shops are dirty and the produce not packed. All this does take place. That is why we are carrying out the food program and adopting measures. Together with the Mossovet, we will build ships in the new microrayons with all the facilities selling fruit and vegetable products. It is a little more difficult for us to do this work in Moscow's established rayons. Nevertheless, we, together with the Mossovet, are adopting measures for vacating lower floors to establish good shops there. Recently, there was a program "Moscow and Muscovites" where it was shown how we, together with the local Bauman organizations, built a shop on Karl Marx Street. In my opinion, it has turned out to be very successful and Muscovites are frequent customers there.

[Voznesenskiy] I would like to ask a few questions on behalf of TV viewers concerning the efficiency of consumption. Here, for instance, are the questions: How do you solve the problem of the variety of prepared food products in packets? It is asked by an engineer, (Genadiy Viktorovich Smirnov), from Moscow. (Valentin Vasilyevich Aleshin) from Leningrad, also an engineer, asks: The program talked about the efficiency of consumption. I think that it is determined not by the consumer himself but by those who sell the product, by the efficiency of trade. A question has been posed for a long time concerning the sale of products in small packages and processed items. This will raise the efficiency of trade and consumption. Here is another question. It is addressed to Voldemar Petrovich and it is from Pyatigorsk. (Ivan Petrovich Kravchenko), a serviceman, asks: Do you adopt any measures for producing small loaves of bread. A lot of bread is wasted when one has to buy a whole large loaf. Maybe Aleksandr Ivanovich will begin answering them? Be so kind.

[Struyev] Do you want me to answer all of them?

[Voznesenskiy] Yes, please.

[Struyev] My answer to (Valentin Vasilyevich Aleshin) is that the program specifies the efficiency of consumption. He says that it depends on trade, and I agree but I must emphasize that unfortunately our call for an increase in the supply of items in small packages so far is not satisfied by industry. And the level of the supply of packing, which ensures the efficiency and especially the safekeeping of these items and reduces loss, is very low.

[Voznesenskiy] And it ensures rational consumption, because one could buy what, and how much, one wants.

[Struyev] Quite right. It is specified in the program to bring the supply of items in small packages up to 70 percent. This is also the goal for the current 5-year plan. Probably there are some objective reasons for difficulties in the industry and I think that Comrade Voldemar Petrovich and other producers may answer this. The same question from (Genadiy Viktorovich Smirnov), also from Moscow: How do you solve the problem of determining the variety of food items in packages? I have already answered this. It will depend on whether we continue to supply goods to one organization. Unfortunately, for more correct utilization of food resources, we are doing it, especially in big cities where there is a distribution point. This reflects on the consumer of the given city. The reason why in other places the demand is not satisfied is associated with production and procurement.

[Voznesenskiy] There are three questions which I think can be amalgamated: When will walnuts be sold in shops, asks Comrade (Kolesnikova). (Inna Ivanovna Guboreva), chief of a bureau in Moscow asks: Why are there no berries or stone-fruit in the shops? And finally, another question from Comrade (Korobkova), chief engineer, also from Moscow: Why are there absolutely no black currants in the shops? I do not know which of you comrades can deal with these questions.

[Kozlov] Looks like it is quite definite that I have to handle it. First of all, black currants have not ripened yet.

[Voznesenskiy] This is convincing.

[Kozlov] It is convincing, as they cannot be made available. Berries have just began to appear and we have practically just now begun to market them. Stone-fruit are also just beginning to appear on the market, therefore it is not surprising that we did not have any. The spring was a little late, but in principle we have already produced more of this product than last year and in addition we are delivering to the union reserves. I think that there will be more deliveries than there were before. There has been nothing to deliver because nothing had ripened yet.

[Voznesenskiy] Well, Voldemar Petrovich there are a number of questions... [interrupted]

[Struyev] Here is a question about bread; he may answer it.

[Voznesenskiy] Voldemar Petrovich, besides the question asked previously on whether there are measures for producing small loaves of bread, I would like to ask you a few more questions, which could also be grouped because these questions are related to production of items consumed by diabetics. Comrade (Vladimir Yefimovich Dogvil) from Kharkov is asking and interested in this question, as is Comrade (Romanova), a pensioner from Moscow, and a war veteran and pensioner from Moscow--her name is not provided. May I ask you to answer these questions?

[Lein] (Ivan Petrovich Kravchenko) is interested in what is being done about producing small loaves of bread.

[Voznesenskiy] Yes, yes.

[Lein] It is a good question. Last year, on 3 July to be precise, a resolution of the Central Committee and the Council of Ministers was issued on the economy and on additional bread resources, in which an enormous goal was set to increase small-sized bread products. One has to be straightforward about it: this is a serious question. Every year, as a result of improvements in our people's food rations, consumption of bread products drops. At the same time, demand is rising for bread products made of better grades of flour, top grades of flour. In 1965 we produced 4.5 million tons of top grade bread products; last year almost 7 million tons of such items were produced. These include something on the order of 3.5 tons of small items weighing less than 500 grams, including buns and rolls, long loaves and other fancy bread.

A significant volume of work is being carried out at enterprises in order to increase production of small items. Currently, the production of small items--I mean small loaves of bread of about 700-900 grams instead of 1,300 or 1,000 which we produced before--has grown by more than 30 percent compared with last year or to 50 percent of the total volume of bread produced.

In order to increase the production in a number of other regions we have to expand the capacities of bakeries, because it is not possible to place 100 buns weighing 100 grams each into the same oven where it is possible to place 10 1-kg loaves of bread. Therefore, every year we reconstruct the existing enterprises and build new ones. Since 1965, 508 new bakeries have been build in the country. We plan to build something on the order of 125 bakeries in the current 5-year plan. Construction of new bakeries are also envisaged for the next 5-year plan. In June there were new bakeries built, such as those in Volgodonskiy, Menzelinskiy in Tataria and Mikhaylovskiy in Sverdlovskaya oblast.

It has to be noted that in order to increase the variety of bread products--as I have already said--it is necessary that bakeries be built rapidly. It took less than 2 years to build a bakery in Minsk. It takes 5, 7 or 8 years to build similar bakeries in other places. A bakery has been under construction in Magadan since 1975 and it is scheduled to be commissioned only in 1984--almost 10 years. In Chita a bakery has been under construction since 1978; in Bezhetsk since 1979 and in Tambov since 1979.

At the same time, a proper attitude is exhibited by builders of such father-cities as Minsk, which I have mentioned already before. In Barda City in Azerbaijan they pledge to commission a bakery a year ahead of the plan. We provided them with a full set of equipment and there is no doubt that it will be done.

We like to think that the leaders of soviet government bodies in the cities will change their attitudes toward the completion dates for construction of bakeries after adopting the food program. This way, a further expansion of production of bread products in accordance with the demand will be ensured. This was very well put by Ivan Petrovich. On top of everything else, it allows us to economize the bread resources. I can now tell you, Ivan Petrovich, that according to the results of the last 6 months the bakeries of our ministry meet the requirements of the industrial cities and villages. Compared with the first 6 months of last year 29,000 tons of bread products less were sold in the same cities which we provide with bread products, although we meet the requirements of all the cities for bread products.

The following is in response to the question of (Vladimir Yefimovich Dogvil) and Comrade (Romanova) on production of dietary products. The question of production of dietary products: The use of saccharin in our country is forbidden; we produce dietary products, especially for those affected by diabetics, by using xylite and sorbite which are produced by medical industry enterprises. In order to fully satisfy the demand by consumers, at the beginning of this year we had a special discussion at the joint session of the board of the Ministry of Food Industry and the Ministry of Health and planned a concrete way to further increase these products. These are bread and confectionery products.

Previously in our country we had no special labels on items for diabetics. We are building a large combine especially for producing more than 30,000 tons of glucose which is one of the major components for producing sorbite. Its commissioning, which is planned for the end of this year, will allow us to increase and fully satisfy the demand of diabetics for these products.

I think that there are diabetic sections in a number of Moscow's shops. Similar sections are open in food stores of other cities. I think that this initiative will be supported in all other cities.

[Kamentsev] Could I say something, Lev Aleksandrovich?

[Voznesenskiy] Yes, please, only before I ask you to answer these questions I would like to make a following appeal to you, dear comrades. During the period of our program, a huge number of the most interesting questions went through my hands. The majority of them I have managed to distribute among you and you can see for yourself how interesting and important these problems are. Therefore, in order to answer as many of them as possible, let us try--I understand it is difficult--to have as short answers as possible. After that appeal I am giving the floor to Vladimir Mikhaylovich.

[Kamentsev] I do not like the appeal very much but I would like to ask your permission to take a little different path. There are too many questions and even if I give very short replies to every one of them, half-answers will be the result and both the people will be unsatisfied and time will be lost. I tried to do the following. I have grouped a large number of questions to give one at least general answer because they are similar. If you will give me the opportunity I will answer a few particular ones. But I will try to be very brief.

Here is a question from Comrade (Rybalchenko) from Kiev: The plan for catching fish, as reported in newspapers, is being fulfilled by over 100 percent, but there is no fish on the market. How do you explain this? A question from

Krasnaya Sulin in Rostovskaya Oblast: Why is there no fish? Comrade (Kayarkov) from Leningrad asks: So many questions are discussed but the question on fish breeding is not elucidated at all, and is there a kind of a program which is based on the experience in the GDR? There are plenty of fish there.

I am emphasizing why I am going to say this. Sturgeon caviar is sold on the black market in Astrakhan but it is not available in shops. Caviar was available in 1951, why is it not available now? I am sorry, I did not name those who asked the questions. This is Comrade (Vasiliy Ivanovich Orlov) from Moscow, an engine driver. Comrade (Savina) from Yaroslavl, labor veteran, asked the question about the black market and Comrade (Ivan Mikhaylovich), pensioner from Moscow asks why there is no fish while in Czechoslovakia there is less water but more fish. [as printed]

There are many questions of the same kind and I would like to answer them in the briefest way possible. I think, Lev Aleksandrovich, that people are justifiably asking whether or not there is fish, because they can see what they can buy on shelves. But let us try to sort out what the matter is, because the situation with fish is original indeed. Well, in 1950 or when, as letters say, fish was available, we caught 1.5 tons of it. In 1981, or last year, when there was no fish we caught 9.5 million tons. Production of fish products grew more than fivefold and per capita fish consumption was raised to 17.6 kg compared with 7 kg in 1950. By the way, the question about the fact that there are plenty of fish in the GDR is not valid. Per capita fish consumption there is 7 kg, or what we had in 1950.

The fish industry today is a highly developed food industry. With the hands of the Soviet people the most powerful oceanic fleet was created which operates in all latitudes of the world's oceans. There are many fish processing complexes built, many large fishing ports, and lake fishing and fish trading organizations. Nevertheless, there is a question: Where is the fish? It is a legitimate question. I understand the people who are asking it. There is an opinion that most of the fish, especially the caviar, is going for export. This is wrong. We sold 4,800 tons of caviar internally last year and exported 170 tons, or about 2 percent. We export about 5 percent of our fish. By the way, comrades we import the same quantity of fish. We buy the type of fish we need or herring, sardines and filleted fish.

It appears that the reply to the given question has to be based not on the sociodemographic and biological problems because the sociodemographic changes which took place in our country in the past decades or even in the past 10 years are a result of great and rapid changes in people's living standards, the structure of society and demand.

The buying capacity today has increased as a result of an increase in per capita consumption. Population in cities increased by 100 million. This way the demand for fish products, considering the increase in incomes, considerably exceeds the significant growth we have achieved. Hence, when the questions are asked, a whole series of questions on fish breeding or why there is no this or the other type of fish--fish in our fresh water reservoirs is also to be included, although the question is actually asked about the ocean fish--what can we answer? Of course, construction of hydroelectric stations, industrial and agricultural usage of water have negatively influenced the availability of fish in internal reservoirs and not just the availability of fish but also the condition of the reservoirs themselves. Unfortunately, this same thing is going on in all countries. Obviously it is important to build electric power stations, and develop agriculture and industry, because all this is done to raise our people's living standards. Therefore our state pays a lot of attention and provides huge sums of money to compensate for these negative factors in reservoirs. There are hundreds of millions of rubles which are used for the construction of fish breeding plants, spawning farms and conditioning stations. And owing to this we managed to stabilize the catch of fish in reservoirs and not to reduce it. If we use the Caspian Sea for example, it is said that there was a lot of fish and caviar in the 1930's. We were catching 15,000-17,000 tons of sturgeon but now, thanks to the work of fish breeders and fishermen we are catching 26,000 tons.

Today, out of every 10 sturgeon caught, 8 are the result of fish breeders' work. Is 26,000 tons a lot or a little? For the Caspian Sea, comrades, it is a lot! It is 85 percent of the world's total catch of sturgeon. But for our enormous country 26,000 or 56,000 or even 100,000 will not be enough.

Questions are being asked about how we can increase the quantity of fresh water fish in reservoirs. I want to say that we must devote the most serious attention to the matter of fish ponds. In 1950 we had 5,000 tons and last year in 1981 we took 200,000 tons of fish from ponds. Therefore, the rate is very high but in absolute terms, of course, we would like to have more. And in connection with this the food program envisages a volume of 300,000 tons by 1985 and 450,000 tons by 1990.

Of course we need feed for this as well as capital investment, but this, I will tell you, is the most correct, the most correct path. Now, on the series of questions on saltwater species of fish--why don't we have this or that species of fish--I would like to say the following, comrades. After all, the fish in the ocean are also a product and there are species on which certain factors have a great influence. In the ocean we also have productive generations and unproductive ones. As I have already said, that in the 1950's the generation of herring was productive, which permitted extremely high catches. Presently, the stocks of herring have been depleted, but at the same time iwashi [ivasi] have appeared.

During a certain period of time cod disappeared but (kutasu) and capelin appeared. Hydrological environment and catches affect this as well. Stocks are limited. We are not the only ones in the ocean and I must say that with today's technology it is possible in a very short time to fish out absolutely everything. And what shall we do tomorrow? Therefore fishing has to be carried out on a strictly scientific basis. Hence our fishery, together with world science, determines precisely the volume of rational fishing which will not cause the depletion of fish schools and will ensure that our children and grandchildren will be able to use this national wealth.

The fish which are appearing now and which are different from the usual ones provide excellent raw material for high grade fish products. Therefore, our aim today is to give the consumer sufficient quantity of not only the traditional fish products but also new types of products which are being assimilated by fishermen. We are working now very actively in this direction. I am sorry, Lev Aleksandrovich, for spending about 5 minutes or 4 minutes but I have embraced a large segment of questions although I apologize in advance in front of those TV viewers whose questions I could not answer, but you will not allow me more time. If you will I would like very much to answer more... [interrupted]

[Voznesenskiy] We will see how it goes. Aleksey Alekseyevich, please.

[Smirnov] I have not answered for a long time and there are a lot of questions accumulated. A group of questions, particularly from Comrade (Aleksandra Petrovna Katyan), a teacher from Odessa; (Ivan Mikhaylovich Varganov), a pensioner from Moscow and another three notes from Tambov, Kiev and Riga without signatures. They are asking why the prices in city cooperative trade organizations are signficantly higher than in state shops.

I would like to give one answer to all of you, if I may. True, it is so, because there are different conditions for procurements and selling. If kolkhozes and sovkhozes provide the state with raw material, meat and milk products and other products at fixed state prices we are procuring the products for selling in a city cooperative shop--we have now about 15,000 of such shops and stalls in the cities--from private plots of kolkhoz and sovkhoz workers and residents of rayon centers and small towns for agreed prices. These agreed prices are different. The Ukraine, Uzbekistan and the Siberian oblasts of our country--they all have different prices. Therefore, selling prices are determined in accordance with this.

But I would like to say this, dear TV viewers, that consumer cooperatives do not receive any profit. We are setting our prices only in accordance with the expenses which occur in cooperatives, for example in cattle slaughtering, processing and selling raw meat or in the production of sausages and smoked products and in the production of milk and other products.

Therefore, of course our selling price is different. They are different in the Ukraine and in the southern European part of the country, so are they in Uzbekistan for mutton, for example, and other types of meat. Therefore, we will try to increase such procurements from the population and to increase the volume. First we will try to stabilize these prices and then to gradually reduce them.

According to statistics, as a result of our activity the population has saved over R1 billion. If there were no city cooperative trade organizations then the produce would have to be purchased on a free market, on a so-called free kolkhoz market. Therefore I, of course, understand the wishes of comrades and we will strive for price reductions.

A question has just come in from (Rima Vasilyevna Boris), an engineer from Moscow: Why doesn't Tsentrosoyuz organize procurement of early vegetables, the surplus of individual growers, berries, flowers and so on? We do exactly that. We, in general, supply early vegetables, berries and other products to industrial centers. A major proportion we buy from private plots of citizens, and if we buy on behalf of the state, then the state compensates us from the state budget. Everything we sell in city cooperative shops is based on our own calculations, on an autonomous financing basis.

As far as flowers are concerned, the question is a legitimate one and we will deal with it separately because an address is given here--in Stupino, near Moscow, the flower growing society of Moscow's four regions has many flowers. We will take care of this immediately and I would like to thank (Rima Vasilyevna) for this address.

This question is from Murmansk from Comrade (Krylov): Slaughtering of deer is being carried out in their oblast but there is no venison in the shops. We will immediately take care of this, as this question is new to me and I thank you for this information.

[Voznesenskiy] Thank you. Who is ready, comrades? Nikolay Timofeyevich? Please.

[Kozlov] The questions I have here are in response to my previous answers.

[Voznesenskiy] The reaction to what you were talking about.

[Kozkov] Yes. In my talk I said that we do have vegetables but I am being told that there is a shortage of vegetables and they are of poor quality. It is true that I have named items which are sold in Moscow in sufficient quantity. As far as shortages are concerned how do I take this question? We were selling tomatoes in 50-ton quantities from hothouses only. We just did not have them. Now is the season for tomatoes. We deliver them and there are sufficient quantities of them in Moscow. We will start to saturate other cities as well. Therefore earlier we just could not sell tomatoes in such volume. The same was true with cabbages. We began with small quantities and finished with more.

The second question suggests that no black currants are available on the market. I am not disputing this. The period of ripening has started and soon currants which are in kolkhozes and sovkhozes will be supplied to the shops. But until now--I do visit markets--there have been no currants. Perhaps they have only appeared in the last day or two.

Now plums are being delivered from southern regions and stone fruits are being delivered at a faster rate.

The next group of questions: Is it necessary to construct delivery bases? Would it not be better to deliver the produce from kolkhozes and sovkhozes directly to trade organizations? I would not like to place strict boundaries around the question of whether or not bases are needed in the cities. Every project has a reason for being. In principle you know the directives of Leonid Ilich to stock as much produce as possible at the production sites. And now, in accordance with the 5-year plan, 1.6 million out of 2.1 million tons of storage capacity will be built at production sites. This means the tendency is to solve this problem.

At bases we store the produce delivered from distant regions, imported produce such as citrus fruit and so on. Bases must be developed in the cities. There are many questions here about the bases being poorly mechanized. We have to agree with this, but we envisage measures in the program for mechanizing the bases and installing machines, garbage pits and packing facilities in them in order to deliver the products to shops packed and in good condition. We work precisely in this direction.

[Voznesenskiy] Thank you. Voldemar Petrovich, please.

[Lein] I have a number of questions here which include one from (Vladimir Sergeyevich Zubov) from Leningrad: Voldemar Petrovich, how do efforts to increase sugar production conform with medical recommendations for a sharp reduction in sugar consumption? I have already covered this question. There have been a number of similar questions, you know. As I have already said, we are now trying to use more fruit extracts [podvarki] and trying to create special production, trying to use more dairy products for confectionaries and so on and also for other products.

(Aleksandr Lazerevich Belyayev) from Moscow asks the question: Various kinds of bread are produced. Riga bread can be kept for a few days and retains its quality and freshness. However, certain kinds of breads, especially white, literally lose their freshness the next day. So, why is so little Riga bread produced? It is practically impossible to buy it, only by accident. Can the quality of bread not be raised so that it could be stored at home for a number of days?

The question is fair. There is not yet enough Riga bread being produced. We are now building a new bread plant in Vykhino, Moscow, and are also reconstructing a number of other enterprises after the completion of which we should increase the production of Riga bread, which is very popular among the people.

(Ivan Petrovich Nikonenko) from Volchansk in Kharkovskaya Oblast poses a very interesting question. Volchansk had a food combine which produces soft drinks and confectionery. It was closed down and now the question exists: How to increase the supply to the city's population? Supply was turned over to Kharkov and was taken away from Volchansk. Is this compatible with the decisions of the May CPSU Central Committee plenum?

(Ivan Petrovich), you are completely correct. It is under no circumstances compatible. Probably this is simply a big misunderstanding. Recently, when our collegium discussed implementing the decisions of the May CPSU Central Committee Plenum we paid particular attention to further developing food branches in the so-called food combines that you are talking about. In the Ukraine, this administration has been specially consolidated at the Ukrainian Ministry of the Food Industry and they handle these questions. (Ivan Petrovich), I will personally take control of this in order to restore everything and also to increase this production.

The second question that (Ivan Petrovich) poses is: We have a bread plant and it produces good flour products. However, at times it produces only white bread and no black bread. Why has it stopped producing all types of buns?

Vegetable storehouses are in disorder and have not been renovated. Where will the new harvest be stored? We have two questions here.

[Voznesenskiy] Well, it seems now the second question does not concern you.

[Lein] Yes.

[Voznesenskiy] However, I would like to make certain additions in regard to the first question.

[Lein] Please.

[Voznesenskiy] The fact is that many questions have come in regarding black bread and for you also, Aleksandr Ivanovich. Here, Comrade (Ivanova) from Tallin asks: Why is there such poor black bread in Tallin? (Valeriy Ivanovich Yurkin), an engineer from Grodnenskaya Oblast asks: How long will the residents of our city have to experience a shortage of black rye bread? Help us solve the problem of supplying the city's population with black bread. Unfortunately it says Grodnenskaya Oblast but the city is not named. But perhaps this will not interfere with interest in this question in a practical way. (Ivan Ivanovich Yeliseyev) from Moscow asks: Where can one buy pure rye, black or Russian brea, and so on. Here are a number of such questions. I will hand them to you later so you can familiarize yourself with them, but now if you could answer them... [interrupted]

[Lein] First, I have to say on a completely professional level that there is no such thing as black bread. There are rye, wholemeal [oboynyy] and wheat bread. The question is quite correctly posed that there are not enough kinds of rye bread. The fact is that recently the production of rye had decreased, because the yield of bread baking quality rye amounts to 19-22 quintals. The Belgians have created rye with a yield of approximately 42 quintals but it is not of breadbaking quality. This was the subject of a special examination by the government and the republics and oblasts in the areas where rye is grown have been set a concrete task to increase the production of rye in order to increase production of rye bread varieties.

(Dina Petrovna Shurina) from Lvov asks the question: What about the production of Italian macaroni? Well our production of Italian macaroni increases year after year. This year we will produce approximately 1.56 million tons of macaroni products. Thus everywhere the requirement for macaroni products is being satisfied.

I have a number of questions here. Comrade (Ilekhinina), I beg your pardon, (Ilizanina), asks the question: There has been no vermicelli on sale in Kuntsevskiy Rayon for many months now. Well, it is probably some sort of misunderstanding. The Moscow factory supplies macaroni products to all of Moscow, including vermicelli. Regarding Italian macaroni, these are the so-called long hollow spaghetti. At the present time our machine builders have developed the production of machines that are undergoing quality adjustments at the Kiev, Lvov and Donetsk factories and we hope that the machine builders will bring the machines that have been made to a high level of efficiency and we will be able to completely meet the requirements of the people who have grown to like this Italian spaghetti. Yes.

An interesting question has come from (Seva Ignatyevna Shishakova-Gnezilova) from Gelendzhik: Did you know that a book called "Quick, Tasty and Nutritious" has come out in Krasnodarskiy Kray in which the author tells how food can be prepared in 9, 12 or 18 minutes? Through preparation by this method the loss through cooking is decreased, the caloric value is increased and flavor qualities are enhanced. (Yuliya Vasilyevna Belyanchikova) in Moscow has this book. I would be pleased if you would take an interest in this work.

Thank you for your advice. We are also concerned with the same questions. Literally a few days ago we examined the question of how to create production of quick-cooking vermicelli. A ready meal can be prepared from it in 5 minutes and we plan to produce such products across the whole country. I will try to familiarize myself with this book. Thank you for the recommendation.

[Voznesenskiy] Thank you. Sergey Fedorovich.

[Antonov] I have received very many questions regarding product quality, especially cooked meats. I have already said that individual cases, unfortunate cases, of substandard work are not ruled out. We are involved in a decisive struggle with this. But, despite their enormous volume, cooked meats production has reached a level of nearly 2 million tons annually, the products turned out are basically (?good) No country produces this much produce. Cooked meats have become a major food product, a mass food product in the population. Therefore I would like to say that after this meeting we will be thinking over another series of measures to increase quality. Perhaps this is fair criticism here of excess amounts of salt or excess starch. I do not even want to enumerate surnames because there are too many and our time is limited but the essence comes to this, that the quality of cooked meats is still being criticized.

However, very interesting questions have been posed on this subject; it is true without a signature: Why are pale-colored and not red-colored cooked meats sold? Indeed there has been a change in the color of our cooked meats. Why? Because, not knowing the end results, potassium nitrate was previously widely used in cooked meats. If potassium nitrate is added to meat products, the meat will be red. However, this is now categorically forbidden by the Ministry of Health as potassium nitrate is carcinogenic and causes serious illnesses.

Now many questions have come in on reasons for irregularities in the supply of meat, cheese, butter and so on. Well, strictly speaking, I have nothing to answer on this because the reasons for these irregularities are quite directly discussed in the materials of the May CPSU Central Committee Plenum and Leonid Ilich Brezhnev's report which note that we do not have enough of these products yet. Why did this arise? Aleksandr Ivanovich did say that there had been a big production increase, but per capita consumption rose to 58 kilograms. The food program sets the target of 70 kilograms per capita.

Irregularities are chiefly explained by the increase in the population's purchasing power together with the increase in volumes. People have started to eat more products of various kinds. Furthermore, we must not forget the 3 years of poor harvests which delivered a serious blow to agriculture and undermined livestock raising. During these years we even experienced a decrease in products compared to, for example, 1975.

Now there is also the very important question on the matter of children's nutrition. I must say that our party's Central Committee and the government pays particular attention to questions of children's nutrition. They view it as of great importance for our younger generation. And also there is a another factor, which exists all over the world, that mothers sometimes do not have enough milk or no milk at all after giving birth. Thus we were faced with the task of producing substitutes for mother's milk. In connection with this four technologically equipped and very modern enterprises for production of milk-based children's foods have already been built. These are (Vovkarys) in Belorussia, (Istra) in Moskovskaya Oblast, (Khoroliya) in the Ukraine and (Baltiva) in Odesskaya Oblast. By the way, the (Baltiya) Plant was built under license from the United States. This means it is the most advanced method of producing food for the youngest children, the content of which is as close as possible to mother's milk. I cannot say that it is the same as mother's milk because so far mother's milk has been impossible to duplicate exactly. But it is possible to come close to it in biological content and microelements and we are doing this. This is what we are doing about children's food.

[Lein] I apologize to (Ivan Petrovich Nikonenko). In the two questions which I have read he asks: Sergey Fedorovich: The Volchanskiy Meat Combine used to produce 5,000 meat piroshki per day. Now production has stopped. It used to produce dumplings and stopped that too. On whose instructions? Please answer.

[Antonov] I can tell you the following: With the general shortage of meat, the aim is to provide more raw meat. Therefore, we have a question here: Why has stewed meat disappeared? It has not totally disappeared. It is used for other special purposes, but there is not enough of it. The same applies to piroshki. Even the local authorities are taking steps to ensure that when they are distributing resources which they receive from stocks they give more raw meat to the population. This appears to be the reason. In the future we are setting the task of increasing production of such indigenous foods as dumplings and other frozen food products to the maximum, primarily in prepared form. It only remains to warm it at home and eat it without wasting the efforts of a housekeeper in preparing a meal.

This is my answer in passing, but I would also like to say this about trade in children's food. The scale of production--I have already mentioned the plants which were constructed--is now quite big. I will give you the figures: this year we will produce 36,000 tons of these products for children ranging in age from newborn infants to 3 months old and up 1 year old--36,000 tons. If we talk in terms of packets, we produce this product in hermetically sealed packets, in a vacuum and with nitrogen to neutralize all the negative influences on this product. This is a very interesting technology. Now if we look at this volume of 72 million such packets this is quite a significant volume. Comrades, a plant is now under construction in (Sibay) designed especially to produce health foods for children developed by the Institute of Nutrition of the USSR Ministry of Health.

That is what I wanted to say about children's food. Now about cheeses. It is true that the same goes for cheeses... [interrupted]

[Voznesenskiy] Sergey Fedorovich, the cheese question is also very interesting, but if it is possible only 30 seconds for cheeses or we will not have enough time to answer other questions.

[Antonov] Yes. I would like to say that life is better with cheese, is it not? [laughter] A lot of attention is paid to cheese as well. There was an incredible increase in volume, I would say. It just makes you wonder. In 1965 we produced 231,000 tons of cheese. This year we produced 731,000 tons. This means cheese production doubled or more than doubled. Why then are there interruptions in supply? I will tell you straight: There are interruptions in cheese supplies only because cheese has become the product of mass consumption. Who ate cheese before? Take the tsarist period. I cannot say exactly, but I know that only priests and landowners ate cheese. It was not a product of the plain folk's diet. Now it is the product of the people's diet. The task in the program is correct and we will definitely fulfill it. The food program says: ensure the production of 800,000 tons of cheese in 1985 and 1 million tons in 1990. I am pledging to produce 1 million tons earlier.

[Voznesenskiy] Thank you. Aleksandr Ivanovich will speak now.

[Struyev] I have a lot of questions, therefore I will be very brief. (Lev Alekseyevich Arkhipov) asks: How are the market prices for foodstuffs controlled? Similar questions come from Comrade (Bazhanov) from Izhevsk and (Matrakhin), a pensioner from Kiev; from (Nikolay Alekseyevich Cherkasov) in Riga... [interrupted]

[Voznesenskiy] And many other comrades.

[Struyev] (Makarova) from Moscoe and many other comrades. I must say that market prices are not controlled by any directives at all and they cannot be controlled, because a buyer there deals with a supplier. An individual producer is a supplier whether the produce comes from a private plot or from a kolkhoz plot which is provided for producing certain types of agricultural products. But the market prices are regulated by the volume of produce sold at the same markets by kolkhozes and sovkhozes. I must say that it is a big drawback and we are asking the relevant ministries, together with local soviet authorities, to adopt measures to increase the supply. This, of course, will determine the market prices and will ensure a price reduction. Meanwhile, comrades justly point out the very high prices, and I must say of course that this is made use of, keeping in mind that the supply of these products by kolkhozes and sovkhozes is insufficient. But they are kolkhoz markets.

This is one group of questions. Now, Comrade (Kostyukovskiy) from Moscow, candidate of technical sciences, asks: Which ministries are now engaged in work that would give the collectives of shops which deal with product storage an incentive to reduce losses when they fall below normal spoilage level, that is, to reduce losses before they reach the prescribed threshold because these thresholds are frequently sufficiently high.

How frequently are the criteria of normal spoilage reviewed? I must say that the thresholds for natural losses are not high and they are periodically reviewed in order to reduce them, taking into account the technological changes in deliveries of food and other products. There has been an increase, albeit insignificant, of deliveries of packed goods. Transport facilities and packing materials used during deliveries of goods to shops have improved. As a rule, we, the price raising authorities, review these prices. In other words price allowances are being reduced and the task of trade personnel lies in working in the framework of these new allowances. What are the incentives for this? We must keep in mind that financial activity is the end result of trade and incentive funds of trade personnel depend on profits. The more attempts are made to decrease, not increase, the natural loss norms--the Ministry of Trade constantly demands this from trade personnel--the more opportunities there are for receiving bonuses and other advantages from incentive funds and for increasing the benefits of trade personnel and satisfying their social demands.

At the beginning of the 5-year plan period it was said that Italian-made jeans would be delivered. I would like to know when they will go on sale. I do not know who said this and although this is not a food question, I would like to say how sometimes trendsetters create a stir and hullaballoo about deficits with such questions and so forth. We have not imported and will not be importing jeans from Italy. The production of jeans is well developed in socialist countries and we have developed the production of the required fabric and it is being produced. Of course some people chase after labels but I think, comrades, that we cannot compete with this. We have enough to import, primarily, equipment for our country's economic development.

Comrade (Dektev) from Moscow, a white-collar workers, asks: It is known that our country exports a whole list of high-quality food products, including exports to capitalist countries. Are these products a surplus in our country or are some other factors involved? I am unaware that a lot of food products are exported, particularly to capitalist countries. On the contrary, unfortunately, we are still importing a lot of these products from capitalist countries. We have to and we are adopting measures--we are guided in this by the food program--to increase the production of quality goods in our country to satisfy the growing and changing demands of the population.

An unsigned question: Are shops in Moscow selling buckwheat for diabetics? It is available in Kiev. We do have shops in Moscow providing diabetics with the necessary products but we do not have enough buckwheat, comrades, and somebody has already mentioned this. Moreover, its quantity has sharply decreased compared with previous years. Bad harvests of these crops and lack of attention to them in producing regions has something to do with this. The latter is because this influences the total yield per hectare.

The Central Committee and our government have adopted measures and they will be implemented and have been implemented since 1982 to significantly increase production and deliveries of these groats to the shops. How is the resolution of the party's Central Committee on buckwheat being implemented? That question I have already answered. Why do a lot of goods not reach the consumer and remain under the counter? We admit ourselves that we have dishonest elements among the over 9 million-strong army of trade personnel who speculate cashing in on shortages of some goods. They are being strictly punished. A directive is now being applied on criminal responsibilities. This calls for increasing on-the-spot public control over implementation of trade rules.

I have already said who regulates market prices. A lot of attention currently is being paid to the well-being of war veterans. I have already talked about this. A question about lids for domestic preserves. Many people are now canning in the home but there are not enough metal lids. This is correct. The fairs have ended but the industry produced less than was demanded.

Why are crackers, bagels and pastries constantly unavailable in bakery shops? I think Comrade Lein has talked about small items and linked this with the effectiveness of ovens. I, as a consumer, can say that our requests for these products are not being fulfilled and Comrade (Zakharova), a pensioner from Moscow, asks the right question.

[Voznesenskiy] Aleksandr Ivanovich, you still have a lot of questions.

[Struyev] But I did ask to speak earlier.

[Voznesenskiy] Yes, and I am at fault, together with all the other respected guests. We took so much time to answer other questions that you have been left less time than all of us would have wanted. With regards to this I have a proposal which I think will satisfy everybody. Now, with your permission, I would like to attempt to summarize our talk today. I think it was quite original and this was realized, of course, not only by the participants of this program themselves, but also I think by the comrade television viewers. After all, today the participants in the program, perhaps for the first time in the whole history of our direct programs, had to answer questions whose causes lie not only in the activities of your ministries but in the activities of many other ministries and departments as well, primarily those which plan and organize agricultural production, produce the necessary equipment and produce the raw materials for the work of your branches. I understand your somewhat difficult position today when you had to answer not only for the shortcomings which naturally exist in every large branch of the national economy and without which there probably could be no life, work or successes--if they are not accompanied by any kind of shortcomings--but you also had to answer to some extent for shortcomings existing in other branches.

From another point of view, comrades, our television viewers should and must also be understood. It is precisely with the work of your branches that the consumer has to be in direct contact. It is precisely the results of your branches' work that the consumer, rather all of us as consumers, are using to judge the situation in agriculture, the agroindustrial complex and, in many instances, in the national economy as a whole.

To what extent this is right is another matter. It may perhaps not always be fair, but it is a fact and we must regard this fact as a reality.

At the same time the picture that has been painted today on the screen shows, and more correctly reflects, another most important fact, namely, that the solution of food program tasks is possible only through the efforts of the whole agroindustrial complex, and by extension, so to speak, perhaps of the whole national economy. You know that today, among many other questions that came in, there is this one: To destroy food is a crime, but the Votkinsk gas apparatus plant supplies gas stoves that cause ovens to burn the foods being prepared. When will this outrage stop? asks Comrade (Murey) from Moscow.

Well this is correct. Strictly speaking, this doesn't concern the topic of our talk today, but in essence this question is correct and this one small question reflects the fact that all of us in our work and life are directly or indirectly related, that is interrelated; and all of us, in our activities, in one way or another have something to do with the population being reliably provided with food products in the shortest possible time.

In the final analysis, the solution of this paramount economic and, as it was said at the May CPSU Central Committee Plenum, topical social and political task depends on the work of power workers and metallurgists, transport and communication workers, medical workers and teachers, on literally everyone's labor.

We have come to the end of our program. You have answered many of the questions which have come in on the telephone but did not get to answer a number of other also important and interesting questions because of their abundance. And so, Aleksandr Ivanovich and respected comrades, I have noticed, and I don't think you will deny this, the striving of literally all of you to answer certain additional most important questions that however, because of insufficient time, were left unanswered. Therefore, as is appropriate in such cases, and this time also, we will collect all these questions, summarize them, present them to all of you to look over and ask you, as soon as you find at least a little time for this supplementary work, to respond in one way or another to these questions, including perhaps in the form of short addresses by you, say for 10 or 15 minutes. Right there at your work posts, in your offices you will be able to answer the unanswered questions you are most concerned about and we will subsequently collect them into a special program and present them for judgment, so to speak, by our television viewers. Would such a request be feasible?

[Struyev] It would be feasible.

[Voznesenskiy] Thank you.

[Struyev] We agree to do this and indeed ask you to send us these questions. We will give answers to those with signatures--there were a lot of unsigned questions. By the way, I have to say that among these there are individual little questions but they are significant for commerce... [interrupted]

[Voznesenskiy] They are significant.

[Struyev] They do not decide the fate of generally satisfying requirements but only as far as individual questions go. I even think that since the majority of us are Muscovites, after receiving these questions from you and working on them, we will get in direct contact with those who wrote these questions.

[Voznesenskiy] Those who left their addresses.

[Many voices] Yes, yes. [laughter]

[Struyev, handing Voznesenskiy questions] I give you these questions and those that I have answered.

[Voznesenskiy] Yes. Yes, all of this will be summarized and presented to you, as I have already said.

Allow me to thank you for your participation in this program. I would like to say a big thank you to the comrade television viewers for their considerable activity and interest in discussing the country's food program in our general discussion. All the best to you.

CSO: 1800/1078

AZERBAIJAN CP CENTRAL COMMITTEE HOLDS PLENUM

Information Report on Plenum

Baku BAKINSKIY RABOCHIY in Russian 19 Jul 82 p 1

[Information report of Azerbaijan CP CC Plenum held 18 June 1982]

[Text] A plenum of the Central Committee of the Communist Party of Azerbaijan was held on 18 June. It discussed the topic "On the Results of the May (1982) Plenum of the CPSU Central Committee and Tasks of the Republic's Party Organization Arising Out of Its Decisions and the Address of L. I. Brezhnev entitled 'On the USSR Food Program Over the Period up to the Year 1990 and Measures To Fulfill It.'"

Comrade G. A. Aliyev, first secretary of the Azerbaijan CP Central Committee, candidate for membership in the Politburo of the CPSU Central Committee, delivered the report.

There was discussion of the report in which the following participated: K. N. Ragimov, first secretary of the Nakhichevanskaya Oblast Party Committee; B. S. Kevorkov, first secretary of the Nagorno-Karabakhskaya Oblast Party Committee; V. A. Guseynov, first secretary of the Baku City Party Committee; D. D. Dzhamalova, first secretary of the Lenkoran' City Party Committee; M. G. Askerov, AzSSR minister of agriculture; M. M. Ashurov, first secretary of the Khanlarskiy Rayon Party Committee; T. Kh. Orudzhev, AzSSR minister for the fruit and vegetable industry; N. E. Mustafayev, first secretary of the Shchekino City Party Committee; Yu. K. Rzayev, chairman of the AzSSR State Committee for Viticulture and Winemaking; N. Kh. Abbasov, first secretary of the Agdzhabedinskiy Rayon Party Committee; M. S. Mamedov, chairman of the Azersel'khozkhimiya Scientific Production Association; G. B. Abdullayev, president of the AzSSR Academy of Sciences; D. M. Muslim-zade, first secretary of the Azerbaijan Komsomol Central Committee; M. F. Bannikova, worker at the Khachmas Canning Combine; D. M. Asanov, AzSSR minister of rural construction; A. D. Akhmed-zade, first secretary of Fizulinskiy Rayon Party Committee; F. R. Salmanov, AzSSR minister of cotton ginning industry; Sh. M. Aliyev, first secretary of the Sumgait City Party Committee; S. Ch. Kasumova, AzSSR minister of trade; N. A. Abdullayev, secretary of the party committee of the Sovkhoz imeni Engel's in Shemakhinskiy Rayon; R. V. Mirzoyev, first secretary of the Shaumyanovskiy (Rural) Rayon Party Committee; K. P. Pashayev, director of the

Sovkhoz imeni XXII Parts"yezd in Kubinskiy Rayon; A. K. Suleymanov, first secretary of the Kazakhskiy Rayon Party Committee; and F. D. Yagubov, chairman of the Kolkhoz imeni S. Vurgun in Zakatal'skiy Rayon.

Comrade G. A. Aliyev delivered the closing address.

An appropriate resolution was adopted on the topic under discussion.

Yu. I. Mordvintsev, I. N. Kuz'min and V. M. Yashin, responsible officials of the CPSU Central Committee, took part in the proceedings of the plenum.

Resolution on Food Program Adopted by Plenum

Baku BAKINSKIY RABOCHIY in Russian 23 Jul 82 p 1

[Resolution adopted by plenum of Azerbaijan CP Central Committee on 18 June 1982]

[Text] Having heard and discussed the report of Comrade G. A. Aliyev, first secretary of the Azerbaijan CP Central Committee and candidate for membership in the Politburo of the CPSU Central Committee, the plenum of the Azerbaijan CP Central Committee noted that the decisions of the May (1982) Plenum of the CPSU Central Committee and the address delivered at that plenum by Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the Presidium of the USSR Supreme Soviet, constitute a very important contribution to the theory of Marxism-Leninism, enrich and develop the party's farm policy, and have opened up a new stage in the struggle to achieve the goals of its program and a steady rise in the prosperity of the Soviet people.

In his address Comrade L. I. Brezhnev furnished a thorough scientific analysis of the socioeconomic problems of our society which have become urgent and defined the main directions of the party's farm policy over the long run and ways of radically improving the activity of the country's agroindustrial complex.

The Food Program, which was drafted at the initiative of Comrade L. I. Brezhnev and approved by the plenum of the CPSU Central Committee, is an organic part of the party's economic strategy over the coming decade and marks a radical departure in the upward climb of agriculture and related sectors and signifies progress for the entire national economy.

Party members and all the workers of the republic have received with a sense of profound satisfaction and great enthusiasm the decisions of the May Plenum of the CPSU Central Committee, the address of Comrade L. I. Brezhnev and the Food Program; they see in them a vivid new manifestation of the party's concern about the well-being of the Soviet man, and they consider it their patriotic duty to apply maximum strength, knowledge and ability to successful fulfillment of the tasks set forth in them.

In carrying out the party's farm policy worked out by the March (1965) Plenum of the CPSU Central Committee and elaborated at subsequent plenums of the

Central Committee and at the 23d, 24th, 25th and 26th CPSU Congresses, and implementing the decree of the CPSU Central Committee and USSR Council of Ministers on boosting the economy of Azerbaijan, the republic's party organization has made an important effort to develop agricultural production. Over the years 1970-1981 fixed productive capital in agriculture increased more than threefold, available power 2.1-fold, and available power per worker 1.4-fold. The tractor and farm machine fleet of kolkhozes and sovkhozes was completely renewed, and the level of mechanization of operations was raised in cropping and livestock raising. Labor productivity in agriculture increased 2.1-fold and the profitability of kolkhoz-sovkhoz production 1.5-fold.

Intensification of industrial production, its specialization and concentration, development of interfarm cooperation and agroindustrial integration, improvement of practices in cropping and livestock raising, and the selfless labor of farm workers achieved a growth between the 7th and 10th Five-Year Plans that was twofold in the average annual production of grain, 11.5-fold for grapes, 2.2-fold for cotton, 3.9-fold for vegetables, 3.5-fold for fruit, 1.4-fold for potatoes and melons, 2.7-fold for leaf tea, 1.6-fold for meat (carcass weight), 1.9-fold for milk, and 2.2-fold for eggs. The average annual gross production of agricultural products as a whole increased 2.5-fold between the 7th and 10th Five-Year Plans. The output of products of agriculture per unit area was threefold greater in 1981 than in 1965, and per capita output was doubled.

A number of major steps have been taken to develop the processing and manufacturing branches of industry and to strengthen the material and technical base of organizations in procurements, transport and trade.

Fundamental changes have taken place in the social and cultural appearance of the Azerbaijan village, and the prosperity of rural working people has risen.

The plenum of the Azerbaijan CP Central Committee noted at the same time that the existing potential and possibilities for increasing the output of cropping and livestock raising to meet the growing needs of the public have not been fully utilized in the republic's agriculture. Not all farms have guaranteed achievement of stable high yields and productivity of livestock and optimum utilization of land, water, labor and physical and technical resources.

A disproportion has come about between the volume of production of farm products and capacity for processing them, especially in the cotton-ginning, winemaking, canning, tea and other branches of industry. The low level of the transport support of the agroindustrial complex and the weak material and technical base of procurements and trade organizations make it a necessity that the system for management of agriculture undergo further improvement and that the operation of the entire agroindustrial complex be linked together.

There have been substantial shortcomings in the organization of rural construction and the supply of social welfare and cultural, trade and consumer services to the rural population.

The May Plenum set large and responsible new tasks before Azerbaijan's agroindustrial complex. Under the nationwide specialization and division of labor the republic is expected to make a substantial contribution to fulfillment of the USSR Food Program.

The plenum of the Azerbaijan CP Central Committee resolved as follows:

1. To approve wholly and completely the decisions of the May (1982) Plenum of the CPSU Central Committee, the propositions and conclusions contained in the address of Comrade L. I. Brezhnev, and the USSR Food Program adopted by the plenum of the Central Committee, and to undertake their unstinting fulfillment.

To regard mobilization of the efforts of party members and all the workers to perform the tasks advanced by the May Plenum of the party's Central Committee as a most important task of the republic's party organization.

2. To approve the specific measures drafted by the Bureau of the Azerbaijan CP Central Committee as set forth in the report of Comrade G. A. Aliyev on carrying out the decisions of the May Plenum of the CPSU Central Committee and to perform the tasks advanced in the address of L. I. Brezhnev and the Food Program, and to make them the basis of the practical activity of the republic's party, soviet, trade union, Komsomol and economic authorities.

3. That party obkoms, gorkoms and raykoms, ministries and departments, trade union and Komsomol organizations, soviet and economic authorities, directors of kolkhozes and sovkhozes, of industrial, construction, transport, procurements and trade enterprises, and primary party organizations shall mount a vigorous organizational and political effort among workers, kolkhoz members and the intelligentsia to perform the tasks arising out of the decisions of the May (1982) Plenum of the CPSU Central Committee, the address of Comrade L. I. Brezhnev delivered at the plenum, the country's Food Program and the related decrees adopted by the CPSU Central Committee and USSR Council of Ministers.

4. That the council of ministers, gosplan, ministries and departments, party obkoms, gorkoms and raykoms, guided by the decisions of the May Plenum of the CPSU Central Committee shall by 1 October of this year complete and submit to the Azerbaijan CP Central Committee the draft of the republic's food program for the period up to the year 1990. That food programs shall be drafted in Nakhichevanskaya ASSR, in the Nagorno-Karabakhskaya Autonomous Oblast and in the republic's rayons, and that comprehensive plans for economic development and for increasing the output of farm products shall be drafted on kolkhozes and sovkhozes.

5. That party, soviet and economic authorities shall draft and implement for every rayon, kolkhoz, sovkhoz and interfarm enterprise a set of effective measures aimed at substantial growth of production and procurement of farm products, at optimum utilization of land, water, labor, physical-technical and financial resources, at raising the level of cropping and livestock-raising practices in every way, and at increasing the efficiency of socialized production, on that basis to ensure the following:

i. along with the intensification of cottongrowing, a further increase in the production of grapes, including table varieties, early vegetables and potatoes, fruit, pomegranates and olives for delivery to the country's cities and industrial centers;

ii. an average annual production of grapes amounting to 1.4 million tons in the 11th Five-Year Plan and 2.3-2.5 million tons in the 12th, grain output of 1.1 million tons and 1.2 million tons, respectively; of vegetable and melon crops 950,000-970,000 tons and 1.2-1.3 million tons, respectively; of meat (carcass weight) 150,000 tons and 180,000-185,000 tons, respectively; of milk 850,000-860,000 tons and 950,000-970,000 tons, respectively. A 1.9-2-fold increase in the production of all types of animal feeds;

iii. construction of the Vilyashchayskoye and Vaykhirskoye Reservoirs, the Shamkhorskiy Mashinnyy Canal and their use for land irrigation, commencement of construction of the Bazarchayskoye Reservoir, activation of the Salyany-Astara, Mil'skiy, Shirvanskiy and other group water pipelines, irrigation on 160,000 hectares and drainage of 285,000 hectares of pastureland;

iv. a growth of production over the 10-year period of 1.7-fold for canned fruits and vegetables and 1.5-fold for vegetable oil;

v. accelerated development of capacities for the production of canned goods, fruit and grape juices and vegetable oil, as well as for processing raw cotton, primary processing of grapes and production of champagne. Increased production of high-quality dry and varietal wines.

The most immediate task is to achieve even during 1982 a substantial increase in the productivity of cropping and livestock raising, to ensure unconditional fulfillment of plans and socialist obligations for production and procurement of all types of farm products, their punctual processing and full preservation, and to build a reliable basis for further accelerated development of the agroindustrial complex in the years to follow.

6. To commit party, soviet, and agricultural authorities and procurements, transport and trade organizations to guaranteeing punctual delivery to the consumer of foodstuffs without allowing their quality to diminish in the process of collection, storage, transport and sale.

7. That gosplan, the academy of sciences, the ministry of agriculture, the ministry of fruit and vegetable industry, the State Committee for Viticulture and Winemaking, scientific research institutions and higher educational institutions achieve a substantial acceleration of scientific-technical progress in branches of the republic's agroindustrial complex on the basis of a concentration of personnel and resources along the most important lines of research and a shortening of the time required for development projects and application of their results to production.

8. That ministries and departments, party obkoms, gorkoms and raykoms, and local soviet and economic authorities shall ensure a further rise in the efficiency of capital investments committed to developing and strengthening the

material and technical base of the republic's agroindustrial complex, concentrate funds and resources on the most important projects, and achieve a reduction of construction time and punctual startup and attainment of rated output at new facilities. That projects within the agroindustrial complex shall be regarded as the republic's crash construction projects.

9. That party, soviet and economic authorities and ministries and departments shall adopt the necessary measures to further improve the housing conditions, municipal and consumer services and social welfare and cultural conditions of the rural population and establish strict enforcement of deadlines and standards in performance of all types of projects related to the social development of rural areas.

10. The plenum of the Azerbaijan CP Central Committee considers it a most important condition for successful fulfillment of the Food Program that the level of party leadership of the development of the agroindustrial complex be raised further, that the smooth interaction of all its components be organized, and that a steady rise in the efficiency of agricultural production and in the quality of its end product be guaranteed. Party obkoms, gorkoms and raykoms are to revamp the organizational effort in this sphere, make it more meaningful and competent, and enhance the role and responsibility of primary party organizations in carrying out the tasks defined in the Food Program. Particular attention is to be turned to correct assignment of party members and specialists to the most important areas of production, unjustified turnover of supervisory personnel of kolkhozes, sovkhozes and other enterprises of the agroindustrial complex is not to be allowed, and every party member should serve as an example in carrying out party, official and civic duty. To substantially improve the work of selecting, training and improving the qualifications of supervisory personnel, specialists and workers in the middle level of production. To make thorough preparations for the upcoming organization of oblast and rayon agroindustrial associations and to take the necessary measures to staff them with highly qualified personnel.

11. That party obkoms, gorkoms and raykoms and primary party organizations, guided by the instructions of the 26th CPSU Congress and the decisions of the May (1982) Plenum of the Central Committee, furnish the ideological support for implementing the Food Program and the efficient and uninterrupted operation of the entire agroindustrial complex. Every means is to be used in the party political effort, agitation and propaganda so that party members and all workers thoroughly understand the historic significance of the decisions of the May Plenum of the CPSU Central Committee and the principles and conclusions contained in the address of Comrade L. I. Brezhnev, and the essence of the party's policy aimed at meeting the vital needs of the Soviet people is to be elucidated convincingly.

The plenum of the Azerbaijan CP Central Committee assures the Central Committee of the Communist Party of the Soviet Union, the Politburo of the Central Committee and Comrade L. I. Brezhnev personally that the assignments of the homeland will be fulfilled and overfulfilled successfully and that AzSSR will make a worthy contribution to carrying out the Food Program of the Soviet Union.

AZERBAIJAN SSR SUPREME SOVIET PRESIDIUM ON FOOD PROGRAM

Baku BAKINSKIY RABOCHIY in Russian 27 Jun 82 p 2

[Communique by Azerinform: "At the Presidium of the Azerbaijan SSR Supreme Soviet"]

[Text] On 25 June, under the chairmanship of comrade K. A. Khalilov, a session of the Presidium of the Azerbaijan SSR Supreme Soviet was held.

When speaking at the session of the Presidium of the USSR Supreme Soviet that discussed the tasks of the soviets of people's deputies relating to the implementation of the decisions of the May (1982) Plenum of the CC CPSU, comrade L. I. Brezhnev stressed that the implementation of the economic strategy for national development, the translation into reality of the Food Program, presupposes the participation of all elements of the Soviet political system. Comrade L. I. Brezhnev noted that the first among them is the state, its bodies, and primarily the soviets of people's deputies, which are to shoulder a substantial share of the work to implement the program outlined by the party.

The principal element in the management of agriculture and other branches of the agroindustrial complex will be, as outlined by the Plenum, the councils of the agroindustrial associations. They will be established at sessions of rayon, oblast, and kray soviets and the supreme soviets of the autonomous republics.

The soviets of people's deputies are to regularly monitor and guide the activities of these bodies. The efforts of the soviets at present should be primarily focused on assuring the growth of agricultural production and elevating the performance of every kolkhoz and sovkhoz in fulfilling the plan tasks.

The speech of comrade L. I. Brezhnev and the decree of the Presidium of the USSR Supreme Soviet pointed out the main directions of the work of the soviets of people's deputies to accomplish the tasks relating to the implementation of the Food Program.

The Presidium of the Azerbaijan SSR Supreme Soviet, proceeding from the premise that the republic's soviets of people's deputies should make a maximal contribution to the accomplishment of this central problem of the communist party and Soviet state during the 11th and 12th Five-Year Plan periods, accepted in its decree on this problem, for steadfast guidance and implementation, the decisions of the May (1982) Plenum of the CC CPSU, the directives and recommendations contained in the report made to that Plenum by the General Secretary of the CC CPSU comrade L. I. Brezhnev, the decree of the Presidium of the USSR Supreme Soviet "On the Tasks of the Soviets of People's Deputies in Implementing the Decisions of the May (1982) Plenum of the CC CPSU," and the decree of the June plenum of the Azerbaijan CP CC which specifies the tasks as regards implementing the Food Program in this republic.

The soviets of people's deputies in the Azerbaijan SSR were given the necessary instructions for the steadfast implementation of measures to assure a proportional and balanced development of all branches of the agroindustrial complex with the object of securing a stable supply of foodstuffs to the population and agricultural raw materials to industry as well as further improving the living standards of the nation.

At the Presidium's session the secretary of the Presidium of the republic's Supreme Soviet R. S. Kazneva presented a report on the results of the election to the 18th Convocation of the local soviets of people's deputies in Azerbaijan SSR and to the people's judgeships at rayon (municipal) people's courts in the republic. It was pointed out that the electoral campaign in Azerbaijan SSR, as in the entire country, took place in a well-organized manner, with high political and labor activity of the masses, and under the sign of the mobilization of working people to implement the historic decisions of the 26th CPSU Congress and fulfill the plan for this year as well as for the entire Five-Year Plan period.

The entire electoral campaign and the voting conducted on 20 June provided yet another convincing proof of the triumph of socialist democracy and firm solidarity of the working masses in rallying round the Communist party and the CC CPSU headed by the eminent continuator of Lenin's work, General Secretary of the CC CPSU, chairman of the Presidium of the USSR Supreme Soviet, comrade L. I. Brezhnev.

The decree on this matter charges the executive committees of the local soviets of people's deputies in the republic with assuring a well-organized convening of the first sessions of the corresponding soviets of the new Convocation, within the legislated time limits, and examining at these sessions the aspects of the formation of bodies of the soviets, approving plans of measures to implement the desiderata voiced to the candidates for deputies at the pre-election rallies of voters, and settling other matters specified in the legislation on local soviets of people's deputies. Corresponding instructions have also been issued concerning the elections of new members of rayon (municipal) people's courts.

On considering the fulfillment of land legislation by the local soviets of people's deputies in the Imishlinskiy and Kubatlinskiy rayons, it was pointed out that the executive committees of these soviets and the administrative agencies in the rayons have accomplished, under the guidance of party organizations, considerable work in recent years to improve the utilization and conservation of land resources. As a result of the implementation of measures to conserve cropland and add new agricultural land as well as to utilize land rationally, increase crop yields, and irrigate arid sectors, the area of land under cultivation has increased and significant accomplishments have been made in increasing the output and procurements of the principal types of agricultural products. The measures taken have also resulted in a decrease in the number of instances of violations of land-use legislation.

At the same time, the local soviets and their executive committees in the Imishlinskiy and Kubatlinskiy rayons still display shortcomings and omissions in their activities relating to the conservation and rational utilization of land resources. They are not adequately utilizing the rights granted them legislatively as regards the work to improve the utilization and conservation of land resources, and permanent commissions and deputies of the soviets are not being adequately mobilized for this work. On some farms insufficient attention is paid to the development of roadside and vacant lands as well as to land re-cultivation, and shortcomings and omissions persist in the work to implement measures for the protection of soils against erosion, the establishment of protective forest belts, and improvements of natural grazing lands. Instances of violation of land-use legislation are tolerated when diverting land for the construction of facilities serving various purposes, as are instances of illegal use of public land. An inspection quickly revealed that many land users in these two rayons lack legal title to land use, and that kolkhoz and sovkhoz settlements lack boundary markings, which complicates the determination of land uses. The law and order agencies in these rayons do not always execute rigorous supervision and monitoring of the observance of requirements of the law by all land users.

The decree of the Presidium of the Supreme Soviet issued specific instructions to the Imishlinskiy and Kubatlinskiy rayon soviets of people's deputies and their executive committees concerning the safeguarding of the conservation and effective and rational use of land and the observance of the legally established norms.

The session also examined the performance of the law and order agencies in Kusarskiy Rayon as regards safeguarding socialist property. During the discussions it was pointed out that the Executive Committee of the Kusarskiy Rayon Soviet of People's deputies and the rayon's law and order agencies have, in cooperation with state and public organizations, intensified their struggle against encroachments upon socialist property. Along with this, it was pointed out that the activities of the rayon's law and order agencies have not always been effective in preventing law infringements associated with depredations and waste of public property. The employees of the public prosecutor's office, the department of internal affairs, and the judiciary do not always respond promptly and correctly to reports on economic abuses. The investigation of certain instances of embezzlement is sometimes unjustifiably protracted, and the reasons why criminal activities had not been stopped at an earlier stage sometimes are not analyzed. Groups of volunteer people's squads and other public formations are not adequately mobilized for this work. The Executive Committee of the Kusarskiy Rayon Soviet of People's Deputies is not sufficiently demanding toward economic managers in the matter of observance of the laws governing the protection of socialist property, and it is inadequately mobilizing the aktiv, the deputies, the autonomous public organizations of working people, and the collectives of enterprises, farms, and organizations, for the struggle against pilferers of national wealth, mismanagement, and waste. The committee pays insufficient attention to reinforcing the inspection and monitoring apparatus and improving the accounting of material values, and it does not assure constant cooperation with the law and order agencies.

The decree issued on this matter obligates the Executive Committee of the Kusarskiy Rayon Soviet of People's Deputies to draft and implement effective measures for assuring the unconditional enforcement, in the rayon, of the legislation protecting socialist property, and eliminating the shortcomings and omissions revealed by the inspection. It recommends to a number of the republic's ministries and departments that they tighten the responsibility of the heads of the enterprises, institutions, and organizations located in that rayon for a strict observance of the legislation protecting national property, and that they take necessary measures to improve departmental and intradepartmental control. Corresponding instructions are issued to the republic's ministries of internal affairs and justice as well as to the Supreme Court and the Prosecutor's Office of the Azerbaijan SSR.

At its session the Presidium also examined other problems, on which it also issued decrees.

Those taking part in the discussion of the agenda included: the members of the Presidium of the Azerbaijan SSR S. A. Grigoryan, F. R. Mustafayev, and N. V. Nikitin; the Azerbaijan SSR Prosecutor General A. M. Zamanov; the chairman of the republic's Supreme Court I. I. Ismaylov; the Azerbaijan SSR First Deputy Minister of Justice A. A. Zul'fugarov; the Azerbaijan SSR Deputy Minister of Internal Affairs Yu. G. Kerimov; the chairmen of the executive committees of the rayon soviets of people's deputies--Kh. S. Mirzoyev (Imishlinskiy Rayon), Sh. A. Yakh'yayev (Kubatlinskiy Rayon), and U. A. Ordukhanov (Kusarskiy Rayon), and others.

INFORMATION REPORT OF BELORUSSIAN CP CC PLENUM ON FOOD PROGRAM

Minsk SOVETSKAYA BELORUSSIYA in Russian 5 Jun 82 p 1

[Text] The Belorussian Communist Party Central Committee Seventh Plenum was held in Minsk on 4 June.

The plenum received the report of Comrade T.Ya. Kiselev, candidate of the CPSU Central Committee Politburo and first secretary of the Belorussian Communist Party Central Committee, "Results of the CPSU Central Committee May (1982) Plenum and the Tasks of the Republic Party Organizations Ensuing From Comrade L.I. Brezhnev's Report on the USSR Food Program for the Period Through 1990 and Measures To Implement It".

The following spoke in the debate on the report: V.A. Mikulich, first secretary of the Minskiy Obkom, A.L. Davidchik, chief of the animal husbandry section of Novogrudskiy Rayon's Kolkhoz imeni Zhdanov, Ye.Ye. Sokolov, first secretary of the Brestskiy Obkom, T.N. Kulakovskaya, academician-secretary of VASKhNIL's Western Department, S.M. Shabashov, first secretary of the Vitebskiy Obkom, Ye.Ye. Dyatlovich, chief economist of Kopyl'skiy Rayon's "Timkovichskiy" Sovkhoz and secretary of the primary party organization, Yu.M. Khusainov, first secretary of the Gomel'skiy Obkom, F.P. Sen'ko minister of agriculture of the Belorussian SSR, L.G. Kletskov, first secretary of the Grodnenskiy Obkom, A.A. Zelenovskiy, chief of the USSR Ministry of Land Reclamation and Water Resources Glavpoles'yevodstroy, V.V. Prishchepchik, first sectetary of the Mogilevskiy Obkom, N.S. Yakuchev, minister of fruit and vegetable industry of the BSSR, A.M. Zinkevich, director of Volkovysskiy Rayon's "Ross'" Pureblood Station, Ye.B. Razuyeva, first secretary of the Glusskiy Raykom, G.G. Bartoshevich, first secretary of the Minskiy Gorkom, and N.I. Afanas'yev, general director of the "Gomsel'mash" Production Association.

The Belorussian Communist Party Central Committee adopted a decree on the question discussed.

Comrade M.S. Khozyayinov, chief of a sector of the CPSU Central Committee Agricultural Department, participated in the plenum.

DECREE OF BELORUSSIAN PARTY PLENUM ON FOOD PROGRAM

Minsk SEL'SKAYA GAZETA in Russian 6 Jun 82 p 1

/Decree of the Seventh Plenum of the Central Committee of the Communist Party of Belorussia dated 4 June 1982. Results of the May (1982) Plenum of the CPSU Central Committee and Tasks of the Republic's Party Organizations Arising Out of Comrade L. I. Brezhnev's Report on the USSR Food Program for the Period Until 1990 and on the Measures for Its Realization"/

/Text/ Having heard and discussed the report by Comrade T. Ya. Kiselev, candidate-member of the Politburo of the CPSU Central Committee, first secretary of the Central Committee of the Communist Party of Belorussia, the Plenum of the Central Committee of the Communist Party of Belorussia notes with satisfaction that the decisions of the May (1982) Plenum of the CPSU Central Committee and the report by Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee, at it are a major contribution to the creative development of the Marxist-Leninist theory and to modern agrarian policy and mark a new stage in the implementation of the party's program goal--a steady advance of the country's economy and a rise in the well-being of the Soviet people. The plenum comprehensively analyzed the results of development of the agroindustrial complex and profoundly and thoroughly disclosed the ways for an increase in the production of food products and for the further growth of the efficiency of agriculture and of the national economic sectors connected with it.

The USSR Food Program developed on Comrade L. I. Brezhnev's initiative and adopted by the plenum is a fundamentally new step in the system of planning and management of the national economy. It is the most important component of the party's economic strategy for the next decade and embodies large-scale measures for the development of the productive forces of socialist society and improvement of social relations in rural areas.

Party members and workers in the republic, like all the Soviet people, received the decisions of the May (1982) Plenum of the CPSU Central Committee, the documents adopted by it and Comrade L. I. Brezhnev's report with great enthusiasm and full approval, see in them the manifestation of the party's specific concern for the Soviet man and perceive them as a fighting program of actions in the implementation of the party's agrarian policy.

Implementing the policy worked out by the March (1965) Plenum of the CPSU Central Committee, party, Soviet and economic bodies and labor collectives achieved significant results in the development of agricultural production and in the strengthening of its material and technical base.

During the period after 1965 capital investments in the republic's agriculture totaled almost 16 billion rubles--4.8 times as much as during all the preceding years of Soviet rule. The fixed productive capital of kolkhozes and sovkhozes increased almost 5-fold, the power-worker ratio, 4.2-fold and labor productivity, 2-fold. The areas of drained land expanded by 1.6 million hectares. During the 10th Five-Year Plan, as compared with the Seventh Five-Year Plan, the average annual volume of production of agricultural products increased 1.6-fold. Their purchases grew. The level of per-capita consumption of meat and meat products rose 36 percent, of milk and dairy products, 23 percent and of eggs, 2.5-fold.

Important changes took place in the working and living conditions of sovkhoz workers and kolkhoz members. During three five-year plans 21.2 million square meters of living space were built with state capital investments and the funds of kolkhozes and the population. The network of schools, hospitals, nurseries, kindergartens, clubs and trade and domestic enterprises expanded. The wages of agricultural workers rose and their pension security and social insurance improved. The occupational and cultural level of rural workers rose.

At the same time, the Plenum of the Central Committee of the Communist Party of Belorussia notes that the capabilities of the republic's agroindustrial complex are not yet fully utilized for an increase in the production and improvement in the quality of food products. Agriculture and the sectors connected with it are still slow in changing over to the intensive path of development. The proper return on invested funds is not ensured on all kolkhozes and sovkhozes. Land, equipment, fertilizers and other means of production are not used efficiently everywhere. There is a big diversity in the yield of fields and in the productivity of farms. Considerable losses of products occur during their procurement, storage, transportation, processing and sale. Enterprises and organizations servicing agriculture are organizationally and economically poorly connected with kolkhozes and sovkhozes. Some party, Soviet and economic bodies tolerate significant shortcomings in the management of the agroindustrial complex and in organizational and ideological-educational work among workers.

The Plenum of the Central Committee of the Communist Party of Belorussia decrees:

1. To completely approve the decisions of the May (1982) Plenum of the CPSU Central Committee and the suggestions and conclusions set forth in the report by Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee, at the plenum and to assume them as the basis for the practical activity of party, Soviet and economic bodies and trade-union and Komsomol organizations in the republic for the realization of the food program and a systematic implementation of the agrarian policy of the party.

2. The Bureau of the Central Committee of the Communist Party of Belorussia, the Belorussian SSR Council of Ministers, oblast, city and rayon party committees, local soviets of people's deputies, ministries, departments, the Belorussian Trade-

Union Council, the Central Committee of the Belorussian Komsomol, primary party, trade-union and Komsomol organizations and managers of kolkhozes, sovkhozes, industrial, construction and transport enterprises must expand active organizational and political work on the mobilization of the republic's workers for the fulfillment of the decisions of the May (1982) Plenum of the CPSU Central Committee, of the tasks arising out of Comrade L. I. Brezhnev's report on the food program at the plenum and of the decrees of the CPSU Central Committee and the USSR Council of Ministers adopted in connection with this. The results of the Plenum of the CPSU Central Committee must be discussed at meetings of the party aktiv, at plenums of oblast, city and rayon committees of the Communist Party of Belorussia, at assemblies in primary party organizations, at meetings of boards of ministries and departments, at sessions of soviets of people's deputies, in trade-union and Komsomol organizations and in labor collectives. Specific measures to ensure the maximum contribution of every oblast, rayon and sector of the national economy and of all labor collectives in urban and rural areas to the solution of the food problem must be determined and implemented.

3. To execute the decisions of the May (1982) Plenum of the CPSU Central Committee and in accordance with the food program party, Soviet and economic bodies, primary party organizations and managers and specialists of kolkhozes and sovkhozes must concentrate the efforts of rural workers on an efficient utilization of every hectare of land and on the further increase in the yield and gross output of agricultural products.

The average annual production of grain in the republic during the 11th Five-Year Plan must be increased to 7.8 or 8.1 million tons and during the 12th Five-Year Plan, to 8.2 or 8.6 million tons; in Brestskaya Oblast, to 1,090,000 or 1,125,000 and 1,150,000 and 1,210,000 respectively; in Vitebskaya Oblast, to 1,365,000 or 1,420,000 and 1,440,000 or 1,520,000; in Gomel'skaya Oblast, to 1,180,000 or 1,235,000 and 1,250,000 or 1,300,000; in Grodnenskaya Oblast, to 1,215,000 or 1,265,000 and 1,270,000 or 1,335,000; in Minskaya Oblast, to 1,650,000 or 1,715,000 and 1,730,000 to 1,815,000; in Mogilevskaya Oblast, to 1,300,000 or 1,340,000 and 1,360,000 to 1,420,000 tons. A stable growth of the gross output of grain of winter rye and pulse crops must be ensured. During the current five-year plan the growing of seeds of grain crops must be transferred to an industrial basis and the introduction of their highly productive, new varieties into production must be accelerated.

The average annual production of potatoes in the republic during the 11th and 12th Five-Year Plans must be increased to 12.5 or 13.5 million tons; in Brestskaya Oblast, to 1,990,000 or 2,150,000 tons respectively; in Vitebskaya Oblast, to 1,520,000 or 1,630,000; in Gomel'skaya Oblast, to 2,280,000 or 2,470,000; in Grodnenskaya Oblast, to 1,770,000 or 1,910,000; in Minskaya Oblast, to 2,960,000 or 3,200,000; in Mogilevskaya Oblast, to 1,980,000 or 2,140,000 tons. The establishment of specialized zones for the cultivation of commodity potatoes on an industrial basis must be completed.

During the decade the gross output of vegetables in the republic must be increased 1.2-fold and during the current five-year plan their average annual production must reach 840,000 tons and during the 12th Five-Year Plan, 866,000 tons; in Brestskaya Oblast, 114,000 and 119,000 tons respectively; in Vitebskaya Oblast, 115,000 and 118,000; in Gomel'skaya Oblast, 164,000 and 169,000; in Grodnenskaya Oblast, 88,000 and 92,000; in Minskaya Oblast, 237,000 and 241,000; in Mogilevskaya Oblast, 122,000 and 127,000 tons.

On the basis of the introduction of industrial technology of cultivation and increase in the yield of sugar beets no less than 1,391,000 tons of sugar beets must be annually produced in the republic during the 11th and 12th Five-Year Plans; in Brestskaya Oblast, 534,000 tons, in Grodnenskaya Oblast, 442,000 tons and in Minskaya Oblast, 415,000 tons respectively.

During the decade a 1.4-fold increase in the gross output of fruits and berries must be attained. During the 11th Five-Year Plan their average annual production must be ensured in the volume of 500,000 tons and during the 12th Five-Year Plan, 595,000 tons; in Brestskaya Oblast, 82,000 and 98,000 tons respectively; in Vitebskaya Oblast, 62,000 and 74,000; in Gomel'skaya Oblast, 114,000 and 136,000; in Grodnenskaya Oblast, 52,000 and 62,000; in Minskaya Oblast, 100,000 and 119,000; in Mogilevskaya Oblast, 90,000 and 106,000 tons.

In order to fulfill the tasks set, the Belorussian SSR Gosplan, the Belorussian SSR Ministry of Agriculture, the Belorussian SSR Ministry of Fruit and Vegetable Industry, the Belorussian SSR Ministry of Land Reclamation and Water Resources, the Belorussian SSR State Committee for Supply of Production Equipment for Agriculture, the Main Administration for Land Drainage and Construction of State Farms in the Belorussian Woodlands, oblast, city and rayon committees of the Communist Party of Belorussia and oblast and rayon executive committees must implement a set of measures for an increase in soil fertility. A full and efficient utilization of all the available resources of organic and other local fertilizers must be ensured on every kolkhoz and sovkhoz. A scientifically substantiated farming system must be introduced persistently.

The establishment of the necessary material and technical base of chemicalization on the farms and organizations of the Belorussian Scientific Production Association for Agrochemical Services to Agriculture must be accelerated. The rates of construction and commissioning of warehouses, centers for the technical servicing of machines, runways, manure storage facilities and other projects must be increased and losses of organic and mineral fertilizers, lime materials and plant protection agents must be reduced maximally. The responsibility of agrochemical services for their competent and efficient utilization must be increased.

Measures for an overall reclamation and agricultural development of land must be implemented and the production of the planned yield of agricultural crops on this land must be ensured. During the decade 110,000 hectares of irrigated land must be put to use and 950,000 to 970,000 hectares of water-logged and swampy land must be drained. The construction of top-priority projects for antiflood protection must be completed in the zone of the Poles'ye Lowland. Proposals on an expansion of the scale and acceleration of reclamation work in the republic's northern zone must be submitted to the Central Committee of the Communist Party of Belorussia and to the Belorussian SSR Council of Ministers.

4. Party, Soviet and agricultural bodies must take the necessary measures for an unconditional fulfillment of the volumes of production of livestock products envisaged by the food program. During the 11th Five-Year Plan the average annual production of meat on all the categories of farms in the republic (in carcass weight) must be increased to 1 million tons and during the 12th Five-Year Plan, to 1.1 or 1.2 million tons; in Brestskaya Oblast, to 160,000 and 175,000-190,000 tons

respectively; in Gomel'skaya Oblast, to 170,000 and 190,000-210,000; in Grodnenskaya Oblast, to 160,000 and 175,000-190,000; in Minskaya Oblast, to 215,000 and 235,000-260,000; in Mogilevskaya Oblast, to 140,000 and 155,000-165,000 tons. A universal transition to intensive methods of management of animal husbandry must be ensured, the periods of animal fattening must be shortened and the productivity of all types of livestock and poultry must be increased considerably.

Along with an expansion of the capacities of industrial-type hog breeding complexes pork production at sections on nonspecialized farms must be developed widely. The possibilities for an increase in meat resources must be more fully utilized through an increase in the production of mutton and poultry and rabbit meat.

Work on an increase in the productivity of dairy farming must be carried out systematically. The average annual production of milk in the republic must be increased to 6.5 or 6.7 million tons during the 11th Five-Year Plan and to 6.9 or 7.0 million tons during the 12th Five-Year Plan; in Brestskaya Oblast, to 1,025,000 or 1,055,000 and 1,090,000 or 1,100,000 respectively; in Vitebskaya Oblast, to 1,085,000 or 1,115,000 and 1,150,000 or 1,170,000; in Gomel'skaya Oblast, to 1,180,000 or 1,220,000 and 1,255,000 or 1,275,000; in Grodnenskaya Oblast, to 905,000 or 935,000 and 960,000 or 970,000; in Minskaya Oblast, to 1,410,000 or 1,450,000 and 1,500,000 or1,510,000 in Mogilevskaya Oblast, to 895,000 or 925,000 and 945,000 or 975,000 tons. By 1990 the average milk yield per cow must be increased by 600 to 700 kg.

5. The Administration of Fish Industry under the Belorussian SSR Council of Ministers on the basis of reconstruction, technical retooling and development of the material base and rise in the productivity of fisheries must triple the production of commodity fish during the decade. It must meet the annual need of kolkhozes, sovkhozes and industrial enterprises and organizations engaged in fish breeding for quality fish planting stock.

6. The Belorussian SSR Ministry of Agriculture, the Belorussian SSR Ministry of Fruit and Vegetable Industry, the Belorussian SSR Ministry of Procurement, oblast, city and rayon committees of the Communist Party of Belorussia, oblast and rayon executive committees and kolkhoz and sovkhoz managers must ensure the further strengthening of the fodder base of the republic's animal husbandry and the intensification of field and meadow fodder production. Work on an increase in the yield of fodder crops and natural hayfields and pastures and on the introduction of advanced technologies of procurement, storage and utilization of feed must be carried out persistently and a reliable feed reserve for public animal husbandry and livestock in the private ownership of citizens must be created.

7. On the basis of the requirements of the May Plenum of the CPSU Central Committee in 1982 party, Soviet and economic bodies must attain a significant increase in the productivity of farming and animal husbandry and an unconditional fulfillment of annual state plans for the purchases of grain, potatoes, meat, milk and other products. Crops must be cared for at the proper time, preparations must be completed successfully and the grown harvest must be gathered in an organized way. Measures for the control of losses of products and regular work of procurement, transport and trade organizations must be developed and realized at every kolkhoz, sovkhoz and all the enterprises of the agroindustrial complex.

8. The Belorussian SSR Gosplan, the Belorussian SSR Ministry of Agriculture, the Belorussian SSR Academy of Sciences and party, Soviet and economic bodies must accelerate the performance of fundamental and applied research on problems of development of the agroindustrial complex contributing to the most successful implementation of the food program. Special attention must be paid to the development of highly productive varieties of agricultural crops, breeds and lines of animals and advanced technologies of production, storage and processing of agricultural products with minimal expenditures of labor and energy resources. Work on an accelerated introduction of the achievements of science and advanced experience into practice must be intensified.

9. The Administration of the Belorussian Railroad, the Belorussian SSR Ministry of Motor Transport, the Belorussian SSR Main Administration of the River Fleet, the Belorussian Administration of Civil Aviation, ministries, departments, associations and enterprises of the agroindustrial complex must attain an efficient interaction of all the services engaged in the transportation of equipment, fertilizers, construction materials and agricultural products, as well as in the application of fertilizers and chemical plant protection agents with the use of aviation.

10. The Belorussian SSR Gosplan, the Belorussian SSR Ministry of Food Industry, the Belorussian Ministry of Meat and Dairy Industry, the Belorussian SSR Ministry of Agriculture, the Belorussian SSR Ministry of Fruit and Vegetable Industry, the Belorussian SSR Ministry of Procurement, the Belorussian SSR Ministry of Trade and the Belorussian SSR Cooperative Union must ensure a prompt and quality processing of all the agricultural products produced in the public sector and on private farms of citizens. The construction of storage facilities at kolkhozes, sovkhozes and trade and processing enterprises, as well as of receiving and sorting centers and shops for the initial processing of raw materials, must be carried out at more rapid rates. Advanced methods of procurement, transportation and storage of products must be used extensively, the network of procurement enterprises must be expanded and they must be located as closely as possible to the places of production of products. Direct relations of trade organizations with kolkhozes, sovkhozes and other enterprises of the agroindustrial complex must be improved. Purchases of surplus agricultural products, as well as wild growing fruits, berries and mushrooms, from the population must be organized.

The assortment of produced products must be varied considerably, their quality must be improved and the production of semifinished products, articles enriched with nutritive and flavoring additives, potato products, baby and diet food products and quick frozen fruits and berries must be increased. During the decade the production of meat from the raw materials of state resources must be increased 1.6-fold, of cheese, 1.7-fold and of potato products, up to 35,000 or 38,000 tons.

11. Oblast, city and rayon party committees, the republic's ministries and departments, executive committees of local soviets of people's deputies and economic managers must manifest constant concern for the development of private farms of citizens and horticultural collectives. Conditions must be created so that every family living in rural areas may keep livestock, hogs, sheep and poultry. Work on the establishment of subsidiary farms at industrial enterprises and organizations must be carried out more actively. The construction of hothouses, livestock breeding sections and storage facilities for fruit and vegetable products at them must be practised extensively.

12. Party committees, soviets of people's deputies, ministries and departments in the republic, economic managers and party, trade-union and Komsomol organizations of construction projects and client enterprises must accelerate the commissioning of the projects of the agroindustrial complex. They must be considered the republic's shock construction projects. Work on the search for possibilities of lowering the cost of construction and on the introduction of advanced design and planning solutions for production, residential and cultural-general premises with the use of efficient materials and articles of a high plant readiness must be intensified. Along with the maximum utilization of available capacities the production base of rural construction must be built up. New industrial house building enterprises for an annual construction of a total area of 335,000 square meters of living space in rural areas must be put into operation during the 11th Five-Year Plan.

A systematic implementation of measures for the social development of rural areas and rise in the level of well-being, culture and medical and domestic services for their residents must be ensured. More attention must be given to the further improvement in people's housing conditions and to a refinement of the construction and good order of settlements. On the republic's kolkhozes and sovkhozes during the 11th Five-Year Plan 6.8 million square meters of living space must be built, including more than 2 million square meters with the funds of kolkhoz members, workers, employees and the rural intelligentsia. The construction of schools, nurseries, kindergartens, clubs, libraries, medical institutions and trade, public dining and domestic service enterprises must be carried out at outstripping rates. A prompt utilization of the capital investments allocated for rural construction during the current five-year plan must be attained, the length of bus lines must be increased and a reliable transport communication of kolkhozes and sovkhozes with rayon centers must be organized.

13. Oblast, city and rayon party committees, oblast and rayon executive committees, the Belorussian Trade-Union Council, ministries, departments and farm managers must persistently carry out work on strengthening cost accounting and lowering production costs and services at kolkhozes, sovkhozes, industrial enterprises and construction organizations of the agroindustrial complex. Meastures to stimulate the labor of their collectives, managers and specialists depending on the final results of production and increase in profit at serviced kolkhozes and sovkhozes must be worked out and implemented. Work experience according to the brigade contract, as well as of links with job-contract-plus-bonus wages for output, must be popularized more widely. Special attention must be paid to an improvement in the activity of lagging farms, high rates of production growth and a sharp reduction of expenditures per unit of output must be ensured at them and the maximum possible assistance in the development of the material and technical base and reinforcement with personnel must be given to them.

14. The Belorussian SSR Council of Ministers, the Belorussian SSR Gosplan, oblast and rayon executive committees, ministries and departments must actively engage in work on the further improvement in the planning and management of the agroindustrial complex as a single whole and on this basis strive for a balanced development and close interaction of all its sectors and eliminate superfluous and duplicating links. Measures must be taken to strengthen the rayon link, to efficiently combine territorial and sectorial principles of management and to eliminate the lack of departmental coordination and petty patronage of kolkhozes and sovkhozes.

15. Party committees and organizations and Soviet and economic bodies must intensify their control over the provision of democratic principles of management of agriculture and of the requirements envisaged by the Kolkhoz Charter. The dates for holding general assemblies of kolkhoz members, assemblies of authorized agents and board meetings at kolkhozes must be observed strictly and the role of production conferences and workers' meetings at sovkhozes, of the elective nature and reporting of managerial personnel and of the increased activity of rural workers in the solution of problems pertaining to intrafarm life must be strengthened.

16. The Bureau of the Central Committee and oblast committees of the Communist Party of Belorussia must take measures to further enhance the role of rural rayon party committees. It is necessary to see to it that they actually accomplish the guidance of the agroindustrial complex and an efficient interaction of all its links, persistently improve the manner and method of their activity, develop the initiative of primary party organizations and give them more efficient help in the work on an increase in the creative activity of party members and mobilization of workers' collectives for the fulfillment of the food program.

In connection with the establishment of agricultural divisions in rayon party committees they must be staffed with well-trained, competent and energetical cadres having experience in party work.

17. Oblast, city and rayon party committees and primary party organizations must raise the level of work with the personnel of kolkhozes, sovkhozes and interfarm enterprises and associations so that all production sections may be headed by workers capable of successfully implementing the large-scale, new tasks set by the 26th party congress and the May (1982) Plenum of the CPSU Central Committee. Personnel must be educated in the spirit of a highly responsible attitude toward work and irreconcilability with respect to shortcomings. The initiative of those that express the desire to be transferred from the managerial staff to jobs as managers and specialists of kolkhozes and sovkhozes, as well as from advanced to economically weak farms, must be supported and encouraged. The advancement of women to managerial jobs must be promoted.

18. Party, trade-union and Komsomol organizations and economic bodies must more fully utilize the possibilities of socialist competition. They must see to it that it involves and develops the interest of every collective and of every worker of the agroindustrial complex in the fulfillment of production plans and socialist obligations and in the attainment of high final results. This work must be done on the basis of the further introduction of cost accounting, development and strengthening of creative cooperation with collectives of related industries, an efficient fulfillment of contractual obligations and a strict observance of planning discipline.

19. Party committees and organizations must highly efficiently utilize the system of party and economic training and all forms of mass propaganda and agitation for a widespread and effective explanation and study of the materials of the May (1982) Plenum of the CPSU Central Committee, the report by Comrade L. I. Brezhnev at it and other documents adopted by the plenum. Cadres of party members and of all urban and rural workers must be familiarized with the correct Marxist-Leninist

understanding of the new tasks of the party's agrarian policy embodied in the food program. The understanding that the success of the currently most important endeavor--creation of reliable food resources--depends on the creative and initiative work of every worker must now be persistently impressed upon his consciousness by all the means of oral and press propaganda.

Editorial boards of newspapers, journals, television and radio broadcasting must concentrate their attention on a more reasoned interpretation of the activity of party, Soviet and economic bodies for the solution of the food problem, actively support and develop the creative search of grain growers, livestock breeders, machine operators, specialists and labor collectives, popularize advanced experience in a business-like and convincing manner and continue the patronage over the construction projects of the agroindustrial complex, filling it with a deeper content and effective forms.

The Plenum of the Central Committee of the Communist Party of Belorussia assures the CPSU Central Committee and Comrade L. I. Brezhnev personally that party, Soviet and economic bodies, trade-union and Komsomol organizations, party members and all workers in the republic's urban and rural areas armed with the decisions of the historical May (1982) Plenum of the CPSU Central Committee will work with a full devotion of efforts, persistence and initiative on the implementation of the food program, will strive for an increase in the production of food products and will welcome the 60th anniversary of the formation of the USSR with new accomplishments in labor for the good of our socialist homeland.

SHEVARDNADZE CONCLUDING REMARKS AT GEORGIAN PARTY PLENUM

Tbilisi ZARYA VOSTOKA in Russian 25 Jul 82 pp 1-2

[Article: "The Word of the Communists of Georgia Is Firm and True!: Concluding Remarks by Candidate Member of the Politburo of the CPSU Central Committee, First Secretary of the Central Committee of the Communist Party of Georgia, Comrade E. A. Shevardnadze at the 9th Plenum of the Central Committee of the Communist Party of Georgia, 21 July 1982"]

[Excerpts] Comrades!

Putting it frankly, this time I would like not so much to sum up the results of the work performed by our Plenum, as to share with you some of my impressions about it. And I think that they are our common impressions.

You all know: we attach great importance to each Plenum, and we prepare in the most careful manner for each of them. Therefore every time, when summing up the results of a Plenum, we provide at the same time an evaluation of it, we carry out a kind of operations critique, we analyze what it provided, what new contribution it has made to our work, what kind of lesson we must extract from it, and what conclusions we must make for the future. And, as a rule, in conclusion we note with a sense of satisfaction that, from Plenum to Plenum, their organizational and political level becomes higher and higher.

This has been demonstrated once again by our regular Plenum today, which proved to be precisely this kind of Plenum both with regard to content and with regard to form.

From the point of view of content, the Plenum proved to be, one might say, saturated. With regard to the posing of the questions, the nature of their discussion, and the approach to them, the Plenum has been conducted at the level of a congress of the party organization. The informational reports by Comrade G. V. Kolbin and the statements made by the comrades in the discussions greatly supplemented the report by the bureau of the Central Committee and expanded its framework.

They were interesting and instructive statements. They, as it were, graphically illustrated the basic principles in the decree of the CPSU Central Committee, entitled "The Organizing and Political Work of the Party Organizations of Georgian SSR in Preparing for the Sixtieth Anniversary of the Formation of the USSR."

I would particularly like to emphasize that all the principles, all the conclusions in that very important party and political document found, from our point of view, their rather complete illumination and interpretation in today's report, in which we took an especially scrupulous approach to assuring that not a single thesis, not a single idea, literally not a single word in the decree of the CPSU Central Committee remained beyond the field of vision of our Plenum. And I think that we succeeded in doing that.

And yet now, at the conclusion of the work by the 9th Plenum of the Central Committee of the Communist Party of Georgia, it has become necessary to return once again to the individual evaluations contained in the decree of the CPSU Central Committee with regard to Georgia and to our party organization, inasmuch as these evaluations characterize the work also of today's plenary session itself.

Thus, this decision states, for example, that the Central Committee of the Communist Party of Georgia makes broad use of the recommendations made by Communists when developing the decrees and preparing major political measures.

And that is precisely how it was this time. Recommendations by Communists, by all our party activists, were used in the broadest manner when preparing this Plenum of the Central Committee, and our Plenums are the largest-scale political measures between congresses of the Communist Party of Georgia.

Furthermore, the decree of the CPSU Central Committee states that the activities of the Central Committee of the Communist Party, the party committees and the Soviet agencies of Georgia, are increasingly typified by:

-- their joint nature;

-- the depth of studying and resolving the problems;

-- concreteness;

-- the development of criticism and self-criticism.

We shall dwell especially on all these questions, on all these factors, inasmuch as we attach great importance to them.

Today, at our Plenum, which was devoted to the tasks evolving from the July decree of the CPSU Central Committee on Georgia, one observes, during the development of the practical measures, the draft of the Plenum decree, the prevailing of specifically this kind of situation, the situation of joint actions.

The preparation itself for the Plenum proceeded on genuinely joint, collective principles. The preparation began at that moment when, at the CPSU Central Committee, it was decided to study the experience of the organizing and political work of the party organizations of Georgian SSR in preparing for the sixtieth anniversary of the formation of the USSR. And all the subsequent work proceeded under the sign of joint actions. It must be said that, from the very beginning, this tone was set by the group of workers at the CPSU Central Committee. For a prolonged period of time, the comrades became acquainted on the spot with the practical aspects of the organizing and political work, visited various regions of the republic, many of its cities and rayons, and labor collectives, thoroughly studied the experience of the primary party organizations, had long discussions with Communists and the population at their place of residence, met with the party activists, and listened attentively to various ideas, practical proposals, recommendations, and critical comments. Thus, from the very beginning a collective approach to the job at hand was established.

But when the decree was adopted, the preparation for the present Plenum began immediately, and all this work was carried out again on the basis of joint, collective actions. All our party activists began to prepare for the Plenum. In the party's city and rayon committees, in the ministries and departments, in the primary party organizations, in collectives of workers, the comrades began to think carefully about the proposals and to work out measures.

Today, in the work of our Plenum, one can also see such a feature as depth when studying and resolving problems, a feature which, as was stated in the decree of the CPSU Central Committee, is becoming increasingly inherent in the activity of the republic's party organization.

We have complete justification for stating that we attempted to take the most thorough approach to the studying and resolution of all the problems on which the July decree of the CPSU Central Committee concentrates its attention. A large amount of preparatory work was carried out at the apparatus of the Central Committee of the Communist Party of Georgia, in all its sections, in the Tbilisi City Party Committee, and in the oblast, city, and rayon party committees. That preparation was of a profound nature. Actively involved in it were the Council of Ministers, Gosplan, Gossnab, and the Central Statistics Administration of the republic, many ministries, state committees, and other departments, where an analysis was made of the results of what was done during the past ten years and tasks were refined for the future.

Thus, the very preparation for the Plenum proceeded on a systems basis. That systems nature, that depth, were determined to a large extent by the active participation in the preparatory work by the scientific institutions, primarily such institutions as the Institute of the Economy and Planning of the National Economy, the Institute of Philosophy, the Institute of Party History, attached to the Central Committee of the Communist Party of Georgia, and others, which we have already mentioned in our report.

Special significance was given to our Plenum by its concreteness, the third distinctive feature which, as was mentioned in the decree of the CPSU Central Committee dealing with our party organization, is being increasingly typical of its activity.

This concreteness found its expression in the fact that all those who made statements clearly and precisely defined their position, the position of their organizations, their opportunities for locating new additional reserves for the further increase in the volumes of production. This is especially important now, in view of the strenuous nature of plans for the republic's economic and social development.

The report stated that at the 27th Congress of the Communist Party of Georgia, all the members of the bureau of the Central Committee, all the deputy Chairmen of the republic's Council of Ministers, our ministers, and secretaries of the party's oblast, city, and rayon committees will be given the opportunity to make statements and to report how they are keeping the word that they gave at our 26th Congress -- at plenary sessions and at sessions of working groups -- to report on what has been done during these years, how provision is being made for the fulfillment of the assignments of the Eleventh Five-Year Plan in all branches, in those spheres of the national economy in which they bear personal responsibility to the nation. Thus, our Plenum today was a kind of preparation for the forthcoming congress.

That is how the situation stands from the point of view of the form of conducting our Plenum. And one can state confidently that this active form of it corresponds completely to the requirements of the new decree of the CPSU Central Committee with regard to our party organization.

And now a few more questions.

First. It is necessary to continue the concrete -- I repeat, concrete -- measures to combat bourgeois ideology, to give that struggle a concrete nature, a concrete directedness. Only then will we be able, as is required by the new decree of the CPSU Central Committee on Georgia, to give a decisive rebuff to bourgeois ideology and propaganda that are hostile to socialism, to be consistent in educating the class approach to the evaluation of historical facts and events, and to guarantee the even greater pertinence of ideological-educational work, the conducting of it in close relationship with the peculiarities of the present international situation.

It is necessary for us constantly to proceed from the fact that recently bourgeois propaganda has been taking on an increasingly aggressive, specific, purposeful nature. It is now addressed to individual social groups in our society, to individual nations and nationalities, and even to specific individuals, and is linked with concrete events and concrete facts.

That is why it is so important now not only to give a decisive rebuff to bourgeois propaganda, but also to give to all our ideological work a truly offensive nature, to constantly unmask the attempts of the imperialists and the ideological saboteurs of all kinds who are casting aspersions upon the policy of our party and of our state.

We must be convincing in opposing to the fabrications of bourgois propaganda the advantages of our socialist way of life, our life ideals. As V. I. Lenin pointed out, these fabrications "must be opposed, step by step, by our communist action. This also is a kind of warfare, a military contest between two methods, two formations, two economies -- the communist and the capitalist. We shall prove that we are stronger."

The battle of ideas is taking on special scope under present-day conditions, when the militaristic propaganda of imperialism has been aimed at the unleashing of a new world war. The propaganda of military superiority and the attempts to resolve international problems from a position of strength are encountering the protest and wrathful censuring by all the nations of the world.

Under these conditions it is necessary for us in an especially consistent and purposeful manner to form high political vigilance in everyone. In every citizen it is necessary to imbue a sacred sense of the Motherland and to strive to increase his personal contribution to the reinforcement of our country's defensive might. Being a true patriot, being a consistent internationalist, means, first of all, demonstrating high political vigilance. In every citizen, and primarily in our youth, it is necessary for us to develop the readiness at any moment to rise up to defend our socialist Homeland and the historic gains of socialism.

Every young man must understand with all his heart what he must know, what he must learn, in order to defend peace on earth. But doing this is not so simple. It is necessary to train oneself for this. The peace-loving policy of our party, of the Soviet state, by no means removes from the agenda the question of the reinforcement of our country's defensive might. Elements of indifference are absolutely inadmissible here. That is why the tasks of increasing the political and class vigilance must always being closely interrelated with the problems of military-patriotic education, and military-patriotic work. That is why the tasks of the ideological education of the youth which have been advanced in the decree of the CPSU Central Committee must be resolved by us in organic tie with its moral-political, psychological, and military-technical training for service in the ranks of the USSR Armed Forces.

A lot is being done in this direction. The Central Committee of the Communist Party of Georgia has recently made a number of important decisions which have noticeably increased the activity rate of the work performed by the party, Soviet, Komsomol, and administrative agencies with regard to the military-patriotic education of our youth. As you know, a coordinating Council of Military-Patriotic Education, which is headed by Central Committee Secretary, Comrade G. N. Yenukidze, has been functioning here since 1979. The same kind of councils have been created under the party's oblast, city, and rayon committees. I can mention with a sense of satisfaction the successful implementation of the plan for our measures -- conducted jointly with the Red Banner Trans-Caucasus Military District and the Red Banner Trans-Caucasus Border District -- for military-patriotic and international education. A large amount of work was carried out during the period of preparation for the celebration of the sixtieth anniversary of our border district, which solemn celebration will occur soon.

This work requires further intensification. It is precisely for that reason that we have touched upon this question once again at the Plenum of the Central Committee today. Under conditions of the increasingly acute ideological struggle, and the international situation that has been created, military-patriotic education must become a very important link in all our ideological work. It must contribute to increasing the political vigilance, to intensifying the personal responsibility borne by everyone for the fates of socialism, for the flourishing and security of our Motherland, and for peace on earth.

Second. Problems that are closely related with the process of forming a systems, comprehensive approach to the resolution of economic, social, and political tasks are problems of forecasting. Forecasting is an independent science. You are well aware of that. And today it is absolutely impossible to control the social and economic processes on a scientific basis without it.

You all know what a strenous struggle our entire party organization has been waging for the past ten years to overcome our republic's relative lagging behind the nationwide level with regard to the basic social and economic indicators. This is our chief strategic task. In order to resolve it, as you can see, a decade was not sufficient. In order to finally overcome the lag that has been created, it may take an additional 7-8 years, that is, in essence, this may last for all the 1980's, years that will prove to be no less strenuous.

Why has that happened? What led to this lag by our republic? The reason lies in the fact that we did not have the proper scientific forecasts. No one thought about the long-range effect. There were no precise computations of the long-range development of our republic's national economy. There was no harmonious, scientifically substantiated concept for the development of the entire economy as a whole. And no one accepted for implementation those recommendations that were contained in individual scientific works. Those recommendations did not find any application in the practical situation. The warning signals coming into the Central Committee were simply ignored. That was an erroneous approach. Everyone knows what it led to. From all this we must make serious conclusions for the future.

As a result of the need to carry out the most serious, the most thorough forecasting work, it is necessary also to pose the following acute and rather complicated question. We are speaking about demographic problems. It is very important to know how we will look by the year 1990, or 2000. To know how the labor-resources balance sheet, our republic's induction contingent, etc. will be formed.

Why do we consider these problems to be acute and vitally important? Because the resolution of the tasks of the republic's further economic and social development is directly linked with a scientifically substantiated demographic policy, and with the demographic processes in general. We must learn how to exert a practical influence upon the demographic situation in the republic. And that situation, putting it plainly, both at the present time and according to the computations for the next decades, is very, very unfavorable.

The fact of the matter is that during recent years our birth rate has been steadily declining, and that has been sharply aggravating the process of population reproduction. I would like to cite the following figures. The average annual rate of population increase during the Tenth Five-Year Plan for Georgia was only 0.6 percent. During the next decade the demographic situation will become even more critical. As is indicated by forecast computations, in the 1980's, as compared with the 1970 indicators, the rate of increase in the able-bodied population will drop sharply, with a simultaneously increase in the number and percentage of persons of pension age. At the present time the republic has almost a million pension recipients, and their number will increase gradually.

An especially alarming situation is developing in rural areas. The number of people in the rural population decreased during the past 40 years by many tens of thousands of people, and within the next 20 years that process will occur even more rapidly and, according to the computations by planning agencies, the size of the rural population by the year 2000 will be reduced by several hundreds of thousands.

Demographers feel that in 1990, as compared with 1980, the size of the population will be reduced in 21 rayons; and by the year 2000, in 42 rayons in our republic. In the 1980's the able-bodied population will decrease in 35 rayons. Even now, in many mountain villages, the only people remaining are elderly, or there are no people left at all. In this regard also we have made very serious mistakes.

As you can see, the situation that is developing is not a simple one. Our comrades must know about this. Are we acting correctly when we remain silent, when we do not increase the responsibility for overcoming what can be flatly called this alarming tendency? What will future generations say about us?

Frequently we talk about the relatively high percentage of the population that is not employed in the socialized economy. And that occur not because we have a good demographic situation. The fact of the matter is that, over a period of many, many years, the process of increasing the republic's industrial potential has been artificially retarded. Here also one can see the effect of the lack of scientific forecasts. Therefore, despite the critical nature of the demographic situation, the problem of the employment rate of the labor resources remains just as critical.

We also have poor forecasts about the development of science and scientific-technical progress. For example, at the 7th Plenum of the Central Committee of the Communist Party of Georgia, we said that the resolution of our Food Program will depend more and more upon the way in which selection work in vegetable husbandry and in animal husbandry is set up in the republic.

This is not a new branch of science, and yet, unfortunately, we still do not have here a correctly organized system. The republic has a large number of institutes and a large number of scientists who are engaged in selection work, but frequently they are all working without any precise prospects, without any scientific forecast. For example, we create new varieties of tea leaves and grain crops, we develop new breeds of livestock, but who, for example, can say what varieties of wheat, tea, fruits, citrus crops, or grapes we will need in the year 2000 in order to meet the requirements not only of high harvest yield, but also their resistance to diseases or their suitability for the processing industry? I think that no one can answer that question. But it is also extremely necessary for us to know that.

Putting it succinctly, if we forecast poorly, we plan poorly. Let our comrades make the proper conclusions from that.

The July decree of the CPSU Central Committee calls upon us to take a creative approach, to demonstrate a creative work style. This is not an abstract appeal. Working creatively means thinking in progressive categories, and means confirming the progressive principles in everything. That is why we need forecasts and scientific prediction.

There is certainly a need now to conduct shortly a republic-level conference on scientific practice and in a thorough, serious manner to speak a bit about the state of forecasting work in all sectors of economic, administrative, and social-political life.

All that remains for us to discuss now, comrades, is the last feature which was noted in the new decree of the CPSU Central Committee on Georgia as becoming more and more typical of the activities of the republic's party organization -- the development of criticism and self-criticism.

This feature also distinguishes the work of our Plenum, which is imbued with the spirit of high demandingness and mutual exactingness, the critical and self-critical approach to the achieved successes, and with a clear understanding of the entire complexity of the tasks that are confronting the Communists and all our workers.

Today we can say with conviction that the most reliable basis, the most solid foundation, and, if you wish, the basic guarantee of the unconditional fulfillment of this decree must and will become the initiative and creativity of the masses, the labor and political participation of the broadest segments of the population, the atmosphere of high demandingness, of strict exactingness, of a sharp increase in the responsibility borne by everyone. They must and will become the atmosphere of high organizational spirit, of complete spirit of mobilization, of coolheadedness, precision, and a businesslike attitude in work, a concrete, specific, competent approach to the resolution of any practical question, of any task. They must and will become our readiness and our firm resolve to confirm even more broadly the democratic principles in all our practical activities, in all spheres of our life, and, at the same time, to combat in an even more well-principled and consistent manner all the shortcomings in our work, all the negative phenomena, to extend even more boldly and more broadly the healthy comradely criticism and self-criticism, and to educate more stubbornly in everyone the sense of dissatisfaction with what has been achieved, the sense of high self-monitoring and self-checking.

So, comrades, let us go our separate ways today with the firm intention, with the firm resolve, to withstand all the tests, to overcome all the difficulties, if they confront us on the way, to execute with distinction any task that is assigned to us, to fulfill completely the new decree of the CPSU Central Committee, and to meet in a worthy manner the sixtieth anniversary of the formation of the Union of Soviet Socialist Republics!

That is the word given by the Communists of Georgia! And our word is a true, reliable, firm word!

KAZAKH CP CENTRAL COMMITTEE HOLDS PLENUM

Information Report on Plenum

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 24 Jun 82 p 1

[Information report of Sixth Kazakh CP CC Plenum held 23 June 1982]

[Text] The regular plenum, the sixth, of the Kazakh CP Central Committee, was held on 23 June 1982.

The plenum heard and discussed the report of Comrade D. A. Kunayev, member of the Politburo of the CPSU Central Committee and first secretary of the Kazakh CP Central Committee, entitled "On the Tasks of the Republic Party Organization Arising Out of the Decisions of the May (1982) Plenum of the CPSU Central Committee and the Address Which Comrade L. I. Brezhnev Delivered at It Concerning the USSR Food Program."

The following participated in discussion of the report: Comrades V. P. Demidenko, first secretary of Kustanayskaya Oblast Committee of the Kazakh CP; O. S. Kuanyshev, first secretary of the Kokchetavskaya Oblast Committee of the Kazakh CP; N. Ye. Morozov, first secretary of the Tselinogradskaya Oblast Committee of the Kazakh CP; K. M. Aukhadiyev, first secretary of the Alma-Atinskaya Oblast Committee of the Kazakh CP; V. T. Stepanov, first secretary of the Severo-Kazakhstanskaya Oblast Committee of the Kazakh CP; Ye. N. Auel'bekov, first secretary of the Turgayskaya Oblast Committee of the Kazakh CP; V. A. Livenstsov, first secretary of the Aktyubinskaya Oblast Committee of the Kazakh CP; A. A. Askarov, first secretary of the Chimkentskaya Oblast Committee of the Kazakh CP; M. B. Iksanov, first secretary of the Ural'skaya Oblast Committee of the Kazakh CP; A. G. Korkin, first secretary of the Karagandinskaya Oblast Committee of the Kazakh CP; G. A. Pivovarov, first secretary of the Kuybyshevskiy Rayon Party Committee in Kokchetavskaya Oblast; A. K. Protozanov, first secretary of the Vostochno-Kazakhstanskaya Oblast Committee of the Kazakh CP; T. Ye. Yesetov, first secretary of the Kzyl-Ordinskaya Oblast Committee of the Kazakh CP; P. I. Yerpilov, first secretary of the Pavlodarskaya Oblast Committee of the Kazakh CP; A. G. Ramazanov, first secretary of the Semipalatinskaya Oblast Committee of the Kazakh CP; V. A. Kuz'menko, milkmaid of the Kamenskiy Breeding Farm in Alma-Atinskaya Oblast; A. A. Tynybayev, first secretary of the Taldy-Kurganskaya Oblast Committee of the Kazakh CP; Kh. Sh. Bekturganov, first secretary of the Dzhambulskaya Oblast

Committee of the Kazakh CP; F. F. Safronov, director of the "Dvurechnyy" Sovkhoz in Turgayskaya Oblast; S. N. Tanekeyev, chairman of Kazpotrebsoyuz; M. G. Motoriko, KaSSR minister of agriculture; and A. A. Alybayev, KaSSR minister of meat and dairy industry.

The plenum of the Kazakh CP Central Committee adopted a resolution on the topic under discussion.

The plenum of the Kazakh CP Central Committee took for guidance and unswerving fulfillment the decisions of the May (1982) Plenum of the CPSU Central Committee, the principles and conclusions set forth in the address delivered at it by Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee, and also the decrees of the CPSU Central Committee and USSR Council of Ministers approved by the plenum, and it stressed that unconditional fulfillment of the basic tasks of KaSSR in implementing the country's Food Program which have been defined up to the year 1990 constitutes a most important strategic direction in the activity of the republic party organization.

Yu. P. Belov, sector head in the agriculture division of the CPSU Central Committee, took part in the proceedings of the plenum.

The plenum of the Kazakh CP Central Committee has completed its work.

Resolution on Food Program Adopted by Plenum

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 24 Jun 82 p 1

[Resolution adopted by Sixth Plenum of Kazakh CP Central Committee on 23 June 1982]

[Text] Having heard and discussed the report of Comrade D. A. Kunayev, member of the Politburo of the CPSU Central Committee and first secretary of the Kazakh CP Central Committee, entitled "On the Tasks of the Republic Party Organization Arising Out of the Decisions of the May (1982) Plenum of the CPSU Central Committee and the Address Delivered at It by Comrade L. I. Brezhnev Concerning the USSR Food Program," the plenum of the Kazakh CP Central Committee, expressing the unanimous opinion of party members and all the republic's working people, wholly and completely approves and supports the historic decisions of the May (1982) Plenum of the CPSU Central Committee and the principles and conclusions set forth in the address delivered at the plenum by Comrade L. I. Brezhnev.

The decisions of the May (1982) Plenum of the Central Committee are vivid evidence of the consistent and purposive activity of the CPSU Central Committee, of its Politburo, and of Comrade L. I. Brezhnev personally in carrying out the up-to-date farm policy worked out by the March (1965) Plenum of the CPSU Central Committee and in pursuing the course of the 26th congress of our party toward fuller satisfaction of the vital needs of the Soviet people. They mark a fundamentally new stage in solving one of the most complicated problems of the national economy.

Large-scale measures to develop the productive forces of socialist society and to improve social relations in rural life have been outlined in the profoundly meaningful and programmatic address of Comrade L. I. Brezhnev and in the documents approved by the plenum.

The purpose of the measures drafted by the party is to reliably furnish the country's population all types of food in the shortest possible time, to substantially improve the diet of the Soviet people by increasing consumption of the most nutritious products. The instruction of the plenum of the CPSU Central Committee that the Food Program should yield its first fruits in this very year has extremely great importance in this life, since that will require raising the productivity of cropping and animal husbandry guaranteeing fulfillment and overfulfillment of state plans for purchases of grain, meat, milk and other products and their prompt processing and full preservation, and creation of a reliable base for a faster upward climb of agricultural production in the years to follow.

Kazakhstan, a very important granary and livestock-raising center of the Soviet Union, has tasks to perform in the further stable development of agriculture and related branches of the agroindustrial complex which are more complex and responsible than ever before.

The republic possesses everything necessary to perform them: a mighty economic and scientific potential and experienced personnel devoted to the cause of the Communist Party.

The plenum of the Kazakh CP Central Committee resolves as follows:

1. To adopt for guidance and unswerving execution the decisions of the May (1982) Plenum of the CPSU Central Committee, the principles and conclusions set forth in the address which Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee delivered at it, and also the decrees of the CPSU Central Committee and USSR Council of Ministers approved by the plenum.

2. To consider it a most important and strategic direction in the activity of the republic party organization to unconditionally perform the basic tasks of KaSSR defined for the period up to 1990 in carrying out the USSR Food Program. To direct toward their fulfillment the organizational and political work of party, trade union and Komsomol organizations, soviet and economic authorities, the creative energy and initiative of the working people of city and countryside, and the entire force of nationwide socialist competition.

The tasks arising out of the decisions of the May (1982) Plenum of the CPSU Central Committee and the address which Comrade L. I. Brezhnev delivered at it are to be discussed in plenums and aktivs of party committees, conferences of party members in all primary party organizations, meetings of collegiums of ministries and departments, sessions of soviets of people's deputies, trade union and Komsomol organizations, and work collectives, and specific measures for performing them are to be outlined.

KaSSR Gosplan and its local agencies are hereby required to take the republic's principal tasks in carrying out the USSR Food Program as points of departure in completing the drafting of food programs in oblasts and rayons and comprehensive plans for development of farms and increasing production of farm products on sovkhozes and kolkhozes by 1 November 1982.

The ministries of agriculture, the fruit and vegetable industry, procurements, the food industry, the meat and dairy industry, the fishing industry, reclamation and water management, and trade, Gossnab, KaSSR Goskomsel'khoztekhnika, Glavrissovkhozstroy [Main Administration for Setting Up Rice-Growing Sovkhozes], Kazpotrebsoyuz, and other ministries and departments of the republic are by 1 January 1983 to draft and approve measures to ensure fulfillment of the tasks envisaged in the country's Food Program over the period up to the year 1990.

On the basis of the decisions of the May (1982) Plenum of the CPSU Central Committee proportional and balanced development of the republic's agroindustrial complex is to be achieved, management, planning and economic incentives improved in all its branches, with maximum orientation of production toward attainment of high final results. A sharper change of direction is to be made in all sectors of the republic's economy toward solving the problems of the further upward climb of agricultural production and branches related to it so as to augment at a faster rate the production and procurement of all types of farm products, to improve their quality and preservation, and to solve the problem of uninterrupted supply of all food commodities to the population.

3. The plenum of the Kazakh CP Central Committee requires that party obkoms, gorkoms and raykoms, ispolkoms of oblast, city and rayon soviets of people's deputies, the republic's ministries and departments, primary party, trade union and Komsomol organizations, and directors of sovkhozes, kolkhozes and other state farms and of industrial, construction and transport enterprises, in the light of the decisions of the 26th party congress and the May (1982) Plenum of the CPSU Central Committee and the instructions and conclusions set forth in the address of L. I. Brezhnev delivered at the plenum mobilize all energies, potential and physical and technical resources for the successful fulfillment of the priority task of the Food Program, which is unconditional fulfillment and overfulfillment of the plan and socialist obligations for 1982 and the 11th Five-Year Plan as a whole concerning the production and procurement of grain, meat, milk, potatoes, vegetables and other farm products.

To ensure high quality of all agricultural work this year, prompt care for crops and preparation and organized performance of the harvest. To use effectively the pasturing period for increasing the productivity of livestock and increase its weight gain during fattening and the milk production of dairy cows.

Fodder is to be laid by at a faster pace everywhere in order to fully meet the needs of socialized livestock and livestock which are the personal property of individuals in every rayon and on every farm.

To carry out additional measures to speed up activation of projects in the branches of the agroindustrial complex with a view toward ensuring unconditional fulfillment of assignments to augment enterprise capacities envisaged in the plan for 1982 for the production, procurement, processing, storage and distribution of farm products, and also for construction of housing, schools, kindergartens and other cultural and consumer service facilities and production projects on sovkhozes and kolkhozes as well as assignments for improvement of all spheres of service to rural workers.

4. Party, soviet and agricultural authorities and farm directors and specialists are to be persistent in achieving further intensification of agricultural production on the basis of all-out mechanization and electrification, chemicalization and reclamation, and to be more vigorous in applying the advances of science and advanced know-how on sovkhozes and kolkhozes. To improve the planting pattern, to make the transition everywhere to plant those varieties of agricultural crops that are promising and have the highest yield, to improve selection and breeding, to step up the effort toward specialization and concentration of production on the basis of interfarm cooperation and agroindustrial integration.

To expand the network of subsidiary farming operations at industrial enterprises and in construction, transport and other organizations and to promote development of private subsidiary farming by individuals.

A sound basis is to be created everywhere for faster upward climb of agricultural production in the years to follow so that every oblast, rayon, every sector of the economy, and all work collectives in city and rural areas make the maximum contribution to carrying out the Food Program.

5. The plenum of the Kazakh CP Central Committee requires that party, soviet and economic authorities concentrate efforts on improving in every way the practices used in cropping and livestock raising, on the fight for improved utilization of land, especially irrigated land, capital investment and productive capital, on raising labor productivity and the quality of performance, on eliminating losses, on conservation and thrift, and on reducing production costs on sovkhozes and kolkhozes.

As faster development of all branches of the agroindustrial complex in the republic is achieved, there has to be expansion of the network and reconstruction of existing processing enterprises in the food manufacturing, meat and dairy, and canning industries; waste-free technology has to be introduced everywhere so that foodstuffs are produced in a broader assortment from agricultural raw materials produced in the republic and their supply improved to the population.

6. Obkoms of the Kazakh CP are required to take steps toward further enhancement of the role of rural party raykoms in political guidance of the agroindustrial complex and in ensuring the smooth interaction of all its entities. The obkoms are to see that the raykoms constantly improve the style and methods of their activity and extend more concrete aid to primary party organizations in their effort to mobilize work collectives to fulfill the plans and assignments arising out of the Food Program.

The newly created agriculture divisions of party raykoms are to be staffed with trained and competent personnel who have practical experience working with people.

7. Party obkoms, gorkoms and raykoms and primary party organizations are to raise to a new level their work with the personnel of sovkhozes, kolkhozes, interfarm enterprises and associations so that all areas of the agroindustrial complex are headed by workers capable of successfully performing the tasks set by the 26th party congress and the May (1982) Plenum of the CPSU Central Committee and to pay particular attention to indoctrinating directors and specialists in a spirit of high responsibility for the jobs assigned them and an implacable attitude toward shortcomings.

To promote the transfer of specialists from the managerial staff directly to sovkhozes and kolkhozes, to motivate in every way those who declare a desire to work on economically weak and newly created farms. To be bold in promoting women to supervisory work and to ensure the correct combination of experienced and young personnel.

8. Party obkoms and raykoms, soviet, trade union and agricultural authorities are to achieve broad participation of sovkhoz workers and employees in the management of production and improvement of intrafarm democracy. To ensure the regular holding of general assemblies of kolkhoz members and meetings of boards on kolkhozes, production conferences and assemblies of sovkhoz workers. To strictly observe dates for elections and reporting of supervisory personnel of kolkhozes.

To develop patronage relations of collectives of industrial enterprises toward sovkhozes and kolkhozes.

Party and state discipline are to be strengthened in every way, and fulfillment of directives of the party and government and decisions of party and soviet authorities are to be monitored and verified more closely.

9. Editors of newspapers and journals, KaSSR state committees for television and radiobroadcasting and for affairs of publishing houses, the printing industry and the book trade are to make efforts to convey the principles and conclusions of Comrade L. I. Brezhnev's address and the contents of the documents of the May (1982) Plenum of the CPSU Central Committee to all the republic's workers, to concentrate attention on more fully documented coverage of the activity of party, soviet and economic authorities in solving the food problem, to skillfully cover the socialist competition for improving in every way cropping and animal husbandry practices, attaining the best final results in all entities of the agroindustrial complex, popularize advanced know-how in an effective and convincing way, extensively portray the growing political activity and industry of all collectives in the struggle to perform the tasks of the republic's socioeconomic development in the 11th Five-Year Plan and the decisions of the 26th CPSU Congress and the 15th Congress of the Kazakh CP.

The plenum of the Kazakh CP Central Committee expresses firm conviction that party members and all the republic's workers will once again demonstrate their high degree of organization and solidarity around the Leninist CPSU Central Committee and will apply all energies in the unified fraternal family of nationalities of our great homeland to successfully carry out the Food Program and the plans of the second year of the current 5-year period, make a maximum contribution to implementing the decisions of the 26th CPSU Congress and 15th Kazakh CP Congress, and celebrate the 60th anniversary of formation of the USSR in a worthy way.

TURKMEN SUPREME SOVIET PRESIDIUM DISCUSSES FOOD PROGRAM

Ashkhabad TURKMENSKAYA ISKRA in Russian 20 Jun 82 p 3

[Turkmeninform article: "In the Supreme Soviet Presidium of the Turkmen SSR"]

[Text] A regular session of the Presidium of the Supreme Soviet of the Turkmen SSR took place under the leadership of B. Yazkuliyev, member of the CC Bureau of the Communist Party of Turkmenistan and Chairman of the Presidium of the Supreme Soviet of the TSSR.

The Presidium approved the decree on the organization of task completion, which emanated from the May 1982 Plenum of the CC CPSU. It emphasizes that one of the main tasks of Soviets of People's Deputies and their subordinate organs has now become the implementation of the Food Program of the USSR, an undeviating execution of measures to assure a proportional and balanced development of all branches of the agro-industrial complex, with the goal of providing the country with a steady supply of food products and agricultural raw materials, and of further raising the standard of living of the people.

The first sessions of local Soviets of People's Deputies of the Republic's 18th convocation are to be devoted to a comprehensive discussion of tasks emanating from the decisions of the May 1982 Plenum of the CC CPSU and the instructions given by Comrade L. I. Brezhnev contained in his report at that Plenum and in a speech at a meeting of the Presidium of the Supreme Soviet of the USSR on 31 May 1982. Specific measures must be developed everywhere for implementing the Food Program and for putting into effect the essential preparatory work for the impending education of region and oblast agro-industrial societies.

Local Soviets of People's Deputies and their executive and administrative organs are being called upon to concentrate their efforts on an all-round increase in the output of agricultural production and to strive for profitable work on the part of all economic units and for an unconditional accomplishment of Plan tasks by every kolkhoz, sovkhoz, and agricultural enterprise. Measures must be taken to improve the use of irrigated lands in the republic and to strengthen the control over adherence to laws regarding land and water utilization.

Attention has been focused on the necessity of expanding the output of agricultural production in subsidiary economic units of enterprises and organizations, as well as in private subsidiary economic units of citizens. It is important to constantly keep in front of the local Soviets those problems concerned with assuring the safekeeping of the produced goods, and ensuring efficient work on the part of preparation, transport, trade, and other organizations dealing with transporting, safeguarding, and processing agricultural products and delivering them to consumers.

Taking into consideration the fact that the party looks at the problems associated with the social transformation of the village as an indivisible, component part in the implementation of the entire Food Program, the Soviets of People's Deputies should exhibit more perseverence in improving living conditions of farm workers and in keeping the cadres in the village. It is essential to achieve an unconditional completion of plans for the construction of housing, roads, and communal and social-cultural buildings and to develop cooperative and individual housing in rural populated points.

The Presidium of the TSSR Supreme Soviet also examined the rate of progress of legislation requested of Soviets of People's Deputies of the Maryyskiy oblast regarding the awarding of a "Veteran of Labor" medal to workers and the status of accomplishing the tasks required by the resolution passed by the Presidium of the TSSR Supreme Soviet on "The Status and Measures Taken for the Further Improvement of Legal Studies for Deputies of Local Soviets and People's Deputies of the Tashauzskiy oblast."

Other problems were also discussed, and appropriate resolutions were approved.

The session was attended by M. G. Shmidt, member of the CC Bureau of the Communist Party of Turkmenistan and Deputy Chairman of the Presidium of the TSSR Supreme Soviet; O. I. Ishankuliev, Candidate Member of the CC Bureau of the Communist Party of Turkmenistan and Chairman of the TSPS; O. Nazarov, Secretary of the Presidium of the TSSR Supreme Soviet; and leaders of certain ministries and departments of the republic.

UKRAINIAN CENTRAL COMMITTEE, GOVERNMENT AFFIRM FOOD PROGRAM

Kiev PRAVDA UKRAINY in Russian 6 Jun 82 p 1

> [Text] The Ukrainian Communist Party Central Committee and Ukrainian SSR Council of Ministers have adopted the decree "The Organization of Work on Fulfillment of the Decisions of the CPSU Central Committee May (1982) Plenum and the Tasks Posed in Comrade L.I. Brezhnev's Report 'The USSR Food Program for the Period Through 1990 and Measures To Implement It!'".

Attaching great significance to the precise organization of all work on the practical accomplishment of the tasks advanced by the CPSU Central Committee May Plenum, the Ukrainian Communist Party Central Committee and UkSSR Council of Ministers have affirmed a work plan which determines priority measures for the extensive discussion, explanation and propaganda of the plenum's material and issues concrete assignments pertaining to realization of the instructions contained in Comrade L.I. Brezhnev's report and the Food Program and fulfillment of the CPSU Central Committee and USSR Council of Ministers decrees affirmed by the plenum.

The results of the CPSU Central Committee May (1982) Plenum and the tasks of the party organizations ensuing from its decisions and Comrade L.I. Brezhnev's report "The USSR Food Program for the Period Through 1990 and Measures To Implement It" will be discussed on 24 June at a Ukrainian Communist Party Central Committee plenum and in June-July at obkom, gorkom and raykom plenums and at meetings of communists in all primary party organizations. It is recommended that the results of the CPSU Central Committee plenum also be discussed at meetings of workers, employees and kolkhoz members in the labor collectives.

The plenums and meetings should analyze the state of affairs comprehensively and in depth and determine with reference to local conditions concrete measures for the accomplishment of the tasks ensuing from Comrade L.I. Brezhnev's report at the CPSU Central Committee plenum and for ensuring the proper contribution of each oblast, rayon, city and labor collective to implementation of the Food Program.

It is recommended that the republic's ministries and departments develop practical measures for the accomplishment of the tasks ensuing from the decisions of the CPSU Central Committee May (1982) Plenum and Comrade L.I. Brezhnev's report and discuss them at enlarged board sessions.

In accordance with the USSR Supreme Soviet Presidium decree and the instructions expressed by Comrade L.I. Brezhnev at the Presidium session of 31 May this year, the tasks of the soviets in connection with the decisions of the CPSU Central Committee May (1982) Plenum and the practical measures for a further increase in the activeness of the soviets, deputy commissions and groups and each deputy in implementation of the Food Program will be examined at the first sessions of the newly elected soviets. Particular attention here should be paid to the accelerated solution of questions of sociocultural and housing construction in the countryside.

It is recommended that the UkSSR Council of Trade Unions and Ukrainian Komsomol Central Committee outline concrete measures with respect to participation in implementation of the Food Program and discuss them at their plenums and also at plenums of the sectorial republic trade union committees in local trade union and Komsomol organizations. Their main attention should be concentrated on the development of effective socialist competition for the successful fulfillment of the plans of 1982 and the quotas of the 11th Five-Year Plan and an increase in the role and responsibility of the trade union and Komsomol organizations for a strengthening of labor discipline, an improvement in the working people's work, social and recreational conditions and the more active participation of trade union and Komsomol members and the youth in the practical implementation of the decisions of the CPSU Central Committee May (1982) Plenum.

Considering the important role which belongs to science in the accomplishment of the tasks advanced by the CPSU Central Committee plenum, the Ukrainian Communist Party Central Committee and UkSSR Council of Ministers have proposed that the UkSSR Academy of Sciences and VASKhNIL Southern Branch and ministries and departments make the necessary amendments to the plans of scientific research and discuss the tasks of the scientific establishments ensuing from Comrade L.I. Brezhnev's report "The USSR Food Program for the Period Through 1990 and Measures To Implement It" at a joint session of the UkSSR Academy of Sciences' and VASKhNIL Southern Branch presidiums.

A paramount task of the party organizations at the present time is to convey the content and significance of the decisions of the CPSU Central Committee May Plenum and the propositions of Comrade L.I. Brezhnev's report and the USSR Food Program to each communist and each worker and help him determine his place in the nationwide struggle for a further upsurge of agriculture and the development of all sectors of the agrarian-industrial complex. Party committee members, obkom, gorkom and raykom executives, soviet deputies, trade union and Komsomol workers, scientists, specialists, managers, production pacesetters and innovators and the best propaganda forces must participate most actively in this work.

Particular attention is being paid to questions of the staffing of the newly created agrarian-industrial complex management authorities with executive personnel and specialists, organization of the precise interaction of all the complex's components at the republic, oblast and rayon levels and an improvement in the economic mechanism of the management of kolkhoz and sovkhoz production. The appropriate authorities have been instructed to draw up proposals on the structure of the management machinery of oblast and rayon agrarian-industrial associations.

All this work will be headed by the UkSSR Council of Ministers Presidium Agrarian-Industrial Complex Commission which is being set up.

Instructions have been issued concerning the preparation of proposals and the realization of the concrete tasks ensuing from the decisions of the CPSU Central Committee May Plenum, particularly concerning the work volume in the construction of cultural-social facilities in the countryside thanks to the enlistment for this purpose of the capacity of the urban house-building works, the amount of capital investments to be channeled into housing and sociocultural construction on the economically weak kolkhozes and sovkhozes thanks to 10 percent of the resources allocated for the construction of sociocultural-everyday facilities in the republic's cities and the possible amount of cooperative housing construction in the countryside performed under contract.

It is planned in the very near future to develop and implement concrete measures for an improvement in the organization of supplies of fruit and vegetable products to the population--an improvement in procurement, a reduction in losses and uninterrupted trade in the cities and industrial centers.

Measures will also be developed:

to strengthen the material-technical facilities of local food industry.

further develop trade in the countryside, extend the network of modern stores, trading centers, public catering enterprises, bakeries, canning shops and cold stores and more fully satisfy the rural population's commodity requirements;

improve consumer services for the rural population, expand the construction in the rayon centers of laundry and dry-cleaning factories and enterprises for the repair of household machinery and appliances and create coin-operated laundries, baths and composite acceptance centers on the kolkhoz and sovkhoz central grounds;

expand road building in the countryside and improve bus services;

accelerate the telephone hookup of facilities in rural localities, particularly in treatment and prophylactic and children's establishments; and

organize municipal services and gas supply in the countryside.

It is planned to examine in the Ukrainian Communist Party Central Committee the progress of fulfillment of the quotas with respect to the production and supply to agriculture and other sectors of the agrarian-industrial complex of equipment, installations, spares, mineral fertilizer and other material-technical resources and also the progress of construction of projects of the agrarian-industrial complex.

Concrete measures are planned for a further increase in the efficacy of socialist competition and an improvement in the work of the raykoms and gorkoms and primary party organizations on leadershp of agricultural production. It is important to staff the newly created agricultural departments in the raykoms with authoritative communists, primarily from the ranks of specialists with experience of party-political work and party educational institution graduates. The Ukrainian Communist Party Central Committee departments and obkoms have been instructed to organize the training of raykom agricultural department workers and kolkhoz, sovkhoz and interfarm association primary party organization secretaries at courses in the Ukrainian Communist Party Central Committee Higher Party School and obkom improvement courses.

It is also necessary to prepare proposals for an improvement in the training of kolkhoz and sovkhoz executive personnel and specialists and extend the improvement course attendees' period of probationary service on the advanced farms.

The Ukrainian Communist Party Central Committee and UkSSR Council of Ministers have drawn the attention of the obkoms, raykoms and gorkoms, local soviet ispolkoms and leaders of republic ministries and departments, kolkhozes and sovkhozes and enterprises and associations particularly to the fact that in organizing all work on implementation of the decisions of the CPSU Central Committee May (1982) Plenum and the Food Program it is essential to concentrate the efforts of the party organizations and labor collectives primarily on fulfillment of the plans and socialist pledges of the current year for the production and sale to the state of grain, meat, milk and other products and the urgent tasks for an improvement in food supplies to the population. All steps must be taken to ensure the timely and high-quality care of the agricultural crop sowings and the harvesting and grain procurements and the maximum use of all opportunities for the creation of sufficient fodder stocks and the uninterrupted provision of the working people with vegetables. It is necessary to create a reliable basis everywhere for a speedier upsurge of agricultural production in subsequent years.

UZBEK CP CENTRAL COMMITTEE HOLDS PLENUM

Information Report on Plenum

Tashkent PRAVDA VOSTOKA in Russian 16 Jun 82 p 1

[Information report of Uzbek CP CC Plenum held 15 June 1982]

[Text] The Sixth Plenum of the Central Committee of the Communist Party of Uzbekistan was held on 15 June 1982. Comrade Sh. R. Rashidov, first secretary of the Uzbek CP Central Committee and candidate to membership in the Politburo of the CPSU Central Committee, presented a report entitled "On Results of the May (1982) Plenum of the CPSU Central Committee and Tasks of the Republic's Party Organization Arising Out of the Address of Comrade L. I. Brezhnev Entitled 'On the USSR Food Program Over the Period up to the Year 1990 and Measures To Fulfill It.'"

The following took part in discussion of the report: Comrades M. M. Musakhanov, first secretary of the Tashkentskaya Oblast Party Committee; K. Kamalov, first secretary of the Karakalpakskaya Oblast Party Committee; U. Umarov, first secretary of the Tashkent City Party Committee; A. Karimov, first secretary of the Surkhandar'inskaya Oblast Party Committee; V. P. Yesin, first secretary of the Navoiyskaya Oblast Party Committee; A. Alimov, UzSSR minister of fruit and vegetable industry; R. G. Gaipov, first secretary of Kashkadar'inskaya Oblast Party Committee; S. Mamarasulov, first secretary of the Andizhanskaya Oblast Party Committee; A. A. Urkinbayev, UzSSR minister of agriculture; V. A. Khaydurov, first secretary of Syrdar'inskaya Oblast Party Committee; A. K. Karimov, first secretary of Bukharskaya Oblast Party Committee; T. Baymirov, first secretary of Dzhizakskaya Oblast Party Committee; R. Ashuraliyev, first secretary of the Samarkandskaya Oblast Party Committee; M. Kamalov, first secretary of the Namanganskaya Oblast Party Committee; Kh. Umarov, first secretary of the Ferganskaya Oblast Party Committee; M. Kudaybergenov, first secretary of the Khorezmskaya Oblast Party Committee; I. Kh. Dzhurabekov, UzSSR minister of reclamation and water management; M. M. Mirzayev, general director of the Scientific Production Association for Fruitgrowing, Grapegrowing and Winemaking imeni R. R. Shreder.

Comrade N. F. Vasil'yev, member of the CPSU Central Committee and USSR minister of reclamation and water management, spoke at the plenum.

The concluding address at the plenum was delivered by Comrade Sh. R. Rashidov, candidate to membership in the Politburo of the CPSU Central Committee and first secretary of the Uzbek CP Central Committee.

The plenum of the Uzbek CP Central Committee adopted a resolution on the topic under discussion.

Comrades V. V. Dorofeyev and I. Ye. Ponomarev, responsible officials of the CPSU Central Committee, took part in the proceedings of the plenum.

That ended the work of the plenum of the Uzbek CP Central Committee.

Resolution on Food Program Adopted by Plenum

Tashkent PRAVDA VOSTOKA in Russian 17 Jun 82 p 1

[Resolution adopted by Sixth Plenum of Uzbek CP Central Committee on 15 June 1982]

[Text] Having heard and discussed the report of Comrade Sh. R. Rashidov, candidate to membership in the Politburo of the CPSU Central Committee and first secretary of the UzSSR CP Central Committee, entitled "On Results of the May (1982) Plenum of the CPSU Central Committee and Tasks of the Republic's Party Organizations Arising Out of the Address of Comrade L. I. Brezhnev Entitled 'On the USSR Food Program Over the Period up to the Year 1990 and Measures To Fulfill It,'" the plenum of the Uzbek CP Central Committee deems the regular plenum of the CPSU Central Committee held on 24 May 1982 to be a major event in the life of the party and the Soviet State. The plenum has particular importance because of the importance of the topics discussed, and their implementation will make it possible to ensure progress of the entire national economy. The decisions of the plenum are evidence of the consistent conduct of the farm policy worked out at the historic March (1965) Plenum of the CPSU Central Committee and elaborated at the 23d, 24th, 25th and 26th party congresses.

The plenum examined and approved the Food Program covering the period up to the year 1990 and measures to implement it, affirmed a number of decrees of the CPSU Central Committee and USSR Council of Ministers which undoubtedly are playing a decisive role in development of all branches of agricultural production and in fulfillment of the Food Program. The task of completing full mechanization of cropping and animal husbandry and of retooling the food branches of industry on a new technical base was set and will be performed.

In an exceptionally meaningful address delivered at the plenum, one that was imbued with a spirit of creativity, Comrade L. I. Brezhnev thoroughly and comprehensively analyzed in fundamental terms and in Leninist fashion the results of development of the country's agroindustrial complex, revealed the main directions of its further progress and the ways and means of carrying out the Food Program. The address of Comrade L. I. Brezhnev constitutes a major contribution to scientific communism and to Marxist-Leninist theory of the agrarian question in the present stage.

The plenum of the Uzbek CP Central Committee emphasized that the workers of the republic, along with the entire Soviet people, regard the Food Program and the tasks set by Comrade L. I. Brezhnev as their vital concern and fervently declare their readiness to successfully carry out the decisions of the May Plenum of the CPSU Central Committee.

In the years that have passed since the March (1965) Plenum of the CPSU Central Committee major changes have taken place in the republic's agriculture, as indeed they have throughout the country. The level of technical adequacy of kolkhozes and sovkhozes is high, and agriculture's productive potential has been strengthened in an unprecedented way.

Irrigation and reclamation, chemicalization and full mechanization have experienced considerable development. Major steps have been taken toward specialization and concentration of agricultural production on the basis of interfarm cooperation and agroindustrial integration.

Branches of industry serving agriculture--the chemical industry, the mixed feed industry, agricultural machinebuilding, and the food branches of industry--have undergone further development. Industry building machines for animal husbandry and feed production have been built anew.

Profound changes have taken place in the living and working conditions of the kolkhoz-sovkhoz peasantry, and social issues are being resolved successfully in rural life.

All of this has made it possible to increase the production of farm products on a substantial scale. The gross output of agriculture has doubled and reached nearly 7 billion rubles. Cotton production has increased 1.7-fold, production of the most valuable fine-staple cotton fivefold, grain production fourfold, the output of fruit and vegetables 3.5-fold, meat production twofold, the production of milk and eggs 2.6-fold. Over that period labor productivity has risen 36 percent.

While according appropriate praise for what has been achieved, the plenum of the Uzbek CP Central Committee feels at the same time that there are still many unresolved issues in the republic's agriculture. On many farms the productivity of cropping and livestock raising is low, and the potential of the land, water resources and plant and equipment are not being sufficiently utilized. The public's demand for meat and milk has not been fully met, and there are interruptions in the supply to trade of certain other foodstuffs.

The plenum of the Uzbek CP Central Committee resolves as follows:

1. That the decree of the May (1982) Plenum of the CPSU Central Committee and the principles and conclusions set forth in the address of Comrade L. I. Brezhnev be taken up as a guide and be adopted for unswerving fulfillment and made the basis of the practical activity of all party, soviet, trade union and Komsomol organizations and the republic's economic authorities in carrying out the Food Program and in consistently implementing the CPSU's farm policy.

2. That the UzSSR Council of Ministers, gosplan, the republic's ministries and departments, party obkoms, the Council of Ministers of Karakalpakskaya ASSR and oblast ispolkoms take as their points of departure in drafting annual plans of economic and social development and the draft plan for the 12th Five-Year Plan the assignments set forth in the Food Program, the need to accomplish a sharper change of direction of all sectors of the economy toward solving the problems of a further upward climb of agricultural production, development of the agroindustrial complex and development of cottongrowing so that the task of a fuller supply of food to the republic's population is performed in a very short period of time.

3. That party obkoms, gorkoms and raykoms, the republic's ministries and departments, local soviet and economic authorities, directors of kolkhozes and sovkhozes and industrial, construction and transport enterprises, and primary party organizations mount a vigorous organizational effort among the workers, kolkhoz members and intelligentsia to perform the tasks arising out of the decisions of the May (1982) Plenum of the CPSU Central Committee and the address of Comrade L. I. Brezhnev, from the decisions of the present plenum and the report of Comrade Sh. R. Rashidov, the decrees of the CPSU Central Committee and USSR Council of Ministers, and the decrees of the Uzbek CP Central Committee and UzSSR Council of Ministers on these topics.

Karakalpakskaya ASSR, every oblast, all rayons, kolkhozes and sovkhozes, every sector of the economy and all the work collectives of cities and rural areas are called upon to make a maximum contribution to solving the food problem, which is the central problem of the party and state in the 11th and 12th Five-Year Plans.

4. The plenum requires of all party and soviet authorities, ministries and departments, trade union and Komsomol organizations, kolkhozes and sovkhozes, and interfarm enterprises and associations that they concentrate the efforts of work collectives on improving in every way the practices followed in cropping and animal husbandry and wage a fight for improved utilization of land, productive capital and physical, labor and financial resources, for higher labor productivity and quality of performance, for elimination of losses, for conservation and thrift, and for reduction of production costs on kolkhozes and sovkhozes.

Particular attention is to be paid to ensuring accelerated development of animal husbandry and to strengthening its animal feed base, to increasing the production of meat, milk and eggs, to larger production of grain, especially corn and rice, and larger production of vegetables, potatoes, melons, fruit and grapes.

The initiative of Akhangaranskiy, Leninskiy, Andizhanskiy, Pakhtaabadskiy, Khodzhaabadskiy, Kasansayskiy, Uychinskiy, Samarkandskiy, Dekhkanabadskiy, Kurgantepinskiy, Shakhrisabskiy, Kasanskiy, Pastdargomskiy, Sovetabadskiy, Urgutskiy, Sariasiyskiy, Denauskiy, Gizhduvanskiy, Farishskiy, Bakhmal'skiy, Kanimekhskiy and Bozatauskiy Rayons, which have resolved to bring meat production in the 11th Five-Year Plan up to 10,000 tons or more, is approved.

5. The plenum warmly approved the initiative of the Yangiyul', Yangiyer, Denau, Kokand, Namangan and Termez party gorkoms, which have been striving to produce meat on subsidiary farms of enterprises and organizations up to the proportion of 25-30 kg per worker per year.

6. The plenum emphasizes that given the growing scale of production new requirements are being imposed on the personnel of all branches of the agroindustrial complex with respect to the planning and management of production and its supply of materials and equipment. At all levels of management there must be close linkage and coordination of the activity of all components of the agroindustrial complex, their dynamic and balanced development, and personnel must be given greater responsibility for attainment of the best final results and motivation to increase the production of good-quality foodstuffs.

Party obkoms, gorkoms and raykoms and primary party organizations are to persistently improve the forms and methods of organizational and mass-political work, impart maximum concreteness, seriousness and responsiveness to this work, augment the activity of work collectives to successfully carry out the tasks set by the May (1982) Plenum of the CPSU Central Committee and furnish straightforward and effective followup in this matter. This very year they are to achieve a substantial improvement in the productivity of cropping and animal husbandry, fulfillment and overfulfillment of state plans for purchases of cotton, grain, meat, milk, eggs, and fruit and vegetables, timely processing and full preservation of those purchases, and they are to create a sound basis for a more rapid upward climb of agricultural production in the years to follow.

The plenum emphasizes the particular role of party raykoms in rural rayons in performing the tasks advanced by the May (1982) Plenum of the CPSU Central Committee. Every effort needs to be made to enhance the responsibility of all personnel for increasing agricultural output, to keep that personnel in rural areas, and to enhance the importance of material incentives for conscientious work in the agrarian sector of the economy. Provision should be made for appointment to the agriculture divisions of party raykoms authoritative specialists who have given a good account of themselves.

The plenum of the Uzbek CP Central Committee assures the Leninist CPSU Central Committee, the Politburo of the Central Committee, and Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the Presidium of the USSR Supreme Soviet, personally that the party, soviet, trade union and Komsomol organizations, economic authorities, kolkhoz members and sovkhoz workers, specialists and scientists, industrial workers and all the working people of the republic will spare no energy in unconditionally carrying out the decisions of the May (1982) Plenum of the CPSU Central Committee and the present plenum and will make a worthy contribution to carrying out the Food Program.

SOVIET JOURNAL ON SOCIALIST COMMUNITY'S UNITY

PM201505 Moscow MEZHDUNARODNAYA ZHIZN in Russian No 8, [no date given] (signed to press 20 Jul 82) pp 31-39

[V. Nekrasov article: "Unity and Cohesion--The Guarantee of the Socialist Community's Further Successes"]

[Text] The socialist community countries entered the second year of the current 5-year period with new achievements. The course of the all-round intensification of production and of improving production efficiency and the quality of output--the course defined by the recent congresses of the countries' communist and workers' parties--is being persistently implemented. New problems and complex tasks are being resolved and the shortcomings which still exist are being overcome in the interests of society as a whole and of each citizen. The fraternal countries' national incomes are growing, as are their global social product and volume of industrial production, and the working people's living standard is improving.

"The communist and workers parties are the living soul, the leading and guiding force of the socialist community countries," the CPSU Central Committee resolution "on the 60th anniversary of the USSR's formation" notes. "Experience shows that loyalty to the principles of Marxism-Leninism and socialist internationalism and close collaboration between the fraternal parties in all spheres make it possible to correctly combine the socialist states' common and national interests, successfully resolve the contradictions and difficulties which arise in the course of the development and assure the confident progress of each country and the socialist community as a whole. CEMA and the Warsaw Pact Organization reliably serve this end."

The new system is developing in an atmosphere of constant economic, political, military and ideological pressure from imperialism. In the conditions of profound economic upheavals and the protracted crisis now being experienced by present-day capitalism, the most reactionary, most aggressive forces have stepped up their activity. It is obvious today as never before that imperialism sees the main obstacle to its adventurist designs in the socialist community's cohesion, the growth of its prestige and its purposeful, consistent struggle for international security.

In the struggle against socialism the obscolescent system has always sought to disunite the socialist countries and weaken their unity. The fraternal states have counterposed to this line their firm alliance, which is based on relations which are genuinely comradely and alien to national selfishness and is the bulwark of peace on our planet. "We created this community," L. I. Brezhnev has said, "above all in order to oppose the threat of imperialism and the aggressive military blocs it has created and in order to uphold the cause of socialism and peace by joint efforts."[1]

Reactionary circles in the West have not given up their attempts to hold back the confident march of world socialism and reverse the wheel of history. "The history of world socialism," the CPSU Central Committee report to the 26th Party Congress stresses, "has known all kinds of trials. It has had complex moments and moments of crisis. But communists have always boldly confronted the enemy's attacks and won. Thus it has been, thus it will be, and let nobody doubt our common determination to secure our interests and defend our people's socialist gains! We are fighting for the just cause of peace and the people's security, for the working people's interests. The truth of Marxist-Leninist teaching is our side. Our strength lies in unity and cohesion."[2]

The recent congresses of the fraternal countries' ruling parties also particularly emphasized the fact that in response to the stepping of imperialism's intrigues still closer collaboration between the socialist states is needed. Thus at the 10th SED Congress E. Honecker, general secretary of the SED Central Committee, noted: "For us the main thing has been and still is to deepen our alliance with the USSR and the other fraternal socialist countries and to actively help strengthen our community's unity and cohesion."[3] The report of T. Zhivkov, general secretary of the BCP Central Committee, at the Bulgarian communists' 12th Congress said: "Fraternal friendship and solidarity and friendly mutual assistance are the guiding principle in relations between our countries and peoples. This is a mighty rallying force in the common struggle for socialism and communism. Our unity and cohesion and actions along the path to the common goal...offer the opportunity more successfully to overcome the difficulties which arise, resolve the complex tasks of socialist and communist creation and rebuff the enemies of socialism and peace."[4]

Today, now that Western reactionary circles, using the full arsenal of resources from "cold war" days, are making desperate attempts to undermine real socialism's prestige and rightwing and "leftist' revisionists are waging an unseemly campaign aimed at belittling the historical role of the community of socialist states, the strengthening of their solidarity and cohesion is acquiring particular significance.

A highly complex, tense situation has recently arisen in the world through the fault of the aggressive forces of imperialism, above all American imperialism. Never before has there been such open talk of plans for nuclear missile war. Never before have American politicians and generals expatiated so cynically on the possibility of a "limited" nuclear war in Europe and on making a "first" or "preemptive" strike against socialism. The U.S. president is calling for a new "crusade against communism." The militarization process has entered a new, extremely dangerous phase in the West.

At the same time there is the task of making socialist ideals less attractive and using all possible means to weaken the socialist community countries, complicate their economic growth, subject their peoples to ideological poisoning and split and isolate them politically. An integral part of imperialism's strategic political plans is the concept of the "destabilization of socialism"--a combination of all possible forms of pressure on socialist states with promises of all kinds of "benefits" to be derived from deviation from the agreed line and fundamental principles. This is a modification of the old plans for "differentiated coexistence" whose aim is to set some socialist countries against others.

An integral component of this "differentiated" approach is unbridled anti-Sovietism and gross distortion of the genuinely equal nature of the fraternal countries' political and economic ties with the Soviet Union. The "psychological war" of slander against real socialism is being whipped up to literally hysterical heights. Washington and its allies, making broad use of religious and nationalist prejudices, are gambling on discrediting the new society's political system and trying to shake the masses' conviction of the correctness of Marxist-Leninist ideas.

The events which have taken place since the 26th CPSU Congress have fully confirmed the correctness of its conclusion: our class enemies are learning from their defeats, they are operating with increasing sophistication and perfidy against the socialist countries. A vivid example of this is the political and economic crisis they were able to provoke in Poland, where the forces of counterrevolution, supported by imperialist centers, plunged society into a state of anarchy and jeopardized the foundations of Polish socialist statehood.

The Polish leadership's actions--the imposition of martial law and the formation of the Military Council of National Salvation--struck a crushing blow against the forces of counterrevolution in the country and created the conditions for the stabilization of the political and economic situation. But this clearly did not suit the provocateurs across the ocean. The American administration and the leaders of certain other NATO states virtually declared propaganda and economic war on the Polish people, seeking to kindle a hotbed of unrest in the country and push the Poles into a fratricidal struggle. The economic sanctions adopted against Poland by a number of capitalist countries complicate the situation and make it more difficult to lead the Polish economy out of its crisis state.

The events in Poland were used by ruling circles in the West, above all the United States, to whip up anew the anti-Soviet, antisocialist campaign. With striking irresponsibility the White House is trying to use the "Polish problem" to damage the interests of peace, security and cooperation between peoples and to promote the implementation of American imperialism's hegemonist designs.

As W. Jaruzelski, first secretary of the PZPR Central Committee, noted in his report at the 24 February 1982 Plenum of the PZPR Central Committee, "Poland is regarded as an instrument, as a lever for exerting pressure on the Soviet Union and the socialist community.... It has been assigned the role of detonator under the edifice of peace, whose foundations are the inseparable agreements signed in Yalta and Potsdam. The process of disintegrating the socialist community and turning back European history by a whole epoch was to begin with Poland."[5]

These plans failed and the West's provocative actions against Poland and the Soviet Union were firmly and resolutely rebuffed.

The effective force of socialist internationalism is revealed particularly convincingly when any of the fraternal countries is in a difficult position and needs urgent support. The internationalist position of the CPSU and the fraternal parties of the socialist countries is a great help to the Polish communists and working people of people's Poland in overcoming the crisis situation and repelling the intrigues of internal counterrevolution acting in accordance with the scenarios of imperialist centers.

The fraternal solidary displayed by the countries of real socialism toward the Polish people has met with high recognition in Poland itself. "Only the socialist community countries," the newspaper TRYBUNA LUDU stressed, "were interested in preserving Poland's high international prestige in the struggle for man's peaceful development.... Resolutely opposing any forms of intervention in Poland's internal affairs, they are thus helping to strengthen Poland's external security. It is at times like these that the words solidarity, socialist internationalism, fraternity and cooperation acquire their full meaning."[6]

Economic aid from the socialist community plays a vitally important part in eliminating the grave difficulties which have arisen in Polish society. The CEMA Executive Committee 21 January 1982 statement approved by the 36th CEMA Session in Hungary (June 1982) expresses readiness to continue to render all-round aid to the fraternal Polish people in overcoming the economic difficulties which have arisen, restoring the normal production process in the national economy and ensuring conditions for the country's further socialist development.

The visit to Moscow in early March 1982 by the Polish party and state delegation headed by W. Jaruzelski and its talks with leaders of the CPSU and Soviet state were an important step in strengthening the fraternal ties between the Soviet Union and Poland. The Soviet Union, the joint Soviet-Polish communique noted, will continue to render Poland support and aid. "The imperialist powers and primarily the United States," L. I. Brezhnev said at the dinner in the delegation's honor, "are stepping up the pressure on Poland, flouting law and morality. They would like to bring down new trials and hardships on the Poles. But let no one believe that socialism will not defend itself. It will, and most resolutely.... There is no doubt," he continued, "that the economic cooperation plans we have outlined will benefit both countries. They cover the development of raw material "resources and the development of the most important industrial sectors. There are quite good opportunities for expanding our ties in the agricultural sphere." For his part W. Jaruzelski assessed highly the fraternal, selfless aid rendered to the Polish people by the Soviet Union and the other socialist countries and showed the illusory nature of the imperialist powers' hopes of dismantling the socialist community. It will not be its weak link.[7]

The Polish party and state delegation's visit to the Soviet Union was a major event of international life attesting to the socialist community countries' indestructible solidarity in the face of the fierce attacks on it from the aggressive forces of imperialism. Great political significance attached to the visits by the Polish party and state delegation headed by W. Jaruzelski to the GDR, the CSSR, Hungary, Bulgaria and Romania in March through June 1982. Those taking part in the talks discussed the prospects of intensifying economic, scientific and technical cooperation among the fraternal states, which will help to eliminate the unfavorable consequences of the Polish national economy's dependence on the West and will serve the interests of the development of the CEMA countries' socialist division of labor, denounced the course of the imperialists forces, particularly the United States, toward spurring on the arms race and noted the importance of the contribution made to the cause of detente by the socialist countries pursuing a coordinated foreign policy.

U.S. imperialism does not restrict its hostile actions against the socialist community countries to the European region. The United States has stepped up the economic blockade against the Republic of Cuba, is stepping up its espionage and other subversive activity against it, not stopping even at the use of biological weapons, holding provocative military exercises in the vicinity of the shores of the Island of Freedom, and threatening the country with a naval blockade and direct military intervention. The Cuban people are being threatened with punishment for their desire for freedom, for their friendship with the Soviet Union and the other countries of real socialism and for their combat solidarity with the peoples of the developing states struggling for national sovereignty and economic independence.

In Southeast Asia, U.S. imperialism is giving every encouragement to the Beijing hegemonists in their aggressive actions against the Socialist Republic of Vietnam and also against People's Democratic Laos and Democratic Kampuchea. Alongside armed acts of provocation, the opponents of the socialist development of the peoples of Indochina are resorting to attempts to undermine their economy, stepping up "psychological warfare" and stopping at nothing to prevent the peoples of Vietnam, Laos and Kampuchea from focusing their efforts on the solution of peaceful, creative tasks.

The attempts by aggressive imperialist circles and their Beijing stooges to weaken real socialism's world positions and shake the socialist community are encountering the growing cohesion of fraternal countries and their mutual support in the struggle against imperialism's fierce attacks and for the consolidation of the socialist system.

Tirelessly strengthening the unity of the fraternal countries and their all-round, increasingly profound cooperation in all spheres and pooling forces and resources in the most rational way in the interests of each socialist state and the entire community--that is how the communist and workers' parties pose the question. They stress that this cooperation, based on equal rights, mutual respect, consideration for each other's interests and true revolutionary solidarity, serves and will continue to serve as a reliable basis for the entire "socialist cooperative," as V. I. Lenin put it.

The decisive front of the rivalry with capitalism lies in the sphere of the economy and economic policy. The recent congresses of the socialist community countries' fraternal parties noted that although the past few years have not been the most favorable for the national economies of a number of socialist countries nonetheless the CEMA states' economic growth rates have been substantially in excess--double in the past decade--of the corresponding indicators in developed capitalist countries. In 1976-1980, according to a report by the UN ECE Secretariat, the average annual growth of the national incomes of the European states of the socialist community was 4.4 percent, which assured an absolute increase of over 24 percent over the 5 years.

Each of the community countries resolves the problems facing it primarily through its own national efforts. However, the importance of their cooperation, both bilaterally and within the CEMA framework, is growing steadily. During the Crimea meetings of the leaders of the fraternal parties and states last year, which were an important stage in the coordination of their common positions in the economic and other spheres, it was stressed particularly that the socialist community now has everything necessary to build up its energy capacities, reach a qualitatively new level in machine building and fully satisfy the demand for consumer goods and agricultural produce. The further development of socialist economic integration and the intensification of the international socialist division of labor are called upon to play an important part in achieving these objectives. "We see key to the prosperity of the national economies," L. I. Brezhnev has pointed out, "in the increasingly profound and steady division of labor and in the joint assimilation of the most progressive production methods."[8]

An important step in this direction was taken at the 36th CEMA Session on 8-10 June 1982 in Budapest. Here general agreements were signed on multilateral cooperation in the development and extensive use of microprocessor technology in the CEMA countries' national economies and on the development and organization of the specialized and shared production of industrial robots, as was an intergovernmental agreement on multilateral international specialization and sharing in the development and production of microchips [izdeliya mikroelektronnoy elementnoy bazy] for computer facilities, special manufacturing equipment and particularly pure materials for microelectronics.

Today diverse positive experience of cooperation has been accumulated. However, life shows that in this respect there are considerable reserves. The attentive study and broader utilization of the achievements of particular community states in organizing production and management and resolving individual national economic problems remain one of the most important tasks for the forthcoming period. In the fraternal parties' opinion, the transition which has been projected and is now being implemented by the socialist countries toward the intensive development of the economy and the implementation of large-scale social programs requires a tireless creative quest and the intensification of cooperation in finding the optimum combination of the interests of each of the fraternal countries and of the entire socialist community. It is highly indicative in this connection that the proposals put forward at the 26th CPSU Congress--to supplement the coordination of current national economic plans with the coordination of economic policy as a whole and to examine the possibility of using new forms of pooling the socialist community states' resources and efforts--met with the fraternal parties' approval.

It must be stressed in particular that the community countries now have to resolve creative tasks in complicated international conditions. The blocking of the detente process, the arms race imposed by imperialism, the attempts by some imperialist states to use all sorts of bans and discriminatory measures in trade and financial levers as a means of exerting political pressure on the world of real socialism are a heavy burden for the socialist states. The deterioration in the economic situation and the sharp price increases characteristic of the world capitalist economy also introduce an element of instability to economic ties with the capitalist countries. That is why the task of using each socialist country's reserves and their common potential to mitigate the adverse outside impact on the course of economic progress is becoming increasingly urgent.

The overall international situation and the solution of problems which concern mankind, such as preserving and consolidating peace, halting the arms race, and settling international conflicts justly and peacefully, depend to a considerable degree today on the rallying of the socialist countries and the unity of their actions in the world arena. For many years now, effective coordination of the fraternal states' international activity has been of inestimable and ever-increasing significance in the struggle to save the peoples from the nightmare of nuclear conflict. "In the current international situation," USSR Foreign Minister A. A. Gromyko has noted, "we can see especially clearly that the chief element preventing the implementation of militarist plans and aggressive military doctrines is the socialist community. All those who are anxious that the peoples' future be a future of reliable peace and progress can safely rely on its Leninist policy of peace and friendship among peoples."[9]

The countries of real socialism have most resolutely condemned the plans adopted by Washington and its NATO allies to deploy hundreds of new U.S. medium-range nuclear missiles in Europe and have spoken out against the U.S. decision to develop wide-scale production of neutron and chemical weapons. The essentially aggressive doctrine of the admissibility of nuclear war proclaimed by the United States and also its opposition to the work of various forums examining specific problems of limiting the arms race and disarmament have been sharply criticized. Many international documents from the socialist community countries put special emphasis on the fact that they will continue to advocate preserving everything positive which has been created by their joint efforts on the path laid by the CSCE and will deal the necessary rebuff to the actions of NATO militarist circles.

The current aggravated international situation requires powerful and purposeful efforts and continual initiatives from the socialist community--this is the unanimous conclusion of the fraternal parties, which stress that it is a question of increasing the foreign political activeness of each socialist state and securing a higher degree of coordination of joint actions. Thus, the Czechoslovak newspaper RUDE PRAVO, assessing the world situation at the start of 1982, wrote: "All-round cooperation and cohesion among the socialist countries are important factors which exert their particular influence on the course of international events.... The guarantee of the socialist states' strength and lofty international prestige lies in the coordination of their foreign policy activity."

The socialist countries counter imperialism's militarist course with a policy of peaceful coexistence, easing of tension, mutually advantageous cooperation and honest constructive dialogue. The socialist countries are firmly convinced that a sensible and just solution to disputed international problems is perfectly possible and that the language of force and the threat of force is not appropriate for this. It requires holding talks on an equal footing, taking account of each other's interests and strictly respecting the principle of identical security. Military-strategic parity between the USSR and the United States and between NATO and the Warsaw Pact Organization is the objective foundation for assessing the situation which has taken shape in the world and the prospects for its development.

As a result of constant cooperation among the socialist countries, the fundamental unity of their views on all main international issues has been established. The community members regard the 26th CPSU Congress' peace program as their common foreign policy platform. They see in the peace program for the eighties, subsequently expanded by a number of initiatives of the CPSU and the Soviet state, realistic and constructive ways to lessen the threat of war, deepen detente and develop peaceful cooperation among states with different systems. The fraternal parties point out that the Soviet Union's policy creates an effective counterbalance to aggressive imperialist circles' intentions to continue to heat up the international situation and foist a new round of the arms race on the world. This policy meets the interests of the fraternal socialist countries and of all peace-loving mankind. For instance, "Czechoslovak communits and our entire people," G. Husak, general secretary of the CPCZ Central Committee, noted in the report to the 16th CPCZ Gonress, "rate highly the role of the Soviet Union as the key bulwark of socialism and of everything revolutionary and progressive in the world and as the hope and guarantee of peaceful development against whose might the attempts of imperialist and militarist circles to dictate their will to other peoples are smashed."[10]

The new peace initiatives advanced by L. I. Brezhnev at the 17th USSR Trade Unions Congress and the 19th Komsomol Congress were met with fervent approval in the socialist community states. The proposals contained in his speeches, which are aimed at limiting the arms race, and primarily at reducing nuclear weapons in Europe, were seen by the fraternal countries as a clear manifestation of the Soviet leadership's sincere desire for peace and its certainty that it is possible to achieve an agreement which is acceptable to both sides.

The Warsaw Pact Organization--which has convincingly proved during the 27 years of its existence that it is a purely defensive alliance which reliably serves the interests of peace and socialism--plays an important role in drafting the coordinated foreign policy course of the fraternal countries and preparing their joint actions. The organization's political consultative committee is constantly advancing constructive proposals aimed at improving the international situation, eliminating seats of tension and adopting radical measures to curb the arms race, especially the nuclear missile race, and diminish the danger of war. This coordinated course is pursued by the socialist states at UN General Assembly sessions, at the Vienna talks on force and arms reductions in central Europe talks in Vienna, at the Madrid meeting of the all-European Conference participants, at the Geneva Disarmament Committee and at other international forums. Naturally, each country expands and develops this common line with its own important initiatives.

Historical experience shows convincingly that considerable might is needed to defend socialist gains from encroachment by the enemies of progress. Under the conditions of the intensification of imperialism's aggressive aspirations the Warsaw Pact member states display the necessary concern for increasing the readiness of their joint armed forces under the Warsaw Pact Organization to rebuff any attack on their security. "The militarist course and aggressive policy of the NATO bloc led by the United States," L. I. Brezhnev said at the 17th Soviet Trade Unions Congress, "forces us to take measures to maintain the country's defense capability at the required level. This is a grim necessity of the contemporary world and of course it diverts considerable funds to the detriment of our plans for peaceful building. But, as I have already said several times, we are not spending and will not spend for these purposes one ruble more than is absolutely necessary to ensure the security of our people and their friends and allies."[11]

During the talks between the USSR and CSSR party-government delegations held in Moscow in June 1982 the sides declared that, at a time when imperialism has adopted a course toward achieving military superiority and is undertaking a new round in the arms race, they will do everything to promote the strengthening of the socialist community states' cohesion and the consolidation of their defensive military-political alliance--the Warsaw Pact Organization.

It is indicative that the more the might and influence of world socialism and the socialist community states grow, the more brazenly and impudently imperialism makes use of the weapons of lies and slander against them. The 26th CPSU Congress and the congresses of the other fraternal parties of the socialist countries noted the current intensification of the ideological struggle in the world arena. As is known, the confrontation of ideas is an inalienable part of the transition period from capitalism to socialism on a worldwide scale. However, imperialist forces are doing their utmost to transform this confrontation into "psychological warfare" waged according to the laws of the jungle. The imperialists or their accomplices blacken and distort everything which goes on in the socialist countries, setting in motion a system of sophisticated methods calculated to undermine the socialist world, "disunite" it and discredit the very idea of socialism in the eyes of the millions-strong masses of working people.

Today the anti-Soviet, antisocialist, chauvinist campaigns have assumed the character of official measures in the West, with not only the relevant propaganda and special espionage and sabotage services but also certain state and government leaders taking part in them. These campaigns have become a very substantial element in U.S. and NATO militarist strategy and an organic part of their course toward spiraling the arms race.

The "psychological warfare" unleashed by imperialism makes increased demands on the activity of the socialist countries' communist and workers' parties in the ideological sphere. The November 1981 Moscow conference of the community countries' communist and workers parties' central committee secretaries for international and ideological questions clearly declared the need to continue to expand cooperation in the struggle against anticommunism and anti-Sovietism and to resolutely advocate the triumph of the ideals of communism and peace.

With every passing year the fraternal friendship of the socialist community peoples grows stronger, their cooperation becomes increasingly comprehensive and their foreign policy increasingly effective. The harmonious family of the states of real socialism, overcoming difficulties which emerge and rebuffing all attempts by imperialism and its assistants to undermine the foundations of its might, continues its on-going forward progress, demonstrating repeatedly the great insurmountable truth of Leninist teaching and the strength of its unity and cohesion on the principles of Marxism-Leninism and socialist internationalism.

MOSCOW TV ROUNDTABLE ON FOOD PROGRAM

OW121404 Moscow Domestic Television Service in Russian 0833 GMT 27 Jul 82

["The Food Program--Common Task for All the People"; from the "Problems, Decisions, Solutions" series, moderated by political observer Lev Aleksandrovich Voznesenskiy, with Leonid Yakovlevich Florentyev, RSFSR minister of agriculture; Polad Adzhiyevich Polad-zade, USSR first deputy minister of land reclamation and water resources; Leonid Ivanovich Khitrun, chairman of the state committee for supply of production equipment for agriculture; and Viktor Petrovich Borodin, deputy chairman of the state committee for agro-industrial complex questions]

[Text] [Voznesenskiy] Hello, comrades. Our meeting today is a continuation of the live broadcast of 1 July. I will remind you that our guests in that program were heads of ministries and departments responsible for planning and organizing agricultural production, creating conditions for stable crop production and livestock breeding work and providing equipment for agriculture and its full utilization in the fields.

As usual, the program's participants were able to answer only some of the several hundred questions that were called in. We collected these questions in this weighty volume and the participants studied all these questions and a few of the comrades had time to prepare their answers. Today we would like to acquaint you with these questions. Leonid Yakovlevich Florentyev, a member of the CPSU Central Committee and RSFSR minister of agriculture, has the first word.

[Florentyev] Today, having familiarized myself with the questions that were sent from various parts of our country, I would like to answer those that I consider to be most important. A number of questions concern the state of agriculture in the non-chernozem zone. Why has there been no return on the investments in the non-chernozem zone for a long time? I would like to answer this question by saying there has been a return. Generally, the return is not inconsiderable but it is still insufficient. Plans to increase the production of agricultural products have not been fulfilled by all farms.

Without bogging you down with figures, I would like to cite only two figures: the gross production in the non-chernozem zone in the 7th 5-Year Plan period amounted to R13.5 billion and in the 10th 5-Year Plan period to a little under R18 billion. Therefore, there is growth but we agree with the author of this letter that the growth is insufficient.

Little construction of housing and projects for rural everyday life is being carried out. This is correct, although the construction of houses, palaces of culture, preschools and roads in this zone has recently intensified. Still, the rate of social reorganization of rural areas in the non-chernozem zone cannot be considered sufficient. Therefore, nearly R10 billion have been allocated for the construction of housing, cultural and domestic services and roads in the 11th 5-Year Plan period. I have in mind here state capital investments and those funds which the kolkhozes allocate for these aims. Compared to the R5.6 billion for the past 5-year plan period this is a growth of almost 190 percent.

Incidentally, many oblasts in the non-chernozem zone are doing the right thing and this results in houses being constructed well. In Sverdlovskaya, Moskovskaya, Leningradskaya, Gorkovskaya and a whole series of other oblasts not only are individual houses being constructed but whole streets, whole microrayons are being built, especially in backward kolkhozes and sovkhozes which, as life and experience show, permits backward farms to become average and at a later time to become leading farms.

Crane operator Comrade Baraeva asks: Will the living standards in rural districts rise? The living standards in rural districts will unquestionably rise. The rise in the well-being of rural workers is an integral part of the food program--not simply integral but one of the most important parts of this program. The payment of additional wages for length of service to all permanent workers of sovkhozes and other state agricultural enterprises located in the non-chernozem zone will begin next year. This, again, demonstrates the RSFSR's special concern for the non-chernozem zone.

At present in these farms only tractor and machine operators receive additional pay for length of service according to speciality. The May CPSU Central Committee Plenum approved a party and government decision to pay additional wages for length of service and to introduce additional leave for permanent livestock breeding workers. Needless to say, this very important large-scale measure will promote the retention of workers in livestock breeding, which, as the party says, is the leading area in the rural sector. These privileges will be given on approximately the same scale as those for tractor and machine operators. Thus, privileges for livestock breeding workers will be given in Siberia, the Far East, the Urals, the non-chernozem zone and the central chernozem regions as of 1 January next year and in the remaining RSFSR regions as of 1 January 1984. This is not all. The construction of housing, cultural and domestic services and roads is being significantly expanded not only in the non-chernozem zone, about which I have talked, but in all regions of the RSFSR.

I will not burden you with figures but will just say that the capital investments in the social reconstruction of rural areas in the RSFSR as a whole in the 11th 5-Year Plan have increased by 160 percent in comparison with the 10th 5-Year Plan. It would be nice, of course, to solve the housing problem faster, in 3 or 4 years. This is a natural desire but the existing means only allow us to solve this problem on the current scale, which is a very large scale. Besides, as was stated in the decisions of the May CPSU Central Committee Plenum, contract construction organizations, as well as some of the capabilities of city housing construction combines, will be used to assist kolkhozes and sovkhozes in housing construction in rural areas.

In general, the construction of housing and cultural and domestic service facilities, the conditions contributing to the retention of kolkhoz and sovkhoz workers and the creation of stable labor collectives are becoming national concerns. You understand that the creation of such permanent and stable labor collectives in a kolkhoz or a sovkhoz is the most important condition for successful development of production and for increasing its efficiency.

Comrade Konin from Kuybyshev asks me--asks us--the question: What are the most essential additional measures that kolkhozes and sovkhozes are implementing this year to increase grain production? This is a very important question because grain is the foundation for developing both farming and livestock breeding. This is one of the central links in our country's food program.

Kolkhozes and sovkhozes in the RSFSR are doing considerable work to increase grain production this year. In the first place the area of the most productive winter crops was expanded last year. In the second, the quality of sowing and the hibernation period were better and as a result, almost all areas under winter crop cultivation were preserved after the hibernation period, and the winter crop area we will be harvesting is 2.5 million hectares greater than was harvested last year, Kolkhozes and sovkhozes conducted this year's spring sowing in an organized manner, and it is an especially favorable sign to note the enlarged areas of buckwheat, millet, corn and certain other crops.

A valuable initiative was proposed by the corn growers of Rostovskaya Oblast, who pledged to produce 1 million tons of corn this year. Much is being done now to realize this statement, this lofty pledge. Twenty-six million hectares of spring grain crops have been sown by kolkhozes and sovkhozes in order to ensure a big harvest and improved grain quality. This was done with simultaneous applications of phosphorus-based mineral fertilizers. More organic fertilizers were used this year. Now all the strength and means of kolkhozes and all the attention of collectives on farms are directed to harvesting agricultural crops, including grain and others, without losses.

A distinctive feature this year is a wider implementation of the ipatov method of large-group and production line organization of harvesting. Particular attention, as I said, is being paid to fighting losses. To achieve this, following the example of the experience of farms in the Kuban, Rostovskaya Oblast and Stravropolskiy Kray, a preliminary crop capacity is estimated for each field and then payments for labor depend on the actual production from the given field and on how much it differs from the preliminary estimate. All these measures must be adopted in order to ensure that the biological crops which have ripened in the field end up in kolkhoz and sovkhoz storage facilities.

The following question is asked by Comrade Ivanov from Moscow: Why are only 0.25 hectares allowed for the private plot of each household in the non-chernozem zone, while 0.5 hectares are allowed in the chernozem region? I think there is a certain inaccuracy in the question itself. In accordance with the kolkhoz's rules, a family on a kolkhoz or, as we call it, a kolkhoz household, is allowed 0.5 hectare for the private plot of each kolkhoz household and up tp 0.2 hectare in the field. These are merely guidelines while the actual size of each household's private plot is determined by the size of the household and the amount of their labor input into social production. Those who do more work and actively participate in social production receive more household land.

The size of each private household plot of permanent workers, specialists and personnel in sovkhozes and other state agricultural enterprises who work and live permanently in rural areas amounts to 0.3 hectare. Agricultural specialists, medical personnel, educational personnel and teachers, as well as agricultural service personnel receive up to 0.25 hectare of land per household. All other workers and personnel living in rural areas receive up to 0.15 hectare of land per household. This is how our land laws determine the size of private household plots. This is the answer to the question of interested comrades.

Here is a question on beekeeping--on why and how our beekeeping is developed. Some questions suggest that beekeeping is not well developed. I have to agree with this. The collectives of kolkhozes and sovkhozes do not treat this question seriously. We consider it our important responsibility to adopt a number of additional measures in the coming years for seriously developing this important branch--important not only as a branch producing a valuable food product, but also for the pollination of agricultural crops, gardens and so on.

The Ministry of Agriculture and local agricultural authorities have now developed a whole range, a whole complex of measures for the further development of beekeeping, for organizing new specialized beekeeping farms and interfarm beekeeping enterprises. The further development of beekeeping on the private plots of the rural population is also envisaged. For this purpose oblast, rayon and city societies of amateur beekeepers are being formed. The necessary additional measures are being adopted for supplying beehives, honeycomb and beekeeping implements to private apiaries. In general, we consider the questions asked on this topic are to the point. They reflect the concern of those comrades who have participated in asking the questions on this program, the questions which prove that we have more work yet to do in order to correct the situation in this very important branch.

Comrade Bonaderko, an engineer from Moscow, asks: How is the problem of the shortage of machine operators in agriculture going to be solved? I have already answered this question in general. The main reason for the shortage of machine operators is not that so few of them are being trained. Large numbers of machine operators are being trained in the RSFSR as well as in the other fraternal republics. Unfortunately they are highly transient.

In order to ensure that kolkhozes and sovkhozes have qualified machine operator cadres as I have already said, we are expanding the construction of housing, cultural and welfare facilities. but this is not enough, so we are building repair shops and technical service stations for improving the working and living conditions of machine operators.

On the whole, the volume of capital investments for these aims, to strengthen the production base of mechanization in the current 5-year plan period, will double compared to the last 5-year plan period.

The quality of training of machine operator personnel will be expanded and improved, especially at specialized vocational and technical schools--Leningradskaya and certain other oblasts are setting a good example in this regard--and courses will be held directly in kolkhozes and sovkhozes. We, together with the Ministry of Education, regard the constant work in rural schools with senior class members as our sacred duty. First of all, we are doing everything to strengthen the production base of rural schools and will spare nothing for this. Neither kolkhozes, sovkhozes nor the ministry nor the system as a whole are sparing anything to attain this goal.

Together with the teachers we are conducting vocational guidance with seniors at rural secondary schools, and as a result a large number of seniors at rural schools in Kostromskaya, Omskaya and Kirovskaya Oblasts, and now very likely in the majority of oblasts, krays and autonomous republics, remain to work in their native kolkhozes and sovkhozes. Only today I received a supreme Soviet deputy director of one of the sovkhozes in Moskovskaya Oblast who said that out of 36 graduates at her school 34 young men and women stayed to work. She asked for help in obtaining new equipment, and we will help without fail, and help with housing construction as new young families appear and the demand for housing grows.

The problem of providing kolkhozes and sovkhozes with machine operators does exist, especially in the non-chernozem zone and a number of other regions, and in a number of kolkhozes and sovkhozes in other regions. This problem is not a simple one, and we will be endeavoring to solve it by taking measures regarding a whole complex of questions about both production and nonproduction and by actively solving questions on the social reconstruction of rural areas and improving labor conditions of rural machine operators.

In his report at the May CPSU Central Committee Plenum Leonid Ilich Brezhnev said that the food program advances tasks of different time spans, long-term and medium-term ones and very urgent ones. It seems to me, said Leonid Ilich, that we should place precisely the latter ones at the center of our concern. Now many of the questions which came in during the program concern these pressing and urgent tasks that kolkhozes and sovkhozes are now working on. I have already spoken about grain and construction. There are also pressing and urgent questions in rural areas, but there is a whole series of other questions with which kolkhozes and sovkhozes are now occupied and among them the care of agricultural crops, especially cultivated crops, is the most important. This includes potatoes, sunflowers, corn, soybeans and other cultivated crops and vegetable crops.

Another central question as important as that of bread is fodder preparation. As we said last time, on 1 July, we experienced a very difficult winter period. Now in the majority of kolkhozes and sovkhozes, I would say the prevailing majority have the opportunity not only to fulfill fodder preparation plans but also to put away a definite quantity of fodder as insurance stock without which--without a reserve, without an insurance stock--life is impossible in agriculture. Kolkhozes and sovkhozes, agricultural organs and the ministry itself now live and breathe these concerns.

[Voznesenskiy] Nikolay Fedorovich Vasilyev, a member of the CPSU Central Committee and USSR minister of land reclamation and water resources, appeared in the 1 July program. At that time it was noted that stable farming and livestock breeding depends to a large degree on the successful implementation of extensive land reclamation work. Today Polad Adzhiyevich Polad-Zad, USSR first deputy minister of land reclamation and water resources, will answer questions on this problem.

[Polad-Zade] Large sums are spent on land reclamation in our country. However, the question arises in certain people's minds: Strictly speaking, why is it necessary? Comrade Nizhemudinov, a student from Moscow, asks such a question: Why are there consistently high annual harvests in the United States and Canada but in our country we have bad harvest years? And Comrade Yuriy Konstantinovich Kovalev, a communications worker, asks: Why do we buy wheat from overseas?

I will cite a number of figures to explain this question. It is considered impossible to carry out agricultural production without irrigation with an annual rainfall rate of less than 400 millimeters. I have farming in mind. Well, 40 percent of our arable land has these conditions, whereas in the United States it is only 11 percent. The so-called unstable moisture zone, where annual rainfall ranges from 400 to 700 millimeters, in the United States encompasses 29 percent of the total arable land area. We have an area which encompasses 59 percent of the total arable land. Only 1 percent of our arable land area has propitious conditions where nothing needs to be done. Sixty percent of the arable land area in the United States has these conditions.

At the same time, under these conditions Americans irrigate 25 million hectares, while we have at present, a total of 17 million hectares of irrigated land, I mean 17.5 million hectares. This is the situation, Propitious natural conditions and a high level of arable land reclamation allow a number of countries--the United States and other countries in the world--to obtain stable harvests. For us to obtain a guaranteed harvest we need to make large capital investments in the land, conduct land reclamation, introduce a large quantity of mineral fertilizers and take other measures which would allow a stable increase in yield.

This is why our party persistently sets the task of expanding land reclamation work and the stock of land on which high yields may be stably and systematically obtained, irrespective of weather conditions and climate; in other words, to program the yield. A great deal of attention is paid to land reclamation and development of irrigation and drainage in our country. Currently, we have 31 million hectares of reclaimed land at our disposal, and this is the most valuable asset of our agriculture, and it is constantly expanding.

In accordance with the food program, our country's irrigated land area will be brought to 23-25 million hectares by 1990. Today, we have 17.5 million hectares. The area of drained land will be raised to 17-19 million hectares. Today, we have 13.5 million hectares of such land. With this, I would like to specially underline the fact that large-scale special-purpose tasks in the food program will be solved with the aid of land reclamation, and the main task is fodder. Already reclaimed lands produce a quarter of all fodder used in livestock breeding. This portion will be significantly increased as a result of the implementation of that land reclamation work about which I spoke.

Production of the valuable groat rice crop, as we know, is dependent entirely on irrigation. The food program envisages a considerable increase in vegetable production. This will also be accomplished through use of irrigated land. As a matter of fact, the entire increase in vegetable production will come about through irrigation. A very important special-purpose program is the significant expansion and increase in corn production on irrigated land. Comrades, you know how important corn is to our livestock breeding. Whereas we produce approximately 3 million tons of corn today, by 1990, as a result of the implementation of land reclamation measures, this production will be brought to 13 million tons.

While effecting a large-scale program of reclamation work, we give much consideration, basic consideration, to constantly increasing the effectiveness of land reclamation and raising the return from reclaimed hectares. A very interesting question was received from Valentin Sergeyevich Voloshin of Kursk, who writes: As you know, we invest enormous amounts in land reclamation. Large capital investments are envisaged in the food program. However, not every drained and irrigated hectare is as efficient as it could, and should, be. Please tell me what causes this? Don't we, in this case, bury money, so to speak, and what is being done and what will be done to ensure a considerable increase in the efficient reclamation of and production from this enriched land?

As a whole, comrades, I can say that the efficiency of land reclamation is very high in our country. Every irrigated hectare produces, in monetary terms, 5 to 6 times more and a drained hectare 1.5 times more than the ordinary field. Yields are increasing systematically and so is total agricultural production in the reclaimed lands. Here are the figures: grain yields in 1965 were 13.8 quintals per hectare from reclaimed, irrigated land. The average grain yield in the last 5-year plan was 38.5 quintals per hectare from irrigated area. Some 22 and 1/2 quintals of corn were produced, whereas 48 quintals per hectare were produced in the last 5-year plan; 23 quintals of rice against 39. Or take fodder, for example, some 24 and 1/2 quintals were produced before and now, or in the last 5-year plan, the average yield was 34.5 quintals per hectare of fodder units.

In addition, I want to say that the high efficiency in the use of reclaimed land is noted, not just in separate farms, but in large regions. Therefore, to say that funds are buried is incorrect. But, comrades, one cannot deny that there are reserves, and the reserves are huge. All farms do not produce everything from an improved hectare which it can give. A lot of farms reap small harvests, and much land is unused and has insufficient irrigation. Sometimes it is irrigated once or not at all. There are reasons for such occurrences. There are, of course, shortcomings associated with the work of improvers. There is evidence of low quality work, and this is being justly criticized. We are adopting concrete measures and a real, concrete program has been developed to eliminate these shortcomings. There are mistakes in projects and there are cases of delays in completion of improvement projects. However, at the same time, there are a number of questions which must be worked on by everyone, in order to significantly increase production, including, first of all, the necessity to provide every irrigated, every drained, hectare with a normal dose of mineral fertilizer. Unfortunately, this is not done everywhere. All reclaimed lands must be provided the necessary equipment and must have the labor resources. This entire complex of questions, namely, the right project, proper fulfillment of reclamation works, mineral fertilizers, equipment and people, educated people, ability to work properly on the improved land, ensures an excellent final result. Everywhere this was done, they naturally had big returns. The task, in all farms, is to eliminate all negative occurrences.

The food program has the main task of achieving complex reclamation construction in order to increase the efficiency in the use of improved lands. What is this complex construction? It is the creation of the entire infrastructure, together with reclamation construction, construction of channels and renovation of fields necessary for a normal and effective use of all that is being created. These are villages, roads, production construction, livestock housing and so on.

Here is another question. It is asked by Comrade Dementyev from Tula: How much reclaimed land is annually and how much is not being used? Why are we losing reclaimed land and aren't these losses far too big? Yes, that is a good question, all right, I have already said that we are commissioning 1.5 million hectares of reclaimed land annually. Approximately 700,000 hectares of irrigated land and 800,000 hectares of drained land. In the last, the 10th 5-Year Plan, only 3.8 million hectares of irrigated land were commissioned, but we lost only about 400,000 hectares. What were these losses? The main factor, of course, is the write-off or transfer of nonagricultural use of lands with outdated irrigation, which were commissioned decades ago at a not very high technological level, a level which was suitable for the purposes of development in those days but which does not suit us now.

Some of these lands have lost their sources of water and some have ceased being used for other reasons. These are the lands we lose. The percentage does not seem large, but this is not a desirable occurrence and we are building our plans so that we do not lose irrigated land but reclaim it, put it in order, and improve and raise its technical level.

The situation is a little worse with the losses of reclaimed land which is becoming estranged in the process of being used for nonagricultural purposes. In the last 5-year plan period, for example, 60,000 hectares of reclaimed land were used for nonagricultural purposes. We do not think this is right; this is wasteful. Industrial enterprises, cities, and other facilities could and should be built on those lands in which no state investment had been made.

We, together with the Ministry of Agriculture and with local party and Soviet authorities, are creating a barrier to these occurrences and will continue increasing controls over the preservation of reclaimed land reserves.

The following question has come in: Comrade Stinikov, pensioner from Zhukovskiy, writes: Please clarify the part of the food program which talks about diverting some northern rivers to the Volga. What has it got to do with the food program?

This question, comrades, is very significant and a lot of time is needed to answer it in detail and I do not want to take a lot of time for the technical details of the question. I will say briefly: the south of our country, especially the south of the European part of our country, is a very favorable zone for the development of irrigated farming. But the water resources in this large region, a region favored with plentiful labor resources, sun, and good soils, are on the verge of depletion. In principle, there is still a lot of water in the Volga and there is water in the Don and Kuban Rivers. But the fact is that we are bound by an ecology problem. A further significant use of water from the Volga will not harm the Volga itself, but will lead to a reduction in the level of the Caspian Sea, which will cause a reduction of very valuable stocks of fish.

The same situation obtains with the Sea of Azov. Beginning now the development of the people's economy is faced, in connection with the usage of water from the Don and the Kuban, with a problem such that the further taking of water from these rivers would be dangerous for the stocks of fish in the Sea of Azov. Pollution is occurring because of the irrational use of the sea and valuable breeds of fish are disappearing. The only way to help the Volga is by diverting a part of the northern rivers' flow, which is now flowing uselessly into the Arctic Ocean. This is a very insignificant part, which in no way will affect the region from which the water will be taken.

Having received this injection, this aid or grant from the Volga, the Don Basin will be able to send part of the water to the Northern Caucasus, into the Kuban Basin. On the whole it will allow the irrigation of a considerable area of land and the harvest of much valuable agricultural produce.

Comrade Filipovich, a steamship company employee from Bezhetsk, asks: Is the problem of river dredging being solved? I must say that this is a very topical question. As a result of economic activity, urbanization and industrial development, many small rivers have gotten into such a condition that they simply cannot be neglected in this way anymore.

The USSR Council of Ministers 2 years ago adopted a special resolution on increasing the protection of small rivers from pollution, depletion and the irrational use of water resources. In connection with this resolution and implementing the directives of this resolution we began developing a program for solving these problems. One must keep in mind that this program will take a lot of time, of course, and will absorb a lot of funds and will be implemented over a long period.

Draft plans are now being prepared for dredging projects in small rivers, and this will be completed in 2 years. After this, problems concerning each river will be reviewed and some sort of work will commence. I would like to say that small rivers will receive a lot of help from the measures on diverting part of the northern rivers into the Volga and from the Volga to the Northern Caucasus.

Many questions have been received in connection with environmental protection. Here is one from Comrade Bityugov from UFA, then from Comrade Zonov from Vyksa in Gorkovskaya Oblast, and from Comrade Kosarev from Moscow. They all write very emotionally about the issues connected with environmental protection and the necessary to guard the environment carefully. The concern about this problem is justified. It worries all the Soviet people. We cannot treat our environment recklessly. We must do everything possible to preserve our environment as a priceless gift.

But I would like to say that the questions which have come in highlight the problem somewhat narrowly. It is directly said here that land reclamation workers destroy nature. Comrade Zonov writes: Land reclamation reduced in many ways the stocks of wild fowl and various wild animals. Birds and animals are running away from man. Or Comrade Kosarev writes: As a result of land drainage and the mistakes made in the process, peasants are leaving their native places. In connection with this I would like to say that the concern over nature does not envisage and must not proceed from the assumption that everything around us should remain the way it was before.

It seems that today's level of civilization, today's level of consumption, everything that we have, cannot ensure that the environment remains untouched. To state the question thus is probably incorrect. Now the letters state that there is less game, fewer berries and there are no cranberries and the reason for this is alleged to be land reclamation work.

Well, in the first place, to make it all clear, I would like to say that land reclamation is not yet being carried out on so large a scale in this zone. We have 200-220 million hectares of waterlogged land in our country, 80 million hectares of which is swampland. Only 13.5 million hectares of land have been drained, of which only 4 million hectares were swampland. Therefore these figures do not indicate that such great changes could have occurred. In fact we do lose a certain amount of game and berries, of course, but this is not only the result of land reclamation work, rather it is the result of the development of civilization in general, the development of industry, urbanization, the building of large cities and so on.

Well, of course, comrades, it is a shame. One would like to have more game and berries but we have to bear in mind that today's level of consumption is such that we cannot replace our produce needs with berry-gathering and hunting. A powerful industrialized agriculture must be created, and this is the only way to provide the people with bread, meat, milk, vegetables and fruit.

Now in regard to cranberries. I have already said that cranberries have disappeared not because of land reclamation, but rather have disappeared in areas where we have not yet begun land reclamation. I can tell you that there is another way; incidentally it is being intensively utilized in a number of countries. Cranberries can and must be cultivated industrially, on specially built plantations. Incidentally, we are now creating such a plantation in the Belorussian polesye and cranberries grown in this way are much tastier and produce a greater yield per hectare than cranberries that are picked on swampland. It seems this is the path we should follow in the future. Man actively interferes with nature, plows up an enormous area of virgin land, extracts minerals, builds cities, gas pipelines and so on. Naturally this leaves an impression on the environment. It is another matter to ensure that all this is done wisely; everything should be weighed. Irreparable losses deliberately inflicted on the environment should not be allowed.

Concern about protecting the environment and not allowing damage to the environment is a common concern of all the people, and it is very important that inter-departmental barriers and priorities are eliminated so that everyone has a clear view of the direction this work must take.

Well, if we speak in concrete terms about the place of land reclamation in environmental questions then land reclamation is, of course, a powerful factor in man's influence on the environment, but I would like to remind television viewers that land reclamation in Russia means improvement and we are striving to improve unfavorable natural conditions for people, for crops, and for the transformation of our agriculture. Many examples of this may be cited. Land reclamation work has created regions with completely new landscapes, natural landscapes, with favorable conditions for people, for a good life, for creativity and recreation.

Take the example of the Golodnaya Steppe. Its very name tells us what sort of region it was. Today it is an enormous zone where our Soviet people live very well in well-built rural settlements and work, obtain good harvests and do not complain that somehow land reclamation has altered the conditions which used to exist. Or take the other zone which worries the letter-writers most of all. This is the waterlogged zone. Take the Belorussian Polesye for example. Hardly any of the residents of the new polesye would agree to return to the farmsteads in the swamps to live in miserable conditions. And tonight can anyone compare his present new life with that which existed before? However, we clearly understand that thorough analysis and a balanced approach are required for implementing all this work. We must not be hasty. We are trying to consider everything in our plans so that there will be no harm to the environment. The environment is changing, but it is changing for the better. This slogan must be advanced as the basis of our work in transforming the conditions for land reclamation activities.

If we talk concretely about the drainage zone—and I repeat that this has been the main concern expressed in letters--the task is not only draining swamps. Swamps, however, are a waste of water land, and land. We are talking about draining the waterlogged pasture and in connection with this, enlarging the area of arable land and creating large fields. Naturally some swampy lands are also a part of these large fields, as well as small forests, scrub and other unsuitable lands. Therefore in place of the small fields which were barely suitable for agriculture and which were the reason that many people left the rural area of the non-chernozem zone in the RSFSR, large fields are being created which are big enough for machines and equipment. An infrastructure is being created with roads and comfortable villages, and I would bet with the author of this letter about people leaving their native places. On the contrary, as a result of land reclamation, as a result of land reclamation construction, the influx of workers in the Russian non-chernozem zone, in those farms where the complex of land reclamation works has been carried out, is so great that there are many people writing in and asking for employment on these farms.

[Voznesenskiy] Many questions which came in during the live program referred to agricultural equipment, its quantity and quality, and especially its efficient use in farming and the livestock industry alike. We have asked one of the participants in the program, Leonid Ivanovich Khitrun, member of the Central Auditing Commission of the CPSU, chairman of the USSR state committee for supply of production equipment for agriculture, to answer this group of questions.

[Khitrun] Many questions came in addressed to the Selkhoztekhnika and to me personally concerning the mechanization of agricultural production, material and technical supplies to kolkhozes and sovkhozes for agricultural production and a number of other questions. Comrade Mikhaylov, an engineer from Frunze, for instance, asks the following interesting question: Do you consider the stavropol method of establishing an association for agricultural mechanization and electrivication a long-term proposition?

Comrade Petrov, kolkhoz chairman from Moldavia, asks the following question: In Moldavia there is an association for mechanization attached to the kolkhoz council. How would further relations be formed between them and the selkhoztekhnika? Comrade Yefremov asks: All the activity of the selkhoztekhnika must be evaluated by the final results of the nonagricultural enterprises servicing agriculture. This is a very important and significant question, and if it could be solved even partially then it would be a great stimulous for better work in your enterprises, our enterprises, that is. He then suggests: Do you consider it possible to draw something from the experience of the previously abolished maching-tractor stations? There are also a number of other questions of similar content. I will not list them all.

I would like to say the following about this. Yes, we all know that in recent years, especially after the historical March CPSU Central Committee Plenum, agriculture has been equipped at a high rate. The energy capacities are growing. The May plenum of the CPSU Central Committee determined further measures for the technical restructuring of agricultural production. These are significant measures and they were discussed before.

However, this is only one aspect, the quantitative side. As was emphasized in Leonid Ilich Brezhnev's report, we must continue to provide agriculture with modern equipment and improve its quality, longevity and reliability and create fully equipped technical branches. As was emphasized, and quite fairly asked by comrades, complex and purposeful work must be carried out to improve the use of the created technical potential. In connection with this a number of interesting methods of using the machine-tractor fleet have been developed. More specifically these are: the famous Abashskiy method in Georgia, in the region where the new agro-industrial complex management system was tested. The experience of the Abashskiy Rayon has been well publicized. They did the following: they centralized all the agricultural equipment and concentrated all of the machine-tractor fleet in the Seklhoztekhnika, which carried out all the agricultural work in the kolkhozes and sovkhozes.

The Stravropol Skiy method is also well-known. This is the creation in Krasnogvardeyskiy Rayon of an association for the mechanization and electrification of agricultural production. This is what Comrade Mikhaylov was asking about. This is a very long-term method which has enabled us to concentrate equipment and to organize a continuous and complex use of mechanization facilities, which allowed their more efficient use as well as an increase in the productivity of the machine-tractor fleet by 10-15 percent and considerable reduction in the consumption of fuel and lubricants calculated in hectare per tractor units. This reduction in the consumption of fuel and lubricants is in the vicinity of 6-8 percent annually. These are significant figures which, in the final analysis, amount to huge savings of fuel and lubricants.

If we look at all other methods of centralizing the machine-tractor fleet and other centralized uses of machinery, each of them has its own applicability which takes into account the various local circumstances and different natural and economic conditions.

We have an organizational method, tested in practice, of using the machine-tractor fleet, namely, the Ipatovskiy method, as we call it. This Ipatovskiy method of organization of the machine-tractor fleet is applicable in absolutely all zones. This is simply a necessity. It is based first of all on a complex and continuous usage of mechanization facilities. The use of the Ipatovskiy method in its total strength with the utilization of all the capacities ensures an increase in the efficiency of equipment by 20 percent.

Therefore, those comrades who in their questions propose, in essence, measures for improving the organization of the machine-tractor fleet, are very correct in their questions. Their concern is justified. All these methods are undergoing practical tests. The regular results of all this work will be calculated at the end of the year, appropriate estimates will be made and local specialists will be called in. In other words, all the forms of organizing the machine-tractor fleet will be thoroughly studied and, of course, appropriate recommendations and conclusions will be made regarding these questions.

One thing is quite clear: a task is set in the food program to increase the existing technical potential by 20 percent by 1990. This is a very great task which must be fulfilled by all machine operators and engineering and technical personnel employed in the agro-industrial complex. We in turn are studying these questions, thinking about them, and will be adopting measures for the better and more efficient use of the machine-tractor fleet in agriculture.

Comrade Varbel, head of the Ukhta-Komi Rayon Selkhoztekhnika, asks: Why aren't the railroads and the Ministry of Communications completely fulfilling their obligations in unloading goods for agriculture along frequently used routes, even though they have cargo cranes? This leads to damage of agricultural machines and above normal inactivity of railroad cars. What is being done in this regard?

Yes, we have many similar complaints against railroad workers. That is, their work, and we indeed must solve and regulate a number of questions on goods and material needs for agricultural production. I would like to note in passing the preservation of goods during transportation. We are working on this together with the Ministry of Communications, and a whole series of joint documents has been signed and published. Comparatively recently, at a joint collegium with the Ministry of Communications, we examined the work experience of using rolling stock, improving rolling stock use, mechanizing loading and unloading work, preserving goods in transit and other related questions.

We are satisfied with the results of this cooperation between the Selkhoztekhnika organization enterprises and railroad administrations and railroad enterprises. It seems that all of this will facilitate and is already facilitating improvement of this matter. There are, of course, still unresolved questions, and in particular, improving the unloading of goods from railroad cars for agricultural enterprises along frequently used routes. We have to complete work on these questions.

Boris Nikolayevich Lapishev, an engineer from Kiev, asks a very interesting question: A difficult situation has developed in the republic regarding equipment for loading and unloading haylage silos. How should this situation be solved?

A very progressive method for preserving fodder is being used in the country, namely, the construction of special haylage silos. Although sometimes this question has been criticized by the press, this is a very progressive method for storing fodder. This storage method allows a 20-percent savings of fodder. This is the quality fodder we are talking about, the haylage. This method of preserving fodder allows the fodder distribution to be mechanized and even automated. One can provide tens and hundreds of examples where farms are successfully employing the silo method of storing and thus ensuring proper preservation of fodder. I just want to use one biting but fair comment from Sakhalin. Comrade Gayduk, head of one of the farms, has sent us a letter in which he evaluates the silo method of storing fodder. He made an original statement by saying that the fact that this method is not widely used is "pure ignorance." He is very sharply condemning those heads of farms, enterprises and organizations such as Selkhoztekhnika who are building poor facilities and not introducing this progressive method.

Work is being carried out now by the Belotserkovskiy Plant, one of the specialized enterprises of the Ministry of Machine Building, for animal husbandry and fodder production, on more efficient haylage silo loaders and unloaders. The equipment has been produced and supplied in the last 2 years to the existing silos and will be supplied to kolkhozes and sovkhozes as replacements for the outdated types of equipment which are now being used for unloading the haylage silos. There are a number of other questions, and I would like to say in conclusion that currently the Selkhoztekhnika State Committee Collegium, all the enterprises and organizations of the systems and all the collectives, with many thousands of workers--there are over 1.7 million people working in the system and there are about 8,000 enterprises and organizations--are all working strenuously on fulfilling the urgent tasks specified in the food program.

The Selkhoztekhnika State Committee Collegium on 22 June, more than a month ago, at its enlarged session, with the participation of the heads of oblast, kray and republican Selkhoztekhnika organizations, scientific research, planning, machine testing and other enterprises and organizations of the system, discussed in detail the results of the May CPSU Central Committee Plenum and the tasks originating from its decision on mechanizing agricultural production to be implemented by the Selkhoztekhnika enterprises and organizations.

A concrete program for the system's practical activities has been worked out and approved. These activities are to be directed at the implementation of the May 1982 CPSU Central Committee Plenum directives and recommendations outlined by Comrade Leonid Ilich Brezhnev, general secretary of the CPSU Central Committee in his report at the CPSU Central Committee Plenum.

The plan of the practical activities of the system embraces all the links of administration. It concerns all the collectives and it envisages the solution of the current problems related to the harvesting and procurement of fodder, preparation for livestock wintering and the implementation of a number of other current tasks. This further improvement in the activities of enterprises and organizations in all spheres is also envisaged in the plan of practical activities. Above all, this means improvement in the quality of work of repair enterprises, technical stations servicing the machine-tractor fleet, stations servicing the equipment at livestock farms, trade supply bases, machine testing stations, repair plants and other subordinate enterprises.

Special attention is paid to improving the style and methods of work, consolidating state discipline, increasing organizational capacities and business-like awareness, improving the training of cadres and increasing the level of competency in people. In other words, if we formulate this briefly, the following are the demands imposed upon the specialized Selkhoztekhnika system which provides engineering services to the agro-industrial complex: to carry out more energetic and purposeful work which will ensure further increases in the production of agricultural produce; to achieve good final results in farming and animal husbandry; to expedite scientific and technical progress in agriculture; to introduce on a wider scale more efficient methods of using the machine-tractor fleet in kolkhozes and sovkhozes and providing repair and technical services; to improve the organization of material and technical supplies to kolkhozes and sovkhozes and the organization of bridge building, maintenance, transport and many other works which directly influence yields in fields and productivity on farms.

[Voznesenkiy] To conclude the program we invite you to hear an address by Viktor Petrovich Borodin, until recently USSR first deputy minister of agriculture. After recording the address that you will now see, Viktor Petrovich became deputy chairman of the USSR Council of Ministers Presidium Committee for Agro-Industrial Complex Questions. I give the floor to Viktor Petrovich Borodin.

[Begin Borodin recording] The first question is from Comrade Petrov, an engineer from Moscow: Can we regard the adoption of the food program as negating all the initiatives on increasing agricultural production adopted since the 22d CPSU Congress?

I would like to say no, we should not regard this as so. Suffice it to say that the measures taken by the party and government in developing our country's agriculture before the May CPSU Central Committee Plenum enabled every person to have 3,485 calories [daily]; that is, on a par with the world's developed countries. However, we still do not have enough livestock products in the nutrition structure. The decisions of the May CPSU Central Committee Plenum are an extension of the enormous work done by the party, government and all the Soviet people after the March CPSU Central Committee Plenum in 1965. This is how I would like to answer this question.

The next question comes from Comrade Izotov, an economist: What is the grain yield per hectare around the Soviet Union?

I would like to say that our yields grow from one 5-year plan period to another. Suffice it to say that according to central statistical administration data, crop yields amounted to an average of 10.2 quintals per hectare in 1961-65, 13.7 quintals per hectare in 1966-70, 14.7 quintals per hectare in 1971-76 [as heard] and 16 quintals per hectare in the last 5-year plan period.

The next question comes from Comrade Orlov from Moscow: Won't our national economy be divided into two sectors--industry and agriculture?

No, this will not happen because the national economy is an indivisible economic complex. As agriculture--intensive agriculture--cannot develop without the industrialization of all its aspects, so also a highly developed industry of any country cannot develop without agriculture. For example, agriculture receives for its development material resources from 84 branches of the national economy; that is, ministries and departments. At the same time industry receives from agriculture produce for processing and for final distribution to stores for sale to the population.

The following question interests Comrade Yerefey Giogoryevich Tuchik from Zaporozhye: Who will manage the capital funds and material assets apportioned to rayons and oblasts? Agro-industrial complexes or ministries and departments?

Well, as yet there is no concrete position on rayon and oblast agro-industrial complexes, but we envisage that these capital investments and material and technical resources will be managed by the rayons and oblasts.

Next we have a whole group of questions from different comrades, predominantly from Moscow. Comrade Anisimov, a pensioner from Moscow asks: Is it possible to apply the experience of Hungary in solving livestock production problems? The next question comes from Comrade Gristinin, an engineer from Moscow: How is the Hungarian agricultural experience being utilized in fulfilling the food program in our national economy? Is it being used? A group of students of the IMO [?Institute of Teaching Methods) in Moscow asks: What scale and concrete forms will our work take in adopting the experience of agricultural development in Hungary and Bulgaria?

We are cooperating very closely with our Hungarian comrades and adopting each other's experience. This cooperation is conducted in three ways. First, scientific and technical cooperation: both our institutes and Hungarian institutes are now doing work in cultivating new varieties, and new varieties have already been grown. Second, trade cooperation: for example, we bought three very large poultry factories from Hungary in the last 3 years; they have already been built and are operating. Third, the immediate introduction of achievements in selection, seed cultivation and technology: this is a very large-scale question and occupies a large area in the activities of our ministries. For example, we exchanged technological methods 4 years ago. We introduced sugar beet production with as little manual labor as possible in a 200-hectare area in the fields of Hungary. In exchange for this they introduced corn production in an 800-hectare area in Moldavia. What did this achieve? It gave us the opportunity this year to apply this technology to an area of 3 million hectares of corn grown with industrial technology. Our Hungarian comrades generally adopted our technology for growing sugar beets in their fields.

In addition I would like to say to the IMO students that we are now closely cooperating with our Hungarian comrades in improving the work of personal plots and auxilliary farms and also in combining such production with kolkhozes and sovkhozes. I should add that this has been drawn up in appropriate standard documents, and those kolkhozes and sovkhozes are annually improving cooperation with our kolkhoz workers, workers, pensioners and other people living in rural areas and cooperating with kolkhozes and sovkhozes in the production of certain kinds of produce.

The next question is from Skhodnya, but unfortunately the name is not given. Many directors of kolkhozes and sovkhozes--it seems he means chairmen of kolkhozes--while doing work in rural areas actually live in the city. This causes great damage because, while they call on young people to work in rural areas, they themselves live in cities. How will this question be solved in light of the decisions of the food program?

Well, how can this situation be assessed? I consider that it is not right for the heads of subdivisions, especially those of our large farms at kolkhozes and sovkhozes, to live in cities. Perhaps there are some objective reasons, but in principle a person should live where he works, together with his collective.

The next question is from Ivan Petrovich Gerasimov, a teacher from Khimki: What measures will be taken against whitewashing (ochkovtiratel)? For example, sowing has not been finished in certain kolkhozes and sovkhozes in Kaluzhskaya Oblast, but they report that everything is all right. Will obkom representatives again be sent to farms during sowing and harvesting as was done in the 30's when oaths were taken and no deception was allowed?

Well, this is a two-part question. I would like to say on the first part that the harshest measures and punishments must be administered to those who deceive the state in this manner and we have existing statutes for this which are in force. Regarding the second question, obkoms are directly connected with production and their instruction personnel, leadership personnel, namely, the heads of departments and obkom secretariats, are very much concerned with questions of agricultural production on a daily basis.

The next question comes from Comrade Igor Aleksandrovich Brusenskiy, an economist of the Institute of Economic Problems in Moscow. He asks many questions and I have chosen one: How will the growth in agricultural production and in processing capacities be planned and coordinated when the agricultural production has seasonal fluctuations while the storing and processing capacities of the enterprises of the food, meat, milk and fish industries are currently being used to their utmost capacity? This is a very interesting question and it was not looked into from this standpoing until the May CPSU Central Committee Plenum. What was looked into was the development of agriculture on its own; the food industry was viewed on its own and so was the meat industry and so on. However, from now on, with the creation of agro-industrial associations in rayons, oblasts, republics and in the union as a whole, and with the establishment of an agro-industrial commission headed by the deputy chairman of the USSR Council of Ministers, this problem will be solved in such a way that unified planning will be adopted in the agro-industrial complex and hence it will be easier to solve problems and to avoid those mistakes and disproportions which we still unfortunately have.

Another question is asked by Comrade Yuriy Ivanovich Fedorov, an engineer from Moscow: A good power base per rural worker is the basis for success in agriculture. I would be interested to learn about the rate of growth of the power base per agricultural worker in our country compared with the rate in developed countries. I can answer the following. If we had 5.4 horsepower units per agricultural worker in 1960, then in 1965 we had 7.7, in 1970 we had 11.2, 16.8 in 1975 and 24.1 in 1980. As you have noted, a growth in the per capita power base of agricultural workers is envisaged in the food program. As far as comparison is concerned, then in Hungary there are 10.3 horsepower units per rural worker, but I must say that this is not the level we need. We must not only consider the power base per worker but also per 100 or 1,000 hectares of land under development. Then everything will be more precise. In areas where there are more workers, it naturally works out that there are fewer units per worker. Then there has to be a dual count.

Another question is from Comrade Nikonorov, an engineer from Moscow: Why, despite the availability of powerful tractors, is there such a slow rate of production of attachments for them? Yes, this problem does exist. On the basis of the norms we use for planning agricultural production and for supplying tractors with tractor-pulled equipment we are considering that for every tractor power unit there must be three units of tractor-pulled implements. Today we have achieved approximately half of this. The fact is that we, or our industry, still cannot ensure the production of all the necessary attachments in complete form and in large variety for our existing tractors. But this problem is being solved in every 5-year plan as well as after the appropriate decisions were made at the May plenum, where the food program was ratified.

Another question is asked by Irina Aleksandrovna Frolova, an editor from Moscow: What are the prospects for increasing the productivity of anti-erosion equipment? This is a most interesting question. The prospects are good, I must say. The factories' capacities are being expanded and we will receive enough equipment for work to be carried out on the protection of soil from erosion. At this point in time we are planning to carry out work on protecting the soil from erosion with the equipment we are talking about, on the area of almost 48 million hectares. The total area of the antierosion work is approximately 80 million hectares.

Here is another question or a group of questions. The first one is asked by Comrade Zaryayev, an engineer-technologist from Riga. He writes: The plans are grandiose and we approve of them. What measures are envisaged for attracting human resources for implementing the food program in the climate of the labor shortage in the country? The second question is asked by Grigoryeva, a student of the Moscow State University: Not only material but human resources as well are required for the realization of the food program. Are there plans for creating komsomol youth brigades for upgrading agriculture? Neither we nor anybody else, of course, are planning to create such brigades for upgrading agriculture, because this is impossible and there is no necessity for it. We, or the Ministry of Agriculture, are solving this problem and it has been stated in the relevant documents of the food program that it is necessary to create good conditions for the rural population and to tie them to their place of residence. We mean the construction of housing, places for cultural activities, roads and so on. This is the first thing. The second thing is to sharply increase labor productivity by improving the qualifications of all the agricultural workers, to further increase the mechanization envisaged in the food program, to step up the usage of chemicals and to improve the lands specified in the program.

These are the questions which are left from the first program. Now I have received a good number of questions which were not asked over the phone but which arrived through the mail.

The next question is from Comrade Koshinov, a World War II veteran from Vladimir-Volynskiy: A considerable portion of time was devoted in Leonid Ilich Brezhnev's speech at the plenum to problems in the livestock industry. In connection with this I would like to know how the problem with fodder supply to the public herd and to the animals of individual farmers alike is going to be solved. This is a perfect question. The problem in the development of the livestock industry is now mainly the result of the inadequate fodder base.

The food program envisages ensuring the production of 540-550 million fodder units. For your information I will say that 400 million fodder units were consumed in 1981 by all types of farms and animals. Therefore, there is a unified plan for the public and private sectors alike. The basis for the implementation of this program will be the increased yield of fodder crops, increased production of hay and increased pasture areas. The second question is the question of the proper storage of all types of fodder by means of the construction of all types of storehouses. The third question is the question of work mechanization in the production and preparation of all types of fodder. Unfortunately, we are carrying out a lot of manual work during the production and especially during the processing of fodder crops.

A number of questions have arrived from the Khamytovskiy and Kurskiy Rayons of the Kurskaya Oblast. From a long list of questions I would like to answer only two of them. Why are the areas under the most reliable grain crop, namely, spring rye, so small? Indeed, in recent years, especially in the past 10 years, the area under such crops as rye has been somewhat reduced. This is connected with the fact that, first of all, we have developed very good strains of winter wheat of the mironov variety, which are now being sown in practically all the oblasts of the Russian federation. They are high-yield crops, significantly higher than that of rye, and are frost resistant. This is the first reason. The second is that the existing strains of rye produce low yields and therefore cannot compete with wheat. Recently our selectionists developed a number of strains of short-stemmed, high-yield rye and the area of their cultivation has started to expand. In our plans, we are envisaging the expansion of the sowing area under rye, as this is in accordance with our people's interests and traditions. Another question: Why is the area under the crop which is the most productive and the most needed by the dairy herd, namely, fodder beet, not being expanded, while the area under sugar beet, which gives miserably low yields, is overly extended? It appears that such a comparison is not quite right. The area under sugar beet is not being expanded but remains stable and we are adopting measures not to expand the area but to increase the yield of sugar beet in order to increase the production of sugar. Unfortunately, we cannot say just yet that we are working well in that direction and that we are providing sugar to the population by producing sugar ourselves. As for the first part of the question, in connection with the expansion of the area under fodder beet is concerned, then that is a very fair question and we are working on this problem and will continue to do so. We will introduce its production, that is, we will expand the area of its cultivation, and increase its yield in order to ensure a better supply of fodder to our public livestock sector.

Another question is asked by Yevdokiaya Ivanovna Shiryayeva, a pensioner, and Nataliya Borisovna Borzunova, also a pensioner, from Moscow. They write: The food program can be implemented, and you will agree with me, with hands and not only by organizations. Perhaps it pays, first of all, to review the question dealing with tying down the agricultural labor force and not letting the youth leave kolkhozes and sovkhozes with such ease. Perhaps it pays to forbid this with the exception of such cases when farms are in need of young specialists [word indistinct] of farms.

This is a two-part question. As far as the latter portion is concerned, suggesting that we stop the youth from leaving kolkhozes and sovkhozes, I think this is the wrong idea. This is not our responsibility. The youth can work there if they like, and they do work there.

In response to the other question, I have already said this in one of my first answers. We are now adopting very great measures, and these are ratified by the party and government, to solve the social problems in villages, to create good cultural and domestic housing facilities in the rural areas in order to tie down the work force, raise their standards and ensure the solution of those great tasks which the party has put to our people. [end recording]

[Voznesenskiy] Comrades, I do not think that today's program requires any special conclusion. We will continue work similar to this, answering your questions in different ways. Allow me only to thank you for your attention and thank the comrades who participated in the program for their honest attitude to the questions which interest and worry many, many television viewers. All the best.

'IZVESTIYA' HAILS USSR PEOPLE'S FRIENDSHIP

PM181257 Moscow IZVESTIYA in Russian 11 Aug 82 Morning Edition p 1

[Editorial: "Great Force of Fraternity"]

[Text] The friendship of the peoples has become a firm part of our seething, multifaceted life and of creative labor. All the republics, krays, oblasts and cities of the land of the soviets are multinational. And every citizen of our country, wherever he lives, feels himself to be an equal person with full rights. The country's constitution says: "It is the duty of every USSR citizen to respect other citizen's national dignity and to strengthen the friendship among the nations and ethnic groups of the multinational soviet state."

The long road that has been traveled together has cemented the Leninist fraternity of the peoples and has made it invincible. "Socialism," Comrade L. I. Brezhnev has said, "brought into play the powerful motive force of our development represented by the friendship of the peoples. The unity of the multinational soviet people is as strong as diamonds."

Mentally surveying the road that has been traveled, we can speak proudly today of the truly swift socioeconomic development of our fraternal union. In 60 years the USSR's share of world industrial production has increased by a factor of 20. Modern industry, agriculture and science and flourishing culture all characterize each Soviet republic nowadays. What is the source of this swift social progress? "It is our socialist system, the energy and will of the masses led by the Communist Party...and, of course, it is the wise Leninist nationalities policy and the unity and mutual assistance of all the peoples of our socialist motherland," Comrade L. I. Brezhnev has noted.

The result of the revolutionary transforming activity of the peoples rallied into the USSR under the party's leadership has been the building of a developed socialist society. A historic new community of people--the Soviet people--has been formed in the country.

Profound patriotism and internationalism are features that have always been characteristic of Soviet people. They were forged and tempered in the years of industrialization and the collectivization of agriculture, during the period of the cultural revolution and in the seething workdays of the 5-year plans. The party's Leninist nationalities policy and the Soviet social system passed with honor a grim test during the Great Patriotic War.

The postwar rebirth of the country was a truly nationwide exploit. Our country's peoples have seen for themselves over and over again that the cohesion in a single union augments their strength and accelerates socioeconomic development.

Not only has the sociopolitical and ideological unity of society been achieved in the USSR now. The new type of social and spiritual relations between working people of different nationalities which is characteristic of the developed socialist society has been asserted.

The USSR peoples' unity and friendship and soviet people's great patriotism are organically interconnected: they have a common sociopolitical base and a common ideological, philosophical foundation--Marxism-Leninism.

Soviet people's sense of fraternal inviolable friendship contributes to our labor successes. We generously share our experience with one another. We rejoice at our neighbor's achievements. We help one another at difficult times. Thus widespread publicity in the development of competition in our country has enabled, for instance, 107 Latvian enterprises to make active use of the progressive Shchekino method. Hundreds of such examples could be mentioned.

"Our successes are based on a feeling of comradeship and on keen responsibility for the common cause and now, in particular, for the fulfillment of the decisions of the CPSU Central Committee May (1982) Plenum and the country's food program," says Ye. Chelkarov, secretary of the party committee of the "Put K Kommunizmu" kolkhoz, Zelenovskiy Rayon, Uralskaya Oblast, sharing his thoughts. "People of 17 nationalities work together on our kolkhoz--Russians, Kazakhs, Belorussians, Ukrainians, Turkmens, Uzbeks...they work and live harmoniously like one big happy family."

Special cordiality in relations between people usually reigns in multinational collectives. This is the customary norm of relations in the collectives of the Kama Truck Plant, on the Baykal-Amur Railroad, at the Ust-Ilimskaya Ges and on the construction projects of the Non-chernozem Zone. Fraternity, cooperation and great patriotism are helping us today to create major territorial-production complexes like the Sayano-Shushenskaya Ges and the Baykal-Amur Railroad, to open up the virgin oil territory of West Siberia and to transform the RSFSR Non-chernozem Zone.

The most mass, sovereign [polnovlastnyy] state organs--the soviets of people's deputies--are a true expression of the close unity of all nations and nationalities and of the commonality of their political life. The 2.3 million deputies elected by the people--communists and nonparty people, representatives of over 100 nationalities--decide important questions of socioeconomic, political and cultural building and display concern for Soviet people's welfare.

The CPSU Central Committee resolution "on the 60th anniversary of the formation of the USSR" notes that the preparations for the USSR's jubilee must help to further improve working people's ideological and political, patriotic and international education and their class tempering. The soviets of people's deputies are called upon to propagandize the historic advantages of socialism in vivid and well-reasoned fashion and to ensure by their practical activity the further rapprochement of the country's nations and ethnic groups.

Collectivism in relations between people and socialist comradeship are raised to a still higher level in the course of the everyday struggle to assert the social and moral values of the socialist way of life and a healthy ideological and moral atmosphere.

All the Soviet Union's nations and ethnic groups and all Soviet people--patriots and internationalists--are fully determined to greet the USSR's 60th anniversary with new labor successes and will continue to struggle with even greater vigor to implement the historic decisions of the 26th CPSU Congress.

'IZVESTIYA' STRESSES ROLE OF WORK WITH LETTERS

PM250805 Moscow IZVESTIYA in Russian 18 Aug 82 morning edition p 2

[Unattributed article under rubric "On Topics of the Day": "A Letter Arrives...."]

[Text] Each day party and Soviet organs, newspapers and journals, radio and television and organizations and institutions receive letters from every corner of our motherland. This huge mail is the voice of working people, the voice of the masters of the country, their proposals, opinions and requests. Working people's letters contain the will and wisdom of the people.

Comrade L. I. Brezhnev has described working people's letters and proposals as the party's channel of living communication with the masses. In his report at the 26th Party Congress he said that Soviet people, boundlessly trusting the party, open their hearts to it on the most vital questions of social life, labor and everyday life, frankly share their views and concerns and criticize the existing shortcomings. Our party's central committee attaches great importance to work with letters and to a timely reaction to them. This is what you must always remember when a letter is placed on your desk.

Life and practice give every reason to believe that the procedure for and standards of work with letters have improved substantially in recent years. A great role has been played here by the CPSU Central Committee resolution "on measures to further improve work with working people's letters and proposals in the light of the 26th CPSU Congress decisions," which determined specific, effective measures to further improve work with working people's letters and proposals.

It is hard to overestimate the significance of letters--these truly human documents. They help us to orient ourselves better in the situation, to assess the activity of economic and social organizations more objectively, to combat bureaucracy and red tape and to see shortcomings and ways of eliminating them more clearly. They are one of the most confiding and valuable sources of information about the demands of people in cities and villages.

Letters are one means of implementing Soviet citizens' constitutional rights. Our constitution, which has been living and operating for the good of the people for almost 5 years now, grants every citizen the right to submit to state organs and social organizations proposals on improving their activity and to criticize shortcomings in work. Widely exercising this right, Soviet people are stepping up their participation in the management of state affairs and are helping to further improve socialist democracy.

Officials, the USSR Constitution says, must examine citizens' proposals and statements within the prescribed deadlines, answer them and take the necessary measures.

Nationwide competition for a fitting celebration of the 60th anniversary of the formation of the USSR has now been started throughout the country and a steep wave of the people's activeness, prompted by the mobilization of all efforts to successfully implement the food program approved by the CPSU Central Committee May (1982) Plenum, has developed. Ways of making the fullest use of reserves in order to solve the food program are the theme of a great number of letters to the editorial board. The widespread all-union campaign under the slogan "Preserve All That Has Been Grown!" is daily swelling the main from readers as participants in it submit with profound interest many businesslike proposals and criticisms.

Every leader, every official, everyone who works with citizens' letters and complaints must remember that a sensitive, considerate attitude toward them is his duty to the people and to the party. That is precisely how the Soviets of Moscow, Leningrad, Kiev, Minsk and many, many other cities and villages in the country view the examination and analysis of their mail, proposals and criticisms--as the execution of an important duty. These questions feature increasingly often on the agendas of sessions of union and autonomous republic supreme Soviet presidiums, local Soviets, ispolkoms and standing commissions.

It is the rule in the Tbilisi Gorispolkom to rigorously monitor matters to ensure that no letter is left without a timely reply. "Open letter days" are the practice there. On such days the leaders of the ispolkom and its sections meet with people at their place of residence. Many urgent questions are resolved during these meetings.

The Gorkovskiy Oblispolkom has generalized instructive experiences of work with letters in the Kras Nobakovskiy Rayispolkom. There a letter ceases to be monitored only after the question raised in it has been completely resolved.

The nature of letters is multifaceted. Local Soviets' mail contains letters of complaint, but often a complaint or a seemingly personal matter will contain a socially significant statement of a question. V. I. Lenin believed that businesslike complaints are of substantial significance and lead to substantial results. For instance, the residents of the settlement of Vetluzhskiy in that same Krasnobakovskiy Rayon complained about defects in a new apartment block. The appeal was examined by the rayispolkom and prompted serious discussion with the leaders of the "Gorkovgrazhdanstroy" trust. Measures were soon taken to eliminate the defects and to improve the quality of construction.

However, there are still unfortunately other cases where answers to letters are excessively delayed and a callous attitude toward legitimate requests and valid statements is permitted. The following also happens: a good promise is given about a letter, but it is not fulfilled. Then repeat complaints and appeals to higher organs on questions that can and must be resolved by enterprise leaders and rayon and city organizations appear and people are sometimes forced to travel long distances seeking the satisfaction of their requests. Our editorial mail testifies to this.

An attentive, sensitive attitude toward working people's letters strengthens the link between organs of power and the masses. This is a statewide, partywide concern. To pay attention to letters is to show respect for people. Those who are associated with this responsible, noble and rewarding work must always remember that.

USSR WEEKLY ATTACKS CONSUMERISM, MONEY-GRUBBING

PM251221 Moscow NEDELYA in Russian No 33, [no date given] (signed to press 19 Aug 82) p 7

[Yadim Kassis and Leonid Kolosov article under the rubric "Returning to a Past Article": "About the 'Golden Box'"]

[Excerpts] Letters arrive in the editorial office, and the telephones ring. Readers want personally to share their thoughts with the authors of the article "Secret of the Golden Box," which was published in two issues of IZVESTIYA (23 and 24 June 1982). Let us recall that it told of an operation by Moscow chekists who put an end to the criminal activity of a group of smugglers who were secretly exporting from our country valuable antiques, gold, precious stones.... [passage omitted]

"Thingism" destroys people's souls, deprives them of moral foundations and leads to moral degradation. Consumption and consumerism are diametric opposites. Consumption is essential, without it mankind cannot exist. Consumerism is something else. Its roots lie in the essence of the private property relations of the antagonistic society, in which it constitutes a variety of social parasitism, that, of consumption without labor, and is expressed in the desire for profit at any price, in money-grubbing, in a rapacious attitude to people, in the plundering of natural riches....

Consumerism is an infectious and dangerous disease. It finds expression in the disharmony of material and spiritual needs, manifests itself in the bourgeois cult of things, in "thingism," and leads to the spiritual impoverishment and disintegration of the personality. Consumer orientation has no class grounds under socialism and is hostile to it. But it is no secret that recently we have still been observing in certain people outbreaks of the so-called "thing disease...." These outbreaks are brought on by shortcomings in economic and educational work. These outbreaks are promoted to a considerable extent by alien trends from abroad, by ideological subversion by the West, which is seeking to introduce the "cult of consumption" into our people's consciousness and poison it with "thingism." How many times we have seen for ourselves that a petit bourgeois is not just an egoist and egocentric and a potential rogue but also a possible traitor.

Honestly, it was not at all pleasant for us to read the cases of the thieves of whom we wrote and whose personalities inspired loathing. But it is necessary to speak about it, and to do so at the tops of our voices, unashamedly, remembering that the law is always on the side of justice. If your neighbor, who holds the modest post of chief of a waste paper reception center, has acquired two cars, and a parsley trader from southern latitudes who has established himself in some market has acquired two cooperative apartments, if a sponger throws money about in a restaurant every evening, and the secretary of some organization dealing with the registration and distribution of housing space changes her fashionable clothes too frequently--clothes which she buys under the counter at speculative prices--it is worth reflecting on the matter....

The role of ideological influence and communist education in overcoming a consumer attitude to life is growing all the time. In order to pull from the bourgeois bog those people who have fallen into it for one reason or another, these people must be given active assistance. Let us be frank--the higher our socialist society rises in its development, the more intolerable the deviations from the norms of our morality which are still encountered seem. Private property trends, money-grubbing and stealing run counter to the very essence of socialism. It is necessary to struggle against these phenomena, making use of the opinion of the labor collective, the critical word of the press, methods of persuasion and, finally, the force of law.... Of course, this is no easy struggle. "New life is not born easily," the CPSU Central Committee report to the 26th Party Congress stated. "The path of social progress is hard and sometimes tortuous, but the achievements of the socialist society are all the more considerable and prominent, and the exploits of its builders and defenders are all the more grand."

These defenders include our glorious chekists. A letter, which we venture to cite in conclusion, was devoted to them. M. Volovich writes from Kiev: "Esteemed comrades! I, like all Soviet people, was profoundly indignant at the actions of these criminals, who were active for several years, and it was only thanks to our chekists and their very hard, uncompromising work that those crimes were exposed. I beg to express very great gratitude to the chekists through your newspaper and to wish them health and new successes in their noble work in liquidating all foul scum on our healthy society."

RSFSR AGRICULTURE MINISTER ON FOOD PROGRAM

LD180012 Moscow Domestic Service in Russian 0910 GMT 17 Aug 82

[Talk by Leonid Yakovlevich Florentyev, RSFSR Minister of Agriculture, on Agriculture in the RSFSR--live or recorded]

[Summary] There are 23,000 kolkhozes and sovkhozes, with over 215 million hectare of agricultural land, including over 131 million hectares of arable land, in the RSFSR. Two thirds of marketable grain production comes from arid steppe regions. Greater progress has been made in recent years in improving technology and mechanization on farms. The May 1982 plenum pointed out the need to improve further on yields and output: The food program provides for specific ways of doing this.

The RSFSR's tasks in fulfilling the food program include raising the annual average grain production to 134-136 million tons in the 11th Five-Year Plan and to 140-142 million tons in the 12th Five-Year Plan. Compared to the 10th Five-Year Plan, by 1990 gross sugar beet production is to increase 1.3 times. Sunflower seed 1.5 times, potatoes 1.2 times, vegetables, cucurbits and fruit 1.4 times and grapes 2.6 times. Over the next few years RSFSR grain yields are to increase to 20-21 quintals per hectare on average--that is, 6 quintals per hectare more than most farms achieve annually at present. Over the 10 years the average milk yield per cow is to be increased by 600-700 kg. [as heard]

In the 11th Five-Year Plan R68.6 million of sovkhoz and kolkhoz funds are being allocated for development of the material and technical base and social restructuring of rural areas in the RSFSR. This is 13 percent more than in the 10th Five-Year Plan. Over the decade 3.3 million hectares of irrigated and 3.7 million hectares of drained land is to be brought into use in the republic. Expansion and modernization of animal husbandry farms, is a prime task, as is comprehensive mechanization and accelerated development of fodder production. Full utilization of the capacities of industrial animal husbandry complexes are a considerable increase in output of meat from nonspecialized collective and state farms are tasks of utmost importance. Particular attention is to be devoted to improving the work of dairy farms to ensure that each dairy farm annually increases milk yields by at least 80-100 kg per cow.

Developing of subsidiary plots, agricultural workshops and industrial enterprises' subsidiary plots are of great importance in achieving the aims of the food programs. All possible efforts are being made to ensure that each family living in a rural area has its own household plot, cattle and fowl. Last year collective and state farms sold to the population about 9 million suckling pigs and 313 million fowl. They are also helping rural dwellers with haymaking, pastures and fodder, as well as allocating forage as payment for collective and state farm workers' labor and organizing marketing surpluses.

Efforts are being made to improve labor organization and work conditions on farms, though such efforts are by no means organized everywhere. Two-shift and two-cycle and other progressive work schedules should be more actively introduced on farms in order to attract young people.

A scientifically-based program for increasing yields and soil fertility is being carried out, with due consideration for the specific characteristics of each region.

Kuban farmers are selling their 3rd million ton of grain to the state; Stavropolskiy Kray and Rostovskaya Oblast have sold the state 1.5 million tons of grain each, the majority of which is valuable wheat. "It should be admitted, however, with all frankness that gathering the harvest and grain procurement is not being carried out in a sufficiently well-organized fashion everywhere. Being carried out in a sufficiently machinery and vehicular transport is not yet being used with maximum efficiency for harvesting and procurement work everywhere." Agricultural organs consider stepping up grain cutting, threshing and sales to the state, particularly of pulse and groat crops, to be their prime duty. A good example is being set by farmers in Moskovskay Oblast and the Don, who have already laid in over 1 million tons of hay each. Laying in fodder and preparing to winter animals is a prime task.

Preparation of the soil for sowing winter crops must be speeded up.

"Of course, the fulfillment of wide-ranking measures for the social transformation of rural areas is an inalienable integral part of the food programs. It is people who decide the success of the matter at hand, and these people must be trained, their skills improved. Their interest must be roused so that they stay on kolkhozes and sovkhozes." In the 10th Five-Year Plan R11.2 million of sovkhoz and kolkhoz funds was spent on construction of housing, amenities and roads. This is 1.5 times the sum spent in the Ninth Five-Year Plan. Plans for the commissioning of schools, housing, children's preschool institutions, health institutions and social amenities were unfortunately not wholly fulfilled, but the situation is now improving.

In accordance with the directives of the May 1982 plenum, R18.5 million is to be spent in the 11th Five-Year Plan on housing and social amenities in RSFSR kolkhozes and sovkhozes. This will fund the building of at least 30-35 apartments in each kolkhoz and at least 70 apartments in each sovkhoz over the 5-year plan. Cooperative construction of housing will be further expanded, and houses will be primarily of the farmstead type with provision for farming a subsidiary holding. Construction of housing and social amenities in those kolkhozes and sovkhozes that are lagging behind in this respect or are very remote will be given priority. Not everywhere are the necessary measures being taken in this respect, though a number of oblasts in the RSFSR have devoted great efforts to achieving progress.

In fulfilling plans for agricultural and social development, much depends on subjective factors. Much depends, too, on the managers and experts on a farm. At present 98 percent of state farm directors have specialized, mostly higher, education: 96 percent of collective farm chairman are also agricultural specialists. "People are on the whole conscientious and, I would say, selfless, people's abilities differ, however, and their organizing abilities differ. It is our task to develop these organizing skills and in every way help farm managers and specialists to cope with the tasks confronting them." Those farms that lag behind must be brought up to the level of the front-ranking ones.

RASHIDOV CHAIRS REPUBLIC LIVING STANDARD COUNCIL MEETING

[Editorial Report] Tashkent PRAVDA VOSTOKA in Russian on 28 July carries on page one an 800 word report of the meeting of the Republic Council for the Improvement of the Living Standard of the Population held in Tashkent on 27 July. Candidate Member of the CPSU CC Politburo and First Secretary of the Uzbek CP Central Committee, Sh.R. Rashidov presided over the meeting. The results of seminars on pressing problems of the standard of living of agricultural workers were discussed along with problems within the oblast councils' work in the area. The question of doing away with the still present individual farmsteads [khutors] was discussed in detail, as was the construction of housing and cultural projects.

Along with the Uzbek SSR Minister of Consumer Services, A.I. Brodova; Rashidov spoke on the reconstruction of the village.

ALIYEV AT NAVY DAY CELEBRATION

[Editorial Report] Baku BAKINSKIY RABOCHIY in Russian 27 Jul 82 carries on page one a 500 word report of the festivities of USSR Navy Day held in Baku on 25 July. G.A. Aliyev, candidate member of the CPSU CC Politburo and first secretary of the Azerbaijan CP Central Committee was present along with other members of the Buro and several military officers. The festivities were highlighted by a parade of the warships of the Red Banner Caspian Fleet. Other activities included a short congratulatory speech by Aliyev and a number of water sports.

POLISH VOIVODSHIP DELEGATION VISITS LATVIA

Riga SOVETSKAYA LATVIYA in Russian 7 Jul 82 p 1

[Latinform Communique: "Talk at the Central Committee of the Latvian CP"]

[Text] On 6 July a delegation of the Szczecin Voivodship Committee of the Polish United Workers Party, headed by first secretary of the voivodship party committee Stanislaw Miskiewicz, visited the Central Committee of the Latvian Communist Party.

In the course of the attendant talks A. E. Voss, first secretary of the CC of the Latvian CP, told the delegation members about the basic directions of activity of the party organizations in our republic as regards fulfilling the decisions of the 26th CPSU Congress, the 23rd congress of the Latvian CP, the plenums of the CC CPSU, and the directives and recommendations of comrade L. I. Brezhnev, General Secretary of the CC CPSU.

This concerned the cardinal problems of economic and socio-cultural construction as well as of organizational, iedological, and political-educational work.

In particular, much attention was devoted to measures to implement the decisions of the May (1982) Plenum of the CC CPSU and translate into reality the Food Program drafted by our party. The guests were informed of our views on the harvest and on the progress of current agricultural work in the republic.

It was pointed out that mass socialist competition in honor of the coming 60th anniversary of establishment of the USSR has been broadly launched in all branches of the national economy.

Stanislaw Miskiewicz described the current situation in Poland as a whole and in the Szczecin Voivodship in particular, as well as the implementation of the decisions of the recent plenums of the CC PUWP, which outlined the principal directions of the struggle to strengthen party unity and the positions of socialism. Speaking of the specific measures taken by the Szczecin voivodship PUWP committee in this respect, he stressed that the communists and working people of the voivodship are, like the entire Polish nation, resolutely determined to strengthen the unshakable friendship with the Soviet Union and other Warsaw Pact countries in the interests of peace, socialism, preservation of stability on the European continent, and strengthening of international security.

It was pointed out that the communists of the Szczecin Voivodship are steadfastly surmounting difficulties in economic and social life upon basing themselves on the working class, working people, and all knowledgeable elements of society.

The encounter took place in an atmosphere of cordiality and fraternal friendship.

Those taking part in the conversations included the comrades E. Ya. Aushkap, V. I. Dmitriyev, and V. A. Chemm, along with V. D. Laukman, the chief of the department of foreign liaison at the CC of the Latvian CP, and the members of the Polish delegation Adam Juszczyk and Jan Worona.

AFGHANI, POLISH AND OTHER DELEGATES VIEW NATIONALITIES CONFERENCE

Riga SOVETSKAYA LATVIYA in Russian 1 Jul 82 p 3

[Interviews with foreign delegates at Nationalities Conference by V. Smetannikov and V. Stefanovich: "A Tried and Tested Weapon"]

[Text] Yesterday in Riga the all-Union scientific-practical conference on "The Development of Relations Among Nationalities Under Advanced Socialism. Experience in and Problems of Patriotic and International Education" ended its deliberations. The special correspondents of SOVETSKAYA LATVIYA V. Smetannikov and V. Stefanovich turned to some of the foreign guests with the request to share their impressions of these deliberations. Below are their comments.

Zdenek Kral, Deputy Chief of Agitation and Propaganda Department, CC of the Czechoslovak CP, doctor:

The working people of Czechoslovakia, together with the Soviet nation and the nations of other countries of the socialist community, are preparing to celebrate the 60th anniversary of establishment of the USSR. Hence we greatly rejoiced to receive the invitation to take part in the conference. We listened with great interest to the greeting from comrade L. I. Brezhnev. To us all his thought that the Soviet Union has attained not only juridical but actual equality of all nations and nationalities is particularly important.

We attentively listened to the substantive speech of comrade B. N. Ponomarev, candidate member of the CC CPSU Politburo, secretary of the CC CPSU, which shed clear light on the key principles of Leninist policy toward the nationalities in the stage of advanced socialism, and on the international significance of that policy. His speech outlined ways of improving patriotic and international education. All this is of great importance to the communists of Czechoslovakia. For imperialist circles selected our country as the object of ferocious attacks. They gambled on fooling young people, who account for a majority of our country's population and still lack serious experience in the class struggle. Our task is to intensify the ideological toughening of our young citizens and bring them up in the spirit of proletarian internationalism.

We are leaving Riga enriched in new theoretical theses and practical experience learned at the conference and in encounters with work collectives. We wish the

Latvian nation new achievements in building the communist society, and may it greet in a worthy manner the 60th anniversary of the USSR.

Janusz Janicki, Deputy Chief, Ideological Department, PZPR [Polish United Workers Party] Central Committee, docent:

Vladimir Il'ich Lenin declared that nationality problems are closely linked to the class struggle. The justice of his statement is particularly evident against the background of current events in Poland.

Currently the upbringing of the nation in the spirit of socialist patriotism in our country proceeds under the conditions of an acute class struggle in the sphere of national consciousness. The principal tool of the domestic enemies of socialism and their foreign inspirers has become nationalism. Disdaining no means to achieve their ends, our enemies strived to exploit national feelings in the dirty game they are playing against the party and the socialist state. The martial law put an end to the public activities of the counterrevolutionaries. Comrade Wojciech Jaruzelski, when speaking of the international aid provided us by the USSR, noted that: "We are convinced anew of the basic nature of the socialist family of nations--he who is in trouble gets help from his brothers."

All that has been said at the conference in the profound, shining, and substantive speeches by comrades B. N. Ponomarev and A. E. Voss, and in the comments of the participants, has inspired us with tremendous vigor. The Soviet experience in the development of national relations and patriotic and international education under advanced socialism will help our party to do everything possible to improve the process of the formation of a socialist national consciousness within the Polish society.

Dzhelani Kargar, Prorector of the Institute of Social Sciences, Central Committee of the People's Democratic Party of Afghanistan:

As known, recently there took place a national conference of the PDPA, which discussed important problems. It stressed that above all it is necessary and possible to expedite the implementation of the fond hopes of our multinational nation for whose sake the April 1978 revolution was accomplished.

That revolution put an end to the economic and political domination of feudalists on Afghani soil. But the country is living through difficult times. Domestic and international reaction, American imperialism, Beijing hegemonism, and their lackeys are waging a subversive undeclared war against a nation which has burst the fetters of feudalism.

The solution of the nationality problem by the party is particularly not to the taste of our enemies. They have always exploited differences among nationalities to unleash bloody internecine and fratricidal conflicts.

Currently our party is taking the line toward effective equal rights of all nationalities and ethnic groups. Of tremendous importance to us in this important cause is the experience in the solution of the nationality problem in the USSR. Hence, we have been following the course of the conference in Riga with a mostlively interest. The valuable experience generalized at that conference will contribute to further strengthening the friendship of nations and consolidating universal peace.

James Jackson, member of the Politburo and secretary of the Central Committee of the United States Communist Party:

I regard the Riga conference as an extraordinarily important event. Every utterance by its participants convincingly reflects the strength of proletarian internationalism. All mankind is aware that the monolithic unity of the Soviet people has become an insurmountable obstacle on the path of Fascism, which attempts to enslave and destroy the world's nations.

However, imperialism has not drawn conclusions from the lessons of history. It is doing everything to split the forces of the world revolutionary process and undermine the unity of the socialist community, the international communist and national-liberation movement, and the friendship of the nations of the USSR. In the ideological war against the USSR and the countries of the socialist community, the international reaction bets chiefly on reviving nationalist prejudices and national alienation and dissension.

Hence it is necessary to consistently reveal the internationalist character of Lenin's policy toward the nationalities and strengthen the unity of the Soviet nation, the working people of the socialist states, the international working class, and all progressive forces of the world in the struggle against imperialism and for peace, democracy, and social progress. This is demanded by the times.

I take this opportunity to wish new great accomplishments to the working people of Soviet Latvia in their creative toil for the good of peace and socialism.

Edward Glekin [name transliterated], member of the Political Committee, National Executive Committee of the Communist Party of Ireland:

Ireland is often termed the country with the most tangled nationality problem in the world. And I found it of special interest to observe the accomplishments in resolving the nationality question in the USSR. This is particularly exemplified by Latvia. Latvia's example is not an exception. It is characteristic of all the Union and autonomous republics, autonomous oblasts, and nationality districts of the Soviet Union.

Imperialism's policy in my Ireland has always been based on the principle of "divide and conquer." What is now being accomplished in the Soviet Union is known to the entire world. But consider the newest statistics. The figures published last week show that Northern Ireland has reached the highest level of unemployment in its history.

But in Latvia I have yet again personally witnessed the absence of unemployment here. The national culture, art, and literature of Latvia have bloomed without precedent, under Soviet rule. During this period the number of books published annually in

Latvia has more than quadrupled. In Ireland, by contrast, the appearance of a new book in Gaelic is celebrated almost like a holiday. To this day in my country only one short-feature film in Gaelic has been made.

I listened with great interest to the speeches and comments at the all-Union conference in Riga. And everything that I learned I will take along with me as priceless baggage which I will share with my comrades.

The current Day of Soviet Latvia is what we strive toward and struggle for in Ireland.

SOVIET NATIONALITIES POLICY DEFENDED

Kiev PRAVDA UKRAINY in Russian 10 Aug 82 p 2

[Article by E. Bagramov, Doctor of Philosophical Sciences, professor, under rubric, "Criticism of Hostile Theories": "National Relations in the USSR and Bourgeois Falsifiers"]

[Text] Among the outstanding achievements of the socialist system that have been exerting a constantly increasing effect upon international life, an important place is occupied by the successful resolution of the national question in the world's first country of victorious socialism. "On the basis of our own experience," the decree of the CPSU Central Committee, entitled "The Sixtieth Anniversary of the Formation of the USSR," states, "the peoples of the Country of Soviets have been convinced: the solidarity in a single union multiplies their strengths, accelerates the socioeconomic development. . . In the joint struggle for a new, just peace, there have arisen a great brotherhood of the people of labor, a sense of being part of a single family, and an indestructible Leninist friendship of nations -- these are all inexhaustible sources of the constructive creativity of the masses."

Whereas capitalism has proven its organic inability to resolve the national question that it created itself, socialism has given the world a model of the fundamental reorganization of all aspects of life and the consolidation of dozens of nations and nationalities into a voluntary fraternal union, a brilliant example of the unprecedented upsurge of creative and constructive energy by the nations comprising it, and the confirmation of the completely equal status, friendship, and international solidarity.

National relations in our country have achieved that stage of maturity that conforms to the conditions of developed socialism. This expresses itself in the high level of development of the nationwide economy -- the interrelated national-economic complex; in the confirmation of the uniform social structure of each nation and nationality; in the complete development and inseparable unity of the union-level state principle and the national state principle at the republic level; in the flourishing, rapprochement, and mutual enrichment of the cultures of the socialist nations and nationalities; and in the confirmation of the ideology of Marxism-Leninism, socialist internationalism, and the friendship of nations. In our society, on the basis of the drawing closer together of all the classes and social segments, the legal and actual equality of all nations and nationalities, and their fraternal cooperation, a new historical community of people has formed -- the Soviet nation.

The successful construction of socialism and communism overthrew the assertions by the ideologists of anticommunism to the effect that the motivating force in international relations -- dealing with a capitalist or a socialist society -- has been and continues to be national egoism or great-power chauvinism. No. Socialism has found a powerful antidote to that very virus of nationalism which, in the words of bourgeois scientists, has been spreading over the world with irrepressible force. The mighty union of the nations of the USSR has withstood its durability test, and primarily the very grave tests during the period of the past war. Those who planned on the dissolution of that union have become convinced of the indestructible strength of the friendship and brotherhood of peoples, which friendship and brotherhood were engendered by socialism.

The opponents of socialism who have never ceased spreading slander about the Soviet national policy, have now found themselves in a difficult situation. Although they do not like it, they must recognize the tremendous progress that has been achieved by the nations of the USSR under socialism.

One can no longer ask the question as to whether the Soviet system is a viable one. Our experience in state construction, in free self-determination and development of nations, in establishing smooth fraternal cooperation among large and small nations which, in the past, were divided by deep-lying contradictions; the carrying out of a cultural revolution that has brought into contact with advanced civilization those national and ethnic groups that were doomed to slow extinction -- all this is the precious property of socialism, property that is of importance to world history.

Nevertheless the reactionary socialists and politicians in the West do not want to agree with the assertion that it is precisely in the USSR, on the basis of the great victories of socialism, that the national problem has been resolved for the first time in history. That is the very same problem that proved to be beyond the efforts of the self-priding democratic countries of the capitalist Western Europe and North America, such as the United States and Great Britain, Canada and Belgium, where the national conflicts still continue. The ideologists of anticommmunism are thrown into trepidation by the very idea that the Soviet example is becoming increasingly attractive on various continents, especially in the developing countries that have broken the chains of the age-old oppression and are firmly resolved to decide independently the question of their future.

While asserting the aggravation of the conflicts among nationalities in the non-socialist world, the bourgeois ideologists approach with the same measuring sticks the characterization of the interrelations among the nations in the USSR. They state flatly that the establishment of socialism on the tremendous expanses of the world has allegedly brought nothing new into national relations.

The cutting edge of the bourgeois propaganda has been turned against the increasingly stronger unity of the Soviet nation and against the beneficial process of bringing the nations closer together. Opponents of communism, extending the struggle against the theory and practice of the socialist resolution of the national question, resort as a rule to the following "traditional" theses:

socialism, they say, has not given the nations true self-determination, but has, by force, united them into a single state; the upsurge of nations was achieved at the cost of a loss in national traditions; the course aimed at bringing the nations closer together, as carried out by the Communist Party, runs contrary to the national strivings of the nations.

"Soviet national policy has rendered the national question more acute," B. Meissner, professor at the University of Cologne, said on the pages of the anticommunist magazine PROBLEMS OF COMMUNISM in reaction to the historic decisions of the 26th CPSU Congress. "The Soviet nation still remains a conglomerate of nations," the French political expert H. Carriere d'Encausse, author of the completely false book "The Disintegrating Empire," attempts to prove.

The adoption of the new Soviet Constitution was for anticommunists yet another reason for accusing the Soviet Union of infringing upon the rights of nations. Especially vitriolic attacks were directed at the principles contained in the Constitution, to the effect that the Soviet nation is a new historic community and there is embodied in the USSR a state unity of the Soviet nation. In these principles the bourgeois ideologists view the suppression of the national individuality of nations. They give themselves up to absurd judgments concerning which nation, or nations, is or are dominant in the USSR, as though the experience of the development of our country has not proven that the rights of all nations in the USSR are reliably guarded and protected by our entire way of life.

The new Soviet Constitution confirms the great vital force of the voluntary union of the peoples in our country, a union that is based on principles of socialist federalism. By reinforcing the state unity of the Soviet nation and the consolidation of all the nations and nationalities for purposes of the joint building of communism, the USSR Constitution completely guarantees the sovereign rights of the union republics.

The Soviet system guarantees the constant consideration of the interests of all nations and nationalities, a completely thought-out system of representation of the nationalities in all spheres of social life, and the joint work of the workers of various nationalities in the party and state agencies.

Deputies of 61 nationalities have been elected to the USSR Supreme Soviet; those of 71 nationalities have been elected to the Supreme Soviets of the union and autonomous republics; and those of more than 100 nationalities have been elected to local Soviets. The USSR Constitution proclaims that it is the duty of every citizen of the USSR to respect the national dignity of other citizens and to reinforce the friendship of the nations and nationalities of the Soviet multinational state.

That is the real-life situation. But for the ideologists of anticommunism the main thing is not this reality, but, rather, the desire to create enmities among the nations of the USSR on the basis of national, religious, and even racial considerations, and to revive nationalistic prejudices. For that purpose they are resorting to unsrupulous speculation upon national emotions, and are attempting to place under doubt the desirability of transforming the old patriarchal way of life, inasmuch as that way of life, don't you see, "corresponded" more to the age-old national traditions.

Incapable of denying the fact that the rapprochement and mutual enrichment of national cultures raises to a completely unprecedented level the culture of each nation, the reactionary ideologists sound the alarm concerning the "imperishable assets" which, they say, can be lost as a result of "alien influences." And if these "imperishable assets" prove to be customs and superstitions that actually go back to the Middle Ages, it is important for them to create the impression that there are those who are making encroachments upon that "holy of holies" of national spirit. Incidentally, the very concept "national" is equated with everything that is archaic and obsolete, while everything that is new and that has been engendered by the socialist way of life is simply rejected as being contradictory to the "spirit of the nation."

Previously the bourgeois propagandists made the attempt to contrast socialism and the national future of a particular republic. At the present time, when in our country there has been confirmed a well-developed socialist society that reveals the tremendous advantages that are typical of the new system and that are superior to those of capitalism, the Western ideologists are beginning to understand that the process of the building of communism is of an irreversible nature. And still they try to "incline" the Soviet republics, so to speak, toward "an isolated development."

The false thesis concerning Russification by which the anticommunists attempt to discredit the real brotherhood and flourishing of nations in the country of victorious socialism remains one of the stereotypes of anti-Soviet propaganda. This is a monstrous attempt to view the Soviet national policy as a continuation of the policy of Russian tsarism, it is a vain attempt to undermine the love and fraternal feelings that all the nations of the USSR have for the great Russian nation.

By their statements concerning the threat that allegedly exists for the national future of the nations, the reactionary ideologists attempt to cause a negative attitude toward the development of cooperation among the nations, without which cooperation, as everyone knows, there is no, and can be no, social or national progress, and attempt to compel the nations to accept national exclusivity and the conservation of national assets.

A tremendous role in the reinforcement of the international commonality of the Soviet people is played by the Russian language. It is not only a means of communication among nationalities, but also the language of friendship and brotherhood of nations. In 1979 the Russian language was given as their native language by 153.5 million persons, of whom 137.2 million were Russians and 16.3 million were representatives of other nationalities. In addition, 61.3 million persons stated that they speak Russian fluently as a second language. The gravitation toward the mastery of the language spoken by the nation that has consolidated around itself all the country's nations and nationalities is at the present time especially great, but that does not indicate by any means the weakening of the positions of the other languages spoken by the nations of the USSR. Newspapers, magazines, and books are published in large quantities in the republics, both in the national languages and in Russian, and one can freely use any languages in all spheres of life.

Speaking in Tashkent in March 1982, Comrade L. I. Brezhnev, using as an example Uzbekistan, one of the thoroughly developed, flourishing republics in our country, revealed the vital force of the national policy of the CPSU: "Life shows us in a graphic way that, despite the slander leveled at us by our opponents, socialism not only is not leading to a situation in which the nations lose their inimitable originality, the peculiarities of their culture, and their traditions, but, on the contrary, raises that uniqueness to a new height and makes it the property of many other peoples."

Socialist internationalism has proven its indisputable superiority over bourgeois nationalism. That is the important lesson provided by the 60 years of development of the USSR, the homeland of the indissoluble international brotherhood of all the nations in our country.

ALIYEV ATTACKS VUZ ENTRANCE PROCEDURES

Baku BAKINSKIY RABOCHIY in Russian 28 Jul 82 p 1

[Azerinform report on 24 July 1982 Azerbaijan Communist Party Central Committee meeting on VUZ entrance examinations]

[Text] In the practical activity of the Azerbaijan Communist Party Central Committee aimed at the intensive development of all sectors of the economy and the struggle for a further steep upturn of the republic's national economy an important place is assigned concern for the training of highly skilled specialists. Constant attention is paid to an improvement in the teaching-educational process in the VUZ's and the careful and objective selection of applicants for VUZ training.

In accordance with tradition, a meeting was held on 24 July in the Azerbaijan Communist Party Central Committee on the threshold of the entrance examinations--a most critical stage in the life of the higher school--which comprehensively discussed questions connected with preparation for and enrollment in the VUZ's.

The meeting was attended by obkom, gorkom and raykom secretaries, ministry and department leaders, rectors, party and Komsomol organization secretaries, VUZ trade union committee chairmen and Azerbaijan SSR Ministry of Higher and Secondary Specialized Education, Azerbaijan Communist Party Central Committee, republic Council of Ministers, Komsomol Central Committee, people's control body, creative union and mass information media executives.

Information on the progress of the preparation for the entrance examinations was presented by K.G. Aliyev, minister of higher and secondary specialized education of the AzSSR.

The following spoke at the meetings: I.A. Ibragimov, rector of the Azerbaijan Institute of Oil and Chemistry imeni M. Azizbekov, F.M. Bagirzade, rector of the Azerbaijan State University imeni S.M. Kirov, Z.T. Kuliyeva, rector of the Azerbaijan Pedagogical Institute imeni V.I. Lenin, A.M. Aslanov, rector of the Azerbaijan Arts Institute imeni M.A. Aliyev, B.A. Khalilov, rector of the Azerbaijan Agricultural Institute imeni S. Agamaliogly, E.A. Abbasova, rector of the Azerbaijan State Conservatory imeni Uz. Gadzhibekov, R.A. Kuliyev, director of the Specialized Boarding School imeni Dzh. Nakhichevanskiy, and A.A. Kasimov, military commissar of the republic.

The VUZ's, the speakers noted, have performed a definite amount of work on raising the level of the specialized training and ideological-political education of the student youth. The social composition of the students has improved, and there is more order in the organization and conduct of the entrance examinations, in the teaching-educational process and in the entire life of the VUZ's. There has been a rise in the level of knowledge and an improvement in the general and specialized training of young men of indigenous nationality who have expressed a desire to continue their studies in the country's higher military schools. There are more and more of them with every passing year, and graduates of the Specialized Boarding School imeni Dzh. Nakhichevanskiy constitute a considerable number of future officers and defenders of the motherland.

All this is the result of the Azerbaijan Communist Party Central Committee's constant attention to and concern for the development of the higher school and the consistent and scrupulous activity of the Central Committee Bureau to improve the work of the VUZ's and ameliorate the moral climate in the educational institution collectives.

This year the republic's VUZ's will accept, it was said at the meeting, 21,450 persons, over 13,000 of whom will be daytime department students. There will be a greater enrollment of students than in previous years in the engineering and economic VUZ's for promising specialties in the sphere of machine building, petroleum processing and automation. Tuition in a number of new specialties will be introduced and the training of specialists in accordance with the decisions of the CPSU Central Committee May (1982) Plenum and the requirements of the sectors of the republic's economy determining technical progress is being expanded also.

Enrollment has been increased at the Azerbaijan Production Engineering Institute for instruction in the natural and chemical fiber spinning specialty. The Institute of Oil and Chemistry is to begin the training of specialists for automated manipulators and industrial robotized complexes and the Polytechnical Institute for robotized production techniques. The Arts Institute will accept 50 more persons than last year for instruction in the painting, drawing, sculpture and history and theory of fine art specialties. Enrollment in the correspondence department in the Azerbaijan SSR State Conservatory has begun.

Many leading VUZ's of Moscow, Leningrad and other cities of the country are training highly skilled specialists for the economy, science and culture of Azerbaijan. It is currently proposed to send 850 young men and women for training in the VUZ's of other cities. They will assimilate, inter alia, such new specialties for the republic as fodder production, pureblood work in stockbreeding, automation in agricultural production, social psychology, bibliography and a number of others.

The speakers presented information on the course of the preparations for the entrance examinations and the organizational work of the rector's offices and party, Komsomol and trade union organizations of the VUZ's for conducting competitive tests at a high level. For the purpose of the youth's vocational guidance and for assisting it in preparing for the entrance examinations, they reported, open doors days, olympiads and lecture series have been conducted in the VUZ's and lecturers have visited the republic's rural rayons. School and vocational-technical college graduates have met in Baku with the leaders of VUZ's of other cities.

Publicity at the time of examinations is being expanded, and automated equipment for an objective evaluation of the applicants' knowledge is being employed in the lecture halls more assertively. The Azerbaijan Institute of Oil and Chemistry's experience of the introduction of a system of quality control in the training of specialists and the careful selection of applicants, which has been collated and approved by the USSR Ministry of Higher and Secondary Specialized Education, is of particular interest.

At the same time the speakers noted that there are still serious shortcomings in the work of the educational institutions and the organization of entrance examinations and cited instances of a breach of the rules governing how they should be held, lack of objectivity, protectionism and connivance at unscrupulous people who have resolved to make the examinations a source of personal enrichment. Recognizing the great responsibility of the VUZ collectives for the selection of the most deserving youth for the student ranks, they gave the assurance that they would apply all their powers to remove the shortcomings and oversights and create the most propitious, benevolent and objective atmosphere at the examinations.

The meeting was addressed by G.A. Aliyev, candidate of the CPSU Central Committee Politburo and first secretary of the Azerbaijan Communist Party Central Committee.

The situation concerning enrollment in the VUZ's and the work of the VUZ's as a whole improves with every passing year in our republic, he said. The basis of the high-quality training of specialists with higher education is their correct selection and the entrance examinations. Enrollment work, properly organized, serves as a guarantee of the training of highly skilled specialists and a worthy reinforcement of the national economy, science and culture.

Having noted with satisfaction that there has come to be greater organization, objectiveness and fairness at the time of the entrance examinations, Comrade Aliyev emphasized that this stage in the life of the VUZ's is a big sociopolitical event affecting the interests of practically all strata of Azerbaijan's population. And the mood of very many people and a further improvement in the moral-psychological climate in the republic will depend to a considerable extent on their successful, precise and, what is most important, honest and objective conduct.

The great deal of work which was performed in the 1970's and which is continuing today on the creation of a normal atmosphere in the VUZ's, an improvement in their activity and securing favorable conditions for the VUZ training of working youth and the children of workers and kolkhoz members is giving rise to a feeling of profound satisfaction in the labor collectives. Visiting them, particularly in rural localities, G.A. Aliyev said, I have always inquired after people's opinion on this question. As distinct from previous years, when there were many complaints about violations, I now hear words of gratitude and approval, as was the case during recent visits to Agdzhabedinskiy, Kasum-Ismailovskiy, Fizulinskiy and Khanlarskiy rayons. All this is gratifying for it is the result of the great deal of work performed primarily by the VUZ collectives, Ministry of Higher and Secondary Specialized Education, the party and soviet authorities and the Azerbaijan Communist Party Central Committee.

However, we cannot be satisfied with what has been achieved; as before, there are serious shortcomings in the VUZ's work. In the ranks of VUZ lecturers there are, unfortunately, people who are using their position for mercenary ends and engaging in bribe taking, protectionism and finding places for their closest relatives, friends and neighbors. There is still a considerable number of them, and this again needs to be discussed openly today. Such instances are manifested both at the time of the entrance examinations and throughout the academic year. The Azerbaijan Communist Party Central Committee receives many warnings to the effect that at times tests, examinations and, in a number of cases, term papers in the institutes are credited following some string-pulling or bribe. Precisely this is attested by the actions of D. Dzhavadov and F. Poverennaya--exposed bribe-taker-lecturers of the Azerbaijan Pedagogical Institute imeni V.I. Lenin and the Institute of the National Economy.

Certain VUZ leaders believe, Comrade Aliyev observed in this connection, that if an instance of bribe taking has been uncovered in an institute, this merely compromises the collective and even try to gloss over such instances, endeavor to get rid of these people without undue noise and fail to adopt measures to expose them. We believe such an approach to be mistaken and even harmful. And we evaluate positively the actions of VUZ leaders who display assertiveness in the exposure of unworthy persons.

A few days ago the Azerbaijan Communist Party Central Committee examined the question of serious shortcomings in the activity of the Pedagogical Institute of Russian Language and Literature imeni M.F. Akhundov. An extremely unhealthy atmosphere had developed in the institute, and there were instances of the use of position for mercenary ends, protectionism and bribe taking. The main culprits here were the rector, other leaders and the secretary of the party committee of the VUZ. As a result Rector A. Mamedov was removed from office and strictly reprimanded, this being noted on his record. VUZ Vice Rector D. Akhmedov, who was also strictly reprimanded, was dismissed. A party penalty was also imposed on A. Gasanov, secretary of the party committee. The question of Vice Rector L. Belikova's liability will be examined upon her return to work following illness.

Serious shortcomings were revealed last year in the Pedagogical Institute imeni G. Zardabi in Kirovabad, for which the gorkom punished Comrade Rector Sh. Shikhkerimov. Just as unseemly facts were uncovered in the Institute of the National Economy, the University and the Polytechnical and Engineering-Construction institutes.

Comrade Aliyev recalled the unseemingly actions of Comrade Agayev, former first secretary of the Lerikskiy Raykom, who has now been expelled from the party. Among the variety of numerous violations and abuses which he perpetrated, which were reported in an Azerbaijan Communist Party Central Committee decree, which has been published in the press, was the illegal registration for training of his children. They have now been expelled from the VUZ's.

All the cited instances are a cause for extraordinary concern. They testify that far from everything is yet in order here, both in the organization of entrance examinations and in the educational process. The fact that certain executives of the higher education system and the VUZ's have yet to adopt a scrupulous position, have not joined in active struggle against negative phenomena and themselves sometimes abuse their position and succumb to every conceivable request and string-pulling catches the attention. The recently uncovered instance of the daughter of E. Nazarli, deputy minister of higher and secondary specialized education, illegally being found a place in the Azerbaijan Pedagogical Institute of Russian Language and Literature appears intolerable. The VUZ readily acceded to the ministry leader's wish, this being, of course, a profitable act for A. Mamedov, former rector of the VUZ. This and similar instances cannot fail to disturb us. The laws here are the same for all, and no one has the right to disregard them, whatever position this person may hold. The higher the position, the greater the strictness, objectiveness, fairness and stringency toward oneself should be and the more unswervingly party standards and official laws should be observed.

Everyone should remember that the emphatic curtailment of abuses of any kind and violations of the standards of communist morality must be his vital concern and a matter of his party conscience and honor. The task is to develop even more extensively the struggle against negative phenomena, uncover unscrupulous people more actively, create public opinion around them and adopt measures to expose them. As our experience shows, without such a scrupulous, uncompromising struggle a healthy moral atmosphere is impossible and the high efficiency of teaching-educational work cannot be guaranteed. And we appeal to you once again for the most extensive participation therein.

Now, at this important stage of the formation of the new body of VUZ students, G.A. Aliyev continued, the VUZ leaders must be imbued with a feeling of high responsibility and mobilize their collectives for the accomplishment of the responsible tasks which they have been set. Having dwelt on questions of the preparation for the entrance examinations, he expressed confidence that a sound basis had been created for their successful conduct. But the republic Ministry of Higher and Secondary Specialized Education and the VUZ rector's offices, party committees and Komsomol and trade union organizations still have much to do prior to 1 August to create the most favorable conditions possible for the young people entering the VUZ's. It is essential to go over again and again the entire body of people who will participate in the entrance examinations--the examiners, entry commission workers and other people enlisted in this important sociopolitical campaign. No one knows the VUZ workers better than their leaders themselves, and if there are even the slightest doubts as to a person's honesty, he should not be enlisted in the organization and conduct of the examinations.

Comrade Aliyev drew VUZ leaders' special attention to the need for the careful selection of future students from the ranks of the best prepared and most capable youth. He observed in this connection that there are many medal winners among the entrants. As the results of the entrance examinations of past years have shown, there are also those whose knowledge does not correspond to the high requirements. The Ministry of Education (Comrade E. Kafarova) must investigate these instances and adopt measures to rule out all instances of upward marking. The Central Committee department and the ministries of education and higher and scondary specialized education should strictly monitor the evaluation of the medal winners' knowledge, study questions of their vocational guidance and be more assertive in helping them correctly choose an occupation.

At the time of the entrance examinations it is necessary to use as many technical facilities as possible. The practice which has evolved in the Institute of Oil and Chemistry and other VUZ's is reason to believe that these facilities are efficient; they only need to be skillfully and correctly employed. I believe, Comrade Aliyev observed, that the Institute of Oil and Chemistry's experience of the organization of enrollment and the use of computers merits approval, support and extensive dissemination in all VUZ's. Of course, the examination atmosphere causes the higher-than-usual excitement of the competitors, and for this reason it is necessary to create a benevolent, tranquil atmosphere in which the applicant may display his knowledge and everything of which he is capable. This is very important, and it is essential to perform this work properly. It is necessary to subordinate everything to ensuring that an atmosphere of the maximum objectiveness, fairness, honesty, sensitivity and attention reign everywhere. All complaints and petitions should be examined attentively in order to exclude the possibility of mistakes, prejudice and the overstating or understating of evaluations.

Objectiveness, G.A. Aliyev emphasized, is the ability both not to overstate the evaluations and at the same time not to understate them, if the applicant has knowledge. This entire work needs to be performed such that it completely rule out conditions for bribe taking, abuse of office, protectionism and family and other relationships.

It is essential to pay the closest attention to the activity of the branches of the Moscow, Rostov and other VUZ's of other cities, where lack of supervision engenders flagrant violations in the conduct of the entrance examinations and in the educational process.

Having dwelt on questions of the noncompetitive acceptance of applicants from Azerbaijan's rural rayons in the republic's VUZ's, Comrade Aliyev emphasized that it is essential here to put a stop to all possible abuses by individual rayon leaders and VUZ workers. It is very important that there arrive from the rayons children of workers and kolkhoz members who, having completed their studies, will return to their native villages and farms as field managers and teachers, engineers and physicians.

Truly big successes have been scored in sending the young people to the VUZ's of other cities, Comrade Aliyev continued, and this is cause for satisfaction. The high pass rate of the students being instructed in Moscow and Leningrad is particularly gratifying. However, the drop-out rate is still considerable: 21 persons--and this is 7 percent--have been dismissed from the first course.

It is essential to increase supervision of the selection of applicants, and this work must be performed on an even higher level to ensure that truly the best representatives of Azerbaijan's youth attend the VUZ's of other cities. It is obviously essential to add a number of new specialties of which we are in need. Our republic is experiencing an acute shortage of highly skilled specialists in the sphere of medicine. The Ministry of Health (Comrade T. Kasumov) must strive to send young people to Moscow's medical VUZ's. It is essential to settle this question positively in the next academic year.

Speaking of the tasks for a further improvement of VUZ enrollment, Comrade Aliyev instructed the leadership of the Ministry of Higher and Secondary Specialized Education and all VUZ's to analyze the examination results thoroughly and critically, submit concrete proposals for an improvement in their organization and conduct and present the Azerbaijan Communist Party Central Committee with detailed information, which must reflect achievements and shortcomings in order for lessons to be learned and for even better preparations to be made for enrollment next year. It is also necessary to attentively study the results of the entrance examinations in the course of freshmen classes and determine the quality of the selection in terms of the level of the students' training.

G.A. Aliyev dwelt in detail on the tasks to ensure extensive publicity in the organization and conduct of the entrance examinations. The practice of past years with respect to the use of VUZ radio and television centers and the attendance of the applicants' parents at the examinations, he observed, should be continued and conducted more actively. Great assistance should be rendered by republic radio and television and all the mass information organs. It is necessary to extensively and comprehensively illustrate the course of the entrance examinations and the successes and shortcomings of this important campaign and respond promptly to all negative phenomena. It is necessary to give immediate notification of all such instances in order that each instance become known to the republic's public. It is our task in publicizing and correspondingly appraising these instances to use such information for preventive work, for forestalling negative phenomena and for mobilizing people to expose criminals.

The Azerbaijan Communist Party Central Committee Center for the Study of Public Opinion and Sociological Research must develop work extensively on study and collation of the working people's opinions and proposals with respect to questions of the further refinement of the practice of entrance examinations, ways and means of ruling out all violations and current laws and procedures.

In conclusion G.A. Aliyev expressed confidence that the participants in the meeting would correctly evaluate and adopt for execution the strict, high-minded discussion which has been held and that the VUZ leaders and party committees would do everything to ensure that the entrance examinations be held on a high organizational and ideological level and in accordance with the high tasks set workers of the higher school by the 26th CPSU Congress.

K.M. Bagirov, G.A. Gasanov, F.E. Musayev, Yu.N. Pugachev, G.N. Seidov, S.B. Tatliyev, K.A. Khalilov, Z.M. Yusif-zade, R.E. Mekhtiyev and G.Sh. Efendiyev, members and candidates of the Azerbaijan Communist Party Central Committee Bureau, participated in the meeting.

INSTILLING OF SOVIET PATRIOTISM NEEDED TO COUNTER SUBVERSION

Kiev RADYANS'KA UKRAYINA in Ukrainian 1 Apr 82 p 2

[Excerpts from article by I. Skyba, first secretary of the Ivano Frankovskiy obkom of the Ukrainian Communist Party: "Let us develop patriots and internationalists"]

[Excerpt] One of the greatest achievements of our multi-ethnic socialist state is the creation of a new Soviet people. Organically intrinsic to it are such features as communistic conviction, fidelity to the maxims of Lenin's party, active citizenship, and a noble and inspired feeling for the fatherland.

Further improvement of this type of ideological work is called for by the CPSU Central Committee resolution: "On the 60th anniversary of the founding of the Union of Soviet Socialist Republics". Among the major tasks of party committees and party organizations is "to intensify the patriotic and international education of youth; to promulgate the revolutionary, military and labor traditions of the Communist Party, the Soviet nation, the heroic achievements of the Armed Forces of the USSR; to make every Soviet citizen convinced of the justness and invincibility of socialism, politically aware, ready to defend the fatherland, and cognizant of the achievements of socialism".

The process of consolidating communistic ideology and patriotic awareness requires constant guidance and systems. Objective factors must be skilfully employed for every worker, especially teen-agers, to better and more fully comprehend the facts and figures of our community life.

Implementation of the wide range of creative programs noted by the 26th CPSU Congress requires a further increase in the patriotic awareness of the masses. The executive assemblies of the congress, the oblast party organization, has given its full attention to improving this important area of activity. A certain system of patriotic education has been established.

This means that from the earliest moment—at home, in the pre-school period and later in school—every person should be imbued with a spirit of devotion and love for the Soviet homeland, a desire to devote his entire life in service to it; and that this work might be continued by a goal-oriented set of ideological and educational measures in the labor collective so that fullest use of all methods and forms of influence is made.

The sharpening of the battle of world ideologies requires an intensification of class tempering of the working classes, especially youth.

Comrade V. V. Shcherbyts'kyy, member of the CPSU Central Committee politburo, first secretary of the Ukrainian Communist Party Central Committee emphasized in the World Report of the Central Committee of the 26th Congress of communists of the republic: "It is class spirit and revolutionary conviction that have always been and remain a reliable shield in the battle against our ideological enemies".

The oblast party organization notes specifically the attempts made by the special services of the West, the emigrant centers of Ukrainian bourgeois nationalists, to extend their poisonous tentacles into the minds of individual people, with special attention for our region. The working classes of the oblast have dealt these attempts a resounding rebuff. Their life's experiences have taught the members of the older generations, who themselves saw the truths about capitalism, to recognize the face of the Ukrainian bourgeois nationalists. It is very important to transmit the class tempering achieved by them to the new generations.

Evenings such as "This can not be forgotten", the speeches of the socio--political club imeni Yaroslav Galan serve this purpose well. Their powerful influence on the people is due to the fact that the lectures and discussions about the antinationalism of Ukrainian bourgeois nationalism and the Uniate Church are reinforced with movies, testimonies of eye-witnesses to the bloody atrocities of the Ounov bandits and speeches by participants of the national struggle against them.

But it would be wrong to be content with our achievements and to fail to see the new problems and jobs which threaten our lives. A reliable reference point in approaching their resolution and overcoming deficiencies is provided by the resolutions of the 26th CPSU Congress and the 26th Congress of the UKrainian Communist Party. Step by step, party committees and local party organizations are implementing the comprehensive plan of organizational and political measures aimed at implementing the resolutions of the congress. The whole ideological effort is being brought into prominence by the preparations for the 60th anniversary of the founding of the USSR and by the realization of measures developed to implement the resolutions of the CPSU Central Committee "On further improvement of work in ideology and political education".

The urgent tasks of the oblast party organization have been discussed at recent meetings of party members. The discussion revolved around the content and direction of efforts to make ideological and political work more effective, especially international, patriotic and class education. The membership meetings thoroughly assessed what has been impeding the work and they determined ways to resolve the current problems.

The party obkom is troubled by the fact evaluations of ideological activities often show preference to quantitaive indicators which are easy to determine and compare, but which do not always reveal the crux of the matter, the effectiveness of educational measures. These evalutions have no form or pattern. Individual ideology workers keep on repeating the familiar altruisms instead of opening up to questions which truly persuade the audience and subconsciously provide them with vital information. In this regard, at membership meetings criticism has been leveled at the the party organizations of the Kaluga automative enterprise 08022, the oblast interkolkhoz construction agency, the kolkhoz "Druzhba in the Tismenetsky rayon and several other local party organizations, ideology institutions, press and radio agencies, and vuz departments of social sciences. They have been given specific assignments to enrich content, elevate the level and quality of propaganda and persuasion based on the modern achievements of science and technology, and to continually search for the most active ways to ideologically influence the masses. For this purpose the social concepts curriculum and the analysis and assessment of the effectiveness of political education should be improved. This also entails encouraging working class management personnel to take communist education courses and providing better ideological support for the implementation of government plans and socialist obligations.

In the days approaching the 60th anniversary of the founding of the USSR, ideological work in the oblast is aimed at welcoming the great holiday of the Soviet nation with new progress in implementing the historic decisions of the 26th CPSU Congress, the development of the economy and raising the living and cultural standards of the working classes.

SHEVARDNADZE REPORT TO GEORGIAN PARTY CENTRAL COMMITTEE PLENUM

Tbilisi ZARYA VOSTOKA in Russian 23 Jul 82 pp 1-5

[Report of E.A. Shevardnadze, candidate of the CPSU Central Committee Politburo and first secretary of the Georgian Communist Party Central Committee, at Georgian Communist Party Central Committee Ninth Plenum on 21 July 1982]

[Excerpts] It may be said with all confidence today at the Georgian Communist Party Central Committee plenum that, as throughout our country and as throughout our party, preparations for the 60th anniversary of the formation of the USSR are at the center of the attention of the entire party organization and all working people of the republic.

A special Georgian Communist Party Central Committee decision has been adopted in fulfillment of the CPSU Central Committee decree "60th Anniversary of the Formation of the USSR." A plan of the main organizing and mass-political measures has been drawn up. A republic jubilee commission has been created. Central Committee plenums have received reports from Comrade G.V. Kolbin, second secretary of the Central Committee, and Comrade G.N. Yenukidze, secretary of the Central Committee, on the course of fulfillment of the plans of the republic's economic and social development and also the upgraded pledges adopted in socialist competition in honor of the jubilee and on the development of ideological and mass-political work on preparations for the 60th anniversary of the USSR.

A Georgian Communist Party Central Committee appeal to the workers, kolkhoz members, people's intelligentsia, communists and Komsomol members and all working people of Georgia calling for the more extensive development of the quest for and active utilization of all intrinsic resources and potential and a worthy greeting of the nationwide holiday has been adopted.

Multifaceted and varied work is being performed by the Georgian SSR Supreme Soviet Presidium and Council of Ministers, Georgian Council of Trade Unions and Komsomol Central Committee, obkoms, gorkoms and raykoms and our ministries, departments, associations and primary party organizations.

Here I would like to repeat what has already been mentioned. We approach jubilee dates, as a rule, not as a short-term campaign and not as an episode in our life. Irrespective of jubilee dates, we continue to perform our day-to-day work in accordance with the well-adjusted system which has evolved in the republic party organization over the last 10 years, particularly since the 26th Georgian Communist Party Congress.

And it was to this that attention was drawn in the CPSU Central Committee July decree on Georgia, which said that in recent years the practice of a comprehensive approach to the solution of political, social and economic problems has been established increasingly in the republic.

This comprehensive approach contains the essence and meaning of the system that has been elaborated here.

Such a systemic and, I would say, scientific approach was essential for tackling the main, fundamental task--making manageable all socioeconomic and public-political processes in the republic.

Such was our thinking. In order to effect it in practice it was necessary to pave the way and main directions of the party organizations' organizing and political work and an improvement in the style and methods of party leadership of the national economy and party influence on all aspects of the life of the republic.

All recent years have elapsed here in an atmosphere of constant experiments and constant quest for new forms of control. The comrades know how such a comprehensive system was created and took shape. This was a far from simple and straightforward process. There were difficulties, mistakes and failures. There were also deviations of a kind, if you wish, and departures from generally accepted standards. For example, there was an inordinate obsession with meetings, and even now, to be blunt, this shortcoming has not been entirely overcome, even though it has been mentioned repeatedly. There was a time when we manifestly overdid things with respect to the creation of every conceivable kind of commission, and many of them functioned only formally. These negative trends are now being consistently overcome.

In short, we did not succeed in everything all at once. And we are not afraid to admit this. We have seen the gaps in our work and on each occasion have attempted to find the most expedient solution of questions.

Thus a systemic, scientific approach to the accomplishment of the most important economic-political tasks took shape gradually.

This entire comprehensive system finally evolved at the 26th Georgian Communist Party Congress, when we concluded that we should concentrate our main efforts and the main direction of organizing and political work on the achievement of high final results in all spheres of the republic's economic, social and sociopolitical life.

This positive experience is also mentioned in the CPSU Central Committee decree, which says that the creation of working groups and commissions under the auspices of the Georgian Communist Party Central Committee and the obkoms, gorkoms and raykoms on urgent problems of the activity of the republic party organization is practiced for the achievement of the best final results.

This rational system of control has fully justified itself. It operates today also, having secured the successful completion of the first 6 months of the second year of the 11th Five-Year Plan.

The fulfillment of the plans and socialist pledges in the first 6 months will be described in more detail in the report of Comrade G.V. Kolbin, second secretary of the Georgian Communist Party Central Committee. I will therefore dwell only on certain general questions of the development of the republic's economy.

The CPSU Central Committee decree observes that the republic's industry as a whole is fulfilling the quotas with respect to the main technical-economic indicators and the adopted socialist pledges. It should be said that the quota for the manufacture and sale of industrial products was fulfilled 103.4 and 102.2 percent respectively. Some R96.4 million of output were sold over and above the plan. The plan for labor productivity growth in industry was fulfilled 103.5 percent. The increase in production thanks to labor productivity growth constituted 78.8 percent. The proportion of products of the top quality category was raised to 13.8 percent.

The increase in industrial production constituted 5.2 percent against the planned 4.8 percent and the 5 percent of the socialist pledges.

These, comrades, are good indicators, particularly when it is considered that we had to surmount considerable difficulties. It may be said without false modesty that our working people have achieved a truly big victory. All this is the result of the heroic, selfless labor of our entire working class, our kolkhoz peasantry, our intelligentsia and our specialists, managers and party, soviet, trade union and Komsomol authorities. It is a manifestation of our people's great sense of responsibility to the whole country--the indestructible USSR.

It was precisely the high sense of patriotism and international duty which lent the Georgian working people new powers and new energy in the struggle for fulfillment of the quotas of the first 6 months of the current economic year and in surmounting the difficulties which had fallen to our lot. Incredible difficulties, it may be said.

First, there was a severe winter. I recall that the abnormal natural phenomena began back last year, when on the Kizlyar winter pasture a wet snow fell and was followed by a drop in temperature to 30 degrees and more of frost. The frosts lasted more than a month. As a result ice-crusted ground formed, and the grazing of the sheep became practically impossible. In the second half of January it became sharply colder throughout the republic. Heavy snow falls began in Western Georgia, and the snow cover in certain parts reached 1.5 meters.

Then the very difficult spring arrived. The snow falls were replaced in April by heavy downpours, which were accompanied in Eastern Georgia by heavy hail.

From April through July hail fell 42 times. This was twice as often as in 1973-1975, which are still considered here the most difficult and complex with respect to weather conditions. Five times more agricultural area than at that time was damaged in a matter of weeks.

As a result of the unprecedented downpours, the like of which for many decades the republic does not recall, there were flood tides, and the amount of water was several times greater than the maximum of many years' standing. The monthly precipitation norm fell in a single day in places. Floods began which caused great damage to 6 cities and 26 rayons of Western Georgia. More than 60,000 hectares of agricultural land were inundated.

The numbers of sheep and goats fell by more than 100,000 in the 6 months, and there was a shortfall in lambs and kids of up to 75,000 compared with last year, not to mention the number which had to be slaughtered. Altogether the republic's public farms have lost more than 200,000 head of sheep and goats, as a result of which this year we are experiencing a shortfall of up to 5,000 tons of meat and more than 400 tons of wool. Over 25,000 hogs fell as a result of disease which broke out suddenly, which was almost twice as many as in the same period last year. Furthermore, the public farms experienced a shortfall of more than 17,000 piglets, and this is the equivalent of the loss of more than 3,000 tons of pork. A considerable number of cattle in the Kolkhida floodplain perished as a result of the floods. Up to 9,000 tons of meat have already been lost altogether owing to the natural disasters, and it will be very difficult to make good this loss.

Even more appreciable losses have been caused plant growing. At the Georgian Communist Party Central Committee Seventh Plenum, which discussed the Food Program, we spoke about how our vineyards had suffered. But this was not the end of matters. Natural phenomena have again made their presence felt. According to preliminary calculations, hail has already damaged up to 150,000 hectares of agricultural land, 70,000 hectares of which are vineyards. Up to 300,000 tons of grapes have been lost on all categories of farm. For this reason alone the kolkhozes, sovkhozes and population of the republic will experience a shortfall of more than R160 million.

The unfavorable weather conditions have created serious difficulties in tea growing, where the situation had been stable in recent years. We did not manage to pick 200,000 tons of green leaf even at the first vegetation. The cold weather has also delayed the second vegetation. Compared with last year the lag in the tea harvest as of 20 July had reached almost 38,000 tons. To our great regret the gap is not yet being reduced. It is our tea growers' duty to exert the maximum effort and do everything to overcome the lag and honorably fulfill the socialist pledges. And this work should be headed by the communists.

A considerable quantity of industrial output has been lost owing to the elements. Water flooded the grounds of the Zestafoni Ferroalloys Plant and "Gruzkabel'" Plant. Serious damage was done to the "Chiaturmarganets" Association, the Shorapani "Elektroelement" Plant and the Trans-Caucasus Railroad. Many supply lines were put out of order. Highways and bridges were destroyed and houses were damaged. Tbilisi's municipal economy was damaged. Rustavi enterprises--the foundry and chemical plant, the chemical fibers plant and others--have failed to supply several million rubles' worth of output. Total losses are incalculable.

And if, despite these disasters, the republic's economy has completed the first 6 months so successfully and if the difficulties which have arisen have been overcome so skillfully, all this has been achieved thanks to the high organization, diligence and persistence of all the republic's working people, their purposefulness and their boundless devotion to our partywide, statewide, nationwide cause.

This work has been headed by the communists and the party organizations. We in the Central Committee recently received a letter from Comrade V.A. Kochoyan, first secretary of the Bogdanovskiy Raykom. Hail had done colossal damage to the sowings, and, as in other rayons, an extremely difficult situation had come about here in the production and procurement of fodder. Nonetheless, the communists and the rayon party organization did not flinch but mobilized all forces. This is what the letter says in conclusion: "We will do everything possible to prevent a drop in the production and sale to the state of animal husbandry products, fulfill all plans and socialist pledges and not let our republic down in questions of the achievement of the scheduled indicators of the second year of the 11th Five-Year Plan. We assure the Georgian Communist Party Central Committee that we will greet our country's glorious jubilee--the 60th anniversary of the formation of the USSR--with new labor achievements."

Such a spirit, such a mood has embraced all the communists and all working people of the republic.

And this desire and this ability to counterpose to the power of the elements the power of our organization and mobilization is the result of the fact that the optimum system of the control of socioeconomic and public-political processes which has been created in the republic and in our party organization continues to operate. It is operating and driving the mechanism of our entire organizing and political work.

However, it cannot be said that the difficulties are already behind us here. Even now the elements are continuing to inflict considerable damage on the economy. There was again heavy hail which damaged large areas the day before yesterday in Kapskiy Rayon, for example.

It is as yet difficult to accurately gage the overall dimensions of the damage that has been caused, the more so in that many losses are of a long-term nature and will continue to make themselves known. Thus agriculture next year, not to mention this year, will experience a shortfall of more than R100 million worth of products.

The losses are also being reflected in the rate of growth of basic indicators in industry, particularly the food and other sectors. This could be reflected the most seriously in the activity of the "Samtrest" Association.

Furthermore, there has been a considerable diminution in the planned volumes of production in light, food, canning and certain other sectors of the republic's industry in connection with the limited nature in the country of the resources of certain types of raw material and intermediate products.

In the current year as a whole the plan for industrial production has been reduced here by R246 million. In this case an increase in this sector of the economy of only 0.3 percent is secured. Thus for the first time in the last 10 years a real danger has been created in the republic of disruption of the state plan and socialist pledges for industrial production growth.

This simply cannot be allowed. Our industry has considerable potential for preventing a decline in the rate achieved in the first 6 months. And the maximum use must be made of this potential.

We have put to the union government the question of the allocation to the republic of the appropriate resources for the production of an additional R265 million worth of products, bearing in mind, of course, that capacity and labor resources will enable us to assimilate these resources. It should be said that at the CPSU Central Committee Secretariat session when the decree on Georgia was adopted we were promised the appropriate assistance. Our request is now being studied in the USSR Council of Ministers. Given a positive decision on this question, the industrial production growth rate will constitute 103 percent compared with last year.

However, as you can see, this is insufficient for fulfillment of the socialist pledges. In order to secure a growth rate at the 105-percent level it is necessary to find an opportunity of increasing industrial output within the republic to the tune of a further R200 million roughly.

Is this a feasible task? I believe that there should be no doubt on this score. In the 10th Five-Year Plan, when intermediate product-raw material resources were sharply limited, we nonetheless managed to manufacture R720 million worth of above-plan products and thereby secure approximately one-third of the entire industrial production increase. And all this thanks to intrinsic potential and internal resources. It was here that the advantages of the method of the concentration of the efforts of the party, soviet, economic-planning and public organizations in the main fields of activity were revealed.

In the 11th Five-Year Plan we must continue to develop this principle and increasingly introduce the systemic character of party leadership of the economy, a systemic character which should commission all our resources and potential and place them at the service of the national economy. This is how we usually commemorate jubilee dates in the life of our country and in the life of our republic.

And the CPSU Central Committee July decree on our party organization and on Georgia summons the communists and all working people to this.

The Central Committee decree demands of the Georgian party organization that it cater for a predominantly intensive path of the economy's development. We regard this task as a most important component of economic strategy, which is aimed at overcoming the republic's comparative lag behind the union-average level of socioeconomic development. Intensification is the key to maintaining our economy's high growth rate.

The appropriate subdivisions--our commissions and work groups--which are confidently directing the most important processes of the republic's national economic development, are obliged to help us uncover new potential as quickly as possible. You know that these groups are headed by the most authoritative and best-qualified comrades--Central Committee Bureau members, deputy chairmen of the Council of Ministers and ministers.

It should be remembered that intensification is inconceivable without the utmost strengthening of performance and production discipline. We have many shortcomings, gaps and weak points here.

According to the results of the first 6 months, the lagging enterprises alone fell R11.7 million short in the supply of commodity output, despite the fact that the production program of the majority of them was backed up by the corresponding material-technical and labor resources. A real possibility of increasing the production growth 0.3 points was let slip.

Nine enterprises of union jurisdiction failed to cope with the 6-month plan, and 17 enterprises of this list in the second quarter alone reduced the plan by almost R10 million. I am not even talking of the upgraded quotas which the Georgian Communist Party Central Committee and republic Council of Ministers determined in their joint decisions. Of the 27 ministries and departments, 11 failed to fulfill these quotas, and of the 61 enterprises and associations of union jurisdiction, 45.

The production growth rate targets, which were understated as it was, were not met in places.

This is why we have to speak of an absence of due performance standard. Obviously, not all our managers are fully aware that the planned industrial production growth rate for the republic is established at the start of the year and is not susceptible to any adjustments in a downward direction. It is not fortuitous that the Central Committee charges us in its decree with adopting urgent measures to overcome the lagging of a number of enterprises in the fulfillment of plans for the production and sale of products.

It is essential to secure a stable high growth rate in industry. The comrades must not forget that a very big industrial production increase has been planned for us, I ask that attention be drawn to this, for the end of the 5-year plan. We will only succeed in obtaining it if the republic annually reaches the control figures of the 5-year plan. And in overtaking them even.

The attitude of the leaders of certain ministries and departments and enterprises and associations which are adopting for the coming economic year manifestly understated plan quotas is causing serious alarm and concern in this connection. Thus the suggestions of the Ministry of Timber and Wood-Processing Industry provide in the first 3 years of the 5-year plan for an increase of the order of 10.3 percent (instead of 15.4), the Ministry of Fruit and Vegetable Industry for an increase of 0.9 percent (instead of 19.7) and of the Ministry of Rural Construction for an increase of 5.8 percent (instead of 16.6). An alarming situation has been created in the Ministry of Light Industry, in which, according to the results of 3 years of the 5-year plan, the distance from the control quota will constitute R176 million.

We realize that many comrades proceed from objective difficulties. But it is here that a systemic approach in work is required. The merit of a systemic approach is precisely that it makes it possible to overcome such difficulties. Yet one has the impression that both the Ministry of Light Industry and certain other of our ministries are completely reconciled to the idea of the inevitability and insuperability of a rupture in the fulfillment of the 5-year target and are not about to take emergency steps.

Insufficient scrupulousness is evidently also being displayed by the corresponding departments of the Georgian Communist Party Central Committee and republic Council of Ministers and Gosplan. They have yet to investigate all these problems in depth and are orienting our managers inadequately toward the obligatory, unconditional fulfillment of the control quotas of the 5-year plan.

Work needs to be fundamentally reorganized, the more so in that, as an analysis shows, certain ministries, departments, enterprises and associations are making use of far from all opportunities for an increase in production. It is essential to constantly proceed from the fact that next year will essentially determine the fate of the entire 5-year plan, and it is important to secure its fulfillment at all costs. The year of 1983 is for us the decisive year of the 11th Five-Year Plan!

Under these conditions particular significance is attached to the rational use of material-technical resources. The Central Committee decree sets us the task of paying increased attention to questions of economies and thrift, and we must make this requirement the cornerstone of all our management-economic activity. Certain steps are being taken in the republic to better control this process. However, the quotas for economies in certain types of resources are being fulfilled unsatisfactorily, as before.

The Georgian Communist Party Central Committee attaches exceptional significance to the problem of the skillful, rational use of material-technical resources. We plan to devote a Central Committee plenum to it.

It is essential that we ensure the fuller load of production capacity, where there is also sizable unutilized potential.

New capacity is being assimilated unsatisfactorily. More than half of the enterprises surveyed last year by workers of the republic's Central Statistical Administration have failed to reach the planned level, and not even half of the capacity has been assimilated at one-fourth of them, moreover.

It is particularly important to strive for a reduction in the amount of uninstalled equipment, to which we are directed by the Central Committee decree.

Last year warehouse stocks of uninstalled equipment in the republic's national economy increased by more than R14 million, owing mainly, moreover, to imported equipment which is to be installed at facilities which are being built and modernized.

The reasons for this are to be found in the low quality of planning documents and an inability to implement technical policy in the sector in a farsighted manner and, sometimes, in elementary irresponsibility. How otherwise can we explain the fact that costly imported equipment which has just been acquired has proven superfluous at the Kutaisi and Batumi electrical engineering plants and in the "Elektrovozostroitel'" and "Gruzugol'" associations?

Another reason for the accumulation of uninstalled equipment is the disruption of the specified times of its installation and commissioning. A production line-display board at the Rustavi Foundry and a line for filling small paint cans in the "Gruzbytkhim" Association have been under installation for more than 7 years now. Unfortunately, these are not isolated examples.

More flexibility and exactingness needs to be displayed in this situation by our supply authorities. The republic Gossnab must hold more strictly accountable those who have not learned to dispose of state property proprietorially and carefully and promptly redistribute accumulated equipment. We demand more initiative of the Georgian offices of the USSR Gosbank and Stroybank. You have been accorded big rights, comrades; learn to make better use of them in the interests of our common cause. We must strive resolutely to ensure that allocated costly equipment not pile up in a warehouse and not go to rust at a construction site but be used highly efficiently in production.

The solution of this problem will also largely depend on the timely introduction of capacity and on how capital construction develops here. And it is not yet developing in the best manner. And the CPSU Central Committee decree pays special attention to this question for this reason.

True, by the end of the 6 months the construction workers had, as a whole, improved work somewhat and had introduced 5 percent more fixed capital than in the analogous period last year, but, nonetheless, the 6-month plan for installation was frustrated. Of the 44 construction projects determined by the Georgian Communist Party Central Committee as being the most important, only 4 were completed in the first 6 months. Nor were the quotas for the introduction of schools, kindergarten and hospitals fulfilled. The plan for the volume of the commodity construction product was realized only 64 percent. Incomplete use was made of the potential for an increase in labor productivity in the sector. It is first of all necessary to decisively strengthen labor discipline and make better use of machinery, mechanisms and so forth.

A creative attitude toward matters, bold experimentation, a quest for what is new and progressive--that which constitutes a basic component of our entire system of party leadership of the most important processes of the republic's socioeconomic development--have been demonstrated most graphically in the mangement sphere. Let us recall just the Abash experiment, which was a kind of first swallow of our creative quest in this area.

The Abash method has become the property of the entire republic. And there is no doubt that when at the CPSU Central Committee May (1982) Plenum L.I. Brezhnev evaluated positively the experience accumulated by agrarian-industrial associations in a number of rayons of the RSFSR, the Ukraine, Georgia, Latvia and Estonia, he also had in mind the experience of the Abash comrades. A year prior to this, speaking in Tbilisi, L.I. Brezhnev also mentioned that the country was keeping an attentive eye on the interesting experiments being conducted in the republic.

All our experiments and searches in the management sphere are essentially a component of the work to refine party leadership in all spheres of economic, social, political and cultural life.

And here we primarily have attentively studied and adopted the style and methods of work of the Central Committee itself and its Politburo headed by L.I. Brezhnev.

The Central Committee's decision on Georgia and other documents, particularly the well-known decree on an improvement in planning and a refinement of the economic mechanism, orient us precisely toward an increase in the role of the local management authorities in tackling large-scale national economic problems and the more harmonious combination of all-state and regional interests and the territorial and sectorial principles of the planning and management of the national economy.

Fulfillment of the Central Committee's instructions has enabled us to achieve pronounced results at the most varied levels of management, particularly at the rayon and city level.

Important forms of the integration of sectorial and territorial planning have also emerged at the republic level. We may cite as an example the joint bilateral measures of the Georgian Communist Party Central Committee and republic Council of Ministers with a number of union ministries and departments which we have come to practice extensively recently. They have been developed and are already being implemented in metallurgy, machine-tool building and electrical engineering and electronics industry and certain other sectors. As a result there is an increase in the degree of the republic's participation in the all-union division of labor, the interests of its socioeconomic development are tied in better with the tasks of the entire single national economic complex of the country and work on the discovery and commissioning of additional production potential is transferred to a more solid plan-oriented basis.

The fact that all our searches in the sphere of an improvement in management bear real fruit has been corroborated particularly convincingly by the present year, when, as we have already said, the republic's workers have had to overcome natural disasters. In any event, it may now be said with confidence that had we not had rayon agrarian-industrial associations operating under the leadership of the party committees, the losses from the natural disasters would have been considerably greater.

On this occasion also the agrarian-industrial associations were a sound support of the rayon party organizations and raykoms. They are currently actively uncovering reserves, doing everything to ensure as few losses as possible, mobilizing people for restoration work in the vineyards, skillfully concentrating equipment on the farms that have suffered, redistributing toxic chemicals, seeds, fertilizer and so forth.

It is necessary to perform this work even more purposefully, fully preserve and gather in the entire remaining harvest, strive for the maximum load of the processing enterprises and compensate as far as possible for the losses of some agricultural crops with others which were not as severely affected by the hail and bad weather. It is very important to carry out the repeat sowing of vegetable and fodder crops in organized manner.

This year all the rayon agrarian-industrial associations have to pass a considerable test. This is your first test, comrades! And we do not doubt that these associations will once again confirm their high mobility and efficacy.

We must also orient as much as possible the managerial machinery in industry, construction and transport toward the discovery of additional potential. Much of this potential lies at the intersection of the interests of different organizations, enterprises and departments.

I would like in this connection today to again talk about the experiment being conducted by the Poti comrades, who have created a territorial intersectorial association for control of the city's social and economic development. This has made it possible to considerably improve the economic activity of all organizations and increase their leaders' responsibility for final work results, and the interests of different departments here are beginning to coincide with the tasks of securing the high rate of the socioeconomic development of the city as a whole. An atmosphere is evolving in which each collective and each worker "takes to heart," it may be said, the cause of his enterprise, the whole city and his system.

It is essential to develop such an approach everywhere.

Centralized planning in combination with the broad initiative of the union and autonomous republics and autonomous oblasts and okrugs, the CPSU Central Committee decree on the 60th anniversary of the formation of the USSR says, makes it possible to ensure the balanced and efficient development of the Soviet economy. The experience of the GSSR's development in the country's single national economic complex shows convincingly the advantages of this path, along which the national formations are proceeding confidently under the conditions of the socialist society.

Backward national outlying areas do not now exist, L.I. Brezhnev emphasized at the 26th CPSU Congress. However, the party's current economic strategy does not rule out the preferential development of a number of regions. Under the conditions of developed socialism the process of the leveling of the socioeconomic development of this national formation or the other pursues the goal of ensuring the optimum use of the possibilities of the production forces and creating favorable conditions for the even greater burgeoning of the economy and culture of each nation and nationality and each republic.

This process is characteristic of Georgia, and it is being developed and extended constantly. We have been set the task of pulling ourselves up in certain essential indicators of economic development and overcoming the republic's lag behind the union-average level, and we are targeting our entire system of party leadership of the economy at the accomplishment of this task and endeavoring to maintain the high rate of socioeconomic development.

It was with good reason that at the 26th Georgian Communist Party Congress we granted the floor to the republic's leaders and all Central Committee Bureau members. Many ministers spoke in the plenary sessions, and almost all our managers were given the floor at working group meetings. This was also done intentionally. We wanted every leader to share at our party forum how he intended to ensure successful work in the area of the republic's economic and social development with which he had been entrusted and what he intended to do to make the stride of Soviet Georgia confident and broad. We consider it essential that the entire republic know who is responsible for what here.

We proceeded at that time from the fact that in 5 years, at the 27th Georgian Communist Party Congress, and the 27th congress is not all that far off, each leader would again speak and render account to the republic party organization on what he had done in this time, how he had coped with his duties and how he had kept his word. And the main criterion of the professional and political qualities of our leaders will be fulfillment of the 5-year plan, how the executives--of both republic scale and rayon level--have coped with the accomplishment of this key task and what personal contribution they have made to securing the high rate of development of the GSSR!

Having stated the positive processes and the positive experience which has been accumulated in the republic party organization in the sphere of organizational-party work, the CPSU Central Committee decree pointed to the concrete tasks which we have to tackle.

The first of these indicates that for an increase in party influence in the decisive areas of production it is necessary to improve the structure of the primary party organizations and the assignment of the communists and increase their vanguard role in production and social life.

I would like to mention particularly that as soon as the CPSU Central Committee decree was adopted, our entire aktiv and all Central Committee departments, primarily, of course, the Organizational-Party Work Department, began active preparations for our plenum today.

In particular, in connection with the question of the structure of the primary party organizations an analysis shows that compared with 1971 the number of primary party organizations in the republic has grown by 948 units, party groups by 1,945 and shop party organizations by 2,489. Terminal party committees have been created in railroad transport, as have primary party organization secretary councils in 19 industrial and a number of agricultural associations. In this time the number of communists has increased in almost all sectors, particularly in those, moreover, which are determining the rate of industrial and scientific-technical progress. The number of communists employed in the material production sphere as a whole is growing also.

However, the party Central Committee decree is entirely correct in pointing to the need for the better control of this process. In a number of rayons like Akhalkalakskiy, Akhmetskiy, Bolnisskiy, Gardabanskiy, Gurdzhaanskiy, Dmanisskiy, Lagodekhskiy, Marneul'skiy, Mtskhetskiy, Tetritskaroyskiy and Tsalkskiy the party stratum among the working population is declining. The number of communists employed in agricultural production, particularly in animal husbandry, is declining in certain rural rayons. There are rayons where there is virtually no growth in the number of machine operator-communists.

For this process to be controlled it is necessary to know precisely how many communists work, for example, as brigade leaders, foremen and shop chiefs and how many of these lower production cells lack a proper party stratum. We should know how many communists working in the production sphere are really creating physical values. It is necessary to have a clear idea of whether the structure of the party organizations ensures optimum party influence everywhere and whether every communist has the opportunity of performing his vanguard role such as to ensure that it be most efficient and pronounced.

All these questions require in-depth study and attentive analysis, which, in turn, points to the need for a streamlining of current party statistics, which do not thoroughly reflect the actual state of affairs.

The work being done by the party committees on study of the problem of the assignment of communists and an improvement in the structure of the party organizations should be considered inadequate.

The Organizational Party Work Department and other Central Committee departments and the gorkoms and raykoms must submit concrete proposals concerning the necessary changes in statistical accountability and obtain the necessary information on whose basis it will be possible to adopt managerial decisions aimed at a further improvement in the structure of the primary party organizations, the assignment of communists, an increase in their vanguard role and, what is most important, an increase in the responsibility of each communist, as required by the CPSU Central Committee decree.

The second task indicates that it is essential when regulating the growth of the party ranks, forming elective party and state bodies and promoting personnel to executive work that we take fuller account of the national composition of the republic's population.

The question of the representation of different nationalities among those admitted to the party is very important. Much has changed for the better here in recent years. But what has been done is far from sufficient. This matter requires constant attention on the part of all party committees, beginning with the Georgian Communist Party Central Committee. It again needs to be tackled on a solid, systemic basis. And in this case the Organizational Party Work Department should first of all study in depth the actual state of affairs in individual regions of the republic and individual sectors of the economy.

In order to be conversant with the situation and to control these processes it is essential in this sphere also to create a precisely formulated, well-conceived system. And here the work will be based on the creation of the necessary bank of information, for it is again necessary to streamline party statistics. The fact that we do not have data on the national characteristics of those admitted to the party does not help, for example. Naturally, this process is not regulated to a certain extent.

A positive trend has been generated here in recent years in the formation of the elective party and state bodies and the promotion of personnel to executive work. L.I. Brezhnev said in this connection at the time of his visit to Tbilisi: "It is good that in implementing personnel policy you have begun to take into consideration more attentively the factor of the population's multinationality and to nurture and promote to executive work personnel of all the nations and nationalities living in your republic."

There has been a marked increase in the last 10 years in the representation of all the main nationalities living in the republic in the composition of the party organization and the makeup of the Central Committee and the obkoms, gorkoms and raykoms, among primary party organization secretaries and bureau members and among management personnel on the party schedule and ministry leaders. At the same time, as Leonid Il'ich emphasized, with regard for the requirements of the congress, this policy must continue to be pursued with even greater persistence. The CPSU Central Committee decree also orients us toward this.

There is evidently a need to return again to the Georgian Communist Party Central Committee 17th (1979) Plenum on questions of work with the personnel and investigate how the decisions it adopted are being fulfilled, particularly those concerning executive personnel.

The third task demands the utmost development and extension of socialist democracy. The republic party organization has considerable experience with respect to the development of democratic principles in all walks of public-political life and the encouragement of the initiative and independence of the state and public organizations.

For the utmost development and extension of socialist democracy and intraparty democracy it is essential that we perfect even more our systemic approach, which imbibes the consistent development of the initiative and assertiveness of the masses and constant reliance on the primary party organizations, the communists, the labor collectives, broad strata of the population and on study of public opinion.

For this purpose it is primarily necessary to continue to practice the extensive briefing of the communists and working people on all the most important economic and sociopolitical issues. This practice has become firmly established here. In the last 10 years alone members of the Georgian Communist Party Central Committee and Auditing Commission participated in the work of over 10,000 meetings in the working people's labor collectives, personally explaining party policy to tens and hundreds of thousands of people.

This is why Soviet Georgia must greet the 60th anniversary of the formation of the USSR in an atmosphere of self-critical analysis of everything that has been done in fulfillment of all the CPSU Central Committee decrees on Georgia, beginning with the decree on the Tbilisskiy Gorkom, and in an atmosphere of the unswerving accomplishment of the tasks ensuing from Comrade L.I. Brezhnev's speeches at the Tbilisi festivities.

In this connection we must step up supervision of performance in the literal meaning of the word. This is still a weak point here, although the CPSU Central Committee decree said that the republic party organization attaches importance to an increase in the authority of party decisions and the organization of their implementation.

The authority of decisions must be prized, Comrade L.I. Brezhnev said, emphasizing how important it is to continue to keep an eye on ensuring that adopted decisions be implemented properly--both in the republic and at the center.

Abiding by this instruction, we here in the Central Committee, just as in the local party bodies, have set up special work groups to increase the authority of party decisions. However, their work is not yet corresponding to the tasks confronting us. It is essential to analyze the efficacy and promptitude of the supervision of performance more assertively and scrupulously, draw up effective recommendations for its better organization and keep a stricter record of the on-schedule fulfillment of adopted decisions.

The facts indidate that performance discipline is frequently violated here and that the standard of performance is not high enough. Many decisions are not brought to their logical conclusion or are implemented only after big delays.

For example, we have repeatedly very pointedly raised the question, and have dealt with this today also, of the need for a further increase in the production of consumer goods, an increase in their quality and a broadening of their selection. For this purpose a joint Central Committee and republic Council of Ministers decree was adopted at the end of 1981 containing a concrete action program for our ministries, departments and individual enterprises and organizations. But sufficient time has elapsed, and the state of affairs is changing for the better only slowly. This indicates that the corresponding Georgian Communist Party Central Committee and Council of Ministers departments and the leaders of certain ministries and departments do not feel and do not bear personal responsibility for the nonfulfillment of the decisions of the higher authorities.

It is also necessary to step up the work on fulfillment of the decisions of the Georgian Communist Party Central Committee Sixth Plenum on questions of science and scientific-technical progress. It is generally acknowledged that the plenum proved good and businesslike. The task now is to perform active practical work on realization of the goals and recommendations of the Central Committee plenum, at which very many questions were raised requiring prompt, precisely, prompt solution. In particular, it was a question of medical science and the problems of health care. We expressed certain considerations on how work in the Ministry of Health system needed to be set up and organized, relying on the comparatively sizable base and the extensive network of scientific research institutes. But the plenum on science is in the past, and the comrades are continuing to adopt a passive attitude and are not moving quickly enough.

It should be said that there have been pronounced positive changes recently in the style of work of the Georgian Supreme Soviet Presidium, Council of Ministers, Council of Trade Unions and Komsomol Central Committee. They have begun to approach the most important problems of the life of the republic with greater competence and specificity and conduct an active search for the most efficient forms of enlistment of the working people and the youth in the running of state and public affairs.

However, what has been done is far from sufficient. Our state and public organizations have every opportunity to realize to an even greater extent the rights and powers accorded them and be the party authorities' more assertive and effective assistants.

For this it is primarily necessary to organize a systemic approach and improve the coordination of the activity of the republic soviet, trade union and Komsomol authorities, from the elaboration of work plans through the precise allocation of responsibility for the state of affairs in this sphere or the other. It is a question of the need to coordinate the work of the republic party, soviet and public authorities both horizontally, that is, among themselves, and vertically.

The CPSU Central Committee emphasized the importance of the republic party organization's consistent work on the further strengthening of the fraternal friendship of the peoples, an improvement in the patriotic and international education of the working people and the consolidation of socialist democratism in all spheres of the life of society.

These propositions assume particular significance if it is recalled that 10 years ago the CPSU Central Committee decree on the Tbilisskiy Gorkom recorded: "A number of party organizations does not attach the necessary significance to the international education of the working people, particularly the intelligentsia and the youth."

Things are quite different now. Work on the working people's education in the spirit of the Leninist friendship of the USSR peoples and Soviet patriotism and socialist internationalism is being performed on a clearly considered, systemic basis. The preparationsfor the 60th anniversary of the USSR have stimulated all ideological work even further.

All this work has been constructed on a firm basis and solid foundation and on the wealth of traditions of Georgian classical and Soviet literature and all our, as L.I. Brezhnev said, distinctive and, in many respects, unique national culture.

In the formation of the new man, to whom national exclusiveness and local preference are alien, an important part is played by the mass friendship and fraternity of the peoples festivals held in Tbilisi, Sukhumi, Batumi, Tskhinvali and other cities and rayons, which, as the CPSU Central Committee decree says, enjoy great popularity.

Measures have been approved for an improvement in the teaching and study of Georgian, Abkhaz, Osetin and other languages of the nationalities and national groups of the republic and of Russian as the medium of inter-nation communication.

All this, as the CPSU Central Committee decree said, is contributing to the establishment of an atmosphere of mutual understanding and trust among all representatives of the nations and nationalities which live in the republic.

At the same time our party's Central Committee considers the continuation of purposeful work on the rapprochement of the republic's nations and nationalities on the basis of equality, mutual respect and trust and the fraternal friendship of all the USSR peoples a most important task of the Georgian party organization.

This is how we conceive of the problem of ideological support for our entire grand policy, party policy. And we must continue to proceed from the fact that the role of literature and art in this process is qualitatively growing increasingly as the general political and general cultural outlook of Soviet people, whose spiritual-aesthetic requirements are becoming higher and higher, broaden.

Our firm and our constant support in all work on ideological backup for all the measures being implemented by the republic party organization should be, as hitherto, the Georgian Communist Party Central Committee Institute of Party History, which, together with other Trans-Caucasus branches of the CPSU Central Committee Institute of Marxism-Leninism, participated in the creation of the collective monograph "Activity of the Trans-Caucasus Communist Organizations in the Working People's Communist Education". The same support should be rendered, as hitherto, by the Tbilisi branch of the V.I. Lenin Central Museum, which is engaged in intensive and multifaceted preparations for the 60th anniversary of the formation of the USSR, and the republic Academy of Sciences' Institute of Philosophy, whose active participation in all our work we perceive constantly.

Such support should also be rendered by other of the academy institutes of a humanities profile and all VUZ social science departments. I would like our social scientists working in academy institutes, whose leaders are here in this hall, not to forget that these institutes--which are essentially ideological--are ideological institutes of our party and our state. Unfortunately, certain comrades would forget this without our reminders. Furthermore, their very membership of the Academy of Sciences, where problems should be developed on a truly scientific, fundamental basis, on the one hand makes much incumbent on these institutes and, on the other, permits us to make the strictest demands on them, demands on the grand scale, as they say.

Our consistent policy of strengthening socialist discipline and law and order and legality has also been reflected in a number of legislative enactments. And the very struggle against the embezzlement of socialist property, theft, speculation, bribe-taking, protectionism, parasitism and other antisocial phenomena has become a most important factor of the general recuperation of the moral-psychological atmosphere in the republic and has served as a basis to a certain extent for the accomplishment of many socioeconomic and public-political tasks.

This struggle has now assumed a more purposeful character. There has been a marked recovery in the operational situation in the republic, the number of crimes against the citizens' life, health and dignity and the theft of personal property have declined, and there has been a drop in juvenile crime. This trend, and this is particularly important, is characteristic of the majority of cities and rayons.

Nonetheless, it is very disturbing when certain party committees and administrative and other supervisory authorities, having achieved somewhat of a reduction in the number of offenses, relax their vigilance and lose their self-critical approach and, together with this, control over the development of certain processes.

The so-called "liquor case," what kind of embezzlement was uncovered at the Tbilisi Champagne Wines Works and what a crime was committed in the Ministry of Finance are well known to the participants in the plenum. The guilty parties were severely punished. This should, it might have seemed, have served as a warning to others. However, serious abuses and serious breaches of socialist legality and law and order are still being perpetrated in a number of cities and rayons. How is this? One trial has just ended, many people have had proceedings instituted against them, and thereupon new crimes are revealed. It happens that swindlers and smart dealers are organizing the large-scale embezzlement of socialist property, but that we are not taking the proper steps to nip them in the bud. This means that the vigilance of some of our comrades has been blunted. This means that preventive work is still organized inadequately here.

It is the task of our party, soviet, economic-planning, administrative and supervisory authorities to reliably protect public property from embezzlers and thieves, remembering that many serious crimes start with petty offenses and then develop and become large scale.

In this connection I wish to touch on the sphere of trade and consumer services, where offenses have again become more frequent here recently and discipline has broken down. There are many instances of hoarding goods in short supply and of overchanging and short-changing the customers.

As always, we must now also make the prevention of infractions the cornerstone. In every rayon, in every city and throughout the republic it is necessary to develop a precise system of combating losses, mismanagement and all manifestations of a negligent, careless and disorderly attitude toward public property. This is why we attach such importance to the interesting experiment currently being conducted in Telavskiy Rayon, where, as you know, a system of the interaction of economic-planning, administrative and supervisory authority leaders for the prevention and timely forestalling of all kinds of offenses and abuses has been created.

We must more boldly seek out and adopt all that is new and progressive in the struggle against infractions and other negative antisocial phenomena, persistently striving to ensure, as L.I. Brezhnev said, that the moral atmosphere in Georgia be as pure as our mountain air.

And in this case we will only be able to accomplish the tasks connected with bringing proper public order to bear given a comprehensive, systemic approach and their suitable ideological support.

We give the assurance today that the communists of Georgia and the republic's working people will give all their powers, their energy, their knowledge and their experience for the further upsurge of the national economy of our great motherland and the strengthening of its economic might and power and make their worthy, impressive contribution to the building of the communist society!

We say today that the Georgian Communist Party is recognized as a proven detachment of the CPSU--the party of the great Lenin. And we will bear this high title honorably and aloft throughout our life and throughout the struggle for communism and the bright future of all mankind!

'SHARP CRITICISM' VOICED BY UKRAINIAN SUPREME SOVIET PRESIDIUM

Kiev PRAVDA UKRAINY in Russian 9 Jul 82 p 1

[Unattributed report: "A Meeting of the Ukrainian SSR Supreme Soviet Presidium"]

[Text] On 8 July a regular session of the Ukrainian SSR Supreme Soviet Presidium took place under the chairmanship of UkSSR Communist Party Central Committee Politburo member and chairman of the UkSSR Supreme Soviet Presidium A.F. Vatchenko.

The presidium considered questions connected with the holding of the fifth session of the UkSSR Supreme Soviet Tenth Convocation.

The status of control over fulfillment of the UkSSR Supreme Soviet Presidium decrees was discussed at the meeting. It was noted that local soviets and their executive committees and republic ministries and administrations have improved organization and control over fulfillment of UkSSR Supreme Soviet Presidium decrees. The CPSU Central Committee decree "On Further Improving Control and Verification in Light of the Decisions of the 26th CPSU Congress" has had a significant effect on the upsurge in the level of this work.

At the same time the ispolkoms of the Kirovograd, Kiev, L'vov, Nikolayev, Odessa, Poltava, Sumy and Kherson oblast soviets, and ministries and administrations in the republic, namely the Ministry of Land Reclamation and Water Resources, the Ministry of Housing and Municipal Services, the UkSSR State Committee for the Supply of Production Equipment for Agriculture, the Ukrainian Cooperative Union and others, which are not insuring proper control over timely reaction to documents issued by the UkSSR Supreme Soviet and its organs and poorly organizing the fulfillment of the tasks defined in them, were subjected to sharp criticism. Some decisions taken by oblispolkoms in accordance with presidium decrees and the recommendations of the permanent commissions are not always passed on to the lower wings of the soviets. There are repeated cases of verification being of an irregular nature, amounting merely to a statement of shortcomings and omissions, without deep analysis of their causes and of management results. Shortcomings in organizing fulfillment of presidium decrees and the recommendations of the permanent commissions of the UkSSR Supreme Soviet are to some extent also explained by inadequate control and exactingness on the part of presidium sections. The organs of the UkSSR people's control are almost completely uninvolved in this matter.

In a decree adopted the Presidium obliged the executive committees of oblast soviets of working people's deputies and the Kiev and Sevastopol' city soviets of working people's deputies and republic ministries and state committees and administrations to analyze more deeply the activities of local soviets and subordinate enterprises, establishments and organizations in implementing presidium decrees and the recommendations of the UkSSR Supreme Soviet permanent commissions, to take the necessary steps to improve this work and strengthen executive discipline, and to involve deputies and the public at large more in the organization of fulfillment. All the activities of soviet and economic organs should be subordinate to the most complete implementation of the decisions of the 26th CPSU Congress and the 26th UkSSR Communist Party Congress, the provisions of the USSR Constitution and the UkSSR Constitution and the tasks set forth in the reports and speeches of comrade L.I. Brezhnev on questions of state, economic and social and cultural building and the fulfillment of plans and socialist pledges for the 11th Five-Year Plan and to insure a worthy greeting of the 60th anniversary of the formation of the USSR.

The presidium heard a report from the chairman of the Voroshilovgrad oblispolkom A.V. Merzlenko on the work of the soviets of working people's deputies in the oblast in insuring compliance with laws on the safeguarding of socialist property, and it examined questions of awards for mothers giving birth to many children, naturalization in the Ukrainian SSR and other matters. The plan was confirmed for the main measures of the UkSSR Supreme Soviet Presidium for the second half of 1982. Corresponding ukazes and decrees were adopted.

The following took part in the discussions of the questions: I.Z. Sokolov, UkSSR Communist Party Central Committee Politburo second secretary; V.S. Shevchenko, deputy chairman of the UkSSR Supreme Soviet Presidium; Ya.Ya. Kolotukha, UkSSR Supreme Soviet Presidium secretary; presidium members G.I. Gutovskiy, A.T. Yesaulov, A.I. Korniyenko and A.S. Statinov; UkSSR minister of internal affairs I.D. Gladush; republic minister of justice V.I. Zaychuk; chairman of the UkSSR Supreme Court A.N. Yakimenko; and others.

VATCHENKO REPORT AT UKRAINIAN SUPREME SOVIET SESSION

Kiev PRAVDA UKRAINY in Russian 10 Jul 82 pp 3-4

[RATAU report on speech delivered by A.F. Vatchenko, Ukrainian SSR Communist Party Central Committee Politburo member and chairman of the Ukrainian SSR Supreme Soviet Presidium, at the fifth session of the Ukrainian SSR Supreme Soviet Tenth convocation. Date not specified]

[Text] Esteemed comrade deputies. Today at the session of the UkSSR Supreme Soviet, as in the period of preparation for it, in which deputies and the soviet and economic aktiv participated actively, much useful work has been done. We have thoroughly analyzed and assessed the status of housing and social and cultural construction in the countryside in Krymskaya and Cherkasskaya oblasts, and throughout the republic as a whole. These questions, as is known, make up an organic part of the Food Program approved by the CPSU Central Committee May Plenum.

The plenum decisions and the report of CPSU Central Committee General Secretary and chairman of the USSR Supreme Soviet Presidium comrade L.I. Brezhnev--a report imbued with the spirit of creativity--reveal the essence of party agrarian policy for the Eighties and constitute a new contribution to the theory and practice of the building of communism. In terms of their sociopolitical significance the plenum documents are truly historic. At no time in our country have such comprehensive and long-term, large-scale measures been defined to solve a vitally important problem--the food problem.

It is of fundamental importance that along with the further development of the material-technical base for agriculture and its associated sectors, improvements are made in the management of the agrarian-industrial complex, which is for the first time being set up as a unified, independent object of planning and control. The greatest importance attaches to measures to strengthen the economies of kolkhozes and sovkhozes, develop their independence in resolving production questions, enhance the role and responsibility of farm managers and specialists, provide incentive for labor in the agrarian sector, improve living conditions for the rural population, and strengthen party leadership. Major funding is being allocated, the activity of all elements of the Soviet political system is being directed, and the efforts of all our people are being mobilized to implement the Food Program, which is designed to reliably provide foodstuffs for the population.

The results of the CPSU Central Committee May Plenum and the principles set forth in comrade L.I. Brezhnev's speech at the plenum have been comprehensively discussed and unanimously approved at a plenum of the UkSSR Communist Party Central Committee, at plenums of the party obkoms, gorkoms and raykoms, at sessions of the local soviets of working people's deputies and in the primary party organizations and labor collectives. Plans to solve the tasks stemming from comrade L.I. Brezhnev's report, the Food Program and the decrees passed by the CPSU Central Committee and the USSR Council of Ministers in this connection, have been worked out and are being implemented everywhere. Great political and organizational work has been initiated.

Deeply studying and discussing the plenum material, like the entire country the workers of Soviet Ukraine approve and wholly support the domestic and foreign policies of the CPSU and the practical activity of its Central Committee headed by comrade L.I. Brezhnev. This is manifest in the high political and labor activity of workers, kolkhoz farmers and the intelligentsia and in the broad scope of socialist competition to greet in a worthy manner the 65th anniversary of the Great October and the 60th anniversary of the formation of the USSR. As a result, during the first half of the year, within the republic above-plan industrial output worth R638 million has been sold. New production capacities, 3.5 million square meters of housing, and a whole range of public, cultural and everyday projects have been commissioned. The harvesting of early grain crops has been started in a well-organized way. Steps are being taken to increase the production of livestock farming produce.

The elections for the deputies of local soviets of working people's deputies and people's judges were a striking demonstration of the indestructible unity of party and people. They took place everywhere at the required organizational and political level and with high election activity on the part of voters. All the newly elected soviets have held sessions at which the tasks stemming from the CPSU Central Committee May Plenum decisions have been discussed, and permanent commissions and executive and management organs have been formed. Their qualitative makeup has been improved. The task now is to insure continuity in the work of the soviets and to advance further and achieve more.

The activity of soviets in all links must be subordinate to implementation of the Food Program and the principles laid down by comrade L.I. Brezhnev at the CPSU Central Committee May Plenum and the 31 May 1982 meeting of the USSR Supreme Soviet, and also to the specific measures outlined by the UkSSR Communist Party Central Committee June Plenum. The soviets are called upon to to cooperate actively in the development of all sectors of the agrarian-industrial complex and to create the conditions essential for the successful activity of the agrarian-industrial associations.

It is especially important to focus efforts on the further development of agriculture. The UkSSR Communist Party Central June Plenum set high targets for the production of agricultural produce. As CPSU Central Committee Politburo member and first secretary of the UkSSR Communist Party Central Committee comrade V.V. Shcherbitskiy stressed at the plenum, "These targets absolutely must be met because this is essential for the uninterrupted supply of foodstuffs for the population."

Raising standards of farming and livestock farming, and the struggle for efficient use of production funds and material, labor and financial resources, labor productivity growth, and to improve work quality and eliminate losses in the national economy are decisive here. It is also essential to activate the work of the soviets to expand agricultural production on subsidiary plots at industrial enterprises, private subsidiary plots and horticultural associations.

As comrade L.I. Brezhnev pointed out, the local soviets must also play first fiddle in implementing the program outlined for the rebuilding of the countryside and the construction of housing, roads, schools, hospitals, kindergartens and stores in rural localities. Much has been done to resolve these questions, particularly since the CPSU Central Committee March (1965) Plenum, which, developing party agrarian policy, recognized the need for making a sharp turn in improving labor and everyday conditions for rural workers. This course has been further developed in subsequent CPSU Central Committee plenums and party congresses, and it can be said that the restructuring of the countryside has acquired a mass nature.

State and kolkhoz capital investments in the social sphere during the period 1965-1980 within the republic reached almost R7 billion, which makes up 79 percent of allocations for this purpose during all the years of Soviet power. In the last two five-year plans alone about 13 million square meters of housing, general education schools with places for 1.2 million pupils, preschool establishments with 243,000 places, and many other important present-day projects have been commissioned. In addition, individual houses with a total floor area of almost 40 million square meters have been constructed using public funds.

Many villages have been essentially renewed. Their planning and the provision of public services and amenities have been improved, asphalt roads and sidewalks and water and gas lines have been laid, and a network of municipal and everyday services and cultural and educational establishments has been set up. Villages like Petrovka in Krymskaya Oblast, Skorodistik in Cherkasskaya Oblast, Shcherbani in Nikolayevskaya Oblast, Chernobayevka in Khersonskaya Oblast and Bakhmutskoye in Donetskaya Oblast are examples. There are many beautiful villages with good public services and amenities in L'vovskaya, Chernovitskaya, Rovenskaya, Ivano-Frankovskaya and Volynskaya oblasts. Indeed, in every oblast and in every rayon there are villages where there is something to look at and something to learn from.

Last year, two rayons--Vinogradskiy in Zakarpatskaya Oblast and Pokrovskiy in Dnepropetrovskaya Oblast--and also 43 villages throughout the republic were awarded diplomas of the USSR Exhibition of National Economic Achievements, and 27 populated points certificates of the UkSSR Supreme Soviet Presidium, for the best construction work and the provision of public services and amenities.

Under the leadership of party organs, a substantial contribution is being made by the soviets of working people's deputies to the social reconstruction of the countryside. They are increasingly concerning themselves with the compilation of planning documentation for construction and the co-option of assets from enterprises and organizations regardless of their administrative subordination, and they are effecting control over the course of work and recruiting the public extensively in this.

In places where the soviets are solving these questions in a proper, planned way and acting as plenipotentiary managers, and along with kolkhoz and sovkhoz managers utilizing all opportunities for providing villages with services and amenities and showing constant concern for the working and everyday conditions of rural workers, cadres are being strengthened and good results being obtained from economic management. In this regard, there is much that is instructive in Krymskaya Oblast, where an influx of labor into the farms is observed and stable labor collectives have been created that insure high production indicators. Even last year, when conditions were made complicated by the weather, the workers of the Crimea fulfilled plans for the procurement of grain and other agricultural produce, and in this connection received a greetings message from comrade L.I. Brezhnev. The oblast and six of its rayons were awarded challenge red banners of the CPSU Central Committee, USSR Supreme Soviet, AUCCTU and Komsomol Central Committee for the 1981 results.

In Cherkasskaya Oblast the organization of socialist competition for the best set-up rural populated points, which is closely linked with realization of pledges to increase the production and procurement of agricultural produce, deserves attention.

However, along with the positive experience in the work of soviets in Krymskaya and Cherkasskaya oblasts in the social reconstruction of villages, there are also shortcomings and unresolved questions. The main reason for this is that soviet and agricultural organs in Krymskaya Oblast, and particularly Cherkasskaya Oblast, are still not making full use of available opportunities and resources. As a result, the status of construction in many villages does not everywhere meet present-day requirements. Funds allocated for the construction of housing and public and cultural projects are not always assimilated, while at the same time there are dilapidated houses and shortages of adequate schools, preschool establishments and trade and everyday enterprises in the countryside.

These kinds of shortcoming still remain in other oblasts of the republic also. In this connection the speaker criticized soviets in Poltavskaya, Sumskaya, Kirovogradskaya, Odesskaya, Nikolayevskaya and Chernigovskaya oblasts. This is largely explained, he went on, by the fact that the executive committees of some soviets are not deeply scrutinizing the work of construction organizations, providing the necessary help in overcoming difficulties, or adopting many decrees, and they do not always fully insure the implementation of decrees, as has happened with the Kirovograd oblast executive committee.

In Khmelnitskaya, Vinnitskaya and Zhitomirskaya oblasts they participate insufficiently in the construction of housing for kolkhozes and sovkhozes, even though they are experiencing a shortage in the agricultural labor force. Meanwhile, many farms in other oblasts are using their own funds to erect entire streets of individual houses with outbuildings and handing over these homes to young families on a privilege basis. Experience shows that this is advantageous both for the farm and for the people working on it.

The Ukrainian Interkolkhoz Construction Organization and the Ministry of Rural Construction, which are the main contractors in the countryside, are making an extremely low contribution to rural housing construction. The Ministry of State

Farms, Ministry of Land Reclamation and Water Resources, Ministry of the Fruit and Vegetable Industry, Ministry of the Meat and Dairy Industry and the Main Administration for Fruit Growing and Viticulture still show little concern for the timely commissioning of public and cultural projects in rural localities.

More attention should be given to individual construction, and, as envisaged in the Food Program, financial and material aid should be given to the construction workers, and cooperative construction should be developed.

Having drawn attention to the need for further improvements in municipal and everyday services, A.F. Vatchenko said that the experience of Cherkasskaya Oblast, which was the initiator of the creation of rural municipal services, shows that this is an essential matter. The average per capita cost here of communal services is almost R30 annually. At the same time, many farms in the republic still do not have municipal services, and in some places, for example Nikolayevskaya Oblast, some of those already in existence have been liquidated. This is largely the result of the fact that the Ministry of Housing and Municipal Services and the Ministry of Agriculture have in essence been removed from management of rural municipal services.

It is also urgently necessary to resolve such questions as the further strengthening of the material base for rural schools and vocational and technical schools, improving the training and educational process and professional training for young people, and creating all the conditions essential for bringing them firmly into agricultural production. Here, the field is large, both for the local soviets and for the Ministry of Education and the State Committee for Vocational and Technical Training. It is very important to activate work on the development of clubs, libraries and sports facilities in the countryside, and to expand the construction of rural outpatient and polyclinic establishments and pharmacies, and provide them with telephone communications and transportation. There should be a greater concern to provide care facilities for mothers and babies, the families of dead soldiers, invalids, and veterans of the Great Patriotic War. The presidium and permanent commissions of the UkSSR Supreme Soviet and the republic Council of Ministers should establish effective control over all this.

Effective measures must be implemented to make full and efficient use of the large allocations that will be made under the Comprehensive Program for the Social and Cultural Development of the Countryside during the 11th Five-Year Plan and for the Period Through 1990, as approved by the UkSSR Communist Party Central Committee and UkSSR Council of Ministers. Accomplishment of what has been outlined will make it possible in most oblasts to bring close to the normative the level of social and cultural and everyday projects for the rural population and to construct tens of thousands of kilometers of hard-surfaced roads and sidewalks. In accordance with the task set by the UkSSR Communist Party Central Committee June Plenum, this year already it is essential to complete in the main the construction of access roads to the central farmsteads of kolkhozes and sovkhozes, and as a rule, during the current and next five-year plan to complete the construction of roads to other rural populated points and livestock farms.

The soviets of working people's deputies must also work actively to set up in each rayon center a cultural complex that includes a house of culture, library, school of music, museum, bookshop, park, and sports and other facilities. This goal was set by the 26th UkSSR Communist Party Congress. It is also essential to accelerate the construction of community centers in villages and to strengthen the material base of the rural and village soviets, especially in Poltavskaya, Chernovitskaya, Khersonskaya, Ternopolskaya, Kiyevskaya and some other oblasts where these questions are still being resolved slowly.

For successful construction in the countryside it is necessary to train more and better construction workers and develop the material-technical base of the rural construction organizations, and also, in accordance with the the CPSU Central Committee and USSR Council of Ministers decree, to recruit the housing-construction combines to construct houses, schools and preschool establishments.

The republic Gosplan and the ispolkoms of the oblast soviets must also give help to kolkhozes and sovkhozes in carrying out construction work using the operational method [khozyaystvennyy metod], provide such construction projects with cement, pipes, facing panels, plumbing parts and other construction materials, and make more extensive use of local construction materials and increase the production of brick and roofing.

Many kolkhozes and sovkhozes now have their own brick plants. Thus, in Volynskaya Oblast 20 kolkhoz brick plants are producing about 12 million bricks annually, largely satisfying internal farm needs. However, in some places, for example in Vinnitskaya Oblast, many of the existing brick plants and stone quarries are not operating at full capacity and some of them are being closed. And this with the connivance and tacit consent of the Ministry of the Construction Materials Industry and the Ministry of Agriculture.

Standards at rural construction sites require a new approach and higher level. Many of them are being set up in the same monotonous way and the planting of greenery around the central farmstead area is not always done. The republic Gosstroy is still giving little attention to these questions. Today the task is that each rural populated point have a construction plan and its own planning for streets and apartments, and various, different designs for houses of the farmstead type. In order to successfully resolve these questions it is essential to strengthen the architectural services, especially the rayon service. Now for example, in Cherkasskaya Oblast, the duties of architects in many rayons are being undertaken by engineers, land use surveyors, and people in other professions that have nothing to do with architecture.

But, important though it is, it is not merely a question of constructing needed projects. It is possible to have the most up-to-date everyday-service reception points and stores with sparkling windows, but the benefits will be scant if the essential services and goods are lacking and people have the wrong attitudes. The soviets of working peole's deputies must give their serious attention to this side of the question. Sometimes, and this applies particularly to services enterprises, in the pursuit of plan fulfillment for gross output they forget about the individual and what the everyday services are supposed to do. Take for example the Chermomorsk rayon everyday services combine in Krymskaya Oblast. Last year it fulfilled the plan 200 percent--mainly through the transportation of shell limestone--but was unable to sew or repair clothing and footwear, repair domestic electrical appliances or provide the public with an adequate amount of other services.

There is also much neglect in the work of rural trade and public catering enterprises, medical establishments, schools, kindergartens, creches and clubs. The Ukrainian Cooperative Union, the Ministry of Health, the Ministry of Education, Ministry of Culture and other ministries and administrations in the republic must devise and implement radical measures to improve services for the rural population. The contribution from scientific and planning and design institutions should also be more concrete. It is essential to develop more broadly patronage by urban collectives over the countryside as is being done, for example, in Krivoy Rog city enterprises or the "Zavod Aresenal" production association.

A.F. Vatchenko dealt with questions of training the labor force for the countryside and improving labor and everyday conditions. These problems are still being inadequately resolved in Cherkasskaya, Zakarpatskaya, Sumskaya and other oblasts, and this is leading to the departure of specialists from the countryside at a time when there is an acute shortage of them.

All the means and forms of organizational work in the soviets must be subordinate to the comprehensive resolution of tasks for the further restructuring of the countryside. These questions must be regularly aired for review at the sessions and meetings of ispolkoms and the permanent commissions, organization and control of social and cultural construction in the countryside must be strengthened, deputy groups and posts, the public organs of independent action and the entire soviet aktiv must be involved more broadly, and the role and responsibility of farm managers for solving social problems must be enhanced. It is essential everywhere to organize effective social competition for better comprehensive provision of amenities and services in the countryside.

The further restructuring of the countryside, A.F. Vatchenko said, depends directly upon the dynamic development of agriculture and its improved efficiency. Now, it is very important to make efforts to gather in the harvest in shortened periods and without losses, insure the planned sales of grain and other produce, activate fodder procurement for livestock farming, and improve its productiveness. While working on long-term questions the soviets of working people's deputies should not weaken their attention to current questions and should resolve them comprehensively and at the required level.

At today's session, in the reports of Yu.G. Bakhtin and V.N. Shapoval and in the speeches of the deputies the positive experience of the soviets of working people's deputies in the development of housing and social and cultural construction in the countryside has been thoroughly dealt with, shortcomings have been pointed out, and critical remarks have been made, including those addressed at republic organs. The UkSSR Supreme Soviet Presidium will carefully examine and generalize them and pass on appropriate assignments to realize them.

In our day-to-day work, A.F. Vatchenko said in conclusion, we must proceed from the premise that fulfillment of the plans outlined by the party is a decisive condition for improving the well being of the people and a reliable foundation for the growth of our motherland's economic and defensive might and for preserving peace in the world. On behalf of the deputies he assured the CPSU Central Committee and thr UkSSR Communist Party Central Committee that the republic's soviets of working people's deputies will do everything necessary for the successful fulfillment of the decisions of the 26th CPSU Congress and of the CPSU Central Committee May Plenum and will make a worthy contribution to the cause of the building of communism.

COUNCIL OF MINISTERS OFFICIAL VISITS BELORUSSIA

Minsk SOVETSKAYA BELORUSSIYA in Russian 13 Aug 82 p 1

[BELTA [Belorussian Telegraphic Agency] item: "Visit of L. A. Kostandov to Our Republic"]

[Text] From 9 through 12 August, Deputy Chairman of the USSR Council of Ministers, L. A. Kostandov visited Belorussia. Together with Chairman of BSSR Council of Ministers A. N. Aksenov, Secretary of the Central Committee of the KPB [Communist Party of Belorussia] L. S. Firisanov, and other leading workers in our republic, he visited a number of enterprises and construction sites. In discussions with workers, specialists, and administrators they discussed questions concerning the fulfillment of the decisions of the 26th CPSU Congress, the aasignments of the Eleventh Five-Year Plan with regard to the increase in output and the improvement in the quality of output, and problems of building up the production capacities and reducing the periods of time required for the construction of projects.

While visiting the Gantsevichi Experimental Canning and Vegetable Drying Combine, L. A. Kostandov directed his attention to the need for the maximum use of the existing equipment and the completion of the construction of other production entities that are of great importance for carrying out the country's Food Program that was adopted by the May 1982 Plenum of the CPSU Central Committee.

At the Azot Production Association in Grodno, emphasis was made of the important role played by that enterprise in increasing the effectiveness of agricultural production and in the intensification of vegetable husbandry. Emphasis was made of the importance of the most rapid guaranteeing of the newly constructed buildings with the appropriate documentation and technological equipment. Comrade L. A. Kostandov also visited a synthetic-fibers plant.

During his visit to the Khimvolokno Production Association in Mogilev, L. A. Kostandov became acquainted with the technological processes of production, the reserves for increasing the production of *lavsan* [Soviet synthetic fiber], the economizing of raw materials, and the reduction of waste products. There was a discussion of the production activities of the collective at our country's largest complex for the production of dimethylterephthalate -- the basic raw material for obtaining chemical fibers and threads. Chemists and construction workers and the administrators of party and Soviet agencies of the city and oblast participated in a conference at the enterprise, where the basis emphasis was placed upon the resolution of the production-economic tasks of the collective of many thousands of chemists.

At the Silk Fabrics Production Association imeni XXV S"yezd KPSS in Mogilev, the questions that were considered pertained to the intensification of production, the expansion of the variety of the fabrics being produced, and the improvement of their quality. The guests also visited the textile workers' vegetable garden.

Deputy Chairman of the USSR Council of Ministers L. A. Kostandov visited the construction sites of the Belorussian Metallurgical Plant in the city of Zhlobin, and became acquainted with the state of affairs at that very important new construction site. Urgent tasks linked with its construction were discussed.

During the visit to the Beloruskaliy Production Association, special attention was devoted to problems of building up the production capacities of Mining Administration No. 4, of providing the newly activated projects with technological equipment, particularly the potassium sulfate and granulation shops. Other questions that were considered pertained to the delivery to the association of highly productive mining technology, as well as the transportation means necessary for sending the finished output to the customer. A series of measures aimed at improving the protection of the environment in the Soligorsk region were discussed.

During meetings with collectives of workers at the production associations and construction sites, the questions that were discussed pertained to the expansion of the construction of housing, of institutions for cultural and everyday purposes, and of nurseries and kindergartens, and the improvement of the workers' working and everyday living conditions.

Also present at the enterprises and construction sites together with Comrades L. A. Kostandov, A. N. Aksenov, and L. S. Firisanov were the first secretaries of the oblast party committees and chairmen of the oblast executive committees.

On 12 August Deputy Chairman of the USSR Council of Ministers L. A. Kostandov departed for Moscow.

RASHIDOV EXTOLS UZBEK-TAJIK FRIENDSHIP

Dushanbe KOMMUNIST TADZHIKISTANA in Russian 8 Aug 82 p 2

[Article by Sh.R. Rashidov, candidate of the CPSU Central Committee Politburo and first secretary of the Uzbek Communist Party Central Committee: "Great Holiday of the Fraternal Peoples"]

[Text] The working people of the great country of soviets are preparing as a single amicable family for a big holiday. This year the multinational Soviet people and all progressive mankind will commemorate the glorious 60th anniversary of the formation of the USSR. Sixty years in man's history is but a moment. But there have been majestic accomplishments in our country in this time which in volume and magnificence are the equivalent of many centuries.

Let us try to cast our thoughts back to the historic years preceding the formation of the USSR. These were the fiery years of the Great October and the civil war and the years of our people's heroic struggle against the forces of internal and external counterrevolution. Realization of the people's age-old dream of progress, social justice and education became possible in the rays of the Neva dawn. V.I. Lenin and the illustrious Communist Party which he created put on the agenda the question of unification on the basis of the equality of all nationalities and national groups of one-sixth of the globe. Grateful generations will never forget that our great leader was at the source of this unification, which was of world-historic significance.

"We desire a voluntary union of the nations, a union which will permit no violence by one nation against another, a union which will be based on the fullest trust, a clear consciousness of fraternal unity and entirely voluntary consent," V.I. Lenin wrote. The formation of the USSR was the splendid triumph of these ideas.

At that historic time the all-union leader Mikhail Ivanovich Kalinin said: "We see the new crimson banner of the USSR rising. Comrades, I see this banner in the hands of Comrade Lenin. We will go forward with this banner and raise this banner so high that it will be seen by the working people and oppressed people of the whole world!"

It is now almost 60 years that this victorious red banner of the USSR has proudly fluttered above the world, personifying the magnificence of communist ideals. This banner has inspired us both in labor and in battles, on great days of joy and in the grave hours of trials.

When one glances at the far-reaching changes which have occurred in our country and in all the fraternal republics, one's heart fills with pride. I would like to cite just one example. Civil aviation appeared in Uzbekistan and Tajikistan in the first year following the creation of our union. One simply cannot believe that only six man-made birds took off into the republic's skies at that time. Nonetheless, this was precisely how it all was. The first run was opened by the Tashkent-Dushanbe-Termez route. Approximately 1,000 passengers, 200 kilos of mail and several tons of freight were transported on it in a year. Now the Tashkent Airport alone carries hundreds of times more passengers and freight.

Many years have elapsed since the first aircraft, which flew over the roof of the world--the Pamirs--brought to Moscow the government report of the formation of the Tajik SSR. In this time Tajikistan and Uzbekistan, like the entire country, have in their development reached heights which are difficult to characterize in figures. In short, our republics have risen from the swamp of feudalism to the skies of socialism and are building the radiant edifice of communism together with all the fraternal Soviet republics.

As I write these lines, I think of the ancient friendship and fraternity of the Tajik and Uzbek peoples. Like twins, our peoples have single feelings and aspirations. From the depth of the ages they have lived in one region warmed by the rays of a single sun. The same rivers provide water for our fields, and our peoples live as inseparable friends.

Since ancient times Tajik songs have been heard in the Uzbek home, and Uzbek tunes flow at Tajik festivals. These are the splendid fruit of the two peoples' centuries-old friendly, fraternal relations. The aspiration to a single goal strengthened the friendship of our forebears. A striking symbol of our ancient friendship is the fact that the great Tajik poet, philosopher and historian, Abdulrakhman Dzhami, was the teacher and friend of the poet and scholar and founder of Uzbek literature, Alisher Navoi. The handsome memorial in ancient Samarkand in honor of the two great [ustod] is an ode in stone extolling the eternal friendship of our peoples.

The friendship of our peoples has been tempered like steel in the years of Soviet power. The [ustod] Ayni stands for Uzbeks on a par with the insurgent Khamza. The fraternal friendship of our peoples is lauded in the lines of Sadriddin Ayni and Khamid Alimdzhan, Gafur Bulyam and Mirzo Tursun-zade.

We are fellow thinkers not only in the sphere of creativity but also in all walks of life--in economics and science--and in all spheres of production. This is graphically corroborated each day of our life. The wealth of experience of Uzbek and Tajik cotton growers is a precious laboratory of the development of cotton growing both in our country and throughout the world.

If the Tajik peasant considers Tursuna Akhunova, twice hero of socialist labor and Lenin Prize winner, his teacher, on the same grounds the Uzbek cotton grower names Abdulgafur Samatov, winner of two gold stars, his mentor. If the victory of the Tajik hydropower engineers is inspiring the Uzbek textile workers to the fulfillment of two 5-year plan quotas in a single 5-year plan, the valor of the Uzbek reclamation workers in the development of new land is inspiring the Tajik cotton growers to an increase in the production of the most valuable fine-fibered cotton.

Thus the closest cooperation in all spheresof our life and constant learning from each other are producing a multitude of victories.

The literature and art festivals held last year in Uzbekistan and Tajikistan are still fresh in our memory. They have become festivals of all the people. If these unforgettable meetings, which have filled our hearts with great joy and inspired creative workers to the creation of new works about our era and the splendid people of our time, they have inspired the working man to new labor accomplishments.

In all our deeds and accomplishments we have clear goals and precise reference points. Comrade L.I. Brezhnev's arrival in Tashkent to present our republic with the third Order of Lenin, his striking speech at the ceremonies devoted to this event and his wise advice and instructions have become guiding documents for each of us. Having emphasized the successes of the republic's working people, the leader of the party and the state concentrated our attention on unsolved questions. On the basis of these tasks and the USSR Food Program adopted at the CPSU Central Committee May (1982) Plenum we must increase the efficiency of agricultural production and the sectors of industry connected with it and satisfy more fully the population's growing food requirements.

Cotton growing is developing rapidly in our republic, as in Tajikistan. The plans for the delivery of "white gold" to the motherland are overfulfilled annually under all weather conditions.

Speaking of the Food Program, we have to emphasize the important role of the CPSU Central Committee March (1965) Plenum in the development of our economy. Thanks to the consistent implementation of the party's agrarian policy which was drawn up by the March Plenum, the average annual production of raw cotton in Uzbekistan has increased by 2.5 million tons. We gave our word at the 26th CPSU Congress that in the 11th Five-Year Plan Uzbekistan's cotton growers would present the state with 30 million tons of "white gold". All the republic's working people are now working selflessly to fulfill this promise.

Comrade L.I. Brezhnev termed an increase in the quality of raw cotton a most important task. We have increased responsibility for the quality of the raw cotton and are working to reduce the cotton-treatment processes.

It is well known that land reclamation and an improvement in water supplies are a decisive condition of the development of cotton growing and fulfillment of the Food Program. It is fitting to cite just one fact here. Itis planned to spend more than R6 billion in this 5-year period on water-resource construction.

Our republic's agriculture, together with cotton, will be determined to a decisive extent by grain growing, fruit and vegetable growing and animal husbandry. We are setting the task in this 5-year plan of raising average annual grain production to 2.8-3 million tons and in the next 5-year plan to 3.3-3.5 million tons. In other words, compared with the 10th Five-Year Plan grain production will have increased by a factor of 1.5. In the long term the grain growers are counting on raising grain production to 5 million tons.

The generous earth and bright sun, the industriousness of the rural workers and their skill afford us an opportunity to obtain rich harvests of the most varied vegetables and fruit. The production of melon crops in this 5-year plan will be raised to 3.6 million tons and by 1990 to 4.4 million tons. Fruit and vegetable production will reach 6 million tons.

Uzbekistan is a highly developed industrial republic. Thanks to the disinterested assistance of all the peoples of our country, we currently have more than 1,600 large-scale industrial enterprises. The high upsurge of the republic's industry is characterized by the following figures: prior to the revolution, all Uzbekistan's power stations generated 3.5 million kilowatt-hours annually, while last year the turbines of the Uzbek power stations generated 35.4 billion kilowatt-hours of electric power.

The new cities of Chirchik and Angren, Yangiyer and Navoi, Almalyk and Zeravshan, Muborak and Shargun, the giant Bukhara-Urals and Central Asia-Center gas pipelines, hundreds of thousands of hectares of cottonfields and orchards, the land of the Golodnaya and Dzhizak steppe which has been brought to life, major reservoirs and canals and steel tracks cutting across the entire republic--such is the appearance of our republic today and its landscape, which has been transformed by human hand.

More than 1,600 products manufactured by Uzbek enterprises have been awarded the official Symbol of Quality. This testifies to our industry's qualitative growth.

All the successes of the republic's economy and culture are the splendid fruit of universal socialist competition. The traditional competition of many years' standing of the silkworm breeders of Leninabad and Fergana, the hydropower engineers of the Nurek and Syrdar'ya and the workers of Uzbekistanskiy and Tursunzadevskiy rayons are reflected in our common achievements.

"The peoples of the country of soviets are convinced from their own experience that cohesion in the single union multiplies their forces and accelerates socioeconomic development. We are rightly proud that in common formation with the working people of all the nations of our country the peoples of the former national outlying regions which were hitherto doomed to age-old backwardness have strode confidently into the socialist future, bypassing capitalism, and have attained the pinnacles of social progress."

These words from the CPSU Central Committee decree "60th Anniversary of the Formation of the USSR" apply in their entirety to the peoples of the Tajik and Uzbek republics.

On the eve of the great holiday of the fraternal peoples we are witnesses to the unity of the working people in our struggle for a new, just world and the triumph of the sense of a single family and a sense of the indestructible Leninist friendship of the peoples--the inexhaustible source of the constructive creativity of the masses. We are fortunate in our membership of this union and involvement in the great creative accomplishments. We are convinced that, like all the Soviet peoples, the working people of Tajikistan and Uzbekistan will achieve new successes in implementation of the decisions of the 26th party congress and the outlines of the CPSU Central Committee May Plenum.

ALIYEV CRITICIZES INDUSTRY AT REPUBLIC CONFERENCE

Baku BAKINSKIY RABOCHIY in Russian 23 Jul 82 pp 1-2

[Report on G.A. Aliyev speech at Azerbaijan conference on production efficiency and work quality; date not specified]

[Excerpts] Comrades! Summing up the discussion, I would like primarily to mention that in the first half of 1982 Azerbaijan's working people scored considerable successes. The plans and socialist pledges are being fulfilled in almost all sectors of the economy. The 6-month plan for the production and sale of industrial products was fulfilled ahead of schedule. Industrial production increased 5.3 percent, which is on a par with the annual target. It is gratifying that for several years running now, including the 6 months of the present year, we have achieved a high rate of labor productivity and have obtained more than 80 percent of the increase in industrial output thanks to this indicator. The proportion of products bearing the Symbol of Quality increased. As a whole, a further rise in industrial production efficiency and work quality was achieved.

A sound basis for the successful fulfillment of plans and socialist pledges was laid in agriculture. You are all well aware of the difficulties which befell the rural workers in the spring as a result of the heavy rains, downpours and hail damage. But sound organization of work and the willpower and expertise of the kolkhoz members, sovkhoz workers, specialists and our personnel were counterposed to the difficulties which arose. And the first successes are already to hand: the annual plan and socialist pledges for the procurement of cocoons, of which a record quantity was delivered, were fulfilled ahead of schedule, considerably more vegetables have been dispatched to union stocks and delivered to the state as a whole than by this time last year and the grain harvesting is proceeding successfully. The forecasts testify that we will be able to fight for record boundaries in all branches of agriculture.

Certain successes were scored in capital construction also. In rate of growth of industrial production, capital investments and construction and installation the Azerbaijan SSR is in one of the leading places among the union republics. Many measures were implemented in the 6 months in the sphere of sociocultural building, a rise in the working people's well-being and an improvement in services for them.

Our task is to take advantage of these favorable conditions as efficiently as possible for the complete mobilization of Azerbaijan's working people for the successful accomplishment of all the tasks confronting the republic, including those in industry and capital construction. We must proceed here from the fact that together with the successes scored in the first 6 months we have many shortcomings and unsolved questions. For this reason our entire work must now be channeled into the removal of these shortcomings and the full use of potential. We must not rest content with what has been achieved. As demanded by the party, every year we achieve more and proceed further, toward new heights. Consequently, in each section and at each part of the line there should be an attentive, objective and self-critical analysis of the path that has been trodden and the results achieved. The more so in that certain shortcomings in industry and capital construction are causing great concern here. We therefore deemed it necessary to convene today's meeting and thoroughly discuss the results of our work in the first half-year in industry and capital construction.

Of course, we receive statistical data monthly and study the results at Central Committee Bureau and Council of Ministers sessions, various operational conferences and Central Committee commission sessions for sectors of the national economy. But the purpose of our meeting is to sum up the collated results of our entire practical work on the fulfillment of plans and socialist pledges. You will, I believe, agree with the conclusion that we have had today a thorough, professional exchange of opinions. And the information provided by Comrades Bagirov and Musayev and the speeches of the comrades representing various sectors of the national economy and party, soviet and economic-planning bodies--all this together has revealed to us a fuller picture of the state of affairs in the republic's industry and capital construction at this time. This is very important primarily because the clearer our picture of the situation, and the more objectively we evaluate it, the more possibilities we will have for implementing concrete measures at the subsequent stage, with regard both for the successes that have been scored and the shortcomings and blunders that have been revealed. In this sense I believe that the conference has served its purpose.

We hope that today's critical, high-minded discussion will help not only those who have expressed and those who have received complaints but all who are in this hall and all the labor collectives which you represent.

Comrade Aliyev went on to dwell in detail on the measures which have to be implemented in the second 6 months to complete the second year of the 11th Five-Year Plan with high indicators in all sectors of the economy.

In industry, he said, it is necessary to strive for the successful fulfillment of the plans and socialist pledges for the production and sale of products and to secure a higher growth rate. The rate achieved in the 6 months of 5.3 percent cannot satisfy us, although this was the highest indicator among the union republics. After all, we have undertaken to increase industrial production 5.8 percent. Consequently, in the second 6 months it is necessary to put to work all reserves in order to secure, as a minimum, in terms of the year's results an industrial production growth of 5.8 percent. This is, I repeat, the minimum. For it is perfectly legitimate to set the task of achieving a growth rate of 6 percent.

As I said earlier, we are growing pretty well in labor productivity. However, here also not all potential is being used. Data has been cited at the meeting to the effect that many enterprises failed to fulfill the labor productivity plan in the first 6 months and that in certain sectors its growth was less than the plan and republic-average rates. I believe that in each ministry and in each sector and enterprise it is necessary to formulate and implement additional measures to ensure a higher labor productivity growth rate. We will keep a strict watch on this, regarding increased labor productivity as a most important indicator and a criterion of the evaluation of all work in the sphere of industry.

There are serious shortcomings in the fulfillment of plans with respect to the product list and contractual commitments concerning product supplies. The figures have been given today. These shortcomings are frequently explained by the tardy receipt of raw material and other objective factors, which do indeed occur. But the main reason lies elsewhere. We have studied this question in the Azerbaijan Communist Party Central Committee. It turns out that many leaders prefer to take the easy path, as they say. There are types of products which are easier to produce and can be produced in greater quantities, and overall favorable production indicators are secured thanks to these, to the detriment of the product list and the contractual commitments. As a result republic organizations are receiving complaints from cities of the country for shortfalls in the supply of necessary products.

I also wish to draw your attention to the use of production capacity. The figures cited at the meeting are a cause of serious concern. We have much capacity which is being used inadequately through the fault of the leaders of the corresponding enterprises and ministries. Their references to a shortage of raw material and other factors are unwarranted, as a rule. Of course, each facility has its difficulties and its problems, but at the same time we know that we have a common sickness and that capacity is often assimilated greatly behind the planned schedule owing to the inertia, lack of dispatch and sluggishness of those whose job it is to deal with this directly.

I would request a detailed investigation of the causes of the incomplete assimilation of capacity and equipment down time. We must have a clear picture in order to adopt effective measures for the complete assimilation of capacity. More, we need to organize work such as to ensure that capacity reach the planned level ahead of time.

Certain sectors and ministries, Comrade Aliyev continued, have played an important and even determining part in the achievement of the, as a whole, favorable indicators which we are using currently and of which we are rightly proud. But we have sectors and regions which are impeding the achievement of an even higher industrial production growth rate and even better technical-economic indicators.

Of course, we cannot fail to be disturbed by the state of heavy industry, that is, the group "A" sectors, the more so in that their share of total industrial production is over 70 percent. But the group "A" sectors are growing at a pace less than the republic average, which is creating additional difficulties.

Oil and gas industry is not fulfilling its plans and socialist pledges. The reasons for this have been mentioned repeatedly, and I am not about to repeat them. The Azerbaijan Communist Party Central Committee knows that the republic's oil industry is experiencing certain difficulties and that its leaders and enterprise collectives are struggling against them. But this is not being done sufficiently purposefully and energetically. Azerbaijan's strong scientific-technical potential in the oil industry sphere, our oil workers' great experience, of which the entire country avails itself, and their wealth of traditions have been activated far from fully.

We support, of course, our oil industry's potential being used on a realistic basis. In other words, everything should correspond to the available base. Unfortunately, the oil industry leaders recognize as realistic only plans adjusted downward.

The oil workers have many difficulties for reasons not always within their control. But who is responsible for a slackening of discipline and exactingness toward the lower levels on the part of the leaders of the Oil and Gas Production Administration and the "Kaspmorneftegazprom" and "Azneft'" associations themselves? And why is not all the fixed capital at the associations' disposal being used with the proper results? What is the reason for the manifestly insufficient activeness of our top oil industry specialists and scientists in the solution of complex questions of drilling and oil production in Azerbaijan? And if we really wish to advance in this direction, and we are obliged to strive for this, we must orient ourselves toward making fuller use through common efforts of the resources of Azerbaijan's interior and the Caspian to stabilize and increase oil production and increase the efficiency of the entire work of the oil industry. It is precisely thus that both Comrade Abasov and Comrade Gadzhiyev, their deputies and all oil industry executives and specialists must operate.

As far as nonferrous metallurgy is concerned, we have always held the Nonferrous Metallurgy Administration up as an example of a high rate of production growth. Now the situation has changed. The administration has objective difficulties, it is true. But we know something else also--given the due assertiveness and enterprise of the administration's leaders, they could overcome the slump and again bring the sector to the foremost positions.

The state of the chemical sectors of industry cannot fail to alarm us. The chemical workers worked unsatisfactorily in the first 6 months. The question of the work of the chemical sectors of Sumgait was recently examined by the Azerbaijan Communist Party Central Committee Bureau. There was a businesslike and highly exacting discussion, and a concrete decree was adopted. I am sure that there is every oppostunity for a considerable improvement in the work of chemical and petrochemical industry in the second 6 months.

Nor was everything as it should be here, unfortunately, in the first 6 months in engineering either. We are accustomed to having a growth rate in these sectors--monthly, quarterly, annual--of no less than 10 percent, and this is natural for progressive sectors. But what do we have currently? Five-six-seven percent and sometimes lower even. In electrical equipment industry, for example, the growth constituted only 2.7 percent. We expect of the leaders of electrical equipment industry and other engineering sectors serious conclusions to be drawn from what has been said.

Comrade Aliyev went on to describe the situation in group "B" sectors. What has taken place in the Ministry of Light Industry, he said, is well known from the decree that was issued. Light industry's lagging is damaging the republic's industry as a whole. After all, this ministry's share of industrial production constitutes more than R1.5 billion. In round figures this is almost 15 percent of the total volume of our annual plan of industrial production, and, naturally, the indicators of all industry depend on the level of work of this sector. We were patient with the Ministry of Light Industry leaders, who assured the Azerbaijan Communist Party Central Committee that they would remove the shortcomings. But when we were persuaded that these assurances lacked any foundation and, even more, when serious abuses were revealed in the actions of the ministry's leaders, we took thoroughgoing steps. The Central Committee Bureau dismissed Comrade Minister Melikov, and he was strictly reprimanded, this being noted on his record, and he was given a routine job. Comrade Guseynov, first deputy minister, was dismissed with the same penalties and also assigned to lower-level work. The ministry leadership was strengthened. I would like to hope that the Central Committee decree, which, as declared here by Comrade Ibragimov, minister of light industry, has been greeted at all enterprises and by all workers of light industry with full understanding and approval, will play its part and help secure a fundamental change in the situation in the sector. The leaders of the ministry and its subdivisions are present at the meeting. Our criticism and our complaints leveled at the former leaders of the ministry apply equally to many enterprise and association leaders. And I would like to hope that you will approach matters with a sense of high responsibility, join efforts and under the ministry's leadership adopt the necessary measures to rectify the situation.

I would like to draw your attention to one further fact, Comrade Aliyev continued. Speaking of the distribution of industrial production in our republic geographically, by region, the bulk of it is concentrated in Baku, Sumgait and Kirovabad. Baku produces almost one-half of the industrial product. And if we add here Sumgait and Kirovabad, you can imagine what proportion belongs to these cities. However, it has to be said plainly today that these cities are not contributing enough to the more accelerated growth of Azerbaijan's industrial production as a whole. It is here that the growth rate of industrial production and an increase in labor productivity is below the republic average. The leaders of the corresponding ministries and departments exercising direct leadership of the enterprises are, of course, responsible for this, but these cities' party and soviet organizations are responsible together with them. We expect of the industry of Baku, Sumgait and Kirovabad better work and, as a minimum, the fulfillment of their plans and pledges and a considerable increase in the growth rate in all indicators in order to complete the year successfully.

Thus, as you can see, comrades, we have many questions and many problems in industry which we have to solve, and solve quickly and most actively. This applies, in particular, to the production of consumer goods. You know how seriously the CPSU Central Committee sets the task of an increase in the manufacture of goods in mass demand. Directly involved in this here are the ministries of light, local, food, meat and dairy, timber and wood-processing industries and others. But at the same time we have big opportunities for an increase in the production of consumer goods at heavy industry enterprises. This is precisely how the CPSU Central Committee and Comrade L.I. Brezhnev put the question. But our republic is lagging behind considerably in this matter.

It has already been said earlier that it is necessary to sharply improve the work of the Ministry of Light Industry. But the Ministry of Local Industry here is working inadequately also. We have criticized it repeatedly. The ministry has big opportunities to use local raw material and other resources in order to expand both the volume and the selection of consumer goods and enhance their quality. But the ministry is making unsatisfactory use of them.

The Ministry of Timber and Wood-Processing Industry must improve its work also.

The CPSU Central Committee recently conducted a special seminar-conference in Sverdlovsk to study the practice of the work of the party organizations and labor collectives on increasing the production, broadening the selection and improving the quality of consumer goods. Our comrades participated and returned and reported on their impressions and the requirements put forward at the seminar by the CPSU Central Committee.

The question is now posed thus (and this, incidentally, is practiced in a number of union republics, oblasts, ministries and departments): raising the production of consumer goods at all enterprises in the 11th Five-Year Plan to the amount of the annual wage fund of the working people employed in the material production sphere. What does this mean for our republic? It means that we have to increase the manufacture of consumer goods by a factor of 1.5-2.

Comrade Aliyev focused attention particularly on the need for the rational use of ferrous and nonferrous metal. Recently, he said, the CPSU Central Committee held an enlarged meeting devoted to this problem, which is of exceptional significance. In the light of the meeting's requirements we analyzed the situation in the republic concerning the collection and use of ferrous and nonferrous metals. What transpired? Some 385 enterprises or 12 percent of them failed to fulfill the plan for the delivery of ferrous metals and 345 for nonferrous metals. The republic's procurement and shipment plans were disrupted as a result.

The work of transport was described in sufficient detail in the reports and in the speech of Comrade Kengerli. I can only reiterate that transport has now become a bottleneck in the national economy. We have spoken mainly here of railroad transport, but there are also serious shortcomings in the use of transport along Ministry of Motor Transport lines and in each ministry and department.

I would like to believe once again today Comrade Kengerli's statement that the railroad workers will reorganize their work. Much has to be done by the line's leaders and its services in order to strengthen discipline and ensure the efficient use of all the opportunities of our railroad transport, on which fulfillment of the plans and pledges in all sectors of the economy largely depends.

Although we have not touched on questions of trade and consumer services and have not made it our task to analyze their work today, I would like to say a few words about this sphere. After all, essentially all that is done in industry, just as in other sectors of our economy, is aimed primarily at an improvement in Soviet man's well-being. And this most important problem is largely tackled via trade and consumer services. It has to be stated with great regret that the 6-month plan in trade was not fulfilled and that there are serious shortcomings in consumer services also. I believe that Comrades Kasumov (Ministry of Trade) and Gasanov (the Azerittifak) and the leaders of the Ministry of Consumer Services will draw the appropriate conclusions. We will not be reconciled to the situation in these sectors, and such measures must be adopted as will provide for the unconditional fulfillment of annual plans and pledges. With an unfailing improvement in the quality of trade and consumer services, of course.

Summing up the discussion concerning industry, I would like in conclusion to say the following: we have real opportunities to accomplish all the tasks which we have jointly determined today in the second 6 months. We must do everything possible to complete the second year of the 11th Five-Year Plan for industry ahead of schedule.

In working on fulfillment of the plans of the current year we must at the same time engage in earnest in the formation of the 1983 plans. The Gosplan and ministries, departments and enterprises are now preparing their proposals and coordinating them with the appropriate union ministries, departments and USSR Gosplan administrations. Very active work is under way, but not all is proceeding smoothly, as we would wish. We need to provide in the 1983 plan for a labor productivity growth rate higher than this year. Eighty-eightyone percent of the output increase thanks to increased labor productivity must become a past stage for us. We must advance further and rise higher.

Comrade Aliyev went on to analyze the situation in capital construction.

What is particularly disturbing here? The fact that the introduction of fixed capital constitutes 97 percent of the plan and that this is 11 percent below last year's level in volume. It needs to be borne in mind here that the proportion of fixed capital planned for the first 6 months constitutes only 34 percent of the overall plan of the introduction of fixed capital for the year.

It was with good reason that I put to construction organization leaders the question of fulfillment of the plan for the commodity construction product, which reflects the introduction of fixed capital. And everyone must be responsible for the introduction of fixed capital: construction workers, clients and party and soviet authorities. The introduction of fixed capital is the main, decisive indicator in capital construction for our goal is to build this facility or the other, commission it and obtain output. The growth of industrial production and the entire economy is connected precisely with this.

The second thing which is very disturbing is the state of housing construction. I will say bluntly that there are many big shortcomings and outrages even here. The plan for housing construction was fulfilled 66 percent, which constitutes only 61 percent of last year's level. Twentyone percent of the housing volume planned for the year has been introduced.

The main culprit of the nonfulfillment of the plan for housing construction, without absolving other ministries and departments of responsibility, is the Glavbakstroy, which instead of improving its work gets worse every year.

We demand a rectification of the situation in housing construction as a whole, including and primarily with respect to Baku. If anyone is counting on again confining himself to explanations at the end of the year, let him not harbor illusions. We will hold everyone strictly responsible for the fulfillment of the plans of housing and sociocultural construction.

We have many construction organizations, ministries, departments, various trust and so forth. Each subdivision has its own purpose, which must be justified. We have yet to achieve this, unfortunately. The situation dictates the need for the most efficient use possible of summertime and the favorable fall period for catching up.

And, of course, it is necessary to work very seriously on an improvement in the quality of construction: production, housing and sociocultural. Projects are still frequently handed over here with work left undone and of a low quality. Both construction workers and clients must be equally strict in this matter. We are shocked by the unscrupulousness and irresponsibility of clients who sign an acceptance sheet for a knowingly unfinished project or one of low quality. I have already said that authoritative commissions need to be set up for the acceptance of these projects. Why, for example, is the Baku Gorispolkom deputy chairman or its chairman or some other responsible person not chairman of the commission? After all, acceptance is entrusted, as a rule, to secondary persons, who frequently come under pressure and sometimes go along with fraud for mercenary considerations.

Material-technical support for construction is of great significance. There are objective difficulties here connected with shortfalls in the supply of metal and timber, a shortage of transport and such. But it is also known that, given better work by the republic Gossnab and its good interaction with other organizations, primarily construction and transport organizations, many questions could be solved considerably more efficiently. Therefore I believe that the comrades will draw the proper conclusions from today's discussion.

The same should be said in respect of the Ministry of Construction Materials Industry. Although it fulfilled the 6-month plans, there are considerable shortcomings in its work. I mentioned this when Comrade Sadykov was speaking. Many people complain about the quality of the construction materials, and there have been complaints today also. I hope that the leaders of the Ministry of Construction Materials Industry will adopt the appropriate measures.

As a whole, it has to be said that there are many problems in capital construction, and they must all be tackled comprehensively, in good time and with a high level of performance. This is a guarantee of the successful fulfillment of the plans and pledges of the current year.

I consider it essential to dwell on one further question concerning all sectors of the national economy. This is the organization of accounting and accountability. We have mentioned this repeatedly, but have to mention it again today because there continue to be in industry, agriculture, capital construction and in other sectors, particularly in the services' sphere, instances of overstating volumes, exaggerated reports, window-dressing, embezzlement, the squandering of state property, theft, bribe taking and cheating. And certain leaders are engaged in this. I would like the comrades to understand once for all that party principles are for us sacred. We will never permit anyone nor ever forgive anyone violation of our laws and any abuse of position. It is necessary to struggle and struggle emphatically and ruthlessly against all these instances. It would be naive to think that we will put an end to them completely in the immediate future. But it is necessary that every leader adopt a clear and precise position and that every subordinate know and sense that his leader will permit nothing illegal and never make a deal with his conscience.

All our acts and behavior should be constructed on a pure and honest basis. On the basis of party and state laws and the standards of our party life. And all negative facts must be brought to light in good time and the strictest party and administrative proceedings instituted against the guilty parties.

In order to work better in the second half, remove the shortcomings which have been mentioned here and ensure the accomplishment of the tasks set the republic and the socialist pledges we have adopted it is essential that ministry, department and enterprise leaders improve the style and methods of their work and outline and implement practical measures for realization of the recommendations which we have jointly formulated today. It is essential in each ministry and department and at each enterprise and construction site to analyze the results of the half-year again and again, evaluate the situation self-critically, uncover shortcomings and determine the ways to remove them. Only thus will you ministry, department, enterprise, organization and construction site leaders achieve a serious improvement in your work and the fulfillment of the tasks facing you in the second half.

A very great deal of work has to be done by our party committees--oblast, city and rayon--and primary party organizations. They must study questions of the economy in greater depth, strengthen the leadership of industry and capital construction, systematically monitor the work of the enterprises and organizations on the territory of a city or rayon, display more exactingness and study questions of personnel selection, assignment and training better. And, of course, be genuine organizers of active struggle against all the shortcomings mentioned here today.

Big tasks confront the trade union and Komsomol organizations. The main thing is to direct people toward even more effective participation in socialist competition and the achievement of the highest results in industrial production and construction and raise the sense of their personal responsibility for work efficiency and quality.

We have entered the critical stage of 1982, which is very important for the fulfillment not only of the plans of the current year but of the entire 11th Five-Year Plan. We are approaching an outstanding event--the 60th anniversary of the formation of the USSR. For this reason our meeting is of fundamental, topical significance. And it is our duty to make skillful use of the meeting's recommendations to work better in the second half and honorably accomplish all the tasks of 1982.

Such an attitude and the high trust raise our responsibility immeasurably. And we have gathered at the meeting today aware of this responsibility. We will hold our discussion, businesslike and strict, but at the same time benevolent and profoundly party-minded, with our activists aware of this responsibility. And we must with a full understanding of our responsibility ensure the fulfillment of all our plans and pledges in the second half. We must mobilize the forces of the working class, kolkhoz peasantry and the intelligentsia for the development and improvement of the work of all sectors of the economy, an increase in production efficiency and product quality and improvement in the style and methods of our party and state activity and achieve the goals set us by the 26th congress and the CPSU Central Committee May Plenum.

Approaching the 60th anniversary of the formation of the USSR, this big and joyous holiday, a holiday of the triumph of our party's Leninist nationality policy and the friendship and fraternity of the peoples, we must do everything necessary to greet the jubilee with big new successes and record indicators in all sectors of the economy.

(Comrade G.A. Aliyev's speech was received with great attention and was repeatedly interrupted by applause)

LABOR SHORTAGE CAN BE MANAGED, SAYS OBKOM SECRETARY

Kiev RADYANS'KA UKRAYINA in Ukrainian 9 Jul 82 p 2

[Article by Ye. Kachalovs'kyy, first secretary of the Dnepropetrovskaya Oblast Committee of the Ukrainian Communist Party: "Labor Resources Reserves"]

[Excerpt] Today large and small enterprises are vying with one another to attract workers. Why? It should be obvious to everybody: growth of labor resources is shrinking, with a fairly high rate of gainful employment. As the situation is developing, in the current five-year plan the increase in persons of employment age will be significantly smaller in comparison with the preceding five-year plan. And there is nothing, as the saying goes, you can do about it. But is that in fact the case?

Let us consider the matter. In pointing to a labor shortage, are not certain managers using it as an excuse to cover their own miscalculations and poor production performance? You see, they explain, I don't have enough personnel. And yet it suffices to look into the state of affairs, to analyze how labor resources are being utilized, what is being done to boost the technological level and improve discipline of execution and, finally, how social problems are being resolved for it to become clear: the available manpower is sufficient in order successfully to accomplish the production program, of course under the conditions that proper order and procedures are established.

I certainly do not mean to level such accusations at everybody. What we are talking about is witting aggravation of the labor shortage problem, which causes detriment and introduces confusion into the planned and actual number of employees at a given enterprise. Particularly since there are plenty of opposite examples. Take the following, for example: last year, while lacking the planned number of employees, the following enterprises operated smoothly, overfulfilling their state plan targets: The Pipe and Tube Rolling Plant imeni Karl Libknekht (O. Yesaulov, general manager), the Dneprodzerzhinsk Coking By-Product Plant imeni Ordzhonikidze (P. Vlasov, general manager), the Dnepropmetallurgstroy Trust (P. Posun'ko, manager), and others. An obvious disproportion is also being ignored. While it is true that there is an overall labor shortage in our oblast's industry, in the construction industry the work force exceeds the standard level. Parallel with this, work time losses are still rather high. Because of these, each year there is failure to complete several million rubles worth of capital investment. There also are plants, combines, and associations which, while maintaining "surplus" personnel, are below gross output targets by large amounts, due to inefficient use of time, poor engineer-technical and organizational support of production.

What is the conclusion? There exists a labor shortage problem. But in economic management policy and practical activities we should recognize the necessity of substantially improving utilization of labor resources.

While stressing renovation of existing facilities and furnishing them with new equipment, which permits a smaller number of employees, we should not consider scientific and technological progress to be a panacea which will definitely cure all ills. One should be clearly aware of its potential, at least in the immediate future. It is quite clear to me, for example, that the labor of that same coal miner in the Western Donbass or Krivcy Rog Basin iron miner, steelmaker or furnaceman, metallurgical equipment maintenance mechanic, tire assembler, etc, will continue for quite some time to require physical strength and endurance. Therefore what is needed is training of reliable worker cadres and their production adaptation.

Here is an ideal variant: enterprises obtain replacement worker cadres by hiring youth, graduates of secondary schools and vocational schools, not by hiring people away from neighboring factories. But young people today dream of becoming cosmonauts and musicians more than becoming miners, metallurgical workers, and lathe operators. They have the habit of berating the school (it is partly to blame, however) and parents. It has probably always been the case that more people have vied for "choice" jobs than are needed by society. For another thing, we have not learned to perform youth career counseliing sufficiently flexibly and with adequate ingenuity.

I would also like to discuss the system of collective moral and material responsibility for the state of labor discipline and work performance results, which has gained supporters at many enterprises in this oblast. It has evoked debate, it is true, and even strong objections. Practical experience has shown that wherever the voluntary principle is not ignored, the method of joint responsibility becomes a considerable advantage of workforces. At the pipe and tube rolling plants imeni Lenin and imeni Karl Libknekht, the overwhelming majority of brigades and sections are working under this system. In the last year the number of violations of labor and public discipline have declined by approximately one fourth (they now occur 5 to 6 times less frequently than the oblast average). The collective moral and material responsiblity system now covers almost 290,000 workers in Dnepropetrovskaya Oblast.

We examine all aspects of application of and search for new, progressive forms of organization of labor, particularly the most effective in an economic and social respect -- brigade -- in a close link with the problems of utilization of labor resources.

In this oblast there are many enterprises which, due to the mass adoption of brigade forms, in combination with other measures, have substantially improved efficiency of utilization of labor resources. This has been fostered by synthesis by the party oblast committee of experience in expanding collective forms of organization of labor amassed by the party committee and management at the Dnepropetrovsk Metallurgical Equipment Plant. More than 70 percent of the employees of this enterprise have been organized in combined brigades. Every ruble spent on establishing such labor subdivisions here generates 11-12 rubles of profit.

Establishment of brigades has injected new impetus into the movement for learning related occupations, has reduced work time losses, and has strengthened discipline. Up to the present time approximately 50,000 brigades have been formed in this oblast, encompassing more than one third of all industrial workers. It is planned by the end of the five-year plan to encompass more than 60 percent of the total labor force with progressive forms of organization of labor.

With the aim of holding manpower in rural areas, the executive committees of the oblast and rayon soviets are working in a practical manner on matters of socioeconomic reconstruction of the village.

As we can see, a great deal is being done to achieve efficient utilization of labor resources in this oblast. At the same time we realize that with these measures alone the acuteness of the problem cannot be totally eliminated. Calculations indicate that we are short approximately 30,000 persons in order to achieve the targets of the oblast economic and social development plans in the 11th Five-Year Plan.

Taking into consideration the experience of party organizations, soviet and economic agencies of Moscow and Leningrad, the oblast committee of the Ukrainian Communist Party and the oblast executive committee issued a joint decree entitled "On the Procedure of Setting Worker and Employee Ceilings for Production Associations, Enterprises and Organizations in This Oblast." This was preceded by thorough study of the capabilities of enterprises, construction jobs, and establishments, and of the personnel situations which developed in each specific instance. We proceed thereby from a realistic oblast labor resources balance sheet. The situation can be essentially stated as follows: it is necessary substantially to improve the utilization of manpower and to redistribute it taking into consideration the needs of all areas of the economy, the service industry, and science. This is due to the fact that many enterprises in leading branches and sectors are short of manpower, while the number of persons employed in supply and support activities, science and scientific services is unwarrantedly growing. The number of employees has exceeded the specified limits simultaneously at 76 enterprises and organizations, and at 18 trusts.

Initial results indicate that setting things in order as regards utilization of labor resources is an entirely realistic business. Almost 13,000 persons have already been redistributed in this oblast.

To date approximately 2500 enterprises and organizations in this oblast have agreed on workforce ceilings for this year and next year. A total of not less than 27,000 persons are to be reassigned. Thus our unique experiment is confirming the necessity of improving the territorial principle of management of labor resources, a matter addressed by well-known decrees of the CPSU Central Committee and USSR Council of Ministers. Redistribution of manpower and setting of workforce ceilings have forced oblast party organizations and economic agencies to seek out internal reserve potential more vigorously and to correct deficiencies connected with problems of labor productivity, utilization of production capacities, level of mechanization and automation of production, and adoption of advanced forms of organization of labor and sociopsychological management methods. The task they have set for themselves consists in working unswervingly to increase production with the same and even smaller number of workers.

The oblast party organization believes that in the conditions which presently exist as regards manpower, this is the only correct strategy. Today that person is keeping step with the demands of the times who thinks and seeks to determine how one can better and more efficiently organize work in each specific section, how to utilize scientific and technological advances applicable to a specific work station, what must be done to boost labor productivity, and how, finally, to free "surplus" persons, whose labor we need. We must be able wisely to manage and dispose of our labor resources.

REGIONAL

BELORUSSIAN CC STRESSES FEED PREPARATION AS URGENT TASK

Minsk SOVETSKAYA BELORUSSIYA in Russian 17 Jul 82 p 1

[Unsigned article: "The Urgent Task of the Moment: Assure the Preparation of Roughage and Succulent Fodder in the Planned Quantities and With High Quality" under the rubric "At the Central Committee of the Belorussian CP"]

> [Text] /The Central Committee of the Belorussian CP examined the question of the tasks to intensify the work to prepare fodder in the republic's kolkhozes and sovkhozes./ [printed in boldface]

The CC listened to the notice from the agricultural department of the Belorussian CP CC and to the reports of the first secretary of the Minskaya Oblast Belorussian CP committee, V. A. Mikulich, as well as of the first secretaries of the Brestskaya, Vitebskaya, Gomel'skaya, Grodnenskaya, and Mogilevskaya oblast party committees--the comrades P. A. Kalikhovich, Ye. I. Radetskiy, A. S. Lyakhov, D. K. Artsimeni, and S. P. Titkov.

The CC of the Belorussian CP pointed out that during the rainy weather prevalent this summer many party, Soviet, and agricultural agencies, primary party organizations, and kolkhoz and sovkhoz heads are, on utilizing their own resources and possibilities as well as assistance from the working people of cities and workers' settlements, actively working to provide the republic's animal husbandry with roughage and succulent fodder. As of 14 July of this year the republic's farms prepared 1 million tons of hay from the first cutting (34 percent of the plan target) along with 5 million tons of haylage (76 percent), 1.1 million tons of silaged fodder (14 percent), and 132,000 tons of dehydrated fodder (38 percent).

At the same time, a number of heads of party committees, Soviet and agricultural agencies, and kolkhozes and sovkhozes have failed to reorganize their activities in accordance with the demands of the CC CPSU and the Belorussian CP CC regarding fodder production under the current weather conditions, and they tolerated delays and poor organization of the preparation of fodder.

Particularly alarming is the serious lag in hay preparations. For the republic as a whole hay production averaged 0.5 tons per cow, and in the Vitebskaya, Gomel'skaya, Minskaya, and Mogilevskaya oblasts it was even less. Hay preparations are not progressing satisfactorily on farms of the Borisovskiy, Baranovichskiy, Lioznensky, Pukhovichskiy, Rossonskiy, Zhitkovichskiy, Myadel'skiy, Shklovskiy, Glusskiy, Kirovskiy, Oktyabr'skiy, Petrikovskiy, Mozyrskiy, Svetlogorskiy, Lel'chitskiy, Orshanskiy, Luninetskiy, Dokshchitskiy, and certain other rayons.

In places nothing has been done to ensure the round-the-clock operation of active hay-ventilating facilities and equipment for the production of grass meal. Many kolkhozes and sovkhozes fail to observe the fodder production technology so that, as a result, the quality and nutrient value of fodder decreases.

Party, trade-union, and Komsomol organizations as well as the heads of many farms have not shown awareness of the complexity of the situation that has arisen, and have not taken adequate measures to mobilize all toilers of agriculture for fodder-preparation work; further, they are not adequately utilizing forms of the moral and material encouragement of people.

Many party committees and Soviet and agricultural agencies are not mobilizing for harvesting operations adequate numbers of blue- and white-collar workers and engineers and technicians from industrial enterprises and municipal organizations and institutions. This is so in the Vitebskaya, Gomel'skaya, Minskaya, and Mogilevskaya oblasts. In places the work of those mobilized for fodder preparation is poorly organized. A large part of that work force is kept busy for only part of the work day and a great deal of time is lost on commuting to work and, in addition, the necessary agricultural implements are not provided.

The Belorussian SSR ministries of agriculture and fruit and vegetable management as well as the Belorussian SSR State Committee for Agricultural Equipment [Goskomsel'khoztekhnika] do not adequately influence the course of fodder preparations and do not strengthen with the requisite on-the-spot organizational work the recommendations they issue, and neither do they adequately assure a high technical readiness of fodder-harvesting and -transporting equipment. Further, they do not adequately analyze and disseminate readily accessible and effective techniques and methods of fodder production and do not supervise the observance of fodder-production technologies and improvements in fodder quality.

The Central Committee of the Belorussian CP has placed the oblast, city, and rayon Belorussian CP committees, the primary party organizations, the commission for problems of the agroindustrial complex under the Presidium of the Belorussian SSR Council of Ministers, the executive committees of the oblast and rayon soviets of people's deputies, and the heads of kolkhozes and sovkhozes, under the obligation of eliminating the observed shortcomings.

The CC acknowledged the announcements of party obkom secretaries that urgent steps will be taken locally to fulfill unconditionally the tasks as to the preparation of hay and other types of fodder so as to satisfy completely the fodder demand of both socialist and privately owned livestock on every kolkhoz and sovkhoz.

To this end, all fodder-harvesting equipment must be utilized, the work of the fodder-preparing detachments and elements must be streamlined, and the utilization and deployment of material and manpower resources should be made more efficient. In addition, the volume of the preparation of hay, grass meal, and other types of fodder by means of progressive technologies should be increased, the round-the-clock operation of active ventilating facilities should be ensured, as should be the round-the-clock operation of fodder-dehydrating facilities and pile-dryers, and the available awnings, vacant premises, and racks should be maximally utilized.

Kolkhoz members, blue and white-collar sovkhoz workers, specialists, pensioners, students, the entire rural population, should be broadly mobilized for participation in fodder preparation. Past experience indicates a need to organize detachments and teams of blue and white-collar workers of industrial enterprises and municipal and rayon center organizations and institutions in order to harvest and store fodder resources from croplands, bogged and shrub-covered meadows, roadside strips, forest clearings, and areas on which the use of mechanized equipment is not feasible. Proposals by party obkoms for dispatching at least 152,000 city dwellers for fodder preparation have been approved; of this total, 10,000 city dwellers will be dispatched in Brestskaya Oblast; 22,000 in Vitebskaya; 35,000, in Gomel'skaya; 5,000, in Grodnenskaya; 20,000, in Minskaya; and 60,000, in Mogilevskaya.

Suitable care of lands following the first grass cutting should be organized, upon treating them with mineral and liquid organic fertilizers so as to provide the premises for subsequent bumper harvests. The fields available after the harvesting of annual grasses should be re-planted with plants of the cruciferae family, sunflowers, and other fodder crops.

The oblast, city, and rayon Belorussian CP committees and the Belorussian SSR ministries of agriculture and fruit and vegetable management as well as their local agencies should thoroughly analyze the status of fodder preparations on every farm and take concrete steps to complement the fodder stocks of the kolkhozes and sovkhozes lacking adequate stocks. Further they should allot to these farms for this purpose hay-mowing sectors of non-agricultural lands as well as on other farms with the object of unconditionally assuring the preparation of hay, silaged fodder, and haylage in the planned quantities.

The Belorussian SSR Goskomsel'khoztekhnika, the Belorussian SSR Ministry of Agriculture, and the oblispolkoms and rayispolkoms have been asked to organize prompt repair and maintenance of machinery, mechanisms, and equipment, and improve the supply of the needed spare parts to the kolkhozes and sovkhozes, with the object of maintaining a state of high readiness of fodder-harvesting equipment and facilities for the drying of hay and the production of vitamin-treated meal.

The party committees and primary party organizations should tighten the personal responsibility of the managerial personnel and experts at the kolkhozes and sovkhozes for the unconditional fulfillment of the plans for the accumulation of fodder, the observance of the technology of the preparation and storage of fodder, and improvements in the quality of fodder. All organizational and political work should be oriented toward creating well-organized and disciplined atmosphere in brigades, detachments, and teams occupied with fodder harvesting and providing them with the necessary conditions for highly productive labor. To this end, party and Komsomol members should be assigned to the decisive sectors, a sweeping socialist competition should be launched, the organization of labor should be streamlined, and effective ways of moral and material stimulation of the fulfillment and overfulfillment of tasks should be determined and applied.

The oblast party committees were asked to report to the Belorussian CP CC by 10 September 1982 on the fulfillment of this resolution.

* * *

The Central Committee of the Belorussian Communist Party has appealed to party and Komsomol members, kolkhoz members, sovkhoz workers, agricultural specialists, and the workers of the enterprises, organizations, and institutions of the republic dispatched to the aid of the toilers of the countryside, for doing everything necessary to fulfill and overfulfill the tasks posed as to the preparation of fodder and thereby making a worthy contribution to the implementation of the nation's Food Program.

REPUBLIC DELEGATES VIEW NATIONALITIES CONFERENCE

Riga SOVETSKAYA LATVIYA in Russian 2 Jul 82 p 3

[Interviews with conference participants by the SOVETSKAYA LATVIYA special correspondents P. Antropov, V. Stefanovich, V. Smetannikov: "Our Strength Lies in Friendship: Comments by Participants in the All-Union Scientific-Practical Conference"]

[Text] "Common Aims," by R. Ristlaan, secretary, Estonian CP Central Committee

The greetings by comrade L. I. Brezhnev to the participants in the all-Union scientific and practical conference in Riga pointed out that the paths of further development of relations among nationalities have been outlined by the 26th CPSU Congress. This concerns primarily augmenting the material and spiritual potential of every republic and exploiting it maximally to develop the entire country.

In this context, the close ties and practical cooperation established between Estonia and Latvia are of great importance. For a long time now our republics have been engaging in socialist competition. Many work collectives and entire branches of industry provide examples of the tremendous benefits produced by that competition. We advance from regular assessment of its results to concrete exchange of advanced knowhow through, among other things, the All-Union Exposition of Achievements of the National Economy [VDNKh] USSR, on which our republics are constantly represented.

It is particularly important at present to emulate our principal accomplishments in developing agriculture. In recent years we have been working under difficult weather conditions, and mutual assistance here is very important. Pursuant to the decisions of the May (1982) Plenum of the CC CPSU, we are reorganizing our agro-industrial complex, which will contribute to implementing the Food Program.

We are now at the eve of the 60th anniversary of establishment of the USSR, which we are preparing to celebrate festively. The scientific-practical conference in Riga also will contribute to a worthy welcome of this notable anniversary.

As adopted at the conference, the recommendations on the party's guidance of the development of relations among nationalities as well as on patriotic and international education, are of special importance to the republics of the Soviet Baltic. Our ideological enemies strive to impose on a certain part of the population distorted notions of our reality and weaken the friendship of the nations of the USSR. But no one ever shall be permitted to undermine the unity of the Soviet society.

We already have exchanged views with our Latvian comrades concerning ways of improving our joint implementation of the conclusions of the conference.

I wish to mention the delighted welcome we received in Riga. We all liked the magnificent new Political Education House of the Latvian CP CC. For the first time in the Baltic region I saw such beautiful and graphic posters which these days have been beautifying the whole city.

We who have been recharged with creative enthusiasm in Riga, which we are now about to leave. We are facing responsible work.

"We Need Such Experience," by S. Nechay, secretary, Ternopol'skiy Oblast Committee of the Ukrainian CP:

Each day of the all-Union scientific-practical conference on patriotic and internationalist education was chockfull with work. The conference participants were inspired by the warm greetings from comrade L. I. Brezhnev. Fruitful discussion of the agenda was assisted by the substantive speech of candidate member of the CC Politburo of the CPSU, secretary of the CC CPSU, comrade B. N. Ponomarev.

Both the plenary and the section meetings of the conference considered many topical problems of the development of relations among nationalities under advanced socialism. We also familiarized ourselves with the work and life of Latvia's work collectives, and participated in many interesting encounters. I, for example, toured the Riga GES [State Electric Power Plant], the Sovkhoz imeni Lenin, and the Kekava Poultry Factory. We talked with people who expressed their ardent support of the Leninist nationalities policy of the CPSU and their desire to strengthen the friendship of Soviet nations.

The integrated national economic complex of this country is a mighty lever for progress in each republic and it assures the flowering and rapprochement of the nations and nationalities of the USSR. This is clearly exemplified by Soviet Latvia. Vigorous progress in every domain of economic and social life in this republic is perceptible at every step.

I happened to visit many republics, tour modern enterprises and farms. But the tour of Kekava--one of the country's leading poultry factories--which I and other delegates made impressed us strongly. Such a comprehensive solution of the problems of mechanization and organization of labor, such remarkable working, living, and recreational conditions, I have not encountered before. The factory's employees live like one united family; they lead an interesting and prosperous life. Comradely mutual aid and support among people of various nationalities has become the norm and tradition of intercourse.

After I return home I shall try to narrate to our aktiv and specialists all that I have witnessed on the banks of the Daugava. For the Latvian experience belongs to us all. Now that we all work to fulfill the decisions of the May (1982) Plenum of the CC CPSU and the USSR Food Program this experience will profit us greatly. Its application to Ukrainian soil will contribute to the further strengthening of the friendship of our nations.

"A National Tribune," by G. Zimanas, editor-in-chief of the journal KOMMUNISTAS (Lithuania), doctor of philosophic sciences:

The friendship between the Latvian and Lithuanian peoples was tempered and strengthened in their joint struggle for establishing Soviet rule and overthrowing the dominion of the bourgeoisie. It passed its trial by fire during the Great Patriotic War. Shoulder to shoulder, Lithuanians and Latvians along with the other nations of our multinational country fought and won in the ferocious battle with the enemy.

This friendship fruitfully contributes to the flowering of the economy and culture of both republics. We have organized broad exchange of advanced knowhow. While in Latvia I have seen again and again that Lithuanians can learn here a lot, just as our friends from the banks of the Daugava can learn a lot from us.

Here there is a limitless field of endeavor for us journalists. We need to reveal yet more convincingly the great transforming power of Marxism-Leninism, of the ideas of proletarian socialist internationalism. It is necessary to demonstrate more convincingly the fruitful results of the Leninist nationalities policy of the CPSU, of the party's creative approach toward the relations among nationalities and the processes of the burgeoning and rapprochement of nations in our country. It is important to illuminate these problems from the standpoint of comrade L. I. Brezhnev's observation that, in our multinational country, internationalism today primarily means honest, conscientious,and fully productive labor of all the nations of this country for the sake of the common welfare.

Of special importance to our press is the education of working people in the spirit of Soviet patrotism and proletarian internationalism as well as of intolerance toward any manifestations of nationalism, chauvinism, national narrowmindedness and boasting, exclusiveness and isolation.

Improvements in exploiting the possibilities of the press for the solution of these problems were the subject of circumstantial discussion at the session of the eighth section and during encounters of the journalists present at the conference. On returning to our editorial offices we shall attempt to utilize as fully as possible the valuable ideas with which we armed ourselves in Riga.

ESTONIAN OFFICIAL CONCERNED WITH NATION'S LEISURE TIME

Moscow IZVESTIYA in Russian 12 Jul 82 p 2

[Article by R. Ristlaan, secretary, Central Committee of the CP of the Estonian SSR: "Our Leisure Time" under the rubric "Ideological Work: Experience, Practice, Problems"]

[Text] We care about what the youth is doing, what young men and women are drawn to. But while they are the object of the unflagging attention of adults,what about the older generation? How does it spend its leisure time? In society everything is related: if on Sunday you cannot pull the father away from the TV set and the mother is, so to speak, chained to the kitchen, then the son prefers to sit in the doorway and strum a guitar.

It is an old saying that a man can be judged by the manner in which he spends his leisure time. We always like those to whom it is a habit to utilize their leisure time in order to strengthen their health, broaden their mental horizons and cultural interests and keep studying. Much is now being done in the republic to organize interesting and attractive mass recreation for working people. This problem is of constant concern to the Central Committee of the Estonian Communist Party, and its bureau regularly considers problems of organizing recreation for the people. Recently these problems were the topic of broad discussion at a republic meeting of the party-Soviet aktiv.

Millions of people now engage in various creative technical and artistic hobbies, physical culture, and sports. Thus, in our republic more than 200,000 people participate in artistic activities and hobby clubs and circles alone; 100,000 inventors and rationalizers engage in technical creativity; and every fourth denizen of the republic has been recruited for the mass physical culture movement. We have rich traditions of folk singing, folk dancing, and folk music and wind-instrument music.

It is pleasing to observe that in recent years cultural-educational work has transcended the narrow bounds of traditional forms and problems directly related to daily work and production began to be more boldly attacked. Such an approach has resulted in unifying the efforts of clubs and work collectives. Many cities and rayons--Kokhtla-Yarve, Pylva, Khaapsalu, and Vil'yandi--know how to honor work pacesetters and conduct socio-political quizzing contests. A deep impression was produced by the Day of the Young Worker organized at the Palace of Culture and Sports imeni Lenin. Considerable popularity has been won in the countryside by complex measures such as the Vyrts'yarevskiye Games and Chudskoye Lake Games. Labor competition and occupational mastery contests, as held in the course of these games, are skillfully combined with an artistic, sports, and entertainment program. The Days of Music in Khaapsalu, commemorating P. I. Tchaikovsky, and the "Pyarnu Summer" Festival are widely known and attract audiences from both within and without the republic.

There also have been innovations in club activities, the organization of family recreation for workers, communion between man and nature, tourism, and hikes. Of the greatest interest, in my opinion, are the new forms of recreation that are directly linked to work for the good of society. There exist very valid reasons for awarding the republic Komsomol prize to the organizers of the "Hometown" Drive, in the course of which the young people of Tallinn have been working to modernize, renovate, and install amenities in old premises.

The activities of the youth hobby circles play a major role in shaping the occupational and professional interests of children. Cars, aircraft, ships, and radio and television devices are of interest to many boys and girls. Currently, more than 30,000 pupils belong to technical hobby circles. At the Tartu House of Pioners these circles are particularly attractive, and in Vil'yandiskiy Rayon they operate in 16 kolkhozes and sovkhozes as well as at four industrial enterprises.

Even so we think this is not enough. Hence, at present a specific task has been posed to the republic's ministries and departments: organize technical circles for the students at all trade schools operated by the enterprises, and introduce them broadly at vocational higher schools. This would undoubtedly contribute to the popularity of these circles and their increased prestige among the youth. DOSAAF members are doing a great deal to organize leisure-time recreation.

The republic's population, and especially the youth, is greatly sports-minded. This winter the traditional skiing marathon honoring the Day of the Soviet Army and the 350th anniversary of Tartu University was held in a picturesque locality near Tartu. More than 6,000 people competed for speed and endurance on a 50-km route--twice as many as the preceding winter. Skiing contests were organized in all schools, rayons, and cities of the republic.

Much is being done to streamline mass children's sports. The "Starts of Hopes" cycle of athletic contests, providing for regular monthly contests in particular principal types of athletics, have become widespread.

A leading role in all these activities is played by enthusiasts--persons fascinated by art, physical culture, and sports. The current broad development of Estonian Soviet culture could not be visualized without such enthusiasts as Kaarel Ird, Gustav Ernesaks, and Eugen Kapp, whose creativity and propagandist passion are a source of pride to the nation. The masters of culture and sports Arvo Ratasepp, Il'ma Adamson, Lekho Muldre, Ivan Lysov, and Ants Antson know how to enthrall the masses and always find the time and desire for this. Recently hundreds of enthusiasts-amateurs organizing recreation for the public have appeared. Ants Arukuusk, chief engineer at the Tamsalu Division of the State Agricultural Equipment Trust [Sel'khoztekhnika]; Liya Tammel', electrical repairperson at the Myar'yamaa Tele-Communications and Television Center; and Ants Peyl', a technician at the Institute of Thermoelectrophysics--they all are the equals of experts. There are plenty of examples to be emulated.

I often happen to meet these people.Their ideas and suggestions often are translated into reality in the form of various measures taken by party, Soviet, Komsomol, and trade-union organizations. Consider what we are thinking of doing at present: the number of cultural and sports facilities in the republic is growing and, in this connection, we monitor the availability of any vacant clubrooms, sports stadiums, and swimming pools and, if we find any such, we immediately adapt correspondingly the traditional system of the provision of recreational facilities to the population as well as the approach itself to this problem.

The usual assumption is that the older generation, which has already formed interests of its own, will on the whole know how to occupy itself in its leisure time, and that the problem sometimes reduces to what opportunities we can provide it with. As for young people, the assumption is that they cannot think up anything sensible and need guidance and have to be led by the hand toward interesting and useful occupations. I believe that this is not quite true. Both the older and the younger generations should be led "by the hand" toward useful occupations. Perhaps the only difference is that young people are easier to handle, being more mobile and more readily diverted. Young people do not know how to dissemble; they are extreme in their likes and dislikes, being either enthusiastic or wholly negative. But work with the people becomes ever so much easier if a child sees from infancy on what preoccupies adults--parents, neighbors, teachers. One should work with all population groups, without division by age barriers. I believe that little boys and men as well as little girls and women could find much in common by attending the same circles and clubs. Suffice it to visit the "Kalev" Swimming Pool on a Saturday, when you see in the pool lanes all sorts of people--masters of sports and little first graders, adults, and young men and women. They all have a good and interesting time.

Yes, we emphasize chiefly the organization of leisure time activities for working people rather than for idlers. It is particularly important in this connection not to overlook leisure time activities for the entire family. For while in recent years some changes have taken place in the organization of sanitarium and spa activities, with many pensions and rest homes having opened their doors to families, in our everyday work to organize leisure time activities for the population we unfortunately still divide it by age groups and categories, forgetting that, if the necessary conditions are provided, the family itself can select and best organize its own leisure time activities.

This is well understood, for example, at the fishery kolkhoz imeni Kirov where family leisure time activities have acquired a mass character. The kolkhoz members are served by a center of culture and trade; 7 clubs and 2 libraries; 63 artistic activity circles and amateur groups; schools of music, arts, and athletics; an exhibition hall, used to display the works of professional and amateur artists, and a folklore museum. It is precisely families which enjoy these facilities, with each family member doing his own thing. At some other kolkhozes and sovkhozes, too, family recreation has become customary--for example, the Tallinn Poultry Factory and the "Vinni" Sovkhoz.

The popularity of family recreation and its great effectiveness are not doubted by anyone. There is so much good that children learn from adults, while the fathers, mothers, grandfathers, and grandmothers themselves at the same time become more demanding toward themselves. Recent studies showed that currently only 10-15 percent of the republic's adult population practices physical culture regularly to the extent necessary for good health, and that of this amount women account for only 5 percent and schoolchildren, 25-30 percent. Now if physical culture and sports could be made a family affair in the broad meaning of the term, if the appropriate habits were to be inculcated in everyone--what a tremendous potential for the health of the nation could be exploited!

Of course, the work and study collectives represent the principal element called upon to inculcate an activist civic attitude in citizens. At the same time, the influence produced by the work of the local soviets in residential areas should not be overlooked. These soviets exercise direct guidance over sports and cultural institutions, and they supervise communal and housing facilities which offer solid possibilities for organizing leisure time activities of the population. It was precisely under the local soviets that many amateur organizations of residents, capable of greatly influencing these activities, have been established. Considerable experience in organizing leisure time activities at places of residence of the inhabitants has been accumulated by the local soviets of Narva and Kalininskiy Rayon of Tallinn as well as at the Pyl'tsamaa township in Yygevaskiy Rayon, and it has been disseminated by the ideological commission of the Central Committee of the Estonian CP. But even so there is still so much work to be done in organizing leisure time activities in residential zones. We hope to achieve a radical turnabout in this respect in the very near future.

We once analyzed letters written to the CC of the Estonian CP on the situation of unhappy families. As it turned out, as a rule, these families are materially secure and live in material abundance. The papas and mamas try to doeverything so that their sons would not feel deprived. But what is remarkable about these families is that they cannot remember when was the last time they went together to a theatre, a museum, an exhibition, or a tourist hike, or when they last discussed together a favorite book. I do not wish to pontificate, but let me say one thing: mutual indifference and the absence of common family interests and hobbies to which the teenager could devote his leisure time invariably shape the formation of his moral traits. This is food for thought. In encouraging and developing in all ways the traditional forms of the organization of leisure time of the population, we attempt to utilize for educational work such a highly important element as the family and inculcate with its aid good habits of rational recreation in the youth, in the entire population. For, as the saying goes, a habit arrives as a stranger, becomes a guest, and turns into the master of the house.

UKRAINIAN SUPREME SOVIET FOCUSES ON RURAL SOCIAL TRANSFORMATION

Kiev PRAVDA UKRAINY in Russian 10 Jul 82 pp 1-2

[Report on fifth session of the Ukrainian SSR Supreme Soviet Tenth Convocation: "The Social Transformation of the Countryside: An Important Tasks for the Soviets"]

[Excerpt] The CPSU Central Committee May (1982) Plenum and the Food Program it approved, which is a most important integral part of party economic strategy over the next decade, have evoked a flood of enthusiasm and a high businesslike attitude among the workers of the Soviet Ukraine, as they have throughout the country. Everywhere stepped-up work has been developed to implement the major tasks meeting the radical interests of the people and aimed at further improving their well-being. The collectives at kolkhozes and sovkhozes, enterprises and construction sites, and scientific establishments are filled with resolve to make worthy contributions to this all-state, all-people's cause.

Along with the development of the agrarian-industrial complex and every possible improvement in the use of its production and technical potential in the Food Program, an important place is assigned to measures for the social transformation of the countryside. Their implementation will serve to improve labor productivity in agriculture and eliminate the social differences between the city and the countryside.

These matters were at the center of attention among participants of the fifth session of the Ukrainian SSR Supreme Soviet Tenth Convocation which took place 9 July in the Session Hall of the Ukrainian SSR Supreme Soviet.

Before the opening of the session there was a meeting of the Council of Elders at which organizational questions on the work of the session were examined.

1000 hours. The deputies warmly greet comrades V.V. Shcherbitskiy, A.F. Vatchenko, G.I. Vashchenko, I.A. Mozgovoy, I.Z. Sokolov, V.A. Sologub, Yu.N. Yel'chenko, A.S. Kapto and Yu.A. Kolomiyets.

Deputy K.M. Sytnik opened the session of the Ukrainian SSR Supreme Soviet.

Those present honored the memory of Ukrainian SSR Supreme Soviet deputy V.A. Voronin who died during the period between sessions.

Chairman of the Mandate Commission G.K. Kryuchkov, delivered the commission's report The supreme soviet adopts a decree recognizing the competence of deputy I.D. Nagayevskiy, elected by the Zhdanovskiy-Il'inskiy electoral district, and of A.Z. Khomich, elected by the Petrovskiy electoral district, both in Donetskaya Oblast.

The agenda for the session is confirmed unanimously.

1. Organizational work of the soviets of working people's deputies in Krymskaya and Cherkasskaya oblasts in implementing the CPSU Central Committee May (1982) Plenum task of developing housing and social and cultural construction in the countryside.

2. Confirmation of the Ukazes of the Ukrainian SSR Supreme Soviet Presidium.

Chairman of the ispolkom of the Krymskaya Oblast soviet of working people's deputies, deputy Yu.G. Bakhtin, and chairman of the ispolkom of the Cherkasskaya Oblast soviet of working people's deputies, deputy V.N. Shapoval, presented reports on the first item on the agenda.

(The reports are published in today's edition of this newspaper).

The discussion of the reports begins. Deputies note that the measures outlined to improve social and everyday living conditions in the countryside brightly reflect the concern of the CPSU and Soviet government for the individual's labor and his welfare. The task is to skillfully handle available means allocated for housing and social and cultural contruction, make more complete use of all reserves and the possibilities of the material-technical base, and persistently improve technology and the organization of labor at projects.

At the session, it was from these positions that work done was analyzed and existing shortcomings and ways to eliminate them examined. It was pointed out that local soviets of working people's deputies should strive to achieve timely and complete assimilation of capital investments and strict observance of planning periods for the commissioning of new construction projects in the countryside.

KISELEV SPEECH ON YANKA KUPALA CENTENARY

Moscow PRAVDA in Russian 4 Jul 82 p 3

[Article by T. Kiselev, first secretary, Central Committee of the Belorussian Communist Party: "He Remains a Paradigm:On the Centenary of the Birth of Yanka Kupala"]

> [Text] The famous names in which our multinational socialist culture takes pride include the name of Yanka Kupala, a founder of Belorussian Soviet literature. Currently the working people of the republic and the entire nation as well as our friends abroad are solemnly celebrating the centenary of his birth.

Yanka Kupala was the first Belorussian writer to merit being called the national poet of Belorussia. All his works reflected the thoughts, hopes, and strivings of working people, the very soul of the nation.

The small village of Vyazynka, not far from Minsk, contains a museum-house, and the path toward it truly never gets overgrown with grass. It was there that the future poet was born on 7 July 1882.

The poetic talent of Ya. Kupala reached its maturity early in the 20th century, in an atmosphere of the growing struggle of the working people of tsarist Russia and its borderlands for their social and national liberation. Already his first poem, "The Muzhik," published in May 1905, organically combines personal feelings with civic motifs, which is so characteristic of the whole of Ya. Kupala's works. The poet sounded a clarion call in behalf of the right of the working people to a better fate. This topic also is persuasively voiced in the poem, "And Who Is Going There," which M. Gor'kiy masterfully translated into Russian:

> And who is going there across the bogs and forests,
> What huge crowd? The Belorussians.
> And what are they carrying on their emaciated shoulders?
> What have they lifted with their emaciated hands?
> Their injustice.
> And what wish did they now conceive, these blind and
> Deaf men, oppressed for centuries?
> They want to call themselves men.

Ya. Kupala became increasingly aware of the social aspects of life and interpreted them as an artist. In 6 years (1908-1913) he published three collections of poems and a number of dramatic works which made the author's name famous far beyond the confines of Belorussia. Revolutionary moods are clearly present in the poems "Kurgan'," "Bondarovna," "The Lion's Tomb," in the drama "The Destroyed Nest," and in many other works, whose principal topic is concern for the people's happiness. His faith in the creative force of the nation and his readiness for struggle against its oppressors provided the poet with a breadth of views and a feeling of historical optimism. "We shall push onward toward freedom, equality, the sciences, and light! Grandchildren shall breathe freely where the grandfather is crying now!"

Kupala perceived reality not only in social conflicts but also in the varied manifestations of the beauty of human labor, in the loveliness of Belorussian scenery, in native folk melodies....The richness of experience encountered in his poetry along with subtlety and precision of imagery, directness of feeling, and grandeur of metaphors, as well as the combination of expressive techniques and imagery of folklore with innovatory language, caused his works to shine with artistic splendor.

The life and creative endeavors of Ya. Kupala were spent in Moscow and Petersburg, where he completed his education, and in Vilnius, where he edited one of the first legally permitted publications in the Belorussian language--the newspaper NASHA NIVA [Our Soil]. There,he got to know a number of important Russian, Ukrainian, and Lithuanian artists. And it was there that he first won recognition and success. The Belorussian poet grasped the very heart of the experience of Pushkin, Lermontov, Nekrasov, Kol'tsov, Shevchenko, and Mickiewicz, and utilized it creatively. He translated into Belorussian many works of Russian, Ukrainian, and Polish authors, and he constantly consulted classics of world poetry.

At the same time, along with his comrade, friend, and peer Yakub Kolas, whose centenary of birth also is being celebrated this year. Ya. Kupala laid the foundations for the new Belorussian literature which, in his words, made its voice heard "amidst strange nations and kinfolk nations," "bearing the light of truth to the people."

At the very outset of his literary labors Ivan Dominikovich Lutsevich adopted the name Yanka Kupala, referring to the folk legend in which a man who observes the opening of the flower of the fern is rewarded with happiness. But it was not the magic flower of the fern but the Great October Socialist Revolution that opened the path toward happiness to all working people. A festive, radiant feeling of boundless expanses, of indomitable movement forward permeates the creative works of Ya. Kupala following October 1917. The times seem to him "aquiline" and "fairy-tale." The darkness and obscurantism of pre-Revolutionary hibernation disappeared forever into the past. He views the future of his nation as life-affirming and filled with creative labor. The new socialist life evokes a feeling of joy in the poet. His contemporary poetry is, as was observed by A. V. Lunacharskiy, full of "enthusiasm about the reborn homeland." He personally witnessed the unprecedented flowering of Soviet Belorussia. Plants and factories were built, the countryside was transformed, illiteracy was being eliminated, and the Belorussian University and Academy of Sciences were opened. Economy, science, and culture developed vigorously. Kupala took an active part in these transformations both as a poet and as an eminent public and state activist: he was a candidate member, and subsequently full member, of the Central Executive Committee of the Belorussian SSR, and he was elected deputy to the republic's Supreme Soviet and member of the Belorussian and Ukrainian academies of sciences.

In his works he addresses words of special gratitude and nationwide love to the Communist party, whose "irresistible strength raised the country in arduous battles and led it from one victory to another." Ya. Kupala traveled a great deal throughout the country, meeting with people of varied nationalities and occupations. He created poetic works conveying the spirit, energy, and pathos of the socialist transformations. The poem "On the Oressa River," along with the poetic works "Ode to Construction," "On Our Field," "I'm a Kolkhoz Member....," and many others constitute a veritable chronicle of the creation of a new life.

As before, Kupala's chief protagonist is the simple working man. But the world and sensations of that working man have changed: his deeds and thoughts are permeated with a feeling of great dignity, with the confidence and pride of the freely living man.

In 1935 a cycle of Kupala's works was published, expressing with special vigor the creative strength of socialism and the spiritual growth of man. Gor'kiy penned the comment "Glorious" on the margins of the poem "Len," narrating the feelings of a young kolkhoz girl, her radiant enjoyment of work and love. The poems "Alesya," "The Soiree," "The Guests," and "Boy and Girl"--which was liked and known word for word by Yuriy Gagarin--abound with winged language and happiness of new life.

Yanka Kupala was a poet-internationalist, the singer of the friendship and brotherhood of the Soviet nations. He wrote many radiant poems about Russia, Moscow, the Ukraine, Georgia, and Kazakhstan. He devoted inspired verses to Gor'kiy, Dzhambul, and Stal'skiy. The entire unencompassable Soviet land is the poet's homeland. He perceives it as being united by common ideals, a noble goal, a great cause:

It goes, from the walls of the Kremlin, plunged in lofty thoughts
About all nations, about mankind, across marshes and surf breakers,
It goes, comrades--the commune, to perpetuate a happy world.

Limning the joys of worldwide creative labor, Kupala at the same time was sensible of the threat of Fascism to peace and mankind. His poems of the prewar period reminded of the danger and expressed the unshakable readiness of the Soviet nation to defend the happiness that it had won for itself. When the Great Patriotic War broke out, the poet battled the foe with passionate words. His poem "To the Belorussian Partisans" inspired Soviet patriots, appealing for battle.

And Kupalov's work as a publicist provided a mighty weapon. The poet picturesquely wrote:

If the foe picks an apple/ that matured in our orchard,/
it will burst as a grenade in his hands!/ If he burns a handful/
of our heavy ears of grain,/ the grains will spray/
him with a hail of lead!/ If he approaches our/
wells of cool pure water,/ they will dry up/
to deprive him of water.

"We shall rebuild everything, heal the wounds...." These words, which Ya. Kupala had written early in the war, are full of confidence in victory. The poet himself did not live to witness it. His life came to an end in June 1942.

Kupala's words about the nation evoke boundless love and gratitude. His name is forever linked with that of Belorussia. The legacy of this classic of Belorussian literature is passed on to ever newer generations of readers, whom it educates in the spirit of Soviet patriotsim, international brotherhood, and loyalty to the Homeland.

The name of the people's singer graces institutions of science, culture, and art, kolkhozes and sovkhozes, and streets of cities and villages. His works are being published in dozens of languages of the peoples of the USSR and the world, and his plays continue to be performed.

Yanka Kupala's jubilee coincides with the 60th anniversary of establishment of the USSR. On the eve of that great holiday, we take special pleasure in realizing that the poet's dreams have become reality. The steadfast implementation of Leninist principles of the policy toward the nationalities, as well as of the plans for socialist construction, has resulted in outstanding accomplishments by all the nations of the Soviet Union--economic, scientific, and cultural accomplishments.

It was owing to Kupala that Belorussian literature was elevated to the level of the best works of the literature of the fraternal nations of the Land of the Soviets, and it was he who enriched the treasure trove of world culture.

Kupala's artistic traditions are worthily continued by Belorussian writers. The genuinely native creativity of Yanka Kupala shall continue to provide to the working people of the republic, to all Soviet people, a paradigm and a model of active participation in communist construction, and it shall remain a priceless civic and cultural value.

BRIEFS

KAZAKH DELEGATION IN TALLINN--On 22 July K. Vayno, member of the CC CPSU, first secretary of the Estonian CP, received the delegation of fraternal Kazakhstan arriving for the Days of Literature and Art. In behalf of the CC of the Estonian CP, the Presidium of the Estonian SSR Supreme Soviet, and the Estonian SSR Council of MInisters, he welcomed the dear guests cordially and from the bottom of his heart. Comrade K. Vayno emphasized that the importance of the Days of Literature and Art of the Kazakh SSR inherently transcends the framework of the cultural life of our republics. This event is yet another major stride forward in the cause of the internationalist upbringing of the working people and the rising generation, and a new valuable contribution to the further strengthening of the friendship of our nations. Comrade K. Vayno further stated that the republic responds with tremendous interest to the commencing holiday of culture. "This is understandable since, despite the tremendous distance separating us, we are linked by a common historical destiny and the bonds of common conditions of socio-economic life, common interests, and common goals--by the inseparable unity of our multinational Soviet Homeland." The head of the delegation of the Kazakh SSR, Sh. Zhanybekov, Deputy Chairman of the Kazakh SSR Council of Ministers, expressed his appreciation of the warm words of welcome addressed to the delegation and all working people of Kazakhstan. He transmitted to those present greetings from the CC of the Kazakh CP, the republic's Presidium of the Supreme Soviet and Council of Ministers, and personally from comrade D. Kunayev, member of the CC CPSU Politburo, first secretary of the CC of the Kazakh CP. Comrade Sh. Zhanybekov described the work of the working people of Kazakhstan in translating into reality the decisions of the 26th CPSU Congress and fulfilling the decisions of the May (1978) Plenum of the CC CPSU. Those present at the encounter were the comrades I. Kebin, V. Klauson, A. Kudryavtsev, R. Ristlaan, N. Yuganson, D. Visnapuu, and M. Pedak; the deputy chairmen of the Estonian SSR Council of Ministers A. Gren and B. Saul; the department heads of the CC of the Estonian CP A. Soydla and O. Utt'; the administrator of the CC of the Estonian CP, V. Koort; the Estonian SSR Minister of Culture I. Lott; and the chairman of the Estonian SSR State Committee for PUblishing Activities [Goskomizdat] L. Kayk. [Text] [Tallinn SOVETSKAYA ESTONIYA in Russian 23 Jul 8 p 1] 1386

AFGHAN DELEGATION IN TALLINN--On 21 July the government delegation of the Democratic Republic of Afghanistan, headed by the Deputy Minister of Trade of the DRA, Ali Akhmad, stopped in Tallinn in the course of its travels in our country. The guests were welcomed by A. Tregubov, Deputy Chairman of the Estonian SSR Council of Mnisters, who told them about the economic and cultural development of the Estonian SSR under Soviet rule, and about the manner in which the working people of the republic translate into reality the decisions of the 26th party congress and the May (1982) Plenum of the CC CPSU. Comrade K. Akhmad, on his part, spoke of the achievements of the Afghan nation in the new stage of the revolution and expressed appreciation of the fraternal assistance of the Soviet nation in building a new life in his homeland. On the same day, the guests from Afghanistan toured the Tallinn harbor area and sightseeing spots of the republic's capital. They were accompanied by the Deputy Minister of Trade, Estonian SSR, T. Teras, and the Deputy Director of the "Soyuzvneshtrans" [All-Union Association for Foreign Transport] O. Nikitin. [Text] [Tallinn SOVETSKAYA ESTONIYA in Russian 22 Jul 82 p 2] 1386

POLISH HOLIDAY IN TALLINN--On 22 July an evening commemorating the 38th anniversary of Poland's rebirth was held in Tallinn. It was attended by activists of the Estonian affiliate of the Society of Soviet-Polish Friendship, as well as by Polish restorers and builders. The festivity was inaugurated by the chairman of the presidium of the governing board of the Society of Soviet-Polish Friendship, chairman of the Tallinn City Executive Committee, A. Norak. An address was delivered by the deputy chairman of the society's Estonian affiliate, the editor-in-chief of SOVETSKAYA ESTONIYA, G. Turonok. Those presents were welcomed by the representative of the local office of the Polish "Budimeks" foreign-trade construction enterprise in Tallinn, R. Tlustochowicz. The soiree participants dispatched a welcoming telegram to the governing board of the Society of Polish-Soviet Friendship in which they expressed their firm conviction that a close friendship and comradely mutual assistance based on the principles of socialist internationalism shall continue to characterize and further broad and close cooperation of the Soviet and Polish nations. The soiree was attended by the head of the department of foreign liaison at the CC of the Estonian CP, E. Saya, along with the chairman of the Estonian Society for Friendship and Cultural Relations With Foreign Countries, Hero of the Soviet Union A. Meri. [Text] [Tallinn SOVETSKAYA ESTONIYA in Russian 23 Jul 82 p 3] 1386

SERBIAN DELEGATION IN MINSK--An official friendly visit to Minsk has been paid by the delegation of the Trade Unions Council of the Socialist Republic of Serbia, headed by a member of its presidium, Stanimir Ivanovich, upon the invitation of the Belorussian republic council of trade unions. On 15 June the delegation was welcomed at the Belorussian Trade Unions Council [Belsovprof]. An exchange of opinions about various aspects of the activities of Belorussian and Serbian trade unions took place. The participants in the talk expressed the desire to broaden and strengthen traditional and friendly bonds and mutual exchange of experience between the Belsovprof and the Trade Unions Council of Serbia. The guests visited the Minsk Bearings Plant, touring the production facilities, the sanitarium and preventive care center, the kindergarten, the Pioner camp, and workers' apartments. At the encounter with the plant's trade-union activists, the head of the delegation, Stanimir Ivanovich, declared: "We were greatly impressed by the high technical level of production at the enterprise and by the living, working, and recreational conditions of its workers." He emphasized: "It was of special interest to us to study the operating experience of the trade-union committee. We shall utilize much of what we found of interest. For example, the forms and methods of involving workers in the management of production, and the steps taken by the plant trade-union committee to safeguard occupational safety and organize recreation for the workers." The members of the delegation toured the city and viewed the exposition at the Museum of the First Congress of the Russian Social-Democratic Workers Party [RSDRP]. The delegation's itinerary includes a visit to the "Svetlyy Put'" [Shining Path] Kolkhoz in Molodechnenskiy Rayon. The guests will also tour the Naroch' Sanitarium and other trade-union rest homes in the republic. [Text] [Minsk SOVETSKAYA BELORUSSIYA in Russian 16 Jun 82 p 1] 1386

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

Economics

URBAN-RURAL CONNECTIONS TO BE STRENGTHENED

[Editorial Report] Baku KOMMUNIST in Azeri 22 July 1982 pp 2-3 carries a 2,600-word article by Alyjan Abbasov, section director of the Economics Institute under the AzSSR State Planning Committee, timed to a "united political day" with the theme "Strengthening the urban-rural connections is an important condition for the fulfillment of the USSR Food Program." In addition to improving levels of expertise, education and cultural amenities, he noted that "converting agricultural labor to a form of industrial labor is an important facet of improving the lifestyle of the urban and rural population" and "in resolving the questions of rebuilding the countryside socially, transportation plays an important role." He adds that "transporters must try to work harmoniously and carry their cargoes on time, in good condition and with little waste."

STRESS PUT ON RURAL CONSTRUCTION

[Editorial Report] Baku KOMMUNIST in Azeri 1 July 1982 p 1 carries a 1,000-word lead editorial noting that "basic investment in village construction has increased from year to year, the process of rebuilding the village has been implemented and, along with the building of important agricultural structures, dwellings for working people and other buildings appropriate to modern demands have been put up." However, "the situation is not the same everywhere. Firstly, the quality of construction is inconsistent. Buildings are often turned over with serious shortcomings and flaws." A number of examples are given. In addition, "the worst aspect of rural construction is that building, for different reasons, drags on for years." It is asked that the Ministries of Rural Construction and Irrigation and Water Resources Economy, the Chief Kolkhoz and Sovkhoz Construction Administration, and the Vini- and Viticulture Committee attempt to expedite their work.

YOUNG RURAL POPULATION MOVING TO CITIES

[Editorial Report] Baku KOMMUNIST in Azeri 7 July 1982 p 2 carries a 2,400-word article by M. Allahverdiev, section director, AzSSR Institute of Economics, on reasons why the social infrastructure of rural areas should be improved in order to stem the population flow to the cities. He notes that "our republic has a number of regions with unutilized labor resources of which the greater part should be within the social labor process. Certainly, to guarantee this is not a simple question. One must create circles of activity corresponding to sex, age, trade and specialization close to the dwelling place; those who need it must learn a new trade or specialty and different service institutions must be built according to demand." Statistically speaking, "more than 70 percent do not have an appropriate trade or specialty." Furthermore, "according to surveys, mobile labor resources are concentrated in rural areas, and the greater part of these are women." The reason for leaving rural areas are: "the necessary conditions for youth to remain and work in the countryside do not exist. Along with the inadequacy of specialized education, urban culture, health, housing and other services, there is a limitation of advanced possibilities in skills, the arts and duties." In the 1970s "the urban population grew on the average of 15,000-17,000 yearly in comparison to the countryside. Of these 80 percent were between the ages 16-24." The author adds that better plumbing, heating and education and sports possibilities would improve the situation.

Social and Cultural Affairs

FUNERAL TRADITIONS ATTACKED

[Editorial Report] Baku KOMMUNIST in Azeri 14 July 1982 p 3 carries an 1,100-word summary of "Letters to the Editor" concerning an article which appeared on 12 February 1982 on funeral traditions. "Many of them [letters] discuss the 'councils [mejlis] which take place at funeral ceremonies; they note correctly that these 'councils' are not beneficences [the term used in the text is the one used in rites of the Kalendari dervish order]." Numerous letters are cited on this. In one of them, from Sumgayyt, it is written that there is "a new 'discovery' by mullas who view funeral ceremonies as a source of easy income." It is added that "a great part of the letters are connected to a serious lack of control over the cemetery economy." Readers have written in that "monuments, busts and statues costing 10,000-15,000 rubles have been placed on top of some graves." The new 'traditions' are also subjected to criticism; a reader from Masally rayon writes: "One of the new traditions is awaiting youths just released from the army. Preparations for this ceremony begins 6 months beforehand when special attention is given to 100-150 kilogram of bulls or rams and different kinds of drinks are prepared. After the individual returns from the army, an eating and drinking festival begins." These procedures are viewed with disapproval.

THOUGHTS ON MAN'S SPIRITUAL DEVELOPMENT

[Editorial Report] Baku IZVESTIYA, AzSSR AKADEMIYA NAUK: SERIYA ESTORII, FILOSOFII I PRAVA No 4, 1981 in Azeri pp 95-101 carries a 4,500-word article by G. J. Aliev entitled "The Development of the Spiritual Demands of the Personality Under Conditions of Mature Socialism," in which the author, primarily parroting other sources, distinguishes between material demands which "are defined by societal development, especially the level of productive forces, dominant production relations, science, technology, culture, etc.," and spiritual demands, which are "endless and unlimited." Spiritual demands are divided into six categories: 1) Demand for a scientific world-view; 2) Demand for sociopolitical activity: 3) Intellectual demands; 4) Moral demands; 5) Esthetic demands; 6) Demands for creativity. He adds that "this categorization is relative as elements and aspects constituting the structure of spiritual demands are connected."

POET DESCRIBES SOUTH AS MELANCHOLY

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 2 July 1982 p 2 carries a number of quatrains in which the poet, Zahid Ismayylov, ascribes qualities to various regions of Azerbaijan. The last quatrain is: "Fatherland, friendly Fatherland/ May fortune be better, Fatherland/ Your North joyous/ Your South melancholy."

'DADA GORGUD' No 20 PUBLISHED IN TABRIZ

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 2 July 1982 p 7 carries a 300-word note by A. Memmedrza on the publication of DADA GORGUD No 20, 1982 in Tabriz. In addition to the usual Southern literary works there is a poem by the Soviet Azerbaijani poet Bokhtiyar Vahabzade devoted to the 90th birthday of the Southern bard Ashyg Ali.

TWO SOUTHERN TALES PUBLISHED IN NORTH

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 2 July 1982 p 7 carries two short stories by H. Sahir, introduced by M. Afiyat, who notes that with regard to Southern Azerbaijani prose "its level is lower than could be wished" especially in comparison to poetry. Sahir's work, however, "is interesting, and his pen incisive and sweet."

International

SOUTHERN BORDER VIOLATED

[Editorial Report] Baku KOMMUNIST in Azeri 29 July 1982 p 4 carries a 200-word note by Col. A. Parakhin of the Transcaucasian Border District on two men who were violating the border. They were spotted by three youths [all of whom had Armenian names], who notified border guards. "The unknown men were unable to answer questions on who they were or where they were going." No further data are given, save that the youths were thanked by an "Officer Sukhoy."

FOREIGN STUDENTS GRADUATE FROM PETROLEUM INSTITUTE

[Editorial Report] Baku KOMMUNIST in Azeri 1 July 1982 p 2 carries a 150-word dispatch on the graduation of 108 foreign engineers from the Azerbaijan Petroleum and Chemistry Institute. Also "at the Republic Foreign Students Council an Azerinform correspondent was informed that more than 1,800 people from 68 countries received high level training, of which 108 became science candidates. Roughly 6,000 study Russian in the preparatory faculty of the Azerbaijan Petroleum and Chemistry Institute."

FOREIGN SCHOLARS ATTACKED

[Editorial Report] Baku KOMMUNIST in Azeri 27 July 1982 p 3 carries a 1,600-word article by A. Rzayev, Chairman of the Azerbaijan branch of the Soviet Political Science Association, and A. Memmedli, Secretary of the same organization, attacking Lemercier-Quelquejay, Bennigsen and Wimbush for certain statements allegedly made by them on Azerbaijan. The following statement by Lemercier-Quelquejay was found especially offensive: "The 1979 Iranian revolution proves to Soviet Azerbaijanis that they can use Islam as a revolutionary force because Azerbaijani political development is very limited." This contention is denied by the authors.

TURKISH TOURISM CONSULTANT IN BAKU

[Editorial Report] Baku KOMMUNIST in Azeri 3 July 1982 p 2 carries a 750-word interview with Yavuz Bulent Bakiler, "a consultant to the Turkish Ministry of Culture and Tourism and well-known poet." When asked how often he had been in Azerbaijan, he replied "This is the second time I have been a guest in Azerbaijan. I was in Baku the first time in 1980 because I had to participate in the International Film Festival in Tashkent." He is in Baku and will travel to Central Asia to collect material for a book. When asked the extent of Turkish interest in Azerbaijan, he replied: "In our country there is unbounded interest in Azerbaijan, its culture and art."

INDIAN JOURNALIST ON AZERBAIJAN

[Editorial Report] Baku KOMMUNIST in Azeri 9 July 1982 p 3 carries a 600-word note by S. Geraybeyov on an article concerning Azerbaijan in NEW AGE, "The Organ of the Indian Communist Party" by Maksud Alikhan. According to Geraybeyov, "The author writes that Azerbaijan has helped India, Syria, Afghanistan, Iraq, Algeria and Iran in the construction of industrial concerns and the development of the petroleum industry." On Islam, he adds that "A significant part of the Indian population is Muslim. Thus, it is not by chance that the Indian journalist displayed an interest in the situation of Islam in the republic. One of the reasons for this is that Azerbaijan is Iran's neighbor, and a significant part of Iran's population is Azerbaijani, and in Iran complex events of a political-religious nature are taking place. During Alikhan's trip to the republic he met with the heads of the spiritual administration of Transcaucasian Muslims. He writes that citizens are completely free to believe in religion, as everywhere else in the Soviet Union."

NEW SOUTHERN PUBLICATION REVIEWED

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 23 July 1982 p 7 carries a 450-word note by SIRUS on the first issue of the Southern Azerbaijani literary magazine YENI YOL [New Road] published by Huseyn Duzgun (also known as "Sadig"). It is noted that "in the first days of the victory of the Iranian revolution the magazine YOLDASH [Comrade], published by H. Duzgun, was later published under the name INGILAB YOLUNDA [On the Road of Revolution] of which 13 numbers have now been published. Duzgun is now publishing a new magazine." In the introduction to the first issue of YENI YOL Duzgun writes: "Three years of official activity of the Azerbaijan Culture Society as a research institution have now gone by. During this time a number of works of a literary nature have been published by the society along with a number of scientific-literary works." Further, "a number of progressive poets and writers who are not members of our society can participate in our journal. Our basic goal is to publish mass-scientific, literary-research materials."

SOVIET AZERBAIJANI LITERATURE PUBLISHED IN TABRIZ

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 2 July 1982 p 7 carries a 600-word note by M. Manafi on four Soviet Azerbaijani works published in Persian in Tabriz. The works are: the tale "Kommissar" by Mahdi Huseyn; a booklet containing chapter 9 of "Kommissar"; "Revolutionary Tales of Azerbaijan" containing short stories by A. Shaig, M. Ibrahimov and M. Huseyn; and a collection of three short stories by M. Huseyn and one by A. Hagverdiev.

Political Affairs

PRESS, MEDIA MUST DRAW UP PLANS TO PROPAGANDIZE NEW FOOD PROGRAM

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 22 July 1982 carries on page 1 a 1,000-word boldface editorial entitled "The Food Program and the Press." The recent plenum of the CC CPSU drew up a major program for the 1980s calling for a revitalization of food production and of the agro-industrial complex to meet the food needs of Soviet citizens completely. To achieve this goal the press and the media, as active propagandists of party policy, must work actively to promote and encourage the new measures. To this end the editorial calls for the drawing up of short- and long-term plans for active press and media intervention and gives examples of some possible approaches.

EDITORIAL STRESSES PARTY SUPERVISION OF AGRICULTURE PERSONNEL

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 31 July 1982 carries on page 1 an 800-word boldface editorial on the importance of experienced professional personnel for Kazakh agriculture. Professional personnel play a decisive role in every area of Kazakh life, especially in terms of carrying out contemporary party agricultural policy and in guaranteeing supply of foods and other agricultural products to the people. The editorial stresses the great experience and abilities of Kazakh agriculture specialists and underscores the importance of correct party supervision for putting them to work properly. However, it continues, the situation is not universally good and due to lax party control in many areas cadres are often poorly prepared or work irresponsibly and ineffectively.

Among other problems discussed in the editorial are high personnel turnover rates in some parts of Kazakhstan and refusal by trained specialists to accept the jobs to which they are assigned. Some Alma-Ata agricultural specialists, for example, prefer to remain in the city and even work outside their specialities rather than relocate to remote rural areas. The editorial also criticizes lack of the technical knowledge necessary to supervise agriculture specialists properly on the part of party organizations.

PARTY COMMITTEE IRONS OUT MANGYSHLAKSKAYA DEVELOPMENT PROBLEMS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 17 July 1982 carries on page 2 a 2,300-word article by S. M. Mukashev, Mangyshlakskaya Oblast Party Committee First Secretary, on the role of oblast party organizations in ironing out Mangyshlak development problems. The article is published under the regular rubric "Party Life: the Style of Committee Work."

New goals advanced at the May CC CPSU Plenum require new levels of party oversight and supervision in all areas of the Soviet economy, not just in agriculture. Having stated this need, Mukashev reports in detail on efforts by the Mangyshlakskaya Oblast Party Committee, subordinate rayon committees and special party task forces to accelerate regional development of oil and gas resources to the greatest possible degree. Throughout the article Mukashev emphasizes the party's ability to work out complex problems of development coordination through consultation with economic organizations at every level. As a result existing production facilities are working more stably and new ones are being brought into being with a minimum of disruption.

KAZAKH TRADE MINISTER ON REPUBLIC TRADE ORGANIZATIONS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 25 July 1982 carries on page 4 a 1,500-word article by KaSSR Deputy Minister of Trade A. Ungebayeva on the current state of KaSSR trade organizations and future goals. The article is published in note of Soviet Trade Services Workers Day.

New tasks assigned Soviet trade services workers by the May Plenum of the CC CPSU in the area of food sales and services overshadow the celebration of Soviet Trade Services Workers Day this year and will require major improvements and an expanded scope of trade services. However, Ungebayeva goes on, the Ministry of Trade has no direct influence upon the production of consumer goods, and foods and sales plans cannot be met if goods are simply unavailable or in short supply.

With this proviso in mind, Ungebayeva examines what is being done to improve trade services, food sales and services. She reviews the scope of KaSSR trade services with emphasis upon the many new facilities. There were 10,000 square meters of new sales area this year so far alone, and new kinds of trade outlets. Some 60 percent of goods sold are now sold, for example, on a self-service basis. Ungebayeva emphasizes the importance of the products of auxiliary private enterprises and the kolkhoz public markets that are now a major output for such products. Some 270 now exist in the KaSSR, and many more will be opened in the future. Ungebayeva also underscores the importance of reduced spoilage of food products in the warehouses and stores and less waste by trade services organizations.

LACK OF FREEZER CAPACITY HAMPERS DELIVERY OF FISH TO KAZAKH CONSUMERS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 11 July 1982 carries on page 2 a 1,000-word article by A. Abdrakhmanov, KaSSR Deputy Minister of Fisheries, on KaSSR fisheries in the light of the May Plenum Food Program. The article is published to note Soviet Fisherman's Day.

The "USSR Food Program for the Period up Until 1990" recently sanctioned by the May Plenum of the CC CPSU called for increased production of fish and sea products and enhancement of the productivity and efficiency of the fishing fleet. The same program calls for a two-fold increase in live and frozen fish production over the next 10 years.

Fisheries are well developed in the KaSSR on the Caspian and Aral Seas, on Lake Balkash, and on the Zaysan, Edil, Zhayyq (Ural), Ertis and Esil. In addition to these natural sources, moreover, there has also been a recent emphasis on development of pond fisheries as well. Among problems discussed by Abdrakhmanov are lagging construction preventing full development of pond fisheries and a severe shortage of freezer capacity that results in large amounts of fish spoilage, especially during summer months. As a result a substantial proportion of large fish yields fails to reach consumers. There are also problems with boat operations and equipment.

Current republic plans call for a 2.2-fold increase of the output of pond and a 2.5-fold increase of river fisheries output by 1985. Total production from these sources is to rise to 14,000 tons by 1990 and total fish output from all sources to 32,500. Output of processed foods from fish will grow even more.

EDITORIAL DETAILS KAZAKH PLANS FOR IMPROVING FOOD SALES, SERVICES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 9 July 1982 carries on page 1 an 800-word boldface editorial on Kazakh plans to improve republic food sales and services to meet new goals advanced by the May Plenum of the CC CPSU. The editorial emphasizes the key importance of trade and service organizations in meeting the new goals and stresses the many problems that have existed in past operations. It notes, for example, shortages of grains and vegetables in some rayon of Dzezkazganskaya, Turgayskaya, Aktyubinskaya, Uralskaya and Kzyl-Ordinskaya Oblasts, large scale waste of food products generally, handling problems and a poorly developed food sales and services base. Among measures proposed to overcome such problems are reorganization, re-equipment, new methods, an improved connection between food sales and service organizations and producers, closer attention to the people's needs and efforts to increase supplies of foods and food products.

KARATAV PHOSPHOROUS PRODUCTS CONSIDERABLY CHEAPER THAN OTHER SOURCES

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 9 July 1982 carries on page 3 a 1,400-word article by Erghali Saghatov on the history and present state of Karatav phosphorus mining. According to Saghatov, estimated reserves are now set at 6 million tons and plans call for raising annual production to

25-30 million tons (some 21 million tons to meet minimal domestic needs) in the near future. Saghatov stresses the cheapness of raw products (2-5 times cheaper than from other sources) from Karatav and of processed yellow phosphorus and thermal phosphoric acid made from them (1.5 to 2 times cheaper). In the last part of his article Saghatov reviews various on-going and new projects to expand and develop the Karatav mines and Karatav-Dzhambul Territorial Production Complex facilities further.

KAZAKHSTAN PRODUCES 90 PERCENT OF USSR PHOSPHORUS

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 7, July 1982 carries on pages 55-62 a 3,400-word article by A. Nuryshev, chief of the Chemical Industry Division of the Kazakhstan CP Central Committee, on the current aims of the Soviet and KaSSR chemical industries and the role of Kazakh party organizations in achieving and maintaining quantitatively and qualitatively high production levels. The article is published under the regular rubric "Problems of Socioeconomic Development Under Refined Socialism."

Special emphasis was placed on the development of the USSR chemical industry in the decisions of the 26th CPSU Congress. This was because, in L. I. Brezhnev's words, "There is no economy without the chemical industry."

Current goals call for a 30-33 percent increase in total chemical industry output during the current, 11th Five-Year Plan. Fertilizer production is to rise to 150-155 million tons and other sectors proportionally. Kazakhstan, because of its minerals, oil and energy base, will play a major role in achieving this goal. Among other things, the KaSSR currently produces 90 percent of all USSR phosphorus.

Nuryshev reviews the KaSSR chemical industry with special reference to new sectors such as the Shevchenko Plastics Factory and in emerging microbiology industry and the role of party organizations in successes so far achieved. KaSSR chemical industries currently produce 150 different products and will produce still more in the future. One problem area, however, seems to be petroleum refining since the important Guy'yev Petroleum Refining Plant is faulted for low technological achievements. This presumably refers to problems with the distillation and separation of petrochemical raw materials since this problem has been mentioned elsewhere. Nuryshev also alludes to undefined difficulties in the Chimkent "Fosfor" Production Union and in the organization of some of the new sectors of the industry in Kazakhstan.

KAZAKH CENTRALIZED MOTOR TRANSPORT NEEDED TO MEET MAY PLENUM FOOD GOALS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 6 July 1982 carries on page 2 a 1,600-word article by engineer Kh. Bekbolatov on the need for centralized motor transport to meet May Plenum food goals. The article is published under the regular rubric "Problems, Thoughts, Suggestions."

The 26th Party Congress raised the question of drawing up a coordinated program for the long-term improvement of the work and interconnection of transport of every kind, reduction of transport costs and elimination of seasonal drops in capacity. Such a program would successfully meet the transport needs.

The need for such a program has become all the more pressing with demands by the May CC CPSU Plenum for improved agro-industrial complex transportation services. Only through a total improvement of these transportation services will the goals of the May Plenum be met. Towards this end Bekbolatov proposes creation of centralized oblast motor transport unions for agriculture under the freight administration of the republic Ministry of Motor Transport.

Turning to his native Kokchetavinskaya Oblast, Bekbolatov shows the greater productivity of such centralized unions as they exist in other industries and details the specific advantages of centralization in various motor transport sectors. Low coefficients of use, for example, could be overcome by centralized control while a large, centralized stockpile of spare parts and assemblies would reduce time spent out of service. He also suggests that there is a considerable problem of expertise lack in smaller transport units and that this problem could be overcome in larger unions. Bekbolatov offers specific figures on monetary and other savings from putting his proposal to work and calls upon oblast authorities to take action.

DRY MOYYNKUM TO BE IRRIGATED BY KAZAKHS TO MEET NEW FOOD GOALS

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 2 July 1982 carries on page 3 a 1,300-word interview with Aytbay Nazarbekov, first secretary of the Moyynkum Rayon (Dzhambulskaya Oblast) Party Committee and KaSSR Supreme Soviet Deputy, on plans to irrigate fields and pastures in the dry rayon to increase yields drastically to accord with the new party food program. Nazarbekov was interviewed by Nurlytay Urkinbaeva and the interview is published under the regular rubric "Mother Nature."

Nazarbekov was asked questions about what his rayon is doing in general to meet the new food program, rayon water use patterns and what measures are being carried out to suit the particular conditions of the area and protect the local environment. In his answers Nazarbekov stresses the current diversity of food production in the area with many new food products, e.g., garden vegetables, now being produced for the first time in the region and strenuous efforts by all concerned to conserve every drop of water and prevent any deterioration of crop and pasture lands.

In terms of the future major efforts are now being made to move Shu River water into the Mayynkum along a 117 kilometer long canal to irrigate 45,000 hectares largely to expand grain production. Plans also exist to utilize substantial reservoirs of subterranean water, estimated at 180 billion cubic meters and lying at depths of 2 to 20 meters below the surface, to irrigate pasture lands. Shu and subterranean water, plus careful attention to protection of a fragile desert environment will make possible full yields from the area in the future inspite of desert conditions.

MOBILE REPAIR SHOPS ABSENT FROM RURAL AREAS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 30 July 1982 carries on page 3 a 500-worded unsigned expose published under the regular rubric "What the Controllers Have Found." The KaSSR Ministry of Consumer Services is assigned, on paper, 4,500 specially equipped service vehicles including 2,800 consumer service mobile repair shops. Unfortunately, although seen from time to time in the cities such repair shops are all but unavailable anywhere else. An investigation revealed large numbers of mobile repair shops out of service, some converted for other purposes and others assigned to individuals for private use. Moreover, many of the less than one-third of the mobile repair shops listed as available on paper simply no longer existed or were stationary in the cities and no longer mobile. No wonder, the article continues, that these repair vehicles are all but unseen in much of the KaSSR. Clothing, shoes and appliances--some quite expensive and easily repairable--are being discarded for lack of repair facilities.

FRUIT AND VEGETABLE SUPPLY DISORGANIZED IN ALMA-ATINSKAYA OBLAST

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 31 July 1982 carries on page 3 a 1,500-word article by Z. Boranov, T. Bitaev, deputy chairman of the Alma -Atinskaya Oblast People's Control Committee, and Q. Alimqulov, on major problems of fruit and vegetable supply in Alma-Atinskaya Oblast. The article is published under the rubric "SOTSIALISTIK QAZAQSTAN Raid."

Major efforts are now underway in Alm-Atinskaya Oblast to guarantee supply of every kind of food product to the people as soon as possible. As part of this effort 8,800 hectares have been specially planted with fruits, vegetables and grains in the oblast and agricultural workers are preparing to harvest 175,000 tons of food products from them.

Many agricultural organizations and workers in the oblast take their obligations and duties very seriously and are achieving good results. Others, however, are not working up to required levels. Among the latter is the Alma-Ata City "Plodoovoshchtorg" Organization which includes 107 stores with 7,214 square meters of sales space for fruits and vegetables, 8 trade organizations, 42 sales pavilions, 11 stalls and 9 open air markets.

Unfortunately, this large system is totally inadequate for its assigned tasks. It lacks facilities for receiving and storing food products. It lacks freezers and even the most rudimentary equipment for handling and processing food. Most processing is done by hand. There is also an acute shortage of certain types of vegetables and fruits in high demand. There are goods of unsalable quality, a serious lack of packing boxes and packaging of every sort, inadequate quantities, qualities and varieties of canned goods (one factory even lacked facilities to store foods being canned, resulting in waste and spoilage) a severe shortage of agricultural labor to harvest what is available. Furthermore, gross transportation mismanagement drives up costs and prevents delivery of foods. The article also chides lack of supervision by the federation of consumer societies and other individuals and organizations responsible for dealing with such problems and improving food sales and availability. The new party food program should be yielding results by now, the authors complain.

FALLING WATER LEVELS ENDANGER KZYL-ORDINSKAYA POND FISHERIES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 28 July 1982 carries on page 4 a 500-word article by Kh. Sukhanberdin, worker at the Kzyl-Ordinskaya State Fisheries Protection Inspectorate, on problems of pond fisheries in his oblast due to falling water levels. The article is published under the regular rubric "Man and Nature."

Special heed is devoted in party and government measures to protect the environment and preserve natural sources of water. Fish are especially endangered by the drying up of lakes in Kzyl-Ordinskaya Oblast, a matter of growing public concern. Already there are 90,000 hectares of dried up lake beds in the oblast.

Sukhanberdin looks at the problem in terms of pond fisheries since theyare being severely effected by the falling water levels. He stresses that maintaining such ponds is not difficult as long as water flow is preserved. However, the Syr-darya water that once flowed into the lakes has been diverted to the Aral Sea. Therefore, providing regular water flow is becoming a growing problem that must be solved if oblast pond fisheries are to grow and prosper. Sukhanberdin suggests experimental use of rice paddies to raise fry for release into water reservoirs as a way to expand Kazakh fisheries resources.

KAZAKH RURAL CONSTRUCTION TO BE INCREASED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 July 1982 carries on page 1 an 800-word boldface editorial entitled "The Enhanced Pace of Rural Construction." L. I. Brezhnev spoke of a social reconstruction of rural Russia in his speech to the May Plenum of the CC CPSU. This will involve major efforts in housing, culture and services, road construction, etc., to make rural labor more productive. The editorial reviews what is being done to achieve these goals in rural Kazakhstan with special reference to the role of mobile construction colonies and the need to overcome any and all deficiencies in their operations.

ROAD BUILDING TO INCREASE UNDER NEW FOOD PROGRAM

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 27 July 1982 carries on page 1 an 800-word boldface editorial on the importance of road building for the new party food program. This road building is to eliminate differences between urban and rural areas and will mark a turning point in the improvement of social and living conditions in agricultural enterprises. Transportation will play a special part in achieving this goal since the new food program can only be carried out based upon an adequate transportation system. Thus road construction and road renovation will receive a substantial part of the 160 billion rubles investment allotted to carrying out the new Food Program. Plans calls for construction of 130,000 kilometers of general roads and 150,000 kilometers of agricultural service roads by 1990 as part of the program. Kazakh road construction organizations that built more than 2,000 kilometers of new roads during the last five-year plan are now scheduled to build 8,000 kilometers this year alone. The editorial details past and present efforts to provide new and improved road links to agricultural enterprises in Kazakhstan and stresses the importance of the on-going two month shock campaign to get roads into shape for the autumn harvest.

KAZAKHS DEVELOP NEW METHODS TO STUDY SUBTERRANEAN COAL LAYERS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 17 July 1982 carries on page 3 a 1,400-word article by Doctor of Technical Sciences and KaSSR State Prize Laureat Yu. Veksler, professor at the Karaganda Polytechnical Institute, on new methods to study subterranean coal layers. The article is published under the regular rubric "Scientist's Rostrum."

The amount of coal mined in subterranean mines has grown considerably during the current five-year plan. In connection with this effort, many measures are being carried out to improve the safety and efficiency of underground mining.

Veksler described the work being carried out by his own institute and the KaSSR Academy of Sciences Seismology Institute to improve presently employed mechanical means of subterranean geological investigation. The problem is that mechanical means, involving drill samples, geological torpedos, etc., are time consuming even when used with computers to construct geological models. A more direct and instantaneous method of subterranean survey is needed. Veksler describes new seismo-acoustical survey and seismic holography methods.

CHIEF ENGINEER DISCUSSES CONSTRUCTION OF EKIBASTUZ TRANSMISSION SYSTEM

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 July 1982 carries on page 3 a 1,000-word interview with V. Saukhpen, chief engineer of the Ekibastuz Electrical Station Production Union, on current work to develop a transmission system for Ekibastuz power. The interview was by O. Galiev and is published under the regular rubric "Today at the Pavlodar-Ekibastuz Territorial Production Complex."

In the interview Shaukhpen is asked about overall progress at the Ekibastuz station, the two major transmission lines under construction leading towards the Urals and Central Asia and the problem of specialist cadres. Of the two major transmission lines, most progress has been made on the Ekibastuz-Chelyabinsk line with the Ekibastuz-to-Kokshetav segment soon to be completed. Some 1,500 transmission towers are already in place and lines are being installed along a 150 kilometer stretch. Planned completion date is the last quarter of this year when transmission will begin with a current of 500 kilowatts. Later, with the establishment of relay stations, current will be increased to 1,150 kilowatts. The line will be extended past Chelyabinsk to Uralsk and then to Surgit and on to connect with the Kansk-Achinsk Fuel and Energy Complex. Also part of development in this direction is an Ekibastuz-Omby line.

In the case of construction towards the south, towards Ortalyg and Central Asia, work is going on at a much longer, 10-15 year time table. The most progress so far has been along the Ekibastuz-Tselinograd section of the Central Asian line. Saukhpen stresses the importance of relay stations for carrying out transmission line construction plans and notes the enhanced demand for specialists generated by such relay stations.

CONSTRUCTION MATERIALS SHORTAGE SLOWS EKIBASTUZ DEVELOPMENT

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 23 July 1982 carries on page 3 a 1,700-word article by Sayitqazy Dosymov reporting on a recent visit to Ekibastuz on the occasion of an all-union, five day conference to acquaint journalists with the territorial-production complex and its components. In this context, Dosymov's article stresses complex components as parts of an integrated, intercoordinated whole with each individual production area serving and being served by others. Dosymov describes the State Rayon Electrical Station No 1 facility and the "Bagatyr'" mines from this point of view in particular. He notes that the latter mines are now producing coal above planned output levels for the year but records continuing construction delays as a major problem at the miners city of Ekibastuz. The principal cause is shortage of construction materials.

ICHTHYOLOGIST SEES END OF ARAL FISHERIES IN NEAR FUTURE

[Editorial Report] Alma-Ata QAZAQSTAN AYELDERI in Kazakh No 7, July 1982 carries on page 30 a 1,000-word article by Ichthyologist A. Bayimbetov on current problems and prospects of Kazakh fisheries. The article is published under the regular rubric "Twelve Months of the Year."

Some 70.5 percent of the earth's surface is covered by water, mostly in the oceans. Inhabiting these waters are some 25,000 species of fish. The overwhelming majority inhabit salt water and very few species are found in fresh water. (There are only about 1,000 species of fish in the enclosed seas and internal waters of the Soviet Union, about 155-160 species of which are found in Kazakhstan.)

Fish are valuable sources of food, feed, drugs, fertilizers, oils and industrial raw materials for man. In 1977, about 9.7 million tons of fish were caught in the Soviet Union including 36,150 tons in the KaSSR. Unfortunately, fish catches have been on the decline since then. One reason is the damming of natural streams and the building of artificial reservoirs. Such efforts have reduced fish habitats and interfered with fish reproduction. The result has been a drastic reduction in fish, even highly important commercial fish. In 1961-1962, for example, 140,000 centners of carp were caught in the KaSSR but only 56,400 to 88,800 centners during the years 1976-1978. Some once common fish have even become quite rare.

The Aral is the largest single source of fish for the KaSSR but yields have fallen drastically in recent years, from 400,000-500,000 centners to 20,000-30,000 centners, due to the falling level of the sea and the increased salt content of its waters. In some areas fish cannot be caught at all. All this means, Bayimbetov laments, the total end of Aral fisheries in a few years.

In the last part of his article, Bayimbetov proposes solutions to republic fisheries problems and methods to protect fish resources, stocks of indigenous fish in particular. They include fish farms and seeding of reservoirs, breeding new varieties of local fish and acclimatizing foreign fish to Kazakh conditions, those of the Balkhash Basin in particular, and active measures to preserve the Aral and its fisheries. To this end Bayimbetov proposes, among other things, introduction of new, salt resistant fish and lake fish farming in the Aral Sea shallows.

Social and Cultural Affairs

KAZAKHS MAKE EFFORTS TO RESTORE ISLAMIC MONUMENTS

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 5, May 1982 carries on pages 10-11 an 1,800-word article by Marat Qulbekov on current Kazakh efforts to restore the great Islamic monuments of the past. The article is published under the regular rubric "BILIM ZHANE ENGBEK Archaeological Expedition."

Hundreds of thousands of years ago there were once beautiful, culturally, artistically and scientifically advanced cities in the Kazakh steppe. Archaeologists, in fact, note the existence of as many as 200 such large and small cities in the Kazakh steppe in the 11th and 12th centuries. All that remains today, however, are a few mausoleums and other buildings that confer a general idea of the glories of the past. Such monuments are living evidence of the culture and art of the people of those times and thus the party and the government have done their utmost to protect and restore them. One evidence of this concern are the 1976 Soviet and 1978 KaSSR Laws "On Protection and Use of Historical and Cultural Monuments."

Qulbekov reviews in detail efforts by scholars of the Alma-Ata Construction Materials Scientific Research and Planning Institute led by Sof'ya Suleymonqyzy Takibaeva to study and duplicate the ancient construction materials and ancient construction methods used in building the ancient monuments, the Akhmet Yassaui Mausoleum in particular. A special emphasis of the work of the institute is on study of the ceramic tiles so characteristic of the older kazakh and Islamic architecture.

EMIGRE PAPER HELPS IRANIAN KAZAKH CONTACT SOVIET RELATIVES

[Editorial Report] Alma-Ata BIZDING OTAN in Kazakh No 10, May 1982 carries on page 3 a 500-word unattributed article reporting on successful efforts by an Iranian Kazakh to reestablish contact with Soviet relatives through BIZDING OTAN. The Iranian Kazakh Demes went to Iran with his father and eight other brothers and sisters in the 1930s. Later, his father returned to the Soviet Union along with two of the sisters of Demes and a brother, Janbuz. To reestablish contact with these relatives, Demes wrote to BIZDING OTAN. The paper answered with a letter from Soltan Balqaiey of the TuSSR providing full details on Demes' family. The article stressed their success and prosperity. The number of persons mentioned as descendents of the three Soviet repatriots is witness to the prodigious birth rate of the Kazakhs in years past.

KAZAKH POPULATION GROWTH LOWEST IN CENTRAL ASIA

[Editorial Report] Alma-Ata QAZAQSTAN AYELDERI in Kazakh No 6, June 1982 carries on page 18 an 1,100-word article by economist Abdiqadyr Attapkhanov on declining population growth rates in the KaSSR. The article is published under the regular rubric "The Golden Threshold."

It is very clear that every young family plays a special role in maintaining population levels and that family size is directly connected with the size and quality of the labor force. This fact has become increasingly obvious in recent years and a decreased growth in the Soviet labor force was one of the factors singled out by L. I. Brezhnev in his report to the 26th Party Congress as hindering Soviet development. As a consequence a new Soviet demographic policy has been developed and is now being carried out.

Discussing these points in detail, Attapkhanov notes the rapid decrease in the Soviet population growth rate since 1960. He attributes the change to a drop in fertility of women aged 16-49 with the largest drop among women over 30. As a consewuence Attamkhanov goes on, women 20-30, 20-24 in particular, are responsible for most of the growth that is taking place, thus the current importance of young families in the Soviet Union.

Demographers, he goes on, have shown the need for three children per family if any growth in population is to take place (260 children per hundred families are necessary to maintain current population levels alone). Real growth, however, Attapkhanov emphasizes, must come from the third, fourth, fifth, etc., child.

Turning to Kazakhstan he records the same tendencies already noted on an all-union basis there also. Whereas 37.2 children were born per 1,000 Kazakhs in 1960, yielding a growth rate of 30.6 per thousand, the same figures were 24.0 and 15.9 respectively in 1980. As a result, whereas the number of Kazakhs in the Soviet Union increased by 46.2 percent between 1959 and 1970, the figure was only 23.7 percent between 1970-1979. This was well below the growth rates for other Central Asian peoples. The Uzbeks grew by 35.5 percent during the same period, the Tajiks by 35.7 percent, the Turkmen by 33.0 percent and the Khirghiz by 31.3 percent.

Kazakh growth rates, Attapkhanov concludes, are now below what is needed to master the potentialities of the republic and thus the call by D. A. Kunayev at the 15th Congress of the Kazakhstan CP for increased demographic growth in the KaSSR. Attapkhanov ends his article with a summary of the benefits and provisions of the new Soviet Family Law.

KAZAKH KOMSOMOL MAGAZINE INTRODUCES NEW SERIES OF FOLK MEDICINE

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 7, July 1982 carries on page 7 a 1,000-word article by Ethnographer Otegen Abdramanov on the folk practices of traditional Kazakh veterinarians. The editors of BILIM ZHANE ENGBEK promise that the article is the first of what will be a series on all aspects of Kazakh folk medicine. The editorial note cautions against identification of folk medicine with blind faith in the efficacy of "religious" treatments. In this vein, Abdramonov's article treats highly practical areas of Kazakh folk veterinary practice. He includes details on setting broken bones, and traditional treatments for damaged ligaments and muscles. He stresses the broad experience of the Kazakh people in these areas due to their long, close association with animals.

ALMA-ATA POLICE RAID BLACK MARKET FOR BOOKS

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 16 July 1982 carries on pages 10-11 a 2,400-word article by Aliya Bopezhanova and Musa Rakhmanberdiev on a police raid recently mounted by Alma-Ata authorities on an open air book black market held near the city. The article is published under the rubric "Conscience and the Law."

The two journalists visited the headquarters of the Alma-Atinskaya Oblast Department of Internal Affairs to report on a local black market in books. The police were aware of its operations but unable or unwilling to do much about stopping them. Finally, after being prodded, police plainclothesmen mounted a raid. They found a large open air bazaar attended by large numbers of buyers and blackmarketeers. The books on display were all new (the authors suggest that they came directly from state book trade warehouses; the sellers themselves, however, claim that the books were purchased in state bookstores at retail prices) and exhorbitantly priced. The sellers, moreover, were often leading citizens, including a chief engineer of a planning institute, a senior research worker and several teachers. Many turned out to have records of previous arrested for black marketing. Ten were arrested and questioned, but they told police little or nothing about the real sources of the books they sold.

Disturbed by the apparent broad scope of the problem, Bopezhanova and Rakhmanberdiev talked with a deputy chief of the state book trade who is quite willing to speak of a Soviet public highly interested in books and of shortages of popular titles but largely avoided the question of possible direct black marketing of new books from book trade warehouses. The deputy chief suggested that creating book exchange points would be one solution to the problem of book shortages.

The 10 arrested black marketeers were fined 50 rubles each, and their books and profits were confiscated. Bopezhanova and Rakhmanberdiev, however, were unimpressed by police and book trade responses to the problem. They thought that the fines and seizures were inadequate in view of the large profits being made.

STATUS OF EAST TURKESTAN KAZAKHS OUTLINED

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 7, July 1982 carries on pages 10-11 a 1,600-word article by Lucpan Badavamuly on the present state and history of Kazakhs and other Altaic minorities of East Turkestan. The article is published under the rubric "Answers to Your Questions" and was published in response to a letter by worker Sarsen Imanqulov who wrote BILIM ZHANE ENGBEK to ask about the areas in Turkestan occupied by Kazakhs and for information on East Turkestanian Kazakhs in general.

Badavamuly discusses the geography and demographics of Eastern Turkestan, now known as Hsin-chiang. Regarding Kazakhs, who numbered about 1 million in 1958 and are the second largest (after the Uighurs) of 13 Turkestanian Altaic nationalities (totaling more than 6 million), he provides an area by area breakdown of settlement with attention to the history and background of each group. Those discussed included the Uisin (claimed to be descendents of the ancient Wu-Sun of the Chinese sources; 100,000 in the Ili area); the Qyzay clans (100,000 in the Ili area); the Abag-Kerey (associated with the ancient Mongol Kereyid, now Turkic-speaking; 150,000 in the Altay), whose close relatives, the Ashamayly, live in the KaSSR, and the Nayman Kazakhs in the Tarbaghatay. He also records 60,000* Abag-Kerey Kazakhs in neighboring parts of the Mongolian People's Republic; 10,000 Kazakhs in Turkey, whence they fled Chinese oppression, and others in India, Pakistan and Afghanistan. Other Chinese People's Republic Kazakhs are found in two autonomous hsien in Kan-su and Ching-hai Provinces.

In his historical survey, Badavamuly repeatedly emphasizes long term Chinese oppression of East Turkestan Kazakhs. This oppression was often exerted through the traditional "feudal" structure of Kazakh society. In addition to the Kazakhs, there are also 5 million Uighurs (1957); 80,000 Khirghiz (1962); 65,000 Mongols (1962); 10,000 Uzbeks and 45,000 other "minorities" in Eastern Turkestan. Chinese numbered 5 million in 1957.

* This figure is too low and is probably as estimated from the early 1970s. The Kazakh population growth rate during the period 1956-1963 was 3.86 per hundred in Mongolia. If this rate has continued there must now be nearly 100,000 Kazakhs in Mongolia. This amounts to almost 6 percent of the total population. Note that other population figures given by Badavamuly are also very old. [Translator Note]

International

KAZAKHSTAN FRIENDSHIP SOCIETY CHIEF REVIEWS ACTIVITIES

[Editorial Report] Alma-Ata KOMMUNIZM TUGHI in Uighur 14 July 1982 page 3 carries a 1,200-word article by Zh. Qaliyev, chairman of the Presidium of the KaSSR Society for Friendship and Cultural Relations With Foreign Countries, on the activities of the Society. According to Qaliyev, Kazakhstan conducts cultural relations with 97 counties, and these connections are expanding. In 1980 the Society sent various materials--albums, postcards, books, record, etc.--to 1,094 addressees, while in 1981 that figure rose to 1,178. Also, the Kazakhstan Friendship Society sends out a bimonthly information bulletin "Soviet Kazakhstan Today" in six languages. Last year more than 120 people from Kazakhstan traveled through the Society to 13 foreign countries, mostly to Syria, India and the United States, where they participated in USSR Days exhibitions. Thousands of Americans visited the Kazakhstan exhibition daily in New York. In addition, last year the Society received 35 delegations and 87 tourist groups from 51 countries in Kazakhstan. The Society is steadily increasing the number of its regional branches.

JOINT SINO-IMPERIALIST VENTURES IN XINJIANG CITED

[Editorial Report] Alma-Ata KOMMUNIZM TUGHI in Uighur 21 July 1982 page 3 carries a 1,300-word article by O. Barlybayev [not further identified] on the policy of the Chinese Government to encourage cooperation with corporations from capitalist countries in the economic exploitation of the Xinjiang-Uighur Autonomous Region. Barlybayev lists numerous projects in which representatives of capitalist firms and the Chinese are jointly engaged. He notes, for instance, that construction was completed in the second half of 1981 under the supervision of Japanese and Hong Kong companies on the Tianshan factory, the largest wool-goods producing plant in Xinjiang. Other joint ventures include a mineral fertilizer plant in Kuqa, a cracking shop in an Urumqi petrochemical plant, an agro-industrial complex, petroleum exploration, etc. Enriched uranium from Xinjiang is even being surreptiously supplied to South Africa. In all, nearly 100 goods produced in the region are being sold by more than 20 states of the capitalist world. To interest foreigners in Xinjiang, the Chinese Government is encouraging foreign businessmen to visit the region under the guise of developing tourism. Hotels for foreigners are being built in Urumqi, Turpan, and Kashgar. In fact, more than 5,900 foreigners from the capitalist world visited Xinjiang last year, and more than 40 such groups are expected this year. The "open door" policy of the Chinese has led to the appearance of foreign advertising and goods on the streets of the cities of Xinjiang.

Economics

YOUTH URGED TO STAY IN KIRGHIZ VILLAGES

[Editorial Report] Frunze LENINCHIL JASH in Kirghiz 10 July 1982 page 3 carries a 900-word article by J. Akhunova, a special correspondent, on why young people are becoming dissatisfied with village life in Kirghizia. After receiving a letter from a sergeant in the Soviet Army who complained that many young people were leaving his native village of Dobolu in Tyan'-Shan'skiy Rayon for the city because they consider life there boring, the correspondent investigated the situation in the village. She discusses the neglect shown for the village House of Culture and recommends that more recreational activities be organized for young people. She also notes that of the 40 students who graduated from school in 1980, only 25 and of 37 who graduated in 1981, only 23 are working in their native village, and that only sporadically. Frunze SOVETTIK KYRGYZSTAN in Kirghiz 13 July 1982 page 4 carries a 900-word article by a special correspondent of the newspaper in Batkenskiy Rayon, on young people who have decided to remain and work in their native villages in the rayon. The introductory note to the article mentions that a rally took place recently of high-school graduates who have chosen to stay on the farms of Batkenskiy Rayon, in response to an appeal by the graduates of two other high-schools in Dzhety-Oguzskiy Rayon published previously in SOVETTIK KYRGYZSTAN. At the rally a special appeal to young people in the rayon was also proclaimed. The article describes the activities of some high-school graduates who are successfully working on the farms of the rayon. According to the article, it is outstanding that some graduates have raised this effort to the level of a patriotic initiative.

KIRGHIZ AGRICULTURE LEADER ON PRIVATE PLOTS

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 16 July 1982 page 3 carries an 1,800-word article by Iskender Muralalin, chief of the Agricultural Department of the KiCP Central Committee, on private, auxiliary plots in Kirghizia. In Issyk-Kul and Osh Oblasts, the sale of livestock and fodder to individuals for use on private plots has been well organized, and in Issyk-Kul'skiy Rayon special pig farms have been formed to increase the number of pigs available to citizens. But elsewhere, for instance on farms in Naryn Oblast, livestock raising on private plots has been hindered by poor work in this realm. However, in general, the practice of having citizens tend state-owned livestock on private land and working out agreements with them to supply the animals to the state for compensation has given good results. At the present time more than 60,000 hectares of land have been distributed for private kitchen-gardening in the republic, and while this total represents a valuable resource, according to Muratalin, the land thus allotted is not always being used effectively. Fodder is not being grown to the full capacity of the land, and some individuals are cultivating crops like flowers, garlic or sunflowers solely for profit, instead of potatoes and vegetables. According to him, the countryside has no need of such "landowners" who seek only profit.

WARNING ISSUED ABOUT FIRE DANGER DURING CURRENT KIRGHIZ DROUGHT

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 16 July 1982 page 4 carries a 1,000-word article by a senior inspector in the fire prevention administration of the KiSSR Ministry of Internal Affairs, K. Osmonov, and two others, about the possibility of fire damage to the harvest. In the summer, especially under the drought conditions currently prevailing in Kirghizia, workers must be alert to fire danger in collecting grain and fodder. However, on some farms insufficient attention to fire safety has contributed to losses: last year and in the first 5 months of this year, more than 2,000 tons of fodder has been destroyed by fire throughout the republic. The authors compare the fire-prevention efforts undertaken on two kolkhozes in Moskovskiy Rayon, stressing the deficiencies of one kolkhoz in this area.

KIRGHIZ YOUTH INFORMED OF STUDY OPPORTUNITIES IN CENTER

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 24 July 1982 page 4 carries a 700-word article containing the remarks of L. N. Chalagyzova, a responsible employee with the KiSSR Ministry of Higher and Secondary Specialized Education, and two other educators. They offer advice to young people in Kirghizia wishing to enroll in higher educational institutions in the center of the country. Citing the head of the Kirghiz Komsomol T. Aytbayev and Communications Minister V. Tyurebayev as examples of people from Kirghizia who received their educations in Moscow, one educator recommends that young people seriously consider study outside the republic. Chalagyzova notes that acceptance into such institutions for representatives of various nationalities outside of the regular competition began in earnest in the late 1920's and that each year hundreds of young people from Kirghizia continue to be accepted outside the competition. One educator maintains that the republic's industry requires many more experts in electronics, radio engineering, and electrical engineering. Central educational institutions have been training and sending to Kirghizia the experts needed to operate sophisticated machinery. In the textile and food industries, as well as in the training of teachers of Russian, institutions outside the republic have made considerable contributions to the training of specialists needed in the republic.

HIGH-ALTITUDE ANIMAL HUSBANDRY SHOULD BE ENCOURAGED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 28 July 1982 page 2 carries a 600-word article by Sh. Chertikiyev, a senior scientific associate of the Livestock Scientific Production Association of Kirghizia, on high-altitude livestock raising, particularly concerning the raising of yaks, in the republic. In its mountainous regions, such farms as the Kashka-Suu farm in Alayskiy Rayon, with most pastures at an altitude of more than 4,000-5,000 meters above sea level, are able to achieve good results in livestock production. However, in the republic as a whole, the effective use of pasture land is still a high-level desideratum. Although from 1966 to 1977 the number of yaks in the republic increased considerably to a population of 79,200, since that time there has been a decrease of 16.5 percent to 66,100 in 1980. According to Chertikiyev, the fault lies with the accounting procedures of the republic statistical administration, which classifies yaks with cows. Because the two animals differ in rate of maturity and yields of meat, the classification of the two in the same category has an adverse effect upon the development of yak-raising. That is, the policies of the KiSSR Planning Committee and the statistical administration have created a disincentive for farms in the raising of yaks. The matter is now under review, and Chertikiyev expresses the belief that it would help promote this sector if the appropriate organs resolve the issue properly.

TOBACCO GROWERS URGED NOT TO NEGLECT THEIR CROP

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 29 July 1982 page 1 carries a 1,000-word article on tobacco production in Kirghizia. According to the editorial, the number of farms that grown tobacco is increasing in connection with the division and specialization of labor in the USSR, and it would not be an exaggeration to say that tobacco has become the core of the economy of some rayons. However, this year the current drought and water shortage has complicated the prospects for tobacco growers. Since the basic agricultural sector in the republic is livestock breeding, some tobacco growers have undertaken the initiative to convert a significant portion of their tobacco fields to feed grains. Nevertheless, tobacco production should not be neglected, as has been the case in Osh Oblast. In rayons there in which tobacco has been grown in the past, this year work has been poorly organized, supervision has been unsystematic, and some fields have been allowed to dry up. On one sovkhoz, for instance, the peasants are preparing a good corn and fodder harvest, but the tobacco crop is being neglected. As a result, the danger that the plan for turning over tobacco to the state may not be met this year as in previous years has not been overcome. Also, in Osh Oblast in the rayons in which tobacco was replanted, the cutting of the leaves is being delayed, a fact that is contributing to losses and a lowering of quality.

THEFTS ON FARMS IN KIRGHIZIA DENOUNCED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 30 July 1982 page 1 carries a 900-word lead article on the theft of public property and funds on the farms of Kirghizia. The editorial claims that some kolkhoz and sovkhoz leaders are taking an indifferent attitude towards the loss of crops and various kinds of theft. In the first example cited, the chief accountant of a sovkhoz in Issyk-Kul Oblast, K. Alymbekov, was accused of pocketing 142,500 rubles along with two other officials and of bribing others. A case was brought against the criminals, Alymbekov was sentenced to the "highest criminal penalty," and the others were given long sentences. The theft of crops and farm animals is also criticized. Because the Ministry of Agriculture has not exercised firm supervision, some farm leaders have created conditions conducive to the theft of public property by delaying criminal investigations. In one case, a cashier and chief accountant appropriated 125,000 rubles over the last 5 years, but the investigators under the Ministry of Agriculture in Osh Oblast failed to uncover the thefts. Both investigators and criminals were called to accountability in court. Some criminals in many places are not being called to lawful, principled account, and conciliatory attitudes towards them are occurring. But an uncompromising struggle against such phenomena is the demand of the time.

Social and Cultural Affairs

PROBLEMS IN KIRGHIZ BOOK TRADE EXAMINED

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 1 July 1982 page 14 carries an 800-word arricle by Abdykerim Muratov, which appears under the headline "The Reader Speaks." His article is a follow-up to an article in the same newspaper 11 February 1982 on books of translation and the book trade in Kirghizia in general, which noted that some books which are hard to find--though published in editions of some hundred thousand in Russian--sit around gathering dust in bookstores in their Kirghiz-language versions. Muratov agrees that many Kirghiz translations are of low quality and maintains that the translation tasks in these cases are entrusted to translators of little experience who have never written anything. In addition, he complains that in neighboring republics translators have accumulated experience in translating books from the original languages, English, German, Arabic, etc., but not in Kirghizia. Another problem in the book trade arises from the distribution of books. For instance, Muratov claims that in his neighboring rayon, Aravanskiy, bookstores are full of Kirghiz books because the majority of the population there consists of other nationalities. He also recommends that authors try to educate the reading public so that it acquires a taste for books other than those about romantic love.

KIRGHIZ MONUMENT SOCIETY PLENUM REPORTED

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 8 July 1982 pages 14 and 15 carries an 1,800-word report by T. Abasbekov, deputy chairman of the Presidium of the Central Council of the Kirghiz Republican Society for the Preservation of Historical and Cultural Monuments, on the fifth plenum of the Society's Central Council. Abasbekov summarizes the remarks of various speakers at the plenum, beginning with the report of V. M. Ploskikh, a historian and deputy director of the History Institute of the KiSSR Academy of Sciences in charge of scientific work. While Ploskikh could point with pride to such efforts as the attempt to compile a "Collection of the Monuments of Kirghizia," he emphasized instances in which historical monuments have been allowed to deteriorate. For instance, the ruins of the former city Ak-Beshim in Chuyskiy Rayon, a monument of All-Union significance, had been entrusted to a kolkhoz, and last year barley was sown on the territory of the ruins. Similar abuses of historical sites were discussed by Ploskikh and attributed to a failure by economic and construction leaders to comply with the laws on historical monuments. The head of the Archeological Restoration Sector of the History Institute claimed that there were few archeological experts at his institute but that there were many tasks. However, another speaker and the chairman of the Preservation Society's Central Council presidium, K. K. Konduchalova, urged the History Institute not to delay any further the compilation of maps showing the location of archeological monuments. Such maps would help alleviate some of the current difficulties in preserving monuments.

KIRGHIZ WRITERS CRITICIZE LACK OF NATIONAL RESTAURANTS

[Editorial Report] Frunze KYRBYZSTAN MADANIYATY in Kirghiz 8 July 1982 page 2 carries a 750-word open letter by 10 writers living in Kirghizia addressed to Toktogul Chilebayev, the KiSSR minister of trade, and Abdrazak Mokenov, chairman of the Frunze City Soviet Executive Committee. The writers note that when they visit neighboring republics, they are often taken by their hosts to restaurants serving traditional Central Asian cuisine and to chaykhanas, that is, traditional teahouses. But while they are pleased at their hosts' hospitality, they are ashamed that their own capital city of Frunze has so few establishments of a similar nature. In fact, only a single chaykhana operates in Frunze, the one at the large kolkhoz bazaar, and it has several disturbing characteristics. The writers of this letter state that no one has the right to forget that the chaykhana has been an integral part of the whole culture of the Central Asian peoples. In addition, the writers call it regrettable that a "national canteen," in which the Kirghiz national drink kumiss was also served, was closed down a few years ago in Frunze. The writers ask why chaykhanas cannot be opened in various places to show others the abundance of present-day Soviet life. According to them, it would be a pleasure to offer guests to Kirghizia the best of Kirghiz cuisine, since greeting guests hospitably is an ancient national custom of the Kirghiz.

PROBLEMS IN ATHEISTIC EDUCATION SURVEYED

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 15 July 1982 page 15 carries a 1,700-word article by Sh. Temirkanov, who is not otherwise identified, on the organization of atheistic educational work in Kirghizia. The article is a contribution to the contest sponsored by the KiSSR Writers' Union and the newspaper KYRGYZSTAN MADANIYATY for the best articles on the topic of atheism. Temirkanov concentrates on the efforts made by the republic's Znaniye Society to instill a scientific, atheistic viewpoint among the population. Although the percentage of lectures devoted to atheistic topics in comparison to all lectures conducted by the Society exceeds the All-Union average, in many rayons of the republic work in this area is not being carried out systematically or effectively. In some villages there has been for a number of years much severe criticism of members of various sects, but no attention has been paid to the Orthodox Church or to Islam. Atheist work is especially important in the countryside because it is there that religious vestiges are most strongly retained. The shortage of child-care facilities and social enterprises, as well as the slow rebuilding of rural housing, has isolated women from production and complicated the loss of religious belief among them. In addition, while young people can go to the movies, clubs, and dances, there seem to be no other places for the retired to go except to the mosque or church. Professional lecturers must also enlist teachers, doctors, and other rural intellectuals in atheistic work.

LANGUAGE PURITY ADVOCATED BY KIRGHIZ TEACHER

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 22 July 1982 page 6 carries a 600-word article by a high-school teacher in Frunze who recommends that the Kirghiz language be treated with great respect. Although the author of the article himself was educated in a Russian school, has lived in many parts of the USSR and other socialist countries for nearly 30 years, and speaks Russian fluently, he has not neglected his native language and does not speak a jumbled Kirghiz. Contending that Lenin's views on the overuse of foreign words in Russian apply to all languages, he criticizes the use of more than 70 Russian words in place of their Kirghiz equivalents in an introduction by Kengeshbek Asanaliyev to a book by Kirghiz writer Chingiz Aytmatov. If noted literary scholars write such a mixed language, he wonders, what kind of lesson will young people derive from it?

FOLLOWERS OF CHRISTIAN SECTS WARNED TO OBEY LAW

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 25 July 1982 page 3 carries a 1,500-word article by V. Il'inskiy, identified only as a journalist, about the underground activities of certain members of Christian sects in Kirghizia. Il'inskiy states that while most believers uphold their civic responsibilities, some people carry their religious devotion to extremes, falling into the trap of bourgeois propaganda and wittingly or not becoming its "sacrificial lambs." Certain followers of the Evangelical Baptist Church stated in a letter to the church hierarchy that they would provide bail for their fellow believers who are "illegally" persecuted for their belief in God. The article names a dozen signatories of the letter, who are also said to admit that a certain Kozorezova is chairman of an organization called "Fraternal Council of the Imprisoned"--an organization characterized as illegal and reactionary--and that propaganda sessions have taken place in various homes. The article contends that those proclaimed guiltless by the authors of the letter have in fact committed crimes; the law does not permit the propagandizing and teaching of religion to others. The plea of these Baptists for justice does not give them the right to break the law and behave like hooligans towards the authorities, as was the case August 6, 1981 towards the deputy chairman of the Alamedinskiy rayispolkom. But whenever the authorities call to account those who venture outside the law, a hue and cry about persecution of believers is raised. For instance, a certain V P. Khaylo in the Ukraine became a cause celebre among the Baptists of Frunze and other parts of Kirghizia, even though, according to Il'inskiy, after serving 7 years in prison for stealing state property, he returned to his anti-social ways. Also, the former leaders of another sect, the Adventist-Reformists, characterized as a most reactionary and fanatical sect, A. V. Patushnyy and G. V. Dolbineva, had avoided work, abandoned the Soviet way of life, and evaded residence registration. But they have been called to account. Il'inskiy mentions other cases in which members of Christian sects have violated Soviet laws, including the case of Genadiy Sipko (born in 1962) who refused to take the military oath. His older brother, A. Sipko, a clergyman in the Frunze community of Evangelical Baptists, evidently influenced Gennadiy's behavior, and thus Il'inskiy asks whether such religious leaders have any moral right to educate believers, if this education leads to violations of the law. He answers, of course not.

EDITING OUT NEGATIVE REFERENCES TO RUSSIANS DISTURBS KIRGHIZ LITERARY SCHOLAR

[Editorial Report] Frunze ALA TOO in Kirghiz No 7, July 1982 pages 127 to 133 carries a 4,500-word article by Kumon Rysaliyev, a candidate of the philological sciences, who is critical of efforts by editors to correct or improve upon the texts of literary works, particularly those belonging to the literary heritage of the Kirghiz. Rysaliyev discusses at first modifications of a stylistic nature, comparing certain passages from a novel by Mukay Elebayev initially published in 1936 and reprinted in 1974. He criticizes the changes he cites and maintains that while it is sometimes quite necessary to alter some words and expressions, the main aim of an editor should be to avoid damaging the notion that what is published is what the author actually wrote and to avoid interfering in the author's "creative laboratory." He notes that most of the changes were introduced in the first half of the 1950's but are no longer appropriate. However, what seems to concern Rysaliyev more are corrections made in texts because, as he describes it, the editors appear not to understand clearly what the author originally meant. Although Rysaliyev does not say so explicitly, several of his examples demonstrate that he disapproves of editors who have omitted negative references to Russians or Cossack Russians in Kirghiz literary works. For instance, in the version of Elebayev's novel published in 1936, one passage describes a Russian who has lived in Kyzyl-Kyya for some time in prerevolutionary times. A sentence referring to a general Kirghiz opinion of a man who comes with only a cart horse to his name and grows rich was omitted in a later edition. Another omission was the characterization of a certain town as a "Cossack Russian town," which along with other deletions makes it difficult for a reader to understand why the hero, a teenage Kirghiz boy, was afraid to pass through the town. Rysaliyev states that this seems to have been done only as the result of being especially careful lest the editor be blamed for letting such sentences through the editorial sieve, but according to him, "in fact, there is nothing to be fearful of here." He attributes the alterations in the texts to "vulgarism" in Kirghiz literary criticism and at the overall situation at the beginning and end of the 1940's and in the first half of the 1950's and to the fact that nearly all of the editors at the time did not have a very correct understanding of textual criticism. And despite advances in the culture and science of the republic since that time, insufficient attention has been paid to formulating principles and guidelines for editing the texts of the literary heritage. While Rysaliyev is encouraged by the 1980 editing of Mukay Elebayev's work, he is still concerned that readers are not informed of the textual distortions of the 1974 version. While there has been a little discussion of textual issues in the media, it has been insufficient, according to Rysaliyev. Special care must always be taken to be faithful to the literary heritage, or otherwise "we cannot pass on the literary heritage to future generations in its genuine form." Editors should not be entitled to make corrections as they please, but through the exchange of opinion in the media, basic principles for dealing with texts can be objectively worked out.

EXCESSIVE CELEBRATIONS AT CALL-UP CRITICIZED IN KIRGHIZIA

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 4 July 1982 page 2 contains an 800-word account by A. Usubakunov, a correspondent for the newspaper, of village meetings in Ak-Suyskiy Rayon. Among the matters discussed at the meetings were heavy drinking by women, especially at the time of the death of a relative, and excessive celebrations when a young man is inducted into the armed forces. According to one village elder, a "new" custom has come into being in the village of Maman. When a young man is called into the armed forces, guests are invited three times, three sheep are slaughtered, and three or four cases of vodka are brought. At the first celebration, the boy receives blessings from the village elders, at the second from his close relatives, and finally from his friends and peers. Usubakunov asks when the bestowal of blessings was ever accompanied by vodka "among us." One mother and father "tossed a poor man's yearly salary to the winds" getting blessings for their son at induction and offering sacrifices when he returned. Usubakunov wonders if this could be called a "new custom."

KIRGHIZ DOSAAF HEAD ON REPUBLIC ORGANIZATION

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 7, July 1982 pages 75-80 carries a 2,400-word article by Major General Kalinur Usenbekov, chairman of the Central Committee of the KiSSR Voluntary Society for the Promotion of the Army, Aviation, and Navy, and a Hero of the Soviet Union, on the organization he heads. After a brief history of military support organizations in Kirghizia, Usenbekov notes that of the 700 armed forces members from Kirghizia who have earned the title "Hero of the Soviet Union," 12 are Kirghiz. At the present, DOSAAF organizations and the Komsomol are attracting the young to various forms of military-patriotic education. In the republic there are now 4,573 primary organizations of DOSAAF located in all enterprises, farms, and educational establishments. Some exemplary activities of individual organizations are cited, especially in connection with sports. Usenbekov also maintains that military-technical types of sports are being conducted well in Kirghizia, and that it is one of the leading republics in the USSR in this respect. Teams from the republic were well represented in union and zonal competition, but more needs to be done to expand mass participation in these sports.

TURKMEN SSR

Economics

BETTER CONSUMER SERVICES FOR COUNTRYSIDE

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 8 July 1982 p 1 carries a 1,200-word lead editorial on the expansion of the trade network in the countryside. It is noted that "the Turkmenistan Consumers Cooperative exceeded the goods turnover plan in the first 6 months of this year and sold 3.7 million rubles of goods above the plan to the rural population." However, "despite successes in rural trade and measures implemented to perfect its structure, there are still some shortcomings and flaws in this important work. Regrettable events such as cheating consumers to extract more money from them, hiding scarce goods and speculation are hardly nonexistent."

CALL FOR EFFECTIVE USE OF LOCAL LABOR

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 4 July 1982 p 2 carries a 1,300-word article by A. Mukhammedov, director of the Ashkhabad Placement and Information Bureau, on the need to improve utilization of local resources. He notes that "as research has shown, Turkmen women who are currently unemployed are basically occupied with housework or private enterprise." Further, that "last year in the Ashkhabad Repair-Construction Trust 2,071 man-days were lost, and 1,206 man-days in the Housing Construction Combine were lost." It is said that "measures must be strengthened against violations of the work order." Also, "one must strengthen demand and study the effective utilization of labor, economizing and the application of labor resources."

MORE ATTENTION MUST BE GIVEN POULTRY, ANIMAL HUSBANDRY

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 1 July 1982 p 1 carries a 1,200-word lead editorial on the necessity to pay more attention to animal husbandry and poultry operations in some rayons. With regard to the USSR Food Program it is said that in kolkhozes in Tagta and Sakarchaga rayons "insufficient attention is given the growth of animal husbandry. In these enterprises zootechnical demands have been neglected and feed has not been used economically. As for enterprises in Saragt Rayon, the road has been opened to a decline in the poultry population." The editorial notes further that "local party, soviet, trade union and Komsomol organizations must strengthen demands on enterprise managers who view animal husbandry cheaply."

WEAK IDEOLOGY CAUSES UPSURGE OF ISLAM

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 13 July 1982 page 3 carries a 1,600-word article by A. Tuyliev calling for more militancy in the approach to atheistic education. He notes that "in places where political education and ideological work is weak, religious representatives attempt to draw people to their side. Even some youth are entwined in the web of religion." Furthermore, "even now one runs across those keeping traditions like the galyng [bride price] and gaytarma [the bride's returning to her parents after 1 month of marriage] which do major damage to the life of youth within the context of useless remnants of the past." Other harmful aspects include faith healing and marking certain feast days.

REMNANTS OF THE PAST TO BE COMBATTED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 17 July 1982 page 1 carries an 1,100-word lead editorial on the need to combat "harmful remnants of the past." It is stated that "the firm struggle of every communist and working man to bolster the economic strength of our country is intimately linked with the significant, courageous, principled and unremitting struggle against harmful remnants of the past." Culpable in this respect are "not only those following harmful remnants of the past and religious believers but also those who say 'thus it is in Islam' and 'this is the tradition of our ancestors,' as well as those who take part in religious holidays and practice similar reactionary traditions and harmful remnants of the past." Party members are asked to exercise greater vigilance.

TRUTH ABOUT 'HOLY' PLACES REVEALED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 20 July 1982 page 2 carries a 2,000-word article by O. Palvanova and A. Khayydov, both workers in the Scientific Atheism Section of the Philosophy and Law Department of the TuSSR Academy of Sciences, on the fallacious nature of the shrines and holy places of Turkmenistan. "Most of the 'holy' places in Turkmen territory are the graves of the representatives of Sufism." The philosophical orientation of the Sufism of the past is discussed; as for the present, "those who call themselves ishans [a Muslim religious dignitary, similar to a mullah] today are wholly religious illiterates but, according to Sufi thought, have taken on the 'holiness' of their ancestors. Thus, there are many 'sacred' graves in our republic." It is mentioned that "in the Azerbaijan SSR and Iran especially, large trees are called pir [a spiritual teacher, patron saint or founder of a dervish order]. It is noted further that "religious believers consider some wells to be holy when located together with trees." In addition to such traditional holy places or shrines, "one runs across newly created 'holy' places in the republic." The authors call for more enlightenment.

HISTORY OF SHIPS WITH TURKMEN NAMES SUMMARIZED

[Editorial Report] Ashkhabad ADABIYYAT VA SUNGAT in Turkmen 23 July 1982 page 14 carries a 1,350-word article by Boris Paramonov in which he discusses ships in the 19th and 20th centuries bearing Turkmen names. Noting that some Turkmen place names have never been used for ships, he adds that "ships bearing the names of our southernmost cities are a matter for the future."

YOUNG CRITICS CLUB FORMED

[Editorial Report] Ashkhabad ADABIYYAT VA SUNGAT in Turkmen 9 July 1982 page 5 carries a 2,000-word report on a discussion held at the recently formed "Young Critics Club," which was brought into being by the criticism department of ADABIYYAT VA SUNGAT because "it is no secret that there is a shortage of young critics." One of the problems confronting them is that "the existence of poetry containing weak, dubious, pointless, even incorrect thoughts is no secret." Another problem is plagiarism: "For example, they take an idea from Yesenin or Yevtushenko and write a poem. It does not occur to them that this is plagiarism, and they think they have reexpressed this idea especially powerfully and effectively." The "Young Critics Club" is to combat these tendencies.

TURKMEN WRITERS COMMITTED TO USSR FOOD PROGRAM

[Editorial Report] Ashkhabad ADABIYYAT VA SUNGAT in Turkmen 16 July 1982 pages 1-3 carries a 1,500-word report on a meeting of the Turkmen Writers Union Presidium at which members were addressed by Tashli Gurbanov. "In mentioning the contribution of Turkmen writers in the implementation of the Food Program, he discussed works describing men who served the land." He said further that "writers going to the village, the kolkhoz and sovkhoz must be turned into a major event." However, he adds, "we know of some masterworks dealing with rural workers. Recently, however, only a few of such works and publicistic articles have been created. We writers must, in cooperation with the mass media--newspapers, radio and television--turn our attention to the basic theme of the village."

HISTORICAL MONUMENTS NEGLECTED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 28 July 1982 page 4 carries a 1,500-word summarization of letters received by SOVET TURKMENISTANY on the restoration of historical and architectural artifacts. Most of them point to neglect on the part of the TSSR Ministry of Culture, which has taken the line that "it is difficult to find enthusiastic youths who will devote themselves to this work. The basic reason must be that there has been little talk to youth about the honorable and complex work of restoration." The point is made that until sufficient cadres have been trained, the restoration of significant historical and architectural monuments on Turkmen soil will be lagging.

Political Affairs

WORK ETHICS, LOYALTY NEEDED FROM PARTY LEADERSHIP CADRES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 30 July 1982 carries on page 1 an 800-word lead editorial titled "Position and Obligation." The editorial emphasizes that leadership cadres must pay special attention to labor discipline problems and the ethical-political climate within labor collectives. The leader's ethics and loyalty to his obligation set the standard for others. Consequently, the leader must subordinate himself to the Leninist work method, combat bureaucratic tendencies, and never abuse his positions. He must display the essential qualities of simplicity, modesty, concern, responsibility, demandingness, and fairness. The editorial cites the chairman of the Buvay Rayon People's Control Committee, A Egamov, who abused his position by procuring a large apartment for his married daughter, having his courtyard asphalted at state expense, and trading his old color television set for a new one.

GREATER ACTIVISM DEMANDED FROM RURAL PARTORGS, LEADERS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 July 1982 carries on page 1 a 1,000-word lead editorial titled "Rural Communists." The editorial points out that rural party organizations in Uzbekistan have 300,000 members of which 190,000 are closely linked to agricultural production. Primary partorgs, as well as rayon and oblast partkoms, must devote special attention to the performance and skills of party leaders and specialists in the rural sector. Unfortunately, the editorial continues, a number of rural partorgs display insufficient demandingness toward communists who show little activism in the primary task of meeting plan goals. Citing the case of a kolkhoz chairman in Turtkul Rayon whose egotism and laxity toward crop thefts led to the failure of the kolkhoz to meet its plan, the editorial stresses that rural communists and partorgs must be highly demanding and activist in everyday tasks, fight for the moral development of cadres, and efficiently and productively utilize all available resources.

PARTKOMS URGED TO SUPPORT KOMSOMOL WORK

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 2 July 1982 carries on page 1 an 800-word lead editorial titled "The Development of Youth." The editorial points out that the republic Komsomol organization, with more than 3 million members, has been organizationally strengthened in recent years. Currently, some 190,000 of its members are working on 7 all-union, 34 republic, and 246 oblast, city and rayon construction projects, which are one of the most effective means of instilling social activism and the concept of friendship of peoples in them. The editorial urges partkoms to support the patriotic initiatives of Komsomol youths by helping primary Komsomol organizations to implement party congress decisions and to instill in Komsomol activists a sense of responsibility toward assigned work.

DZHIZAK OBKOM SECRETARY ON SCIENTIFIC INFORMATION COUNCILS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 29 July 1982 carries on page 2 a 1,000-word article by S. Nishonov, secretary of the Dzhizak Obkom, titled "Beginning Today." The article describes the work of information groups and councils on science and technology being formed in every organization and institute in the Dzhizak Oblast. The councils provide information and advice on new developments, techniques and cost-cutting principles. For example, one council at the Department of Physics of the Dzhizak filial of Tashkent Polytech has helped introduce new production techniques at a plastics plant, while another at the "Dzhizakstepstroy" Territorial Administration has pushed the adoption of cost-cutting proposals. These councils are an important component of the efforts of oblast partorgs to orient the planning and conduct of scientific research toward practical application in production.

IDEOLOGICAL WORK STEPPED UP IN COTTON FIELD STATIONS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 17 July 1982 carries on page 2 a 1,100-word article by E. Hayitboyev, chief of the agitprop department of the Namangan Obkom, titled "Center of Political Educational Work." The article describes oblast party activities aimed at turning cotton field stations into mass cultural and political educational centers--"a second home for the farmers." There are presently 1,820 field stations in the oblast. Most of them are built according to a standard plan, have sufficient inventories of radio and television sets, gas plates, and sports equipment, and provide various services such as trade, warm food, and childcare facilities. Nearly 10,000 agitators and some 2,800 political information officers operate in these field stations, conducting lectures and conversations on themes such as the political situation in the USSR, the Food Program, communist ethics, and the international situation.

Economics

REPORT ON WATER WORKS CONSTRUCTION

Tashkent SOVET OZBEKISTONI in Uzbek [Editorial Report]

4 July 1982: A 100-word report states that the 106-kilometer long Ulyanov Canal in the Karshi Steppe has been reconstructed to help irrigate 15,000 hectares of cotton-growing farms in a newly reclaimed sector. Now, the canal can carry 132.2 cubic meters water per second.

4 July 1982: A 100-word report states that pumps made at the Ural Hydromachinery Plant imeni Ya. M. Sverdlov have passed their first test at pumping station 7 of the Karshi hydro-complex. Four such pumps will move water from the Amudarya up to the Talimardzhan Reservoir, enabling it to hold 1.6 billion cubic meters water annually.

28 July 1982: A 200-word UzTAG report states that the final weld has been made on the 90-kilometer long pipe canal which will carry 200,000 cubic meters water per 24-hour period from Tuyamuyin north through the Druzhba, Khazarasp, Bagat, Khanka, and Urgench Rayons to Urgench. In 1983, the canal will be extended another 40 kilometers through the Shavat and Gurlen Rayons.

FISHING INDUSTRY NEEDS INTERAGENCY COOPERATION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 July 1982 carries on page 2 a 1,200-word article by A. Mahmudov, chairman of the UzSSR State Committee for the Fishing Industry, titled "The Superiority of Collaboration." Mahmudov begins this article, published in conjunction with Fishermen's Day, with a review of the recent intensification of development of the fishing industry. Manmudov states that considering the annual decline of republic water resources and the lack of available water and land, the fishing industry must increase productivity by reconstructing existing basins and widely introducing scientific and technological advances. Viewed as a component of the agro-industrial complex, the fishing industry must depend for its further development on the cooperation of a number of ministries and agencies. Individual enterprises must begin to use their water basins, where suitable, to grow fish. The Ministry for Land Reclamation and Water Resources must step up construction of fish ponds near reservoirs and natural water basins. The Ministry of Procurement must produce better quality feeding mixtures, with more protein, for fish. Obispolkoms and local organs of the Ministry for Land Reclamation and Water Resources must release adequate water to the fisheries. The Ministry of Higher and Secondary Specialized Education is behind in training needed fishing industry specialists. The Ministry of Trade and the "Uzbekbirlashuv" must increase the number of stores trading in fish and must outfit them with necessary equipment. Finally, Mahmudov calls for increased supervision to guard against pollution of fishing waters by industrial wastes and chemicals.

LABOR PROBLEMS NOTED AMONG TERMEZ PORT TRANSPORT WORKERS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 24 July 1982 carries on page 2 an 800-word article by newspaper at-large correspondent R. Abdurahmonov titled "River Transport Workers on the Job." The correspondent recalls that in 1957 the small docking facility [pristan'] at Termez on the Amudarya River was changed into an international port for shipping to Hairatan and Sherkhan ports in Afghanistan. In 1964, freight operations at Termez were switched to the brigade method, and in 1974, at the request of these brigades, automated freight handling machinery was installed. According to Javdat Sultonbekov, chairman of the port trade union committee, equipment breakdowns, absenteeism, and freight damage, have resulted in labor discipline problems. Whereas transport workers handled 630,000 tons freight in the last quarter of 1981, this figure declined in first quarter of 1982. The trade union committee and the port authority have issued regulations covering labor discipline and freight and equipment security, and have hiked pay incentives, which have improved second quarter 1982 results. The correspondent concludes with a list of outstanding brigades and vessels. The latter are the "Oleg Koshevoy," captained by I. A. Simkovskiy, the "Brest," captained by Sh. Bozorov, the "Shaydakov," captained by Kashshof Ismoilov, and the "Ashkhabad," captained by Mamed Rajabov.

ECONOMISTS SUPPORT EXPANSION OF PRIVATE PLOT ECONOMY

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 23 July 1982 carries on page 3 a 1,500-word article by Prof A. Tokhtaboyev, chairman of the Political Economy Department of Tashkent Medical Institute, and Docent K. Yoldoshev, senior scientific associate in the Political Economy Department of Tashkent Agricultural Institute, titled "Private Plots." The authors emphasize the growing and future importance of private plots in meeting population requirements for food. In 1970, private plots accounted for 20.8 percent of vegetables and fruit and 48 percent of dairy and meat products produced in Uzbekistan. By 1980, private plots were producing 36 percent of potatoes grown in the republic, 49 percent of vegetables, 52 percent of melons, 45 percent of meat, 61 percent of milk, and 37 percent of eggs. Because collective and state farms are specialized in major crops, they are falling increasingly behind in meeting food demands. The authors feel that expanding the private plot sector can help fill this gap. Turning to the problem of population growth, especially in rural areas where 59 percent of the population lived according to the 1979 census, the authors suggest that surplus rural labor, 15 percent of that population, can be usefully engaged in the private sector. The average number of work days for those engaged in agricultural production is 180-220 days a year, a figure that increases in areas where agriculture is heavily mechanized. The authors propose that the private plot economy can also tap this labor force. They also urge that private plot farmers should try for higher productivity. In 1980, there were 921,000 milk cows on private plots--68 percent of the total number in the republic--which averaged 1,500 kilograms of milk per cow, considerably below the average on collective and state farms. Increasing their productivity will result in greater amounts of milk available to the public. They conclude by proposing improved relations and ties between private plot farmers and state and other organizations.

UZBEKBIRLASHUV CHAIRMAN SURVEYS CO-OP SECTOR

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 July 1982 carries on page 3 a 1,100-word article by Z. Sirojev, chairman of "Uzbekbirlashuv," titled "Contribution of Consumer Society Workers." Sirojev notes that Uzbekistan consumer co-ops account for 46 percent of the turnover in retail goods, bake 60 percent of the bread, and sell 70 percent of the vegetables, 98 percent of the fruit and berries, 60 percent of the raw hide, and 100 percent of the wool and fur produced in the republic. Still, Sirojev, admits, supply of food to the population remains one of the most important problems on the agenda. Sirojev feels that improving the year-round supply of food will require fuller utilization by co-op organizations of the produce from private plots. He proposes that long-term agreements be signed with private producers to buy their meat, potatoes, vegetables, and fruits. Thus far in 1982, consumer co-ops have already purchased from them 67,000 tons of meat, 670,000 tons of vegetables and potatoes, and quantities of eggs, chicken, and fruit. Sirojev also calls for increasing the size of cattle herds on the 220 farms run by co-op organizations in order to meet 1982 goals calling for 90,000 tons of meat and a total of 325 million rubles in food products. The chairman concludes with remarks on ties between

Uzbekistan and foreign co-ops. In the last 5 years, more than 100 delegations from foreign co-ops have visited the republic, and two seminars for leaders of co-ops in Asian, African and Latin American countries have been held in Tashkent. He concludes with the statement that Uzbekistan consumer co-ops actively participate in all foreign trade operations handled through "Tsentrosoyuz."

MEASURES URGED TO COUNTERACT SEVERE WATER SHORTAGE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 21 July 1982 carries on page 1 a 900-word lead editorial titled "The Responsibility of the Irrigator." The editorial states that the republic is feeling an acute shortage of water this year. The Andizhan Reservoir, which held 1.863 billion m^3 water in 1981, now holds 491 million. The Kattakurgan Reservoir has 184 million m^3 water this year compared to 494 million last year. Water tables are also falling at the Karkidan, Uchkyzyl, Charvak, Kasansay, and Charvaksay Reservoirs, and in the Amudarya, Syrdarya, and Chirchik Rivers. Cautioning against becoming "frightened" by this situation, the editorial urges compliance by irrigators with measures aimed at conserving water. It points to shortcomings such as irrigating cotton plants without first weeding and cultivating around them, not keeping irrigation ditches clean, and allowing water to spill over into drainage ditches, roads, and field fringes. Auxiliary water sources such as springs, wells, and drainage ditches, must be tapped, and all pumps must be operated at full power. The editorial calls on party and soviet organizations to strengthen discipline among field workers, especially irrigators, of agricultural organs.

MUBARAK GAS REFINERY LABOR PROBLEMS DISCUSSED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 July 1982 carries on page 1 a 900-word article by newspaper correspondent M. Karomov titled "Where Is Its Past Glory?" Karomov states that the 840-man collective of the Mubarak Gas Refinery pledged to refine 15 billion cubic meters gas and to produce 375,000 tons of sulphur during 1982, but it has already reneged by fulfilling the five month plan by only 94.3 percent. Karomov spoke to the plant's partorg secretary and its deputy chief engineer who fixed the blame on a shortage of skilled workers and a high turnover in the work force. The plant is designed to employ 917 workers, including 217 skilled workers--it is short 85 compressor machinists, machine operators, and metal workers. The chief of the plant's planning department said that 405 workers quit in 1981 of which 41 were forced to due to lack of sufficient public facilities. Thus far in 1982, 132 workers have quit, and many are not being replaced. He identifies the causes of the high turnover as insufficient housing and inadequate cultural and educational services. Only 17,000 of the plan's 33,000 square meters of housing were constructed in 1981, and only 3,000 of the plan's 54,000 square meters of housing have been completed thus far in 1982. Since the plant's labor force is largely young, they become easily bored in Mubarak which has only a few clubs and movie theaters. Trade and public dining services are completely substandard.
M. I. Meleshchenko, deputy chief of "Soyuzuzbekgazprom" Administration, pointed to inadequate electric power as another cause for the high turnover. As the

three production lines at the plant have gone on station, power demands have increased such that the present heat and power plant cannot provide full power. He states that the "Uzbekgidroenergostroy" has been dragging its heels on construction of a new power plant for the past 2 years. The correspondent concludes by urging the Mubarak Raykom and the "Soyuzuzbekgazprom" to take immediate steps to save the refinery from backwardness.

NEW GAS DEPOSIT TAPPED IN BUKHARA

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 July 1982 carries on page 3 a 200-word UzTAG report titled "New Gas Deposit." The report states that geologists of the Alat Expedition team of the "Uzbekneftegazgeologiya" Administration have tapped gas through the drilling pipe at the Devalkak exploratory site near Karavulbazar settlement in Bukhara Oblast. It is the third deposit discovered this year in the oblast. Other expedition teams have located gas deposits on the southwest slopes of the Gissar Mountain Range and at the locality called Gharbiy Tegirman. According to information released by the UzSSR Ministry of Geology, the composition of the newly found gas is less mixed with sulphur than present gas fields in this area.

CONSTRUCTION INDUSTRY PROBLEMS DISCUSSED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 24 July 1982 carries on page 1 an 800-word lead editorial titled "The Foremost Job of Builders." The editorial notes that republic builders handed over for use 1.3 billion rubles in fixed capital assets and reached plan targets for housing, schools, children's and medical facilities during the first 6 months of 1982. During the second half of 1982, they must finish 3 billion rubles in production capital assets, 2 million square meters housing, schools for 80,000, and preschool facilities for 20,000. The republic council of collectives of construction organizations recently met to discuss ways to accomplish these goals, and pointed out the need for further improvement in the organization of labor, better utilization of existing resources, activation of reserves, accelerating completion schedules, and increasing the responsibility of leaders for assignments. The editorial remarks that a number of supply organizations are bottlenecking construction projects by late or non-delivery of necessary equipment and supplies. It states that party, soviet, trade union, and komsomol organizations must provide practical assistance in order to quickly improve the situation at construction sites of enterprises that will produce mineral fertilizers and chemical herbicides and pesticides. Further, greater use must be made of local labor resources to speed up construction of enterprises that will produce consumer goods in Andizhan, Dzhizak, Fergana, and Namangan and numerous small cities and rayon centers. The housing construction situation must be quickly corrected through wider introduction of the cooperative construction method and activation of all resources. This gap is acutely felt in Almalyk, Samarkand, Dzhizak, and other large industrial centers where there are newly completed production capabilities. The editorial concludes by urging increased supervision over cooperation between contractors and suppliers, and especially over projects connected with the agro-industrial complex.

UZSSR GOSSNAB, COMMUNICATIONS MINISTRY INVESTIGATED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 21 July 1982 carries on page 2 a 500-word report titled "At the Uzbek SSR Prosecutor's Office." The report states that the prosecutor's office investigated the UzSSR State Committee for Material and Technical Supply (Gossnab) and subordinate administrations and found that they are not complying with state regulations covering the delivery of products to other economic regions of the country. Contract violations, primarily late delivery of products, and those responsible have not been adequately dealt with. The prosecutor's office also investigated the UzSSR Ministry of Communications, and found that subordinate offices have been violating regulations covering the hiring, transfer, firing, and vacation schedules of workers and employees. Workers are being fired without the consent of local committees of trade unions, illegal orders are being issued to work overtime and on offdays, and non-regulatory fines are being levied. There are also shortcomings in ministry services. Finding of these investigations were discussed at meetings of Gossnab and the collegium of the Ministry of Communications, whose chairmen issued orders calling for disciplinary punishment for those responsible.

UZBEKS FACE HARDSHIPS, SHORTAGES IN IVANOVO OBLAST

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 8 July 1982 carries on page 3 a 900-word report from newspaper station correspondent V. Nudler of the "Ivanovoirsovkhozstroy" Trust titled "We Greet You, Selfless Ones." Nudler reports the story of Bahrom Otaqoziyev, one of hundreds of Uzbeks who have come to the Ivanovo Oblast to work. Otaqoziyev says he arrived in 1976, could not stand the hardships, and returned to his native Almalyk. He was so ashamed of his lack of will-power, that he returned as chief of a "santekhnik" brigade at the construction site of the "Uzbekistan" Sovkhoz. Workers began to move into new housing, conditions improved, and Otaqoziyev himself married Nadezhda Viktoroyna who bore a son. His family has a 0.18 ha private plot. He acknowledges that winters are severe, but his wife likes the snow and he likes to go ice fishing. Otaqoziyev thinks of his country often, but says that newspapers and journals are shipped regularly from Tashkent "so I'm informed of everything that happens." He was especially inspired by Brezhnev's speeches in Tashkent which he can write out "word-for-word." Otaqoziyev's statement concludes with a list of specialists badly needed in Ivanovo: skilled amelioreators and builders in every section, bricklayers, painters, cement layers, welders, tractor drivers, and crane operators. He says: "Newcomers will live in trailers [vagonchik] for a certain period, but they will get used to the climate and all the hardships will soon be forgotten."

ILLEGAL PRIVATE USE OF STATE LAND REVEALED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 6 July 1982 carries on page 2 an 800-word report under the "At the UzSSR People's Control Committee" titled "How Is the Land Being Used?" The report states that the PCC conducted a widescale investigation of how collective and state farms are carrying out instructions to introduce the crop rotation method, and found that presently crops are being rotated on 2.6 million hectares on 1,286 farms. At the same time, it revealed numerous shortcomings, pointing to inadequate supervision by the Ministries of Agriculture and the Fruit and Vegetable Industry and the "Glavsredazirsovkhozstroy" over the implementation of the rotation program. Serious failures to introduce this method were found in the KKASSR, Bukhara, Khorezm, Dzhizak, Kashkadarya, Surkhandarya, and Tashkent Oblasts. The investigation also turned up the alarming fact that 1,966 hectares of fields, ranging from 40 to 60 hectares per farm, have been turned over to private production in addition to regularly allotted private plots. In some cases, state land is turned over to enterprises and organizations for private plots, and some 237 hectares were stolen for the construction of private buildings. Investigative results were turned over to party, soviet and PCC organizations. Punitive measures were taken against 82 individuals, and 16 were fined.

UZBEKISTAN CIVIL AVIATION CAPABILITIES SLATED FOR EXPANSION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 28 July 1982 carries on page 2 an 800-word article by E. Sa"dullayev titled "Sky Gate." Sa"dullayev reports on the current and projected expansion of civil aviation facilities in Uzbekistan, basing part of the article on an interview conducted with Ghani Mazitovich Rafiqov, chief of UzSSR Civil Aviation Administration. Rafiqov remarked that during the 11th FYP a substantial portion of AN-24 and YaK-40 airplanes will be taken out of commission and replaced by 70-passenger TU-134 liners. A group of Uzbek pilots has been sent for flight training in these craft. In the last quarter of 1982, the YaK-42 and IL-86, flown by pilots from Moscow, will begin to operate in the republic. Rafiqov stated that Tashkent pilots must learn to fly the IL-86 and Samarkand pilots the YaK-42, which will be used mainly on local flights. Further, the air time of TU-154 and TU-134 airplanes and of KA-26, MI-2, and MI-8 helicopters is increasing. Asked whether airports are to be renovated and reoutfitted along with the expansion of airfields, Rafiqov replied that during the 11th FYP airports would be required to handle a volume of 3.4 billion passenger kilometers. The plan calls for building modern airport complexes in Karshi, Navoi, Bukhara, and Fergana, renovating airfields in Samarkand and Termez, and finishing the renovation of the Nukus and Tashkent airports. The correspondent Sa"dullayev continues that the civil aviation administration has decided to curtail further reconstruction of unprofitable airports at Saryasiya, Tamdy, and Muynak, introduce flight costs as the basic indicator for evaluating aviation services, and to reconstruct the Namangan, Termez, Navoi, Turtkul, Kokand, and Kungrat, so that they can accommodate YaK-42s and TU-134s. Other developments noted by Sa"dullayev include the following. The average air time of every plane will be increased beginning 1983. Agricultural crops will be cultivated on 6.5 million hectares of airfields. The KA-26 helicopter will be moved from Urgench to Kokand for consolidation. The MI-2 helicopter fleet in Khorezm will be enlarged and, if necessary, the MI-8s from other fields will be transferred here. In connection with the expansion of steppe reclamation projects, planes and helicopters will be moved from Sergeli to the Dzhizak aviation enterprise, and the Sergeli base will be turned into a rest facility and training center for pilots. Tashkent airport will get new terminals for IL-62 and IL-86 flights to center and international airports, while the present terminals will be used for local flights. Sa"dullayev concludes that the expansion at Tashkent will make it possible to open direct flights linking the city with capitals of socialist countries and of south and southeast Asian states.

TRADE UNION CHAIRMAN COMMENTS ON LABOR DISCIPLINE MEASURES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 30 July 1982 carries on page 2 a 400-word comment by N. M. Mahmudova, chairman of the republic council of Uzbekistan Trade Unions, to a 1,100-word journalistic piece by newspaper correspondent A. Qorjovov titled "Cause of Our Accomplishments." Mahmudova cites statistics reflecting growth during the 10th FYP and states that current growth depends on strengthening labor discipline and decreasing work force turnover. She considers the major factors to be increased publicization of top workers, improving their living and working conditions, and expanding their meaningful vacation time. Once more, she cites figures from the 10th FYP during which the development of production forces in small and medium-sized cities, settlements and rural points made it possible to bring 30,000 workers into production.

SUPREME COURT MEMBER DISCUSSES LABOR DISCIPLINE PROBLEMS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 7 July 1982 carries on page 2 a 1,300-word article by S. Yigitaliyev, member of the presidium of the UzSSR Supreme Court, titled "The Foundation of Economic Construction." Yigitaliyev states that, according to sociological studies, the most frequently encountered violations of labor discipline are coming to work late or leaving work early, engaging in activities unrelated to work during work hours, taking unauthorized breaks, and absenteeism. He identifies some of the causes of these violations as poor organization of labor, retention of vestiges of the past in people's consciousness, deficiencies in city transport, unsatisfactory housing and consumer services for workers and employees, labor force shortage, alcoholism, and administrative neglect of workers' needs and demands. He also notes that workers sometimes take advantage of labor shortage, and cites the case of a man at the "Uzbekkhimmash" Plant who complained that his foreman didn't like him, failed to show up for work, made other demands, and nonetheless continued to be paid for half a year. Yigitaliyev notes a "serious approach" must be made to cases of absenteeism and alcoholism in view of the present labor shortage, and points to other measures than dismissal, such as fines or withholding incentive pay or vacation time. He stresses that drinking on the job is especially problematic among workers at vehicle transport enterprises, and calls for tougher action from leaders.

Social and Cultural Affairs

EDITOR ADDRESSES ROLE OF WRITERS UNION JOURNAL

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 15 July 1982 carries on page 4 a 1,100-word article by Hafiz Absudamotov, chief editor of the UzSSR Writers Union Journal SHARQ YULDUZI, titled "Mirror of Our Literature." Abdusamatov begins this article, which was published on the eve of a ceremonial meeting marking the 50th anniversary of SHARQ YULDUZI, by stressing that the journal has never strayed from the path indicated by the party. Works published in the journal have reflected the great steps in the building of socialism in the republic. During collectivization and industrialization, the journal opened its pages to farmers and workers. Patriotic contributions filled the journal during the Great Patriotic War. It has given a prominent place to works that glorify Lenin, praise the new Soviet man, and depict images of workers. It has publicized party policies, the themes of peace, friendship of peoples and internationalism, and the works of writers from other republics. Abdusamatov ends the article with a quotation from the Bashkir writer Mustay Karim who praises the journal for the broad space it sets aside for works of writers from fraternal republics.

WRITERS UNION PARTORG MEETS ON WRITERS' ROLE IN FOOD PROGRAM

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 23 July 1982 carries on page 7 a 400-word report titled "On the Path to Prosperity." The report states that the primary partorg of the UzSSR Writers Union met to discuss the tasks of Uzbekistan writers in helping to implement the decisions of the May 1982 plenum of the CPSU Central Committee embodied in the Food Program. Rahmat Fayziy, chief of the Uzbekistan section of the VAAP, spoke on the need for writers to help mobilize farmers by writing publicistics and sketches on rural agricultural themes. This idea was echoed in the talks of Asqad Mukhtor, chief editor of SOVET OZBEKISTONI SAN"ATI, Shamil Alyadin, chief editor of YILDIZ, Erkin Vohidov, chief editor of YOSHLIK, Mikhail Grebenyuk, section director of ZVESDA VOSTOKA, Abdulla Oripov, chief of the Tashkent section of the writers union, Mumtoz Muhamedov, chairman of the soviet of the Uzbekistan section of the USSR Literature Fund, Turob Tola, first secretary of the writers union party bureau, and the writer Andrey Ivanov. Sarvar Azimov, chairman of the writers union, closed the meeting with an expression of trust that writers would comply with these obligations.

REVIEW APPROVES NOVEL'S TREATMENT OF TURKESTAN REVOLTS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 9 July 1982 carries on page 3 a 1,100-word review of Muhammad Ali's verse novel BOQIY DUNYO [ETERNAL WORLD] (Tashkent: "Gafur Gulyam," 1981) by Dr of Philology Ochil Toghayev titled "Eternal World." The reviewer notes that Ali worked for 10 years on this novel which is set against events from the 1898 Andizhan Revolt to the 1917 Revolution and portrays, through characters drawn from a single family, the passage of the Uzbek people from feudalism to socialism. He commends Ali's treatment of the Andizhan Revolt, whose tragedy was that the people were incited to rebel but lacked a definite goal and adequate arms, and of the 1916 Dzhizak Revolt, in which the rebels were helped by Russian revolutionaries. According to the reviewer, the poet reveals the existence of two Russias: one was Tsarist Russia which oppressed local peoples, and the other was the Russia of Lenin, Frunze, Lapin and "other purehearted Russian children who aroused the political and revolutionary consciousness of the local peoples, supported their struggle, and guided them toward a bright future."

RESTORATION OF FORMER KHAN'S PALACE IN KOKAND

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 2 July 1982 carries on page 6 a 600-word article by Abdujabbor Yahyoyev (architect of the Uzbekistan Scientific-Research and Project Institute of Monument Restoration) entitled "Returning it to Its Original Condition." The article concerns the restoration work at the former khan's palace in Kokand. Work was begun in 1974 with the aim of fully restoring the former khan's palace. Great care was taken in the study of archeological finds and archival materials and military sketches in order to determine what the original structure looked like.

STUDY OF INTRICATE GEOMETRIC DESIGNS SHOULD BE POPULARIZED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 9 July 1982 carries on page 7 a 400-word article by H. Karimov entitled "Enchanting Designs." The article concerns the geometric designs traditionally used by Uzbek artists and architects. Unfortunately, the author notes, the masters did not write down how the designs were made and how they could be repeated. Today when young people in Uzbekistan and neighboring republics use these designs they slightly modify the old patterns. They do not know the complex aspects of this work. One scholar, Zokir Bositkhonov, has been studying these designs for over 30 years. He has collected much material on them. The UzSSR Society for the Preservation of Historical Monuments, the Usta [Master] organization of the Uzbekistan Artistic Fond [as printed] and the Uzbekistan Architects' Union should help to publish the material Bositkhonov has collected over the years. This would be a great help to artists in a wide variety of fields.

UZBEKS TO STUDY SPECIALIST-SHORT FIELDS AT CENTER UNIVERSITIES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 21 July 1982 carries on page 4 a 1,300-word newspaper interview with Salim Polatov, UzSSR Minister of Higher and Secondary Specialized Education, titled "On the Threshold of Student Life." Pulatov responds to questions concerning normal admittance procedures to republic VUZes for the 1982-1983 school year. Asked about admittance to VUZes in center cities, Pulatov states that this year 700 students will be sent from Uzbekistan to study in 106 specialist-short fields in 40 cities of the RSFSR, BeSSR and UkSSR. They will be admitted on a non-competition basis. Another 279 will go to schools in the KaSSR, KiSSR, TaSSR and TuSSR. The latter will be selected from among those who have passed entrance exams with "excellent" and "good" scores in all specialities except the fine arts. Pulatov also notes that increasing emphasis will be placed on accepting and supporting young people sent to republic VUZes by kolkhoz, sovkhoz, enterprise and organization committees to study specialities which are short of trained workers.

PEOPLE'S CONTROL COMMITTEE ON THEFT OF STATE PROPERTY

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 23 July 1982 carries on page 2 a 2,100-word interview with Haydar Yahyoyev, first deputy chairman of the UzSSR People's Control Committee, by Yo. Yakvalkhojayev titled "State Property Is Our Property." Yahyoyev responds to questions concerning the morals and self-interest of workers in the trade, construction, and other sectors where loss of state property due to theft is high. He cites the case of A. Aliboyev, manager of the "Uzbeksvyazstroy-4" Trust of the UzSSR Ministry of Communications, who had a house built for himself from state materials as an example of widespread theft in the construction industry. One of the causes of declining morality and escalating theft is that the status of people, especially in the mahallas [Muslim neighborhoods], is increasingly becoming equated with their wealth, even that gained through crooked means. Not only is this passively accepted as normal, but there are also a number of cases where petitions are circulated in mahallas attesting to the fine character of a person caught stealing and requesting the person be let off. Worse, honorary banquets often greet those who have been fined or jailed for a period. Trade and other workers see the extravagant displays of wealth at weddings and parties, or excessive tipping at restaurants, and come to think of such a life-style as normal and desirable. This leads to theft. Yahyoyev states that investigations of 5,444 stores in 1981 revealed that trade regulations were being violated in a third of them and that 3 million rubles in deficit goods were being held back.

WRITERS UNION MEETS ON DEGENERATING SONG LYRICS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 30 July 1982 carries on page 6 a 700-word report titled "There Must Be More Inspiring Songs." The report states that Sarvar Azimov, chairman of the UzSSR Writers Union, chaired a meeting devoted to problems in the song genre. Azimov cited a CPUz Central Committee resolution that identified serious defects and undesirable trends in song lyrics. Lyricists and composers fail to treat the Soviet way of life and the outstanding qualities of Soviet man, the media air too many songs on narrow daily themes, and "artists" write, play, and sing their own "creations" instead of collaborating with professionals. Other speakers and participants at the meeting included Sobir Boboyev, chairman of the UzSSR Composers Union, Enmark Solihov, chief of the music department of the UzSSR Ministry of Culture, Ubay Burhonov and Rasul Rahmonov, deputy chairmen of the UzSSR State Committee for Television and Radio Broadcasting, and Pirmat Shermuhamedov, instructor in the cultural department of the CPUz Central Committee.

COMPLETE REGISTRATION OF HERITAGE MONUMENTS URGED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 2 July 1982 carries on page 6 a 200-word report titled "Ancient Monuments in Their Prime." The report states that a plenum of the UzSSR Society for the Preservation of Historical and Cultural Monuments was held in Samarkand on 28 June to discuss the need for more extensive study and protection of ancient monuments and archaeological sites. Republic scholars urged that a complete register of all sites in all oblasts be drawn up in order to facilitate their study, preservation, and restoration. The remainder of the page contains a 2,200-word article by Polat Zokhidov on the restoration of a 12th century minaret in Bukhara titled "Eternity," and a 600-word article by society architect Abdujabbor Yahyoyev on the restoration of the 19th century palace complex of the Kokand Khanate titled "Being Restored to Its Original Condition."

STORY CENTERS AROUND VARIOUS WATER PROJECTS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 16 July 1982 carries on page 4 a 900-word excerpt from a short story by Fattoh Zohidov entitled "Women's World." The excerpt contains reference to a scholar (Shavkat) who, while arguing for a certain water resource project, developed heart trouble (a heart attack?). The events in this excerpt are related by Shavkat's wife, Manuvvar, to another scholar and prominent Party figure, Odina Rahmonqulovna. Munavvar in the excerpt asks for help from Odina Rahmonqulovna. It becomes clear that Shavkat opposes the diversion of Siberian river water to Central Asia; he fears that the same kinds of mistakes might be made in this project as were made in the early 1950's when there were proposals to build the Great Turkmen Canal connecting such major rivers as the Volga and Amu Darya. Shavkat's wife is unable to understand why the head of the learned council which listened to Shavkat's proposal, Professor Fozilov, is still enjoying such a good life. After all, he was the one who promoted the disastrous Great Turkman Canal proposal; instead of being punished he was left in his position of authority. Shavkat wants to promote rational use of water resources of the Amu Darya and Syr Darya by constructing water reservoirs. Odina Rahmonqulovna says that, unlike those of the 1950's, the project to divert Siberian river is not being hastily adopted. Instead, it is being thoroughly studied in every aspect.

NEW CONSTRUCTION DOES NOT ALWAYS TAKE OLD MONUMENTS INTO CONSIDERATION

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 2 July 1982 carries on page 6 a 2,000-word report by Polat Zohidov entitled "Eternal Quality." The article concerns primarily the Kalon Minaret in Bukhara. It recounts the history of the monument and stories associated with it as well as efforts to restore and study it. There is also discussion in the article of efforts to bring the art of wood carving back in Bukhara. The article concludes with a discussion of construction plans near the minaret which have created a lot of controversy. Fifteen years ago a project was drawn up for building a large gold embroidery factory near the minaret. The project received a positive recommendation from the USSR Union of Architects and was accepted for construction. But there were those who were staunchly opposed to the new building. One of the reasons for opposition had to do with the monument. The height of the factory and its water storage towers would have ruined the view of the minaret. "This was not [proper] respect for a rare, almost nine century old monument."

Taking this into account, the architect of the new structure did away with the water tower and put the water storage underground. Two storeys of the factory were also put underground.

"But, with this, if for some reason the water would have seeped out of the reservoir, water would get onto the minaret and other monuments. Although the project was approved (curiously enough, even by the main monument protection office), there was no way to carry it through. The building was expensive and inconvenient in every aspect. As a result, the minaret was left safe from the senseless attack.

In recent years there has been a new proposal. The proposal, worked out by the Moscow Project Institute, would place a complex of tourist buildings--such as a hotel, restaurant, cinema, theatre and bath--near the minaret. It is planned to create all conditions tourists need in accordance with modern day demands. But it should be clear, after all, what negative consequences will be caused by building a complex engineering system and communications under the monument which has an archeological cultural stratum of over 10-20 meters. As a result of the improper use of a cafeteria [taomkhona] which had been established experimentally in Khiva in a madrasa, a large part of the building was ruined. We would not like to observe such a condition in the case of the ancient monuments around the great minaret.

It is necessary for tourists who come to see things to live in the monuments of the ancient centers? It is not better for tourists, after visiting the monuments on foot, to go to relax in an architectural complex in a garden setting somewhat removed and with all the conveniences?

The famous minaret, with its handsome appearance, is still following the events unfolding around it."

International

CENTRAL ASIAN SCHOLARS CONTRIBUTE TO SYRIAN STUDIES ON IBN SINA

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 16 July 1982 carries on page 5 a 700-word article by Bakhtiyor Irisov titled "Ibn Sina Calls for Scientific Cooperation." Irisov reports that a scientific conference dedicated to the life and work of Ibn Sina was held in Damascus, Syria, in 1981, and was attended by scholars from Egypt, Lebanon, Algeria, and Morocco. Papers read at the conference were published in a joint issue Nos 4-5 of the Syrian journal AT-TURAS AL-ARABI. Irisov briefly describes these articles, and notes that two Soviet Central Asian scholars also contributed to the issue. Prof M. Khayrullayev, director of the Institute of Oriental Studies of the UzSSR Academy of Sciences, published the article "On the Problem of Scientific Classification in the Medieval Near and Middle East," and the Tajik scholar N. Ne"matov published the article "Economic Life in Ibn Sina's Time." Irisov also states that a second volume dedicated to Ibn Sina, and containing 14 articles, has just been published in Syria.

AFGHAN WRITERS UNION ACTIVITIES DISCUSSED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 2 July 1982 carries on page 1 a 700-word report titled "At a Developmental Stage." The report covers the activities of the Afghan delegation for the Days of Afghan Literature in Tashkent. The delegation arrived from Baku on 27 June and held a poetry reading evening. The group was received at the UzSSR Writers Union, toured the city and attended the ballet on 28 June, was received by the CPUz Central Committee on 29 June, and departed for Kabul on 30 June. While at the Writers'

Union, the Afghans were received by Sarvar Azimov who spoke to them about the activism and development of Soviet writers, and used as an example of a people without prior literary language the Karakalpaks. Following this, Abdulla Naibi, head of the Afghan delegation, spoke about the activities of the Afghan Writers Union. He disclosed that the prerevolutionary journal JAVANDUN has now become the literary organ of the Afghan Writers Union, and its first issue has appeared. Further, in June 1982, a writers union section began work in Badakhshan Province with some 140 writers--"most of them children of peasants." Efforts are being made to form sections in 13 other provinces. Finally, Naibi says that in May 1982, a plenum of the writers union board was held to discuss works created in the past 18 months, as well as tasks newly charged to Afghan writers by the Afghanistan People's Democratic Party.

GDR ENCYCLOPEDIA REFLECTS UZBEK LITERATURE

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 9 July 1982 carries on page 7 a 300-word article by Cand of Philology A. Humaniyozov titled "In a GDR Encyclopedia." The article notes the publication of a 3-volume LEXICON FREMDSPRACHIGER SCHRIFTSTELLER [DICTIONARY OF FOREIGN WRITERS] by the Leipzig Bibliographical Institute in the GDR, which includes entries on the Central Asian literary heritage and Soviet writers. These entries were written by Dr Doris Schultz of Humboldt University who defended her doctoral dissertation on Uzbek dialects of Fergana Valley. Jumaniyozov concludes that "the great attention paid to our literature and its representatives in the 'Encyclopedia of Foreign Writers' is proof that Uzbek literature has a prominent place in world literature."

UZBEK ENSEMBLE TOURS EAST AFRICA

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 8 July 1982 carries on page 4 a 300-word TASS release titled "A Great Success." The report states that a group of Soviet artists, including the Uzbek vocal and instrumental ensemble "Sado," gave a warmly received concert in Tananarive, capital of Madagascar. An article published in the state newspaper ATRIKA noted: "The culture of ancient Uzbekistan has only flourished under socialist conditions... in a region that had been backward under Tsarist Russia." Tashkent SOVET OZBEKISTONI in Uzbek 29 July 1982 carries on page 3 a 200-word TASS release filed from Dar-es-Salaam titled "The Success of Uzbekistan's Artists." The release states that Tanzanian newspapers favorably received the five concerts given by the "Sado" ensemble and other Soviet artists. It notes that the Soviet group also performed in Madagascar and the Seychelles and will go to Rwanda from Tanzania.

AFGHAN UZBEK LANGUAGE JOURNAL CITED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 2 July 1982 carries on page 1 a 100-word article entitled "On the Pages of YULDUZ." The article tells of the contents of the Afghan Uzbek-language journal YULDUZ. Among the articles mentioned is one by the Soviet Uzbek literary scholar Begali Qosimov.

FRENCH TRANSLATION OF 'BOBIRNOMA' NOTED

[Translation] Taskhent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 16 July 1982 carries on page 7 a 100-word article entitled "Gift From Paris." A gift has arrived at Samarkand State University imeni Alisher Navoi from Paris. It is a new translation of the precious historical book, "The Bobirnoma." This precious monument of classical Uzbek literature has been published in Paris in commemoration of its author, Zahiriddin Muhammad Bobir's 500th birthday.

The new French edition of "The Bobirnoma" was sent to Samarkand, to the university's scientific worker, M. Kholbekov, by the translator, Dr. J.L. Bak'e-Grammon. Muhammad Kholbekov is a teacher of Samarkand State University's Department of French Language. He has been studying [?] Uzbek translations of French authors' works for a long time. He has also translated selections of works of several French authors. French specialists were well aware of the Uzbek scholar's scientific work and translations. This was why the gift came to M. Kholbekov.

The new publication of "The Bobirnoma" is evidence of the great attention to the Uzbek scholar.

LEBANON INVASION PROMPTS COMMENTARIES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 1 July 1982 carries on page 2 a 1,300-word publicistics piece by the senior Uzbek writer Hamid Ghulom titled "The Arms of the Butchers Will Be Cut Off!" The thrust of this piece, occasioned by the Israeli invasion of Lebanon, is a contrast of the life in Lebanon--"The Asian Switzerland"--before and after the invasion. Ghulom recalls a visit he made to the country [probably at the beginning of the 1960s] during which he met the lawyer Ahmad Daqqash, who drove him around Beirut in his Jaguar, and George Hannah, then head of the Lebanese-Soviet Friendship Society. Ghulom expresses his concern for the fate of his friends and the country and pledges the solidarity of the Soviet people with the Lebanese people in their present suffering. Ghulom also published a poem titled "Bird of Hope" in OZBEKISTON ADABIYOTI VA SAN"ATI 2 July 1982 page 1 which, among other things, depicts Yasir Arafat as a skillful and courageous general, "a master" comparable to Sierro Maestroni and Fidel Castro. The 24 July 1982 paper carries on page 3 a 500-word statement signed by the lawyer Ya. Mordukhayev, the artists I. Oqilov, I Katayev, and S. Ben'yaminov, and war veterans P. Shamuelov and M. Pinkhasova, titled "A Curse on the Israeli Invaders." The statement calls the Israeli invasion of Lebanon "a repetition of what Nazi Germany did" and cites a Tunisian statement at the UN comparing Prime Minister Begin to Hitler. The statement also quotes other sources which ascribe responsibility for the invasion to the United States because it supports Israeli Zionists and militarists: "We firmly condemn Zionism." Furthermore, the statement reads, attempts by Zionists to lure Soviet Jews to emigrate are futile because they live as equals among equals and work as one body and soul with more than 100 other nationalities and subnationalities in the Soviet Union. The statement concludes: "We, along with all Soviet peoples, demand that Israeli troops cease shedding blood and withdraw from Lebanon." The 28 July 1982 paper carries on page 3 a 1,000-word commentary by Docent and Cand of Philosophy F. Ismoilov in the world news section titled "Terror Is the Weapon of Zionism." Ismoilov begins his commentary with the statement that Israel is attempting a "fascist solution" to the Palestinian problem in its invasion of Lebanon, although fascism is not a new development for Israel. The commentator cites an Israeli attack on a Palestinian village in May 1948 and the June 1967 war as previous Israeli crimes against Palestinians. He links Zionism and terrorism, reviews Prime Minister Begin's career, and quotes Ben Gurion's negative view of Begin. For Ismoilov, Israel is "a fascist state, [which] is an anti-communist and terroristic dictatorship of extremely reactionary and chauvinistic elements allied with monopolistic capital." On 30 July 1982 on page 3 a 400-word commentary by O. Bekov under the "Commentator's Pulpit" rubric in the world news section titled "Bulwark of Murderers," appears. Belov stresses the responsibility of the United States for the Israeli invasion of Lebanon, arguing that Israel could not carry it out without the support of its "older brothers." The commentator cites an interview with a Palestinian refugee who says: "Begin is a criminal, yes. But Reagan is our most horrible enemy. Even my 4-year-old boy knows that. Why? Because they [the U.S.] ship their planes and tanks here, and the Israelis kill us with them?" Bekov concludes that "the Lebanese and Palestinian people will of course triumph, and the aggressor will be punished.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

CHERNENKO BOOK ON PARTY WORK HIGHLIGHTED

[Editorial Report] Baku KOMMUNIST in Azeri 4 August 1982 p 1 carries a lead editorial of 2,700 words highlighting Chernenko's book on "Questions of the Work of the Party and State Apparatus," the second edition of which was published in Baku in Azeri. According to the review its basic point is that the "development of the creative activism and efforts of the workers and the strengthening of plan organization, technological order and work order are extremely important factors in expediting the intensification of the economy."

Economics

IRRIGATION CANALS RENOVATED

[Editorial Report] Baku KOMMUNIST in Azeri 19 August 1982 p 1 carries a 750-word Azerinform article on the renovation of the extensive irrigation canal system. The canals include: the Ordzhonikidze Canal--67 kilometers long and running with many twists and turns from the Araz--of which renovation has reached the point where "the first 18 kilometer section from the Araz to Zhdanov is now ready"; "the irrigation-drainage network in Mughan, which carries a substantial part of Azerbaijani cotton, is being rebuilt"--it is 135 kilometers long. As a result of these renovations "last year 30,000 hectares of land were improved through irrigation. This year 35,000 hectares will be put to use." It has been established that "money allocated to irrigation is, on the average, repaid in 3 years."

HOUSING SCANDAL IN NAKHCHYVAN

[Editorial Report] Baku KOMMUNIST in Azeri 10 August 1982 p 2 carries an 800-word report on violations in housing construction and dwelling allocations in Nakhchyvan city. "Due to blatant violations of housing laws citizens sent numerous documents and complaints to higher party and Soviet organs about serious shortcomings in plumbing, cleanliness and sanitation." Another aspect of the scandal was that high functionaries of the gorspolkom had allocated housing in a corrupt manner, a crime for which one was "removed from the ranks of the party," and two others were severely censured.

KHYNALYG POET INTERVIEWED

[Editorial Report] Baku KOMMUNIST in Azeri 13 August 1982 p 4 carries a 350-word note by L. Goldshteyn on an interview with the Khynalyg poet Rahim Alkhas. In addition to writing in Khyna, he also writes in Azeri, Uzbek, Turkmen and Tatar. It is noted further that Khyna is a member of the Ibero-Caucasian group of languages, closely related to Lezgian. It has had an alphabet for 25 years containing 77 letters: 59 consonants and 18 vowels.

NEW CONSTRUCTION DESTROYS OLD MONUMENTS

[Editorial Report] Baku KOMMUNIST in Azeri 19 August 1982 p 2 carries a 1,200-word article by Sabir Afandiyev, chief scientific worker of the Archeology and Ethnography Section of the AzSSR Academy of Sciences Institute of History, on the destruction of ancient historical monuments. "Material-cultural remains both on and below the ground are shattered and destroyed in the maws of powerful scooping mechanisms. Important questions like the protection and renovation of historical monuments are often not answered according to the concern shown to this sector by party and state." A number of examples are given.

TEACHER SENTENCED FOR CORRUPTION

[Editorial Report] Baku KOMMUNIST in Azeri 4 August 1982 p 4 carries an 800-word article on the sentencing of the Docent F. Poverennaya of the Buynadzade Institute of Economics for accepting money in order to inflate grades. "Because she took bribes amounting to a minimum of 1,300 rubles, F. Poverennaya was sentenced to 11 years in prison." Two other teachers also received lengthy sentences.

CORRUPTION IN EDUCATION ASSAILED

[Editorial Report] Baku KOMMUNIST in Azeri 6 August 1982 p 3 carries a 2,600-word article on "corruption, protectionism and nepotism" in the higher educational system. While numerous universities and institutes are mentioned in this regard, the M.F. Akhundov Azerbaijan Institute for Russian Language and Literature and the Azerbaijan Construction Engineers Institute are singled out.

BIOGRAPHY OF ORDUBADI PUBLISHED

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 6 August 1982 p 6 carries a 1,350-word review by Nazif Gahramanov of Tofig Rustamov's "A Pen Hardened in Flames" which is a publicistic biography of the journalistic activities of M.S. Ordubadi, the greatest Azerbaijani historical novelist of the first half of the 20th century. "One of Ordubadi's most brilliant phases was in his publications in the journal MOLLA NASRADDIN" wherein "the writer shows great sympathy for the revolution in Iran and explains the actual situation there on the basis of concrete examples." His other journalistic work is described. In the Soviet period "when he was editor of YENI YOL" he worked in "the struggle for the purification and refinement of the Azeri language." No reference to his other literary activities is made.

SHORTCOMINGS IN AUTO INSPECTION, ENFORCEMENT

[Editorial Report] Baku KOMMUNIST in Azeri 11 August 1982 p 4 carries a 1,000-word Azerinform dispatch on shortcomings in state auto inspections as determined by the MVD. As a result of these shortcomings "the number of fatal traffic accidents increased last year." Among items to be improved: eliminating drunkenness on the roads; more careful inspection of private cars especially with regard to horns, lights and brakes; and the use of advanced inspection technology. As a consequence of the MVD investigation the chairman and deputy chairman of the State Auto Inspection Administration were fired.

International

AZERBAIJANI VOCALIST IN YEMEN

[Editorial Report] Baku KOMMUNIST in Azeri 5 August 1982 p 4 carries a 1,150-word article on Zeyneb Khanlarova's concert tour in the Yemen People's Democratic Republic. The tour was extended from 15 to 30 concerts. The article notes that "through Zeyneb Khanlarova's guest appearances she has created a close cultural relationship between the Soviet Union and Turkey, Iraq, Spain, Switzerland, Kuweit, France, Italy, Nigeria, Senegal, Yemen, Egypt, Syria, Canada, Jordan and other countries.

AMERICAN SCHOLAR ON AZERBAIJAN

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 13 August 1982 carries a 200-word interview with Azade Ayishe, professor at Southern California, on her current research. On the role of women in Azeribaijan, she says: "We know that the Soviet government showed interest in Azerbaijani women because of their skills and this opened up a new page in history. Images of the struggling woman created in Azeri literature, their thoughts and spiritual world, will find its reflection in my research." She adds: "I always read Azerbaijani history. This history is truly a red history." [NB: The word 'red' can also mean golden']

SOUTHERN ANTHOLOGY REVIEWED BY IBRAGIMOV

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 27 August 1982 pp 4-5 carries a 3,500-word article by Mirza Ibragimov on the recent publication of the AZERBAIJAN ANJUMANI, v. I, an anthology of Southern Azeri literature and memoirs embracing the period of 1941 to the present. Ibragimov notes that "AZERBAIJAN ANJUMANI writes that its basic thrust is to spread social educational work, science, education and literature to Azerbaijanis connected with the national existence and historical destiny of all the peoples of Azerbaijan, especially Azerbaijanis living in Tehran and to strengthen education in the mother tongue." Numerous examples are given.

POETESS FETED NORTH AND SOUTH

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 20 August 1982 p 4 carries a 400-word article by Rovshan Valiyev on the response to the poetess Mirvarid Dilbazi's 70th birthday in Southern Azerbaijan. It is noted that "she speaks out for the love of Azeri and for the preservation of our language and old traditions" and that her "verses, which have pervaded Southern Azerbaijan, are quoted in Tabriz and pass from mouth to mouth in Maragha, Ardebil, Zenjan and everywhere in the land of the south." Furthermore, after the fall of the Shah's regime "one of the first songs heard on Tabriz Radio was composed to the words of the poetess, "Choban Gara," which sings of freedom."

On the same page is a 900-word article by Gasym Gasymzade, quoting two of her quatrains devoted to the South in order to display her work in the context of internationalism.

Political Affairs

RURAL CULTURAL ORGANIZATIONS MUST PROMOTE PARTY AGRICULTURAL DECISIONS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 18 Aug 1982 carries on page 1 an 800-word boldface editorial on the need for rural cultural services organizations to promote new party agro-decisions. At present there are 231 rayon and 800 rural houses of culture in the state system alone working to this end in the KaSSR. The editorial calls for new forms of mass culture work and improvement of its content since the psychology of rural workers must be changed. Cultural work must take into account the enhanced educational levels and new sophistication of rural workers. Special efforts must also be made to propagandize the latest party agro-decisions.

LOCAL SOVIETS INTERVENE ACTIVELY IN PAVLODAR ENVIRONMENTAL PROTECTION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 18 Aug 1982 carries on page 4 a 1,200-word article by A. Zhazin, chairman of the Executive Committee of the Pavlodar City Soviet of People's Deputies, on active intervention by his and other local soviets in Pavlodar City and regional environmental protection. The article is published under the regular rubric "Man and Nature" and the regular subrubric "Economy and Ecology."

Pavlodar City is working hard to achieve the goals advanced by the party congress and to meet the requirements of the USSR Constitution. Local soviets of People's Deputies there have an especially important role to play in making, carrying out and supervising fulfillment of environmental plans. The plans are drawn up by local soviet executive committees with the cooperation of representatives of polluting industries and workers of health and weather agencies. Special subcommittees are set up to offer suggestions, and their members and individual deputies journey to problem industries to verify on-the-spot fulfillment of agreed-upon plans.

Zhazin lists a number of problem industries in Pavlodar City and gives specific examples of what they are now doing to reduce air and water pollution and cut the amount of industrial wastes. Already, air quality has improved and still further improvements are hoped for in the future. Throughout his article Zhazin emphasizes the active character of soviet and mass intervention against polluting and other problem industries in and about Pavlodar City.

KAZAKH MVD CHIEF STRESSES ROLE OF POLICE LIAISONS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 20 August 1982 carries on page 3 a 1,600-word article by KaSSR Minister of Internal Affairs A. Platayev on the role of police division liaison officers in combating antisocial behavior and crime. The article is published under the regular rubric "Man and Law."

KaSSR internal affairs organs are working actively to carry out the historical decisions of the 26th CPSU Congress, strengthen socialist legality and law and carry on an effective and forceful struggle against crime. In the latter area the current emphasis is on prevention involving, among other things, anti-crime "pillar points," mobile police stations, crime-prevention councils at work places and police division liaison officers.

Platayev describes the work of leading liaison officers and criticizes areas where they are not working effectively. He notes their great success in maintaining effective relationships with the masses and in mobilizing various groups of individuals in the war against antisocial behavior and crime. Two problem areas singled out by Platayev are social parasitism by individuals refusing to work for a living and alcoholism.

ACTIVE PARTY INTERVENTION KEEPS MANGYSHLAK DEVELOPMENT ON COURSE

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 8, August 1982 carries on pages 20-27 a 4,000-word article by S. Muqashev, first secretary of the Mangyshlak Oblast Party Committee, on the role of oblast party organizations in keeping Manghyshlak development on course. The article is published under the regular rubric "Socio-Economic Development Problems of Refined Socialism."

Many problems--such as industrial water and electrical energy shortages--have been encountered in the course of Mangyshlak development and will continue to be encountered as the pace of construction, production and exploration speeds up. Muqashev reviews the role of party organizations, both at the oblast and the local level in solving these many problems. He stresses the need for active party intervention in every area of development to secure fulfillment of developmental and other directives from above. He reviews some of the successful methods used to bring this about. Among them are special task forces of party activists.

PEOPLE'S SOVIETS MUST INTERVENE TO INSURE AGRICULTURAL PLAN FULFILLMENTS

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 8, August 1982 carries on pages 28-37 a 4,900-word article by A. Plotnikov, deputy chairman of the KaSSR Supreme Soviet, on the role of Soviets of People's Deputies in insuring plan fulfillment and economic development in agriculture and other areas. The article is published under the rubric "A New Era in Carrying Out the Leninist Agro-Policy of the Party."

The role of people's soviets is a key part of socialist democracy. Through the soviets, workers can help guide local and regional development. Today, in accordance with the New Food Program approved at the May CPSU Central Committee Plenum, agriculture and the associated agro-industrial complex are key focuses of the efforts and initiatives of people's soviets at every level.

KaSSR Soviets of People's Deputies are assigned the following tasks, says Plotnikov, in carrying out the New Food Program: 1) increasing agricultural output, 2) raising agricultural productivity, 3) guaranteeing agricultural plan fulfillment, 4) improving product quality, 5) building and putting into service new agro-industries and 6) assisting the development of private plots. Soviets are also to oversee every individual phase of agricultural production and the harvesting, transporting and storing of foods and food products to prevent loss and to take an active role in supervising the reconstruction of the rural environment to improve the living standrds of agricultural workers and stabilize cadres. Achieving these goals will require a revitalization of the soviets themselves and a refinement of their method.

Plotnikov reviews what is now being done by KaSSR soviets in the areas and provides specific examples of successes. Among the new methods being employed are agro-industrial union councils to directly supervise the work of a given agro-industry. The scope of the work of standing committees is also being expanded. Plotnikov stresses that local soviets are directly responsible for what goes on in their jurisdictions. Failure to achieve production success would be a violation of their mandates.

Economics

INEXPERIENCED STAFF CAN'T MAINTAIN COMPLEX EKIBASTUZ EQUIPMENT

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 20 August 1982 carries on page 2 a 1,700-word article by M. Zhanghozhin and S. Otepbergenov on key problems of Ekibastuz energy development. The article is the first in a series of three and is published under the regular rubric "Today at the Pavlodar-Ekibastuz Territorial Production Complex."

At Ekibastuz the waters of the Ertis and local coal are being combined to produce abundant electrical energy as the energy blocs of the great regional plant arise one after the other. Four energy blocs of State Rayon Electrical Station No 1 are now on line at Ekibastuz and bloc No 5 is complete and will begin production shortly. However, although advances are being made, Zhanghozhin and Otepbergenov stress, Ekibastuz operations are by no means trouble free and a number of critical difficulties hamper current operations and future plans.

Zhanghozhin and Otepbergenov suggest that the present Ekibastuz operating force (soon to reach 20,000) is simply incapable of running and maintaining the facility on its own, resulting in plant slowdowns, capacity losses and the frequent need to call in outside assistance from overworked department and project engineers. However, in defense of site labor, Zhanghozhin and Otepbergenov point out that the workers themselves are plagued by extremely poor planning documents and equipment that breaks down unnecessarily. Workers are also hindered by a virtually nonexistent complex repair base. A centralized maintenance plant is needed, but construction will begin only in 1983 due to a lack of planning staff and funds.

An even greater problem for Ekibastuz over the long term is the environmental issue. Enormous ash heaps are accumulating at the site at a rate far exceeding plans due to impure coal and inefficient Ekibastuz furnaces, and coal quality, some of the authors' informants note, is not improving. They suggest enrichment as one solution. Also a part of the Ekibastuz environmental problem is air pollution. Ekibastuz furnaces now burn 30,000 tons of coal every 24 hours and issue 250 tons of ash and other pollutants into the atmosphere. Nothing, however, is being done to solve this potentially life-threatening situation for the inhabitants of the Ekibastuz workers settlement.

In the course of their discussion, the authors also suggest that there may be major delays with Ekibastuz State Rayon Electrical Station No 2, and energy bloc No 1 now under construction. The reason is shortages and late release of funds, also a problem for other areas of Ekibastuz development since 1979. The authors fault planning organizations for the problem. They note that there has been a backup of equipment and assemblies at the site. Since much of this must be stored in the open air, damage often results.

MAJOR REFORESTATION EFFORT PROTECTS ARID REGIONS IN NORTHERN ALMA-ATA OBLAST

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 20 August 1982 carries on page 2 a 400-word article by Q. Omarkhanov on efforts to protect aid regions on the northern bank of the Ili in Kurtinskiy and Balkhaskiy Rayons of Alma-Ata Oblast. Kurtinskiy and Backhaskiy Rayons are among the few semi-arid regions in the otherwise well-watered Semirycheye. To protect the fragile local environment there and as part of a major reclamation effort, the Aqshi Forest Reclamation Station has been establishing and replanting forests in the rayons. There now exist there 4,200 hectares of closed forests and 2,532 hectares of forest protection zones. The latter have a particularly important role to play since they prevent soil erosion and preserve pastures. The Aqshi Station also protects local plant cover against insect infestation through spraying. The station plans to expand reforestation and other efforts in the future.

EKIBASTUZ COAL PRODUCTION FALLING BELOW PLAN GOALS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 August 1982 carries on page 2 a 1,600-word article by M. Zhanghozhin and S. Otepbergenov on growing problems with coal production at Ekibastuz. The article is the second in a series of three and is published under the regular rubric "Today at the Pavlodar-Ekibastuz Territorial Production Complex."

The coal deposits at Ekibastuz are world famous. Reserves are now estimated at 14 billion tons, enough for 100 years at current rates of production. This means that Ekibastuz will remain an area of active mining well into the next century. Today 73 million tons a year are being produced, one-third at the vast "Bogatyr'" cut.

There have been many successes at Ekibastuz, at the "Bogatyr'" cut in particular. However, production plans for the "Ekibastuzugol'" Production Union as a whole have not been fulfilled for the first half of this year and even the "Bogatyr'" cut is a million tons short for 1982.

The primary reasons for the shortfalls, Zhanghozhin and Otepbergenov suggest, is the poor showing of the "Irtyshuglestroy" Construction Trust, soon to be named the "Ekibastuzshakhtastroy" Combine with little more than a name change. The trust is far behind in work to build new pits and reconstruct others, a critical problem since enhanced coal capacity at Ekibastuz is dependent upon bringing these new and reconstructed cuts into full, planned production capacity.

The "Severnyy" cut, for example, is being reconstructed to raise output capacity to 30 million tons by 1985 and 50 million tons by 1990. Funding, however, is only being used very slowly and the first production unit that was due to begin operations next year is still not operational. The new "Vostochnyy" cut is also behind schedule and only 18 million rubles of 148 million rubles allotted for construction of the pit during the last 4 years has been put to use. At this rate, Zhanghozhin and Otepbergenov complain, completion the cut will take 20 years. Even work at the highly productive "Bogatyr'" cut is lagging with millions of rubles of uncompleted construction and installation work. The authors suggest that planned increased production capacity at the cut will be years late as a result.

Problems in addition to inadequate efforts by the construction trust are lagging pace of surface layer removal at the mines to prepare for mechanized removal of coal and major difficulties with mine railways. Last year at the "Bogatyr'" cut, for example, plans called for preparing 60 million tons of coal for mining by stripping away surface layers, but only 37 million tons were actually prepared. In some areas rotor mining machines and escavators must either be laboriously moved from one site to another, or mining capacity is left idle. In the case of mine rail transport, freight cars are not being provided rapidly enough at the mining fronts and weak roadbeds, and other factors lead to railbed collapses, breakage of track and accidents, all resulting in production losses.

The authors do note that the construction trust complains of labor shortage but seem unimpressed. They call for immediate attention by the appropriate authorities to problems uncovered in view of the importance of Ekibastuz for Soviet development. Problems discussed, moreover, Zhanghozhin and Otepbergenov stress, are by no means all.

HOUSING SHORTAGE PREVENTS FULL DEVELOPMENT OF EKIBASTUZ COAL PRODUCTION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 22 August 1982 carries on page 2 a 1,000-word article by M. Zhanghozhin and S. Otepbergenov on the acute shortage of housing and other facilities at Ekibastuz and the effects of the shortage on development there. The article is the third and last in a series of three and is published under the regular rubric "Today at the Pavlodar-Ekibastuz Territorial Production Complex."

The shining lights of Ekibastuz development are the mines, cuts such as the "Tsentral'nyy," third largest in the Soviet Union in terms of production with 100 million tons of coal delivered during the last 5-year plan alone, and the great "Bogatyr'" excavation. But when one looks beyond the mines, as impressive as they are to visitors, the picture is not so rosy. In particular, there is a severe lack of facilities of every sort at Ekibastuz. From administrative buildings to housing, schools and cultural facilities. The government, Zhanghozhin and Otepbergenov note, has issued resolutions on enhanced development of Ekibastuz coal but has not offered help in other key areas of development, as might be expected.

A review by the authors revealed an administrative-living unit under construction for 10 years and now in its third 5-year plan, 14 of 18 school, cultural and other service projects planned for completion last year still uncompleted and a 1981 housing plan only 85 percent fulfilled despite the critical shortage. Responsible for the delays is the "Ekibastuzenergostroy" Trust, but it, Zhanghozhin and Otepbergenov note, is hampered by labor shortage and a lack of critical construction materials such as reinforced concrete while a housing combine is among the uncompleted construction projects itself. The worker-inhabitants of Ekibastuz are precious, the authors conclude, and Ekibastuz will never develop to its full potential if facilities are utterly lacking for housing and serving them.

DROUGHT, MISMANAGEMENT REDUCE CHIMKENT OBLAST VEGETABLE, FRUIT HARVESTS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 25 August 1982 carries on page 1 a 900-word article by N. Bondarenko, inspector of the Chimkent Oblast State Inspectorate for the Quality and Procurement of Agricultural Products, S. Kadeyev and A. Zholdasbekov, on problems with fruit and vegetable production in Chimkent Oblast. The article is published under the rubric "Don't Abandon What the Earth Gives You" and is the result of a SOTSIALISTIK QAZAQSTAN "raid."

Chimkent Oblast is one of the important fruit, vegetable and garden-producing centers of the KaSSR and plays a major role in supplying food products to the people of northern Kazakhstan. This year climatic conditions have been less than favorable and drought has prevailed. In spite of this, however, oblast agricultural workers have been working actively to fulfill the New Party Food Program advanced at the May 1982 CPSU Central Committee Plenum. The results of their efforts are now beginning to be seen but are less than last year's yields, not only due to the drought but also on account of apathy on the part of harvesters.

The authors look at some of the problems involved and discover poorly organized harvesting in many areas with food left on the ground past ideal procurement time, spoilage due to a lack of transportation and packaging, labor shortage, poor labor organization, a lack of necessary equipment and poor choices of fruits, vegetables and other products harvested. The authors suggest that such practices and inadequacies are throwing away the real achievements of a difficult year.

CONSTRUCTION LAGS HINDER DEVELOPMENT OF MAJOR SHILISAY PHOSPHOROUS DEPOSITS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 27 August 1982 carries on page 2 a 1,400-word article by T. Ysqaqov on new phosphorous deposits being developed at Shilisay in Aktyubinsk Oblast and the construction lags hindering a production build up there. The article is published under the regular rubric "Let Us Carry Out the Decisions of the May CPSU Central Committee Plenum."

Shilisay is the site of a major phosphorous deposit with proven reserves of 10-12 billion tons, enough for 400-500 years. The deposits, moreover, are located only 1-15 meters below the surface and are thus readily accessible. Three experimental mines and an experimental refining plant are now in operation, and tests with fertilizers produced from phosphorus refined at the plant have shown them to have excellent properties.

Work has been going on for 5 years to develop the mines and refining capacity to an output of 700,000 tons of refined phosphorus a year by the end of the current 5-year plan. Development at Shilisay has become all the more pressing due to the New Food Program approved at the May 1982 CPSU Central Committee Plenum. Unfortunately, Ysqaqov shows, lagging construction in every area places the achievement of currently planned goals in question. Reasons for the delays are labor shortage, poor labor organization and poor equipment usage. Ysqaqov concludes that the site and its potential products are too important to be hindered by construction problems and calls for a quantitative and qualitative build up of the construction work force to speed site development.

LOCAL AUTHORITIES FAIL TO ENCOURAGE AUXILIARY FOOD PRODUCTION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 1 August 1982 carries on page 1 an 800-word boldface editorial entitled "The Auxiliary Enterprises of Citizens." The New Food Program approved at the May Party Plenum called for the encouragement and development of citizens' auxiliary food producing enterprises. Such enterprises are widespread in the KaSSR. Millions of extra tons of meat, milk, potatoes and vegetables are sold each year to the state by kolkhoz members and sovkhoz workers. Such sales greatly assist the KaSSR food supply. There is no doubt that the people know how to operate such enterprises successfully and profitably. Moreover, many party and government organizations have achieved major gains in encouraging the development of such enterprises. This has resulted in purchases far above planned quantities in some rayons.

However, problems remain, resulting in substantial underfulfillment of purchase plans. For example, only 47 percent of milk set for purchase could actually be purchased from auxiliary enterprises in Alma-Atinskaya Oblast. The editorial blames local soviets and agricultural organizations for these failures and calls for more attention to the development and problems of auxiliary food enterprises.

NORTHERN KAZAKH RAIL SYSTEM CARRIES 60 PERCENT OF REPUBLIC FREIGHT

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 1 August 1982 carries on page 2 a 1,000-word article by N. Ovsyanik, chief of the "Virgin Lands" Railway Administration, on the state of Soviet and Kazakh railways and plans for the future to meet goals advanced by the New Food Program approved at the May CC CPSU Plenum. The article is published under the rubric "Today Is All-Union Railway Workers Day."

Railroads have played an important role in the development of the people's economy and the CP and Soviet regime have devoted particular attention to their development. Rail lines have, as a result, developed at a rapid pace and today the Soviet Union is a railroad nation with one-tenth of the world's rail lines and nearly half of its freight turnover. At present Soviet railroads are transporting 10 million tons of freight and 11 million passengers each day.

Republic railroads are controlled by three railway administrations. One of them is the "Virgin Lands" Railway Administration controlling railways in Kustanayskaya, Pavlodarskaya, Kokshetavinskaya and Tselinogradinskaya Oblasts. This system carries 60 percent of republic freight including iron, coal, ores and food.

Ovsyanik notes the enhanced role of the system in terms of the goals of the New Food Program approved at the May CC CPSU Plenum. To meet these goals, improved service to the republic agroindustrial complex and improved utilization of the freight cars transporting agricultural products is needed. The amount of growth is proceeding hand in hand with the strengthening of the material and technical base of the system and construction of new lines. In some cases these new lines are specifically intended to meet agricultural needs.

CRITICAL SHORTAGES HINDER DEVELOPMENT OF GUR'YEVSKAYA POND FISHERIES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 6 August 1982 carries on page 2 a 1,700-word article by N. Muftakhov on the current state and problems of Gur'yevskaya Oblast Pond Fisheries. The article is published under the rubric "In Service of the Food Program."

The role of pond fisheries in guaranteeing supply of food products to the people is great as can be seen in the decisions of the 1982 May CC CPSU Plenum. The New Food Program calls for a three-fold increase of commercial fish output during the next 10 years. Achieving this goal will require rebuilding and reequipping fish hatcheries and proper use of all reservoirs and natural bodies of water.

Gur'yevskaya Oblast with its numerous rivers and other large bodies of water is one of the areas with broad possibilities for developing pond fisheries. Muftakov reviews existing and planned pond fishing facilities and the processing plant base in the oblast. He notes many problems hindering pond fisheries development in the oblast: Shortages of breeding stock, of fry, of building and of other vitally needed raw materials, unavailability of urgently required special equipment, including large pumps to maintain the ponds, poor management and a disorganized and inefficient system of fish sales, of live fish in particular. Muftakhov notes also that some existing ponds are poorly located with respect to transportation lines and are difficult to maintain as a result. The current thrust of new fish pond construction is centered on the Caspian littoral.

KAZAKH RURAL AREAS CHANGING

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 7 August 1982 carries on page 1 a 1,000-word boldface editorial on changes taking place in rural living standards and in the character of rural areas themselves. The social development of rural areas has always been a part of the program of the CP. Recent proof of this can be seen in the decisions of the May Party Plenum that made the raising of rural living standards a key part of the new Soviet Food Program.

The editorial reviews the changed appearance of Kazakh rural areas in recent years stressing the fact that, in many cases, rural service and other facilities are in no ways inferior to those found in the cities. Moreover, virtually all rural households now have television, radio and gas for cooking. The sovkhozes and kolkhozes themselves are also well organized, well-laid out and beautiful.

However, the editorial continues, problems still remain. It castigates lack of planning in rural development as a key problem area. Also criticized is poor quality construction and poor electrical and water systems and failure to deal with existing problems of local authorities. The editorial calls for active measures to overcome these difficulties and for a speed up in rural reconstruction. The goal, it concludes, is clear. Rural living standards must be raised during the period 1982-1990 to meet the goals of the new party Food Program.

KAZAKH ENVIRONMENTAL PROTECTION SOCIETY PRAISED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 15 August 1982 carries on page 1 an 800-word boldface editorial entitled "Care for Natural Riches."

Evidence of party and government concern with the environment is seen in the various official resolutions and laws that have been sanctioned on forests, water conservation, land use, atmospheric and faunal protection, etc. Such state acts set forth specific measures for the protection of the natural environment and of natural resources.

Much is being done in the KaSSR to carry out the provisions of Soviet environment laws. For example, gas and dust collectors have been installed at large industries to reduce air pollution; air pollution control laboratories have been set up in the cities of Dzhambul, Chimkent and Aktyubinsk, and closed circulation water systems have been introduced into the ferrous and nonferrous metals industries to prevent water pollution. Struggle is also being waged to protect 16 million hectares of land against wind and water pollution and to restore forest cover in many areas.

But this is not to say that there are no problems, as witnessed by numerous letters to the editors of SOTSIALISTIK QAZAQSTAN complaining about environment issues, the condition of the Esil River, for example. It is unfortunate, the editorial continues, that little or nothing is being done to respond to these complaints, in the area of water resources in particular. The editorial calls upon the appropriate authorities to take action and ends by summarizing the requirements of current state plans in the environmental area. The editorial devotes particular praise to the work of the Kazakh Society for the Protection of the Natural Environment.

KAZAKH AGRICULTURAL MINISTER CITES FOOD SUPPLY DIFFICULTIES

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 13 August 1982 carries on page 4 a 1,400-word interview with Gabiden Shakhmanovich Kurmanov, deputy minister of agriculture KaSSR, on the current state of Kazakh agricultural production and the new party Food Program. Kurmanov was interviewed by Musa Rakhmanberdiev and the interview is published under the regular rubric "Rhythm of the 5-Year Plan."

Kurmanov was asked questions about the unfavorable weather conditions of the beginning of this year and their impact upon Kazakh agriculture, the new party Food Program in general terms, the role of the KaSSR in its fulfillment in particular and the reasons (management or resources?) for current problems in Kazakh animal husbandry. In answering the first question, Kurmanov acknowledged the difficulty but stressed the measures taken to overcome it. He noted the failures in some areas that were criticized at recent plenums of the CC CPSU and of the CC Kazakhstan CP but underscores the record of accomplishment of Kazakh agriculture in the past.

Kurmanov characterizes the new party Food Program as a program of abundance but notes that achieving this abundance in view of worldwide food shortages will be no easy task. He stresses, however, the need for a comprehensive, coordinated effort to achieve the new goals. In terms of the contribution of the KaSSR he sums up current accomplishments and future prospects. The most recent estimates of Kazakh food production for 1982, for example, set grain production at 27.9 million tons, potatoes at 520,000 tons, vegetables at 770,000 beets at 2.2 million tons, meat at 1.5 million tons, milk at 2.48 million tons and eggs at 2 billion. In this context Kurmanov stresses the contribution of new emphasis crops, e.g., rice, buckwheat, millet and corn but does not provide production figures. For animal husbandry, Kurmanov stresses proper care as the solution.

NEW FORCES MOBILIZED TO COMPLETE URGENTLY NEEDED ALMA-ATA CANAL

[Editorial Report] Alma-Ata PARTIYNAYA ZHIZN' KAZAKHSTANA in Russian No 8, August 1982 carries on pages 22-27 a 2,500-word article by K. Aukhadiyev, first secretary of the Alma-Ata Oblast Committee of the Kazakhstan CP, on the importance of the Great Alma-Ata Canal now under construction and the new efforts now being made to complete it on time. The article is published under the regular rubric "Carrying Out the Food Program, an Obligation of all the People."

The New Party Food Program approved at the May 82 CPSU Central Committee Plenum calls for major efforts to achieve the coordinated reclamation of land and attain planned agricultural yields from irrigated and drained lands. Aukhadiyev provides an overview of what is being done to this end in Alma-Ata Oblast with special reference to the Great Alma-Ata Canal, now under construction.

Alma-Ata Oblast, he stresses, is heavily dependent upon the 20 percent of its farm and pasture lands that are irrigated since they provide some 70 percent of total oblast agricultural output. And this fact, Aukhadiyev goes on, illustrates the great potential for further development based upon increased use of irrigated lands. However, this growth will be impossible without a radical transformation of existing irrigation systems, the establishment of new and the introduction of more water. Playing a key role in achieving all of these ends will be the new, Great Alma-Ata Canal and its associated Bartogay Reservoir.

There is a potential of 1.2 million hectares of agricultural lands between the Chilik and Chemolgan Rivers but only some 85 percent is now being used, mostly for pasture, with only 20.1 percent of the total used for crops. There is 153,000 hectares of irrigated lands between the two rivers but surface water supply is currently adequate for only 124,000 hectares. The new canal will allow full use of existing irrigated lands and, at the same time, it will permit the full potential to be realized from currently unused or underutilized lands.

The canal will serve Kelenskiy, Talgaskiy, Iliyskiy, Engbekshikazakskiy and Chilikskiy Rayons and Alma-Ata City. It will stretch 170 kilometers and have its origins in the 963 million cubic meter planned capacity Bartogay Reservoir. The first, Chilik to Alma-Ata link is due for completion this year and will begin to serve local irrigation systems in 1983.

Aukhadiyev stresses the progress that is being made on canal construction but also notes that many tasks scheduled for completion in the immediate future are still incomplete. His description of the mass mobilization of new construction and other organizations to speed completion of the canal suggests that work has been going more slowly than planned. The visit by D.A. Kunayev and other leading Kazakh figures in July may also be interpreted as part of a major effort to press forward construction.

Problems mentioned by Aukhadiyev include shortages of housing and service facilities for canal workers and difficulties with prefabricated assemblies and the uninterrupted supply of labor and materials. Aukhadiyev stresses the role of his own and other party organizations in pressing forward canal construction and sees 1984 as a "possible" completion date. Efforts to rebuild local irrigation systems in Chilikskiy and other rayons are currently underway as the canal advances. He ends his discussion with a description of a new, "industrialized," food and fodder production in Alma-Ata Oblast to be built up based upon the new canal and associated systems.

ENVIRONMENTAL LAWS OFTEN COMPLETELY IGNORED BY KAZAKH MINISTRIES, INDUSTRIES

[Editorial Report] Alma-Ata PARTIYNAYA ZHIZN' KAZAKHSTANA in Russian No 8, August 1982 carries on pages 61-67 a 3,100-word article by V. Konovalov, chief of the construction and construction industry section of the KaSSR Committee for People's Control, on work by the committee and its subunits to achieve adherence to environmental regulations, those governing air and water pollution in particular, by Kazakh ministries and industries. The article is published under the regular rubric "The Protection of the Environment, Under Party Control."

Great attention has been devoted at every stage of communist construction to environmental protection and the conservation of natural resources with the system worked out by Lenin himself providing guidance. The Leninist principles of environmentalism, moreover, have been restated by later party congresses and by L.I. Brezhnev himself.

It is particularly important today, with the rapid growth of industry, construction, transportation and other sectors of the Soviet economy, to take into account the negative environmental impact of the development that is taking place and to take measures against it. In Kazakhstan, as a consequence, increased capital and other resources are being devoted to environmental protection as the pace of development speeds up. In the 10th-year plan, for example, 700 million rubles were spent in KaSSR environmental protection projects from health funds alone, in addition to those supported by other funds.

Gas collectors have been installed at polluting industries to prevent harmful substances from entering the air, water purification systems have been introduced, often involving close circulation systems. Such systems both economize on limited water resources and protect the environment from waterborne industrial wastes. These measures, moreover, are only a part of what has been and is being done and Kazakhstan has emerged as one of the leaders in this area.

Konovalov reviews some of the successful projects that have been carried out in every part of the republic to realize the current goal of a major reduction in the introduction of pollutants into the environment. However, he continues, work of people's control units, including that headed by himself, has shown that many industries and authorities, including ministries, still fail to devote adequate attention to environmentalism and, in some cases, ignore environmental laws and regulations entirely.

Konovalov provides numerous examples of offending industries and authorities, such as the "Karaganda Tsement" Production Union that, he claims systematically violates air pollution laws, the Chimkent "fosfor" Production Union and the Dzhambul "Khimprom" Production Union and other metallurgical, energy and electrical production units. The Ministry of Nonferrous Metallurgy is singled out for special blame.

One particular problem, he goes on, is slow construction (or nonconstruction in some cases) of badly needed environmental projects by shortsighted managers and others interested only in immediate plan fulfillments with various waterworks to prevent pollution and waste systems a particularly sensitive area.

Some factories, Konovalov laments, are put into operation without functional sewer systems, completely contrary to law, and in others, poorly operating systems into bodies of moving fresh water, the Irtysh River, for example, now badly polluted with sewage as well as with industrial wastes.

Konovalov suggests that managers and even ministerial chiefs are often totally uncooperative with people's control units in solving such problems and sometimes take no action at all, despite promises to the contrary. He provides numerous examples of projects still uncompleted after 7 or more years, despite official claims of attention to them. He concludes that environmentalism and conservation are vitally important for economic growth and calls for making concrete environmental proposals an integral part of any development plan. Moreover, he suggests throughout his discussion that those giving rise to pollution must bear real responsibility for their actions.

FRUITS, BERRIES IN SHORT SUPPLY

[Editorial Report] Alma-Ata QAZAQSTAN AYELDERI in Kazakh No 8, August 1982 carries on page 31 a 700-word article by B.G. Matakhanov and K.D. Ayapov, assistant professors of the Kazakh Agricultural Institute, entitled "Why Are There Not Enough Fruits and Berries?" The article is published under the regular rubric "Twelve Months of the Year" and is immediately preceded by recipes for jams and jellies[!].

During the years 1976-80, 15.2 million tons of fruits and berries were raised in the Soviet Union each year, a 23.4 percent increase over the years 1961-65. During this same period KaSSR production of fruits and berries rose from 50,900 tons to 243,100 tons or by 477.1 percent.

In spite of this rapid increase of production, however, we have been unable to meet needs. During the 10th Five-Year Plan, for example, only 38.2 kilograms was produced per year per capita, whereas a minimum of 81 kilograms a year is considered the norm by Soviet nutritionists.

Matakhanov and Ayapov offer the following explanations for the short fall: 1) low, very low yields in some cases due to a lack of specialized fruit- and berry-growing enterprises (only 24 percent of the total KaSSR output is grown in such enterprises) and the small scale of the enterprises that do exist; 2) poor quality fruit trees with low productivity and inefficient methods of orchard use and organization. Reorganization of orchards alone, the authors conclude, would result in major gains.

Social and Cultural Affairs

RUSSIAN SPEEDERS DISTURB KAZAKH VILLAGERS

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 20 August 1982 carries on page 14 a 1,500-word article by Musa Rakhmanberdiyev on the disturbance caused in a small Kazakh village by numerous speeders on a nearby highway. The article is published under the regular rubric "Questions To Look Into."

The small village of Mamyr is located in Kaskelenskiy Rayon just west of Alma-Ata. The problem is that the settlement is located on a paved highway which, in some cases, runs right in front of the houses. Although the speed limit is a posted 40 kilometers an hour motorists speed by much faster, at from 80-90 kilometers an hour most of the time. The problem Rakhmanberdiev complains, is bad enough during the day but at night the noise carries and becomes intolerable. Villagers have repeatedly complained to the authorities, to no avail.

Journalist Rakhmanberdiev recounts how he took up position at a police radar station to meet some of the culprits. Unlike the journalist himself and his two police companions, moreover, speeders apprehended turned out to be Russians, and well-placed Russians at that, all in private automobiles. One, an assistant professor at a physical culture institute, even showed "his true colors" by trying to bribe the policemen with an offer of facilitated admission to his institute of one of their children. But it was to no avail, and he, like the others, received his speeding ticket.

Rakhmanberdiev suggests that the problem is one of a lack of consideration and sensitivity by the speeders who are all too wrapped up in their own lives and problems. He laments that peace and quiet are, alas, all too rare on account of such persons.

ONLY RUSSIAN TRANSLATORS OF KAZAKH WRITERS AVAILABLE IN KAZAKH-SPEAKING RAYON

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 20 August 1982 carries on page 14 a 600-word article by Shyngghys Tanqiyev on problems with the availability of Kazakh books in the rayon. The article is published under the rubric "It's Not That There Is No Demand for Books, It's That They Are Unavailable."

Unylskiy Rayon in Aktyubinsk Oblast is considered one of the most outlying rayon of the republic. Most of its inhabitants are Kazakhs, and Kazakh is the language of instruction in the schools and of business.

However, in spite of the overwhelmingly Kazakh color of the area, Tanqiyev complains, the books in the Kazakh mother tongue so lovingly read by the people are rarely available in rayon bookstores, even the most recent publications. In fact, printed materials in Kazakh of almost any sort are unavailable. Tanqiyev seems to suggest collusion to that end by the book supply office of the oblast consumers union. (It is difficult to obtain Kazakh books from this organization even by mail order.) What is available are Russian language books including numerous translations of works by Kazakh writers but not the originals. It is through sales of these Russian books, incidentally, that local book stores have been overfulfilling their sales plans, Tanqiyev notes.

Tanqiyev complains in particular of the unavailability of books published by the scholarly "Gylym" Press. Suppliers seem to think, he laments, that there are no readers for books of the sort published by the press in the rayon but, he adds, this is far from the case and rayon readers are literate and discriminating. But some of the press's books might as well never have been published as far as rayon readers are concerned. He ends by calling for larger issues of books and for improved distribution. The demand for Kazakh books is there and should be met.

KAZAKH MONUMENT SOCIETY VISITS TASHKENT MAUSOLEUM OF HERO TOLE-BI

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 27 August 1982 carries on page 10 a 1,700-word article by Baltash Ysqaqov, consultant of the Central Council of the KaSSR Society for the Protection of Historical and Cultural Monuments, on a recent expedition by his society to the 18th century mausoleum of the Kazakh hero Tole-bi in the old city of Tashkent in the KaSSR. The article is published under the regular rubric "Journey Into the Past."

Tole-bi was an 18th century Kazakh chieftain who once roamed near Tashkent with his people and later took up residence in the old city, where he is buried. Tole-bi, who refused to give way before the Dzungan invaders and thus protected his own people and his adopted Tashkent, is considered a patriot and hero by the Kazakhs and thus the interest in his mausoleum. The article details the discovery of the site of the mausoleum, its structure and decoration, its history and the history and legends associated with Tole-bi himself, both among the Kazakhs and the Uzbeks. Ysqaqov ends his article by calling for cooperation with representatives of the UzSSR in preserving and studying this important monument of interest to both Kazakhs and Uzbeks.

KAZAKH SUPREME COURT JUSTICE STRESSES SOCIETY'S ROLE IN CRIME PREVENTION

[Editorial Report] Alma-Ata MADENIYET ZHANE TURMYS in Kazakh No 7, July 1982 carries on page 20 a 1,100-word article by Qazi Azamatov, justice of the KaSSR Supreme Court, on the need to take active measures to prevent crime. The article is published under the rubric "Don't Think of What You Can Get But Think of Your Honor."

Justice Azamatov holds that active efforts must be made to prevent as well as to punish crime and thus better serve the interests of society. Justice Azamatov provides specific examples of the types of preventable crime. They include one example of wife stealing, which he characterizes as occurring "here and there," several alcoholism related crimes and various larcenies. We are not born criminals, he notes, and crimes do not take place except in a human social environment. If the members of society actively intervene to prevent crime and to instill responsibility and honesty in its members, much crime will be avoided. We don't have to drink, for example, and society does not have to tolerate alcoholism.

KAZAKH TOWN COUNCIL DEFENDS GREEDY MOLLAH

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 12 August 1982 carries on page 4 an 800-word article by Senik Qaliev on problems with a "greedy and dissolute mollah" practicing in his village. The article is published under the rubric "Knowledge, a Ray of Light, Religion a Hindrance."

Two years ago, Qaliev writes, a new mollah came to Fogolevka Village (Leninskiy Rayon, Chimkentskaya Oblast) with the highest recommendation of the "official" religious authorities. Although accepted by the community at large, some local people, however, soon became less than pleased with Kilbat Rasulov, the ex-teacher from Uzbekistan with a knowledge of Arabic who had turned to religion in his old age, after retirement, and without leaving his family, as it turned out. Most notably, it soon became apparent that Rasolov was enriching himself and his family in Chimkent at the expense of local believers with his fees, ransoms and demands for contributions (Qaliev provides us with a list of services and Rasulov's charges). Moreover, Qaliev continues, the new mollah's relationships with the women residents of the village have left much to be desired, and there is even a hint of lewd conduct.

Complaints, Qaliev goes on, flew thick and thin but, he complains, when they were brought before the village soviet, the members of the soviet vehemently defended the mollah and tried to suppress complaints raised against Raslov and close the mouths of the complainers themselves. Qaliev wonders whatever possessed the religious authorities to send a person like Rasulov to the village in the first place, suggesting that the mollah's conduct at Fogolevka Village was nothing new but had already been going on at Tashkent and Chimkent City before he even came to Fogolevka. Qaliev criticizes the responsible religious authorities by name including the head of religious affairs for Chimkentskaya Oblast.

STUDY FINDS MORE ARABO-PERSIAN THAN RUSSIAN WORDS IN KAZAKH PRESS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 6 August 1982 carries on page 10 a 1,300-word review by Nemat Kelimbetov, senior instructor at the Kazakh Abay imeni Pedagogical Institute, of Leninshil Rustemov's new book "Qazingi Qazaq Tilindegi Arab-Parsy Kirme Sozderi" (Arabo-Persian Loan Words in the Contemporary Kazakh Language, "Gylym" Press, 1982). The article is published under the rubric "Beloved Language."

The orientalist and linguist Leninshil Rustemov has recently published a book on Arabo-Persian loan words in the Kazakh language. The book examines in detail 1) the long-assimilated Arabo-Persian loan words in everyday Kazakh and 2) the important but rarely used Arabo-Persian elements found in the popular tales and epics once well known to the people.

Rustemov notes in his book that Arabo-Persian loan words are far fewer in Kazakh than in other Turkic languages such as Uzbek, Azeri, Tatar or Anatolian Turkish. A sample of QAZAQ ADEBIETI surveyed by the author, for example, showed that 78 percent of words used were Kazakh, 14.4 percent of Arabo-Persian origin and 7.6 percent Russian and international words. He concludes that about 15 percent of the current active Kazakh vocabulary is of Arabo-Persian origin and 7 percent of the passive vocabulary.

Rustemov's book, in addition to explaining the grammatical and linguistic relationships of Arabo-Persian loan words, pays great heed to the social, economic and cultural context in which the borrowings originally took place. He notes the influence of a common Islamic literature in particular but stresses the many peculiarities and special characteristics of Arabo-Persian word use in Kazakhstan.

OBLAST PARTY CHIEF STRESSES WELL COORDINATED ATHEISM PROPAGANDA

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 8, August 1982 carries on pages 63-90 a 4,100-word article by Q. Amanbayev, secretary of the Karaganda Oblast Committee of the Kazakhstan CP, on the need for a coordinated, systematic approach to atheism agitation. The article is one of a continuing series published by QAZAQSTAN KOMMUNISI of scientific atheism theory, propaganda methods and successful experiences in atheism agitation work.

Amanbayev reviews atheism agitation work and its organization and structure in Karaganda Oblast. He stresses the need for a systematic, coordinated approach carried out by well-trained agitators working according to unified plans. He provides specific examples of the approach needed and shows how it has led to successes in many parts of Karaganda Oblast. However, he also notices party units whose work is not up to required levels and is uncoordinated, unsystematic and chaotic. He also criticizes atheism agitation that is superficial and formalistic in some areas and agitators that fail to follow the highly effective method of actually dealing with believers on a first hand, personal basis. Amanbayev expresses concern about atheism education councils that are dominated by believers who attempt to substitute one religious custom for another, in burial practices for example, in the name of promoting "new," "Soviet" customs in place of the old. He underscores the fact that active atheism agitation can be crowned with success and condemns those claiming that religion is so entrenched "that nothing will do any good anyhow." Such attitudes, he laments, are taken advantage of by the religious to expand their power.

CONNECTION BETWEEN RURAL CULTURAL SERVICES, PRODUCTIVITY STRESSED

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 8, August 1982 carries on pages 71-76 a 2,900-word editorial on cultural services in rural areas and current efforts to enhance them as part of the New Party Food Program. The article is published under the rubric "Culture and Literature."

Agricultural workers are now striving actively to fulfill tasks assigned by the 1982 Food Program approved at the May CPSU Central Committee Plenum. This program is of the utmost importance for the future of the Soviet Union and is the key to the solution of the Soviet food problem.

One major component of the New Food Program is the physical and social reconstruction of rural areas with new housing, schools, preschool facilities, medical and consumer services, etc. The new program calls for raising cultural levels and improving recreational resources in rural areas because there is a link between recreation and productive labor. The outcome will be a total and drastic restructuring of rural life.

KAZAKH KOMSOMOL MAGAZINE INTRODUCES NEW LAW AND ORDER RUBRIC

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 8, August 1982 carries on pages 10-11 two articles, one a 1,500-word article by KaSSR Deputy Minister of Justice Adalbay Bulghaqbayev on the importance of law in Soviet society and the legal education of youth, the other an 800-word article by Ramazan Nurtayev, fellow at the KaSSR Academy of Sciences Philosophy and Law Institute, on laws governing mine safety, to introduce the new rubric "Legal Education." Bulghaqbayev's article explains the importance and basis of Soviet law and stresses its role in altering and shaping Soviet society. Because of its importance, he goes on, it is crucial to encourage Soviet citizens to observe and strengthen law to the greatest possible degree and one sure way to achieve this, he goes on, is through educating youth to be responsible citizens legally.

Nurtayev stresses, in his article, socialist society as a humanitarian society and mine safety regulations as a logical expression of the humanitarian concerns of party and government. Turning to mine safety regulations per se, he details how they set specific standards and specific responsibilities for maintaining mine safety and specific punishments for violations. He sees inattention to these regulations as one cause of mine accidents and production loss (other causes mentioned are production rushes due to failure to fulfill daily plans, excessive work bravado by individuals and failure to use equipment safely). Mine safety measures, moreover, Nurtayev goes on, are part of a system, with economic principles, that govern complex mine operations.

In addition to general discussions of law and problems of labor safety, as discussed above, future articles will be on labor organization, legal research, copyright law and environmental law. The editorial note also promises to publish answers by experts in response to young readers' questions.

DOCTOR CITES NONORGASMIC WOMEN AS DIVORCE CAUSE

[Editorial Report] Alma-Ata QAZAQSTAN AYELDERI in Kazakh No 8, August 1982 carries on pages 10-11 a 1,100-word article by medical doctor V. Chaykovskiy on the problem of nonorgasmic women and its negative impact upon family happiness and stability. The article is published under the regular family affairs rubric "The Golden Threshold."

The family is a foundation stone of the state. The health and ability to work of family members, as well as its fertility, have a direct impact upon its happiness and stability, as does love, the basis of communal life.

Love, however, and with it family happiness and stability, are destroyed by sexual incompatibility of husband and wife, by the problem of nonorgasmic women in particular, estimated by one authority to be the cause of 30-40 percent of all divorces.

Chaykovskiy looks at the problem in physiological terms and details its negative impact upon the health and psychology of nonorgasmic women and, through them, upon their husbands. He argues against the view that "this is the way things have to be" and stresses sexual compatibility between husband and wife as the norm rather than the ideal. He calls for careful effort by both partners in a marriage to understand and resolve the problem and underscores the need for sexual relations based on the physiological needs of each partner.

CONTRIBUTIONS OF ANCIENT KAZAKHSTAN PHILOSOPHER AL-FARABI LAUDED

[Editorial Report] Alma-Ata QAZAQSTAN AYELDERI in Kazakh No 8, August 1982 carries on pages 14-15 a 1,600-word article by professor A. Qasymzhanov, doctor of philosophical sciences and corresponding member of the KaSSR Academy of Sciences, on the ancient Kazakhstan (born in the old Otrar) philosopher and astronomer Al-Farabi. The philosopher's millenary is being celebrated this year and Qasymzhanov's article is one of a number that has appeared.

Qasymzahov seeks to counter established views that Al-Farabi was little more than a commentator and immitator of Aristotle. He notes, in particular, Al-Farabi's original views on logic and his advanced stance against dogmatic religion and attempt to distinguish a "pure" religion not antipathetical to philosophy. Qasymzhanov calls for a fuller study of the medieval philsopher's works to better understand the scope of his thought.

KAZAKH WOMAN CASTIGATES SOVIET MALE CHAUVINISM

[Editorial Report] Alma-Ata QAZAQSTAN AYELDERI in Kazakh No 8, August 1982 carries on pages 20-21 a 1,400-word article by K. Zhankenova entitled "A Word on Equality." In the 1970's, she begins, there was a debate in the pages of SOVETSKAYA ZHENSHCHINA on the women's movement and what a woman should be. The debate, she notes, went on for a year and many men as well as women expressed their views. Unfortunately, Zhankenova emphasizes, all too typical of male views was the placing of beauty and submissiveness above all other qualities in judging what a woman should be. It would not be going too far, Zhankenova laments, to say that this was the sum of it for most men. But, she implies, few men ever find their ideal.

It is now, she goes on, the 60th anniversary of the foundation of the USSR and high time to give thought to equality. The revolution, Zhankenova stresses, freed women and gave them the right to develop their abilities to the fullest. The social contribution of women, she goes on, is, however, still not recognized by many Soviet men. Moreover, far too many working women do all the housework and are forced to wait on their husbands hand and foot with little regard for their own feelings. (She provides several examples from her own experience.) Men should share the housework with their wives and be more sensitive, Zhankenova concludes, to their needs. Thereby they will be providing long needed recognition of their importance to society.

UIGHUR MUSICIAN FROM EASTERN TURKISTAN SPOTLIGHTED

[Editorial Report] Alma-Ata KOMMUNIZM TUHI in Uighur 25 August 1982 page 4 carries a 900-word article by T. Qahhariy that sketches the life and activities of an Uighur musician, Abdukerim Razi. He was born in the Kashgar Province of Eastern Turkistan, went to Urumqi in 1930, and finally in 1934 went to Central Asian State University in Tashkent for an education. There he studied the works of Soviet composers and Uzbek classicial music. In the second half of the 1930's he worked in Urumqi, where he was a leader at the Uighur Theater. In 1955 he returned to the Soviet Union and remained with the Kazakhstan State Uighur Musical Comedy Theater in Alma-Ata until his death in December 1966.

TURKISH FILM BASED ON AYTMATOV WORK SHOWING IN KAZAKHSTAN

[Editorial Report] Alma-Ata KOMMUNIZM TUGHI in Uighur 12 August 1982 page 4 carries an 800-word article by Fadli Aliyev, a senior scientific associate of the KaSSR Academy of Sciences Linguistics Institute, on the Turkish film version of a work by the Kirghiz writer Chingiz Aytmatov, "My Cypress-Like Beloved." The short story was translated into Turkish, and in 1978 Turkish director Atif Yilmaz wrote a film script with Ali Ozgunturk on the basis of the translation and called the film "Red Kerchief." The film was first shown in the USSR in 1978 at the Tashkent Film Festival of Asian, African, and Latin American Peoples. In 1981 it was translated into Russian, and at present it is showing in the theaters of Kazakhstan. According to Aliyev, this is the second Turkish film to be shown in the USSR. The film was completely adapted to the conditions of life of the Turkish people, with just the basic plot of the Aytmatov short story retained. Much of Aliyev's article is devoted to one of the actresses in the film, Turkan Shoray.

International

NOVEL BY EMIGRE KAZAKH EXPOSES FALLACY OF MAOIST NATIONALITIES POLICY

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 20 August 1982 carries on page 6 a 1,400-word review by Rakhmanqul Berdibayev of Kazakh emigre author A. Qabayev's novel "Qaza Boran" (Sandstorm), "Zhazyshy" press, 1981. The review is published as part of a regular series of reviews.

A. Qabayev was born in the Mongolian People's Republic but grew up in Chinese Turkestan where he was a party official, newspaper editor and writer. Drawing the criticism of his Chinese masters during the Cultural Revolution, Aqbayev was forced to flee for his life to his native Mongolian People's Republic in 1969. Since reentering Mongolia, Aqbayev has continued his writing career and has a number of poems, stories and the novel "Qara Boran," originally published in Mongolian like the other post-1969 works, to his credit.

"Qara Boran," the first of three novels on the same subject, describes the lives and sufferings of Chinese Turkestan Kazakhs from the time of the victory of the Chinese revolution down to the period of the Great Leap Forward. Setting out to expose the "Fallacy of the Maoist nationalities policy," the novel depicts Chinese oppression of the Kazakhs and other Turkestanian nationalities in detail stressing the lack of any real change occasioned by the Chinese Revolution.

Moreover, as Berdibayev points out, Aqbayev sees oppression as coming not only from Chinese chauvinists but also from the old feudal ruling classes of the Kazakhs themselves who have changed their colors but not their intentions under Maoist rule and have reemerged as party cadres.

Berdibayev stresses the importance of the works of emigre writers such as Aqbayev since the KaSSR reader is largely left in ignorance about the lives and fates of the Kazakhs living outside the KaSSR. He calls for a concerted effort todiscover and publish more works of the like.

FRIENDSHIP SOCIETY CHIEF STRESSES KAZAKH CONTRIBUTIONS TO SOVIET-INDIAN FRIENDSHIP

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 15 August 1982 carries on page 4 a 1,200-word article by I. Qaraqulov, vice-president of the Soviet-Indian Friendship Society, on Soviet-Indian friendship and the role of Kazakhstan in it. The article is published to note the 35th anniversary of Indian independence and the 11th anniversary of the signing of the Soviet-Indian Treaty on Peace, Friendship and Solidarity.

Just 35 years ago the Indian people emerged victorious from a long struggle against colonialism and its national independence. The Soviet Union was among the first to congratulate the Indian people in this achievement.

The Indian Republic has continued to develop along lines of national independence, democracy and social progress since that day. The Indian people, moreover, have actively participated in the struggle for peace and nonalignment in Asia and the world. Soviet-Indian friendship has, as a consequence, grown over the years and expanded in scope. The 1971 Treaty on Peace, Friendship and Solidarity has become the basis for this development.

Qaralov stresses the commonality of Soviet and Indian views in many areas, the neutralization of the Indian Ocean for example. He discusses the scope and character of Soviet economic and cultural connections with India with particular emphasis on the contributions of the KaSSR. He notes, for example, the many Kazakh factories supplying Indian economic development projects.

AFGHAN EMIGRE JOURNALISTS VISIT ALMA-ATA

[Editorial Report] Alma-Ata BIZDING OTAN in Kazakh No 9, May 1982 carries on page 3 a 600-word unsigned report on a visit to Alma-Ata by Afghan emigre journalists Aixan Baiani (a Uighur?) and Emerxen Ezezi (a Kazakh?), reporters of the Kabyl (Uighur-language?) paper IOLDUZ. The article details their reception by Academician Smet Kenesbayev on behalf of the Kazakh "Otan" society and visits to various points of interest including the Uighur branch of the KaSSR Academy of Sciences. The article details their reception by Academician Smet Kenesbayev on behalf of the Kazakh "Otan" society and visits to various points of interest including the Uighur branch of the KaSSR Academy of Sciences. The article includes a photograph of Baiani and Ezezi.

Political Affairs

PARTY STUDY SYSTEM IN KIRGHIZIA SURVEYED

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 8, August 1982 on pages 36-42 carries a 2,900-word lead article on party study in Kirghizia, apparently timed to coincide with the recent end of the academic year in the study system. In the reorganization of the party study system throughout the USSR, the number of those making their studies has decreased, and in Kirghizia as well, the number of propagandists has fallen. Last academic year nearly 7,000 propagandists were working in the system, a decrease of some 2,500 compared to the previous year. This has enabled propagandists to be chosen with greater selectivity and has improved the quality of the staff. The lead article also points out that in the party study system of some rayons the basics of scientific atheism are not being studied, and in some places the task of improving the work of young communists is not being carried out. When study groups consisting of a large number of people, 100 or more, are established, it hinders participation of students in lessons.

PARTY COMMISSION WORK IN NARYN OUTLINED

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 8, August 1982 on pages 62-66 carries a 2,000-word article by Raimbek Toktaliyev, chairman of the party commission attached to the Naryn obkom, on the duty of communists to maintain party order. Noting that party commissions occupy a significant place in the struggle for strengthening party order and for cleansing the party ranks, Toktaliyev provides a couple of examples in which party committees in Naryn Oblast have taken measures to punish errant officials. According to Toktaliyev, in the last 2 years in the oblast 310 people have received party punishments for violations of party and state order. Also, in the last 2 years, 58 people have been dropped from the ranks of the party and 101 communists have been given party punishments. Along with such attentiveness, party organizations in some places have been compromising towards instances of violations of party and state order. In addition, some party committees consider party punishment merely as an instructional procedure and neglect checking up on those communists who have been punished.

REASONS FOR RURAL FLIGHT BY YOUNG IN KIRGHIZIA CITED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 1 August 1982 page 2 carries an 800-word article by R. Baygubatov, who is not further identified, on the conditions in a village in Kochkorskiy Rayon and the reasons for the flight of young from the village to the city. There are more than 150 homes in Osoaviakhim, but only 84 people, including only 23 young people, work there. According to Baygubatov, the commonly held notion that young people leave the countryside for an easy life ignores the unsatisfactory condition of the material and cultural life in some villages. With the formation of Cholpon sovkhoz in 1958, Osoaviakhim was classified as a village without a future, but despite that determination, it has still not been decided whether to move the people of Osoaviakhim or take advantage of the land and develop the village. As a result, there is no club, bath, school, or library in the village, and young people spend their free time playing cards or in the streets. The fact that there are no water pipes causes great difficulties. In addition, official organizations have utilized labor resources poorly. For instance, not one leading young person working as a driver or in construction has been rewarded during 1980-1982. Because they were not provided with the work they deserved, some 12 drivers and 20 builders have left the village. In fact, the shortcomings prevailing in the village have led 85 young people in the years 1975 to 1981, or 14 a year, to abandon the village for the city.

CONCERN EXPRESSED OVER FRUIT AND VEGETABLE SUPPLY IN KIRGHIZIA

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 5 August 1982 page 1 carries a 1,000-word lead article on the supply of fruits and vegetables to the citizens of Kirghizia. Growers of such produce are facing a severe test this year because the unprecedented drought and the frost in the first half of May caused much damage. But the editorial emphasizes the need to increase the efficiency of the harvest. For instance, about 5,000 tons of potatoes and 3,500 tons of vegetables are lost each year in the republic because of a shortage of storage areas. If the harvest could be collected without losses, the net harvest would rise by at least 20 to 30 percent. According to the editorial, it is impossible to understand the indifference of some local party committees which have observed the conditions this year, conditions threatening the fulfillment of the plan, and yet have been unable to organize effective assistance. The same newspaper on 17 August 1982 page 4 carries an 800-word article on the same topic by A. Beyshenaliyev, a special correspondent, under the headline "Why Are There Few Fruits and Vegetables?" According to the correspondent, he asked an official of the Ministry of the Fruit and Vegetable Industry, V.F. Zharikov, why in a sunny republic like Kirghizia the supply of fruits and vegetables is unsatisfactory. Zharikov blamed this year's bad weather, but the correspondent, after a visit to various farms, believes it is incorrect to place the blame just on the weather. Some farm leaders have relegated the growing of such produce to second-class status and failed to irrigate the fields properly. Because of the inadequate measures of the Ayylcharbakhimiya [Agrochemical] Association, nearly 1,000 hectares of onion fields in the republic became infested with harmful worms. Beyshenaliyev states that no matter what farm you visit the harvest is encountering losses because of a shortage of manpower. And those working on the farm are dissatisfied with the assistance of city dwellers. While the correspondent was on a sovkhoz, some representatives from an enterprise and the Frunze City Executive Committee helped out for a mere 2 hours. Also, because there are no specialized farms for raspberries, strawberries, cherries, peaches, black currants, and apricots, these fruits are almost never found in the stores.

PROBLEMS AT SULUKTU COAL MINES EXAMINED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 5 August 1982 on page 2 carries a 900-word article by S. Abdyldayev, a correspondent for the newspaper, on the problems currently facing the Suluktu Mine Administration. This year the Suluktu coal mines have fulfilled their 4-month coal target by only 77.6 percent, which means that they have delivered to the economy 49,000 tons less than planned. One reason for the shortfall lies in the fact that because of the great depth of one mine, down to 500 meters deep, and because of the steep grading, an integrated mechanization is not being used and the process of coal extraction is being carried out only by manual labor. Other problem areas are cited: exploration has been conducted poorly, there is an inadequate number of workers and engineers, turnover is high, accidents happen to machinery frequently, motor vehicles often break down and are left out in the open air, etc. One indication of the ineffectiveness of coal operations is the fact that at present 14 tons of earth are discarded for a ton of coal. Another problem area was revealed in a 500-word article on electric power use in the same newspaper 17 August 1982 page 2 written by S. Asankulova, chief of the power oversight inspectorate of Kyrgyzglavenergo [Kirghiz Main Power Administration], and the above correspondent. According to this article, the Suluktu Mine Administration had in the first quarter of the year expended 1,237,000 kilowatt hours of electric power more than planned, by far the largest such offender among the various mine administrations cited in the article.

DROUGHT IN KIRGHIZIA ADVERSELY AFFECTING COTTON CROP

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 11 August 1982 page 1 carries a 900-word article by a brigade leader at the Kirghizia Experimental Cotton-Growing Station and two special correspondents of the newspaper on some problems of cotton growing this year. The article states that this year in the cotton-growing center of the republic, Osh Oblast, cotton production has been cut back and fields of fodder-producing plants expanded. This has been done as a prerequisite for strengthening the oblast's fodder base. While the fodder harvest may be quite plentiful, it is disturbing that on many cotton-growing farms the pace of irrigation is lagging behind last year's pace. For instance, on one kolkhoz in Kara-Suyskiy Rayon last year 2,360 hectares of land were planted to cotton with a planned harvest of 33 quintals per hectare, while this year the cotton fields were decreased by 1,428 hectares with a goal of 37.9 quintals. However, last year the farm actually achieved only an average of 25.9 quintals per hectare, and this year the number of times the fields have been irrigated fully is less than last year. The amount of water given to cotton-growers is less than that provided last year, mainly because priority is given to fodder.

GREATER ATTENTION TO RURAL CADRE SELECTION IN KIRGHIZIA URGED

[Editorial Report] Frunze SOVETTIK KHYRGYZSTAN in Kirghiz 18 August 1982 page 1 carries an 800-word article on the importance of insuring the proper selection of leading cadres in the agricultural sector. The CPKi has devoted much attention to placing and educating leaders in the countryside; in fact the CPKi Central Committee examined the matter of working with rural cadres 37 times during the 9th and 10th Five-Year Plan periods. The party's Central Committee and obkoms have added all the oblast and rayon leaders of agricultural organizations, the kolkhoz chairmen, the sovkhoz directors, and the agroindustrial association chiefs to the basic "nomenklatura." While some exemplary agricultural leaders can be cited, deviation from the proper principles of party leadership can be observed in some raykoms and primary party organizations. In addition, according to the article, the KiSSR Ministry of Agriculture is not above reproach; in the 10th Five-Year Plan, 219 leaders or nearly 58 percent of the total leaders on the kolkhozes and sovkhozes of the republic were replaced. There are not just a few instances in which individuals have been assigned leadership positions without a thorough investigation of their working, moral, and political qualities. This has led to 39 leaders being dismissed from work as unfit for service.

HIGH PRICES IN KIRGHIZ BAZAARS CRITICIZED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirgahiz 24 and 25 August 1982 on page 3 carries a 3,400-word article based upon material from a SOVETTIK KYRGYZSTAN raid conducted by S. Kongurbayev, an inspector with the KiSSR People's Control Committee, and four others. The raid took place at the central kolkhoz bazaar and the Ala-Archa Bazaar in Frunze in response to letters claiming that Frunze bazaars were the most expensive in Central Asia. For instance, in mid-August a kilogram of potatoes cost 1 ruble, carrots 2 rubles, onions 80 kopecks or a ruble, grapes 2 rubles, and honey 6 rubles. According to the authors, in many years of observation such high prices have not been seen previously. As for the cause of the high prices, everybody says that if only the appropriate trade organizations would provide sufficient fruits and vegetables to the bazaar markets, the prices would go down. In addition, no one places a limit on bazaar prices or checks on them. The rest of the article examines some of the problems connected with the Frunze bazaars. In June 1980 SOVETTIK KYRGYZSTAN published revealing material about the bazaars, but the Frunze City Executive Committee and KiSSR Ministry of Trade have failed to address the problematic issues raised by the newspaper. The authors of this article hope that this second appraisal of the situation will spur the two organizations on to resolve the problems quickly. They also state that the participation of the city party committee is required in this matter.

PROBLEMS IN KIRGHIZ LIVESTOCK PRODUCTION SURVEYED

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 8, August 1982 on pages 49-55 carries a 2,800-word article by Iskender Muratalin, chief of the Agricultural Department of the CPKi Central Committee, examining problems in animal husbandry in Kirghizia. While the CPKi Central Committee has given clear directions to rural rayon party organizations for the resolution of the meat problem, many shortcomings remain, in the first ranks of which is the need to increase livestock offspring. The number of sheep grows by 208,000 every year in the republic, so that it has now reached 10.3 million, but on the farms of Talas, Osh, and Naryn Oblasts and some rayons, the plan has not been fulfilled for the number of ewes raised for breeding. At present the proportion of such ewes is only 47 percent of the republic's sheep population, and efforts must be made to increase this proportion. In addition, the production of wool has in fact not grown in recent years. Of special importance in enhancing the productivity of animal husbandry is the need to strengthen the fodder base. One problem in this area is that many farm leaders regard the sowing and tending of grasses as a secondary matter. Since natural grass areas form 50-60 percent of the whole fodder balance in the republic, these lands should be used wisely, but steps to raise productivity are being taken unsystematically, pasture rotation is not being instituted, and fertilizers designated for pastures are being diverted to other purposes. These shortcomings are especially prevalent in Naryn Oblast. But the party organizations working in livestock production must increase efforts to put into effect the current Food Program.

URBAN AID TO RURAL AREAS IN KIRGHIZIA DETAILED

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 8, August 1982 on pages 56-61 carries a 2,400-word article by Fedor Chuprov, the second secretary of the Frunze city party committee, on the assistance being provided by city dwellers to rural workers. He discusses the contributions being made by urban factories to produce the agricultural machinery needed to carry out the current Food Program. Also, in the preparation of fodder and in collecting the harvest, the direct assistance of city dwellers to the countryside is growing. Last year on the fields of the republic during the period from May to September more than 7,000 people worked every day, and on Saturdays and Sundays that figure doubled. Last summer 11,000 school pupils assisted rural workers, and this year, due to the current drought, city party committees and labor collectives are expanding their aid to the countryside. In all activities involved in agricultural work nearly 20,000 city dwellers worked on kolkhozes and sovkhozes in June alone. Certain urban leading workers have also appealed to all able-bodied inhabitants of Frunze to prepare at least 10 kilograms of grasses for fodder. Many enterprises in the city of Frunze are making good headway on the plots of land assigned to them as a subsidiary food source, but according to Chuprov, some enterprise leaders have not utilized their plots even this year, but keep putting off appropriate measures until later.

Social and Cultural Affairs

KIRGHIZ KOMSOMOL URGED TO COMBAT RELICS OF PAST

[Editorial Report] Frunze LENINCHIL JASH in Kirghiz 3 August 1982 page 3 carries a 700-word article by B. Abdysamatov, a candidate of the philosophical sciences and a teacher at the Osh Pedagogical Institute, on outdated customs. According to Abdysamatov, Komsomol organizations have organized atheist education poorly, and as a result some negative phenomena left over from the past are still occurring, particularly in connection with the marriage process. For instance, in Kara-Suyskiy Rayon, a father demanded a bride-price of 5,000 rubles for his daughter, but the mother of the groom could only afford 3,000 rubles. When the father became obstinate about the matter in a quarrel, the young man became convinced that he had to either obtain the money or kill the in-laws. Two shots were fired from the young man's old rifle, jeopardizing the lives of the father-in-law and the mother-in-law, who was 7 months pregnant. Another negative phenomena can be observed when some "gallant" young men, taking a gamble in the face of Soviet law, take underage girls as wives. Several men are cited as having married 16-year-olds and even younger girls and are said to have received the appropriate punishments. Such episodes demonstrate the need for increased activity by the proper organizations.

SOCIAL FUNCTION OF TURKIC LANGUAGES DESCRIBED

[Editorial Report] Frunze LENINCHIL JASH in Kirghiz 5 August 1982 page 3 carries a 1,000-word article by K.K. Sartbayev, a corresponding member of the KiSSR Academy of Sciences, titled "V.I. Lenin on National Languages." Sartbayev provides a few quotes from Lenin on linguistic issues, such as his recommendation against privileges for any nationality or language, but most of his article consists of a description of the Turkic languages spoken in the USSR. He notes that the Turkic peoples occupy the second place in number of speakers after the Slavic peoples and that about 20 of the more than 60 written languages in the Soviet Union belong to the Turkic peoples. The Turkic languages are divided into the following groups according to social function: languages used (1) as Union republic languages--Kirghiz, Kazakh, Uzbek, Azeri, Turkmen; (2) as autonomous republic languages--Tatar, Bashkir, Chuvash, Yakut, Karakalpak, Tuvin; (3) in mixed autonomous republics--Karachay-Balkar, Kumyk; (4) in autonomous oblasts--Khakass, Altay; (5) in some rayons--Crimean-Tatar, Gagauz, Nogay, Dolgan, Uighur. Conducting official affairs in the native language as well as conducting congresses, sessions, conferences, and other aspects of social life in the national languages has expanded the social function of the Turkic languages during the Soviet era.

RICH KIRGHIZ WAY OF LIFE NEEDS REVITALIZATION

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 12 August 1982 pages 8-9 and 19 August 1982 page 10 carries a 4,600-word article written in Frunze in 1981 by Satkyn Sasykbayev. His article is in response to a lengthy series of articles published in the same newspaper last year by Aziz Saliyev on matters of everyday life among the Kirghiz. Sasykbayev is mainly concerned with certain well-known facets of traditional Kirghiz life and the regrettable state of these features at the present time. Depicting traditional life as one characterized by fine craftsmanship, lively sports, and entertaining fests of song and poetry, he tries to debunk the notion that such a life was lethargic, uncultivated, and simple. He recalls in glowing terms a real Kirghiz migration that he had witnessed with his own eyes and then complains that in films and pictures the former way of life is portrayed not in its real beautiful form, but as very unpleasant and poor. He also objects to the image that the furnishings of a traditional nomad's yurt were meager and the idea held by some people that the Kirghiz had very few traditional dishes. He complains that that at present there are no special "national" restaurants serving only Kirghiz cuisine in the republic, oblast, and rayon centers; those restaurants that exist serve a mixed menu of European and Central Asian cuisine. He maintains that the Kirghiz could learn from the experience of other republics, particularly Uzbekistan, in this matter. In addition, although yurts, furnishings for them, and national clothing are being produced in enterprises for herdsmen, they are of insufficient quantity and of poor quality. This unsatisfactory situation is connected with the supply of felt; fat-tail "Kirghiz" sheep produce wool suitable for felt, but not the hybrid "Malysh" sheep. But for some reason it is thought that "Kirghiz" sheep will ruin the "Malysh" breed, so they are intentionally neglected. This is not true in Tajiskitan and Turkmenistan, where "Hissar" sheep are raised as in earlier times to provide products for daily life. Another regretable situation is the tendency towards the uniformity in the breeds of goats. Also, the craftsmanship needed to produce yurts and their furnishings is no longer found in modern-day enterprises. Sasykbayev recommends that local organizations look into such problems and derive lessons from the significant work that has been done in Uzbekistan.

EDITORIAL URGES IMPROVEMENTS IN KIRGHIZ THEATER REPETOIRES

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 15 August 1982 page 1 carries a 1,000-word lead article on the need for improvements in the repetoires of the professional and amateur theater companies and the Kirghiz State Philharmonic. According to the editorial, the repetoires of the republic's theaters do not measure up to the requirements of the day, and there are some works of shallow ideological content. It inevitably comes to mind when watching such performances what sort of education the viewer is deriving from them. It is also regretable that playwrights are not analyzing deeply the multifaceted problems of the present day or portraying clearly contemporary figures. Some shortcomings in the matter of theater repetoires arise from an indifferent attitude, a tendency responsible for the infrequent performance of some important works. On the other hand, some plays are repeatedly performed just out of financial considerations. Some playwrights even abuse their positions and have their own works performed chiefly for the sake of personal profit. In addition, according to the article, it should be noted with sorrow that in the last 10 years not one national opera has been added to the repetoire of the A. Maldybayev Academic Opera and Ballet Theater. For a number of years the N.K. Krupskaya State Russina Drama Theater artistic collective, while paying a great deal of attention to educating workers in an internationalist spirit, has not staged any work of Kirghiz dramatic art.

MORE LETTERS ADVOCATING KIRGHIZ RESTAURANTS PUBLISHED

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 19 August 1982 page 12 carries two letters containing 600 words in all, one by a single pensioner and the other by a group of pensioners, in support of the 10 writers who published an open letter in KYRGYZSTAN MADANIYATY 8 July 1982 page 2 in favor of opening restaurants that serve Kirghiz national cuisine in Frunze. One letter writer reveals that he had written articles for SOVETTIK KYRGYZSTAN and LENINCHIL JASH a number of years ago on Kirghiz national foods, and at the time some Frunze leaders considered the idea of opening national restaurants a good one. But during a discussion of the issue two groups were formed--one urging that such eating facilities be established and the other contending that it would be too expensive to do so. Up to the present nothing has been decided. The other letter describes a visit to Frunze by pensioners, who were disappointed to be unable to find in a restaurant any hot refreshing tea, just unappetizing coffee and such. The writers of this letter express their irritation over the fact that there are no traditional teahouses, properly speaking, in either Frunze or Osh.

KIRGHIZ ENCYCLOPEDIA STAFF TO PUBLISH VOLUME ON 1917 REVOLUTION

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 26 August 1982 carries a 700-word article by M. Edilova of Frunze on a volume soon to be completed by the staff of the Kirghiz Soviet Encyclopedia titled "The Great October Socialist Revolution." This volume is one of several to be produced in the aftermath of the publication of the six-volume encyclopedia itself, including a volume on Soviet encyclopedic work and a Kirghiz orthographic dictionary. At the present time a volume devoted to the KiSSR is being published in a Russian- and Kirghiz-language version. "The Great October Socialist Revolution" volume is basically concerned with describing the events taking place during the revolutionary years of 1917 and 1918. Covering not only matters relevant to the entire revolutionary process, the book also provides a description of revolutionary activities in Kirghizia and the social conditions prevailing at the time in the republic. The volume will include a bibliography encompassing nearly all of the literature pertaining to the October Revolution, including memoirs, fiction, and works of art.

EDITORIAL CALLS FOR GREATER ATHEISTIC EFFORTS IN KIRGHIZIA

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 27 August 1982 page 1 carries a 900-word lead article on the need to improve scientific-atheist propaganda among the population of Kirghizia. While some exemplary ideological-educational work in this area has led to the rejection of the religious point of view by many people, its disruptive, dark influence still holds sway over a certain segment of the population. Atheist education has a special significance when class enemies are striving to use religious slogans for counterrevolutionary aims. Lenin's teachings about the tie between bourgeois class interests and religious propaganda apply even at the present. For instance, there have been instances in which members of Christian sects living in Moskovskiy, Sokulukskiy, and Issyk-Atinskiy Rayons have advocated that their children not go to school on Saturdays, that these children ignore their teachers and the principles and ethical norms of Soviet pedagogy in general, and that young men avoid serving in the Soviet army. The leader of the Adventists-Reformists in Dzhalalabad, one Rutermel', has surreptitiously distributed prohibited literature of a reactionary, tendentious spirit as far as Suzakskiy Rayon and Kale-yingak. An unregistered, illegal community of Evangelical Baptists has been holding secret meetings in a house in the capital of Issyk-Atinskiy Rayon, Ivanovka. And as a matter of fact, in some mosques, "'mullahs' are encountered who incite believers, especially young people, against those belonging to other religions or 'infidels.'" The practice of expending vast sums, sacrificing livestock, and going on a pilgrimage to places called "holy" has still not been prohibited in Osh and Talas Oblasts and some other places. According to the article, no one has a right to be passive and indifferent to the fate of young people when some religious leaders gather boys and girls and even young children, orient them to customs and behavior that does not conform to socialist morality, hinder them from taking advantage of the cultural benefits of present-day life, such as going to libraries, movies, or parties, and advocate that they pay no attention to anything in this "false" world. Various organizations are called upon to undertake more ambitous efforts in atheistic work and are chided for past neglect of this realm. For instance, the article declares that it does not conform to the demand of the time for the republic publishing houses to turn out only one or two scholarly atheistic books a year.

HARMFUL RELIGIOUS CUSTOMS IN KIRGHIZIA DECRIED

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 8, August 1982 pages 73-78 carries a 2,400-word article by K. Dadybayeva, a candidate of the pedagogical sciences, on the harmfulness of religious customs and the task of struggling against them. Dadybayeva lists a number of such customs, citing as examples of their potential harm the unfortunate consequences of a bride abduction and an attempted cure by a folk healer. She also objects to excessive celebrations of memorial feasts, providing as an illustration the case of a veterinarian who commemorated the death of his father 34 years ago. The veterinarian received as gifts a motorcycle, 3 horses, 42 goats and sheep, etc., from the nearly 370 guests and squandered 27 cases of vodka. Just as beks and manaps [local tribal leaders] in the old days held such celebrations to enhance their prestige and show off their wealth, these days some people hold feasts of this sort to achieve an empty reputation and fame. But what bothers her most is a disrespectful attitude towards women, which she regards as a violation of women's equal rights granted under the USSR and KiSSR Constitutions. A clear example of this is polygamy, which some people, pretending not to know Soviet practice, rationalize by various means--"because my wife is sickly, because my wife has given birth only to daughters, because this is a custom of our ancestors," and so on. Some people even call bride price "payment for the mother's milk." Furthermore, the custom of forcing a wife not to speak the name of her husband or mother- and father-in-law is totally outdated; at meetings of the village soviet such a woman is even compelled to have others speak their names. According to Dadybayeva, those working at atheist education should not regard these matters as trivial but should consider them problems of social-political and technical significance.

Military

UNIFYING ROLE OF SOVIET ARMY IN NATIONAL RELATIONS STRESSED

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 8, August 1982 pages 43-48 carries a 2,400-word article by D. Asanov, a Hero of the Soviet Union, on the friendship of the Soviet peoples and its reflection in the cohesiveness of the Soviet armed forces. Asanov recalls the firm rebuff of the non-Russian peoples to the efforts of Nazi Germany to sow discord among the nationalities of the USSR. He also invokes testimonials on the friendly relations between Russians and Kirghiz during World War II. The country has rewarded the efforts of all nationalities during the war, as is revealed by the fact that of those having earned the honor Hero of the Soviet Union are 7,998 Russians, 2,021 Ukrainians, 299 Belorussians, 161 Tatars, 107 Jews, 96 Kazakhs, 90 Georgians, 89 Armenians, 67 Uzbeks, etc.

International

TURKISH CITIZENS REPORTED INTERESTED IN KIRGHIZ WRITER

[Editorial Report] Frunze SOVETTIK KRYGYZSTAN in Kirghiz 28 August 1982 page 4 carries a 700-word article by K. Sabyrkhajuyev on showing the Soviet Kirghiz film "White Steamship" in Istanbul, Turkey in Turkish and English. The writer of the article traveled to Istanbul via the Moscow-Istanbul passenger train and visited, in addition to Istanbul, the cities of Ankara, Adana, Murchi [?], and Kayseri, staying 3 months in Turkey in all. The film was based on a short story by the well-known Kirghiz writer Chingiz Aytmatov, and according to Sabyrkhajuyev, it has enjoyed great success with Turkish audiences. He noticed from the bookstores that several works of Aytmatov's have been translated into Turkish and that they have been widely disseminated among the ordinary people of Turkey. Sabyrkhajuyev states that some of the people he met on the streets have read Aytmatov with great interest. One Turkish citizen maintains that Turks speak proudly of Aytmatov's name.

TURKMEN SSR

Economics

NEW 'SOCIETY FOR SCIENTIFIC ECONOMY' FORMED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 27 August 1982 p 1 carries a 200-word Turkmeniform release of the first Republic conference of the Turkmenistan Society for Scientific Economy. Among its objectives are: "to perfect returns from the economy on a daily basis, to raise the effectiveness of social production, to stimulate creative initiative and activity, and to broadly propagate scientific and technical achievements."

KARAKUM CANAL INCREASES FISH YIELD

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 17 August 1982 p 2 carries a 300-word Turkmeninform dispatch on the 20 quintal per hectare herring catch near Ashkhabad. As noted, the "fish farm, which is in a new branch of the Turkmenistan agro-industrial complex, has gained in strength; the construction of the fully operational reservoir in the Ashkhabad foothills has been fully completed."

Social and Cultural Affairs

ATHEISTIC EDUCATION INCREASES PRODUCTION

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 29 August 1982 p 2 carries a 400-word article by Ch. Ayymgulyev, secretary of the Party Committee of the Zhdanov kolkhoz in Kaka rayon, on measures taken to eliminate "the violation of agrotechnical rules in agriculture" and to restore the workers' enthusiasm for their work. "Learning from last year's shortcomings, we discussed definite measures on this serious subject. One of the most important measures is atheistic education." He adds that "we are undertaking a lot of work in order to extirpate harmful remnants of the past from the peoples' mentality, such as viewing the way of life with indifference, and in order to instill a belief in the future and success." To this end "25 agitators, 12 propagandists and 52 political informants and communists involved in production" are working on this.

CALL FOR HEIGHTENED ATHEISTIC ACTIVITY

[Editorial Report] Ashkhabad SOVIET TURKMENISTANY in Turkmen 6 August 1982 p 2 carries a 1,100-word article by G. Akmyradov, chairman of the Scientific-

Methodological Council for the Propagation of Scientific Atheism under the TuSSR Znaniye Society Administration, and L. Smirnova, deputy director of the Republic House of Atheism, on the necessity "to perfect the forms and methods of scientific atheism." They note that the problem of struggling against harmful remnants of the past in the TuSSR is serious. Various religious groups operate on the republic's territory--Muslim mosques, Orthodox churches, and religious meeting houses for idol worshippers. There are places revered by believers where mullas, ishans and grave guardians come and go preaching sermons." The concrete example given is in the industrial 'new town' of Busmeyin "where there are only six atheistic lecturers." It is then noted that "the substantial number of the Buzmeyin inhabitants who go to Orthodox churches bear witness to the necessity of increasing the militancy of atheistic work."

RURAL AMENITIES TO BE INCREASED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 8 August 1982 p 2 carries a 1,900-word article by R. Nazarova, deputy chairman of the TuSSR Council of Ministers, on recent progress in raising rural culture and work yet to be done. While praising recent achievements as a whole, she points out that "in some rayons the cultural level of rural workers lags behind even the economic growth of kolkhozes and sovkhozes and their material living conditions because certain ministries, leading organizations, local soviets of peoples deputies and kolkhoz managements are not really paying attention to this important question." In fact, "only 36 percent of kolkhoz and sovkhoz settlements have planned projects and of these, 20 percent have not fully prepared for them. As a result, construction goes on without planning and growth prospects are not taken into consideration."

NEW PRISON-LABOR CAMP

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 13 August 1982 p 4 carries a 1,200-word article by A. Durdyev, deputy minister of the TuSSR Ministry of Internal Affairs, on the new Neftezavodsk prison camp. "In 1981 in the system of the TuSSR Ministry of Internal Affairs a corrective-labor detention camp was established in order to orient thieves to perform work useful to society and to teach them productive skills in the Neftezavodsk settlement in Chardzhou Oblast. In setting up this detention camp the experience of fraternal Uzbekistan was studied and introduced into the practice of our republic." "Last year 792 people were sent to this detention camp."

NEWSPAPER, JOURNAL CIRCULATION DATA GIVEN

[Editorial Report] Ashkhabad SOVIET TURKMENISTANY in Turkmen 1 August 1982 p 1 carries a 1,100-word lead editorial exhorting the population to subscribe to newspapers and journals. It is noted that "now there are 7 republic newspapers, 10 oblast newspapers, 7 mass circulation newspapers and 25 journals." According to Soyuzpechat', "every family in the republic receives an average of 4.5 newspapers and journals." A problem in the system, which is blamed on the postal service, is that evening publications often arrive late. Publications enumerated in this regard are: VECHERNIY ASHKHABAD, TURKMENISTAN AGITATORY, AGITATOR TURKMENISTANY, and ZDRAVOOKHRANENIE TURKMENISTANA.

UZBEK SSR

Political Affairs

NAVOI OBKOM CHIEF COMMENTS ON FARM PROBLEMS

[Editorial report] Tashkent SOVET OZBEKISTONI in Uzbek 6 August 1982 carries on page 2 a 3,200-word full page report by newspaper special correspondents H. Qodirov and J. Sa"dullayev titled "With Definite Goals in Sight." Several farm problems were recently discussed at an obkom plenum and a meeting of oblast partorgs. The meetings criticized the decline in head of cattle, substandard breeding techniques and zooveterinarian services, and slow introduction of mechanized equipment on oblast farms. Other problems discussed at the sovkhoz meeting included low water supply, slow development of private plots, and shortcomings in sheep and poultry raising. Discussants suggested that the cause of some of these problems could be traced to the fact that only 10 percent of the farm's 80 workers are communists.

PARTY REPORT-ELECTION MEETINGS HELD IN OBLASTS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 15 August 1982 carries on page 2 a 1,300-word report under the "Party Life" rubric titled "Deep Analysis, High Demandingness." This item covers report and election meetings of party groups and shop party organizations currently being held in Navoi and Andizhan Oblasts and in the Karakalpak ASSR. The Navoi Oblast meetings were attended by 96.3 percent of communists who heard a report that stressed the need for quick preparations for the cotton harvest and for extra hours to be devoted to private plots. The KASSR meetings discussed water shortage, economical use of resources, and the need to form mobile nurseries in the fields to free mothers for the harvest. Meetings in Andizhan Oblast were conducted in an exemplary atmosphere of criticism and activism.

Economics

OBKOM SECRETARIES COMMENT ON UZBEK WORKERS IN NONCHERNOZEM

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 13 August 1982 carries on page 3 a 3,500-word report by G. Lipshits, correspondent for the Uzbekistan Information Agency, under the banner headline "The Nonchernozem Zone: Address of Courage." Accompanying his text on individual Uzbeks working in Novgorod, Ivanovo Oblasts, Lipshits prints statements by secretaries of the three oblast party committees applauding the contribution of Uzbek ameliorators in the Nonchernozem region. Yu. A. Yudin, second secretary of the Novgorod

Obkom, recalls that the "Uznovgorodstroy" Trust, formed in 1974, now works in four rayons, while the "Uzparfinovodstroy" Trust, formed in 1978, concentrates on Parfino Rayon. Yudin is confident that the contribution of Uzbek workers will increase inthe future. G.I. Razumov, a secretary of the Ivanovo Obkom, notes that Uzbek workers are presently constructing the "Druzhba" and "Uzbekistan" Sovkhozes and, in the period reaching to 1990, will carry out reclamation work in seven rayons along the Teza River: Furmanov, Rodnikovskiy, Bichugda, Ivanovo, Shuya, Savinskiy, and Yuzhskiy. Yu. G. Teslenko, second secretary of the Vladimir Obkom, states that oblast party and soviet organs are concerned with creating the proper working and living conditions for the 900 members of the "Uzvladimirvodstroy" Trust. These organs have improved their mass political and educational work, established constant control over the production activities of the trust's mechanized columns, and have participated in mobile assemblies with the collegium of the UzSSR State Committee for Water Resources Construction aimed at increasing their aid to the reclamation project.

MINISTRIES BUILDING OWN VOCATIONAL TRAINING FACILITIES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 24 August 1982 carries on page 2 a 1,000-word article by M. Sultonov, UzSSR deputy minister for higher and secondary specialized education, titled "Important Factor." The article describes the move of ministries and agencies into the field of constructing with their own funds tekhnikums and other vocational facilities for training specialists needed by them. As an example, Sultonov cites the construction of a 12-story study and laboratory building for the Tashkent Institute of Motor Transport and Highways paid for with 9.5 million rubles funds from the Ministries of Motor Transport and Highway Construction and Maintenance. He notes that more than 100 million rubles in capital investment funds have been obtained from republic ministries and agencies for such construction. The remainder of the article details ministry construction tasks and results.

STRONGER TIES BETWEEN RESEARCH INSTITUTES, ENTERPRISES FAVORED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 20 August 1982 carries on pages 2-3 a 1,800-word essay by M. Sharifkhojayev, rector of the Tashkent Economics Institute, titled "Research and Product." The essay reflects the opinions of scholars of the institute toward issues that will concern the September Plenum of the CPUz Central Committee on science policy. Sharifkhojayev laments the insufficient utilization of the potential of research institutes and scholars to influence factors of quality and productivity at enterprises. While part of the problem may be attributed to research that lags behind the national standard, is poorly planned or is not practically applied, Sharifkhojayev feels that it is mainly due to the lack of centralization of scholarly resources and forces and of sufficient economic ties between research institutes and enterprises.

PRODUCTION VOLUME DECLINES IN OBLAST ENTERPRISES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 18 August 1982 carries on page 2 a 700-word economic review titled "The Worker's Word Is a Man's Word." The report states that some republic sectors have developed faster than called for in their plans for the first 7 months of 1982. Overall volume of industrial production rose 3 percent over the same period of 1981. Production of electric energy, coal and oil, rolled metal, compressors, tractors, and harvestors, has picked up speed. Production plans for cement, mineral fertilizers, canning, and clothing, have been overfulfilled. However, some collectives and sectors are headed backwards. Production volume has declined in a number of enterprises in Andizhan, Surkhandarya, Khorezm, and Samarkand Oblasts. The review cites as example the Samarkand Refrigerator Plant which showed a R500,000 decrease in production over the same period last year.

LABOR SHORTAGE HAMPERS CONSTRUCTION OF BEKABAD STEEL MILL

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 22 August 1982 carries on page 2 a 1,300-word article by newspaper correspondent H. Abdusamatov titled "Obstacles in the Path of Rolled Steel." The correspondent notes that because the present rolling mill of the Bekabad Metallurgical Plant is badly outdated and inadequate metal must presently be shipped to plants in the Urals, rolled, and shipped back. This procedure engages many thousands of railroad cars, costs millions of rubles, and wastes lots of time. To reverse this situation, plans were drawn up for a local rolling mill by the "Gruzgipromez" Institute to be constructed from 1979 to 1983 by the "Uzbekmetallurgstroy" of the UzSSR Ministry of Construction. Construction of the mill, slated to cost R37 million, is considerably behind schedule. Over the first 3 years only R7 million construction work was finished and only around R4 million of the R10 million work slated for 1982 have been appropriated. In reviewing the causes for this problem, Abdusamatov notes that the "Uzbekmetallurgstroy" needs a new production facility and that many elements of the work have had to be redone due to changes in the original plan. Most importantly, he cites the fact that the trust needs 870 construction workers but presently has a force of only 470.

NAVOI AIRPORT EXPANSION NEARS COMPLETION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 14 August 1982 carries on page 2 a 100-word report from UzTAG titled "New Airport Building." The report states that finishing touches are being put on the new airport building in Navoi City. When opened at the first of 1983 the airport will be able to handle 200 passengers an hour.

CONSTRUCTION BEGINS ON GULISTAN SATELLITE COMMUNICATIONS STATION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 August 1982 carries on page 1 a 100-word report from UzTAG titled "Moscow--Space--Gulistan." The report states that work has begun on a satellite communications station in Gulistan which will make it possible to transmit the "Orbita-IV" program from Moscow to the populations of the Syrdarya and Dzhizak Oblasts. According to the UzSSR Ministry of Communications, such stations will also be constructed at Zarafshan and Nukus.

TASHKENT CONSTRUCTION PLANS SURVEYED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 1 August 1982 carries on page 2 a 1,100-word article by V. Kozimov, chairman of the Tashkent

Gorispolkom, titled "Great Plans, Bright Horizons." Kozimov reviews components of the 11th Five-Year Plan for construction work in Tashkent. These include construction of 1.5 million square meters housing, secondary schools for 59,000, preschool facilities for 27,000, public dining facilities for 20,000, 33 kilometers of streetcar lines and 47 kilometers of trolleybus lines, 6 stores of the "Universam" type, and various other public service facilities. In connection with the celebration of two milleniums since the founding of Tashkent next year, considerable efforts are being made to expand, repair and beautify parks, canals, and streets. Also on page 2 a 600-word newspaper interview appears with Sobir Odilov, chief architect of Tashkent and head of the main architectural planning administration of Tashkent Gorispolkom, titled "The Beauty of Tomorrow's Capital." Odilov remarks that radical changes will take place in the appearance of Tashkent over the next 2 decades. By the year 2000 the city will occupy 35,000 hectares and almost 75 percent of new housing will be apartment buildings in the 9-12 story range. Karl Marx Street is to be doubled in width and turned into a major thoroughfare. In place of the present Gorkiy Theater of Russian Drama will be built the largest trade center of the city. In place of the present Gorkiy Movie Theater on Navoi Prospect will be built an 18-story republic information center. Yuldash Akhunbabayev Square in Charsu is presently being rebuilt, with high-rise apartment buildings, a sports complex, and the main administrative building for republic tourism going up around the recently completed 23-story "Moscow" Hotel. The Kokaldash Medresseh and Jami Mosque are being restored, and a bazaar with 1,200 trade shops is being built on this square.

STATUS REPORT ON REPAIR OF COTTON HARVEST MACHINERY

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 27 August 1982 carries on page 3 a 500-word article by M. Egamberdiyev, chairman of the republic administration of "Goskomsel'khoztekhnika," titled "Machinery--A Powerful Force." Egamberdiyev states that 4 million of the expected 6 million tons of cotton to be harvested in 1982 will be done by 35,000 harvesters and over 140,000 other pieces of machinery organized into 3,200 harvest-transport detachments. While most of the harvesters have been readied for harvest, some 4,000 still require repair work. A substantial portion of the support and transport machinery also awaits repair. This work is considerably behind in Navoi, Syrdarya, and Khorezm Oblasts, and in Karakalpakistan. The "Goskomsel' khoztekhnika," in cooperation with the UzSSR Ministry of Agriculture and the "Glavsredazirsovkhozstroy," has dispatched specialists and repairmen to places behind in this work. It has also trained 9,000 harvester operators, and increased the training of 10,000 drivers.

ORGANIC-MINERAL FERTILIZER EXPERIMENTS DESCRIBED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 4 August 1982 carries on page 2 a 1,300-word article by Dr of Technology A. Tojiyev, senior scientific associate at the Chemistry Institute of the UzSSR Academy of Sciences, titled "Fertility Aids." Tojiyev describes experimental research conducted by scholars at the institute's laboratory for organic and mineral fertilizers on the chemical properties of humin acids derived from humus. Such acids may be derived from various coals, especially those types found at Kyzylkyya and

Shurab. Research shows that the ammonia, potassium and nitrate compounds of humin acids dissolve well in water. When mixed with ammonia and phosphorus into a "humate ammoniac compound," this organic-mineral fertilizer can considerably raise yields of cotton, vegetables, potatoes, and other crops. Moreover, cotton plant stalks, which presently must be removed from fields to avoid continuation of wilt and other diseases, can be treated with compounds like humin acid and then ploughed under. Tojiyev states that field experiments have been successfully conducted, the technology for the preparation of humin acids has been worked out, and organic-mineral fertilizer using such acids has been prepared. He calls for the cooperation and assistance of agricultural organizations in order to quickly apply this new product to the fields.

TERMEZ, ANGREN CITY ENTERPRISES EXPAND SUBSIDIARY FARMS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 August 1982 carries on page 3 a 900-word article by newspaper correspondent A. Khalilov titled "The Initiative of Urbanites." The article describes the movement of enterprises, organizations, institutions, and VUZes in Termez City to form, develop, and strengthen subsidiary farms. There are now 33 subsidiary farms in the city. According to I. Qurbonov, chairman of the gorispolkom, there will be 50 such farms by the end of 1982. At present, 45 percent of the meat, 60 percent of the milk, and 50 percent of the fruit and vegetables being sold in the city are grown on such farms and private plots. Kh. Tojiddinov, first secretary of the gorkom, has pledged the support of party and soviet organs in stimulating the growth of subsidiary farms and private plots by extending credit to individuals and providing them with feed for their stock. Also TASHKENT SOVET OZBEKISTONI in Uzbek 1 August 1982 carries on page 3 a 1,200-word article by newspaper correspondent for Tashkent Oblast H. Abdusamatov titled "Agrarian Shops of Angren." The correspondent reports that 32 enterprises, organizations, and institutions in Angren City have formed subsidiary farms. The city party organization has adopted a set of practical measures aimed at further developing subsidiary farm operations in the city.

PRIVATE PLOT FARMING SAID TO CARRY STIGMA

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 13 August 1982 carries on page 2 a 1,900-word article by Nusrat Rahmatov titled "A Piece of Ground." Rahmatov notes that in recent years private plot farming has undergone important changes. Today, village soviets and kolkhoz administrations are granting permission to tend stock on plots and loaning money to buy stock. The growing size of private herds gains in importance as available pasturage shrinks in the republic. Managed adroitly, private plots can be like subsidiary farms. Rahmatov details the intensive utilization of a kolkhoz plot by the family of Ergash Qilichev, a docent at Bukhara State Pedinstitute. He comments that during the 1930's men like Qilichev would be accused of having private property--"a minifarm"--but today such opinions are no longer applicable. Not only does Qilichev's family relieve the state of the burden of providing it food, but it also annually delivers to state receiving stations 400 kilograms honey, 500 kilograms potatoes, and a calf. Rahmatov feels that a number of problems connected with the development of private plot farming must be studied, and that attitudes toward such farming must be changed. He observes that usually private plots are tended by old men and women "because many of our young people think of private plots as a vestige of the past, as a remnant of the private property system." He acknowledges that it is difficult to change their minds "because of the ungrounded disparagement of private plot farmers." Rahmatov notes that many other problems face the development of private plot farming: livestock feed, water supply, ploughing, veterinarian services, transport of excess produce to market. There is no consensus on whom should deal with such problems, nor are there regulatory or advisory manuals. Rahmatov concludes with the thought: "Since ancient times, our forefathers lived by bringing life to pieces of land.... We msut carry on this tradition."

TASHKENT PRODUCE SUPPLY ADMINISTRATION CRITICIZED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 18 August 1982 carries on page 3 a 1,300-word article by A. Bukhorboyev titled "Customers Are Waiting." The article deals with the work of the Tashkent City "Fruit and Vegetable" Administrative, responsible for stocking city stores with produce. Bukhorboyev states that most people living in Tashkent go to the kolkhoz bazaars which provide variety and quality superior to that of city stores. According to recommendations of the Nutrition Institute of the USSR Academy of Medical Sciences, a person ought to eat each year 143 kilograms vegetables, 105 kilograms potatoes, 17 kg melons, and 87 kg fruit. To supply a city of 2 million with these amounts requires a highly effective system of purchase, transport, storage, distribution, and sales. According to Bukhorboyev the city administration fails on all these counts. Purchases are made by contract with kolkhozes, placed in boxes regardless of produce type or quality, shipped, erratically distributed to stores, where sizable quantities are held back by trade workers or are otherwise unsalable due to damage or rot. He also cites a recent case in which a "caravan" of melons from Syrdarya, Dzhizak, and Kashkadarya Oblasts arrived in Tashkent where they were inspected for the first time. It was found that the melons were green, high in nitrates, and completely worthless, with the result that the "caravan" was turned back. Bukhorboyev wonders why oblast representatives of the administration didn't inspect the melons before shipping and why local soviets permitted them to be shipped at all. He notes that the administration requires 1.5 million boxes a year for shipping produce, but that so far it has managed to assemble--by hand--only 750,000 boxes annually, and that no consideration is given to the need for special containers for different types of produce. Currently, the city population needs 214,000 tons of fruit and vegetables a year, but administration warehouses can hold only 110,000 tons of which 92,000 can be refrigerated. Moreover, only 50 of the 127 stores supplied by the administration are equipped to conduct a standard trade in produce. Yet, the administration seems indifferent to the fact that the UzSSR Ministry of the Fruit and Vegetable Industry has slated construction to begin on only one produce store in 1982 and three in 1983. Because of these and other problems, the administration cannot keep up with the demands of the growing population of the city.

PRODUCE WASTE NOTED IN BUKHARA KOLKHOZ BAZAARS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 4 August 1982 carries on page 1 a 600-word article by newspaper correspondent H. Qodirov under the "Warning Signal" rubric titled "How Long Will the Waste Go On?" Qodirov remarks that although farmers bring produce to the kolkhoz bazaars in Bukhara confident of a quick sale in fact every day several tons of fruit and vegetables rot in the inadequate containers into which they are stuffed or on the ground. He attributes this waste to the irresponsibility and neglect of bazaar directorates who do not take steps to provide proper conditions for the sellers. The situation must be corrected because in city stores the price of produce is high, variety is limited, and quality is poor. Moreover, because of breached contracts with kolkhozes, the Bukhara Cannery is now canning some of the produce that has rotted in kolkhoz bazaars. Despite the fact that oblast newspapers have exposed the situation at these bazaars on several occasions, leaders of the oblast trade administration, gorispolkom, and other institutions, have thus far failed to take action against responsible individuals.

ENVIRONMENTAL ABUSES REGISTERED IN FERGANA VALLEY

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 4 August 1982 carries on page 4 an 800-word article by Yu. Sultonov, docent at Fergana State Pedininstitute and member of the USSR Geographical Society, titled "Source of Wealth and Refinement." Sultonov lists a series of environmental abuses that have been and are being committed in that part of the valley that lies within Uzbekistan and is inhabited by 5 million people. First, not enough care is being taken in the extraction and processing of Fergana's mineral wealth. He cites the Fergana Oil Refinery that permits the natural gas separated out from oil during the refining process to pollute the atmosphere. Second, measures are not being taken to halt soil erosion, with the result that some 2,000 hectares in the region have become useless ravines. Third, Fergana's relatively abundant water resources are being wasted due to lack of strict regulation over irrigation and the dumping of waters by enterprises that could be purified. Fourth, while more trees and plants need to be planted, the fact is that the majority of the hundreds of thousands of trees and plants planted in populated areas each year are lost because they are not watered or cared for. Finally, because of the ever shrinking land where animals might roam and of the constant abuse of hunting laws, a number of wild animals in the area are becoming rarer.

Social and Cultural Affairs

BUREAUCRATIC HANDLING OF CITIZENS' COMPLAINTS SCORED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 August 1982 carries on page 1 a 900-word lead editorial titled "The Person Behind the Letter." The editorial criticizes those party and soviet organs that are not sufficiently principled and demanding toward officials who handle workers' letters and complaints in a bureaucratic and lax manner, and who fail to meet schedules for receiving citizens. According to letters reaching the newspaper's editorial office, such officials are found in numerous party and soviet organs, ministries and agencies, and institutions and organizations. Because of the bureaucratic attitude, procrastination, insensitivity, and superficiality of these officials and leaders, citizens are frequently obliged to appeal to higher organs for redress of their appeals and complaints. The editorial reminds such leaders that every Soviet citizen has the right to expect a judicious review of an earnest effort to resolve their problems.

PEOPLE'S CONTROL COMMITTEE ACTIVITIES CRITICIZED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 7 August 1982 carries on page 1 a 900-word lead editorial titled "Public Supervision." The editorial reviews the functions of people's control groups and notes that presently some 420,000 people are engaged in such activities in the republic. It attributes the badkwardness of some industrial sectors, the failure of a number of enterprises and construction organizations to meet their plans, and the widespread occurrence of whitewash and wrongdoing in the economy to the ineffective supervision of control posts, groups, and committees. The editorial admonishes such groups to never forget that a critical factor in effective investigations is practical collaboration with standing commissions of soviets and trade union and komsomol organizations. The republic PCC has turned up serious failures within the administrative apparatus to protect state property, utilize resources, and punish those who violate regulations and laws. Frequently, leaders of partkoms, enterprises, and organizations pay little attention to the results of such investigations. People's control organs must make more effective use of publicity of their findings, and party and soviet organs must expend greater effort to properly orient the activities of people's control committees.

RISE IN INTERETHNIC MARRIAGES NOTED AMONG UZBEKS IN NONCHERNOZEM

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 13 August 1982 carries on page 3 a 3,500-word full-page report by G. Lipshits, correspondent for the Uzbekistan Information Agency, under the banner headline "The Nonchernozem Zone: Address of Courage." In the course of this report, Lipshits provides the names of three male Uzbek workers who have married Russian women in the Nonchernozem region, and cites a member of the Shimsk Raykom and Rayispolkom who says "the number of marriages between nationalities is increasing."

DIVORCE FACTORS, WOMEN'S ROLE DISCUSSED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 20 August 1982 carries on page 2 a 2,500-word article by the Uzbek writer Otkir Hoshimov titled "What Is the Child Guilty Of?" Hoshimov discusses various factors that play a role in the rising divorce rate in Tashkent. One frequent reason given for divorce is incompatibility, but Hoshimov favors a materialistic explanation of such cases, claiming that greed of the parents is the more probable cause. Parents frequently turn court trials into "horse trials," seeking to get the best settlements for their families. Such greed is also displayed at weddings. There is a growing rate of divorce between people married 5-10 years, most frequently filed by wives who complain their husbands drink too much, their household furnishings are bad, or their relationship has turned sour. Another cause, according to Hoshimov, is that divorce has become fashionable. That is, women file for divorce because their husbands don't help out at home with the chores and the children. Women complain that they also work and should not have to do everything. Hoshimov acknowledges the view that men should begin sharing such duties, but personally feels that "women should remain women," particularly in the area of child-rearing. Since the beginning of man, he goes on, women have reared the children and "that is why men cherish women." After discussing jealousy as a factor in divorces, Hoshimov dwells on divorces between men and women who hardly know one another but are pressured into marriage by their parents. According to Hoshimov, such arranged marriages are increasingly common even in Tashkent and are not confined to ordinary workers but are also found among the intelligentsia, scholars, and officials. Hoshimov concludes his article with the statistic that each of the 10 rayons of Tashkent has an average of 50 divorce suits monthly, and 90 percent of these marriages are dissolved.

NATIONAL FLAVOR SAID MISSING FROM NON-UZBEK DIRECTOR'S FILMS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 27 August 1982 carries on page 6 a 1,200-word article by Ergash Ismatullayev titled "Problems of Artistic Television Films." This critical survey of films made for Uzbek television contains the following passage: "We have some producers who, even though they are working on films for television, are not interested in its characteristics.... For example, Yuriy Stepchuk, despite having filmed several movies for television, has not aroused the interest of viewers with any of them. Some of his films should not be aired. The reason: the national characteristics of the Uzbek people are not being expressed in Stepchuk's films."

EDITORS COMMENT ON PARTY DECREE ON JOURNALS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 6 August 1982 carries on page 1 a 900-word report titled "At the CPSU Central Committee." The report presents the gist of the CPSU CC resolution "On the creative ties of literary and artistic journals with the experience of constructing communism." The resolution calls for greater activism and responsibility by journal editorial colleges and writers in publicizing party decisions, socioeconomic tasks, modern themes, and new traditions in Soviet society. Their efforts must be based on the principles of party observance [partiynost'] and populism [narodnichestvo]. The chief editors of Uzbekistan's literary and artistic journals responded to this resolution. Hafiz Abdusamatov, chief editor of the Writers Union journal SHARQ YULDUZI, in an article titled "Voice of Our Age," acknowledges that the resolution fully applies to the work of SHARQ YULDUZI and that it accords with the points made by Sharaf Rashidov in his speech on the 50th anniversary of the journal. Some republic journals, including SHARQ YULDUZI, publish works by authors whose world-view is not clear, who do not adopt a class position toward events, and who are confused or in error in their approach to the cultural heritage and artistic expression. Aleksandr Udalov, chief editor of the Writers Union journal ZVEZDA VOSTOKA in an article titled "Important Directive," states that the journal collective constantly endeavors to accept works that depict modern heroes and the rich spiritual world of the Soviet people, and greets the party resolution with satisfaction.

The same paper on 13 August 1982 carries on page 1 a 300-word article by Mirmuhsin, chief editor of the magazine GULISTON, titled "Exactly What's Needed." Mirmuhsin comments that the journal collective will provide deeper coverage of scientific and technological advances and new phenomena in workers' lives. In his opinion, Uzbek writers must make greater efforts to instill in youth both love and respect for the land, nature, and farming. Erkin Vohidov, chief editor of the young writers' journal YOSHLIK, in an article titled "Motivated," takes the opportunity to report that the YOSHLIK editorship held a joint roundtable with the LITERATURNAYA UCHEBA editorship, led by its chief editor A. Mikhaylov, to discuss the chief problems facing young writers. Otherwise, Vohidov feels that the party resolution on journals will helpfully orient YOSHLIK's work.

Shomil Alyadin, chief editor of the Crimean Tatar literary journal YULDUZ, in an article titled "Lofty Task," comments that journals publish too few works on workers' lives and too many shallow works on historical subjects by authors who cannot distinguish between important and unimportant historical facts.

The same paper on 27 August 1982 carries on page 1 a 600-word article by Nurali Qobul, chief editor of the fine arts magazine SOVET OZBEKISTONI SAN"ATI, titled "A Document That Demands Work." Qobul complains about the unscholarly quality of works submitted to the journal and about various subscription problems. Khudoyberdi Tokhtaboyev, chief editor of the literary journal for children and teenagers GULKHAN, in an article titled "Educational Power of the Artistic Word," discusses the resolution on journals and notes that GULKHAN will open its pages to discussions on how to improve literature for children and teenagers.

50TH ANNIVERSARY OF KARAKALPAK JOURNAL NOTED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 30, 23 July 1982 carries on p 5 a 1,400-word report by Tojiddin Seytjonov (editor-in-chief of AMUDARYO journal, People's Poet of the Karakalpak ASSR). The article is written in connection with the celebration of the 50th anniversary of the Karakalpak-language journal AMUDARYO. The article reviews the literary environment in the early 1930's which gave rise to the new journal and the work of the journal over the years. It points out that editions of the journal now run 30,000 copies.

NEW WORK BY SHARAF RASHIDOV ON WORLD WAR II

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 31, 30 July 1982 carries on p 3 a 2,900-word excerpt from a new work by Sharaf Rashidov. According to the introduction provided, the work describes the Russian village Berezovka, which becomes an expression of the wonderful Russian nature and high respect towards the marvelous Russian people. The work reveals the spiritual reasons for the great victory through the patriotic images portrayed. The work will be published in its entirety in SHARQ YULDUZI.

COLLECTION OF WORKS BY UIGHUR POET OF UzSSR

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 31, 30 July 1982, p 5 carries a 700-word article by Murod Hamroyev (Doctor of Philological Sciences, Laureat of the All-Union Lenin Komsomol) entitled "Life of the Droplets." The article is a review of a collection published in Uzbek of poems by [Uighur] poet Rozi Qodiriy. The book is entitled "Shining Droplets" (Tashkent: Ghafur Ghulam Publishers, 1981). Among the poems discussed in the review is one entitled "Two Homelands." In this poem Qodiriy tells of his love for the homeland in which he has lived most of his adult life (the USSR) and his love for the homeland which gave him life and opened his eyes [Xinjiang].

CHANGES IN EDITORIAL BOARD OF 'OZBEKISTON ADABIYOTI VA SAN"ATI'

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek Nos 32 and 33, 30 Jul and 6 August 1982, p 8. Editorial board of the publication as listed 30 July includes Editor-in-Chief Asqad Mukhtor and Deputy Editor-in-Chief Khabib Karimov, and among the members of the board, Enmark Solihof and Rahima Nazarova. In the 6 August issue, Karimov, Solihov and Nazarova are not listed at all among the board members; Asqad Mukhtor is listed as a regular member (no longer editor-in-chief). The editor-in-chief is listed as Odil Yoqubov, the deputy editor-in-chief Ibrohim Ghafurov. Other new board members are Sobir Boboyev, Sa"dulla Karomatov and Olmas Umarbekov.

SEMINAR FOR YOUNG WRITERS OF UZBEKISTAN

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 33, 13 August 1982 carries on p 1 a 300-word article titled "Young Shoots in the Garden of Literature." The article reports on a seminar for young writers of Uzbekistan which began work on Tuesday, August 10, at the UzSSR Writers' Union "Dormon" House of Creative Work. The introductory speech of the UzSSR Writers' Union First Secretary Azimov stressed the great responsibility of young writers of the republic. A list of other speakers at the seminar's official opening is also given.

The same paper carries on p 5 a 900-word article by secretary of the board of the UzSSR Writers' Union Oktam Usmonov titled "Contemporaneity--Our Main Theme." It provides a discussion of the goals and tasks of the seminar of young writers of Uzbekistan which has opened. This is the first time such a meeting has been held. According to Usmonov, the goal of the conference is to further strengthen the attention to the work of cultivating youth from the ideological-artistic perspective. Usmonov mentions other measures as well which have been taken to improve the work of the republic's young writers. For example, this academic year a group of Uzbek writers is studying under the Literature Institute imeni Gorky. Senior writers of the UzSSR are continuing to give help to younger writers. Usmonov refers to the need of young people for positive heroes to emulate. The present seminar is scheduled to last 3 weeks. During it, young writers will have opportunities to exchange ideas with senior writers of the republic. The participants will also visit museums, theaters and exhibition halls, and will meet with factory workers.

A collection of works is to be published as a result of the seminar under the title "Voice of Youth." Television and radio programs about young authors' works will also be broadcast.

DEFECTS IN HISTORICAL FICTION

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 33, 13 August 1982 carries on p 1 an article by Shomil Alyadin (editor-in-chief of YULDUZ) titled "High Assignment." The article by the editor of the UzSSR Crimean Tatar language journal is written in response to the CPSU Central Committee resolution "On Creative Links of Literary-Artistic Journals With the Experience of Communist Construction." Alyadin states: "There are serious mistakes along with successes in the writing of works on historical topics. Certain authors of ours continue unable to demonstrate skill in separating an important fact from an unimportant fact or a historical event. Historical works, too, must serve our present day."

REPORT ON UzSSR SEMINAR FOR YOUNG WRITERS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 34, 20 August 1982 carries an 800-word report on pp 1 and 7, titled "Seminar of Young Writers of Uzbekistan: Thoughts of Dormon." This report concerns the seminar for the republic's young writers being held at the House of Creative Work in Dormon Village. The seminar brings together 60 young writers from all oblasts of the republic and the Karakalpak ASSR. They are working in six sections: poetry, prose, dramaturgy, criticism, children's literature and Russian literature. The sections are being led by well-known writers. Ibrohimov points out that young writers must have a firm grasp of Russian, "the language of the great leader Lenin and of Pushkin. The first secretary of the board of the UzSSR Writers' Union, Sarvar Azimov, spoke about this in a creative discussion with young writers."

MEETING OF BOARD OF UzSSR WRITERS' UNION SECRETARIAT

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 34, 20 August 1982 carries on p 7 a 300-word report titled "At the UzSSR Writers' Union." The report tells of a meeting of the board of the UzSSR Writers' Union secretariat. The meeting was devoted to a discussion of the resolution of the CPSU Central Committee "On Creative Links of Literary-Artistic Journals With the Experience of Communist Construction" and "The Tasks of Writers of Uzbekistan." The editors of SHARQ YULDUZI (Hafiz Abdusamatov), ZVEZDA VOSTOKA (Aleksandr Udalov), YULDUZ (Shomil Alyadin), YOSHLIK (Erkin Vohidov) and OZBEKISTON ADABIYOTI VA SAN"ATI (Odil Yoqubov) each spoke on work already accomplished and future plans in these areas. The concluding speech at the meeting by First Secretary of the UzSSR Writers' Union Azimov called for organs of the press and publishing houses to raise further their demands toward manuscripts, to strengthen their sense of responsibility and to give serious attention to printing Uzbek authors' new works and to raising their ideological-artistic level.

FILMS FOR TV DO NOT SATISFY TODAY'S NEEDS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 35, 27 August 1982 carries on p 6 a 1,100-word article by Ergash Ismatullayev titled "Problems of Television's Artistic Films." The article discusses specific demands of films for television and some of the problems of the TV film industry in Uzbekistan. Some producers do not take an interest in the particular nature of television. "In particular, although Yuriy Stepchuk has made several films for television, not one of them has excited audiences. Some films do not even make it to the television screen. The reason is that the Uzbek people's national characteristics have been unable to find a true expression in Stepchuk's films." Ismatullayev complains also that there are only two television films produced in the republic per year. The films of the last years are far behind the demands of the times.

ENCOURAGING THE STUDY OF RUSSIAN IN SYR-DARYA

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 20 August 1982 carries on p 3 a 600-word article by A. Umrzoqov (Syr-Darya Oblast) titled "Our Second Mother Tongue." The article reports on efforts by teachers of a school in Syr-Darya Oblast's Voroshilov Rayon to encourage enthusiasm among pupils to study Russian. Besides activities in the classroom with this goal, there is also a Russian circle and an international friendship club at the school.

FIRST PHYSICAL EDUCATION MANUAL IN UZBEK FOR PARENTS

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 31 July 1982 carries on p 4 a 500-word article by F.N. Nasriddinov (prorector for academic affairs of the Uzbekistan State Physical Educational Institute, docent) and Sh. Qosimov (chairman of the Department of Sports Games, docent) titled "The First in the Uzbek Language." The article reviews the recent release by Oqituvchi Publishers, A.K. Atayev's "Raising Children To Be Nimble, Skillful and Strong." This is the first material published in Uzbek in language understandable to the layman on physical education for children. The book presents exercises, often with helpful illustrations, which are appropriate for children from 3 to 16. The reviewers' only complaint is that the book, which will find many readers interested in its contents, was issued in an edition of only 8,000 copies. "It would be appropriate if the editions of such necessary materials were increased."

BOOK ABOUT UZBEK LANGUAGE'S EARLY BORROWINGS FROM RUSSIAN

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 7 August 1982 carries on p 4 a 900-word article by Alibek Rustamov and Hisom Ghulomov titled "Great Contribution to the Science of Lexicology." The article is a review of "Materials From the History of the Vocabulary of the Uzbek Language (Late 19th and Early 20th Century)" by Olim Usman and Shafiq Hamidov. The book examines the changes in Uzbek vocabulary in the late 19th and early 20th centuries, particularly those changes due to influence from Russian or other European languages through Russian. Most of the book (pp 18-204) consists of a glossary of such words. This glossary gives the transcription of the items in old

Uzbek (Arabic script). While recognizing that the principal source for international words in Uzbek was Russian, the authors present the variations of those words which were also borrowed through Azerbaijani or Ottoman. For example, the word "committee" is listed both under "komitet" and "qomita." The reviewers approve of the practice of giving the transcription of the Russian words in the form they were spoken; this subjected them to the rules of Uzbek pronunciation of those times.

HELP FROM MOSCOW IN TRAINING UzSSR RUSSIAN TEACHERS

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 11 August 1982 carries on p 3 a 1,300-word article by G. Shcheglova (rector of the Republic Pedagogical Institute of Russian Language and Literature, professor) and V. Lazarev (chairman of the Department of Soviet Literature, Moscow State Pedagogical Institute imeni V.I. Lenin, professor) titled "In Close Cooperation." The article tells of the training of Russian language teachers for the UzSSR, primarily at the Moscow State Pedagogical Institute. The introduction to the article underlines the importance of the Russian language for Uzbeks. "The Russian language, which, according to the demands of history, brought freedom to the peoples of Central Asia, has become the language of cross-national communication thanks to the Great October Socialist Revolution. It has become a social and cultural necessity for members of one nationality of the USSR to learn another's language, including for Uzbeks to know the Russians' [language]. It really has become a second mother tongue."

Twenty years ago the UzSSR Russian Language and Literature Pedagogical Institute was established, and since then it has graduated 10,122 Russian language and literature teachers. There are also Russian teachers for the UzSSR being trained at the Moscow State Pedagogical Institute. This institute provides over 50 Russian language and literature teachers yearly to the UzSSR. The work of students trained there and in other RSFSR institutions is regularly discussed at meetings of organs of the UzSSR Ministry of Education. In the last decades Moscow State Pedagogical Institute has provided around 700 Russian teachers for Uzbekistan. There has been a significant improvement in the background of the students sent from the UzSSR since the 1960's. In those years it was considered a good sign if 25-30 of the 70 who passed in the competition could speak Russian well; now it is strange to find a single one who does not know Russian well. The selection process for picking UzSSR students to be sent to Moscow Pedagogical Institute has been centralized. This has also been a significant achievement. Most of the graduates from the Moscow Pedagogical Institute work in leading posts of the educational organs; likewise, many work in republic pedagogical institutes. The article also details some of the continuing scholarly contacts between the UzSSR and Moscow State Pedagogical Institutes; these include dissertations by UzSSR Russian language and literature teachers which are written in Moscow.

RUSSIAN LANGUAGE IN UZBEK ELEMENTARY SCHOOL

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 14 August 1982 carries on p 2 an 800-word article by R. Mominova and D. Odilova titled "Finding the Way to the Heart." The article tells of a young woman who decided to become an elementary school instructor. Despite her initial doubts about it, she began work in a recently established school in 1973 in Dombrobod. One of her accomplishments after she started work there was establishment of a Komsomol organization. Soon after her arrival she and a number of her colleagues decided to take on the responsibility of being the first to hold class in the Russian language for Uzbek groups. At the beginning it was difficult, but the teachers utilized the best experience in the field and gradually they began to see positive results. "Then the question arose: Should we also conduct mathematics lessons in Russian? This also produced some beneficial results. And now the pedagogues of Secondary School No 131 are extremely pleased with the results of our work. Those children who were raised in our nursery and are now in that school are learning very well not just Russian, but other subjects as well." The Russian language teacher who started the first Russian language group for Uzbeks in the elementary school is now conducting lessons in Russian not just for her own group, but for others as well.

USING UZBEK LANGUAGE LESSONS TO INSTILL LOVE FOR RUSSIAN LANGUAGE

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 11 August 1982 carries on p 3 a 1,000-word article by Q. Masharipov (chairman of the Uzbek Language and Literature Kabinet, Khorezm Oblast Teacher Qualification Improvement Insitute; UzSSR Excellent Worker of People's Education) titled "Rich Source." The article examines ways in which Uzbek language and literature lessons, particularly through use of quotations from Sharaf Rashidov's work "Language of Friendship, Brotherhood and Cooperation," can be used to instill love and respect for the Russian language. Masharipov begins his article with a quotation from this work of Rashidov; the quote concerns the Uzbek writer Furqat who, as Rashidov notes, encouraged study of the Russian language by Uzbeks and friendship with Russians. Masharipov says that if eighth grade teachers begin the section "Furqat's Life and Work" with this passage of Rashidov's work, it will be pleasant and leave a good impression. Masharipov also says that "all pedagogues, and in particular native language and literature teachers, play a very great role in bringing this work of such great importance and its ideas to the minds of all school pupils and in propagating it." That is to say that while the major goal of the native language and literature teacher in the national school is to provide literacy for students in the native language, we must also not forget that he must know how to exert an educational influence in arousing love and interest in deeper study of our second mother tongue, the Russian language.

CHANGES IN UzSSR SCHOOL PROGRAMS

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 14 August 1982 carries on p 3 a 1,200-word article by M. Bekjonova (chairman of the Republic Study-Methodology Kabinet) titled "Great Meeting of Pedagogues." The author reviews some of the important matters being discussed at August teachers' meetings, especially changes in school programs. In 1982-83, almost all subjects in the UzSSR schools which are conducted in Uzbek, Karakalpak and languages of other fraternal republics will be conducted according to a revised program. Among the important changes is that in Uzbek schools the first grades will have 4 hours of Russian language lessons per week instead of just 2 hours.

A new textbook has been written for these lessons and will be in use in the coming year. Now first grade students will finish the oral course in the first semester, and will begin to study "The Alphabet" in Russian in the second semester. Foreign language will now be taught beginning in the fourth grade. Because the number of hours were cut, questions related to the content of teaching foreign languages had to be reconsidered. First the proposed program for teaching foreign languages in the 4th-10th grades was revised. It was published as a proposal to be tried in the schools in the new school year.

Also the first programs for teaching Arabic, Persian, Hindi and Urdu in the 2d through 10th grades have been published by the UzSSR Ministry of Education. From 1-30 June a month-long refresher course for teachers of general schools with Chinese language instruction was held jointly with Moscow State University at Moscow's Institute of Countries of Asia and Africa. Teachers of our republic from Tashkent, Mamangan and Chirchik participated in this seminar.

MARTYRS MURDERED BY RELIGIOUS FANATICS ARE REMEMBERED

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 24 August 1982 carries on p 2 an 800-word article by Sh. Valiyev (docent, Andizhan Oblast State Pedagogical Institute; Candidate of Philosophical Sciences) titled "Love's Sacrifices." The article tells the story of a young couple who were married in 1931 in a civil ceremony and who were subsequently murdered by religious fanatics for having gone through the ZAGS registration. In 1978, a monument was placed over their graves. Since then, every year on 8 March people place wreaths of flowers at the foot of the monument to these young people who became sacrifices of love.

GUARDING AGAINST DYSENTERY

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 26 August 1982 carries on p 3 a 700-word article by K. Ahmadjonova (Worker of the Republic House of Sanitation Education) entitled "Cleanliness--Guarantee of Health." The article tells of the ways dysentery is spread and how it can be avoided.

PRAYER FAILS BUT MEDICINE WORKS

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 7 August 1982 carries a 300-word article on p 4 by B. Dosimov entitled "Atheistic Training in the Family." The author points to the importance of atheistic training for children. He notes, however, that "unfortunately there are still some old people in our midst who are bound to religious survivals. Sometimes they try to poison the minds of their children with religious ideas. They cannot even imagine what harmful results such behavior leads to."

Dosimov recounts the case of religious parents with a 1 year old sick child who brought him to a clinic. The feldsher diagnosed the disease as meningitis, and wrote out an order to have the child taken to Tashkent. But the parents did not take the child there; instead they began to try to cure the child by religious prayers. The feldsher called for an ambulance immediately and obliged the parents to have the child sent to Tashkent. Forty days later the child was cured and left the hospital. "From this example, it is apparent that religion poisons while medicine cures."

ALCOHOL HARMFUL FOR WOMEN

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 7 August 1982 carries on p 4 a 500-word article by A. Qodirova (professor) titled "Save From Alcoholism." The article describes the effects of alcohol on the human body; it especially stresses the harm alcohol can cause women, particularly pregnant women. The article tells of a young female surgeon who began to lead a loose life after she turned to alcohol. Eventually she contracted syphyllis and died at the age of 27.

UZBEK LITERARY LANGUAGE AND THE ROLE OF RUSSIAN IN THE USSR

[Editorial Report] Tashkent GULISTON in Uzbek No 5, May 1982 pp 13-14 carry a 2,000-word article by Shonazar Shoabdurahmonov titled "Today's Uzbek Literary Language." The article considers the development of the Uzbek literary language since the revolution both in terms of changes in the body of the language and its status. Shoabdurahmonov notes that the development of the modern Uzbek literary language has drawn both on internal capabilities (the traditions of the old Uzbek literary language) and external factors (borrowing words from other languages). In some cases, pairs of words continue to exist in Uzbek for the same concept even today. One may be the literary norm while the other may be a synonym in a particular dialect. In other cases there may be a stylistic difference between words. Shoabdurahmonov stresses the beneficial influence on Uzbek exerted by the Russian language. He also notes that the Uzbek language is not just the means of communication for those who speak it, because it has been raised to the status of a language of developed study and instruction, a language of social-political and artistic literature, and a language of the press; it has also become a "language which can serve in all fields of human relations." On the other hand, the Russian language, besides being a single source for enriching and developing the national languages of the Soviet Union, including the Uzbek language, has also become famous as the means of cross-national communication and the means for spreading the achievements of national culture, science and technology of the republics. "Only thanks to this language have the achievements of Uzbek science, economy, art and literature been raised to the All-Union and world scale. Through the translations into Russian, the classical works of Soviet Uzbek literature have become famous not just in our country, but abroad as well."

REVIEW OF WORK ON INTERNATIONALIST UPBRINGING

[Editorial Report] Tashkent GULISTON in Uzbek No 5, May 1982 carries on pp 26-27 a 500-word article by Adiba Nosirova (senior teacher of Tashkent State Institute of Culture) titled "Important Research." Nosirova reviews M. Dzhunusov's work "Questions of the Theory of Internationalist Upbringing (Voprosy teorii internatsional'nogo vospitaniya) (Tashkent: Uzbekistan, 1980). Nosirova gives a generally positive review of the book. She feels that it certainly is a happy event that this book has been published in Russian.

"However, it is extremely necessary to publish this book in Uzbek as well. This is because it illuminates questions of international upbringing and particularly its theory in a complete, unified, consistent and interesting manner. Therefore the appearance of the above monograph in an Uzbek-language mass edition will make a contribution to the work of arming specialists involved in international upbringing with necessary information."

IMPORTANCE OF RUSSIAN LANGUAGE STRESSED

[Editorial Report] Tashkent GULISTON in Uzbek No 7, July 1982 carries on p 3 a 1,200-word article by G.N. Shcheglova (rector, Republic State Institute of Russian Language and Literature, professor) titled "Powerful Language." The article primarily is devoted to demonstrating the importance of the Russian language for the non-Russian peoples of the USSR. In illustrating her points, Shcheglova refers several times to statements by Uzbek CP Central Committee First Secretary Sh. Rashidov. After stating that all peoples of the USSR have equal rights with regard to use of their languages, Shcheglova adds that the importance of the language of cross-national communication is extremely great in developing and bringing together various peoples and nationalities, in the flourishing of language and culture, and in strengthening friendship and cultural relations. The Russian languages allows members of various nationalities to acquaint members of different nationalities with works written in their own language and it also serves as an invaluable means for development of all aspects of national languages. "It is an objective necessity of the building of a developed socialist society that Russian becomes the linguistic means of cross-national communication." "The number of persons of other nationalities and peoples considering the Russian language in particular their own second mother tongue has been growing rapidly." "Today the development of our time is demanding that young people studying in secondary schools master Russian fluently, that they read belles-lettres and technical literature which is comprehensible to others, that they understand oral speech and that they express their own ideas in Russian. In accordance with this demand, around 50 hours are allocated to Russian language and literature between the 1st and 10th classes per week. Beginning in the 4th class through the completion of the 10th class, there are Russian language exams given."

HISTORICAL-REVOLUTIONARY PROSE REQUIRES CLOSER ATTENTION BY LITERARY CRITICS

[Editorial Report] Tashkent GULISTON in Uzbek No 7, July 1982 carries on p 14 a 1,400-word article by Akram Kattabekov (candidate of Philological Sciences) entitled "The Historical Novel and Criticism." The article is devoted to several questions regarding literary criticism of historical novels. In particular, Kattabekov points to the paucity of literary criticism devoted to "historical-revolutionary prose." "Ota (Father), "Khorezm" and "Farghona zulmat qoynida" (Fergana in the Grip of Darkness) have been ignored by literary critics with the exception of some brief critiques; these works have not been thoroughly analyzed. Kattabekov also notes that criticism of historical-revolutionary works has not always studied the social function sufficiently. Kattabekov cites a statement by F. Kuznetsov at a plenum of the USSR Writers' Union devoted to criticism. Kuznetsov said that under the influence of the attempt to avoid vulgar sociologism there has been a decrease in works of criticism of sociological analysis and attention to literature's social tasks and problems. "The reason I [Kattabekov] am giving this special stress is that the theme of revolution is an important social-political topic and we must analyze life in a sociological way."

International

AFGHANI CHILDREN ATTEND PIONEER CAMPS IN TASHKENT

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 25 August 1982 carries on page 3 a 1,000-word article by H. Yoldoshev, chief of the main administration for people's education of the Tashkent Gorispolkom, titled "The First Bell Is Near." In reporting on summer activities and preparations of the Tashkent school system for the coming school year, Yoldoshev notes that during summer 1982 some 600 children from Afghanistan attended the Gulistan, Dorozhnik, Mir, and Tyulenin Pioneer Camps in Tashkent. During their stay, the children saw first-hand the great Soviet concern for human equality and rights, became familiar with Uzbekistan's economy and culture, and shared in party and holiday festivities.

RASHIDOV, NAVOI TRANSLATED INTO MONGOLIAN

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 6 August 1982 carries on page 7 a 200-word report by Sh. Sharipov titled "Rare Gifts." Sharipov states that at a recent meeting of young Soviet and Mongolian writers, the head of the Soviet delegation Omon Natjon, an Uzbek poet, was presented with copies of two books published in Ulan-Bator. One of them is a Mongolian translation of the novel "Powerful Storm" by Sharaf Rashidov, first secretary of the Uzbek Communist Party. The other contains selected poems by the 15th century founder of Classical Uzbek literature Alisher Navoi, translated into Mongolian for the first time. Omon Matjon presented the books to the Literature Museum imeni Navoi in Tashkent where they now form part of the permanent displays on the lives and works of Navoi and Rashidov.

RUSSIANS AND UZBEKS' LITERARY RELATIONS WITH INDIA

[Editorial Report] Tashkent GULISTON in Uzbek No 7, July 1982 carries on pp 24-25 a 1,700-word article by Laziz Azizzoda titled "Concerning Our Literary Relations With India." The article examines the history of Indian-Russian and Indian-Central Asian literary and other relations over a number of centuries as well as Indian-Russian and Indian-Uzbek relations in the Soviet period. In the Soviet era Azizzoda points to the contribution to Indian economic growth by Uzbekistan in the form of industrial and agricultural equipment. In the last 20 years, publishing houses of Uzbekistan have issued about 50 works by Indian authors in Russian and Uzbek. Works by the Uzbek writers Hamza, Ghafur Ghulom, Sharaf Rashidov, Uyghun, Zulfiya and others have been translated into Hindi and Urdu. Tashkent State University has a Department of Hindi, Urdu and Punjab Philology. This, along with the establishment of Urdu and Hindi editorial offices at Tashkent Radio, and the scale of scholarly research at the UzSSR Academy of Sciences Oriental Institute are all contributing to the strengthening of ties of culture and friendship. Azizzoda takes note of the

1967 and 1977 "dekadas" of Indian culture in Uzbekistan and the festivals of Uzbekistan art in India in those same years; he also mentions cooperation in the field of cinema.

AFGHAN COLLECTION OF UZBEK FOLKLORE PUBLISHED

[Editorial Report] Tashkent GULISTON in Uzbek No 6, June 1982 carries on p 23 an 800-word article by Shomirza Turdimov titled "The Saur Revolution." This article reviews a collection of Uzbek folklore published in Kabul in 1980 in the Dari language. The collection is "Pearls of the People" (Collected, prepared for publication, translated into Dari and annotated by Fayzulla Aymoq). The collection is followed by a table of contents and a notice on the importance of the work; these latter items are given in Russian and English. Fayzulla Aymoq had two tasks in mind for the volume. One was to collect some Uzbek oral folk art and publish it in the form of a book. The other was to translate the examples of Uzbek folklore into Dari and provide them with explanations and thus give some indication to all peoples of Afghanistan of the rich Uzbek oral folk art. The collection is composed primarily of works of folklore recorded among Uzbeks living in Afghanistan's northern provinces. Turdimov notes that some of the selections in the volume are common to Uzbeks of Afghanistan and the Soviet Union. One of the tales is also the same as a Tatar one. Turdimov concludes "It can be said that the collection "Pearls of the People" will become one of the literary links serving to further strengthen the friendship of the peoples of Uzbekistan and Afghanistan."

HUNGARIAN WRITER VISITS UZBEKISTAN

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 34, 20 August 1982 carries on p 7 a 100-word report by V. Nikolayev titled "Creative Trip." It is a report on the stay in Uzbekistan of the Hungarian writer, Janos Sziladi, who is in the republic collecting material for a book of sketches about the USSR. He visited a number of places in Tashkent. He held discussions with the first secretary of the UzSSR Writers' Union and meetings with the kollektivs of YOSHLIK journal and Yosh Gvardiia Publishers.

UZBEK MUSIC ENSEMBLE IN AFRICA

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 31, 30 Jul 1982 carries on page 1 a 200-word TASS report titled "Success of Uzbekistan Artists." The report tells of successful concerts given in Tanzania by the Uzbek song and dance ensemble Sado which, along with other groups from the USSR, is on tour in Africa. They have already performed in Madagascar and the Seychelles, and will next go to Rwanda.

NAVOI THEATER TROUPE TO REPRESENT USSR IN GDR

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 31, 30 July 1982 carries on page 1 a 700-word report titled "Before the Responsibility-Laden Trip." It consists of an interview with Dilbar Abdurahmonova (chief conductor of the UzSSR State Academic Grand Theater imeni Alisher Navoi) concerning a trip to the GDR which a troupe from the Navoi Theater is about to make. Abdurahmonova recalls an earlier trip by the troupe to Cairo where the Uzbek ballet received rave reviews. This time the Navoi Theater will be the only group from the USSR to represent the Soviet opera art at an international festival to be held in the GDR. The Navoi's troupe will thus become the third Soviet opera and ballet troupe (after the Bolshoi and the Kirov) with which the GDR's urban theater-goers have become acquainted.

FRENCH AUTHOR VISITS UZBEKISTAN

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 33, 13 August 1982 carries on p 7 a 150-word article titled "Andre Stiehl--Guest of Our Republic." It reports on the visit of this French author to Uzbekistan.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

RASHIDOV INTERVIEW ON BILINGUALISM, FRIENDSHIP

AU141300 Bratislava PRAVDA in Slovak 10 Dec 82 p 6

[Interview with Sharaf Rashidov, candidate member of the CPSU Central Committee Politburo and first secretary of the Central Committee of the Communist Party of Uzbekistan by Valeriya Prutova: "Khashar--Mutual Assistance of Nations"--in Tashkent, date not given]

[Text] His day has to be meticulously planned. Our meeting was scheduled for 9:45 but by then he had already managed to receive the minister of agriculture and to discuss with him the unpostponable tasks of the cotton harvest. He had also been visited by the secretaries of the Central Committee since a meeting of the Central Committee of the Communist Party of Uzbekistan was to be held the following day....

It is all the more startling that, in addition to his other duties, Sharaf Rashidov is also a professional writer. His books--novels, stories, collections of poems, film scripts and press articles--are published in dozens of countries in millions of copies. They can be read in Uzbek, Russian, English, French, German, Spanish, Polish, Romanian, Mongolian, Arabic, Persian, Bengal, Urdu and many other languages. According to critics, the portraits of his heroes in the two-part novel "Victors" and "Stronger Than a Windstorm" and in the novel "A Mighty Wave" hold a prominent place in the gallery of artistic portraits of our contemporaries. It was therefore natural that the first question I asked the author was:

[Question] How do you succeed in combining your party and state activities with writing, a profession that requires tranquility and concentration?

[Answer] My love for my work as a writer helps me. It has become part of my being and has entered my bloodstream. Now I cannot imagine my life without literature, though you are right that it requires a lot of time. To write a novel, for example, I need 6 to 8 or even 10 years. One has to sacrifice one's vacations....

[Question] When writing fiction and poetry, you use your native Uzbek tongue. What about works of journalism?

[Answer] I use both Uzbek and Russian. Where the subject matter is associated with life in Uzbekistan, I use my native tongue. International problems mostly require the Russian language.

[Question] What language do you use at congresses of the Communist Party of Uzbekistan, at Central Committee sessions and at various meetings and conferences?

[Answer] Again, everything depends on the Plenum. Uzbekistan is a multinational republic, it is inhabited by more than 100 nations and ethnic minorities. Therefore, at mass forums we speak Russian, so that everyone may understand all speeches, and at meetings of cottongrowers or livestock breeders, for example, we most frequently speak Uzbek.

[Question] Why do you think was it precisely Russian that has become the language of international communication in the USSR?

[Answer] If for no other reason than because it is the native tongue of the majority of the country's population and, together with Ukrainian and Belorussian, which are related lanagues, is understood by 75 percent of the population. That alone would be enough to make Russian the common language. In addition to this, however, Russian is one of the most advanced world languages. It is hardly possible to enumerate the enthusiastic comments made about the Russian language by outstanding people of diverse periods and nationalities. They included Marx and Engels, Lomonosov, Tugenev, T. Mann, Merime and so forth. They also include my compatriots--scientists, cultural protagonists and poets of the past: Furkat, Mukimi, Sattarkhan, Iskhakhan. The Russian language has absorbed the greatest accomplishments of world science, literature and the arts. It is the language of Pushkin, Dostoyevskiy, Tolstoy and Chekhov. It is the language of Lenin, the language of the first socialist revolution, which has made it possible for ancient Uzbekistan to develop in freedom.

[Question] During the last USSR-wide census in 1979, a large segment of the non-Russian population listed Russian as its native tongue and an even larger segment as its second native tongue. However, there are also other cases: Some Russians list as their native tongue the language of the environment in which they live. How do you assess these facts? What are the unique aspects of bilinguality in Uzbekistan?

[Answer] Russian-Uzbek bilinguality comes to us naturally and organically. It is the staff of our life, a product of our history. We have had the same fate: Russians and Uzbeks, together with the other nations in the republic, jointly built Soviet power in Central Asia, they jointly fought against fascism. During the Great Patriotic War, Uzbekistan received more than a million evacuated people. At that time Uzbek families adopted 100,000 children--of Russian, Ukrainian, Belorussian, Polish, Jewish and many other nationalities....

At one of Taskhent's squares there is an unusual group of statues: a woman and a man surrounded by a bevy of boys and girls. It is a memorial for the blacksmith Shakhmed Shamakhmudov and his wife Bakhri-opa, who adopted 16 orphans. The street where Shakhmed Shamakhmudov lived is now named after him: the houses of his now-adult children Nigmat, Aleksey, Sredor, Khalida, Mikhail...are also there. The children of the Shamakhmudov family include a Russian, a Belorussian, a Moldavian, a Ukrainian, a Lithuanian, a Kazakh, a Tartar and so forth. What was their common language? Russian, self-evidently, but also Uzbek as the language of their parents. There were thousands of such families in Uzbekistan, families that took in 6.8 or 11 children. That is the origin of our bilinguality.

[Question] Are mixed marriages common in Uzbekistan and what languages are spoken in these families?

[Answer] In a republic that is inhabited by more than 100 nations and ethnic minorities, mixed marriages are a common phenomenon. There is not a single collective here--enterprise, construction project, institute or laboratory--without people of quite different nationalities working or studying there together. The most different nationalities live together in Tashkent. In the spring of 1966 our capital was struck by a terrible disaster, an earthquake that virtually destroyed the city. The whole country immediately came to help us. A gigantic Khashar--tradition of mutual assistance--began in Tashkent, with everyone joining in the work. Builders from Moscow, Leningrad, the Ukraine, Belorussia, Kazakhstan, Latvia, in brief from all union republics, came to help in the city's reconstruction. Some of them have remained in Uzbekistan forever, raising families here. It is natural that Russian is the language most frequently spoken in such families.

It is becoming a tradition to give one child an Uzbek name and the next one a Russian name. But the children naturally speak both language.

[Question] A a young man, before departing for the front of the Great Patriotic War, you worked as a teacher and have therefore firsthand information about the problem. What changes have occurred since then in the language policy in Uzbekistan's schools? Are there any new elements in it?

[Answer] In the distant thirties one could not speak of any coherent language policy in the educational system. The children were simply instructed in the language spoken by the teacher. Even then there were many Russian teachers in our republic, though young national cadres were also emerging. I was one of them. I had completed the pedagogical school and transferred then to the University of Samarkand, from where I left for the front. I fought in the Nechernozemye [non-black soil] Zone, in the Novgorodskaya Oblast. There I suffered an injury.... Nowadays our schools offer a great variety of languages of instruction, a variety that adequately reflects the ethnic composition of our republic. Seven languages of instruction are used in our republic: Uzbek, Russian, Karakalpak, Kazakh, Turkmen, Tadjik and Kirgiz. Aside from these, the children can study Korean, Tatar, German, Greek and Macedonian as a native tongue. Besides, we have also foreign languages here. There are many specialized schools in our republic in which children are instructed in English, German, French, Arabic and even in Hindi, Urdu and other languages. Mixed schools are common--in 850 of them children are instructed in two languages, in 60 in three and in 8 in four languages. We have opened foreign-language departments at the universities and colleges.

[Question] The resolution of the CPSU Central Committee on the 60th anniversary of the USSR's founding notes that 82 percent of the country's population speak Russian. Only a few years ago this percentage was much smaller. Some Western experts interpret this tendency as forced Russification, as an assimilation of the Svoiet Union's natural cutlrues. How do you view this problem?

[Answer] Such a problem does not exist, I think that it ceased to exist long ago. However, our enemies in the West seek to rekindle it from time to time. To speak about forced Russification means either to be unable to understand or to refuse to understand our way of life. But why should we fight windmills? Let them come to Uzbekistan, sit down in our of our tearooms behind a dastarkhan, listen to the sound of a dutar or a rubab, watch a game of kurash, attend a performance of the Bakhor dance ensemble, visit the Alisher Navoya Theater of opera and ballet or simply walk in the streets of Khiva, Bukhara or Samarkand...and then, if they still feel like it, we can carry on the discussion about so-called Russification.

AFGHAN REBEL LEADERS DESCRIBED AS MEMBERS OF UPPER CLASSES

Moscow GUDOK in Russian 24 Oct 82 p 3

[G. Musayelyan article: "The Enemies Are Coming from Behind a Cordon"]

[Excerpts] Kabul-Moscow--For all the differences within the Afghan counterrevolution, which is being nutured by Washington's secret services, its "leaders" are characterized by one thing. They are all, without exception, from the families of large landowners and the comprador bourgeoisie, from the former royal circles, and from those holding power in the top brass of the Muslim clergy. There is not a single worker, peasant or handicraft worker among them.

In order to establish the truth of this, it is not necessary to make a special trip to Peshawar or other centers of the basmachi in emigration. Much is known about the "leaders" of the enemies [dushmany] in the places where they got started and from which the people threw them out behind a cordon: in "Shurbazar," the commercial center of the Afghan capital, in the former aristocratic quarter of Pagman, in the wealthy suburbs of Kandahar, Faizabad and Charikar....

The social anatomy of the top brass of the Afghan counterrevolution can serve as a classic example of modern political economy. Their ties with the West's imperialist intelligence agencies and with the regicn's reactionary forces were obvious long before they set out on the path of open struggle against the people's power. The ideology of "Brother-Muslims," which has been implanted for decades not without the help of colonial and neocolonial circles, is the basis of the counterrevolutionary groupings' political covering.

Let us take one of the Peshawar leaders, Said Ahmad Gilani, also known under the name of Effendi-Sahib. A large feudal landowner, in his time, held great power in Kandahar and Nangarhar Province. And today Gilani uses "murids," who implicitly carry out his orders, to commit bloody crimes against the people.

The Gilani family is descended from high Islamic authorities, "Saids," from Iraq, who are well known in the Muslim East. It was founded in Afghanistan on the eve of the First World War. And it immediately became involved in pro-British activity. Effendi-Sahidb's father was hanged in 1919 as an English agent for participating in a conspiracy against independent Afghanistan. The son was able to make an enormous fortune. In the 1960's Effendi-Sahib, who had become a large landowner and "patron" of a number of Pashtun tribes, became actively involved in business; he received a monopoly on the sale of French Peugeot automobiles within the country. He was an adviser of Zahir Shah.

KREISKY RAPS PERLE COMMENT ON AUSTRIA AS TECHNOLOGY TRANSFER POINT

PM301545 Moscow IZVESTIYA in Russian 24 Nov 82 Morning Edition p 6

[Article by correspondent L. Stepanov in the A. Artamonov "World Today" roundup: "Refuting Slander"]

[Text] Vienna--IZVESTIYA has already had occasion to write about the U.S. administration's attempts at impudent interference in Austria's internal affairs. Here is a fresh example of such impudence.

In an interview with the Viennese newspaper NEUE KRONEN-ZEITUNG, U.S. Assistant Defense Secretary Richard Perle, expressed dissatisfaction on the U.S. administration's behalf at the fact that Austria is playing the part of a "transshipment center" in East-West trade, illegally supplying the Soviet Union with the kind of valuable technology which allegedly decisively strengthens the socialist system's military potential.

Perle's allegations were firmly rejected by the Austrian federal chancellor. B. Kreisky termed the U.S. assistant defense secretary's comments "intolerable interference" in Austrian affairs.

STEPPED-UP U.S. MILITARY ACTIVITY IN INDIAN OCEAN, FAR EAST SCORED

PM241117 Moscow KRASNAYA ZVEZDA in Russian 17 Dec 82 Second Edition p 3

[Article by Yu. Lugovskoy: "The United States Threatens Peace in Asia"]

[Text] Is it possible to predict the emergence of seats of international tension? Answering this question, a diplomat from a developing country once observed: "You do not have to be an astrologer to do that. Watch where American aircraft carriers go, and you will learn where the next conflict could break out."

This remark, which does not lack sarcasm, springs to mind in connection with an article published by THE NEW YORK TIMES newspaper under the heading "The United States Is Elaborating a New Military Strategy for Asia." According to the newspaper, there is particular emphasis on stepping up militarist preparations in the Indian Ocean region. The Pentagon is sending new aircraft formations, warships and units of marines there from the Pacific.

The authors of the "new strategy" are trying to extend the arms race to the Indian Ocean sea area and to the whole of southern Asia. In other words, to turn the region into an integral part of their global strategy and an arena of preparations for nuclear war. The crux of their intentions in Asia, as in Europe, is to prepare bridgeheads in advance for inflicting a first nuclear strike against the Soviet Union. The regions which become such bridgeheads will have to serve as targets for the retaliatory strike and thus deflect it from the United States. These are the calculations--mingled with adventurism and as cynical as they are criminal.

Clearly such designs also reflect the heightened aggressiveness of the U.S. reaction to any changes in Asia which do not fit in with Washington's scenario for events. That is why means of deterrence are being prepared in advance and methods are being worked out for punitive actions against the national liberation movement, which the United States calls "international terrorism."

It is with this aim that the interventionist Rapid Deployment Forces and a network of bases all around the perimeter of the Asian continent are being created. Weapons are being stockpiled and nuclear warheads deployed at the bases. "The U.S. Defense Nuclear Agency," the JOURNAL OF COMMERCE indicates, "is studying the consequences of nuclear explosions for regions outside Europe, with the main emphasis on the countries of Southwest Asia."

More and more pretexts are being sought in order to justify "strong-arm" methods. Extensive regions of Asia and Africa adjoining the Persian Gulf have been declared a sphere of "American vital interests." Things have gone so far that Washington even publicly threatens to use all its might "in the event of a change in the status quo in that oil-rich region."

Let us think about the meaning of such tirades. In essence, the United States is indicating unambiguously that it wants to stop any attempts by Asian countries to change the unequal nature of their relations with the West. Moreover, Washington is, as it were, warning the developing countries--and the warnings take the form of ultimatums--that it has imposed a kind of "taboo" on socioeconomic transformations. What is this but the most flagrant interference in other people's internal affairs and an attempt to establish a military-political protectorate over other countries?

What circumstances permit the Pentagon to build up its military potential in the Indian Ocean by redeploying naval and air force formations from the Pacific? Here mention must be made first and foremost of the factor of Japan's involvement in U.S. military preparations in the Pacific. The Americans have recently considerably stepped up the pressure on Japan, seeking its further militarization. Here the slander about the "Soviet threat" allegedly hanging over the Japanese Islands is repeated like a kind of ritual invocation. At the same time the United States is vigorously dragging Japan into participation in military preparations in the southwestern Pacific, which is thousands of miles from Japan. Japanese naval forces have begun to regularly participate in the multilateral "Rimpac" naval exercises and other maneuvers held under Pentagon command. This gave the newspaper ASAHI grounds for writing about plans to involve Japan in U.S. "global strategy" and for the "NATOization" of Japan. Indeed, the U.S.-Japanese military alliance has already, in effect, gone beyond the regional framework and is becoming global in nature.

Washington wants its ally to increase its military budget. Yielding to this pressure--and, it must be said, not entirely reluctantly--Japan is planning to increase military expenditure in the next fiscal year by 7.34 percent. In the next 5 years it is planned to allocate some $63 billion for military expenditure. But even this is not enough for the Americans. They want the Japanese to make still more sacrifices on the altar of the arms race. For what?

Here the calculation is obvious. It involves handing over to Japan the guarding of communications in the Pacific and the southern straits joining the Pacific and Indian oceans and a share in the role of Asian gendarme with the United States. And the U.S. 7th Fleet formations thus released are to be sent from the Pacific to strengthen the U.S. 5th Fleet, which is being created on a permanent basis in the Indian Ocean.

It must be added that the United States itself has no intention of weakening its military potential in the Pacific region. This is indicated by plans to deploy 48 American F-16 fighter-bombers capable of carrying nuclear weapons in Japan.

As can be seen from the words of Pentagon chief C. Weinberger, this measure is directly connected with the quest for "strategic superiority" over the Soviet Union. At the same time the United States is extending its network of bases in South Korea and in Micronesia and other parts of the Pacific.

Meanwhile, the American military infrastructure in the Indian Ocean is being developed at full speed. Here it is obviously a question of a large-scale redeployment of a strategic nature. Afterall, there are now some 200 American ships in the Pacific region, including 7 aircraft carriers, and 315,000 soldiers. The allocation of even some of these forces to strengthen the floating grouping in the Indian Ocean creates a fundamentally new correlation of forces there.

The American command has already concentrated in the Indian Ocean 2 aircraft carrier formations with a total strength of more than 30 ships, most of which have come from the Pacific. There are 180 bombers on board the aircraft carriers, and half of these bombers are capable of delivering nuclear warheads. Thus, a nuclear first strike potential is being deployed in the Indian Ocean.

In parallel with this the modernization of bases in the Philippines and Australia, on Diego Garcia Island, in the Persian Gulf region and in South Africa proceeding at an accelerated rate. The United States intends to spend billions of dollars on this in the next 5 years. It is by no means an accident that these preparations have been launched now, just when models of the new generation of arms are going into production in the United States. Runways at bases are being lengthened with a view to receiving new strategic bombers. Harbors at ports are being deepened to receive Ohio submarines carrying Trident missiles.

The United States has recently persuaded Thailand to reopen certain bases on its territory which were created by the Pentagon during the years of the Vietnam war. The United States has begun working on Indonesia and certain other Southeast Asian countries to persuade them to open their ports to American warships. The Pentagon already has about 30 bases in the Indian Ocean region. More than 140,000 American soldiers are located at these bases.

The United States also shows a clear interest in enlisting new allies and involving them in its strategic plans. To this end Washington is trying to create relations of confrontation in various parts of Asia--in the Far and Near East, in Southwest Asia and in the Southeast of the continent--and maintain a state of permanent tension there. As a result of the Camp David deal the United States has already secured a military presence in Sinai. The Americans have long been using Pakistani territory to wage the "undeclared war" against Afghanistan and for anti-Indian intrigues. Pakistan is now assigned the role of the chief advance post in the strategic structure whose other flank is supported by Israel.

In Southeast Asia the United States is gambling on setting the ASEAN countries, namely Indonesia, Thailand, Malaysia, the Philippines and Singapore, against the socialist countries of Indochina. On the pretext of strengthening the ASEAN countries' "defense" against the nonexistent "Vietnamese threat," the Americans are foisting an extensive militarization program on them. The volume of military deliveries from the United States to ASEAN countries has increased 150 percent in the last 5 years and exceeds $3 billion. The United States would like to place the armies of the ASEAN "five" under its own control and substantially restrict their sovereignty in the sphere of defense.

The persistent imperial ambitions of the United States, which seeks to rule over other countries, explains why American diplomacy is trying to torpedo any positive initiatives aimed at turning the Indian Ocean into a peace zone. This turn of events presents all peace-loving countries with the urgent task of pooling their efforts to ensure peace and security in Asia. The path to this goal is indicated in proposals recently put forward by the Soviet Union and the other socialist countries.

Peace in Asia must and can be preserved not by means of saber-rattling but through dialogue and peaceful talks. This is the essence of the proposals from the socialist countries of Indochina to the ASEAN states. The Soviet Union fully supports them. Afghanistan's proposals open up a real path toward normalizing the situation in Southwest Asia. Mongolia's proposal on drawing up and signing a convention on mutual nonaggression and nonuse of force in relations between the states of Asia and the Pacific also met with a wide response.

All these proposals are the foundations on which the edifice of lasting peace in Asia could be built.

BABRAK KARMAL SPEAKS AT USSR 60TH ANNIVERSARY PRESS CENTER

PM271101 Moscow SELSKAYA ZHIZN' in Russian 21 Dec 82 p 3

[TASS report: "Press Center Opens"]

[Text] More than 400 journalists representing the mass media of many countries have been accredited at the press center of the joint CPSU Central Committee, USSR Supreme Soviet and RSFSR Supreme Soviet ceremony marking the 60th anniversary of the USSR's formation. The press center was opened 20 December.

The correspondents were addressed by V. V. Zagladin, first deputy chief of the CPSU Central Committee international section. He briefed those present on the ceremony's schedule and the main spheres of the press center's work. It will relay the opening of the joint ceremony live from the Kremlin Palace of Congresses and host press conferences. Journalists will be addressed by the representatives of foreign delegations and envoys from the various union republics, krays and oblasts.

Movies describing the life, creative labor and friendship of the multinational Soviet people will be screened for journalists in the press center.

At midday the press center was visited by a delegation from Tyumen Oblast comprising leading industrial and agricultural production workers; party, soviet and trade union workers; leaders of enterprises and farms, and representatives of the intelligentsia. G. P. Bogomyakov, first secretary of Tyumen Obkom, spoke about the glorious deeds of West Siberia's workers.

He stressed that the fuel and energy complex' further development was numbered among the main problems at the CPSU Central Committee November (1982) plenum. The Tyumen north is the country's largest oil and gas producing region, in whose exploitation representatives of every nationality in the Soviet Union are involved. Extracting oil and gas and transporting them from West Siberia to the European part of the country is a vital component of the 11th and 12th 5-Year Plans' energy program.

In the afternoon a press conference was given by Babrak Karmal, general secretary of the PDPA Central Committee and chairman of the DRA Revolutionary Council. He was presented to Soviet and foreign journalists by L. M. Zamyatin, chief of the CPSU Central Committee international information section.

Babrak Karmal then spoke.

It is a great honor for me, he said, to be the first of the representatives of the foreign delegations to begin a series of press conferences in connection with this portentous anniversary--the 60th anniversary of the USSR's formation. The Soviet Union's formation was a great and unprecedented event in human history. For the first time on earth a united multinational state of working people was formed, and this glorious anniversary is thus celebrated not only by Soviet people but also by all of the world's progressive and peace-loving peoples. We join with them in extending our warm and heartfelt congratulations on the jubilee.

Babrak Karmal went on to point out that Afghanistan has now reached a very special time. It will soon be 5 years since the national-democratic, anti-feudal and anti-imperialist revolution. The consolidation of the revolutionary process is now under way, and significant changes are taking place in every sphere of the Afghan people's life, including changes in the economic, social, political, cultural and other spheres.

The revolution is advancing despite the subversive activities of imperialism, especially the United States. The country is increasing the rate of development, and one of its key tasks is to complete the land and water reform currently under way. The peasants are being issued with documents concerning the right to work the land, the cooperative movement is expanding and machine and tractor stations are being established. The farmers are receiving from the state diverse aid in the form of agricultural implements, seed stocks, fertilizers and cash credits.

For the first time in our history genuine democracy reigns in Afghanistan--a vivid manifestation of which is the formation of social organizations. Trade unions, democratic organizations of youth and women, unions of creative workers and an economic alliance of private businessmen are operative in the country, and Islamic and tribal councils have been set up.

They all are united in a national fatherland front, in whose work more than half-a-million people take an active part. Serving the people and the revolutionary motherland is the PDPA, the number of whose members has more than quadrupled in the last few years.

Babarak Karmal emphasized that Afghanistan is a multinational state which is home to a score of different ethnic groups and nationalities. Formerly, when the regime of exploitation dominated the country, the oppressors tried to sow dissension among the population and pursued a policy of discrimination. The new power has ensured the equality and brotherhood of the peoples, and the national minorities now have equal rights and equal representation in the state apparatus and the social organizations.

The enemies of the April revolution are waging an undeclared war against the young Afghan republic. With the backing of U.S. imperialism the forces of reaction created armed gangs on the territory of Pakistan. When the destiny of the independent state and the revolution was threatened, the Soviet Union came to our assistance in response to a request from the Afghan Government and in conformity with the Soviet-Afghan treaty and the UN charter. As they rebuff the aggression, the Afghan people are confidently building a new life under the PDPA's leadership and with the support and assistance of the Soviet Union and the other socialist countries.

In following our peace-loving course which reflects the will of the people, he continued, we want to be friends with all countries, particularly our neighbors. The revolutionary government of the DRA has undertaken and will undertake constructive steps in this direction.

During the press conference Babrak Karmal replied to numerous questions from journalists.

Taking part in the press conference were V. N. Ignatenko and V. N. Sevruk, deputy chiefs of CPSU Central Committee sections.

BRIEFS

PONOMAREV, AUSTRIAN OFFICIAL MEET--Vienna, 13 Dec (TASS)--Alternate member of the Political Bureau of the CPSU Central Committee, secretary of the CPSU Central Committee Boris Ponomarev had a friendly meeting here with the chairman of the Communist Party of Austria Franz Muhri. A wide range of questions concerning the invigoration of struggle for peace and ending the arms race, for rallying the communist parties and all peace-loving forces were discussed in the course of the conversation that passed in a warm, heartfelt atmosphere. The mutual striving to deepen friendly ties between the CPSU and the CPA, to deepen friendship between the peoples of the two countries and to ensure an all-round development of relations between the USSR and the Austrian Republic was confirmed. Taking part in the conversation were member of the CPSU Central Committee V. Zagladin and member of the Secretariat of the CPA Central Committee J. Steiner. [Text] [LD132122 Moscow TASS in English 1529 GMT 13 Dec 82]

PONOMAREV, PAPANDREOU MEET--Athens, 16 Dec (TASS)--Boris Ponomarev, alternate member of the Political Bureau, secretary of the CPSU Central Committee, chairman of the Foreign Affairs Commission of the Soviet of Nationalities of the USSR Supreme Soviet, and Prime Minister of Greece Andreas Papandreou had a meeting here today. In the course of their meeting, held in a warm and constructive atmosphere, they discussed questions of further development of relations between the Soviet Union and Greece, as well as some issues of the international situation. Both sides expressed the desire for broader actions against the arms race and enhanced threat of war, in favour of peace and consolidation of detente in Europe and all over the world. ADDRESSES GIVEN AT CREATIVE UNIONS' PLENUM

Markov Address

PM141017 Moscow SOVETSKAYA KULTURA in Russian 7 Dec 82 pp 1-2

[Unattributed account of speech delivered at 3 December combined plenum of the boards of the creative unions and organizations of the USSR and RSFSR in Moscow by G. Markov, first secretary of the Board of the USSR Union of Writers, under the general heading: "Under the Banner of Lenin's Party, Under the Banner of the People's Friendship"]

[Text] We have been brought together in this historic auditorium, G. Markov said, by a great, festive holiday which profoundly moves every Soviet person: The USSR is 60 years old!

The 60 years of our multinational state's existence have been years of labor and struggle. Crushing on its way the sinister encroachment of the entente and fascism when they attempted to enslave our motherland, overcoming [economic] chaos and centuries-old economic backwardness, our socialist fatherland has sent the whole world an example of the indestructible friendship of brother peoples and has become the standard bearer of peace in the world, the bulwark of progressive mankind and a guarantee of the happiness of future generations. Today--on the eve of the holiday--our first thought is for Lenin's party which incorporated the nobility of communist ideals, the honor and conscience of the working class, the courage of the knights of the revolution and the experience and wisdom of the peoples. Assuming, back in the remote years of troubled czarist times, the mission of the working people's leader and the inspirer and organizer of the liberation struggle, the Communist Party confidently led our people through all the trials encountered on our path. The unity of the party and people and their cohesion under Lenin's banner were the main condition of all our victories.

The indestructible alliance of equal republics celebrating its 60th anniversary is graphic proof of the life-giving nature of Lenin's nationalities policy and the rock-hard unity of the party and people. For centuries the nationalities question remained an insolubly difficult one, causing profounding suffering among the people's masses. Only the Party of Communists proved strong enough to resolve it correctly, in the peoples' interests.

We are proud of the genuine flowering of every socialist nation and ethnic group belonging to the USSR. We are proud of the fundamental transformation of the economy and daily life of the former national backwaters of czarist Russia, and the resurrection of peoples and tribes formerly threatened with extinction.

Internationalism and new socialist relations of fraternity, mutual aid and respect have become the essence of our life, our daily routine, our air [as printed] We were taught this by the Communist Party, and it led us along this path, inspired, rallied and organized us, in whatever state of war or peace the country was. Today millions of Soviet people of the different nationalities, which have become a new historical community, thank their own dear Communist Party for its great labor and heroism.

In the past few days and weeks, G. Markov went on to say, the inspiring and organizing role of the Communist Party and its Leninist Central Committee have been revealed with new force. When the sad news spread round the country there issued from the Kremlin the businesslike, confident voice of the party Central Committee addressed to the Communists and all Soviet people. The speeches delivered by Comrade Yu. V. Andropov and K. U. Chernenko at the extraordinary CPSU Central Committee plenum outlined comprehensively the tasks of the party and people at the current moment. The plenum unanimously elected as general secretary of the CPSU Central Committee Yuriy Vladimirovich Andropov, a very close fellow fighter of L. I. Brezhnev, a politician of the Leninist type, an experienced organizer whose talent has been marked by the ability to strictly implement the party's policy.

Soviet people and with them all workers of literature and art welcomed with a warm feeling of approval the decisions of the extraordinary CPSU Central Committee plenum. On behalf of all the country's workers of literature and art allow me to wish Comrade Yuriy Vladimirovich Andropov successes in the eminent post of general secretary of the party Central Committee.

Allow me to assure the party, the Leninist Central Committee and the Politburo headed [vo glave s] by Yuriy Vladimirovich Andropov that the artistic intelligentsia will work still more actively on the creation of works about our heroic time, about our contemporary, the creator and builder of communism, and will make a worthy contribution to our motherland's culture.

Our people, G. Markov said, live by the concerns of fulfilling the decisions of the 26th CPSU Congress. Important significance here will be attached to the recent CPSU Central Committee November plenum and USSR Supreme Soviet session.

In his speech at the regular CPSU Central Committee November plenum Comrade Andropov, general secretary of the CPSU Central Committee, showed in strong and graphic terms the continuity of the party's domestic and foreign policy, and gave an in-depth analysis of the state of the Soviet economy and examined ways and means of overcoming the difficulties and shortcomings existing in the national economy.

As before Soviet writers and the entire artistic intelligentsia will not stand aloof from the concerns of the people and party. They will be present wherever Soviet people are forging victory by their creative labor, and will help by their creativity to form in people communist qualities and the readiness to defend the socialist motherland. They will support all that is progressive and best, and seek new artistic achievements, asserting the principles of socialist realism. The literature of the USSR is now published in 78 languages of the nations and ethnic groups. Our literature is based on life itself, on the living practice of communist building, the ideas of the party and its policy. This inexhaustible source of literature has been and will remain a powerful motive force of all artistic creation.

The unity of the fraternal literatures at the present stage of developed socialism is acquiring features and qualities which it did not and could not have in previous decades. It is a case of the intensive mutual enrichment and rapprochement of literatures which differ in artistic means and creative solutions but are united in their ideological thrust.

Today that is the meaning of international unity.

The party teaches us not to stop at what has been achieved but to march forward. And for that reason even on a holiday we must not forget the unresolved tasks, shortcomings and weaknesses which still exist in our country or the unused opportunities.

The prestige of Soviet literature and art abroad is now higher than ever. All writers will struggle tirelessly for the implementation of the CPSU's foreign policy course and the peace program elaborated by the party congresses. May the world continue to be astounded at the wealth, vividness, optimism and diversity of sound and color of our multinational culture. We will strengthen with new efforts the unity and fraternity of the literatures and no intrigues by our ideological adversities and spiteful critics will stop us or reduce our determination to be--in everything, always and everywhere--with the Communist Party and to struggle by its side for the triumph of peace and communism, G. Markov said in conclusion.

'PRAVDA' Editor's Address

PM141015 Moscow SOVETSKAYA KULTURA in Russian 7 Dec 82 p 2

[Unattributed account of speech delivered by V. Afanasyev, PRAVDA chief editor and chairman of the Board of the USSR Union of Journalists at the 3 December combined plenum of the boards of the creative unions and organizations of the USSR and RSFSR in Moscow under the general heading "Under the Banner of Lenin's Party, Under the Banner of Friendship of the Peoples"]

[Text] Soviet journalism is greeting the remarkable festival, the 60th anniversary of the USSR's formation, in the full flush its strength and creative potential. Throughout these 60 years our Leninist and party-minded journalism has been marching in step with the Communist Party, with its country and with the people; has given expression to their heroic struggle and titanic creative work through the mighty tongue of journalism [publitsistika]; has shared with them the joy of triumph and the sorrow of defeat; and, in the words of V. I. Lenin, that Soviet journalist, par excellence has been not only a propagandist and agitator but also the organizer of the masses.

We now publish over 8,000 newspapers in some 55 languages of the peoples of the USSR. Their combined print run exceeds 178 million copies. Over 5,000 journals and other periodicals are published with an annual print of over 300 million copies. On average, each family takes more than 4 periodicals.

The Soviet Union's publishing houses publish 83,000 books and pamphlets annually with a print run of 1.9 billion copies. During the years of Soviet power books have been published in 89 languages of the peoples of the USSR.

A jubilee is a jubilee and by tradition one usually speaks of successes at jubilees. But during these jubilee days it is also necessary to speak of the problems and difficulties just as V. I. Lenin used to speak to us about them.

The main problem is that of improving the skill and quality of what journalists produce. How much monotony they still have. Facts and figures are necessary and conclusive things. But all too often we cannot see beyond them to the real and living people, their characters, thoughts and feelings, their amazing diversity and their inimitability, as it were, and although our people represent the united and great Soviet people whose formation is socialism's achievements, they are by no means all identical.

Of course, it is not easy for journalists alone to depict all of this multinational, multihued life of the Soviet peoples. It is here that we appeal for help to writers. Without doubt, the press has a good aktiv of writers. I do not want to name any names--there are quite a few but, it would seem, not enough.

Yet there was a time when Mikhail Sholokhov, Leonid Leonov, Konstantin Simonov, Aleksandr Tvardovskiy, Fedor Panferov, Anna Karavayeva, Aleksandr Fadeyev, Vanda Vasilevskaya and many other great figures of our literature deemed it an honor to write in PRAVDA. But what has gone wrong? Have some major writers not lost the taste for keen political writings?

I would very much like our prestigious literary figures to publish pungent, political and principled material in PRAVDA and other newspapers. I am calling on our men of letters to do so.

We fervently approve the decisions of the November plenum and the USSR Supreme Soviet session. It is our duty now to comprehensively help the party to fulfill the decisions of the 26th CPSU Congress and of subsequent Central Committee plenums and the targets for 1983. The paramount task is to propagandize the speech of Yu. V. Andropov, general secretary of the CPSU Central Committee, at the regular November CPSU Central Committee plenum and the materials of the plenum and the USSR Supreme Soviet session: not just to propagandize them but also to organize the masses to implement them and to comprehensively galvanize the working people's creative activity.

Joint Message

PM141649 Moscow PRAVDA in Russian 5 Dec 82 p 1

[Text] To the CPSU Central Committee

We, the participants in the joint plenum of the Boards of the USSR and RSFSR creative unions and organizations, representatives of all fraternal peoples of our country, people of different generations, Communists and nonparty people, address to the CPSU Central Committee words of heartfelt thanks for its enormous concern for the people's welfare and the development of socialist culture and for its constant attention toward figures of literature, art and journalism.

Our ceremonial plenum was held on the eve of a glorious date--the 60th anniversary of the formation of the USSR. Like all Soviet people, the country's artistic intelligentsia experiences feelings of patriotic pride in the achievements of our multinational fatherland marching in the vanguard of social progress and epitomizing the world's future.

The 26th CPSU Congress rated highly the contribution made by literature, art and journalism to Soviet people's spiritual life. We are profoundly grateful for the inspiring support for our creative efforts and we take to heart the party's mandate: to live by the people's interests, to share our joy and sorrow with them, to assert the truth of life and our humane ideals, and to be active participants in communist building.

We will always reverently preserve and develop the great traditions of the founders of socialist culture who charged us to new unswervingly to positions of party-mindedness and affinity with the people and to listen intently to the music of revolution. This powerful music is being played for us today at the Siberian construction sites, in the Atommash shops, at the Baykonur launchpads, in the cities and villages of all the union republics of our great motherland. We hear it in the daily affairs of the Soviet man: the main hero of our books, movies, shows, symphonies, songs, paintings, sketches and articles.

Through the fault of imperialism, the cold winds of the threat of war are arising over the planet again. We reaffirm our resolute support for the peace initiatives of our dear Communist Party and the Soviet state. We believe in the triumph of reason and we consider the struggle for a peaceful future for our motherland and all mankind to be the overriding purpose of all our activity.

In the days of grief when the country was seeing Leonid Ilich Brezhnev off on his last journey, the cohesion of the Soviet creative intelligentsia around the party and its Leninist Central Committee was manifested with particular force.

We warmly welcome the decisions of the extraordinary CPSU Central Committee plenum which confirmed the continuity of the course of the 23d through 26th party congresses and the election of Comrade Yuriy Vladimirovich Andropov, a loyal Leninist and very close comrade in arms of L. I. Brezhnev, to the post of general secretary of the CPSU Central Committee, we wholly and fully approve the decisions of the CPSU Central Committee November (1982) plenum and support the premises and conclusions contained in Comrade Yu. V. Andropov's speech.

The country's creative intelligentsia assures the CPSU Central Committee that the masters of culture will always be with the party and that we will not share our efforts in the struggle for the nationwide cause of communist creation and will devote our talent to the creation of works worthy of our era and the imposing tasks which the Soviet people are resolving today.

Adopted at the joint plenum of the Boards of the USSR and RSFSR creative unions and organizations.

KIRGHIZ PREMIER URGES MORE PROCESSING ENTERPRISES

PM171127 Frunze SOVETSKAYA KIRGIZIYA in Russian 26 Nov 82 p 2

[Unattributed report on speech delivered at 24 November morning session of the USSR Supreme Soviet of the Union by deputy A. D. Duysheyev (Narynskiy Electoral Okrug, Kirghiz SSR), chairman of the Kirghiz SSR Council of Ministers]

[Excerpt] To fulfill the targets of the food program we must primarily strengthen the fodder base of livestock raising and increase the production of grain, vegetables and fruits. Under our republic's conditions it is possible to resolve this problem mainly by expanding irrigated lands. We raise about 90 percent of arable output and virtually all fodder crops on irrigated areas.

The 5-year plan for the development of the USSR's national economy envisages opening up 75,000 hectares of new irrigated land in our republic, including 15,000 hectares in 1983. However, in its draft plan for next year the USSR Ministry of Land Reclamation and Water Resources plans to open up only 12,500 hectares. In this connection R12 million less in capital investments than in the 5-year plan targets are being earmarked. We ask the USSR Ministry of Land Reclamation and Water Resources to find possibilities for opening up the full volume of irrigated land.

As is well known, comrades, the USSR food program sets the task of satisfying the Soviet people's needs for various foodstuffs, including high-quality vegetables, fruits and berries. Our republic has considerable potential for their production. At the same time we cannot process a large amount of the output procured because of the lack of the necessary production capacities. South Kirghizia is rich in nut and fruit forests, orchards and vineyards. But the capacities of the canneries here ensure the processing of only 7 percent of the fruit, berries and grapes procured. There is a similar situation in other parts of the republic. For the same reason little use is made of the crops of wild fruit and berries which grow in considerable quantities in our republic. Unfortunately, in the 11th 5-Year Plan it is planned to increase capacities for the production of canned fruit and vegetables by an extremely small amount, which will not insure the timely processing of berries.

I see a major issue here for the USSR Gosplan, the USSR Ministry of Agriculture and USSR Ministry of Fruit and Vegetable Farming both on the plane of the retooling of existing enterprises with highly productive equipment and on the plane of constructing new enterprises in the republic for processing the very valuable food raw material.

Comrades: In connection with the further development of industry's energy-intensive capacities and the growth in the consumption of electricity in agricultural production, there is an extreme need to strengthen the republic's fuel and energy base. Even with an adequate raw material base and manpower resources, the coal industry in Kirghizia has still not been properly developed. Existing capacities do not meet the needs of the national economy. At the same time, for many years now the union organs have been working on the questions of creating a fuel and energy complex in the republic on the basis of the Kavak basin coal stocks of which are estimated at over 3 billion tons. It would be necessary to accelerate the development of the Kavak field and to ensure the elaboration of measures to build up the capacities of existing coal mines and build new ones.

The Kirghiz SSR has rich hydraulic resources which must be used more fully in the interests of developing the country's national economy. On the river Naryn and its tributaries alone over 20 hydraulic power stations could be installed generating over 35 billion kilowatt-hours of electricity a year. Right now four Ges' with a total capacity of over 2 million kilowatts have been constructed and are operating here. The construction of the Tash-Kumyr Ges (0.45 million kilowatts) is underway. Next will be the Shamaldy-Say Ges and two Kambartinskaya Ges'.

The development of the very rich resources of the Syry-Dzhaz River also opens up great prospects in ensuring the comprehensive development of the national economy and resolving the food program. The use of part of its flow makes it possible to irrigate an additional area of over 200,000 hectares of fertile land in the Issyk-Kul and Chu Valley and to increase considerably the production of meat, milk, vegetables, fruit and other agricultural produce and insure the stabilization of the shrinking Issyk-Kul Lake, which is an all-union health resort.

It is planned to construct four Ges' with a total capacity of 1.7 million kilowatts on the Syry-Dzhaz River. This will make it possible to create a reliable energy base for the large-scale tin ore enterprise under construction. In the interests of the country's national economic complex it is essential to accelerate the construction of Ges' on the Naryn River and the elaboration and approval of a scheme for the comprehensive use of the Syry-Dzhaz River.

One more question. The constant increase in capital investments in the republic's national economy obliges us to display exceptionally great concern for the need to make effective use of them. In this connection special significance attaches to questions connected with deliveries of equipment and construction materials. It must be frankly said that serious shortcomings are continuing to occur in material and technical supplies. For this reason the timely commissioning of many projects nearing completion is being disrupted. Matters are particularly bad with regard to deliveries of timber materials and rolled ferrous metals. In the first 10 months of this year the republic went short of 124,000 cubic meters of construction timber and 31,000 tons of rolled ferrous metals. If this quantity of metal was delivered it would be possible to assimilate over R125 million in capital investments, and that is a substantial sum for our republic.

The supply of petroleum products is being carried out extremely unsatisfactorily. This year there was a delivery shortfall of tens of thousands of tons of fuel and lubricants and petroleum bitumen. All this has created great difficulties in bringing in the harvest which has been raised and procuring agricultural output, particularly fodder. It is essential to increase the responsibility of the suppliers and all levels of the ministries and departments involved with the sale of physical resources for the unconditional observance of state discipline and the fulfillment of contract commitments.

ESTONIAN KOMSOMOL PLENUM HELD

Tallinn SOVESTKAYA ESTONIYA in Russian 2 Nov 82 p 1

[ETA [Estonian News Agency] item: "Plenum of the Central Committee of the Estonian Komsomol"]

[Text] On 1 November the 3rd Plenum of the Central Committee of the Estonian Komsomol was held in Tallinn. A report on the subject "The Work of the Komsomol Organizations in Educating Young People in the Spirit of Soviet Patriotism and Proletarian Internationalism and the Tasks for the Further Improvement of the Class Tempering of Young Men and Women" was given by Candidate Member of the Bureau of the Central Committee of the Communist Party of Estonia (CPE), First Secretary of the Central Committee of the Estonian Komsomol D. Visnapuu.

Those who took part in the discussion after the report included Secretary of the Tallinn City Committee of the Komsomol, Ya. Tanvel'; senior agronomist at the Kolkhoz imeni Ed. Vil'de, Rakvereskiy Rayon, G. Madis; First Secretary of the Kokhtla-Yarve City Committee of the Komsomol, G. Kalinina; senior salesman at the Tallinn House of Trade, delegate to the 19th Komsomol Congress, L. Kyuyts; TPI [Tallinn Polytechnical Institute] student T. Radik; and others. It was noted at the plenum that the republic's Komsomol organization, proceeding from the decisions of the 26th CPSU Congress, the 19th All-Union Komsomol Congress, and the 19th Congress of the Estonian Komsomol, is carrying out purposeful work to educate the young people.

In the decree that was adopted, the Komsomol's city and rayon committees and the primary organizations were made aware of the need for the more creative conducting of the patriotic and international education, for the more thorough revealing of the principles of the Leninist national policy of the CPSU, and the need to improve propaganda and mass-cultural work and direct all the efforts to the proper greeting of the 60th anniversary of the formation of the USSR.

An informational report on the activities of the Bureau and the Secretariat of the Central Committee of the Estonian Komsomol during the period after the 19th Congress of the republic's Komsomol and the implementation of the critical comments and recommendations expressed by the delegates to the congress was given by Second Secretary of the Central Committee of the Estonian Komsomol, L. Savvin.

Second Secretary of the CPE Central Committee A. Kudryavtsev took part in the work of the plenum.

MEASURES OUTLINED TO INTERNATIONALIZE ESTONIAN YOUTH

Tallinn MOLODEZH' ESTONII in Russian 4 Nov 82 p 2

[Report by First Secretary of the Central Committee of the Estonian Komsomol, Donal'd Visnapuu, at the 3rd Plenum of the Central Committee of the Estonian Komsomol: "The Work of the Komsomol Organizations in Educating Young People in the Spirit of Soviet Patriotism and Proletarian Internationalism and the Tasks for the Further Improvement of the Class Tempering of Young Men and Women"]

[Text] The multinational Komsomol organization in our republic, and all the young men and women of Estonia are preparing to meet the approaching 60th anniversary of the USSR.

For 60 years the USSR has been the brilliant confirmation of the justness of the Leninist national policy of the CPSU. It is witness to the fact that the path that was opened up 65 years ago by the Great October Socialist Revolution is the true path.

The celebration of our great Motherland is a holiday of unity, brotherhood, and friendship of nations.

The development of the national economy, public health, and culture, and the raising of the standard of living of the Estonian nation convincingly prove that such gigantic successes during such brief historical periods of time could have been achieved only in the fraternal family of Soviet nations. The Estonian SSR has become part of the single national-economic mechanism of the USSR.

Estonia has close economic ties with all the republics, and primarily with the RSFSR, the Ukrainian SSR, and the Latvian SSR. The fraternal union republics send Estonia more than 89 percent of its agricultural machinery and tractors, 87 percent of the metal-cutting and woodworking machine tools, and a large amount of other industrial equipment.

In addition to the increasingly stronger economic and cultural ties and the reciprocal enrichment of national cultures, there has been formed a new type of Soviet man, in whom one sees imbued such qualities as internationalism and patriotism.

The pages of the history of the Leninist Komsomol of Estonia tell us about the close international ties that Estonian youth had at the most varied stages of the revolutionary struggle and creative labor. In the struggle for the triumph of the bright ideals of the working nation, Estonian youth always felt the fraternal support of the young people in the other republics. By way of an example, one can cite the following fact. Ties of sponsorship between the Estonian Komsomol and the Pskov Oblast Komsomol organization were made as long ago as 1926.

The ideas of Soviet patriotism and proletarian internationalism find their expression in all areas of the communist education of youth -- in the family, in the educational institution, in the labor collective, and in the organizing of recreation. This can be served by all forms of ideological work that the Komsomol is carrying out.

The Central Committee of the Estonian Komsomol has always devoted constant attention to questions of patriotic and international education. A new impetus for this work was provided by the preparation for the celebration of the forthcoming 60th anniversary of the USSR. A new impetus was also provided by the decrees of the CPE Central Committee which are aimed at improving the educational work among the youth.

In 1982 alone, questions pertaining to international and patriotic education were considered more than 20 times at sessions of the bureau and secretariat of the Central Committee of the Estonian Komsomol.

In the resolution of the bureau of the Central Committee of the Estonian Komsomol concerning the state of the international education of the youth in our republic, which resolution was adopted in January 1982, there was a complete analysis of educational work in this area and steps were set down for its further improvement. The Central Committee of the Estonian Komsomol and the city and rayon Komsomol committees worked out special work plans for preparing for the worthy meeting of the 60th anniversary of the USSR. Sessions of the bureaus and plenums of the rayon and city committees of the Estonian Komsomol considered questions concerning the operation of the primary Komsomol organizations and concerning the experience in international and patriotic education. A number of decrees that were aimed at the further improvement of the work were adopted.

Rather good work experience has been accumulated in the Oktyabr'skiy Rayon Komsomol Committee, in Tallinn, and in Pyarnuskiy and Kokhtla-Yarveskiy Rayons. Questions of international education here are under constant supervision. But at the same time certain city and rayon committees of the Komsomol devoted to the analysis and direction of the patriotic and international education of the upcoming generation an unjustifiably small amount of attention. For example, in the Tartu and Pyarnu City organizations and the Paydeskiy Rayon organization, these questions were not considered even once, either at the bureaus or at plenums. There are also shortcomings in the work of the Leninskiy Rayon Committee in the city of Tallinn and the Tartuskiy Rayon Komsomol organization. In those committees, decisions of a directive nature were adopted but the situation has not yet reached the point of monitoring their fulfillment.

An important role in patriotic and international education is played by the ties with people of the same age in other fraternal republics. The city and rayon committees of the Estonian Komsomol have friendly ties with the city and rayon committees of the Komsomol in six of the union republics. The closest contacts have been established with Latvia -- with 15 city and rayon Komsomol committees. One can cite as an example the cooperation between the Valgaskiy and Valkskiy Rayon Komsomol organizations. Many years of contacts are being enriched with newer and newer forms of work. Sports meets and rallies have been added to the labor rivalry. Joint plenums of rayon committees are held, with common work plans being adopted there.

The members of the Estonian Komsomol have established ties with 11 city and rayon Komsomol organizations in the RSFSR. But, unfortunately, these ties, one might say, are still modest and do not reflect that level of economic cooperation that was mentioned at the beginning of the report. By way of an example of prolonged cooperation one can cite the ties which were established between the Kokhtla-Yarveskiy Rayon organization and the Volosovskiy Rayon organization, Leningrad Oblast. Since 1966, meetings and the exchange of work experience have been conducted, there has been an expansion of the competition among the young rural workers, the results of that competition have been summed up, and friendship days are held regularly.

Experience shows us that distance is no obstacle to the establishment of friendly contacts. The Komsomol members of Rakvereskiy Rayon compete successfully with their counterparts in Tskhakayskiy Rayon, Georgian SSR. A delegation of the young people from the rayon took part in ceremonies devoted to the 60th anniversary of the Georgian SSR.

In the report at the 19th All-Union Komsomol Congress it was stated that the CPSU Central Committee's decree, entitled "The 60th Anniversary of the Formation of the USSR," obliges the Komsomol organizations to extend even more broadly the work involved in the patriotic and international education of the youth. The Komsomol committees should demonstrate, in an easily understood manner, the role of the working class and the Communist Party in the international consolidation of the workers, in the implementation of the principles of the Leninist national policy, and should educate the young men and women in the spirit of patriotism. They should demonstrate that the achievements of all the labor collectives of the krays, republics, and oblasts are the result of the efforts of all the nations of the Country of Soviets. Internationalism today is, first of all, honest and selfless labor for the common good.

This kind of labor consolidates the multinational collectives. Working side by side, the representatives of various nationalities are imbued with the awareness of the importance of the common job of learning how best to understand one another and how to subordinate personal interests to the social ones.

In the advanced Komsomol and youth collective at the Krengol'mskaya Manufaktura Combine (brigade leader Yu. Koort) the workers include representatives of several nationalities. The brigade fulfilled the production assignments for the first two years of the five-year plan by the opening of the 19th All-Union Komsomol Congress. Assuming the watch in honor of the 60th anniversary of the USSR, that KMK [Komsomol and youth collective] pledged that it would produce 24,000 meters of fabric in excess of plan.

Another multinational collective is the KMK of the Progress line at the Garment Association imeni V. Klementi (Brigade leader El'gi Prooza). The brigade pledged that it would assume sponsorship of ten new persons, would fulfill the annual assignment by 101 percent, and would work with an average rating of 4.55 points for the quality of output.

There is a large number of similar examples. But at the same time it must be noted that the amount of reserves for improving the international education in these collectives is still sufficient. More attention should be devoted to organizing the recreational activities of the representatives of various nationalities. We do not carry out enough measures that would acquaint the members of the labor collectives with the union republics whose representatives are working at our enterprises. Little attention is paid to the culture of various nations in amateur presentations. Amateur-performance collectives form, as a rule, along a narrowly national line, and mixed collectives are very rare.

Internationalism manifests itself and develops in its full force in the everyday situation, in our daily labor, in the fact that the representatives of various nations are working alongside one another. Unfortunately, we still have to encounter a situation in which "national" enterprises and collectives are formed, and attract young men and women of chiefly one nationality. One can scarcely think that the continuation of this practice will contribute to the achievement of the goal of international education. One even sees the springing up of "national" types of sport, associations for various interests, groups, and clubs. It is understandable that the situation cannot be improved simply by the use of administrative measures. But that means that other methods must be more effective and must exert their effect primarily through the improvement of educational work.

In addition to the creation of multinational collectives, the Komsomol organizations must also keep in the center of their attention the establishment and reinforcement of the ties between young people and related enterprises in the other union republics. It is important, during meetings, for the young people not only to become acquainted with the working and living conditions of their comrades, but also with the experience in the resolution of various production questions and economic problems. It is necessary for these meetings to contribute to the exchange and dissemination of advanced experience and to the improvement of the organization of labor and the socialist competition.

The experience of the joint search for the resolution of technical problems has been accumulated by the young people at two shale-producing enterprises -- Estonslanets and Leningradslanets.

A measure that has become traditional is the holding of competitions of professional skills among the young salespeople of Tallinn, Riga, and Vilnius. Firm ties of friendship contribute to the resolution of many problems of the trade services provided to the public. For example, the experience of the Rigans helped the Tallinners when introducing containers in the trade system.

Socialist competition has always played an important role in improving the patriotic and international education of the youth. The labor rivalry among young people under the motto "Let's give 60 shock weeks to the 60th anniversary of the formation of the USSR!" is yet another confirmation of this.

As was recently noted in the decree of the bureau of the Central Committee of the Estonian Komsomol, an analysis of the rate of competition in the Komsomol organizations of the city of Tallinn indicated that most of the young men and women coped successfully with the fulfillment of their socialist pledges. But at the same time, far from complete use was made of all the reserves contained in socialist competition as a means of international and patriotic education. The graphic agitation devoted to a particular need of shock labor in honor of the 60th anniversary of the USSR has been superficial. All the noted shortcomings must be eliminated during the time remaining until the beginning of the ceremonies in December.

An object of pride for the Estonian Komsomol is the participation of our young people at all-union shock construction sites. Our emissaries worked in the drilling of new mines in Donbass in the mid-1950's. Estonian young men and women filled work assignments in 1955 at the Pravda Sovkhoz in Kazakhstan. In 1955-1965 7000 emissaries from our republic's Komsomol worked the virgin lands.

The Komsomol committees assumed sponsorship of shock Komsomol detachments. For example, the Tartu City Committee of the Estonian Komsomol rendered a large amount of assistance to our detachment in Komsomolsk-na-Amure in providing various kinds of equipment for the organizing of recreational activities and sports, and various materials for graphic agitation.

Our Komsomolets Estonii brigade worked well in the construction of the BAM [Baykal-Amur Mainline]. It is made up of 18 Estonians and 26 Russians, plus Azerbaijanis, Lithuanians, Chuvash, and representatives of other nationalities. Fifty-one fighters in the detachment have the rank of communist-labor shock worker; 56 have been awarded the medal "In Recognition of the Construction of the BAM"; and six have been elected people's deputies, and thus take part in the resolution of questions involving the administration and development of Buryat ASSR.

When forming and sending detachments to our country's very important construction sites, the republic's Komsomol assumes a large responsibility. It is necessary to devote a greater amount of attention than was previously the case to the international makeup of the detachments being manned. It is necessary to carry out more active explanatory and propaganda work among the young people of Estonian nationality.

Not everything has been done in the area of organizing the cultural sponsorship of the construction sites. It is necessary to send performing groups there more often, and not just popular ones, but also those with a high level of professional performance. It is necessary for us also to show more concern for the material-technical support of the construction projects with articles and products for cultural, sport, and recreational activities and with literature.

The international ties among our young scientists are varied. Science as a social phenomenon is, by its nature, truly international. But the sense of internationalism is formed not by the multinational composition of the authors in a particular collection, but, rather, by the real cooperation in the resolution of scientific problems at all stages of research. The forms of this cooperation must be established at the very earliest stages of scientific work -- in students' scientific societies, in postgraduate work. It is obvious that insufficient use has also been made of such channels for the establishment of international ties as the sending of young scientists to other union republics for training, or the exchange of young scientists, instructors, and probationers. Another form that would appear to be a promising one is the creation of temporary creative collectives on the basis of the research institutions of various union republics. A council of young specialists and scientists should think a bit about this.

One of the best time-tested methods of educating a sense of patriotism in young Leninists is Young Pioneer work. The efficient use both of Young Pioneer symbols, and of all the Young Pioneer rituals, and the knowledge of their importance and history, are important factors.

Work that deserves a large amount of recognition is the work performed by our Young Pioneers in immortalizing the memory of those who rose to defend their country during the war years and who lifted it up from the ruins. Red sleuths provide supplemental materials for the displays and rooms of combat and labor glory. There has been a continuing struggle to assign to the detachments and Young Pioneer public-activity groups the names of heroes and to study the biographies of heroes. At the present time our republic has 306 Young Pioneer public-activity groups and 902 detachments, all of which have been assigned names of heroes. These groups and detachments bear the names of the best sons and daughters of the Estonian, Russian, Ukrainian, Latvian, and Belorussian nations.

The assigning of the name of a hero and the subsequent study of his biography are an excellent means for educating in the schoolchildren a sense of Soviet patriotism and internationalism. But we have a large number of heroes of various nationalities whose places of death have not yet been found. We still have nameless graves. And people have departed from us forever, whose deeds and thoughts have not been immortalized. At the same time we still have dozens of groups and detachments that have been unable to choose for themselves the direction that their research work should take. That work leaves much to be desired in Kharyuskiy, Vil'yandiskiy, Kingiseppskiy, Paydeskiy, and certain other rayons in the republic. The time when one should devote special attention to this is now, when the young people are engaged in preparing a Chronicle of the Great Patriotic War. That will be their contribution to the meritorious meeting of the 40th anniversary of Victory.

The activity of Komsomol organizations in schools is carried out on various levels. That activity is aimed at educating in the schoolchildren feelings of patriotism and internationalism. On the threshold of the 60th anniversary of the USSR, friendship festivals are becoming increasingly widespread. They are held regularly in schools with various languages of instruction, for example, in Kunda Secondary Schools No. 1 and 2. Children from Moscow, Leningrad, and Moldavia take part in the festivals. The contacts among these schools are not broken during the summer -- the students work in the same detachment at the Vinnitsa Base-Demonstration Sovkhoz-Technicum.

The Komsomol committee at Schools No. 52 and 32 in Tallinn regularly conduct joint sessions of Komsomol committee and organize joint measures. Good ties have been established between Schools No. 4 and 8 in Tartu. But one cannot say that good contacts have been established everywhere among neighboring schools. Frequently these contacts are of an episodic nature and are expressed in the conducting of one of two measures per year. In order for the contacts to be two-sided, it is necessary for more concern for this to be shown primarily by the young teachers -- the Komsomol members. We think that the republic-level Council of Young Teachers that was recently created under the Central Committee of the Estonian Komsomol will devote attention to this sector of the work. One of the most memorable events for our schoolchildren has been the children's Song and Dance Holiday that was held this year. That holiday actually, like the rest of our art, was profoundly national in content and international. Possibly it is not completely proper to compare it with other measures being carried out by young people -- the scope varies too much -- but I would like to emphasize that something that made it very attractive was its sense of the friendship of nations, a sense that imbued the entire program of the holiday, as well as its spirit of excitement and youth. It is precisely this excitement and the taking into account of the age peculiarities of the audience that are sometimes lacking in other Young Pioneer and Komsomol measures.

Purposeful work in providing the patriotic and international education of youth is being carried out by the Komsomol organizations at occupational-technical schools, secondary special educational institutions, and higher educational institutions in the republic. In most of the PTU [occupational-technical schools] and technical schools, the work is conducted in two languages, and the makeup of the students at our institutions of higher learning is also multinational. In addition to the traditional forms of work performed by the Komsomol committees, the principle of internationalism manifests itself here daily. The Komsomol committee at TGU [Tallinn State University] is working regularly in this direction. Holidays of national friendship are conducted regularly. At the same time it must be noted that, according to data provided by studies, 78.2 percent of the students in the Estonian student groups are satisfied with the organization of their recreational activities, but the students in the departments with the Russian language of instruction are less satisfied with the way in which their free time is organized (41.9 percent). The Komsomol committees at TGU and the other institutions of higher learning in the republic will have to do some thinking about how to arrange the work with a consideration of the desires of the students of all nationalities. The center of gravity of this work should be shifted to the organizations in the various schools at the institutions of higher learning, or the schoolyear organizations, and, if necessary, one should even reduce the scope and volume of the one-time major measures being carried out. Their preparation takes a large amount of effort, energy, and time, but this does not compensate for the shortcomings in the organization of the young people's training and recreational activities.

We have repeatedly and justifiably been informed of those opportunities for the conducting of educational work which are provided by the activities of the EDSh and ESSD [meanings unknown]. The principle of internationalism should be remembered when staffing the public-actions groups and detachments. Political-educational work must be conducted at all levels -- in the detachments, zones, regions, and the public-actions group as a whole. We are inclined to think that during recent time there has been a noticeable tendency toward an improvement in the educational work with students during the period of their summer labor. The attitude toward labor has also improved. The schoolchildren and students at secondary and higher institutions of learning, in addition to their immediate duties, took part, to the extent that they were capable of, in the laying in of fodders -- basically during nonwork time. But the makeup of the public-actions groups does not yet reflect the national makeup of the schoolchildren and the students at the republic's educational institutions. Nor can one call multinational the makeup of the administrators of the detachments and public-actions groups. The institutions of higher learning continue to involve in work in the ESSD not only the students at the technicums, but also the students in the institutes and the university.

The attention of the central headquarters and committees of the Komsomol must be directed at these and other shortcomings in the work of the ESSD and the EDSh. All this will help to resolve the critically important questions.

Representatives of more than a hundred nations and nationalities, that speak 130 languages, have been consolidated into an indissoluble union. The brilliant perspicacity of V. I. Lenin has been confirmed over the passing years. The Russian language has become the single means for international communication. Bilingualism has become a completely natural phenomenon. That is confirmed by data provided by studies in our republic. By 1973, 75 percent of the young Estonians living in Tallinn were fluent in Russian. But here too we have concealed reserves. From year to year the republic is allocated approximately 150 places in higher educational institutions in various cities throughout the country. But, as is indicated by information pertaining to recent years, we have not been using that capability. For example, during the past three years an average of 40-50 places have remained unfilled. Persons of Estonian nationality were represented as follows: in 1980, 29 persons; in 1981, 42; in 1982, 39 persons. Repeatedly our plenums have raised the question of enrolling graduates of schools with the Estonian language of instruction in higher military educational institutions. It would seem that here too one of the inhibiting factors is the poor mastery of Russian. It is one of the tasks of the Komsomol organizations to promote the mastery of a second language by the young people.

Fluency in two languages is necessary for everyone who lives in the territory of a national republic. However, one still encounters young people -- both Russians and those of another nationality -- who, although they live in Estonia, feel that there is no reason to learn to understand Estonian. Frequently one encounters such people, with no knowledge of Estonian, in trade and in the services sphere. Need one say that this position provides the justification for ridiculous stories concocted by our ideological opponents, or that it runs counter to the principles of Leninist national policy?

V. I. Lenin emphasized that one can understand and love only that which one knows well. Only a real patriot can become a true internationalist. Only a person who has a thorough knowledge of his own culture can raise the culture of another nation. Obviously, the republic's Komsomol organizations have done far from everything to acquaint the representatives of other nationalities with the culture of the Estonian nation, and, as of 1 January 1982, the number of such nationalities living in Estonia was more than 70 -- Russian, Belorussians, Ukrainians, Lithuanians, Poles, Moldavians, . . .

Proceeding from our republic's national structure, all the major youth measures of a republic scale are conducted in two languages. Measures that have become very popular are the Russian language Olympics that are conducted in the schools, the special evenings, and the quizzes. It is necessary to note the work performed by the youth editorial board of Estonian Radio, which organized radio lessons in the Russian and Estonian languages. In a special series of broadcasts, the listeners are acquainted with the languages and cultures of the nations inhabiting the USSR. Estonian Television, in addition to the language lessons, carries out, together with television journalists from Leningrad, Latvia, and Lithuania, the "Amber Key" broadcast series.

In the education of an internationalist-patriot, an inestimable role is played by the people's revolutionary traditions, by the glorious history of our Motherland. The exhibition "My Motherland Is the USSR" and the All-Union Walking Tour of Places of Revolutionary, Labor, and Combat Glory have been making their contribution to the education of patriotism. Every year 140,000 young men and women in our republic, including approximately 90,000 Komsomol members, walk along the paths on this tour.

Tourist work is well organized in Vyruskiy, Pylvaskiy, and Pyarnuskiy Rayons. The work is unsatisfactory in Tallin, Pyarnu, Silamyae, and Narva, and in Rakvereskiy and Valgaskiy Rayons. The people in the outlying areas do not have any idea at all of tourist activities. As a result, 11 cities and rayons were unable to send their delegations to the republic-level rally, entitled "Know Your Motherland."

As a result of the fact that soon the entire Soviet nation will be marking the 40th anniversary of Victory, all the Komsomol organizations have begun preparing a Chronicle of the Great Patriotic War. By 1985 it will be necessary to interrogate all participants in the war and to record their reminiscences. That work has been begun rather well by the Komsomol committees in Pyarnu, Vyru, and Tartu -- largely thanks to the close cooperation with veterans councils, military commissariats [Soviet induction centers], DOSAAF [All-Union Voluntary Society for Assistance to the Army, Air Force, and Navy of the USSR] organizations, and agencies of enlightenment.

This year the final phase of the "Orlenok" [Eaglet] military-sports game was conducted rather well. But the questions of the overall physical training of the young armymen continue to be unresolved. In strength exercises, 8.2 percent of the participants in the final competitions failed to cope with the GTO [Ready for Labor and Defense] norms. The young armymen from Valga and Pylva were completely unable to swim.

Sport, Komsomol, youth. These three words are very frequently used in the same context. During the past four years, the republic has trained approximately 600,000 GTO badgeholders. Of them, more than 160,000 are Komsomol members. But in a number of rayons -- Tartuskiy, Pyarnuskiy, Khar'yuskiy -- the level of training is low, and the Komsomol committees must organize active cooperation with sports organizations.

An important role in patriotic and international education is played by culture. The Komsomol Center Committee constantly sends the best young performing artists and amateur collectives to the country's shock-labor construction sites -- to BAM [Baykal-Amur Mailine], Siberia, and the Nonchernozem Zone of RSFSR.

Traditional festivals of political and patriotic songs have become an expression of proletarian internationalism and Soviet patriotism. At the present time 31 political-song ensembles are in operation in the republic. But the problem of the repertoire for the vocal and instrumental ensembles continues to be on the agenda. In 1981 a review of the VIA [meaning unknown] was held, and this year a review of dance orchestras. In the review of dance orchestras, more than 300 ensembles took part. An analysis of the repertoire indicated that the works of Estonian composers and those from other union republic constitute 58 percent; the socialist countries, 6 percent; and the capitalist countries, 36 percent. As one can see, the propagandizing of the light music of Soviet composers has been insufficient. In the creative work of these collectives there have been many instances when the content is sacrified to form. Even in the titles one encounters instances of servility to the West -- "Myuzik Seyf" [Music Safe], etc. Young people have a great interest in light music, and therefore the Komsomol organizations should put that interest at the service of education. There is nothing bad about the fact that various disco festivals are being held. But they must be organized together with the agencies of culture, and one must remember that every young-people's measure must contain within itself an educational charge, and must serve the cause of propagandizing our Soviet way of life and way of thinking.

One of the means of patriotic and international education is tourism. The Sputnik BMMT [Bureau for International Youth Tourism?] in 1981 provided services, by way of exchange, to 8700 young foreigners. This year, during the first six months, 6100 persons visited Estonia as part of youth-tourism groups. For the most part they were citizens of the capitalist and developing countries. The meetings and discussions with foreign guests are, for our young people, not only a good school of internationalism and patriotism, but also a school for the ideological struggle.

The young people of Estonia are participating actively in all international actions in the struggle for peace and the reduction of the arms race. Our young men and women participate in campaigns of solidarity with young people and the nations that are fighting against national oppression and for social development and progress. But experience points out that such measures are not being carried out at the proper organizational level in all the cities and rayons throughout the republic.

Soviet citizens derive their strength from the indissoluble friendship of the peoples of the USSR. That friendship is the source of all our successes and victories. And this fact is constantly disquieting to our opponents in the West, who attempt at all costs to undermine it, and to distort its essence and historical significance. For example, our bourgeois opponents claim that Soviet society is multinational, but not international, and that the development of the relations among the peoples in the USSR will inevitably lead to an intensification of separatist tendencies. Placing their bets on nationalistic prejudices, modern anticommunists attempt to force upon others the recipe for their own model of constructing communism under conditions of national exclusivity, isolation from the other socialist republics and countries, the other nations of the USSR, even under conditions of enmity with them; in other words, completely divorced from the principles of proletarian internationalism and class solidarity. They are continuing to put into motion the myth of the suppression of the socialist republics and the incompatibility of patriotism and internationalism.

Western ideologists refuse to recognize the dialectical unity of patriotism and internationalism, the interrelated nature of the national and international interests of our nations.

And it is all these pseudoscientific theories and doctrines of theirs that they attempt to force upon others through their mass-information media. Armed with microphones, the ideological saboteurs are placing their hopes upon young people. Therefore one of the most important tasks of the ideological and political education of youth is the formation of communist conviction, and a conscious unreceptiveness toward the subversive activities of bourgeois ideology. This requires the Komsomol committees to carry out a more thorough study of public opnion, the moods of young people, and their needs, and to take all this into consideration in their work. It requires them to educate young men and women in such a way that they can give a rebuff to any intrigues carried out by hostile propaganda centers.

It is not words that turn people into patriots and internationalists. Rather, it is concrete actions, active work, daily labor for the good of the Motherland, for the good of communist construction. The party has given the Komsomol the task of educating the active member of the new society. And the best response to this high trust will be our achievements in the job of constructing communism, our fulfillment of the party's intentions, since the result of educational work is expressed first of all in the resolution of practical tasks.

ADZHAR ASSR DEPUTY ADDRESSES USSR SUPREME SOVIET

PM161615 Tbilisi ZARYA VOSTOKA in Russian 26 Nov 82 pp 2-3

[Speech delivered by deputy V. R. Papunidze, first secretary of Adzhar Obkom and deputy for the Adzhar ASSR's Khelvachauri electoral district, at the 24 November morning session of the USSR Supreme Soviet of Nationalities]

[Excerpt] It is known that Georgia is a republic with little arable land, while there is 3 times less agricultural land per capita in Adzharia than in Georgia as a whole. The cultivated land is occupied mainly by perennial plantations and industrial crops, and we are left chiefly only with high mountain hayfields and pastures for the development of livestock raising, which constitute more than 60 percent of the whole structure of agricultural land and can be used for only 3 months a year. Moreover, the density of the livestock population in Adzharia is 3 times as high as in Georgia as a whole.

There is only one way out here: in addition to the principal sectors of agriculture it is necessary to develop mountain livestock raising in every possible way on the basis of strengthening the fodder base and through improving the productivity of natural hayfields and pastures. And here the matter rests upon the mechanization of agricultural work under mountain conditions, including on private subsidiary plots.

In this connection we would ask the Ministry of Tractor and Agricultural Machine Building and also the Ministry of Machine Building for Animal Husbandry and fodder production to expedite the manufacture of equipment for mountain regions.

Let us state frankly that it is not felt that the Kutaisi Small Tractor Plant takes a thrifty attitude to creating engine units and mounted implements for them. It has now been 7 years in the process of selecting and creating models of machines for permanent production. The plant is being constructed, but there is still no finished design for these machines. It has now become known that licenses have been purchased in Italy, but it turns out that we still do not have the necessary documentation compiled with regard to specific technological studies and the utilization of materials and subassemblies--documentation which the selfsame ministry headed by Comrade Yezhevskiy is entrusted with elaborating.

The opening up of mountain hayfields and pastures also requires additional fertilizers, as well as funds for irrigation and roadbuilding. It would be a good thing for the USSR Gosplan to investigate this matter in detail and take into account the fact that Georgian Republic has been allocated, if we proceed from average norms and take into account the production volume planned for 1983, 98,000 tons less mineral fertilizer (in active nutrient equivalent) than agreed.

And one more special feature: The land shortage, the low level of land availability, given identical sizes of personal plots both in the country as a whole and in our republic result in the fact that under our conditions the share of the population's personal plots in the total volume of agricultural land, particularly cultivated land, is large. It stands at 25 percent in Adzharia, but 3.3 percent in the country as a whole.

Account must also be taken of the fact that under Georgian conditions the population's personal plots are chiefly occupied by highly efficient commodity sectors, whose produce is sold to the state at firm state prices, as well as being used for people's own needs. Thus, our personal plots represent a significant factor in replenishing the country's food resources. Therefore, this form of farming must be managed skillfully and given the necessary help and all possible assistance.

I believe that the time has come to sell mineral fertilizers and other material means for personal plots on more favorable terms. Resolving all these questions positively means increasing the republic's contribution to realizing the country's food program.

Serious difficulties arise in the dispatch of citrus fruits and other perishable goods by rail. And, unfortunately, things are not improving. This is being felt particularly acutely now, in connection with the procurement, processing and dispatch of citrus fruits. It can hardly be considered a correct decision to reduce by almost one-third the time norm for loading cars without a corresponding change in the mechanization of this process. Very effective assistance is needed here on the part of the Ministry of Railways.

The Batumi oil refinery, which is more than 50 years old, occupies an important place in Adzharia's national economy. The physically worn-out and obsolete equipment does not ensure the stable working of the enterprise and creates pockets of intensive environmental pollution, particularly in the coastal resort zone. All the installations require immediate renewal. This is one aspect of the matter. Another aspect is the delivery of the raw materials for this plant and the distribution of its output among the consumers. It can hardly be called a thrifty approach when the Batumi plant's output is sent to very diverse corners of the country, while liquid fuel is imported into Georgia by crosshauls from other regions.

We ask the Ministry of Petroleum Industry and also the Ministry of Petroleum Refining and Petrochemical Industry to examine the question of ensuring that the plant's output goes only to satisfy the needs of Transcaucasia so that rail transport is not loaded down with unnecessary operations. Questions of providing the plant with raw materials also need to be resolved. This is not the first time they have been raised, but real measures still have not been taken.

Now to the question of energy supplies. An electricity shortage is to be observed in Georgia in the fall and winter period and will have increased significantly by 1990--which will naturally restrain the further development of the republic's national economy.

The plans for the period 1976-1980 provided for the construction of a central power station. Unfortunately, this question still has not been resolved concretely. The USSR Gosplan state expert commission has already examined a feasibility study for that project. We earnestly request union organs, the Gosplan and the Ministry of Power and Electrification to help us finally resolve this question.

At the same time, of course, the construction of the Khudoni Ges and other Ges's should be continued to deliver peak capacity to the North Caucasus along the 500-kilovolt power transmission line which is under construction from the Inguri Ges to the Stavropol Ges. Such a comprehensive solution to the question--constructing a central power station and continuing the construction of Ges's--will not only help to meet the electricity needs of the republic's national economy but will also make it possible to increase the export of electricity.

Housing and municipal construction is an acute problem for Georgia. Many families still live in basement premises. At the same time a substantial reduction in capital investments for these purposes is planned in the draft plan for 1983. The shared participation of union ministries in municipal construction is also being reduced. We urgently request the Gosplan at least to preserve the state capital investments for housing and municipal construction at this year's level.

SHEVARDNADZE REPORT TO GEORGIAN CP PLENUM

PM041431 Tbilisi ZARYA VOSTOKA in Russian 3 Dec 82 pp 1-4

["On the Tasks of the Republic's Party Organizations in Fulfilling the Decisions of the CPSU Central Committee November (1982) Plenum and the Economic and Social Development Plan for 1983; Report by Comrade E. A. Shevardnadze, candidate member of the CPSU Central Committee Politburo and first secretary of the Georgian Communist Party Central Committee, at the Georgian Communist Party Central Committee 11th Plenum on 2 December 1982"--ZARYA VOSTOKA headline; passages between slantlines published in boldface]

[Text] Comrades!

The Central Committee November (1982) Plenum, whose results we are to discuss, met at a very crucial moment for the party and for our whole country. Leonid Ilich Brezhnev, the major state and political leader who had headed the CPSU for almost 20 years, had died.

In the face of this grievous loss our party mobilized Soviet people, rallied them even more closely around itself and inspired them with will, energy and optimism. In its consistency and continuity it relied on the immutability of the Leninist course and on the unshakable faith of the communists and all the working people in its mighty collective intellect and in the wisdom of its collective leadership.

/All Soviet people unanimously approved the decision of the Central Committee extraordinary plenum on electing to the post of general secretary of the CPSU Central Committee Comrade Yuriy Vladimirovich Andropov,/ an extremely close comrade in arms of Leonid Ilich Brezhnev who has earned tremendous prestige in our party and all over the country by virtue of his profound conviction and principledness, Leninist partymindedness, outstanding organizational talent and lofty human qualities.

Continuity is an integral feature of lofty partymindedness which means above all the ability to /continue a task that has been begun,/ picking up all that is best. And the Central Committee November Plenum summed up the results of the latest economic year and defined the tasks for next year.

At the same time continuity means /the ability to continue a task while further developing and deepening it/ and ensuring the further improvement of all work. And the November plenum detailed the strategy and tactics of economic building.

Comrade Yu. V. Andropov delivered a vivid, meaningful speech at the plenum. It makes a thorough assessment of the situation in the country's economy and determines the optimum forms and methods of achieving the main strategic goal-- /implementing the decisions of the 26th CPSU Congress./

To this end it is planned to accelerate the pace of the development of the economy and to increase the absolute sizes of the growth in national income, industrial and agricultural output and retail trade turnover. It is planned to continue work to improve the national economy's efficiency--the intensive targets, it is stressed, must be fulfilled with a comparatively smaller increase in material expenditure and manpower resources. Thus the discussion of the drafts of the USSR state plan and state budget for the upcoming year reaffirmed the tremendous topicality of the thesis put forward at the 26th congress /that the economy must be economical./

The party's line toward improving the world people's prosperity is being sustained.

As always, the needs of the country's defense are sufficiently taken into account.

The Central Committee largely approved the drafts of the plan and budget, which have acquired the force of state law after being approved by the USSR Supreme Soviet session.

The tasks of the Georgian Communist Party that we have met to discuss at our routine plenum today also stem from the decisions of the CPSU Central Committee November (1982) Plenum and the USSR Supreme Soviet session. The nature of these tasks and the main directions of our work are clearly defined by the 26th Party Congress and the 26th Georgian Communist Party Congress. The republic's communists and working people are fully determined to resolve all these tasks still more intensively and more persistently and purposefully, to combat shortcomings more resolutely and more boldly and to implement our party's wise Leninist course.

In our view, the principle of the continuity of party leadership also has an impact in this. We believe that /it is in precisely this way that this principle must be displayed in the activity, deeds and achievements of our party organization./

I.

Of course, we define the new tasks on the basis of the level the republic's national economy has already attained in the 11th 5-Year Plan. To a certain extent all this is also taken into account in the drafts of the Georgian SSR's plan and budget for 1983 that comrades S. A. Chkheidze and D. N. Dvalishvili have submitted to the plenum.

The base from which we are starting is now pretty solid. It is, above all, of course, our main asset--/the wealth of experience of economic and cultural building that the Georgian Communist Party has accumulated in the last few years/ and that was rated highly in the CPSU Central Committee resolution "On the organizational and political work of the Georgian SSR party organizations in preparing for the 60th anniversary of the formation of the USSR."

This opinion of the Central Committee was vividly reaffirmed a few days ago when our glorious rural working people celebrated their latest success, having fulfilled the plans for the sale of grain and high-grade leaf tea to the state ahead of schedule in extremely complex weather conditions. The republic, as you know, received a warm, cordial greetings message from our party's Central Committee, and this was, as it were, a continuation of the good, fine tradition that has taken shape in our republic.

This year has also been memorable for Tbilisi's working class and working people. We regard the Order of Lenin on the capital's banner as a recognition of the services of the republic's entire party organization. The election of Comrade T. N. Menteshashvili as secretary of the USSR Supreme Soviet Presidium was also a display of tremendous trust in the city and the republic, in our view. We cordially congratulate him and we have no doubt that he will cope in exemplary fashion with the honorable duties entrusted to him.

In point of fact there have been many such instances and events in our life recently, which makes it possible to assert with complete justification: /Soviet Georgia's prestige is rising steadily and the republic's communists and working people are becoming capable of the most complex and responsible tasks of communist building!/

Another component part of the base from which we are starting is the /pretty impressive economic and material and technical potential that has been accumulated through the hard work of the republic's working class, kolkhoz peasantry and intelligentsia./ The current jubilee year has substantially swelled that potential. There has been a further increase in the pace of economic and social development and an improvement in production efficiency and work quality.

The increase in industrial production over the first 10 months was 5.5 percent as against an annual target of 4.8 percent and socialist pledges of 5 percent. Commodity output worth R217 million has been produced over and above the plan.

The practice of determining additional targets for the production of commodity output has had a positive effect in ensuring high growth rates in industrial production. This has made it possible to reveal considerable reserves in many ministries departments and associations.

Increasing attention is being paid to introducing the achievements of science and technology into production. Over 350 measures to assimilate new types of industrial output, introduce progressive technology and mechanize and automate production processes have been implemented since the start of the year.

Labor productivity has increased 3.9 percent, which is more than the socialist pledges that had been adopted.

Agricultural working people are multiplying their contribution to the food program. This is especially noteworthy in that this year has been extremely unfavorable in its objective conditions. Nevertheless, the new record of the tea growers, who handed 537,000 tons of high-grade leaf tea over to the state, has resounded all over the country. Our grain growers have sold over 150,000 tons of grain to the state. Quite good results have also been achieved in other sectors of agricultural production.

There are shifts in capital construction. The commissioning of fixed capital has increased 10 percent. Commissioning's lag behind the assimilation of capital investment ceilings has been decreasing systematically in the last few years.

Construction workers have worked quite well in laying the railroad linking Marabda and Akhalkalaki, where preparations are underway for the handover of the section of track up to Tetri-tskaro. The Telavi-omalo radio relay line has been commissioned ahead of schedule. Thus a substantial turning point in the socioeconomic formation of a number of regions and in the rebirth of what were once neglected mountain areas has been mapped out.

The buildup of the economic potential has created favorable conditions for improving the living standards of the republic's population. Trade turnover has increased and the volume of consumer service sales to the population has grown by 8.4 percent.

Housing construction has been implemented on a large scale. Housing with a total area of almost 800,000 square meters has been commissioned, which is 24 percent more than the corresponding indicator last year.

The network of sociocultural institutions has expanded considerably. Science and culture have developed.

The socioeconomic potential of our autonomous formations has strengthened substantially.

The measure of what has been achieved is the possibility of going even further and of outlining new heights of economic and social development. It is from precisely this standpoint that the Georgian Communist Party Central Committee assesses the upcoming work.

Comrade Yu. V. Andropov has figuratively described the third year of the 11th 5-Year Plan as its central year. It will be an exceptionally important year from the viewpoint of the implementation of the whole 5-year plan. And our party organization now sees the main task as being to /ensure the requisite complex of party organizational, party political, ideological and other measures under conditions of the constantly expanding scale of socialist production and the enlargement and deepening of national economic activity./ This means that the style, forms and methods of our work must be in line with the high growth rates of the main socioeconomic indicators and must constantly match up to the new demands.

As the Central Committee plenum demanded, it is necessary to expedite work to improve the whole sphere of the leadership of the economy--management, planning and the economic mechanism. It is also time now to think on a larger scale, in new terms.

According to preliminary calculations, we will produce R8.7 billion more global social product and almost R4.6 billion more national income in 1981-1982 than we produced in the first 2 years of the last 5-year plan. Some R5.7 billion more industrial output and R681 million more gross agricultural output will be created.

While assessing in this connection how far the draft plan that has been submitted matches up to the demands of the 5-year target and to the interests of solving the most important socioeconomic problems of the 11th 5-Year Plan, we should at the same time determine /effective tactics for handling matters./ The main, focal points for the application of the efforts of party, Soviet and economic organs, trade union and Komsomol organizations and labor collectives must be clearly revealed and above all, in accordance with the resolution adopted at the Central Committee plenum, all efforts must be directed toward implementing the most important task put forward by the 26th Party Congress--/increasing social production intensification and improving the national economy's efficiency./

It has to be admitted that the state plan for the republic's economic and social development in 1983 was formed in pretty complex conditions: after all, this year our national economy has run up against serious objective difficulties. Thus the task has been set not only of overcoming the disproportions that have arisen in the republic's socioeconomic development in 1981-1982 but also of ensuring a firm foundation for the fulfillment of the 11th 5-Year Plan as a whole.

The draft plan that has been submitted is largely in line with this aim and accords with the demands of the CPSU Central Committee November Plenum. One of its most important peculiarities--the intensity of the plan targets--stems from this. The characteristic marks of the plan are intensification, the acceleration of scientific and technical progress, the implementation of a sensible structural policy, the improvement of the management of the economy and the expansion of labor collectives' initiative.

The absolute growth in the most important indicators of socioeconomic development is to increase substantially: the global social product will show an increase of R481 million or 4.9 percent compared with 1982, and the national income produced will show an increase of R417 million or 5.2 percent. The planned volume of industrial production will make it possible to obtain in 1981-1983 an increase in output of 14.4 percent, which is more than the 5-year plan target.

The fact that increasing preferential development rates are planned for industry under all-union jurisdiction also seems important, since the reserves of the food sectors in our republic are to a considerable extent exhausted.

Great attention is being paid to reconstruction and retooling, as a result of which around 60 percent of the total increase in commodity industrial output will be obtained and the national saving of capital investment will amount to R55 million.

The November plenum reaffirmed that concern for Soviet people, for their working and living conditions and for their spiritual development remains a most important party program guideline. The level of prosperity of the republic's population will improve as a result of the growth of production and the increase in its efficiency. Every inhabitant's real income is to increase and the average monthly wage of workers and employees and the work payment of kolkhoz members are to increase.

It is planned to increase state and cooperative trade turnover by 7.6 percent and to expand the volume of consumer service sales to the population by 8.3 percent.

Major measures will be implemented in the sociocultural sphere.

The plenum particularly emphasized the need to accelerate scientific and technical progress and swiftly introduce into production the achievements of science, technology and leading experience. So it is noteworthy that /the role of targeted comprehensive scientific and technical, economic, social and regional programs in implementing all the economic and social transformations increases markedly/ in our draft plan. The annual economic effect resulting from the utilization of scientific and technical achievements will be around R90 million, which is 38 percent higher than this year. Scientific and technical progress will ensure an increase in social labor productivity of 2.5 percent. Twenty-four industrial robots and manipulators will be introduced. The proportion of workers engaged in manual labor will decrease from 50 to 43.5 percent.

One of the most important directions of the draft plan and budget is the further boosting of the economy and culture of the republic's autonomous formations, rayons and cities. The planned rates and proportions for the development of their economies have been determined on the basis of bringing all production reserves as far as possible into national economic circulation and making fuller use of local raw material and especially manpower resources. The gradual equalization of the regions' development levels by ensuring increasing preferential rates of growth in the most important socioeconomic parameters remains a main aim of economic and social development.

Summing up what I have said, it is thus possible to draw the conclusion that the main trends of the draft state plan for the economic and social development of the Georgian SSR in 1983 are largely in line with the demands of the 26th CPSU Congress and the 26th Georgian Communist Party Congress.

The draft state budget is also largely in line with them.

/The unconditional fulfillment and overfulfillment of the 1983 plan targets is a matter of honor for the communists and all the working people of Georgia!/

II.

Under the conditions of the steadily expanding scale of national economic activity, /the further improvement of the style, forms and methods of party leadership of the economy and economic building/ assumes special significance.

This means that all the positive experience and all the most valuable and progressive things accumulated in the party and in our party organization must become the asset of every party committee and every Soviet and economic organ and must be adopted by all ministries and departments, every enterprise and farm and every organization. Progressive experience is a powerful motive force capable of effectively influencing the improvement of matters in any sphere.

Substantial measures to improve party leadership of the economy and other spheres of life have been taken in the republic recently. We are now taking a decision on concentrating party organizations' efforts in order to achieve better end results in implementing the most topical problems and questions.

This approach lies directly within the channel of the Central Committee November Plenum's demands--knowing how to focus the activity of party, state and economic organs and all labor collectives on the key areas. The workers' groups, commissions and coordinating councils created in the republic are operating pretty fruitfully. This has had a positive influence on the standard of economic work as a whole and has forced people to pay everyday, close attention to economic questions. The system for the management of workers' groups that has taken shape under Comrade G. V. Kolbin and other comrades can be cited as a positive example.

At the same time it should be frankly admitted that the principle of focusing efforts is not always consistently and purposefully pursued at the sector and rayon level. So the task is above all to extend to sector and local management components the work style that has taken shape in the Georgian Communist Party Central Committee, the Council of Ministers, other republic organs and certain party committees.

As for the end result, all our activity in the economic sphere should continue to be subordinated to /achieving the average all-union level of socioeconomic development and the average all-union and average sector indicators, and in terms of certain parameters the best indicators in the sector./

To this end it is necessary to continue to secure high rates of increase in the economic potential and to seek to ensure that the growth rates of the republic's main socioeconomic indicators surpass the growth rates of the corresponding average all-union parameters.

This is why we attach special importance to the way in which the situation is shaping up in particular national economic complexes and regions and to the way in which the republic leaders responsible for them handle these problems.

A similar harmonious system must operate in ministries and departments and at local level. Every leader must have a full grasp of the situation, must know the real, I repeat, /real/ potential of the enterprise and must overcome the force of inertia and old habits. Only if this is so will we be able to create the conditions for economic maneuver from both the sector and territorial viewpoints and to ensure stable work by the national economic complex as a whole.

/The year of 1983 is the decisive year of the 11th 5-Year Plan!/ The Central Committee plenum orients all party, Soviet and economic organs and trade unions and Komsomol organizations toward this.

So the fact that certain enterprises and associations under all-union jurisdiction are failing to ensure that the level defined by the 5-year plan for production growth rates is reached is bound to cause concern. The greatest lags are in enterprises of the Ministry of Light Industry--30.8 percent--and you know how great their share of the total volume of industrial output is; the Ministry of Tractor and Agricultural Machine Building--24.3 percent; and the Ministry of the Automotive Industry--6.3 percent. A similar situation is noted in enterprises of the Ministry of Power and Electrification, the Ministry of the Petroleum Refining and Petrochemical Industry, the Ministry of the Chemical Industry, the Ministry of the Production of Mineral Fertilizers and the Ministry of the Electrical Equipment Industry.

The way out seems to be to mobilize all internal resources to reduce and totally eliminate this gap. The republic's Gosplan and the regional and sectorial commissions for seeking out internal economic reserves for production growth must give effective practical and methodological assistance to such labor collectives. A great deal depends on the enterprises' party organizations, which are called upon to head all this work at local level.

Another aspect of the problem is the rigorous fulfillment of the prescribed targets by all organizations. There are still many shortcomings here. During the 10 months the 45 enterprises that failed to fulfill the plan were responsible for a shortfall of almost R47 million in deliveries of output to the national economy. And that amount would have enabled us to secure a production growth rate of 106 percent as against the actual 105.5 percent.

Another worrying fact is that approximately 25 percent of enterprises did not secure any increase at all for us or even allowed a decline in [production] volumes. It is time that comrades grasped that /production growth rates are the most rigorous and objective criterion for the assessment of their work and it is on the basis of this indicator that we determine the real labor contribution of each collective./

In seeking an increase in the level of party leadership of the national economy, we should sharply step up the influence of all organs on /the growth of production efficiency./

Efficiency is a very broad concept that is gradually acquiring even a political nuance. It accurately reflects the quality of all our work and the standard of economic management.

Next year production of national income per person employed in the sphere of material production will increase by 3.4 percent, including by 4 percent in industry and by 7.7 percent in agriculture. Nevertheless, the November plenum noted, and this was no accident, that our economy's turnaround toward efficiency is still being implemented only slowly.

How is it possible to tolerate the fact that almost one-third of the republic's industrial enterprises have decreased their level of /labor productivity/ this year. There are many such enterprises in the Ministry of the Meat and Dairy Industry, the Ministry of Construction, The Ministry of Rural Constrution, the Ministry of Forestry Industry and the Ministry of Light Industry.

Another point, labor productivity must reflect the extent of the labor contribution of every working person and the entire collective. There should be no self-flattery if it improves thanks to an increase in output materials-intensiveness, as is happening, for instance, in Tbilisi's Hosiery Production Association, the Kutaisi Canning Industry Production Association and a number of other enterprises.

Technical progress must determine labor productivity growth, but it is precisely in this respect that we are still lagging behind the demands of the time. The machine-worker ratio in our national economy is unjustifiably low. We have repeatedly mentioned this.

The important organizational and economic factor making for improved labor productivity represented by /norm setting/ is also poorly utilized. Around 33 percent of the workers paid on the basis of time rates in the republic are not covered by norm setting, and this indicator is 10 percent below the average for the country. As yet few piece-rate workers work on the basis of technically substantiated norms so their pay is poorly linked with the expenditure of energy and loses its stimulating significance.

Norms are not set at all for the work of engineering and technical personnel and employees in the republic's Ministry of Fruits and Vegetable Farming and Ministry of Forestry Industry. Measures to improve norm setting are not being implemented in a number of construction ministries and departments. What improvement in the performance of personnel can be expected in these conditions?

With the participation of the relevant ministries and departments the Georgian SSR State Committee for Labor must tackle this problem in earnest, taking into account not only its sociopolitical and moral aspects.

It is certainly time, comrades, to sharply increase the role of science and scientific and technical progress as the crucial factor in improving labor productivity, which is something that we discussed at our sixth plenum. That is why we greeted with such satisfaction Comrade Yu. V. Andropov's thought that planning methods and the material incentives system must help combine science and production. Those who boldly introduce new equipment must not find themselves at a disadvantage.

Each year of the 11th 5-Year Plan is called upon to mark a new stage in the transition of the national economy to a predominantly intensive path of development. The party Central Committee believes that the implementation of this task must be the center of attention for all party, economic, trade union and Komsomol organizations, ministries and departments and labor collectives.

Intensive factors will play a dominant and ever-increasing role in ensuring the growth of production and the improvement of its efficiency. It is no accident that according to the draft plan production of national income per ruble of fixed production capital will increase by almost 0.1 percent in the republic, and the relative saving of that capital compared with 1982 will total R14 million as a result. A further increase in the machine-worker ratio is to be ensured. In 1983 the capital-worker ratio in the national economy will show an increase of 3.6 percent and the power-worker ratio will increase by 1.4 percent.

The system for the management of the processes of the reproduction of fixed capital and for seeking out reserves for intensification needs to be further improved in this connection. The times taken to construct and commission fixed production capital and capacities are still decreasing only slowly and the scale of the expansion of the reconstruction and retooling of existing enterprises is inadequate.

And of course, the fact that capacities for the production of industrial equipment are being only 75 percent utilized at the Batumi Machine Building Plant and the Gruzvinmash Association, for instance, is absolutely intolerable. And when it comes to the utilization of capacities for the production of Chinaware the indicator in our republic is very curious--16.7 percent. It is time to call comrades specifically to account for this situation.

Or take another, more graphic example. If the average all-union level of productivity were achieved at the republic's dairy and fattening complexes, it would be possible to produce over 2,500 tons extra milk and up to 3,000 extra tons of pork and beef. Reaching the average all-union normatives for livestock population would mean obtaining another 20,000 tons of milk, 1,000 tons of beef and around 600 tons of pork, over 60 million eggs and almost 2,000 tons of chicken.

This is not the first time recently that we have made these calculations and quoted all these figures, not simply for effect but so that they can serve as a reference point for comrades and so that everyone can realize how much output we are losing because of mismanagement.

The low indicators for the utilization of machines and mechanisms in the enterprises of a number of sectors cannot satisfy us either. Equipment idle time has increased in ferrous metallurgy. The level of equipment utilization in coal mines, construction and agriculture is completely inadequate.

Unfortunately, many of our economic leaders have still not fully mastered the complex art of the timely assimilation of newly commissioned fixed production capital. It is particularly necessary to strengthen party influence and party monitoring in this matter. Party committees and the sector secretaries of party gorkoms and raykoms must bear personal responsibility for projects' timely attainment of their design capacity.

In short, there are indeed still many economic leaders who, as Comrade Yu. V. Andropov noted at the November plenum, eagerly quote Leonid Ilich's catchphrase to the effect that the economy must be economical but in practice do little to resolve this most important task.

These leaders usually also ignore the important factor making for intensification represented by the /rational utilization of material resources./ Yet the reduction of materials-intensiveness, the reduction of losses and the fuller utilization of production waste and secondary raw materials are now the task of all tasks and, as was said, /a question of the reality of our plans./

Next year it is proposed to reduce materials expenditure per ruble of social product by 0.2 percent in the republic. At the similar plenum last year we set the task of ensuring that the growth in production volume outstrips the growth in the consumption of material and technical resources. This is a very complex matter, so it is all the more pleasant to report to the participants in the present Central Committee plenum that the relevant trend is gradually emerging in the republic's economy. With an increase of 4.9 percent in the global social product in relation to this year's expected level, the national income produced is increasing 5.2 percent. Although the difference is small, the ensuring of such a correlation can be regarded as a great achievement by our party organization and the republic's soviet and economic organs.

To this end the struggle against mismanagement and waste must be waged even more resolutely and useful initiative must be displayed. The materials-intensiveness of many types of output still remains high. However, as the comrades from the Georgian Republic Council of the All-Union Society of Inventors and Rationalizers have calculated at our request, only one-fifth of the technical innovations introduced into production during the first 6 months provide for the saving of raw and other materials and fuel and energy resources and only around one-fourth of them are aimed at improving labor productivity.

Approximately the same correlation exists in research components. So the initiative of the Georgian Academy of Sciences, which has decided to study in detail the extent to which our scientists' developments match up to the demands of reducing materials- and energy-intensiveness, can only be welcomed. Such an approach would be justified in other organizations and departments too.

An important precondition of reducing materials expenditure in the national economy is /progressive norm setting/ and the creation of a reliable normative base. As yet only 6 of the 80 stockholders [fondoderzhateli] to which material resources are allocated in the republic according to the plan have special structural components for norm setting. Yet so far this year enterprises under republic jurisdiction alone have saved over 2,000 tons of rolled ferrous metals, around 6,000 tons of cement, more than 6,000 cubic meters of lumber, over 9,000 tons of diesel fuel and 23,000 tons of gasoline through the introduction of progressive, economically substantiated norms.

This is why the creation of an integrated system of normative organizations in the republic, a system that would unite norm-setting services at all levels--from enterprises to the Gosplan, inclusive--seems so important. We hope the Council of Ministers will submit appropriate proposals to the Central Committee Bureau.

At the same time work to bring secondary raw material resources into national economic circulation should be stepped up everywhere. The first positive results of this work have already been obtained. Next year commodity output worth almost R300 million will be produced from production waste.

However, as yet by no means full use is being made of the available secondary raw material resources. The republic's Gossnab and the Tsekavshiri [expansion unknown] board, in conjunction with city and rayon soviets of people's deputies, must consistently improve work to collect, sell and exploit all types of secondary raw materials. The State Committee for Science and Technology, the Georgian Academy of Sciences and sector research and planning and design organizations must make their contribution to this important state work.

On the other hand it is necessary to better activate the propaganda apparatus, means of ideological influence and the system of working people's political and economic education. It is time to conduct a quest for new reserves in the sphere of the rational utilization of raw and other materials in /every/ sector, in /every/ city and region, in /every/ enterprise, on /every/ farm and at /every/ workplace. Those are the terms in which the CPSU Central Committee November Plenum sets the task. We must ensure that /every/ working person sees it as his own concern. The plenum placed the responsibility for the resolution of the task on party committees and party organizations.

Under the conditions of the steadily expanding scale of the economy and the faster industrialization of all its sectors, the skillful and most rational utilization of /manpower resources/ becomes an important element in further intensification.

This problem, in which both economics and our social policy are fused together, has been consistently resolved in the republic for several years now. You will agree that it is of considerable importance for Georgia when each year an additional 40,000-50,000 people are being drawn into the sphere of social production. Over the last 10 years, that is, the period since the adoption of the CPSU Central Committee resolution on the Tbilisi Gorkom, the number of working people in the social sphere has increased by almost half a million and the unemployed population has decreased from 18.9 percent to 15.4 percent.

However, hitherto we have approached this work in what I would call an indiscriminate fashion, without differentiating where people should be sent and in what numbers. However, with these methods we are finding it more and more complicated with every passing year to mold developing and newly created production collectives.

In 1983 it is necessary to substantially increase the number of workers and engineering and technical personnel at enterprises such as the Elektrovozostroitel Production Association, Tbilisi's Dimitrov Aviation Plant, the Kutaisi Motor Vehicle and the Rustavi Metallurgical and Chemical Plants, the Chiaturmarganets Production Association, the Zakmetallurgstroy Trust No 1 of the republic's Ministry of Construction, and a whole series of others.

In 1983 alone more than 20,000 additional people will have to be assigned to developing enterprises. The question of the /systematic management of all these processes/ is arising acutely in this connection. We must strengthen the services dealing with the provision of cadres at enterprises so that they knowledgeably and skillfully determine their collectives' requirements and sources of manpower reinforcements and request the appropriate [personnel] ceilings in good time from all-union and republic organs.

Military commissariats' activity should be stepped up. The work of the vocational and technical education system must be substantially reorganized to subordinate it to the tasks of molding worker collectives. It is time to embark on training workers for a specific purpose and on assigning them personally after vocational and technical school. Otherwise we will continue to lose almost half the vocational and technical school graduates assigned to enterprises and we will not secure an increase in the proportion of such graduates among the total number of recruits, which is now no more than 10-15 percent even at major enterprises such as the metallurgical, chemical and motor vehicle plants.

For instance, four vocational and technical and two technical schools that each year turn our 900 people provide or, to be more accurate, are supposed to provide the Kutaisi Motor Vehicle Plant with worker cadres. However, this year around 400 people, according to state committee for vocational and technical education figures, and only 130, according to the figures of the plant itself, have stayed there! The discrepancy itself proves the lack of system.

Serious reproaches can also be leveled at the personnel of the republic's higher and secondary specialized education system. According to the assignment plan, I repeat, according to the plan, the Georgian V. I. Lenin Polytechnical Institute was supposed to send 78 people to the plant, but in fact only 31 graduates are working there. And only 52 and 37 percent of the specialists assigned there this year have stayed at the metallurgical and chemical plants in Rustavi respectively. We have been forced to remind very respected comrades of this--academician T. N. Loladze, rector of the Georgian Polytechnical Institute, and Comrde D. A. Dzhaparidze, secretary of the party committee.

The situation is similar at the secondary level. Only 88 of 257 graduates of the Kutaisi Automotive Tekhnikum are working at the motor vehicle plant. So what then was the point of creating the tekhnikum? Comrade D. Ya. Ebanoidze, its director, and Comrade D. I. Bakuradze, the secretary of the party bureau, must answer that question.

The same serious criticism must be leveled at the directors and primary party organization secretaries of vocational and technical schools No 62 in Telavi and No 39 in Gori--Comrades D. G. Tvaliashvili, N. M. Rcheulishvili, M. V. Lomidze and D. G. Chikovani--and of a number of other schools, base enterprises, tekhnikums and VUZes.

We would like Comrades S. T. Rigvava and D. I. Chkhikvishvili themselves and the other leaders of the vocational and technical education system and the higher and secondary specialized education system to raise and resolve all these questions more keenly and we would like every working person to be filled with personal responsibility for the end result of his activity--the molding of worker collectives.

We are paying and will continue to pay great attention to entrance examinations and to the selection of capable young people. But to what end? After all, the main point is that the graduate should enter an enterprise in the future. Otherwise all the painstaking work of tuition and education becomes pointless.

We have been speaking recently of drawing up prospectuses [pasportizatsiya] for projects and enterprises that are under construction, and so forth. Something similar is probably required for the educational establishments training cadres for the national economy. We must have a clear idea of the purpose of each of these establishments and of which enterprises they are training cadres for. And also of the extent to which the standard of this training matches up to the demands that are being made. Literally every faculty and every department must be responsible for the /way in which the relevant sectors of the national economy and of the production sphere are manned with specialist cadres./

In turn, what is also absolutely intolerable is cases of a refusal to hire, as has happened, for instance, to graduates of the Georgian Polytechnical Institute and other VUZes assigned to the Kutaisi Small Tractor Plant and to the Electron and Ion Technology Research Institute in accordance with the latter's own requests to the republic's Gosplan. This is a criticism of Comrades A. D. Natsvlishvili and G. P. Samkharadze, the directors of the aforementioned organizations, and Comrades O. K. Kutsiya and I. D. Todriya, the party organization secretaries.

It is necessary to increase the responsibility to the state of vocational and technical school, tekhnikum and VUZ graduates for the effectiveness and benefit to the cause and to the interests of the country, of the republic and of their own people with which they employ the knowledge they have acquired and for the way in which they repay the colossal outlay on their education and training.

We await specific proposals on this score.

There is something else I want to mention. The problem of the rational utilization of manpower resources is very multifaceted and diverse. As well as the involvement of people in social production, it also includes the optimum siting of sectors of the national economy, the formulation and implementation of a sensible demographic policy, the introduction of progressive forms of labor organization and pay and a great deal more, including, for instance, the development of cooperation between personal plots and public farms.

You cannot do without a comprehensive scientific approach here. It is for precisely this purpose that a subsidiary of the All-Union Labor Research Institute was organized in the republic. Unfortunately, we have still not received sound proposals that can be utilized in practice from the institution. In order to improve the standard of the institution's activity, closer contact must be established with other economic organizations--after all, it is precisely well-organized, scientifically organized labor that is the main creator of public wealth.

Interesting questions also face ideological institutions. /A healthy moral and political atmosphere in the labor collective is the guarantee of highly productive work./ Moreover, there is a need for sensible recommendations on conducting ideological and educational activity in the conditions of the formation of new collectives. We are interested in ensuring that they acquire their own identity and find their feet as rapidly as possible. Broad scope for organizational and political work opens up here. Right from the start it is necessary to instill independence and discipline in people and to encourage initiative and enterprise in every possible way. The decisions of the CPSU Central Committee November Plenum orient us toward this today.

/Production intensification is the only, the most correct way to overcome the bottlenecks in the national economic complexes in which a certain strain persists in our republic./

The party is paying heightened attention to implementing the food program and, in this connection, to the functioning of the /agroindustrial complex,/ in which, as Comrade Yu. V. Andropov noted at the November plenum, there are no secondary tasks.

The Politburo believes that progress in implementing the decisions of the Central Committee May (1982) Plenum must also be discussed at the party committee plenums and aktiv meetings and soviet sessions examining the plans for next year.

Twice already this year the tasks of the republic's agro-industrial complex have been examined in detail at Georgian Communist Party Central Committee plenums, the last time literally a month ago. We studied the way in which the May plenum guidelines are being fulfilled, appropriate decisions were adopted and ways of further developing the agroindustrial complex were determined. The main thing now is to step up practical work in this direction.

I am sure that at today's plenary session, too, comrades will touch frankly on these problems and will hand in to the Presidium notes containing proposals and remarks.

This year has been particularly complex and extremely hard especially for our agriculture and the entire agroindustrial complex. This has had a painful impact on the draft plan. Thus the growth that is to be secured in the food sectors' commodity output over the first 3 years of the 5-year plan as a whole is only 9.4 percent instead of 10.7 percent according to the 5-year plan control targets.

Of course, this growth rate cannot satisfy us. The party Central Committee is setting the republic's agroindustrial complex a very difficult but, in our view, feasible task--/raising the food industry's growth rate to the level projected by the 5-year [plan] target./

The plenum rostrum is probably the most suitable place from which to warn comrades once again: /There can be no question of any failure to fulfill the plans, both current and 5-year./ We are not calling into question even for a minute the fulfillment of the 5-year plan targets for the production, procurement and processing of agricultural output. Let the leaders of all rayons in the republic, especially the grape-growing, horticultural, tea-growing and tobacco-growing rayons and so forth, draw the appropriate conclusion from this.

/The plan is an immutable state law for every rayon, every ministry and department and every labor collective, and we must call people to account for any failure to fulfill it with all the rigor of Soviet legislation, irrespective of their rank and title./

The Central Committee May Plenum adopted several long-term resolutions. We would ask Comrade D. I. Patiashvili, member of the bureau and secretary of the Georgian Communist Party Central Committee, and Comrade O. G. Vardzelashvili to constantly monitor their implementation and to seek the better functioning of the republic's agroindustrial complex.

Another equally important problem is that of increasing production and improving the quality of /consumer goods./ The Central Committee November Plenum demanded that local party and soviet organs join in real earnest in solving this problem.

It is well known that to improve the level of the people's prosperity is one of the main concerns of our party and state. This finds real expression in the increase in working people's real incomes. In our republic these totaled over R25 billion in the 10th 5-Year Plan alone. However, because money incomes have been insufficiently backed up with the relevant commodity resources and paid services and even now are fully backed up with them, the unrealized portion of those incomes is constantly increasing in the republic.

Naturally, the imbalance between income and expenditure creates certain difficulties in money circulation and does not make it possible to satisfy the demand from the republic's population in the optimum fashion. In view of what I have said, we attach special importance to expanding the production of consumer goods.

Early next year we will have a meeting of the party and economic aktiv on this question. I have been informed that the comrades have already embarked on its preparation. That is why I shall touch on just a few points today.

To execute the decisions of the CPSU Central Committee and USSR Council of Ministers, the Communist Party Central Committee and the Council of Ministers of the republic have adopted several resolutions on increasing the volume, expanding the range and improving the quality of consumer goods. Definite improvements have been noted. During the previous 5-year plan the production of these goods increased almost 40 percent and they accounted for about two-thirds of the total volume of above-plan industrial output last year.

However, there are also many unsolved problems here. This applies to questions of a methodological nature, to the management of the process of organizing the planning and production of consumer goods, and to ensuring precise coordination in the efforts of all components of the national economy in expanding their output. Unfortunately the republic's Gosplan, Ministry of Trade and other ministries and departments and also enterprises under union jurisdiction are resolving these urgent questions only slowly.

We recently assigned the management of consumer goods problems to Comrade S. Ye. Khabeishvili, member of the bureau and secretary of the Central Committee of the Georgian Communist Party, who will also head the relevant commission. The relevant subdivision of the republic's Gosplan, whose activity requires further improvement and which needs to be reinforced, should become the commission's working apparatus. /We must administer all processes more actively and decide in practice where to produce what and in what volumes and how to distribute and sell output./

The task is not only to increase the production of consumer goods but also to substantially improve their quality. This applies not only to light and local industry but also to heavy and defense industry enterprises. That was how the November plenum defined the avenues of our work.

It must be said that consumer goods production targets have now been set for the enterprises under union jurisdiction situated in the republic. However, so far they are showing no special enthusiasm in setting about the matter or else are producing these goods without considering the population's needs, while some are literally offering tactic resistance.

Surely there is something the matter when the Rustavi Metallurgical Plant produces consumer goods worth only 2.2 kopeks for every ruble from the wages fund, and the Kutaisi Motor Vehicle Plant produces goods worth 8.9 kopeks, the Electric Locomotive Building Plant goods worth 12.5 kopeks and the Stankostroitel Association goods worth 16 kopeks?

We must seek to ensure that every group A plant and enterprise /produces consumer goods equal at least to the size of the wages fund./ This problem undoubtedly cannot be resolved immediately, at a stroke, but we are right to set ourselves this goal right now.

Of course, this does not relieve enterprises in the group B sectors of responsibility. We pin great hopes on local industry. The comrades are working on prospects for its developments in the 12th 5-Year Plan but for that it is important to ensure the growth planned for the current 5-year plan. Here the actual attitude of the Central Committee, Council of Ministers and Gosplan toward this sector is in need of serious revision. We can and must make principled demands on the comrades, but first we must assign them everything envisaged by the decisions we ourselves have taken. In our republic we have many natural resources, much valuable local raw material, and we must seek to ensure that local industry is fully responsible for its rational and efficient use.

Our rayons acquired great opportunities for increasing the production of the important types of consumer goods that foodstuffs represent with the creation of agroindustrial associations. After all, they have now concentrated in their hands the entire cycle from field to processing to store. And the CPSU Central Committee, USSR Supreme Soviet Presidium and USSR Council of Ministers resolution on further enhancing the role of the soviets in economic building grants the broadest rights and powers in this matter to the local organs. However, so far there are few people in our republic who are taking advantage of these rights.

And they must be taken advantage of to the full. The Central Committee plenum deemed it unnatural that the question of the production of a number of simple commodities is being resolved virtually within the USSR Gosplan. The plenum stressed that this concern must be assumed by the local organs and that they should be fully answerable for its solution. The comrades recently calculated that to dispose in full of the surplus money income of the republic's population, additional consumer goods worth R328 million will be needed in 1983.

To sum up, I should like to note that for the fundamental solution of the problem of producing consumer goods in the necessary volumes and range it is necessary /first/ to tune the management mechanism more finely, /second/ to think about creating special services at large-scale enterprises, right up to the institution of the post of deputy director for consumer goods at some places, and /third/ to step up the work of the Gosplan, the Ministry of Trade and all the ministries and departments concerned and of the republican commission. We as the Council of Ministers to pay the closest attention to this problem. The time has obviously also come to get right down to organizing a special permanent exhibition of consumer goods, imposing on it the duty of methodical work.

A complex situation is taking shape /in the energy complex/ of the republic. In the past 10 years industrial production in our country has almost doubled, yet capacities for the generation of electricity have increased only 50 percent and coal extraction has dropped overall.

A particularly strained situation with respect to the supply of fuel and energy arise in the fall and winter period, when the electricity shortfall, for instance, reaches 15 percent of consumption, which is the result of the predominance of seasonal Ges' in our power industry structure and the inadequate development of base capacities. Under these conditions even the commissioning of the new energy capacities that is projected for the future cannot resolve the problem of electricity supplies for the republic.

This obliges us to raise persistently before the union organs the question of the construction of a base station. The USSR Ministry of Power and Electrification has elaborated a feasibility study for constructing a base power station in Georgia. We must seek to begin the planned work next year in order to embark in 1984 on the implementation of preparatory measures. We also raised this question at the Central Committee November Plenum.

At the same time attention toward the universal implementation of a strict policy of thrift must be stepped up. It is very important to make thrifty use of coal, natural gas, oil and oil products and thermal and electrical energy, the Central Committee plenum said. We must seek a thrifty attitude toward energy resources, the extensive introduction of energy-saving equipment and technology, the improvement of norms, the use of material and moral incentives in the struggle for thrift, and stricter sanctions for overexpenditure and the exceeding of norms and limits.

The fate of our plans depends to a certain extent on the steady operation of the Tbilisi Gres. This is an exceptionally important question. Some responsible comrades at the level of deputy chief of the Georgian Main Production Administration of Power and Electrification must be at the station constantly, monitor the arrival of the necessary resources and fuel oil and ensure that the units operate at full load. This question must constantly be the focus of attention of the relevant Central Committee section and in particular of its chief, Comrade B. D. Makharashvili.

Now, after the creation of the standing commissions for the power industry under the USSR Supreme Soviet of the Union and Soviet of Nationalities, which will unremittingly monitor the activity of ministries and economic leaders, it is important to step up this work in every possible way locally as well and to monitor the organization of this matter at enterprises.

Our inventors and rationalizers, the All-Union Society of Inventors and Rationalizers and scientific and technical society councils and scientists and specialists can make a substantial contribution. We assign an important role to the party organizations, which are called on to create in every collective an atmosphere which rules out a negligent, thriftless attitude toward all types of energy resources and fuel.

In the national economy's successful uninterrupted activity increasing significance is assumed by the /transport complex./ The politburo has voiced grave concern at the state of affairs in transport, noting that many indicators here are deteriorating.

A similar situation has taken shape at the Transcaucasus Railroad. The union ministry frequently resolves important questions without consulting the republic's party organization and leading organs or considering them. Meanwhile rolling stock is being used unsatisfactorily. The car turnaround indicator has deteriorated. The norms for car layover per loading operation are not being observed within the republic.

Sometimes there is total confusion. Cars are dispatched with unsalable goods [kommercheskiy brak] and without documents. MVD reports constantly cite so-called abandoned trains. We must investigate all this closely, comrades, and take the most resolute steps.

The railroad's successful operation depends largely also on the activity of the clients and related organizations. Yet it has become almost a rule in many ministries and departments to issue excessive orders for cars. Absolutely no attention is paid to the work of enterprises' transport shops. Last year about 3,000 cars were delayed longer than the norm through the fault of the procurement organizations during the process of dispatching citrus fruit alone.

The republic's Komsomol members recently suggested organizing circular [koltsevoy] control at the railroad. I think we should support this good initiative. We must seek the collective responsibility of all services for the rhythmical, harmonious operation of rail transport.

At the same time, the railroad leadership and Comrade L. G. Vardosanidze must pay more attention to work with people, with clients. They must consistently implement the CPSU Central Committee resolution on stepping up party political work in rail transport.

What I have said also applies in full to the Georgian Civil Aviation Administration. Despite our repeated requests and demands the leadership of the administration and Comrade I. Z. Samadalashvili are reorganizing their work only slowly.

I must inform you that we again raised at the Central Committee plenum the question of constructing a Transcaucasus mountain pass railroad and of the need to make a fundamental decision on this score. It is extremely necessary that we secure a positive solution of this problem.

On the whole it is very important to ensure marked improvements in transport in the immediate future. And for that reason we would ask Comrade S. Ye. Khabeishvili, member of the bureau and secretary of the Central Committee of the Georgian Communist Party, to pay special attention to these issues.

Many problems remain /in capital construction/ in the republic, as they do throughout the country as a whole.

I spoke earlier of the positive advances in this field. There is an increase in the commissioning of fixed capital and a reduction in the volumes of uncompleted construction. This trend is preserved in determining the ceilings on capital investments for 1983. It is notable that R1.3 million more than envisaged by the 5-year plan are being earmarked for modernizing and retooling existing enterprises.

Nonetheless, the commissioning plan is still not being met. A serious situation has taken shape at construction projects at the Zestafoni Ferroalloy Plant and the Poti Ship Repair and Shipbuilding Plant, the training laboratory block of the Tbilisi University Biological Faculty and others. Special mention must be made of the extremely unsatisfactory work of the republic's Ministry of Construction in modernizing construction materials industry projects, although the minister himself, Comrade V. T. Gogoladze, has been appointed leader of the headquarters here by a decision of the Central Committee Bureau. The 10-month plan for construction and installation work in the modernization of the Rustavi Cement Plant has been fulfilled only 26 percent. And this at a time when the construction workers themselves experienced a cement shortfall of over 30,000 tons during the period. Responsibility for this situation rests with Comrade O. I. Lolashvili, minister of the construction materials industry, and his deputy, Comrade G. V. Meparishvili, who is in direct control of these matters, and with the leadership of the railroad and the local party and soviet organs.

No less complex a situation has formed at a number of projects of the republic's Ministry of Rural Construction. The minister, Comrade I. A. Kharatishvili, can be blamed for the tea factory in Makharadze, the Krasnogorskiy Stockraising Complex, the Dedopalskiy Rabbit Raising Complex, the sanatorium in Tskhaltubo and other projects.

We draw the attention of Comrade T. B. Adamashvili, manager of the Gruzkommunspetsstroy Trust, to the poor state of affairs with respect to the commissioning of the Kobuleti-Ureki-Makharadze purifying installations. The collective of the Tonnelstroy Administration headed by Comrade V. D. Gotsiridze also has much work to do for the timely completion of the motor tunnel at the Rikotskiy Pass.

The conclusion again suggests itself that some leaders are unable to maneuver resources skillfully or to concentrate them on decisive sectors and, if matters have reached that point, are unable to keep their word.

We hope that Comrade G. A. Andronikashvili, member of the bureau and secretary of the Central Committee of the Georgian Communist Party, and Comrade Yu. I. Kedishvili will display more exactingness toward cadres and deal more specifically with problems of construction materials, particularly cement, and the improvement of construction organizations' financial position.

The plenum stressed that we must struggle even more resolutely against the dissipation of efforts and funds at a multiplicity of sites. The proportion of reconstruction and modernization must be increased and the number of new construction sites reduced. The organization of construction itself must be improved.

The question of /housing construction/ is also acute next year. Despite all our efforts, the state capital investment ceilings on housing are being reduced 12.5 percent compared with this year's plan. The volume of the cooperative construction of apartment blocks has risen somewhat, but that will not save the situation. This is why, comrades, we must seek by every means, first, the full assimilation of capital investments and, second, the overfulfillment of housing construction plans.

It must constantly be borne in mind that /the introduction of order in capital construction is a central national economic task./

As for other spheres of the economy, the main criterion by which they must assess their work was said by the Central Committee at its November plenum to be the degree to which the sector satisfies the mounting public requirements. That is why /the overfulfillment of the targets set by the annual plan is a decisive condition for overcoming bottlenecks in the development of the national economy in the third, pivotal year of the 11th 5-Year Plan./ The efforts of all party, soviet and economic organs and all our organizational and political work must be focused on this.

III.

The improvement of party leadership and the intensification of party influence on all spheres of economic activity are interwoven in the closest way with /the further improvement of management/ and the enhancement of the competence, independence and initiative of all management organs and components.

Under present conditions the art of management, like scientific and technical progress, is increasingly becoming a direct production force. And for that reason it is absolutely intolerable for a party, soviet or economic leader to make no attempt to master it to perfection or to have no knowledge of the economic situation, basic tasks and main targets of his department or of how particular indicators are shaping up at a given moment. Our entire party and state apparatus and inspector personnel must persistently master economic knowledge and economic skills.

The mention of this is no accident. This year many phenomena and trends in the republic's national economy have for some reason come as a surprise to us. And that means that we are still not managing some socioeconomic processes actively or competently enough. Please understand me correctly, this in no way means that our actual system of management no longer justifies itself or that we have slackened our attention toward existing problems. By no means. On the contrary, our knowledge has deepened and enlarged. But at the same time the range of tasks which are being resolved has also expanded immeasurably and our approach toward them has become more competent and skilled, and therefore the load on the management apparatus has increased sharply.

Under these conditions special significance attaches to /the rational distribution of functions and responsibility and, I would say, the further democratization of management./

The further development of socialist democracy in the broadest sense is essential, Comrade Yu. V. Andropov stressed at the November plenum, meaning by this the working masses' increasingly active participation in the management of state and social affairs.

Many managerial functions are now concentrated with us, in the apparatuses of the Georgian Communist Party Central Committee, the Council of Ministers and other leading organs of the republic. And some leaders have obviously grown accustomed to rely on higher ranking leaders and to request approval for any question, even the most trivial. This has utterly fettered their initiative.

At the same time we assumed many economic leadership duties in order to ensure a sharp breakthrough in this sphere. We had no other way out, and this approach has fully justified itself. But it is time now to go further. Ultimately there are positions which simply cannot be reached from the level of the republican organs. And that means that each management component must have its own strictly delineated functions.

It is essential to overcome obstinately and persistently the inertia of our economic leaders. The center of gravity in economic activity must be shifted increasingly to the place where many questions of the management of the economy should essentially be resolved--to the ministries and departments, the local soviet and economic organs, enterprises and associations and economic organizations. We must at all cost improve the standard of activity of the sections of the Council of Ministers and the Gosplan, sections and administrations of the Gossnab, and the ministries and associations. There is no other way out.

It is in these components that we must now persistently foster the style and methods of work of the Georgian Communist Party Central Committee Bureau, the Council of Ministers Presidium and other leading organs. And the party organs must learn to lead all processes /via the relevant management organs,/ to involve the soviets, trade unions and Komsomol more actively in the matter and to develop economic democracy by every means. This should be one of the main avenues of our party organizational work.

As is well known, /information/ is the initial and one of the most important components of any management system. In this connection we cannot fail to note that in recent years the republic's central statistical administration--the main supplier of managerial and economic information--has substantially reorganized its work.

Nonetheless, we still have a wealth of work to do in this field. Information should not be separate from life. It must not only inform but also provide food for thought and serve as the basis for forecasting the processes taking place in economic and social life. And that means it is essential to intensify analytical work in all management components and primarily in the statistical administration itself and its grassroots organs. And this applies not only to the central statistical administration. Practice shows that such information and analytical work is still lacking in many of our ministries, departments and economic organs, which have still not learned to make full use of existing accounting procedures and the information material accumulated.

We once achieved a situation where many of our party committees locally had begun to receive almost daily exhaustive information from individual enterprises and farms. This is all the more urgent for soviet and economic organs. This is not bureaucratism but an effective lever of management. It is the lack of the necessary timely information which results in elements of bureaucratism and formalism.

That is why we particularly emphasize that /today any management organ--from local to republican--must thoroughly grasp the situation in economic subdivisions./ Only thus is it possible to ensure that our national economy is managed on a truly systematic, planned basis and to achieve a situation where our economy is truly economical.

Mastering this complex art means primarily ensuring the uninterrupted work of the entire economic mechanism and tirelessly improving it. I would even say that we must /manage the improvement of the standard of management./

So far we are not switching effectively enough to new comprehensive conditions of economic management. As a rule, industrial enterprise and construction and transport organizations display a formal approach to the normative net output indicator. This is basically what explains the not unimportant fact that the implementation of plans in this area regularly lags behind their fulfillment in terms of the commodity output indicator. Contract commitments are frequently broken.

We are all also keenly aware of the way in which the imperfection of the organizational structure of sector management is holding up the further development of production forces. Nonetheless, the elaboration of new general schemes for the management of sectors and the more precise definition of existing schemes continues to be delayed. The sections of the Central Committee and Council of Ministers must step up the demands made on ministry and department leaders over the implementation of this decision of the 26th CPSU Congress.

Comrades, we have already grown tired of pointing out that the team form of organizing and remunerating labor is being introduced at an unsatisfactory pace and often only formally in the republic. Despite the measures undertaken since the fourth plenum, the discrepancy by comparison with the average all-union level has increased here.

We must again level criticism at the state committee for labor, which, in conjunction with the republic's trade unions council, ministries and departments and relevant institutions, must implement more effective measures to introduce the new form of organizing and encouraging labor at enterprises and in organizations. And Central Committee and Council of Ministers sections must keep track of the development of these processes.

The Georgian Communist Party Central Committee has recently attached special significance to the state of financial activity in national economic sectors and at enterprises and in organizations. A special working group headed by Comrade D. N. Dvalishvili, minister of finance, has been created and regularly analyzes the process of forming prime cost in various sectors of the national economy and seeks to reduce it. In the republic's Council of Ministers Comrade N. A. Chitanava is dealing quite fruitfully with these problems.

While in 1975 output worth R148 was produced for every R100 of expenditure in the republic's industry, in 1981 the figure was R155. Definite advances have emerged in the fulfillment of the profit plan.

However, there is still no breakthrough in the financial state of many of our ministries, departments, enterprises and associations. Moreover, when it comes to observing payment and financial discipline our republic holds one of the lowest rankings in the country. For the Ministry of Construction, the Ministry of Rural Construction, the Georgian Main Administration of Water Resources Construction, the Georgian Main Administration of Installation and Special Construction Work and the engineering construction trust alone, overdue debts to suppliers and on bank loans increased 80 percent by comparison with 1978 on the basis of the results of the first 10 months of this year and exceeded R400 million. You ask how such organizations can function normally? The relevant sections of the Central Committee and Council of Ministers and its main administration of capital construction, the Gosplan, Gosstroy, and Georgian branches of the Gosbank and All-Union Bank for Financing Capital Investments, the Ministry of Finance and the construction ministries must investigate the prevailing situation more deeply and rapidly outline measures for its fundamental improvement.

After all, comrades, these conditions are apt to produce exaggerated report data and eyewash. The mobile mechanized columns No 37, 49 and 74 of the republic's Ministry of Rural Construction have commissioned some of their projects only on paper and have thus camouflaged their debts. In the first half of the year fictitiously commissioned projects totalling over R6 million were discovered.

Or take the disgraceful instance revealed at the Anaga Wine Factory in Signakhskiy Rayon, which we mentioned back at the previous plenum. The purchase of grapes has been recorded fictitiously there and falsified documents pertaining to the wine [vinomaterialy] were drawn up. The total sum of transactions involving no commodities has already been established as R300,000. Who gains from this practice? Not the state, of course, nor the republic, but the dealers and speculators themselves.

We have always struggled and will continue to struggle to curtail severely any attempts to ensure plan fulfillment by dishonest means through all sorts of machinations and manipulations. Party committees and primary party organizations must make a strict principled assessment of each instance of eyewash and fraud against the state.

The improvement of the standard of party leadership of economic activity is most closely linked with the consolidation of /executive discipline./

Any decision will only produce the necessary return and become fruitful when it is reliably backed up by organizational measures and is implemented consistently.

The Central Committee November Plenum directed party and trade union organizations and all Soviet people toward a resolute struggle against any violations of party, state and labor discipline. We have accumulated substantial experience of work in this direction and a definite system has taken shape. Nonetheless, you get the feeling that recently we have somehow slackened our attention toward problems of consolidating discipline and order.

First of all we must sharply galvanize the activity of the special commissions headed by ministers and party committee first secretaries which have been created everywhere to combat violations of socialist legality and discipline. We must keep a strict eye on how matters stand in individual sectors and individual regions, make assessments accordingly and submit questions for examination by the Central Committee secretariat and bureau. The Georgian Trade Unions Council must act more purposefully. We hope that Comrade T. I. Mosashvili, candidate member of the Georgian Communist Party Central Committee Bureau, will assume personal control over this problem since it is he who heads the relevant working group.

At the same time, in order to fulfill the instructions of the November plenum--and the idea of strengthening discipline and enhancing exactingness, organization and our degree of mobilization is liberally the leitomitiv of Comrade Yu. V. Andropov's speech--we have an extreme need of initiatives coming from the workers themselves and indicating their high degree of awareness and devotion to the cause.

You recall the initiative of the Tbilisi aircraft construction workers and the undertaking of the Rustavi metallurgical workers, "not a single laggard or violator of discipline nearby!" and the initiative of the Tkviavi workers who resolved to turn their native village into a center of high culture and exemplary public order? After all, they displayed all that is best in our glorious working class and kolkhoz peasantry. Since then their awareness and degree of mobilization have increased immeasurably.

This can be traced clearly in the example of the Lado Ketskhoveli Kolkhoz in Tkviavi village, Goriyskiy village, Goriyskiy Rayon. In 10 years--and the initiative was adopted at the very outset of the struggle to implement the resolution on the Tbilisi party gorkom--the village's appearance has changed out of all recognition and new houses and cultural and consumer service establishments have arisen. The farm's economy has strengthened and people's actual attitude toward work has changed radically. Now we are proud of the Tkviavi Kolkhoz, which is considered one of the leading farms in the republic and our entire country.

As a result of the consolidation of labor discipline there has been a 50 percent increase in production per kolkhoz member while the remuneration per man-day has more than quadrupled. The farm now sells the state almost 8 times more fruit and its profitability has risen from 24 to 62 percent.

It has succeeded in totally eliminating speculation in agricultural produce, many types of dangerous crime and so forth.

The Georgian Communist Party Central Committee Bureau, examining the kolkhoz's very interesting and full food program recently, assessed highly the activity of its broad and party organization.

The same interesting trend can be traced at the aircraft plant. At our next plenary session we must give the floor to the plant's director, Comrade V. Sh. Tordiya, to enable him to describe the beneficial changes which have taken place in the glorious collective of Tbilisi aircraft construction workers.

At the same time, all this gives us no grounds for complacency. We must look attentively right now at everything valuable and useful, and note and publicize promptly the sprouts of a new communist attitude toward labor so that they grow into strong shoots and help our economy to advance. We must not forget or squander the valuable and useful assets in our ideological arsenal.

We have said a lot recently about the authority of decisions. The word authority here is most appropriate; after all, the implementation of a party decision is a real question of our authority, of the authority of any leading organ.

But are we always really mindful of this? For instance, how are we to explain the behavior of some leaders who, despite a categorical ban, seek to amend the plans by fair means or foul? Thus in January through September 897 instances of the alteration of industrial enterprises' production plans were recorded. For instance, the Ministry of Food Industry has on 92 occasions downgraded its enterprises' targets for the production of commodity output, while 29 such cases have been recorded in the systems of the Ministry of Meat and Dairy Industry, 32 cases in the Ministry of Fruits and Vegetable Farming, and 65 in the Ministry of Light Industry. And in all since the beginning of the year production plans have been downgraded by almost R400 million throughout the republic.

What I would call an indulgent approach toward some leaders has developed in our republic. We seem to have started to forget that /the successful implementation of the plans is the only source of our society's accelerated economic and social development and of the consolidation of the material base of the culture of all our country's nations and ethnic groups./ On the other hand, at almost every plenum and aktiv we point emphatically to the intolerability of amending plan targets yet we are not succeeding in eradicating this practice. So it is all not so simple.

Let us take a look. Sometimes objective conditions themselves shape up in such a way that we are obliged to alter the plan. Does this not mean that in some cases it is better not to erect artificial barriers at all? It is simply that the amendment of plans must be approached systematically so that in each case, whether it concerns enterprises within the republican [word indistinct] or under union-republic or union jurisdiction, the question is examined promptly in the republic's Council of Ministers and Gosplan. Then, even when we allow a plan to be altered on one occasion for a particular plant, we will be able to take steps immediately to make up and compensate for the gap by using other organizations in the sector or other sectors. This is a categorical condition and therefore every such action requires specific, serious discussion and solution.

Nor should our controlling organs, in particular the people's control committee and the Georgian Communist Party Central Committee Party Commission and their local subdivisions stand aloof. On each occasion it is essential to ascertain painstakingly whether the amendment was objectively necessary or whether it was prompted only by the desire to make work easier and to achieve plan fulfillment with minimum effort. It is on this basis that we should determine our attitude.

In this connection I must say a few words about the Ministry of Light Industry. The comrades have let us down badly. The plan amendment undertaken by the ministry without, moreover, any serious discussion at the level of the republican organs has influenced the overall pace of production growth in the republic. Not surprising, for it is not a case of kopeks but of a volume of R110 million!

We often say that in the past two 5-year plans light industry workers gave the republic strong support. Their tempo was very high. But they are beginning the 11th 5-Year Plan badly.

Of course, objective reasons for amendment also existed. But was everything done to avoid it? Of course not. Many positions were disputed. But now we are obliged to make up this enormous gap by emergency means.

All I have said does not lift responsibility from the relevant section of the Georgian Communist Party Central Committee and its director, Comrade O. M. Ivanashvili. We would ask Comrade N. A. Chitanava, member of the Georgian Communist Party Central Committee Bureau, to investigate the problems of this sector more thoroughly.

This is why the multifaceted nature and complexity of the socioeconomic and political tasks we are resolving urgently requires the further /improvement of the standard of control and verification of execution./

The CPSU Central Committee, the Central Committee Politburo and secretariat set a good example in organizing control and verification of execution for all party organizations. The Georgian Communists are well aware of this. The party Central Committee's great attention toward all these questions was reaffirmed with the utmost clarity at the recent meeting between Comrade K. U. Chernenko, member of the CPSU Central Committee Politburo and secretary of the CPSU Central Committee, with members of the Georgian Communist Party Central Committee Bureau and the Tbilisi Party Gorkom.

Comrade Yu. V. Andropov's speech at the Central Committee December Plenum is imbued from start to finish with the spirit of enhancing executive discipline. It must be made a rule that any new decision on a given question is taken only when the previous decisions have been fulfilled or some new circumstances have emerged, the plenum said absolutely rightly.

The quality of the preparation of many decisions has improved markedly in our republic recently. These decisions are distinguished by their specific, well-founded nature. For instance, in the Central Committee apparatus this year the proportion of unfulfilled decisions was almost halved and the number of resolutions which were not implemented on schedule was considerably reduced.

At the same time there are also decisions which are not fulfilled. And we must treasure the authority of literally every decision, every resolution, because each of them contains a positive, rational principle. Otherwise we would not have taken it.

Thus at the Georgian Communist Party Central Committee Fourth Plenum we held a serious discussion of the Shchekino method. It is gratifying that the Ministry of Meat and Dairy Industry, the Ministry of Food Industry, the Ministry of Timber and Wood Processing Industry and the Samtrest [expansion unknown] have markedly stepped up this work, thus ensuring a definite increase in labor productivity. However, analysis shows that if all ministries and departments were to achieve the level of the leading ones in this matter we would be able to increase labor productivity in the republic's industry by almost 2 percent more. And that is an enormous reserve.

To ensure that a decision taken by a party, soviet or other organ is really authoritative, it must propose measures making it possible to improve the situation sharply and ensuring the proper end result. In this connection, in preparing a resolution, it is essential to analyze the essence of the issue in depth and to know its final objective. Then verbiage, demagogic slogans and slick meaningless phrases are ruled out. It is through efficiency that we can best combat the cliches and formalism that are inherent in some decisions and make it possible to avoid specific assessments and to shirk responsibility.

Meaningless resolutions appear primarily because they are prepared by incompetent people who do not know what to suggest for the question under discussion. We frequently say that we must teach some appatatus workers in party, soviet and other organs the ability to write and draft documents correctly. In my opinion, we should be franker and more precise--these workers must be taught the ability to analyze and compile fruitful proposals, to seek to improve not only their literary but mainly their professional skill.

Soviet ispolkoms must become one of the main cells in raising executive discipline. The very name says that they must unswervingly execute the will of the people and seek a high standard of executive performance from other organs. The Council of Ministers and the Supreme Soviet Presidium are called on to perform a large amount of work to improve the style of local soviet organs' activity.

As yet the link between these very authoritative organs and local organs is inadequate and that is one reason why, for instance, the expenditure section of the republic's state budget for the first 9 months of this year has been fulfilled by only 93 percent, and almost R4 million in health care and R15 million in education have not been assimilated. The majority of rayon and city soviets are still making inadequate use of the rights granted to them with respect to increasing local budgets and using additional funds. Yet this would make it possible to strengthen the local soviets' material and financial base substantially.

Nor is full use being made of rights to use local resources, including local construction materials, for repairs and the provision of amenities. Yet this promises to provide considerable benefit. I think the republican organs, the Gosplan and the Ministry of Finance must get right down to this very interesting and important question.

Something else must also be kept in kind--/party leadership of economic activity produces the maximum effect when it is based on a firm scientific foundation and is exercised on a scientific basis./ I should like to say a few words about this in particular. You frequently hear complaints about the small size of the management apparatus. At the same time, how many scientific research organizations and how many branches of all sorts of union institutions we have! It must be said frankly that it is people with top qualifications and scientists with degrees who are working in them. That is an enormous potential. If it is directed toward the resolution of the problems which are most pressing for the republic, the benefit will be mutual--to both science and practice.

We vote with both hands for science and scientific methods. No one has any doubts on that score. In our view, science should today provide us with the solution of problems in two main areas: on the one hand, it should ensure the all-round acceleration of scientific and technical progress in the national economy and, on the other, it should supplement the activity of the management organs and provide our management apparatus and management workers with the necessary ideas and proposals and perform in-depth analytical work.

To achieve a sharp improvement in the standard of management and executive caliber, we must think seriously right now about the system we are to use next year to enhance the influence of the Central Committee, the Council of Ministers and the republic's other directive organs on the solution of economic questions.

In our view the main element in improving the leadership of the national economy is /the improvement of the practice of summing up the results of economic activity./ We have considerable and original experience. The comrades are well aware of how results are summed up at the level of the Central Committee Bureau and Council of Ministers Presidium and at our joint sessions and of what the methods of monitoring and assessing all the processes taking place are. I think everyone will agree that every expanded session of the Central Committee Bureau and Council of Ministers Presidium is a sort of school for our party and economic leaders and for the republican leaders themselves, including the Central Committee first secretary.

/It is very important not simply to learn but also to be able to apply the acquired skills to the maximum benefit locally, in specific sectors, and to seek here too a systematic approach toward assessing the activity of the enterprises and organizations under our jurisdiction./

We have frequently mentioned the territorial intersectorial production association created in Poti to manage the city's economic and social development but, truth to tell, we have not undertaken any deep investigation into the mechanism of its operation. Yet the association controls the formation of 52 very important economic and social indicators! That is what it means to really manage all the basic processes on the scale of a city! Truly enormous reserves have been successfully put to use and production efficiency has been sharply increased.

We reported to the Central Committee Plenum about this experience and about how, for instance, industry in Poti City fulfilled the 10-month plan in 9 months with a production growth rate of 111 percent, output bearing the seal of quality increasing 13.3 percent, export output increasing 38 percent and labor productivity 10 percent. We said that this experiment compensates for the shortcomings characteristic of sectorial centralization and narrow departmental specialization. And, in our view, it has a great future.

Very interesting trends in managing the city economy have emerged in Tbilisi, in the capital's Leninskiy Rayon. The main thing is not to be afraid of risk or innovations!

We must not wait for readymade formulas, we must find solutions and answers by generalizing our own and world experience, amalgamating the knowledge of the best practical workers and scientists. That was how the November plenum set the task. And we must give every encouragement to a creative approach toward management in all territorial components. I do not even mention the ministries and departments and sectorial associations, many of which have a substantial information base and computer equipment. But all this becomes a real production force only on one essential condition--under the conditions of a system where this entire mechanism does not merely idle. [as printed]

Take the Ministry of Agriculture. How many problems have accumulated here, how much must be analyzed, weighed and discussed, how much must be considered? But why not do this when summing up the results of the sector's work, why not discuss these problems with the participation of local leaders--kolkhoz chairmen, sovkhoz directors and so forth? I was told that the ministry is making definite attempts to introduce such an integrated system. This work must be accelerated. The relevant Central Committee sections must join in it to ensure that the Ministry of Agriculture becomes a sort of model for others.

The same may be said of all other sectors and territorial management organs. Everywhere we have opportunities for setting up work to sum up results. At ministry, department and party raykom level it is time we reached individual enterprises and farms, shops and teams.

Incidentally, this applies not only to the strictly production sphere. Have we accumulated fewer problems in, for instance, health care, trade and consumer services? Not everyone by any means knows what machine tools are produced by a particular plant but everyone is offended and angered by the inattention of a doctor, the rudeness of a salesman or the poor skills of workshop workers.

Why should we not sum up the results of the theatrical season? The theater is not only a spectacle, it is our powerful ideological weapon. We should also know what benefit we have derived from an international exhibition organized in the republic or from one of the scientific symposiums of which so many are held in our republic.

/Summing up results is a form of control, it is a report on work done. Summing up results is a school for the professional growth of our cadres, a school for expanding their outlook./ And a system must be created which forces every leader to work on himself constantly and to augment the end results of his activity in the post entrusted to him by the party.

The party organizational work section in conjunction with other sections of the Georgian Communist Party Central Committee is now tackling these problems in earnest.

The practice of summing up results will undoubtedly help to /enhance the responsibility of our cadres and officials for the sectors entrusted to them./ We have frequently emphasized that the expansion of socialist democracy is unfailingly accompanied by the consolidation of socialist discipline and that these are two aspects of one and the same process.

It was the November plenum which reemphasized that the expansion of independence must in all cases be combined with the growth of responsibility, with concern for the interests of all the people. And today, in raising acute problems, we have named specific comrades and given them specific instructions. Unfortunately not all our leaders can cope with their responsibility and sometimes unforeseen difficulties arise for this reason, as happened, for instance, as a result of the production breakdown at the Batumi Oil Refinery. You form the impression that the plant's leadership and its director, Comrade E. V. Gventsadze, are not sufficiently aware of the fundamental significance of that enterprise's output for the national economy, and not only the economy of our republic.

An analysis of the state of affairs at the plant shows that to ensure its harmonious work it is vitally important to resolve questions of normalizing the supply of energy to production, the tank farm, the struggle against corrosion, the replacement of a large amount of obsolescent and obsolete equipment and so forth. But who if not the enterprise and party organization leaders should raise these problems and seek their solution? Here the interest and support of the local party and economic organs and union ministry are undoubtedly needed. I think it will be right if we make Comrade G. Ye. Chigogidze, member of the Georgian Communist Party Central Committee and second secretary of the Adzhar party obkom, personally responsible for the refinery's uninterrupted operation.

Or take another example. Because the water of the River Kura had become extremely murky, there was an emergency stoppage at the Rustavi Metallurgical Plant as a result of which there was a shortfall of over 9,000 tons of coke, over 32,000 tons of pig iron, about 50,000 tons of steel, almost 45,000 tons of rolled metal and about 12,000 tons of pipes. It is considered that this happened for objective reasons. But what if we take a closer look?

How could such a large-scale enterprise be allowed to obtain water from a mountain river and to have no reservoir? You cannot explain this only by the planners' blunders--after all the plant has been working for years. Or why to this day has a water recycling system not been introduced? How many times our party commission has concerned itself with this problem, and how many times we have examined it at the level of the Central Committee Bureau and at the Council of Ministers! There are also other acute questions but they have not been reflected even in the bilateral [dvustoronnyye] measures for the plant approved this year. Of course, the Central Committee is to blame, we are to blame here too. All the more so in that the modernization which is now being undertaken does not eliminate the disproportion between the main production sectors. We are investing tens of millions of rubles in modernization but the problems remain.

All this confirms yet again the objectivity of the criticism leveled at the November plenum against the union Ministry of Ferrous Metallurgy and the need for the Gosplan, the Gossnab and the other organizations to help it, but it does not absolve us or the plant's director, Comrade O. N. Suladze, of responsibility.

And how can we explain the regular failure to meet targets and frequent accidents at the Rustavi Chemical Plant, as a result of which the enterprise has already failed this year to supply the national economy with 91,200 tons of synthetic ammonia, 4,100 tons of caprolactam and over 302,000 tons of fertilizers? You well known, comrades, what this means to the republic. Here too the reasons are far from objective, as they might seem at first glance. Somewhere slackness has been allowed, and due principledness has not been displayed in some respects. How can you explain except by the carelessness of shift chiefs comrades M. A. Chachibaya and M. O. Tomadze the fact that one of the nitric acid shop's units went out of commission, as a result of which enormous damage was caused and the entire shop is standing idle, and we were obliged to authorize criminal proceedings on this case?

In brief we expect a resolute reorganization in the style of his leadership from the plant's director, Comrade G. T. Gogoladze. The Rustavi party gorkom and gorkom first secretary Comrade R. M. Georgadze must display more persistence.

Or take the situation which has formed in the glass container industry. Despite amendments to the plan, there has already been a shortfall of over 25 million bottles since the beginning of the year. Yet Comrade R. Kh. Kontselidze, the minister of food industry, and Comrade D. E. Kukhianidze, general director of the Gruzpishchetara Association, are completely unable to find a common language, and there are elements of a lack of collegiality.

Understand me correctly. We may not doubt the high professional qualifications of some of our esteemed leaders. But it is time something else was grasped--to be fully answerable for a matter, qualifications alone are not enough, you must display firmness, persistence and I would even say efrontery, in the good sense of the word, when it comes to fundamental things, to state and nationwide interests. Ultimately /the main criterion of a worker's organizational abilities is his ability to carry any matter through to completion, to its logical conclusion./

On the other hand, to achieve a high degree of responsibility on the part of cadres a correct system is also needed, a system helping to enhance party exactingness. /Mutual exactingness is one of the foundations of a high degree of democracy in management./

That is why I want to reiterate an idea already voiced at the ninth plenum. The idea that at the 27th Georgian Communist Party Congress every leader of the republic, including every bureau member, all our ministers and economic leaders will have to report to the republican party organization on how they have tackled their commitments and the solution of the key task--the fulfillment of the 5-year plan--and what personal contribution they have made to ensuring the rapid pace of the Georgian SSR's development. I think such an approach is fully justified.

/The year of 1983 is a decisive year of the 5-year plan and our cadres, communists and all working people must decide its destiny.

Ensuring a high standard of party leadership of socioeconomic life means above all completing the 11th 5-Year Plan honorably!/

IV.

Of course, it is no accident that we are placing emphasis today on enhancing our cadres' responsibility. The personal responsibility of every communist, every leader and every worker for the fate of national economic plans and the buildup of our state's economic and defense might assumes exceptionally great significance under the conditions of the present international situation.

As the party Central Committee plenum stated, the unswerving upsurge of the economy and the improvement of the people's welfare are our duty to soviet people and also our international duty. This expresses Lenin's perceptive observation that we exert our main influence on the world revolutionary process through our economic policy.

Everyone must realize that the special world-historical role which the era itself has assigned our country and our party is not only honorable but also very complex. /Our responsibility is the soviet people's great historical responsibility for the destiny of socialism on earth and for peace and social progress./

On the one hand this requires the further improvement of the standard of military patriotic work and the active participation of soviet, trade union and Komsomol organs in it. We will continue to strengthen our link with the Transcaucasus Red Banner Military and border districts and to improve the training of young people for army service and seek to ensure that every citizen of the Georgian SSR sacredly observes the law "On the USSR State Border" brought into effect at the Supreme Soviet session.

On the other hand defense might is composed of economic might. Therefore we will continue to rapidly build up the economic potential of our republic, which has been entrusted with the task of safeguarding our great motherland's southern borders.

This year will be a sort of test, a serious trial for us. The situation in the national economy now is extraordinarily complex, comrades. First, extremely unfavorable weather conditions have formed. There was the unusually cold winter in the mountains, spring frosts, torrential rainfall, flooding and then unprecedented hail damage. This has had a most unfavorable impact both on agriculture and on industry--in the processing sectors alone, mainly because of failure to harvest the grapes, we lost opportunities for producing output worth millions of rubles. Second, we have been constantly limited by material resources, as a result of which the initial plan volumes in industry have been reduced by R230 million. Third, the restrictions in the supply of electricity and interruptions in fuel supply have had a very acute effect. Fourth, the unstable work of transport, the lack of freight cars and so forth have made themselves felt.

All these factors are having an influence at the present time too. So, although we have finished the first 10 months of the year quite well, it is now nevertheless necessary to speak of an /emergency/ situation, and /emergency/ position. And we must take /emergency/ measures.

According to the calculations of the republic's Gosplan, in order to ensure the annual growth rate in industrial production envisaged by the pledges, R2,051.5 million of output must be produced in November-December.

That is a very large amount, comrades. There is a month to go before the end of the year, the jubilee year, and we must do everything in our power to ensure that it is a special month, a month we can be proud of later and hold up as an example. /We must declare the last month of this year to be a shock month so that every worker and kolkhoz member, team leader and section chief, enterprise director and kolkhoz chairman, minister and raykom secretary will realize and feel with his whole heart that it is his personal party and civic duty to overcome the exceptional difficulties facing us./

Reserves do exist, but they lie very deep, and we must bring them into play at all costs. It is necessary, as the Central Committee plenum demanded, to increase responsibility for the observance of statewide, nationwide interests and to resolutely eradicate departmentalism and localism.

All forces and abilities and all our experience must be mobilized as much as possible. A fine effort must be felt in every section and in every link.

/Not a minute's idle time! Not a gram of waste!/ That must be our motto today.

Party raykoms, gorkoms and obkoms must do everything to organize three-shift working wherever it is not in place. Everyone must be involved, down to tekhnikum and vocational and technical school pupils and VUZ students.

We have instructed the Central Committee sections, the Council of Ministers and the Gosplan to keep daily watch over the state of affairs in the national economy. Every minister, every association chairman and every party gorkom must daily monitor and report on progress in fulfilling the targets that have been received. The time has come to exploit any potential, even the most insignificant, for the production of additional output. There is now no alternative, comrades!

And it is very important, comrades, to organize correct /ideological support./ The utmost effort must also be felt in the work of ideological services. It is the duty of our ideological workers to be in the forefront, to daily showcase and propagandize those who work with all their strength and energy, to angrily criticize violators of discipline and idlers and to expose any cases of mismanagement. Via the mass news media people must be thanked for their consciousness and diligence and for their shock, intensive work. An emergency atmosphere must be really created and a creative approach to work must be stimulated in every possible way.

The economy must be the focus of attention in our propaganda. It is important to explain to people the specific meaning of certain economic terms [kategorii] so they understand what they are working for.

We are always speaking of the rate of socioeconomic development and the need to overcome the republic's lag behind the average all-union level. But we must explain that what depends on this, for instance, is the expansion and strengthening of the material and technical base of production, the strengthening of the economic potential and, of course, the further improvement of the population's prosperity.

The higher the rate of economic development, the better the state budget, the bulk of which is made up of income from the funds of enterprises and organizations, shapes up. So the more rapid the growth in public wealth and living standards is and the greater the funds earmarked for the construction of hospitals, schools, housing and so forth are.

In 1975-1981 the republic's budget increased by 34.2 percent. According to preliminary figures, its income in 1982 will total R2,712 million, of which around R1,310 million will be channeled into financing sociocultural measures.

The same can be said with regard to output prime cost. What, you might think would a 1-percent reduction in it provide? Yet on the scale of our republic's industry alone, it would have made it possible to save R76 million of material and labor expenditure last year and R80 million in the first 10 months of this year. And that would have been additional profits, some of which would have gone to swell the economic incentive funds and some to strengthen the income base of the budget and to expand production at enterprises themselves.

Or take this: We have said today that it is good when the growth in national income outstrips the growth in the global social product. The point is that materials expenditure and national income are two parts of a single whole--the global social product. When national income increases more rapidly than the global social product, it means that materials expenditure is growing more slowly--that is, that fewer material resources are being expended per unit of output, that they are being saved. In simpler terms, the public health is growing more rapidly than the cost of creating it.

Thus the increasing preferential growth of national income makes it possible to further increase funds for the expansion of production and the increase of the economic potential and to increase the consumption fund, a considerable part of which is distributed and redistributed via the country's budget system. The more national income we have at our disposal, the more funds we can channel into new construction, increased wages, the payments of pensions, allowances, grants and so forth. In our state there are no other sources for this.

Such is the arithmetic of certain economic terms. Some people may find it elementary, but, in our view, it has to be grasped because it confirms yet again that /in order to live better, you have to work better./

In this connection /political work in the national economy/ must be markedly intensified. This is a most important component part of party leadership of economic building and an essential condition of increased party influence on economic activity.

For a successful solution, all the problems we have raised in our report today require close unity of organizational, political and economic work whereby each economic task is bolstered by reliable organizational and ideological support. The close integration of political and economic tasks is manifested in this.

You cannot get things moving merely by slogans, Comrade Yu V. Andropov stressed. Great organizational work by party organizations, economic leaders and engineering and technical personnel is necessary.

First of all, this work must be directed, as we have already said, toward generalizing and disseminating the positive experience of managing the most important problems of economic, social and political life which has been accumulated in the republic and its regions. In this connection it would be worth considering holding a special seminar for the leaders of ministries, departments and party committees to analyze profoundly and comprehensively everything of greatest value that we have at our disposal in the sphere of forms and methods of solving the key problems on the basis of the principle of focusing efforts, to exchange positive experience and to formulate recommendations on its introduction everywhere. That is the first stage.

The second stage must clearly include system for studying, analyzing and generalizing the work style of our party committees. A system that precludes a one-sided approach, superficiality, a lack of objectivity and fitfulness. The meetings between secretaries of the Georgian Communist Party Central Committee and the leaders of all the republic's rayons, cities and autonomous formations which are planned for early next year, before our next plenum, and the compilation before this of descriptions of local organs' work style can be regarded as an important step toward the formation of such a system.

We attach great importance to the meetings with the leadership of the republic's regions. They must graphically demonstrate how party committees, local soviet ispolkoms, rayon agroindustrial associations and trade union and Komsomol organizations are handling the specific situation and exploiting potential and reserves for the region's development. The discussion at the meetings will be extremely specific and extremely businesslike, and thorough preparations must be made for it, comrades.

The party organizational work section, with the participation of other Central Committee sections, has now embarked on a systematic analysis of the activity of party gorkoms and raykoms. Questions of the leadership of the economy, of social life and of the state of the moral and political climate and forms and methods of organizational work are being studied and the existing shortcomings are being analyzed. In our view, this work should be carried out systematically once a year. This will make it possible to implement the leadership of extremely important socioeconomic processes more competently.

The creative quest must also be stepped up in the organization of work with people. The Central Committee bureau recently approved a procedure for interviewing and conducting the probationary period and training of party-vetted cadres. This document is not merely organizational in character, it reflects the increased level of the demands now made in cadres and on the whole process of the management of cadre work, which is also of crucial importance in resolving the economic tasks that face us.

The report and election campaign that has just ended in the republic's party organizations graphically demonstrated communists' activeness and interest in economic questions and in improving the style in which they are implemented. It showed once again how the communists' high level of ideological maturity is transformed into improved forms and methods of economic activity and how, concersely, /the development of the economy provides a mighty base for the further enhancement of the political prestige of our Leninist party./

This is displayed particularly convincingly in the socialist competition in honor of the glorious event--/the 60th anniversary of the formation of the USSR./ This jubilee is full of great political meaning. It graphically demonstrates the fundamental advantages of the socialist principles forming the foundation of the Soviet multinational state. And our party's wise Leninist strategy provides us with the stimulus for ascent.

Comrades!

In its resolution the party Central Committee November (1982) Plenum expressed the firm certainty that the workers, kolkhoz members, intelligentsia and all the working people of our multinational socialist motherland, rallied closely around the communist party, would fittingly greet the 60th anniversary of the formation of the USSR, would mark 1983 with new achievements in economic building and would ensure the country's continued successful progress along the Leninist path to communism.

On your behalf allow me to assure the CPSU Central Committee and the Central Committee Politburo that Soviet Georgia's Communists and working people unanimously support the Central Committee's line, which is set out in Comrade Yu. V. Andropov's report at the November plenum, will piously maintain loyalty to our party's Leninist course and to the tasks of communist building and will do everything for the successful fulfillment of the plans and socialist pledges.

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

STATUS OF VIETNAMESE WORKERS IN COUNTRY REPORTED

Moscow SOTSIALISTICHESKAYA INDUSTRIYA in Russian 18 Nov 82 p 3

/Article by A. Yevreinov, APN correspondent: "I Am Learning Much That Is New"/

/Text/ A year has passed since that time when several hundred Vietnamese youths arrived in Volgograd Oblast, sent here by the SRV government for vocational instruction and work. Their status, like the status of other Vietnamese workers in our country for this purpose, has been defined by a special inter-governmental agreement. They enjoy the same rights as Soviet workers.

But how do the young Vietnamese live, study, and work?

In order to obtain an answer to this question, I traveled to the city of Nikolayevsk, a rayon center of Volgograd Oblast. Here a large group of Vietnamese youths are receiving vocational training at the Nikolayevskvolgovodstroy Trust, which specializes in constructing irrigation systems and other agricultural facilities. An educational combine was created for their arrival here.

Nikolayevskvolgovodstroy is a construction organization. Naturally, the training of the Vietnamese workers here is also conducted in the construction fields of specialization, which are particularly necessary for the rapidly developing economy of the SRV. The educational combine has been furnished with up-to-date laboratories, workshops, and audio-lingual facilities for studying Russian.

"In the Soviet Union I am acquiring the occupation of tractor- and bulldozer-operator," states 27-year-old Fam Kuang Khay from the city of V'yetchi. "At home I also used to work on a tractor, but here there is much more opportunity to increase my skills. Moreover, from the first few days on I have been under the patronage of an experienced Soviet worker, who has helped me in my studies and in my work...."

The climate here is mild. Although there are some periods of freezing weather during the winter, they do not last long; this is the effect of proximity to the warm Caspian and Black Seas. Summers are hot on the lower Volga. There is a great deal of greenery, fruits, and vegetables, while the renowned Astrakhan watermelons grow ripe.

"Admittedly, at first, I was rather afraid of the onset of the first few cold-weather spells," says Fam Kuang Khay, "but then I became convinced that this is not so terrible at all. One merely has to dress more warmly."

I became acquainted with Kha Van Tkhan. He is 21 years old and comes from the province of Binchitkhien. When I entered his room, Kha Van Tkhan was finishing a letter to his home.

"I am writing to my parents about how everything is going well here. I am studying, working, and learning much that is new and interesting. Everyone treats us in a very friendly way, and they are always ready to help. In our free time we engage in sports, watch motion pictures, read a lot, and in the summertime we go to the Volga River. I intend to spend my first leave in the Soviet Union in order to get to know the country better."

NORTHWEST BORDER GUARDS' PARTY AKTIV MEETING

PM031515 Leningrad LENINGRADSKAYA PRAVDA in Russian 17 Dec 82 p 2

[LenTASS report: "Reliably Guarding Motherland's Borders"]

[Text] A meeting of the party aktiv of the Red Banner Northwest Border District yesterday discussed the organizational and political work tasks of commanders, political organs and party organizations in fulfilling the decisions of the CPSU Central Committee November (1982) Plenum and the seventh USSR Supreme Soviet Session and the requirements of the USSR law on our country's state border.

Those assembled honored the bright memory of Leonid Ilich Brezhnev with a minute of silence.

The report was delivered by Lieutenant General A. G. Viktorov, chief of the troops of the Red Banner Northwest Border District.

Border guards, like all Soviet people, warmly and unanimously approve the decisions of the CPSU Central Committee extraordinary and November (1982) plenum and the USSR Law on the State Border and adopt them for unswerving guidance and execution.

The district's servicemen successfully fulfilled their combat and political training tasks and socialist pledges in honor of the 60th anniversary of the USSR's formation, and there was an increase in the number of servicemen and subunits with excellent results among the troops. It was pointed out that the combat readiness of personnel improved, and military discipline and order became stronger. The party organizations strengthened their influence in the units. There was an improvement in ideological and political education work with all categories of servicemen.

Proceeding from the complex international situation, the attention of those present was drawn to the need to boost political vigilance and the responsibility of commanders, political organ leaders and each border guard for fulfillment of the tasks to safeguard the USSR state border and of their own service duties.

Communists F. A. Lamov, A. I. Tymko, B. P. Ryabov, A. A. Kistenev, A. A. Shavanyavichus and others spoke in the debate.

The meeting was addressed by Major General V. S. Ivanov, chief of the USSR KGB Border Guards' Political Directorate, and N. Ye. Chelnokov, chief of a CPSU Central Committee sector.

The meeting participants gave the assurance that they will exert all their efforts and energy to fulfill the important tasks for the reliable protection of our motherland's borders and will make a worthy contribution to the realization of the decisions of the 26th CPSU Congress.

A greetings message to the CPSU Central Committee was adopted with great enthusiasm.

Taking part in the conference were Yu. F. Solovyev, first secretary of Leningrad Party Gorkom, and D. P. Nosyrev, chief of the USSR KGB Directorate for Leningrad Oblast.

MODEL REGULATIONS GOVERNING RAYON AGRARIAN-INDUSTRIAL ASSOCIATION

Moscow IZVESTIYA in Russian 9 Dec 82 pp 2-3

[Text] I. General Provisions

1. The rayon agrarian-industrial association is formed for the purpose of an improvement in the management of agriculture and other sectors of the agrarian-industrial complex of a rayon, on the basis of an increase in the economic independence and initiative of the kolkhozes and other enterprises and organizations incorporated in the association; coordination of their activity and mobilization of efforts for the successful fulfillment of the USSR Food Program; fuller use of the production-economic potential which has been created and resources; an unswerving growth of the volume of the production and a rise in the quality of the agricultural product and the high efficiency of the sectors of the complex.

2. The rayon agrarian-industrial association is created at the decision of the rayispolkom. The decision concerning the formation of an association is ratified by the rayon soviet.

The association incorporates in the established procedure kolkhozes, sovkhozes, interfarm enterprises (organizations) and other enterprises and organizations of the USSR Ministry of Agriculture, USSR Ministry of Procurement, USSR Ministry of Meat and Dairy Industry, USSR Ministry of Food Industry, USSR Ministry of Land Reclamation and Water Resources (other than enterprises for the construction of water-management factilities, which are incorporated in oblast, kray and republic ((ASSR)) agrarian-industrial associations), USSR Ministry of Rural Construction, USSR State Committee for Supply of Production Equipment for Agriculture and USSR State Committee for Forestry system.

Enterprises and organizations servicing several rayons may be incorporated in the association following coordination with the appropriate higher authorities.

Enterprises and organizations of other ministries and departments whose activity is connected with the production, procurement, processing and sale of agricultural products are incorporated in the association following coordination with the higher sectorial authorities.

Enterprises and organizations incorporated in the rayon agrarian-industrial association retain economic independence, the rights of a legal entity and departmental allegiance. They are guided in their activity by the regulations, statutes and other legislative instruments and also these model regulations.

3. The following are the main tasks of the rayon agrarian-industrial association:

ensuring the proportional and balanced development of the enterprises and organizations incorporated in the association for the purpose of an increase in food production, fulfillment of the state plans by all enterprises of the agrarian-industrial complex and an increase in production efficiency and work quality;

the highly productive use of land and its increased fertility, introduction of scientifically substantiated and the most efficient methods of running a farm and transition of production to industrial techniques;

the creation of a strong fodder base for animal husbandry, consistent transition to intensive methods of its management and an increase in the productiveness of livestock and poultry;

involvement in agricultural production of unused land, the efficient use of organic and mineral fertilizer and plant-protection agents and implementation of a set of measures for land improvement, the struggle against soil erosion, environmental protection and the rational use of natural resources;

the rational use of allocated capital investments and material-technical, labor, financial and other resources, proceeding from the need for their concentration in the decisive areas and the surmounting of "bottlenecks" and disproportions;

an improvement in the servicing of the kolkhozes, sovkhozes and other production enterprises and a strengthening of their material-technical facilities;

the transformation of rural centers of population into well-appointed communities and the creation of a modern social infrastructure in the countryside, particularly expansion of road building by the joint efforts of the enterprises and organizations incorporated in the association;

an improvement in economic and intersectorial relations contributing to the organizational-economic unity of the agrarian-industrial complex and the orientation of the activity of the enterprises and organizations incorporated in the association toward the final results of agricultural production;

the creation of stable economic conditions for the financially autonomous activity of each labor collective, increased responsibility for profitable production management and the introduction of rational forms of the organization, norm-setting and remuneration of labor and material and moral incentives;

the economically substantiated specialization and concentration of production and the development of interfarm cooperation and agrarian-industrial integration aimed at the efficient use of material, financial and labor resources;

organization of the development and practical implementation of comprehensive intersectorial programs for the extensive introduction of the achievements of science and progressive experience and the introduction of progressive, fundamentally new resource-saving techniques increasing labor productivity and production efficiency;

the implementation of measures to increase the efficiency of the lagging sectors, works and enterprises and leveling of the economic conditions of management;

loss prevention and the preservation of the agricultural product at all stages of the cycle of its production, procurement, shipment, processing, storage and sale;

organization of the conclusion of forward contracts of agricultural products and also other business contracts and the strengthening of their role and significance as a legal means of ensuring fulfillment of the plans of state purchases and other plan quotas;

implementation of measures for the further development of the private subsidiary farms of the citizens and the rural subsidiary farms of enterprises and organizations as an integral part of the country's food complex and also for the development of subsidiary enterprises and works on the kolkhozes and sovkhozes;

the creation of a system of the data-computer servicing of the enterprises and organizations incorporated in the association based on a uniform collective-user computer system and the extensive introduction of automated systems and economico-mathematical systems of management;

the development in every possible way of socialist competition for the achievement of high production-economic indicators of work and the working people's extensive participation in production management; and

observance of socialist legality in economic relations and the implementation of measures to improve legal work at the enterprises and organizations incorporated in the association.

4. Availing itself of the property assigned its effective administration or use, the rayon agrarian-industrial association exercises its activity in accordance with the plan, performs the duties entrusted to it, bears the responsibility and enjoys the rights connected with this activity, has an independent balance sheet and is a legal entity.

5. The rayon agrarian-industrial association is subordinate in its activity to the rayon soviet and its ispolkom and also, correspondingly, to the oblast,

kray and republic (ASSR) agrarian-industrial association and in the union republics lacking an oblast division to the union republic council of ministers.

6. The rayon agrarian-industrial association is guided in its activity by USSR and union republic legislation and also the regulations governing a given rayon association drawn up with regard for the concrete singularities of this association on the basis of these model regulations and ratified by the rayispolkom and strictly observes socialist legality and state discipline.

II. Leadership of the Rayon Agrarian-Industrial Association

7. Leadership of the rayon agrarian-industrial association is exercised by the association council. The association council is the highest organ of management of the association.

The association council is formed in accordance with established procedure at a session of the rayon soviet upon submission by its ispolkom.

The council of the rayon agrarian-industrial association is, within the limits of competence, an organ of state administration.

8. The council of the rayon agrarian-industrial association incorporates the chief of the agricultural administration of the rayispolkom and his first deputy (deputy), kolkhoz chairmen and sovkhoz directors by office and also leaders of enterprises and organizations of other sectors of the agrarian-industrial complex and representatives of the corresponding public organizations.

The chairman of the association council is the chief of the rayispolkom agricultural administration.

The quantitative and personnel composition of the association council is in each concrete instance confirmed and changed by the rayon soviet. Kolkhoz chairmen and sovkhoz directors should constitute the majority of council members here.

9. The council of the rayon agrarian-industrial association convenes once a month. The council's meetings are deemed competent when no less than three-fourths of its total composition are present. The council's decision on questions within its competence are passed by simple majority open vote and are binding for all the enterprises and organizations incorporated in the association.

10. Day-to-day leadership of the activity of the rayon agrarian-industrial association is exercised by the chairman of the association council, who ensures fulfillment of the council's decisions and is personally responsible (within the limits of his competence) for the state of affairs and activity of the rayon agrarian-industrial association and its council.

The chairman of the association council--the chief of the rayispolkom agricultural administration--is simultaneously first deputy chairman of the rayispolkom.

The first deputy (deputy) chief of the rayispolkom agricultural administration is by office first deputy chairman of the rayon agrarian-industrial association council.

The manager of the Sel'khoztekhnika rayon production association may, at a decision of the rayon agrarian-industrial association council, be appointed deputy chairman of the association council for the mechanization and electrification of agricultural production and material-technical supply.

Depending on the concrete singularities of each rayon, the leaders of other enterprises and organizations servicing agriculture incorporated in the association may also, at a decision of the association council, be appointed council deputy chairmen.

11. The rayon agrarian-industrial association council chairman:

is in charge in accordance with current legislation and these model regulations of the property and resources allotted the association;

concludes contracts, opens the appropriate accounts of the association in USSR Gosbank (USSR Stroybank) establishments and operates in accordance with decisions adopted by the association council;

represents the association's interests in all enterprises, establishments and organizations and in the judicial and arbitration authorities and issues proxies (including those containing power of attorney);

issues within the limits of his competence orders (instructions) for the association; and

determines the competence and official duties of his deputies.

12. The work machinery of the rayon agrarian-industrial association council is the rayispolkom agricultural administration machinery.

13. The structure and employee strength of the rayispolkom agricultural administration--the work machinery of the rayon agrarian-industrial association council--are confirmed by the rayispolkom upon presentation of the association council, prodeeding from the worker strength provisions laid down in the established procedure and the model structure of rayispolkom agricultural administration and the designated ceilings on maximum appropriations for composition of the administrative machinery and with regard for the specialization and structure of a given rayon's agricultural production.

14. Intersectorial commissions for the production, procurement and processing of products, an improvement in economic mutual relations, social problems of the development of the countryside and other questions may be created from

highly skilled specialists, representatives of public organizations and production pacesetters for the extensive enlistment of the working people in the preparation and discussion of proposals for the economic and social development of the rayon agrarian-industrial association, study of the conditions of intersectorial cooperation of production and its concentration, specialization and territorial location and the development of recommendations for the use and introduction in production at the enterprises and organizations incorporated in the association of the latest achievements of science and technology, the scientific organization of labor and progressive experience and also for the preliminary examination and skilled preparation of questions submitted for the association council's discussion.

The composition of the commissions and the regulations governing them are confirmed by the association council.

III. Rights and Duties of the Rayon Agrarian-Industrial Association

15. The rights and duties of the rayon agrarian-industrial association are determined by these model regulations, other legislative instruments and also the regulations governing a given rayon association.

The rights and duties of an association provided for by these model regulations are exercised by the association council.

Rights and Duties in the Planning Sphere

16. The activity of the rayon agrarian-industrial association is organized on the basis of consolidated 5-year and annual plans of the economic and social development of the rayon agrarian-industrial complex which it develops, incorporating the basic indicators of the corresponding plans of the kolkhozes, sovkhozes and other enterprises and organizations (irrespective of their departmental allegiance) incorporated in the association, and also indicators connected with the accomplishment of common production, socioeconomic and cultural-everyday tasks for the rayon agrarian-industrial complex as a whole.

The consolidated plan of the economic and social development of the rayon agrarian-industrial complex is submitted to the rayon soviet and the higher organ of administration of the agrarian-industrial complex.

17. On the basis of the plan of state purchases conveyed by the established procedure the rayon agrarian-industrial association draws up for the kolkhozes, sovkhozes and other agricultural enterprises with their participation draft plans of the sale of agricultural products to the state and submits these drafts for ratification by the rayon soviet. The plans for the sale of agricultural products to the state ratified by the rayon soviet are conveyed to the kolkhozes, sovkhozes and other agricultural enterprises and, in addition, plans for the sale of the products in whose production they specialize are conveyed to the specialized farms of rayon jurisdiction.

The plans for the sale of agricultural products to the state by specialized farms of republic and union jurisdiction are drawn up and ratified in the established procedure.

18. With respect to the kolkhozes and also sovkhozes and other agricultural enterprises under the jurisdiction of the rayispolkom agricultural administration the rayon agrarian-industrial association:

confirms on the basis of notified quotas with regard for the requests of the kolkhozes, sovkhozes and other agricultural enterprises and in connection with the sources of financing the allocation of capital investments (including construction-installation work) and the volume of supplies of tractors, motor vehicles, tractor attachments, grain-harvesting combines and other basic agricultural machinery, fertilizer and chemical plant-protection agents and also formula food;

allocates the volumes of supplies of construction and other materials for the performance of work by the direct-labor method and for repair-maintenance needs;

confirms the allocation of quotas for supplies of petroleum products and other material-technical resources necessary for fulfillment of the plans; and

determines the targets with respect to other plan indicators subject to ratification by the higher authorities.

The plans of capital investments, the quotas of contract work, the plans of material-technical supply and financial-economic indicators are conveyed to the farms simultaneously with the plans for the sale of agricultural products to the state.

19. Within the limits of the allocated material-technical resources and on the basis of farm requests the rayon agrarian-industrial association examines and confirms for the enterprises and organizations of the USSR State Committee for Supply of Production Equipment for Agriculture incorporated in the association:

quotas for the volume of the operations with respect to the production-engineering servicing of the enterprises and organizations incorporated in the association, including installation, startup and adjustment and mechanized operations, machinery assembly and modernization of animal husbandry farmsteads and other production facilities;

the volume of major and current repairs of machinery, equipment, components and units and the volume of operations on servicing the equipment of the kolkhozes, sovkhozes, enterprises and organizations incorporated in the association, including operations in kolkhoz and sovkhoz workshops and at Sel'khoztekhnika enterprises; and

the volume of freight shipments for the kolkhozes, sovkhozes and other agricultural enterprises and organizations by Sel'khoztekhnika transport enterprises. The rayon agrarian-industrial association also examines other indicators of the draft plans and submits proposals in respect of them to the appropriate higher authorities.

The indicators confirmed by the rayon agrarian-industrial association council in accordance with this clause are the basis for the compilation of the rayon Sel'khoztekhnika's production-financial plan.

In instances where the rayon Sel'khoztekhnika has specialized production facilities, its plan indicators related to the volume of work performed for other rayons are confirmed by the higher sectorial authority.

20. The rayon agrarian-industrial association examines and confirms for the Soyuzsel'khoztekhnika enterprises and organizations incorporated in the association a consolidated plan of the agrochemical servicing of the rayon's agriculture, including the volume of supplies of mineral fertilizer, plant-protection agents and other chemical products, plans for the delivery of chemical fertilizer directly to the farms and plans for the performance of agrochemical operations in accordance with the established indicators and within the limits of the allocated funds and established quotas.

21. For service water-management organizations of the USSR Ministry of Land Reclamation and Water Resources incorporated in the association the rayon agrarian-industrial association:

organizes the development and implementation in conjunction with the farms of measures for the highly efficient use of irrigable and drained land and the obtaining of big and stable harvests of agricultural crops thereon;

develops proposals with respect to the draft plans of water use and submits them in the established procedure for ratification and also implements measures for the efficient use of water by the water-user-farms for irrigation;

determines in accordance with need and the availability of production capacity of the service organizations on the basis of the requests of the kolkhozes, sovkhozes and other agricultural enterprises the volume and order of priority of the performance of work on purification and the repair of the water-management reclamative system and installations and also confirms plans for the performance of this work; and

examines other indicators of the draft plans and submits proposals in respect of them to the appropriate higher authorities.

22. With respect to the construction water-management organizations incorporated in the oblast, kray and republic (ASSR) agrarian-industrial association the rayon agrarian-industrial association:

examines the plans of water-management construction for kolkhozes, sovkhozes and other agricultural enterprises and organizations of the rayon and submits proposals in respect of them to the appropriate higher authorities; and

on the basis of outlines of the comprehensive use and protection of waters determines the water-management facilities to be designed and constructed in the rayon, including the technical improvement of operating reclamative systems, and submits proposals to the appropriate higher authorities.

23. For the construction organizations (including interfarm construction organizations) incorporated in the association the rayon agrarian-industrial association examines and confirms plans of contract construction and installation work to be fulfilled by these organizations for the kolkhozes, sovkhozes and other agricultural enterprises and organizations of the quotas with respect to the commissioning of fixed capital and production capacity.

24. For the procurement and agricultural product-processing enterprises and organizations incorporated in the association the rayon agrarian-industrial association:

examines the proposals with respect to the draft plans of purchases of agricultural products and supplies thereof to the processing enterprises and organizations, with respect to the acceptance of products directly on the farms and with respect to determination in the rayon of raw material zones for the processing enterprises and the assignment thereto of farms which supply the raw material with regard for the need for the fuller provision of the plants with agricultural raw material of the required assortment and quality and a reduction in product losses and transportation expenditure and submits its proposals to the rayispolkom; and

examines the draft plans of the industrial processing of agricultural products (with regard for forward contracts) on the basis of the production capacity of enterprises for the processing of agricultural products incorporated in the association and also other plan indicators, proceeding from the concrete conditions of the rayon's specialization, and submits proposals in respect of them to the appropriate higher authorities.

25. The rayon agrarian-industrial association also examines the draft plans of the enterprises and organizations incorporated in it not enumerated in clauses 18-24 of these model regulations and submits proposals in respect of them to the appropriate higher authorities.

26. On the basis of the proposals of the kolkhozes, sovkhozes and other enterprises and organizations incorporated in it the rayon agrarian-industrial association draws up forward plans of the specialization and location of agricultural production, enterprises for the acceptance and processing of agricultural products, repair-engineering workshops and product-storage depots and plans for the development of interfarm cooperation and agrarian-industrial integration and organizes their fulfillment.

Rights and Duties in the Sphere of Intersectorial Production-Economic Relations

27. The rayon agrarian-industrial association:

confirms on the basis of model norms rates (tariffs) for services rendered and work performed by enterprises and organizations, irrespective of their departmental allegiance, within the association (other than wholesale prices for major equipment repairs, tariffs and rates for transportation and construction-installation work and markups for supply-sales organizations laid down in the established procedure) providing for a reduction in the costs of the services rendered and work performed and an improvement in the system of the production servicing of the kolkhozes and sovkhozes;

determines the factory prices for livestock, feed, materials and other resources supplied by the kolkhozes, sovkhozes and other agricultural enterprises and organizations incorporated in the association to one another;

creates for the financing of measures connected with the accomplishment of production, socioeconomic and cultural-everyday tasks for the enterprises and organizations incorporated in the association as a whole centralized material incentive, socio-cultural measures and housing construction and production development funds and on the basis of the appropriate normative documents determines the area and sequence of their use;

centralizes at the suggestion of the kolkhozes, sovkhozes and other enterprises and organizations incorporated in the association the performance of individual production-economic functions (fattening of livestock, rearing heifers, production of formula food, repair and maintenance of agricultural equipment and the equipment of the animal husbandry farmsteads, agrochemical servicing, capital construction and others). A decision on the centralization of individual production-economic functions which entails the transfer from the farms of fixed production capital (agricultural equipment, workshops for its repair and such) and the transfer to enterprises of other ministries and departments of machine-operator personnel or other workers may be adopted by the association here only with the consent of the kolkhozes, sovkhozes and other enterprises and organizations concerned and the appropriate USSR ministries and departments and the union Kolkhoz Council;

entrusts the performance of centralized production-economic functions to individual enterprises and organizations, irrespective of their departmental allegiance, or adopts measures for the creation for this purpose of specialized subdivisions on the basis of interfarm cooperation;

adopts measures to strengthen the material-technical base of the procurement of agricultural products;

organizes fulfillment of the quotas of goal-oriented comprehensive scientific-technical programs, programs for the solution of most important scientific-technical problems and quotas for the introduction in production of scientific-technical achievements and advanced experience;

supervises the course of fulfillment of the plans of the economic and social development of the enterprises and organizations incorporated in the association in respect of questions related to their joint activity;

receives reports of leaders of the enterprises and organizations incorporated in the association on their fulfillment of the plans and quotas for the production, purchase, acceptance, storage, shipment and processing of agricultural products and supplies of machinery, equipment, materials and spares and on performance of their duties in respect of all forms of servicing of the farms and other questions of joint activity and adopts the appropriate decisions in respect of them;

organizes supervision of the fulfillment of adopted decisions and, where necessary, conducts in the established procedure an inspection of the activity of the enterprises and organizations incorporated in the association, examines the results of the inspections and adopts the appropriate decisions in respect of them; and

organizes supervision of settlements between kolkhozes, sovkhozes and other enterprises and organizations engaged in the procurement, processing and storage of agricultural products and servicing agriculture and monitors the soundness of the storage and efficiency of the use of mineral fertilizer, equipment, fodder, construction materials, fuel and lubricants, spares, packaging and other material resources.

Rights and Duties in the Sphere of the Sale of Agricultural Products

28. The rayon agrarian-industrial association:

ensures fulfillment of the plans conveyed to the farms for the sale of agricultural products to the state and also of the forward contracts for these products and contributes to the development of the direct relations of the kolkhozes, sovkhozes and other agricultural enterprises and organizations with industrial and trade enterprises, the transition to the acceptance by the procurement organizations of products directly on the farms and their shipment from the farms by the procurement workers' transport;

adopts measures to ensure that all the agricultural products intended for sale to the state by the kolkhozes and sovkhozes be accepted by the appropriate procurement and other organizations; and

develops and implements a set of measures to increase the quality of the procured and processed agricultural products.

Rights and Duties in the Sphere of Capital Construction

29. The rayon agrarian-industrial association:

directs and coordinates the activity of the kolkhozes, sovkhozes and other enterprises and organizations incorporated in the association in the sphere of capital construction, guided here by the plan of capital construction drawn up in accordance with the consolidated plan of the economic and social development of the rayon agrarian-industrial complex;

examines the draft 5-year and annual plans of capital construction for the enterprises and organizations incorporated in the association and submits proposals in respect of them to the appropriate sectorial higher authorities;

organizes following coordination with the appropriate sectorial higher authorities the pooling of the capital investments of the enterprises and organizations incorporated in the association for the construction of production and nonproduction facilities without changing the established plans for the commissioning of production capacity and fixed capital;

examines proposals of the sectorial authorities concerning the location of construction projects on the territory of the rayon, including newly constructed processing enterprises directly on the territory of their main raw material zone, and submits its proposals to the appropriate higher authorities;

examines in conjunction with the higher sectorial authorities the sequence of the construction of individual projects of the agrarian-industrial complex, adopting here measures ruling out the dispersal of forces and resources of the construction organizations at numerous projects, and submits the corresponding proposals in the established procedure;

supervises the course of construction in the association of facilities by the direct-labor and contract methods, rendering the construction organizations the necessary assistance here in ensuring the commissioning of the facilities under construction within the times specified by the plan;

redistributes, where necessary, following coordination with the appropriate sectorial higher authorities, with respect to the results of fulfillment of the plans of the I-III quarters of the current year capital investments (including construction-installation work) not assimilated by individual state enterprises and organizations incorporated in the association, without a reduction in the set plan of the commissioning of production capacity and fixed capital; and

centralizes, where necessary, the functions of client and technical supervision in construction with respect to the enterprises and organizations incorporated in the association.

Rights and Duties in the Sphere of Material-Technical Supply

30. The rayon agrarian-industrial association:

monitors the organization of material-technical supply of the enterprises and organizations incorporated in the association and the realization of allocated capital;

redistributes, where necessary, among the enterprises and organizations incorporated in the association with their consent 10-15 percent of the allocated material-technical resources;

provides on a priority basis for the support in the form of the necessary material-technical resources of fulfillment of the quotas of the goal-oriented comprehensive scientific-technical programs, programs for the solution of the most important scientific-technical problems and also the targets for the introduction in production of scientific-technical achievements and advanced experience;

adopts measures for the on-schedule installation and commissioning of equipment at the enterprises and in the organizations incorporated in the association and the prevention of the formation of above-norm material and capital equipment stock surpluses;

organizes the production of local construction materials and distributes them to the kolkhozes, sovkhozes and other enterprises and organizations incorporated in the association; and

supervises fulfillment of the measures formulated by the enterprises and organizations incorporated in the association for the economical expenditure of materials, raw material and fuel, fodder, mineral fertilizer and other material resources and also a reduction in losses at work.

Rights and Duties in the Sphere of Personnel, Labor and Wages

31. The rayon agrarian-industrial association:

works to strengthen the kolkhozes, sovkhozes and other enterprises and organizations incorporated in the association with highly skilled leader and specialist personnel;

develops and implements measures for the creation and training of a reserve of personnel for promotion to executive positions and for providing for the kolkhozes, sovkhozes and other enterprises and organizations incorporated in the association personnel of the mass occupations, determines the current and long-term need for the enterprises and organizations for specialists with higher and secondary specialized education and for skilled personnel of the mass occupations, organizes the training and improvement of workers and kolkhoz members and implements other measures aimed at the creation of permanent cadres at the enterprises and organizations incorporated in the association;

submits proposals or gives its consent to the appropriate sectorial higher authorities concerning the appointment and dismissal of leaders of the enterprises and organizations incorporated in the association and also concerning the application of measures of incentive and punishment in respect of these workers;

examines and recommends for introduction at the enterprises and in the organizations incorporated in the association progressive forms of the organization and remuneration of labor;

establishes at the enterprises and in the organizations incorporated in the association a uniform work schedule of individual groups of workers within the limits of normal work time for an accounting period;

dispatches temporarily in the event of production need,workers, with observance of the standards of labor legislation, and equipment of the enterprises and organizations incorporated in the association for assistance in operations on the kolkhozes and sovkhozes and at other agricultural enterprises and in winter and interseasonal periods dispatches on the same terms workers and equipment from the said agricultural enterprises to other enterprises and organizations incorporated in the association; and

confirms on the basis of the model regulations the terms of the payment of bonuses to the executives and specialists of sovkhozes and other enterprises and organizations incorporated in the association, irrespective of their departmental allegiance.

Rights and Duties in the Sphere of Finance, Credit, Accounting and Accountability

32. The rayon agrarian-industrial association:

organizes financial work on the kolkhozes and sovkhozes and at other agricultural enterprises and in the organizations incorporated in the association, implements measures to strengthen cost accounting, improve the quality and reduce the prime costs of products and increase profitability, ensures the preservation and purposeful and efficient use of working capital and an acceleration of its rate of turnover, prevents the diversion of resources to ends not connected with the activity of the enterprises and organizations incorporated in the association and ensures the on-schedule settlement of accounts with the state budget and USSR Gosbank (USSR Stroybank) establishments;

distributes the budget appropriations and credit allocated for the kolkhozes and also sovkhozes and other agricultural enterprises incorporated in the association and under the jurisdiction of the rayispolkom agricultural administration;

organizes supervision of the observance by the enterprises and organizations incorporated in the association of estimates and staffing discipline and also current legislation governing pay and bonuses; and

obtains from the rayon statistical body consolidated data on the course of agricultural operations and the production and purchases of agricultural products and also other data envisaged by accountability essential for operational leadership of the enterprises and organizations incorporated in the association.

IV. Property and Resources of the Rayon Agrarian-Industrial Association

33. The property of the rayon agrarian-industrial association consists of centralized capital and other property allocated the association.

The property of the kolkhozes incorporated in the association is their property.

The property allocated the sovkhozes and other state enterprises and organizations and the property of the kolkhozes incorporated in the association is reflected in their independent balance sheets while the property allocated the association is reflected in the independent balance sheet of the association.

34. Given the centralized performance by the rayon agrarian-industrial association of individual production-economic functions, the resources necessary for this activity are allocated by the enterprises and organizations incorporated in the association, in the procedure and the amounts determined by the association council following coordination with the appropriate sectorial higher authorities.

35. The rayon agrarian-industrial association is responsible in accordance with its duties to the property which it has been allocated and on which, in accordance with current USSR and union republic legislation, exactions may be levied.

V. Reorganization and Liquidation of the Rayon Agrarian-Industrial Association

36. The rayon agrarian-industrial associations are reorganized (merged, annexed, partitioned and separated) and liquidated by the authorities by whose decision they were created.

37. In the event of the merger of rayon agrarian-industrial associations, the centralized capital and other property allocated the association are transferred to the new association which has emerged as a result of the merger.

Upon the annexation of one association to another, the centralized capital and other property allocated the association being annexed are transferred to this other association.

38. In the event of the partition of a rayon agrarian-industrial association, the centralized capital and other property allocated the association being reorganized are transferred in accordance with the instrument of partition to the new associations which emerge as a result of this partition.

Upon the separation from a rayon agrarian-industrial association of one or several new associations and also upon the departure therefrom of individual enterprises and organizations the centralized capital and other property allocated the association being reorganized are transferred to them in accordance with the instrument of partition (in the corresponding parts).

39. In the event of the liquidation of a rayon agrarian-industrial association the centralized capital and other property allocated the association being liquidated are transferred to the kolkhozes, sovkhozes and other enterprises and organizations incorporated in the association as indicated by the appropriate higher authority with regard for their participation in the creation of this property.

The length of time for the creditors to state their claims to the association in liquidation is determined by the authority confirming the decision to liquidate the association, but cannot be less than 1 month.

Claims on the association in liquidation are met from its property on which, in accordance with the law, exactions may be levied.

40. The rayon agrarian-industrial association has a seal depicting the state emblem of the union republic and its own name.

GRISHIN ON TASKS, PROBLEMS OF POLITICAL EDUCATION SYSTEM

Moscow PRAVDA in Russian 5 Sep 82 p 2

[Report by A. Shinkin: "The Inculcation of Conviction--Meeting of Moscow City Party Organization's Aktiv"]

[Text] To conduct work relating to communist education of workers more actively and purposefully--this thought determined the content of the meeting of the Moscow City party organization's aktiv, which was held 3 September. Its participants discussed questions of further improvement of political education work among the city's workers in the light of the decisions of the 26th CPSU Congress, recommendations and directives of General Secretary of the CPSU Central Committee Comrade L.I. Brezhnev.

"Our party considers forming of the personality of the new man," said the speaker, member of the Politburo of the CPSU Central Committee, First Secretary of the party gorkom V.V. Grishin, "as one of the chief directions in the building of communism and an important condition of its achievements. The conomic and social-political development of the country depends to a large degree on the effectiveness of educational work.

"For more than 10 years now, the Moscow city party organization and the workers of the capital have been working on the realization of an objective set by Comrade L.I. Brezhnev at the 24th CPSU Congress--to transform Moscow into a model communist city. In this time a great deal of political and organizational work was done.

"The desire to systematically implement the 'Moral Principles of an Inhabitant of the Model Communist City had their inception directly in labor collectives and were approved by the Moscow CPSU City Committee. This summary of moral norms, while taking into account the special features of the USSR capital, concretizes the tenets of the moral code of a builder of communism."

All this, it goes without saying, cannot but help be reflected in the development of creative initiative in collectives. As pointed out at the meeting of the aktiv, plans of the 10th Five-Year plan and for 1981 were successfully fulfilled in industry, transport and construction. Targets of the second year of the 11th Five-Year Plan have been successfully fulfilled ahead of schadule.

Numerous patriotic initiatives are evidence of the high political awareness of Muscovites. Among them, the initiative of the collectives of the Moscow Motor-Vehicle Plant imeni I.A. Likhachev, Zarya Association and others, aimed at wide-scale utilization of the achievements of science and technology and the movement for economy and thrift at each workplace, had its inception among the collectives of the MELZ Assocation and the Factory imeni Frunze. An initiative of the Muscovites is permeated with deep concern for social well-being; they have launched a struggle for increased production, broader assortment and improved quality of consumer goods.

And what an impressive display of the consciousness of Muscovites is provided by the competition under the slogan "60th anniversary of the formation of the USSR--60 shock labor weeks!" Today, it was pointed out at the meeting, the capital includes more than 600,000 workers and specialists, 25,000 brigades, thousands of sectors and shops; the majority of the enterprises and institutions of all sectors of the economy have joined this movement. They are overfulfilling daily norms and plan targets and are constantly attaining growth of labor productivity, increased output and improved product quality.

The person presenting the report and those taking part in the discussions--First Secretary of Frunzenskiy CPSU Raykom B. Bryaznov, forge and stamp operator from GPZ-1 [State Bearing Plant No 1 (?)] A. Afonin, partkom secretaries of House Construction Combine No 1 of Moscow Main Administration for Housing and Civil Construction and of Moscow Higher Technical School imeni N.E. Bauman I. Os'kin and N. Lakota, Director of Khromatron Plant Yu. Mashin and others pointed out that the leading role in the attainment of all successes belongs to party organizations and their ideological educational work among labor collectives.

In many rayons of the capital, complex plans for communist education of workers have been worked out and are being realized; centers for scientific organization of ideological educational work and methodological sections for Marxist-Leninist ethics and moral education have been created and are in active operation. Lecture propaganda has been improved.

In a word, much has been done. And here a special role was played by the well-known decree of the CPSU Central Committee "On Further Improving Ideological, Political Educational Work." Giving their due to what has been achieved, the participants of the meeting concentrated their chief attention on an analysis of deficiencies in educational work. It was noted in particular that worktime losses at the city's industrial enterprises are still great. Among some collectives together with model consciousness and organization there prevail the habit of self-seeking and egoism, absence of discipline and laxity, drunkenness and other antipodes of communist morality.

What are the reasons for such phenomena? They were referred to in detail both in the report and in the speeches. The fact is that many forms and methods of ideological educational work promoting the establishment of communist conviction of workers and an active life position are not being fully utilized by party organizations; their KPD [no expansion available] is low.

For example, at the present time, more than four million Muscovites are participating in the system of Marxist-Leninist education. But, as was pointed out at the meeting, the effectiveness of this work is not always in accord with present-day requirements.

In a number of speeches, the question was raised of the role of labor collectives in educational work. Interesting experience has been accumulated in ideological political and labor education, for example, at the Plant of Motor-Vehicle and Tractor Electrical Equipment (ATE-1). Here an efficient system has been created that provides educational work for brigade leader, preceptor and agitator. It makes it possible not to overlook a single member of the collective. All this contributes to the successful fulfillment of plans and pledges and growth of people's labor and social activeness. Here is a characteristic detail: 85 percent of the enterprise's workers resolved to fulfill their 1982 targets.

It was stated at the meeting that production brigades were going to be an important and effective means of communist education directly in the process of work. They combine especially fully the interests of the collective and each worker. The following figure was quoted: at the present time, almost one half of Moscow's workers have become part of brigades. At the same time, this form of labor organization has not received due attention everywhere.

In this connection, the question was raised of the educational role of foremen and brigade leaders. These supervisory middle-echelon personnel because of their place in production are most closely and intimately connected with workers, their needs and requirements. A task was set: sectors and brigades had to be headed by experienced, qualified communists, komsomols and leading workers possessing prestige.

In connection with the mounting tasks, there was assessed at the meeting of the aktiv the matter of education of supervisory cadres. Every supervisor must organically combine in himself adherence to party principles with deep competence and discipline with initiative and a creative approach to work and also be sensitive toward people. And this determined an uncompromising attitude toward cases still being encountered of violation of Leninist norms of party life. It was noted in particular that a number of operational heads in Krasnopresnenskiy Rayon were not taking part in the holding of single political days; many of them in the past two years had not held a single talk on political or moral and legal themes.

Analyzing questions of education, the meeting's participants spoke of the need of arranging things in such a way that every Muscovite would contribute through his work and behavior to the affirmation and development of the Soviet socialist way of life and fight decisively against the manifestation of any forms of consumer psychology and against the influence of bourgeois ideology and morality.

In the report and speeches much space was given to questions of educational work with teenagers and young people. A certain portion of young people does not want to take part in socially useful labor; it is characterized by disdain for generally accepted moral requirements and a consumerist attitude toward life.

At the meeting, reference was also made to improvement of educational work in schools, vocational-technical schools, tekhnikums and VUZ's. It was noted that some instructors of educational institutions are not assuming the necessary responsibility for the political and moral training of youth. Teaching some times goes on without reference to the solution of educational tasks.

Many deficiencies in the upbringing of children are tolerated by parents. And party organizations and labor collectives are still inadequate in requiring of them civil fulfillment of parental duties.

Educational work at the place of residence is of major importance. Positive experience has been accumulated in Perovskiy, Pervomayskiy and Frunzenskiy rayons of the capital. For example, about 14,000 persons in Perovskiy Rayon were chosen to house committees and councils of support points; they have been drawn into the work of people's patrols and supervise groups of children and teenagers engaged in amateur art work. More than 200,000 inhabitants of the rayon participate in Saturday and Sunday voluntary workdays for improvement of the grounds and in competition for the title "Model Maintenance House."

The meeting of the aktiv outlined measures for the further improvement of ideological educational work. The firm conviction was expressed that the Moscow city party organization would do everything necessary for fulfillment of the tasks set by the 26th party congress and would henceforward be in the vanguard for the triumph of the great ideals of communism.

USUBALIYEV INTERVIEW IN 'LITERATURNAYA GAZETA'

Moscow LITERATURNAYA GAZETA in Russian 3 Nov 82 p 10

/Interview with Turdakun Usubaliyevich Usubaliyev, member of the CPSU CC and first secretary of the CP of Kirgizia CC, by Yuriy Zarechkin, LITERATURNAYA GAZETA special correspondent: "Having Taken the Speed of a Winged Steed..."; date and place not specified/

/Excerpt/ /Question/ Are you saying, in other words, that the internationalization and integration of culture are proceeding, it turns out, with an outstripping pace in the sphere of production and the economy, and with a certain lag in regard to the remainder of the front?

/Answer/ There is no contradiction here. Scientific and technical progress and production forces in their development have always outstripped the growth of moral awareness, the spiritual life of people. But it is impossible not to see that the development of the country's unified national-economic complex, the very nature of production cooperation and specialization under socialism comprise, at the same time, likewise a very strong factor in drawing the international and the national closer together within the spiritual culture.

In this connection I would like to reiterate that there is absolutely no foundation to the assertions by Western Sovietologists to the effect that the rapprochement and "Russification"--you know, this is their own term, specially invented by them!--of the national cultures is leading to their unification and levelling out, as well as dealing a mortal blow to national specifics. Our experience testifies to something else--such a rapprochement helps to reveal and develop everything which is valuable in these specifics, to make them more fruitful and nourish them with new, vital juices. And the richer the national culture, the greater its contribution to the culture of all mankind. Why deprive oneself of additional abundance and limit the possibilities of the contribution? Leonid Il'ich Brezhnev was completely justified in saying that any national culture which is completely enclosed within itself inevitably loses the traits of general humanity.

Nobody has imposed their own culture on us, and the Kirgizes read Tolstoy or Gor'kiy not because they are forced to do so. By the way, we also read without being forced to do so those who sowed the seeds of the rational and the good long before the appearance of modish anti-Soviet conceptions. We read those authors such as the Russian scientist, Semenov-Tyan-Shanskiy, whose monument was unveiled this year on the road to Issyk-Kul'. Does anything more need to be shown to Messrs. the Sovietologists?

The ancient, original culture of the Kirgiz people, under the influence of the fraternal cultures, primarily that of the Great Russian culture, has not only successfully developed during the Soviet period but has been immeasurably enriched. During the Pre-Revolutionary past the Kirgizes did not know, for example, classical dance; now our ballet has become widely known. And who was the organizer of the first Kirgiz theatrical studio? A Russian--Nikolay Yelinin. Who helped to create Kirgiz painting? Again Russian artists--Vitaliy Obraztsov and Semen Chuykov. Let me note that previously Islam had prohibited any Kirgiz from painting. But now we have our own national school of painting, headed up by USSR People's Artist and Hero of Socialist Labor Gapar Aytiyev.

Cinematographers have become a solid part of this republic's national culture. For their emergence we are obliged to the fraternal aid of groups from Mosfil'm and Lenfil'm. Their influence on the destiny of Kirgiz cinematographers has been enormous. But the films produced by our studio are also quite national and unique. I think that it is precisely this quality of theirs which has not gone unnoticed at All-Union and international festivals, where the best of them have been awarded prizes and diplomas. Remember such films, for example, as "The White Steamship," "The Sky of Our Childhood," "Ulan," and "Men without Women"?....

/Question/ Indeed, the successes of Kirgiz cinematographers have been determined, to a large degree, of course, by the originality of their works. Here in Frunze at the season's opening at Cinema House I saw the premiere of the film "The Thirteenth Grandson," which was made based on a scenario by Erkin Bobriyev. I will not undertake to pass judgement on the professional merits of this motion picture, but I do wish to say something about its philosophical sub-text and its material drawn from life. At the center of attention are the family relations between persons from the city and the village, it would seem, simple, everyday encounters. But how much of the national and the specific there is--how many interesting, everyday details and how much wisdom drawn from everyday life! Somewhere toward the end of the film there appear words which could serve equally for the epigraph and the epilogue: "Traditions comprise our yesterdays and our tomorrows."

/Answer/ Tomorrow's cultural traditions.... Well now, they also have to be created ahead of time. It is in this sense too that we speak about the transformation of customs, habits, and way of life on a new, socialist foundation. Here too we need tact and attention, patience and wisdom. Living traditions include not only those which have peeled off the husks of centuries. Vestiges of the past also have a tendency to survive into the future. Barriers have been placed in the way of erasing these vestiges from people's consciousness and psychology, and we have not yet managed to remove all of them.

At present, for example, one may see in certain homes an excessive amount of household items: hundreds of bottles /?/, a mass of carpets, embroidered coverlets, and other everyday objects, utterly superfluous for the needs of a single family. Inasmuch as such acquisitiveness is not dictated by rational needs, we are striving to overcome it.

[Question] There is another thing which is regrettable. The present-day mechanization and centralization of labor, the increasing devotion of people's leisure to the electronic press, as well as to other passive and, I would say, non-productive forms of rest and recreation, have noticeably reduced the penchant for folk skills, crafts, and applied arts.

It is not by chance that Aytmatov's hero Tanabay, in "Farewell, Gul'sary!", is distressed that there is no one now to make decorations, items made of metal, wood, leather, a genuine saddle. He complains that the old manual skills are dead and gone, and that, you know, a man's soul and eyes are in his hands....

[Answer] Tanabay himself, by the way, in his youth was, as Aytmatov calls him, "one of the gravediggers of the old." He even spoke out at a Komsomol meeting in favor of eliminating the yurta, this, as it seemed to him, "Pre-Revolutionary" dwelling. We failed to allow for the good things in such a reality. Yurtas have continued to be made, and they are extensively used by shepherds. Under the conditions of nomadic livestock raising the yurta is irreplaceable. It is truly a creation of folk wisdom. It can be quickly set up or taken down. At any time of year it is both convenient and comfortable inside.

Of course, the loss of these or other folk crafts has occurred not because they fall under some administrative ban. The headlong wave of the times has pushed out and overwhelmed everything which has not found new forms of existence. Here too it is important to manifest attention in time to that which ought to be preserved and developed. So that talents should not grow scarce and that the link between the generations not be broken, the Kyyal Artistic Crafts Association was created in the republic. In Frunze a school for applied arts has been opened, one of several in the country. This year a review-competition of items by folk artisans and skilled craftsmen is being held throughout the country in conjunction with the 60th anniversary of the USSR.

[Question] And how are the cultural traditions operating, Turdakun Usubaliyevich, in folk artistic creativity; what kind of role is being played by folk festivals and game?

[Answer] A judgement may be reached about folk creativity by merely adducing one figure: we have more than 100,000 participants in amateur artistic activities. Their ranks are constantly being multiplied. When people sing and dance, when their souls are light and joyful, that means that they are working diligently and that life is good for them. And how important we deem this branch of culture is testified to by the fact that television in its plan procedure is making it possible for all rayon and amateur groups to perform before an audience of many thousands of spectators.

We are organizing sponsorship links between professional and amateur creative groups, and we are striving to provide regular contacts between workers in the arts and production groups. The decree adopted on this score by the CP Central Committee emphasizes the necessity for stepping up such contacts for raising the cultural level of laboring people, for enriching their spiritual world.

As regards national folk festivals and games, their traditions come down to us from our distant ancestors. Everything which is truly valuable and national among us has been preserved. Visit the traditional competitions among akyns--the aytysh festival. The singers extemporaneously create verses and melodies; they perform them in turn on their own komuzes. The winner is the one with the sharpest wit, the one who most vividly and picturesquely relates the life and deeds of his contemporaries.

For many of our folk games we have a good material basis--horse-breeding has developed in the republic; it is an important branch of Kirgizia's livstock raising. The following games are very popular: "Oodarysh"--a fight between riders on horseback, "Zhorgo salysh"--a racing competition on pacers, "Berkutchu-kushchu"--hunting with a golden eagle, "Kyz-kumay"--chasing after a girl, a merry game of male and female trick-riders.

/Question/ I am acquainted with one of the champions of this game--Burganak Dzhaparov, a senior horse-herder at the second stud-farm. He was telling me how everything works....

/Answer/ In the very contents of such folk games are many details of our national way of life; they are also a concentrate of culture, a unique form of developing character, propaganda for a healthy way of life and physical toughening up.

It should be said that the vitality of these traditions is confirmed by the successes of our Olympic athletes, along with the many trophies of world and European tournaments won by the athletes of this republic. But even in the field of physical education conditions are changing; sports must become increasingly mass in their nature and just as consciously necessary an element of people's way of life as reading books or enjoying television. Of course, not everybody can become Olympic champions such as Osmonaliyev or Melent'yev; however, you know, even for them prizes and records are not just ends in themselves.

/Question/ Yes, conditions are changing. To keep our needs abreast of the rapidly flowing times is becoming more and more difficult.... You mentioned the sponsorship ties of creative and production groups, the tasks which were posed by the CC's decree to the arts workers of the republic. Four years have passed. What shifts have occurred, in your opinion, and have there been any results? I ask this also because formalism in culture, unfortunately, is not uncommon. We decide, we give directives, but far from always do we manage to achieve out intentions and promises without disruptions in our plans.

/Answer/ The very formula "formalism in culture" sounds, perhaps, quite unusual. Although, of course, formalism, to a certain extent, is inherent to the cultural process. It was not in vain that the 26th CPSU Congress called upon us to wage a determined struggle against formalism in all spheres of social practice, for it retards the progressive development of the socialist way of life.

From the viewpoint of the problems which we are discussing the significance of the above-mentioned decree of the CP of Kirgizia CC is local, and we must not draw any far-ranging conclusions on it, whether this pertains to its contents or its implementation. Nevertheless, the nature of the work prior to and after the adoption of this document provides material for thought.

The fact that sponsorship ties with the production people are expanding' is fine. Expeditionary plenums of creative alliances are being held, along with arts festivals; there are more tours by theaters and conferences with readers and spectators.... And what kind of effectiveness do such contacts have? Who has measured it and how, checking up on the implementation of the decree? In a formal sense, the number of trips by the creative brigades and the mobile exhibits have increased. But has everything been done which is necessary? I am not sure that it has. And I will explain why.

In the reports, let's suppose, they inform us of the following: creative brigades have traveled out into the pasturelands 130 times. I am not saying whether this is a great deal or too little. Another question is important here: what is behind this? Well, so they showed the shepherds an exhibit of pictures. But what kind of reaction did the viewers have? There is no information about this! Moreover, a meeting with creative people can, in one instance, provide inspiration, and, in another case, in contrast, kill for a long time the desire for a similar exchange.

The CC decree stated that the members of creative unions are still spending too little time among workers and kolkhoz members, and they know their lives in insufficient depth. In examining this year the question of the activity of the Kirgiz Academic Drama Theater, the CC Bureau pointed out this same shortcoming to the group: up to the present time the repertory contains no productions which would center upon impressive characters of the contemporary worker or kolkhoz member; there are no vivid plays written on the basis of materials of the republic. In contrast, there is an excess of lightweight, dubious comedic level of productions.

/Question/ Problems connected with professional training and the formation of a civic-minded point of view among the artistic intelligentsia, with respect to their labor consumption, most likely should be included among the most significant questions.

/Answer/ Of course, because the requirement to develop culture has become a social necessity. We are becoming more and more convinced that in our epoch only the socialist state possesses sufficient resources to ensure for the cultural processes a purposeful, organizational foundation and their further progress. The socialist countries, the fraternal Soviet republics have demonstrated a fine example of how a system of cultural institutions ought to function--with their own administrative organs, an autonomous budget, and specially trained staffs. In particular, such a practice of organizing cultural life within the framework of a socialist society has also helped to form our cultural policy.

The most important role in the cultural revolutions, we must not forget, has been played by the Russian language; it has become the language of international communication in the Land of the Soviets. For the Kirgizes, moreover, it has also played the role of a unique mentor. The development during the years of the Soviet regime of a national writing system and a Kirgiz literary language took place and is continuing under the direct influence of the Russian language. Well, and its study in the schools is already a process which is constantly providing a high level of results. There is a growth in the number of Kirgiz schoolteachers who are teaching Russian. There are more than 1200 students of Kirgiz nationality enrolled in the departments of Russian language and literature at our VUZ's....

Inasmuch as we have already spoken about the role of the Russian language in the internationalization of the fraternal cultures, I would like to say that we are extremely disturbed by the problems of translated literature. We are obligated to translations and translators for many of our successes in the development of culture. You know, Marx and Lenin were read for the first time by thousands of people among us in translation into the Kirgiz language. The same was true with the classics of Russian and foreign belles lettres.

At present the need for skilled, professional translation has not decreased but rather has increased. The principles of the translation genre are strict; it need not be repeated that this means that both inter-acting languages must be felt and known to an equal degree. But books are still quite frequently encountered which distort and impoverish the ideological and artistic sense of the original; hence, they do not facilitate the cognition of the spiritual make-up of this or that people, its history and culture.... In general, in my view, it is high time that we train translators professionally in special faculties or departments. If the USSR Ministry of Higher and Secondary Education will start to activate this, we are prepared to organize the first such student groups in Frunze. You see, a specific proposal has just been born.

/Question/ Turdakun Usubaliyevich, it so happens that in our conversation we have already several times approached the subject of literature and a writer's creative work....

/Answer/ "...and you still have not managed to ask me the following ritual question: how does Kirgiz literature participate in building culture?

What can I say about our young literature and our writers? Any routine phrase would be out of place. Nor can I evaluate their role in a simple manner. It was not by chance that I designated Kirgiz literature as young. It indeed was born together with our state sovereignty, our national writing system, and its potential is equally great, if one takes into account the time framework, although not so great as one would like, if absolute criteria are employed.

It is undoubtedly true that Chingiz Aytmatov has made an important contribution to Soviet literature. In this writer's creative work the nature of Soviet man and the roots of the Kirgiz national culture are presented powerfully and vitally. Take those of his short stories such as "The First Schoolteacher," "Dzhamilya," "Farewell, Gul'sary!," "The White Steamship," "Maternal Field," "My Little Poplar in the Red Scarf," "Early Cranes," and you will see the history of our people, the world of the contemporary Kirgiz, educated by the party, raised up to the level of the present-day social and spiritual development by the Soviet system.

And in the poetry of various years, from the first verses in the Kirgiz language by Aala Tokombayeva, it is easy to find milestones of the republic's cultural development. During the 1940's, for example, Alykul Osmonov drew the following dream-picture as a poetic hyperbole: somewhere on a street he meets people, and in one of them he recognizes a well-known academician, in the second--a professor of geology, in the third--an architect.... A dream? At that time, of course. But now--a milestone....

I would like to cite two examples in talking about the participation of literature in making sense out of the changing way of life and cultural acquisitions. And it is not a matter of whom I name in this connection--Sasykbayev or Sal'nikov, Bayalinov or Sydykbekov, Beyshenaliyev or Umetaliyev, Toktomushev or Abylkasimov. Writers and literary people, we know, are called upon to reveal and find what is typical in life, what is worthy of belief. Also valuable, I think, is their view of things as well as their social role as a whole.

It would be difficult to over-estimate the enormous emotional influence of writers' works, the genuinely mass nature of their creative art. As distinct from the bourgeois ideology and "mass culture" industry, the main goal of which is a generalized, "mass" chase after the level of people's spiritual and cultural demands under the standards of one's own way of life, the cultural institutions of socialism are concerned primarily with elevating the human personality, its spiritual needs--and it is from this viewpoint, properly speaking, that we evaluate the contribution to culture made by any of our writers. Culture, literature, ideology, politics are all connected. A writer is always an ideological warrior as well. His civic point of view, his party spirit, and his class nature have been and will always be an inciting motive for literary labor; they have determined and will determine the social and socio-cultural thrust of creative work.

/Question/ You have remarked more than once, Turdakun Usubaliyevich, that the Kirgiz people, thanks to the socialist mutual aid of the Soviet peoples, have experienced the brightest years of the flourishing and upswing of the national culture, that, figuratively speaking, the winged band of culture rests on profound ties, on the harmonious combination of past and present, on the heritage of traditions and the aspirations for the future.

/Answer/ Yes--also on the aspirations for the future.... Here lies the meaning of the entire process of building communism; herein lies its strength and greatness. And every Union republic, including Kirgizstan, by increasing day after day, year after year, its own contribution to the economy and the culture of our unified Motherland--the USSR, is thereby constantly expanding and strengthening the foundation of the Soviet people's splendid future. It is for this purpose that we live and work.

LATVIAN NTO CONGRESS HELD, CHAIRMAN ELECTED

Riga SOVETSKAYA LATVIYA in Russian 16 Oct 82 pp 1,3

/Article: "Standard-Bearers of Technical Progress: From the Sixth Congress of the LaSSR NTO /Scientific and Technical Societies/ /

/Excerpts/ On 15 October the Sixth Congress of the LaSSR NTO was held in Riga at the club of the Avtoelektropribor Plant. Taking part in its work were almost 200 delegates, representing the great detachment of engineers and technicians, agricultural specialists, scientific workers, leading workers and kolkhoz members--all those who are in the vanguard of technical progress, actively facilitating the further improvement and enhanced effectiveness of social production.

This congress's presidium included the following persons: Comrades A. E. Voss, I. A. Anderson, Ya. Ya. Vagris, A. E. Ikaunieyek, P. Ya. Strautmanis, V. A. Chemm, A. K. Zitmanis, E. M. Ozols, as well as the deputy chairmen of the LaSSR Council of Ministers, V. M. Krumin' and M. L. Raman, the deputy chairman of the All-Union NTO Council, Ye. A. Pirogov, the leading officials of the republican and sectorial NTO boards, activists of the societies, along with representatives of party, soviet, economic, and social organizations.

With great enthusiasm the delegates elected an honorary presidium consisting of the Politburo of the CPSU CC, headed by the General Secretary of the CPSU CC, the Chairman of the USSR Supreme Soviet, Comrade L. I. Brezhnev.

The opening statement was delivered by the Secretary of the CP of the LaSSR CC, I. A. Anderson. He proclaimed the greetings of the CP of Latvia CC to the congress, and this met with warm applause.

The accountability report, entitled "On the Work of the Latvian Republic NTO Council and the Tasks of the Scientific and Technical Societies in the Light of the Decisions of the 26th CPSU Congress," was delivered by the Chairman of the Republican NTO Council, Deputy Director of the Institute of Physics, Corresponding Member of the LaSSR Academy of Sciences Ya. Ya. Liyelpeter.

--Our society's activity has proceeded under the banner of implementing the historic decisions of the 25th and 26th CPSU Congresses, the 22nd and 23rd CP of Latvia Congresses, the implementation of the tasks outlined by them with regard to the economic and social development of our country and republic during the 10th and 11th Five-Year Plans--stated the rapporteur. Important guidelines for the NTO's work have been set forth in the decisions of the 17th USSR Trade-Unions' Congress, in the brilliant speech thereat by Comrade L. I. Brezhnev, and in the Food Program of the USSR, as approved by the May (1982) Plenum of the CPSU CC.

Today Soviet Latvia has a powerful scientific and technical potential at its disposal. During the years of the 10th Five-Year Plan alone serial production was introduced of more than 2,870 new and improved types of products for industrial and technical purposes as well as consumer goods. As of 1 July 1982, the republic was turning out 2,577 brands of articles with the State Badge of Quality. In these achievements a significant contribution was made by the scientific and technical societies, which carry out their activities under the direct supervision of the party and trade-union organizations. Every year more than 15,000 suggestions flow in from NTO members, aimed at perfecting the economic mechanism, incorporating progressive technology, raising the technical level and the product quality, economizing on material resources, and at putting into operation all the factors of the growth of production efficiency. The NTO Council and the sectorial boards of the societies participated actively in working out the proposals for the draft annual national economic plans and the "Basic Directions for the Economic and Social Development of the USSR during the Years 1981--1985 and for the Period until 1990," the targeted scientific and technical and comprehensive programs for solving the most important inter-sectorial problems, and the plans for expanding the production of consumer goods.

Today 2,000 primary NTO organizations encompass more than 130,000 members, which is 20,000 more than five years ago. Thousands of workers in economic, financial, planning and supply organizations, united by the newly created scientific-economic society have poured into the NTO's ranks. There has also been an increase in the number of public creative associations, of which there are now almost 8,700 in the republic. The implementation of proposals worked out during the accounting period by NTO members and organizations has allowed us to make savings in the national economy of more than 300 million rubles, as compared with 170 million during the previous period.

There has been a strengthening of ties and coordination between the actions of the NTO and those of the state organs--Gosplan and the republic's Academy of Sciences, ministries and departments, scientific-research and design organizations. Serving as an example of the enhanced authority of the societies is the fact that more than 830 of this republic's enterprises and organizations have turned over to the NTO's primary organizations the functions of production-technical and technical-economic councils, which were formerly administrative organs.

The speakers meticulously and thoroughly analyzed the activities of the NTO council and sectorial boards, and they examined the existing causes of miscalculations and omissions. Certain organizations are not precise enough in coordinating their work with the specific demands of production development; they do not use all the possibilities for drawing the scientific and engineering-technical community into solving the top-priority problems of the national economic plans, into reducing the time periods required for developing and introducing new equipment and scientific research. Not all the scientific-research and plan-technological developments are being created at the level of advanced technical thought. The NTO republican boards of the construction industry, lumbering industry and forestry, and the food industry have not found effective forms of operation which would ensure the unconditional fulfillment in their sectors of the state plans for new equipment, whereas the NTO of the machine-building industry has not adopted sufficient measures to reduce the metal consumption of products or to raise the level of efficient use of metal, one-fourth of which is still becoming waste.

The delegates stated that the NTO organizations are not adopting the necessary measures with respect to the widespread dissemination of innovations and initiatives of the scientific and technical community. Behind the impressive figures of NTO membership and the savings totals are sometimes concealed a weak purposefullness in the work, its poor coordination, and a petty-mindedness of creative quests. In many organizations the results of work are still being measured by the number of recommendations, the number of conferences, inspections, and contests being conducted, rather than by the specific contribution to carrying out the plans for developing science and technology, for solving the urgent problems of intensifying production.

In the decree which it adopted the congress pledged that the NTO organization would constantly develop and improve the forms and methods of its own work, more extensively involve scientists, engineers, workers, and kolkhoz members --the innovators of labor--in the creative process of carrying out the decisions of the 26th CPSU Congress and the 23rd CP of Latvia Congress, the USSR Food Program, the plans of the 11th Five-Year Plan for the development of science and technology, and increasing on this foundation production efficiency and work quality.

The congress elected new personnel of the Latvian Republican NTO Council and Auditing Commission.

* * *

At the plenum which was held that same day Ya. Ya. Liyelpeter was re-elected as Chairman of the Latvian Republican NTO Council.

RASHIDOV SPEECH ON NATION'S 60TH ANNIVERSARY

PM171613 Tashkent PRAVDA VOSTOKA in Russian 18 Dec 82 pp 2-3

[Speech delivered by Sh. R. Rashidov, candidate member of the CPSU Central Committee Politburo and first secretary of the Uzbek CP Central Committee, at 17 December joint celebration session of Uzbek CP Central Committee and Uzbek SSR Supreme Soviet to mark USSR's 60th anniversary: "Triumph of the Leninist Nationalities Policy"]

[Text] Dear comrades:

Ivan Ivanovich Bodyul, member of the CPSU Central Committee and deputy chairman of the USSR Council of Ministers, who is estemmed by us all, has just presented the republic with the CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee Red Banner, which it has been awarded for successes achieved in economic and cultural building and for its great contribution to the development of the country's national economic complex and to mark the celebrations of the 60th anniversary of the formation of the Union of Soviet Socialist Republics. The republic is being awarded the Red Banner for the 10th time.

This high award inspired our working class, kolkhoz peasantry and intelligentsia to new labor achievements in order to successfully implement the historic decisions of the party's 26th Congress and the CPSU Central Committee May and November (1982) Plenums.

Allow me, comrades, on your behalf and on behalf of all working people of Uzbekistan, to express warm gratitude and cordial acknowledgment to the CPSU's Leninist Central Committee and the Central Committee Politburo for their high appraisal of our work.

We assure our party's central committee and the CPSU Central Committee Politburo that we will continue to devote all our forces, knowledge and experience to the implementation of the party's plans and designs and to the further flourishing of our multinational socialist fatherland.

Comrades! Our country's working people and all progressive mankind are currently celebrating a portentous jubilee--the 60th anniversary of the formation of the Union of Soviet Socialist Republics.

This truly great jubilee embodies the triumph of the Marxist-Leninist teaching and the CPSU's nationalities policy and is a vivid new demonstration of the unity of all the nations and nationalities of our socialist motherland and of their adherence to the principles of proletarian internationalism and friendship among peoples.

The founder of the communist party and Soviet state, Vladimir Ilich Lenin, called the land of Soviets a star which, as it rose to new heights of creation, would burn ever brighter and draw more and more people to it.

The leader's brilliant prediction has come true. From the vantage point of its 60th anniversary our fatherland stands before the whole words as a constellation of equal republics jointly building communism. Each Soviet person feels the loftiest sense of pride in his country and in his involvement in its outstanding achievements.

The building of mature socialism, the state of the whole people, the fashioning of a new historical community of people--the Soviet people--the steady development of socialist democracy and the formation and rapid development of a unified national economic complex--these landmarks are supreme achievements of modern civilization.

Each anniversary of the USSR's formation is a glorious historic milestone. This year's holiday is particularly noteworthy. It occurs in the year of the 60th anniversary of the most important event of the 20th century--Great October.

By selfless labor Soviet people are implementing the historic decisions of the party's 26th Congress and the CPSU Central Committee May (1982) Plenum and the USSR food program. They greeted the decisions of the CPSU Central Committee November (1982) Plenum and the Seventh USSR Supreme Soviet Session with tremendous fervor and patriotic enthusiasm.

Comrade Yu. V. Andropov's plenum speech stresses the continuity of the party's domestic and foreign policy. The whole speech is aimed at resolving fundamental tasks of the country's further economic, social and spiritual development and is imbued with paternal concern for the people's well being and happiness.

In celebrating the USSR's 60th anniversary, Soviet people and working people throughout the world direct their thoughts and eyes toward the Leninist party, which they see as the embodiment of mankind's best ideals.

The multinational Soviet state's powerful ascent, the economic and cultural progress of all the peoples of the USSR and the consolidation of their fraternal unity--all this is the living embodiment of V. I. Lenin's ideas and of the consistent implementation of the Leninist nationalities policy by the communist party.

Comrades!

The formation of the USSR occupies an outstanding place in history by virtue of both its political significance and its socioeconomic consequences. It marked the birth of the world's first multinational worker and peasant state.

The inviolable union of free republics is the glorious creation of the Great October socialist revolution. It marked the beginning of a list of great achievements in the political, economic, social and cultural spheres. In the words of Lenin, the workers who effected the revolution set a new world of unity of working people of all nations in which there is no place for social and national oppression against the world of inequality and oppression of peoples. October was the chief political condition for radical socialist transformations and raised all our country's peoples to constructive historic creative work.

Vladimir Ilich Lenin was the great architect of the multinational Soviet state, its creator and inspirer.

V. I. Lenin's greatest service lies in his profound elaboration of the theory of nations and national relations and the creation and development of the multinational socialist state.

K. Marx and F. Engels were the first to show the indissoluble link between the tasks of social and national liberation and to show the subordination of the nationalities question to the interests of the proletariat's class struggle. They showed that only the victory of the proletariat can ensure the establishment of genuinely humane relations among peoples.

"The victory of the proletariat over the bourgeoisie," they stressed, "means at the same time the overcoming of all national and industrial conflicts which at present give rise to enmity among peoples."

Creatively developing the ideas of K. Marx and F. Engels, V. I. Lenin gave them concrete expression in conformity with the new historical era and linked the nationalities question to the victory of the proletarian revolution and the overthrow of imperialism.

He comprehensively elaborated the communist party's program principles and tenets on the nationalities question, which were of tremendous significance for building socialism in a multinational state.

The Leninist program for resolving the nationalities question envisaged the self-determination and complete equality of nations and the reallying of workers and all working people of various nationalities in the struggle for democracy and socialism. It stressed the need for a close voluntary political, military and economic union of peoples, the ensuring of their actual equality and the development of their economy and culture on the basis of fraternal mutual assistance and all-around cooperation.

With the victory of the revolution the party was faced primarily with the task of elaborating a new and historically unprecedented plan for the state organization of nations in conditions of the dictatorship of the proletariat. It was faced with the task of elaborating a democratic form of statehood which would enable the people's national and international interests to be combined in the best possible fashion.

And the party resolved this task proceeding from the Leninist internationalist program. "We are internationalists to the end," V. I. Lenin stressed, "and are striving for the voluntary union of workers and peasants of all nations."

A voluntary union of equal republics, a Soviet federation, was, according to Lenin, the most expedient form of state association of peoples, ensuring in practice their equality, the unity of their national and international interests and their cooperation in all spheres of life. This form ensured the accelerated development of every republic and every people and their union as a whole.

The Leninist ideas corresponded in the best possible fashion to the objective course of historical development, which dictated the need for the unification of peoples into a single union state. Lenin stressed that only peoples who have joined ranks in such a state are capable of defending the gains of the proletarian revolution and successfully resolving the tasks of building a new society.

The tremendous work among the masses done by the party headed by Lenin to explain its policy in the sphere of national state building was completely in line with the aspirations of the working people of all nationalities and whipped up a mighty wave of support for the unification movement in the country.

The center of attraction for the liberated peoples was the RSFSR--the largest republic in terms of population, territory, economic potential and level of economic and cultural development. But the main factor was that the Russian working class and the Russian people had gained the tremendous trust of all the peoples. They made a decisive contribution to the victory of the socialist revolution and the defense of its gains.

Their selflessness, disinterestedness and genuinely fraternal attitude earned them the ardent love and deepest respect of all the peoples. It was precisely great Russia and the Russian people that rallied all our peoples forever into an inviolable union of free republics.

The Leninist ideas, which were an expression of the common interests of working people of various nationalities and their desire for a pooling of efforts and fraternal cooperation, were given practical embodiment in the creation of the USSR in December 1922.

The emergence of the union state marked the triumph of the party's Leninist nationalities policy and the Leninist principles of a voluntary state union of peoples. It was also an outstanding landmark in the development of friendship and cooperation among the peoples. The union state, which took shape as a result of the realization by the peoples of the right to self-determination, constituted an effective instrument for the development of practical cooperation among the peoples.

This was a completely new way of resolving the nationalities question and achieving friendship among the peoples, for it destroyed the disunity produced by capitalism and led to their utmost possible unification and rapprochement.

The practical embodiment of the Leninist forms of federation and the voluntary unification of all the national republics into a united family--the Union of Soviet Socialist Republics--was of tremendous historic significance.

The formation of the USSR made it possible to pool the material resources of the Soviet republics for rational utilization in the interests of all our peoples, subordinate the development of the union republics to a unified national economic plan and thereby make maximum use of the advantages of the socialist economic system.

Wholeheartedly supporting the idea of the creation of the USSR, the Soviet peoples put their labor and energy, creative enthusiasm, abilities and talents into this historic achievement. Inspired and directed by the communist party, they trod the road of proletarian internationalism, the road of unification in order to build a new society and defend the gains of October.

The USSR, founded by Lenin, grew and strengthened. In 1924, as a result of the national state demarcation of Central Asia, radical socialist transformations and the political, economic, and cultural development of the peoples, the Uzbek and Turkmen SSR's were formed and voluntarily became part of the Union of Soviet Socialist Republics. The USSR's development and the subsequent entry into it of new republics augmented our country's strength and potential in building a new society and opened up unprecedented scope for social, economic and cultural progress.

Today, from the vantage point of the jubilee year, the historic significance of the building of the multinational socialist state can be seen more clearly. In mutual relations among dozens of nations and nationalities world history has never before known such inviolable unity of interests and goals, of will and actions, such spiritual kinship, trust and mutual concern as are constantly displayed in our fraternal union.

From their own life experience all the country's peoples are convinced of the rich fruits they receive by being united in the Union of Soviet Socialist Republics and of the very broad possibilities this opens up in further building up the material and spiritual potential of each republic and harmoniously developing the USSR. The concentration of material resources and efforts and the disinterested mutual assistance of the Soviet peoples enabled a highly developed industry and large-scale mechanized agriculture to be created and a cultural revolution to be carried out in all the republics in a short time.

Harsh trails have befallen our state. In the last six decades it has had to staunchly defend its borders, honor, freedom and independence on more than one occasion.

The Soviet fraternity of peoples has successfully withstood the test of time. It has been sealed with the blood of Soviet people of all nationalities abundantly spilled in the joint struggle against the common enemy. It has been cemented by the joint labor of representatives of all the country's nations and nationalities and their mutual assistance and support in the course of building socialism and communism.

Present and future generations will always remember how the emissaries of all the union republics built the City of Youth, Komsomolsk-na-Amure, the DNEPR Ges, Magnitka and the Uralmash, the Kuzbas and Zaporozhstal and the testile combines of Central Asia. They will always remember how, shoulder to shoulder, people of all nationalities defended the gains of socialism in the great patriotic war.

The war was a severe test, but it showed that peoples who have known in practice the happinesses of living in a united fraternal family, peoples who have been educated by the party in the spirit of Soviet patriotism and proletarian internationalism, are invincible.

The truly heroic labor of the people who opened up the virgin lands of Kazakhstan and Golodnaya Steppe and the builder of the major hydroelectric power stations and the industrial giants will never be forgotten.

Our country has become home for over 250,000,000 free and equal people--representatives of over 100 nations, nationalities, national and ethnic groups. The building of the bright edifice of the USSR is the greatest historic service of the Leninist party to which it has contributed its tireless labor, the talent and spiritual enthusiasm of communists and the knowledge and organizational skill of cadres. The building of this historic edifice was the result of the comprehensive experience of all our peoples, the political result of what they dreamed of and fought and worked for.

The USSR's formation was a triumph for the new type of national relations founded on the principles of consistent proletarian internationalism and opened up immense prospects for joint progress by the country's peoples along the path of building socialism and communism.

And once again we see standing before us in all its greatness the genius of Lenin--the architect and creator of the first multinational worker and peasant state in the work. Once again we see before us with all its force and lasting significance Leninism, which has rallied the peoples and forged their fraternity, cooperation and unity on the basis of the principles of socialism.

Comrades!

The natural result of the party's policy its internationalist course and the heroic efforts of all the USSR's nations and nationalities was the building in our country of a developed socialist society. At this stage, marked by a lofty surge of national creativity, the revolutionary transforming force of Marxism-Leninism and the ideas of October is being revealed increasingly fully. Soviet society has never been so unified and firm, has never had such gigantic production forces and spiritual riches at its disposal as today.

In conditions of mature socialism the party is setting and resolving new tasks in the sphere of national relations, further deepening fraternal cooperation among peoples and increasing their international community and unity. Developed socialism qualitatively transforms social and national relations. As a result of the party's consistent internationalist policy all the republics have reached a high level of socioeconomic and spiritual development.

Today the economy of each republic is an integral part of the unified national economic complex. Now that de facto equality has been achieved among the peoples, the task is not to overcome the economic backwardness of the regions but to achieve maximum efficiency of the whole national economic complex and on this basis satisfy both international and national interests.

Economic cooperation among the peoples has now acquired the form of unified, joint, combined labor on the basis of all-union division of labor.

Thanks to the cooperation and unity of our peoples, an important social task has been resolved--the economic development levels of all the Soviet republics have been equalized. The resolution of this task reflects the gigantic path traveled by the Soviet peoples within the framework of the socialist international community, since to begin with they were at various stages of socioeconomic development.

The equalization of the republics' economic development levels means ensuring conditions for the growth of the combined might of the entire Soviet people and the gradual rapproachement of its constituent nations and ensuring the proportionally equal contribution of each of them to the common cause of communist building.

The equalization of the cultural development levels of the USSR's peoples was effected in the main in a short historical period on the path of implementing the Leninist plan for building socialism. The country's 100-plus nations and nationalities, many of which did not even have a written language before the revolution, are now enriching the treasurehouse of socialist and world culture with their own artistic values and scientific discoveries.

In the course of socialist and communist building a unique social class structure of nations has been achieved--they all consist of the working class, the kolkhoz peasantry and the people's intelligentsia. In the conditions of mature socialism the gradual development of a classless structure of society is taking place. And this means a new step on the path of the further rapproachment of the nations and nationalities.

An outstanding result of the activity of the communist party and Soviet state is the fashioning of a new social and international community--the Soviet people.

The Soviet people is the concentrated expression of the common elements in the economic, social, spiritual and ideological life of all the Soviet nations, irrespective of their national affiliation. The new historical community extends still further the possibilities for the economic, social and spiritual development of each nation and nationality and is a common basis for their further flourishing and victory rapproachment. Within this community genuine equality of all nations and nationalities is being achieved, since each of them relies on the combined creative potential of the Soviet people.

The development of national relations in our country in recent decades has enabled the party and people to resolve tasks of increasing scale and complexity linked with creating the material and technical base of communism and further improving working people's well-being and culture.

Comrades!

History knows no state besides the USSR which has done so much for the all-round development of all nations and nationalities in such a short time.

The multinational Soviet state is indisputably the first socialist federation in the world which ensures the democratic combination of the interests of the entire multinational USSR with the interests of each of the republics which belong to it and the dynamic progress and steady rapproachment of all the country's nations and nationalities. This results from the very national state organization of the USSR as a unified multinational union state.

There is and can be no such legal state harmony in capitalist states. They are typified by inequality among nations, which is a direct result of their economic inequality. Such a phenomenon is alien to our laws, to our way of life.

Socialist democracy is constantly directed toward strengthening the economic system as the genuine foundation of equality.

The very principle of the development of our state is such that each republic, while building up its own material and spiritual resources, at the same time extends the possibilities for common progress.

This close interrelation is the source of the all-round cooperation and the development of the glorious traditions of fraternal mutual assistance among our peoples. Shoulder to shoulder they are building the Baykal-Amur Main Railroad and Atommash, opening up the virgin oil lands of West Siberia and transforming the non-Chernozem Zone of the RSFSR. Inspired by the party's decisions, they are now implementing the ambitious food program. Participation in major new construction projects is becoming a matter of honor. The international duty of each republic.

The further development of cooperation among the republics is assisted by the Constitution, the fundamental law of the Soviet state, a genuine manifesto of friendship and fraternity among all peoples of our multinational motherland. It enshrined in legal form and developed the sovereign rights of the Soviet republics and guarantees every opportunity for the all-around development of each nation and nationality.

The state building and economic development of the fraternal republics in the country has been accompanied not only by the equalization of the cultural levels of the Soviet nations and nationalities been leveled but also by their genuine flourishing.

An internationalist content is appearing with increasing vividness in national cultures. The best creative works of any particular people become the property of the whole of society and of all the nations and nationalities of the USSR. The Russian language is an important medium of inter-national intercourse, mutual enrichment of cultures and access to the heights and cultural values of world civilization. Thus we are witnessing a beneficial process of the mutual enrichment of the fraternal peoples' cultures and the fashioning of a culture of the united Soviet people.

The common achievements of the more than 100 nations and nationalities of the USSR are not solely the result of the heroic labor of the working class, kolkhoz peasantry and intelligentsia of given Soviet republics. They are also the result of the great friendship among the peoples of the whole country and of the disinterested assistance of all the Soviet peoples primarily the Russian people.

In joint labor the USSR's peoples are rallying still closer into an indissoluble family. Their strength is increased by full mutual trust and support. The friendship among all the country's nations and nationalities and their monolithic cohesion have become an integral facet of the Soviet way of life.

The CPSU's Leninist nationalities policy and socialist democracy are constantly directed toward the further development and rapproachment of the socialist nations. The party is currently setting new tasks in the sphere of national relations which require all the country's nations and nationalities to pool efforts still more closely.

Each republic has now reached a high economic and cultural level. Their creative forces have grown immeasurably. They are capable of resolving increasingly large-scale tasks. And the main thing now is to use these possibilities to full advantage.

The material and spiritual potential of the Soviet people enables them to implement ambitious projects which would be impossible to realize through the efforts of any one republic. The common interests of Soviet people, expressed in the immediate and long-term tasks of communist building, require the maximum contribution of every nation and nationality to implementing them.

The chief goal of the party's Leninist nationalities policy and socialist democracy is the further development, flourishing and rapproachment of the socialist nations. The flourishing of Uzbekistan is vivid testimony to the triumph of the Leninist nationalities policy. This former backwater of czarist Russia has made a swift ascent from feudal backwardness to the heights of social progress during the years of Soviet power.

Truly tremendous work has been done in the republic to develop industry. At present we have over 100 industrial sectors, and 1M662 major enterprises equipped with the latest machinery and equipment are in operation. Large-scale chemistry, multisector machine building and other industrial sectors including power, coal, gas, mining, metallurgical, gold mining, electrical engineering, light and food sectors have been created and are rapidly developing. Everything--from various types of fabric and food products to aircraft and tractors, cotton harvesters and ferroconcrete products, excavators and the most complex radioelectronic apparatus--is produced in Uzbekistan. Since the USSR's formation in 1922 the volume of industrial output in the republic has increased 428-fold.

Now industry accounts for more than half the entire social product. A powerful construction industry has been created in the republic.

Our remarkable construction workers are building modern production installations, architectural complexes and splendid palaces, embodying the achievements of world, Russian and national architecture. The appearance of our cities and villages is being transformed with every passing year.

Our agriculture has been transformed beyond recognition. It has become large-scale, multisector and mechanized.

At the dawn of the Soviet state Vladimir Ilich Lenin dreamed of the country having 100,000 tractors. Now in Uzbekistan alone there are 160,000 tractors, about 15,000 grain-harvesting combines and 35,000 cotton-harvesters at work.

The main sector of agriculture, the chief source of the republic's wealth and the international pride of its working people is cotton. Sixty years ago, the year of the USSR's formation, 37,000 tons of it were produced. Now for the third year Uzbekistan is providing the motherland with more than 6 million tons of "white gold."

But Uzbek soil is famous not only for cotton. Uzbekistan accounts for 62 percent of the silkworm cocoons, 100 percent of the kenaf, 35 percent of the astrakhans and 21 percent of the rice produced in total in the country.

By the people's heroic labor impressive reservoirs, irrigation canals, drainage ditches and hydropower schemes have been created. The republic occupies first place in the world in terms of level of development of irrigation and land reclamation. More than 3.5 million hectares of our land is irrigated. Golodnaya, Dzhizakskaya and Karshinskaya Steepes continue to be opened up comprehensively on a broad front.

During the years of Soviet power enormous successes in cultural building have been achieved in the USSR as a whole and in our republic. In prerevolutionary Uzbekistan 98 percent of the population was illiterate. Now we have more than 9,000 schools where over 4 million students receive education.

There was not a single higher educational establishment in Uzbekistan before the revolution, whereas now there are 3 universities and 40 institutes with more than 285,000 students. In terms of student numbers per 10,000 inhabitants the republic has overtaken many developed capitalist countries.

One of the most important social achievements of Uzbekistan is the considerable numerical growth of the working class--the most advanced class in society and repository of advanced forms of labor, communist ideology and the new psychology. Sixty years ago, when the USSR was formed, there were 20,000 workers and employees in Uzbekistan. Today over 3.5 million skilled workers, a large proportion of whom are representatives of local nationalities, are engaged in the republic's economy.

Thanks to the constant concern and attention of the party and government, Uzbekistan has become a major scientific center of the Soviet East and has a mighty scientific and technical potential at its disposal. More than 36,000 people, including more than 960 doctors and almost 13,500 candidates of science, work in the republic's scientific establishments.

Uzbekistan is a republic of high socialist culture. We have 28 theaters, more than 4,000 club establishments, over 5,000 movie projection facilities, 6,000 mass libraries and many museums and sports facilities. The press, radio and television have developed rapidly. Some 281 newspapers and 83 magazines are published in the republic. The number of books published annually is over 34 million.

During the years of Soviet power literature and all types of art have flourished and become immeasurably richer in content, form and genre.

Greater attention is paid to the health protection of working people. Some 1,153 hospital establishments are functioning in cities and villages. There are 29 doctors for every 10,000 people. This is considerably more than in many developed capitalist countries.

The party's most important gain is the establishment of genuine people's power in the country. Socialist democracy has guaranteed all working people genuine political rights and freedoms and broad participation in all state and public affairs.

The plenipotentiary power of the laboring people finds its living embodiment in the Soviets of people's deputies Some 259 workers and kolkhoz members, which is 51 percent of the deputies, have been elected to our republic's Supreme Soviet.

Carrying out the Leninist instruction that women are a tremendous force in socialist building, the party has encouraged millions of free working women into creative work. They are making a great contribution to the cause of building a new society.

Almost half the women of Uzbekistan have higher and secondary education. Every third engineer, scientific worker and educationalist is a woman. Some 86,000 women in the republic have been awarded orders and medals of the Soviet Union.

These successes of Uzbekistan are the remarkable fruits of the friendship and cooperation among the Soviet peoples and their life-giving force. These fruits are the result of the wise Leninist nationalities policy.

Uzbekistan's working people reviewed the results of the last 5-year plan with a sense of having discharged their duty. During this time the production forces increased substantially. Science and culture were further developed and working people's well-being improved.

The republic has made a confident start to the 11th 5-Year Plan. The production plan for industrial output was completed ahead of schedule in 1981. Having mounted socialist competition in honor of the 60th anniversary of the USSR's formation on a broad scale enterprise labor collectives are successfully fulfilling the targets for the jubilee year and creating a firm basis for further progress.

Industrial and construction workers are taking an active part in the nationwide movement for economy and thrift, displaying a proprietorial attitude toward public property and improving production technology.

On behalf of the Uzbek CP Central Committee and the Uzbek SSR Supreme Soviet Presidium and Government, allow me, comrades, to warmly congratulate the republic's heroic working class on our state's jubilee and to thank it for its selfless labor and wish it new and even greater achievements.

Uzbekistan's working people are struggling persistently to implement the decisions of the CPSU Central Committee May and November (1982) Plenums. The implementation of the food program has become a matter for all the people.

Under very hard weather conditions our renowned cotton growers won a very hard battle for a large cotton harvest in the jubilee year and honorably kept the word they had given to the party. They presented the Soviet peoples' notable holiday of fraternity with a fine labor gift--there are over 6 million tons of Uzbek cotton in the state cotton stores.

The battles for this year's harvest will go down in the history of cotton growing as a symbol of the arable farmers' courage, valor and heroism. It will go down in history as a symbol of loyalty to patriotic duty and international duty on the party of all urban and rural workers who contributed to the common victory.

The greetings message from the CPSU Central Committee to the Uzbek CP Central Committee, the Uzbek SSR Supreme Soviet Presidium and Council of Ministers and all working people of Uzbekistan on this remarkable labor victory was welcomed with a feeling of tremendous joy in the republic.

The high assessment of the successes achieved in the jubilee stint has generated an ardent response in the hearts of the republic's millions of rural and urban workers and inspired them to new labor achievements.

Advancing toward the 60th anniversary of the USSR's formation and vying with the cotton growers, the workers of other agricultural sectors have successfully fulfilled their socialist pledges.

Allow me, comrades, on behalf of the Uzbek CP Central Committee and the republic's Supreme Soviet Presidium and Government to wholeheartedly congratulate the kolkhoz members, sovkhoz workers and all workers in the republic's agroindustrial complex on the holiday and to thank them wholeheartedly for their heroic labor and enormous contribution to the implementation of the food program and to wish them great new labor victories.

The contribution made by our glorious intelligentsia to the republic's socioeconomic and cultural progress is great. National education and health workers and figures in science, literature and art devote all their knowledge and talent and all their efforts and energy to the people and the noble cause of their spiritual enrichment.

In these solemn hours we wholeheartedly congratulate our intelligentsia on the great holiday and wish it great new successes in developing science, culture and art!

The successes of Uzbekistan--an equal among equals in the fraternal family of Soviet peoples--are the fruit of their sacred friendship, cooperation and mutual aid. The peoples' friendship, unity and cohesion are an inexhaustible source of our motherland's might, a guarantee of the flourishing of all Soviet socialist nations and a guarantee of our future victories in creating a communist society.

Comrades!

The Soviet people are indebted for all their historic achievements to the communist party and its wise leadership.

By its defense of the masses' fundamental interests and its devotion to the ideals of communism and very great attention toward the people's national interests and feelings, the party has won the lofty right to be the leader, guide and organizer of the working people of all the country's nations and ethnic groups.

By its selfless service to the cause of communism and peace it has won boundless trust, prestige and love among the working class, kolkhoz peasantry, people's intelligentsia and all working people of our multinational fatherland. It is with a feeling of special pride that Soviet people use Lenin's profound words to speak of the party: "...We believe it, we see in it the mind, honor and conscience of our era."

The Uzbek CP is one of the CPSU's militant detachments. The republic's communists, numbering over 0.5 million, play a vanguard role in resolving communist building tasks and consistently pursue the party's Leninist nationalities policy. They bear aloft the banner of Soviet patriotism and socialist internationalism and march at the head of the working people in the struggle for the implementation of the party's plans.

The republic's communist party pays great attention to the working people's education in a spirit of proletarian, socialist internationalism and the Leninist friendship of the peoples. It has always done and will continue to do everything to ensure that the friendship of the USSR peoples develops and strengthens from one day to the next. We treasure and will continue to treasure as the apple of our eye the great friendship of the peoples born of the Soviet system and strengthened in labor and battles by inextricable ties of fraternity.

The principles of proletarian internationalism lie at the basis of the party's domestic policy and its international activity. At the dawn of Soviet power V. I. Lenin called Soviet people international devotees, internationalists [mezhdunarodnikami, internatsionalistami]. These words of Lenin's now resound proudly on the lips of Soviet people, for whom a sense of fraternal aid and international solidarity with the worldwide army of labor has become an inalienable characteristic.

In creating a communist society the soviet people are fulfilling their paramount international duty to the international working class and the entire world revolutionary and liberation movement.

By strengthening its economic and defense might our country is making an inestimable contribution to the creation of favorable conditions for the peoples of the fraternal socialist countries to build a new life and is doing everything possible to strengthen their solidarity and develop relations of mutual aid. Our party and the Soviet state have rendered and are continuing to render all-around aid and support to fighters for freedom and independence.

Uzbekistan takes an active part in our country's international links and in the noble cause of assisting the developing countries. The forms of this participation are diverse: they include export deliveries and the training of national cadres and scientific, technical and cultural cooperation. Thousands of the republic's envoys are working in 48 countries at various projects under construction with the USSR's technical assistance. In fulfilling their international duty, hundreds of the republic's envoys are working in Angola, Mozambique, Afghanistan and Vietnam, helping their peoples to build a new life. Uzbekistan is the venue for important international social and political forums. It was here that the "Tashkent spirit" was born, which defined for many years the nature of the movement of solidarity with the Asian and African countries. This was reaffirmed once more at the session of the AAPSO Presidium held in the republic's capital recently.

These are all facets of the constant aid and support which our country renders to the people's national liberation struggle against the vestiges of colonialism and racism.

The foreign policy of our party and the Soviet state is profoundly humanitarian. But this humanitarianism has nothing in common with liberalism. The humanitarianism of the foreign policy of the CPSU and the Soviet Union is of a class-based nature. It is the humanitarianism of fighters for democracy, national independence, the consolidation of peace throughout the world and man's salvation from the threat of annihilation in the flames of a nuclear missile war.

The Soviet Union pits its confident, restrained policy against the bellicose great-power U.S. foreign policy course. From the first legislative act of Soviet power--the Decree on Peace--through to the recent decision of exceptional importance--the commitment to renounce the first use of nuclear weapons--the entire policy of our party and state has been pervaded by the sincere desire to preserve peace. The Soviet Union is prepared to do and is doing everything possible to prevent nuclear catastrophe, curb the arms race and strengthen the foundations of peace on earth.

Born of the revolutionary creativity of the working class and working people of our country, the multinational Soviet state is today a bastion of the struggle for the implementation of the ideals of communism, the consolidation of friendship among all peoples of the world, and lasting peace on the planet.

Comrades!

It is with a sense of legitimate pride in their mighty socialist fatherland that all Soviet people are greeting the great holiday of friendship, fraternity and union. They are fully entitled to this pride. The 60 years of our history are not a long period. But during these years social transformations have been implemented for which centuries are needed. That is the Soviet people's historic feat.

It was the Soviet people, under the communist party's leadership, who created the world's first united multinational worker and peasant union state. A state of genuine democracy and social and national equality. A state which ensured the implementation of the principles of peace and the true freedom and fraternity of all nations and ethnic groups.

The peoples of our country look to the future with optimism and confidence in their strength.

With all the brother peoples, the working class, kolkhoz peasantry and laboring intelligentsia of Uzbekistan are filled with the aredent desire to work selflessly under the leadership of the party's Leninist central committee for the triumph of the immortal ideas of communism.

Glory to the great Soviet people--the builder of communism and consistent fighter for peace!

May our great multinational motherland become even stronger, richer and more beautiful! Long live the Leninist CPSU--the inspirer and organizer of all our victories!

(Comrade Sh. R. Rashidov's report was listened to with great attention and frequently interrupted by applause.)

POLISH VOIVODSHIP DELEGATION IN LITHUANIA

Vilnius SOVETSKAYA LITVA in Russian 19 Oct 82 p 1

/Article: "Visit by a Delegation from Łomża Voivodship, PRP /People's Republic of Poland/ /

/Text/ VILNIUS, 18 October. (EL'TA). A delegation from Lomza Voivodship, PRP has arrived in Soviet Lithuania; it is headed by Candidate Member of the PZPR /Polish United Workers Party/ CC and First Secretary of the Voivodship Party Committee W. Michaljuk. The delegation includes the following persons: peasant member of the PZPR CC W. Malinowski, bureau member of the PZPR Voivodship Committee and foreman of the Cotton Combine imeni October Revolution, S. Oldakowski, and bureau member of the PZPR Voivodship Committee and director of the Grajewski Wood-Chip Panel Plant, J. Kowalski.

On the first day of their visit the guests from our neighboring country met with CPSU CC member and first secretary of the CP of Lithuania CC, P. Grishkyavichus, and CPSU Central Auditing Commission member, chairman of the LiSSR Council of Ministers, R. Songayla. During the course of the conversation which took place P. Grishkyavichus told the guests about the achievements of this republic's working peoplein developing the economy, science, and culture during the years of the Soviet regime. In the conversation it was emphasized that Soviet Lithuania has prospered within the unified and friendly family of fraternal republics. This fraternal friendship, the generous, unselfish aid of Soviet peoples has opened up broad horizons for the precipitous growth of the republic's productive forces, for the steady improvement in the working people's well-being.

The guests were informed about how the working people of the Neman region, in striving to mark in a worthy manner the 65th anniversary of the Great October Revolution and the 60th anniversary of the formation of the USSR, are working intensively to implement the plans for economic and social development, to carry out the tasks which were set forth by the 26th CPSU Congress and the 18th CP of Lithuania Congress. It was noted that a high degree of political and labor activity on the part of farmers and workers in all the sectors of the agro-industrial complex has been brought about by the decisions of the May (1982) Plenum of the CPSU CC and the country's Food Program which it adopted.

The delegation's leader, W. Michaljuk, expressed profound gratitude to the CP of Lithuania CC for the opportunity of becoming widely acquainted with the achievements of Soviet Lithuania and with the operational experience of the party organizations. He talked about the activities of the Voivodship PZPR Committee and the voivodship's Communists in implementing the decisions of the Ninth Party Congress. The delegation's leader provided information about the new law on trade unions which has been adopted by the PRP Sejm /Parliament/. It opens up an extremely important phase in the trade-union movement and marks an important act on the path of normalizing social life, enriching its democratic forms. The thought was expressed that the Polish people, by their own efforts, developing cooperation with the fraternal countries, and utilizing aid from the Soviet Union, will be able to overcome the existing difficulties and will defend the socialist attainments in the PRP.

Taking part in the conversation were the following: Chief of the Foreign-Ties Department of the CP of Lithuania CC F. Strumilas, Deputy Chief of this department M. Sadovskiy, and Second Secretary of the Vilnius Party Gorkom V. Klikunene.

DEMIRCHYAN ADDRESSES COUNTRY'S 60TH ANNIVERSARY SESSION

GF191700 Yerevan SOVETAKAN AYASTAN in Armenian 18 Dec 82 pp 2-4

[Speech of Karen Demirchyan, first secretary of the Armenian CP Central Committee at a joint meeting of the Armenian Central Committee and the Supreme Soviet in Yerevan to mark the 60th anniversary of the USSR; on 17 December]

[Excerpts] Dear friends. Sixty years have passed since the memorable December 1922 when in our fatherland's capital Moscow, the first All-Union Soviet conference triumphantly declared the birth of the world's first united multinational socialist state, the Union of the Soviet Socialist Republics.

That historic act had a fateful significance for the peoples of our country, their real fraternal friendship was confirmed. Various means for joint creative work and struggle were opened for the realization of a noble aim, the building of a communist society.

The plans established by V. I. Lenin regarding the national issue of the Communist Party began to be realized from the first days of the socialist revolution.

The Great October broke the chains of social and national pressure and invited all the peoples of our country to a historic, unique and creative work. Soviet rule not only declared but practically proclaimed and supported the equality of various nations and nationalities. It awakened the people, created political and economic conditions for the speedy development of the people who were previously backward and promoted their close unity and friendship.

The liberated people, as Lenin had foreseen, moved toward fraternal friendship and cooperation. The great Leninist idea for the unification of Soviet republics within a united government prevailed in the minds and hearts of millions. It was warmly defended by the working class, laboring villagers, and prominent intellectuals and became a real popular united movement.

The workers of the Soviet republics knew very well the extraordinary significance of the formation of the USSR. They understood the total importance and necessity of uniting all creative means for the achievement of the historic aims of a new life. The necessity to unify into a common union was first due to the fact that the old world had left an extremely poor heritage, a destroyed economy, destruction and famine. Various parts of the country had very low standards of development. Only by united efforts, mutual support and fraternal assistance was it possible to overcome the backwardness, reestablish and develop production, to create an united socialist economy based on a general plan, to secure the living standards of the workers, to elevate the spiritual lives of the public and to march unitedly along the path of progress.

The Soviet Union became the great family of development and fraternity for over 100 nations and nationalities and showed the world the example of the free development of peoples.

Today, on the 60th jubilee of the Soviet Union, the bright achievements of the Soviet people are seen more clearly. They are more aware of the historic significance of the formation of the multinational Soviet state and its successful development of our country and the peoples of the whole world.

Due to the implementation of a united economic policy throughout the USSR, the unification of creative opportunities, the creation of a planned socialist economy, the rational distribution of public work, and the productive utilization of natural resources, the previously backward country became one of the most economically developed in the world. The gigantic economic progress of the USSR is seen in the fact that over the past 60 years the national revenue of the country increased over 170 times, the volume of the capital investments nearly 560 times, the volume of industrial production nearly 540 times, and its share in the international industrial production, 1 percent in 1922, has reached 20 percent today.

The whole history of the multinational Soviet state shows what a great moving power was the international unification of the peoples, friendship, fraternal assistance and cooperation, for the Soviet peoples. They have become the most important factors for the country's growth of material and spiritual potentials, for the rapid development of all Soviet republics, for our forward movement in all levels of building a new life and for all our historic victories.

Comrades, what socioeconomic and cultural development has been achieved by the Soviet peoples as a result of the implementation of national Leninist policy? What progressive role has the formation of the USSR played in their destinies? A splendid example of this is the socialist biography of the Armenian people.

Today's flourishing Soviet Armenia, the child of October and socialism, is a highly developed socialist republic in all aspects. Its people under the leadership of the party and by the powerful support of the Leninist fraternity of the peoples, have reached heroic heights of contemporary progress.

The united soviet family has given to our people whatever they have not seen and felt throughout their centuries-old history--when the most determined struggle for national existence was waged, a struggle against plunder and tyranny by foreign enslaving forces that passed through like infernal tempests over Armenian lands.

The fraternity of the Soviet peoples gave them confidence, the joy of friendship, the constantly supporting loyal friends and the united construction of the great house of flourishment and happiness. Our people will never forget the paternal care of the great leader V. I. Lenin, his concrete assistance to young Soviet Armenia which was rising out of the ashes and destruction and stood over the path of socialist development.

The Armenian people will never forget how Soviet Russia and the other republics which themselves in that time were going through incredible difficulties, were fraternally sharing all that they had and were generously assisting them to cure their deep wounds, to create a new socialist economy, to lay the foundations of a new life and to transform the appearance of the fatherland.

The people of the old generation and history as well recall that our republic began from zero in many respects. However, we had the liberated creative will and eagerness of the working classes, led by the Communist Party, and their revolutionary creativity.

Regarding the flourishing of our Yerevan, who could believe in 1922 that from a dustry province it would quickly become one of the biggest industrial, scientific and cultural centers in the country. It became a city of unique beauty, the happiest and most beautiful of all Armenian capitals. During the last 60 years, Yerevan lived and struggled as a real working city. It has played a remarkable role in the rebirth of Armenia and in its successes in economic and cultural progress. Yerevan's exploits--probably this is how we should call its historic great works--was appropriately crowned by the highest gift of the fatherland, the Order of Lenin.

By celebrating the glorious 60th anniversary of the USSR today, we remember with deep gratitude all the working generations of our republic, the heroic work and marvelous achievements of those true patriots and internationalists who have participated in the creation and construction of the great Soviet Union, those who have devoted their efforts, energy and knowledge to the strengthening of our multinational fatherland, those who have defended freedom, honor and liberty, and those who have struggled and are struggling for the redoubling of its material and spiritual wealth.

On the occasion of the great day of friendship and fraternity, we deeply congratulate the working class, the workers of collective farm fields, intellectuals, the brave soldiers of the Soviet army, all the workers of our republic wish them all happiness, good life, successes in creative and patriotic work in the name of strengthening the economic and defense power of our dear Soviet fatherland.

Yes, the achievements of Soviet Socialist Armenia are great and its future is bright. Great happiness and the joy of peaceful work has prevailed in the country of the Armenians, the united family of the Soviet peoples. Sixty-five years ago the Armenian people were facing the threat of physical annihilation, as if justice had turned its face away and it seemed that they would soon disappear. However, owing to great October they achieved happiness in the powerful family of Soviet peoples and were able to live and work owing to the new period, the Leninist revolutionary renewal of the world.

At the beginning of our century one of the pillars of British colonialism, Z. Chamberlain declared: "The period of minor nations has passed a long time ago. The time of empires has come." This was not only a saying but impudent cynicism. It was the philosophy of hatred toward mankind and the policy and practice of the imperialists who brought tragedy to many peoples. Is it not the dogmatic backward advocacies and the policy of plundering and tyranny of the imperialists that resulted in the genocide of a whole nation in 1915 before the indifferent eyes of Europe. Are not the same ideologies and policies today the reason that the aggressors are slaughtering the peace-loving Arab peoples of Palestine, bringing suffering to Lebanon and other countries.

No, the time of minorities has not passed. On the contrary, Great October, socialism, and Lenin's ideas have erased the day of the empires. The times of unpunished colonial aggressions, plundering and tyranny have gone. Our great country today is demonstrating to the whole world the example of free development and equal fraternal cooperation of big and small nations as well as the progress and flourishing of peoples living with united aims.

At this solemn moment of the great and bright day of unification and friendship, our people express their warm gratitude to all the brothers and to all the Soviet peoples for their gigantic assistance and for their active participation in all the great work carried out in Armenia. They address their warmest international greetings and wishes of new glorious victories in communist construction.

Today, days before the start of the third year of the 5-year plan, we can say that much has been done. A good basis has been established for the full execution of the 11th 5-Year Plan and a determined struggle is being waged everywhere to achieve the party's economic strategy and to elevate productivity.

The workers of Soviet Armenia are making their contribution in the achievement of the country's socioeconomic development plan. They are successfully fulfilling the state plans and socialist obligations.

The national income grew 12 percent in the first 2 years of the 5-year plan instead of the projected 11.1 percent. The growth is twice the growth pace of capital investments. The industrial production volume increased about 12 percent instead of the 10.5 percent projected by the 5-year plan. The quality of work is improving.

The decisions of the May 1982 CPSU Central Committee Plenum are being carried out, and food program is being implemented. Important means are being initiated to fully secure the republic's demands for agricultural goods.

Regardless of nature's surprises, which have resulted in great losses, the village workers are fulfilling the annual plan for agricultural and livestock provisions and their sale to the state. The growth of gross agricultural production reached 10 percent instead of the 3.9 percent projected by the 5-year plan.

For their great achievements the village workers in this jubilee year received much appreciation from the party and were hailed by the CPSU Central Committee.

Capital investments are mostly being allocated for the expansion, reconstruction and technical reequipment of the existing enterprises. Ninety seven percent of the growth of industrial production volume is attributed to those factors. New houses, schools, preschool establishments, hospitals and other socialist and cultural projects will be completed. The socioeconomic development plan is being carried out successfully.

Much has been done, but more has to be done. We have a good, balanced and scientifically-based plan for the development of the republic's national economy, science and culture. It is a real plan for the great means of our production and scientific technology potential. It stems from the constructive proposals of the party and the historic resolutions of the 26th CPSU Congress and aims at the further development of the republic to increase its participation in the elevation of the united popular economy of the country.

Our main task today is to execute that plan. In order to carry it out successfully and achieve the planned aims, it is necessary first of all to work better and more productively, constantly and devotedly, mobilize all efforts and work with the high awareness of duty and responsibility toward party, people and fatherland.

Raising productivity demands the acceleration of the technological reequipment of industrial and agrarian sectors of the national economy; strengthening the economy in all aspects; improve planning, administration, management and organization of production; and raise labor productivity and quality.

We must generally strengthen scientific technological progress and widely introduce the leading achievements of science and technology in production.

Our primary task is the consistent realization of the food program. It is necessary to fully achieve the major work to improve the soil, construct reservoirs and irrigation systems and intensity the planting of high yield fruit and grape groves. We must further use the existing reserves to raise the production of fields and factories. We are obliged to give serious attention to increasing crop yields, introducing a scientifically-based system of agronomy; raise livestock fodder production; mechanize labor processes; make better use of farm machinery and further strengthen the role of science in agricultural production.

We must do much to improve capital construction in all branches of the national economy. We must particularly note the importance of executing the construction plans on time. The construction workers must always remember that the full achievement of the socioeconomic development plan depends on how successfully they carry out the proposals, productiveness and quality of their work and their conscientiousness. So many times we have stated and now again we reiterate that whatever is being constructed must be of good quality, beautiful, make the people happy and honor the fatherland.

We must economize rationally and productively and show a true caring attitude toward the popular goodwill.

On this memorable day it is particularly necessary to pay attention to these issues because unfortunately we have many enterprises, organizations and labor collectives that are spending too much to fulfill the plans. Many economic administrators and cadres are altering the style of their work very slowly.

The implementation of the economic and cultural construction tasks before us stipulates the full participation of our science. Science today more than at any time before has become a powerful productive force. We are full of hope that the Academy of Science, the republic's institutes, scientific research establishments and our scientists will greatly increase their participation in resolving the problems related to increasing production and productivity in the national economy. We expect all our scientists to actively participate in the further improvement of the production structure and to increase the output of scientific and technical products that consume minimum energy and material.

We are sure that our working class, the workers on the collective farms, the popular intellectuals and all the workers of the republic will achieve new levels in communist construction and will honorably carry out all the projected plans. Their new achievements will be the result of the party's wise leadership. They fully trust the genuine communist party wholeheartedly approve the party's domestic and foreign policy and will further rally around the Leninist CPSU Central Committee.

The Armenian people are happy and proud of their new good fortune, the birth of October. They stepped into the 20th century with problems, persecutions and wounded hearts. In the first 20 years they bore fearful miseries, sufferings and the horrors of cruel genocide--the greatest tragedy of their history. However, today they are marching toward the 21 century free from pressures, deprivation of rights, poverty and backwardness. They are marching with the full flourishment of the material and spiritual powers as a progressing socialist nation. They are not marching alone, as they did for hundreds of years, but with fraternal peoples. They are progressing with great ideals, confident about the future and with assured steps of a working, creative and constructive people.

Hundreds of years will pass but the glorious struggling and constructing path of the past 60 years with the fraternal Soviet people will never be forgotten. It will remain in the memories of the coming generations as the period of heroic great works and establishment of a new world; the period of devoted and brave combatants struggling for the bright ideals of mankind--fraternity, peace and socialist progress.

Living and struggling for the full victory of those ideals has been and will be the greatest happiness of our people.

Today, in the ancient country of the Armenians, the glorious 60th anniversary of the USSR is being marked as a great and bright day, the workers of Soviet Armenia and all the people assure the Communist Party, its Leninist Central Committee and the Central Committee Politburo that they--as they always did

PAKISTANI ROLE IN U.S. MILITARY PLANS FOR MIDEAST VIEWED

PM201137 Moscow NOVOYE VREMYA in Russian No 3, 14 Jan 83 pp 24-25

[S. Irodov article: "The Pentagon's Carrot"]

[Text] A shiny new American F-16 fighter-bomber bearing the identification marks of the Pakistani Air Force soars rapidly upward. As yet, only in the advertising columns of the local newspapers summoning young Pakistanis to the Air Force Academy at Risalpur, where future pilots are trained. But the hour is not far off when these ultramodern combat machines will appear in Pakistan's skies. In mid-January, the PAKISTAN TIMES reports, the first 6 of the 40 such planes which it is planned to supply will be delivered to the country. As Pakistani President Mohammad Ziaul Haq insisted during his first official visit to the United States in December last year, they are equipped with sophisticated electronic equipment.

And deliveries of other combat hardware--tanks, armored personnel carriers, helicopters, missile installations, artillery and antiaircraft guns, electronic equipment--within the framework of the agreement signed in 1981 on American military and economic aid to Islamabad to the tune of $3.2 billion over 6 years are not very far ahead.

U.S.-Pakistani relations have only infrequently been marked by stability, although after the collapse of the SEATO and CENTO blocs Pakistan remained the only country in the region with alliance ties with the United States in the form of the agreement concluded back in 1959 on cooperation, including military cooperation, which made these ties special. Despite the fact that back in the early fifties representatives of the Washington administration were stressing the imprtance of "Pakistan's strategic position for the world struggle against communism," Washington alternated the stick and carrot in its relations with that country. First deliveries of weapons and the granting of financial loans to Islamabad were stepped up, then an embargo was imposed on various aspects of aid to it. Under President Carter alone the United States twice--in 1978 and 1979--stopped economic aid to Pakistan, declaring its displeasure above all with the leadership's nuclear ambitions and certain actions of the Pakistani military regime in the domestic sphere.

The changes in Iran, as a result of which, as the WASHINGTON POST wrote, "Pakistan was the last of the countries on the Soviet Union's Asian border to be oriented toward the West," caused the American administration to review its position. They rejected the "stick." But Carter did not manage to bring the rather rusty system of "special relations" between the United States and Pakistan into the form required by Washington. President R. Reagan's Administration set about doing so zealously. The sides managed with no particular difficulty to overcome a number of problems which had previously delayed military-political cooperation between them. In essence the White House departed from the principle of linking aid to Pakistan to the latter's renunciation of the implementation of its nuclear program. In turn, Islamabad stopped its importunate demands for guarantees that the United States would give Pakistan assistance in the event of any armed conflict.

By all appearances, it was agreed by mutual consent to develop military-political cooperation in the light of Pakistan's present status as a nonaligned state, outside the framework of "official structures." That is, not to conclude any formal treaties, but to move toward Pakistan's gradual involvement in the implementation of American plans in Southwest Asia, the Indian Ocean and the Persian Gulf.

The U.S. press is increasingly actively discussing the possibilities of using Pakistani air and naval bases during the movement of the rapid deployment force to the proposed regions of combat operations. They are talking about Washington's desire to secure the opportunity for its aircraft carriers to call at the port of Karachi, and also to use an airbase in Baluchistan for transit stops for its air force planes. Will the Pentagon receive the right to create its own military bases on Pakistani territory? In public statements in the United States Ziaul Haq denied that Pakistan agrees to make its territory available for the deployment or transit of the American rapid deployment force. Though in a television interview he did slip up and say: "That does not come into our policy plans at the present moment." In any event, observers drew attention to the fact that in the course of the Pakistani-Indian talks on the normalization of relations between those two countries Islamabad stubbornly rejects the Indian proposal to ban the creation of foreign military bases on the two states' territories.

Just at the time when Ziaul Haq was in the United States, an announcement was made on the creation of the new American central command, to cover an extensive region of the Middle East, East Africa and the Indian Ocean. Pakistan is included as the Eastern flank. No protests were heard from Islamabad....

Reports have appeared in the Indian press on the shipment to Pakistan--on the basis of a secret American-Pakistani agreement reached during Ziaul Haq's December visit to Washington--of a group of American military experts to create three top-secret electronic stations there to act as backup for the Pentagon's military operations in the Indian Ocean and the Persian Gulf region and to collect espionage information on countries in the region. The TIMES OF INDIA newspaper describes this deal as effectively amounting to Islamabad's making military bases available to the United States for electronic surveillance, like the bases which existed in the shah's Iran.

Thanks to the new weapons deliveries, the Indian AGENCY PRESS TRUST OF INDIA has calculated, Islamabad will be able to create an additional 2 corps formations, 6 infantry divisions, 34 artillery regiments, 17 tank regiments and 19 antiaircraft artillery regiments. In order to receive F-16 aircraft, 14 military airfields are being extended and modernized. The Ziaul Haq regime does not begrudge military expenditure: The country's state budget for the fiscal year 1982-1983 assigns just under half the expenditure section to it. "A Pakistan which is strong and sure of itself," R. Spiers, U.S. ambassador to Islamabad, stated, "accords with the interests of the United States and the Free World". The White House believes that it will be easier for a militarized Pakistan to strengthen its military cooperation with the Muslim countries of the Near East and the Persian Gulf, and in particular to send military units there. Pakistani servicemen, as Ziaul Haq reaffirmed when he addressed the Washington National Press Club, are already in a whole series of Near Eastern countries. The biggest contingent is in Saudi Arabia. Washington pins its hopes on this for using Pakistan to maintain "stability and order" in the oil-rich region--in other words, to carry out gendarme functions.

A "strong" Pakistan must help safeguard American interests in the Near East and the Persian Gulf zone in another respect too. The White House is seriously worried that the U.S. inability to defend its loyal ally--the Iranian monarch--considerably undermined faith in U.S. potential even in the countries friendliest to the United States. American-Pakistani cooperation is presented in propaganda terms as an example of sincere U.S. concern for its ally's security, while in practical terms Washington zealously utilizes Pakistan's close ties with the Islamic world and its claims to leadership in that world to unite Muslim states on an anti-Soviet basis.

As one argument in favor of giving military aid to Islamabad representatives of the American administration advance the thesis that a militarily strong Pakistan will have no need to create nuclear weapons. Yet somehow it does not seem that the American deliveries will put an end to the nuclear program. Despite the fact that after a series of revelations in the world press the veil of secrecy over the work in progress in Pakistan on the creation of an "Islamic atom bomb" grew considerably thicker, some information has again filtered through to the press. In particular, this concerns Islamabad's attempts to buy special cables in Western Europe which are designed exclusively for controlling underground nuclear tests.

However, all these facts cause Washington little concern. It is evidently worried about problems of quite another nature. Above all it is interested in further stepping up the undeclared war against democratic Afghanistan, which is waged first and foremost from Pakistani territory. Evidently the White House is very displeased even with the small progress which has been observed in the settlement of the Afghanistan situation, in particular in connection with the Afghan-Pakistani talks in Geneva through the mediation of the UN secretary general's personal representative. The United States would evidently like to hinder such dialogue. High-ranking figures in the American administration visiting Pakistan invariably visit the "Afghan refugee" camps, where they make inflammatory appeals for increased interference in the DRA's internal affairs.

Of course, nobody can dispute Pakistan's right to choose its friends and allies at its own discretion. But it is hardly in the Pakistani people's interests to transform their territory into a source of exacerbation of the situation in the region, determine their steps according to patterns prepared across the ocean and ultimately act to suit the forces which regard it as advantageous for tension to persist in Pakistan's relations with its closest neighbors.

Ziaul Haq called his December meeting with Reagan a "meeting with destiny." But will the Pakistani people agree to the dangerous destiny which Washington is basically preparing for them by drawing Pakistan increasingly into the snares of its own aggressive, bellicose designs?

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

KABUL WITHOUT ELECTRICITY 6 DAYS FOLLOWING ATTACK

PM241353 Moscow PRAVDA in Russian 17 Feb 83 First Edition p 4

[Dispatch by Special Correspondent O. Kitsenko: "Restoration Work Completed"]

[Excerpts] Kabul, 16 Feb--The DRA capital gave a ceremonial welcome to a detachment of volunteers which has returned to Kabul after restoring the masts of power lines destroyed by the counterrevolutionary gangs.

As a result of an act of subversion late at night on 4 February the city with a population of over 1 million remained without electricity. Enterprises came to a standstill. Hospitals, schools, kindergartens and creches were in a grave plight.

As a result of the workers' selfless conduct three masts on which the detachment had worked were restored in record time--6 days.

"Our men," (Kh. Emal) [the detachment's commander] said, "were also motivated by hatred for the counterrevolutionaries who are preventing our people from building a new life."

One of the volunteer workers told me: "Before, when I read about the atrocities and outrages committed by the counterrevolution, I believed it was propaganda. Now I have seen with my own eyes what the bandits are capable of and how many difficulties and how much grief they bring people."

The counterrevolutionaries are profoundly wrong in believing that they will be able to halt the process of revolutionary transformations by terror and acts of subversion. Support for the revolutionary authorities is expanding among our people with every passing day, (Kh. Emal) said, concluding his account.

BAGIROV STRESSES RAPO'S, TASKS AT AGRICULTURAL AKTIV

Baku BAKINSKIY RABOCHIY in Russian 11 Jan 83 pp 1-3

[Article: "Intensifying the Political and Organizing Work in Rural Areas, and Successfully Fulfilling the 1983 Plans and Pledges: A Meeting of the Republic's Party and Economic Activists"]

[Excerpts] The workers of Azerbaijan worked meritoriously during the past year. After considerably overfulfilling the plans for the second year of the five-year plan, they met the year 1983 with an awareness of a duty that had been executed and from the very first days of the new year have been applying all their efforts to assure that during the middle year of the five-year plan they will not only reinforce but will also develop the achieved successes and make a worthy contribution to the carrying out of the intentions of the 26th CPSU Congress and the decisions of the May and November 1982 Plenums of the CPSU Central Committee.

The measures to fulfill the instructions of the CPSU Central Committee with regard to the intensification of political and organizing work in rural areas, the guaranteeing of the prompt and complete preparation for the spring field operations, and the adoption of the socialist pledges by the workers of Azerbaijan SSR for 1983 were the topics discussed at a meeting of the republic's party and economic activists that was held on 8 January in the Club imeni F. E. Dzerzhinskiy.

The presidium consisted of members of the Bureau of the Central Committee of the Communist Party of Azerbaijan [CPA] K. M. Bagirov, O. A. Bagirov, G. A. Gasanov, V. A. Guseynov, A. V. Kovtunov, I. A. Mamedov, F. E. Musayev, Yu. N. Pugachev, G. N. Sendov, S. B. Tatliyev, K. A. Khalilov, Z. M. Yusif-zade; and candidate members of the Bureau of the Central Committee, B. S. Kevorkov, R. E. Mekhtiyev, D. M. Muslim-zade, K. N. Ragimov, L. Kh. Rasulova, G. Sh. Efendiyev; and responsible worker of the CPSU Central Committee, I. N. Kuz'min.

The meeting was opened by First Secretary of the CPA Central Committee, K. M. Bagirov.

A report was given by secretary of the CPA Central Committee, I. A. Mamedov.

The republic's rural workers, Comrade Mamedov said, worked well during the second year of the five-year plan and demonstrated their high level of skills and true bravery in growing and gathering in, under the very complicated weather conditions, of a record-breaking harvest of the overwhelming majority of agricultural crops. And now they are directing their efforts, experience, and knowledge toward the fight to implement the historic decisions of the 26th CPSU Congress and the May and November 1982 Plenums of the CPSU Central Committee, and toward the further increase in the production and procurements of output of vegetable and animal husbandry and the realization of the country's Food Program. The results of the November 1982 Plenum of the CPSU Central Committee, and the tasks that evolve from the speech made by General Secretary of the CPSU Central Committee, Comrade Yu. V. Andropov, were discussed at the plenum of the CPA Central Committee that was held in December. Party, Soviet, and agricultural agencies were required to carry out the most rapid elimination of the shortcomings and miscalculations, and to eliminate the lag in the performance of an entire complex of operations in agriculture.

At the present time the country's agriculture has entered the critical period of preparation for springtime field operations. This is not only an agricultural and economic campaign, but also a very important political campaign.

During the current year our republic's kolkhozes and sovkhozes will have to carry out the sowing of spring crops on an area of more than 586,000 hectares. However, certain rayons have not fulfilled the established plan for the laying in of supplies of seeds, as a result of which one has seen a shortage of seeds for potatoes, oats, barley, soy, and perennial and meadow-pasture grasses. Therefore it is urgently necessary to take steps to guarantee the providing of the farms' complete needs for higher grades of seeds.

Everything is not proceeding favorably with the repairing and preparation of the technology for the springtime field operations. The quality of repair is continuing to cause major reproaches. As of 1 January, a large quantity of equipment was in technically inoperable condition: tractors, trucks, drills, cultivators, grain-harvesting combines. One cannot reconcile himself to this. The party, Soviet, and economic agencies must correct the situation, and must extend the organizing work to provide broad support in all agricultural collectives to the initiative that has been approved by the CPA Central Committee -- the initiative of the mechanizers of Shekinskiy Rayon for the preterm and efficient preparation of the technology for the springtime field operations.

Critical tasks confront the grain-growers, who achieved record-breaking indicators in the production of grain last year. The experience of the advanced rayons and farms provides a reliable foundation on which the grain-growers are supposed to achieve new successes in increasing the harvest yield. And yet, in certain rayons, especially the cotton-growing ones, the agricultural workers failed to meet the optimal deadlines for the sowing of winter crops, and on a considerable area no young shoots have come up yet. In order to correct the situation it will be necessary to take careful and well-directed care of the crops and to give accelerated dressings of fertilizer to the grain crops, especially on the plots that have been lagging behind in their development. The failure of even one hectare of grain crops should be viewed as a very serious violation of economic and party discipline.

The republic's grain-growers considerably overfulfilled the strained plans and socialist pledges of last year and are now laying a good foundation for advancing to newer, higher goals. But there is still a large number of shortcomings. The autumn plowing for spring planting is being carried out behind schedule; in a number of rayons, an insufficient amount of fertilizers was brought out onto the fields to be plowed under. The current washing of saline land is being carried out at slow rates. It is necessary to take timely measures to eliminate these and other shortcomings.

The speaker dwelt in detail on the state of affairs in viticulture, vegetable-growing, fruit-growing, tea-growing, and tobacco-growing and on the urgent questions of increasing the quality of the prespring operations in each of those branches. When speaking about the development of potato-growing as an important link in the realization of the Food Program, he reminded his audience of the task posed for our republic -- the task of achieving the guaranteeing of the complete needs of the republic's population for potatoes by means of its own production. And the current year must become in this direction a year of a sharp turning point.

The chief link in the republic's Food Program is animal husbandry, which was the special topic of a plenum of the CPA Central Committee that was held in March 1982. During the period that has elapsed, much has been done, but the work being carried out in the area of animal husbandry and fodder production, and the growth rates for livestock productivity do not yet meet the requirements of the May and November 1982 Plenums of the CPSU Central Committee. The rich reserves available to the animal farms are being used in a manner that is far from economical. As compared with 1981, the farms in a number of rayons have sharply reduced the volume of procurement of livestock and poultry and have reduced the procurement of milk.

Noticeable shifts during the past two years were achieved by the workers in the poultry-raising industry, who during that period increased the procurements of meat by a factor of 2, and eggs by a factor of 1.3. However, here too the opportunities and reserves are being used incompletely. The party has given us the task, Comrade Mamedov emphasized, within the next few years, of achieving a substantial improvement in the rate to which the public is supplied with products of animal husbandry, basically from our republic's own production.

Now is the most critical time for carrying out the livestock wintering-over operations. But many animal farms and complexes prepared poorly for them. Because of the unsatisfactory work of Gossnab and Goskomsel'khoztekhnika, many rayons did not receive the complete supplies of building materials for repairing the animal farms and complexes. Not all the fodder shops, fodder kitchens, and fodder plants have been put into technically serviceable condition. In a few places the plan for construction of them has been disrupted. Many farms have been poorly provided with fodders. A large number of kolkhozes and sovkhozes laid in supplies of them that are considerably less than the need. The task consists in assuring the thrifty, economical use of every kilogram of fodder, and the feeding of the fodders to the livestock only in prepared, balanced form.

There are many unresolved problems in the water-management construction. The work level of Glavazmeliovodstroy does not yet meet present-day requirements. There is a low effectiveness of the use of capital investments there. The fulfillment of the plan for activation of capacities is being carried out by means of small-scale, secondary projects, with the regular disruption of the assignments for the construction of the most important projects that are in excess of the financial limit. There have been a large number of shortcomings in the work of the agencies of the republic's Minvodkhoz, where there is a low level of repair and technical operation of the irrigation and collection-and-drainage networks, and the quality of the washing of saline land is low. The managers of the water-management agencies must make specific conclusions from the criticism.

The carrying out of the tasks that have been posed, the speaker said in conclusion, will be promoted in every way by the agroindustrial associations that have been created in conformity with the decisions of the May Plenum of the CPSU Central Committee in all areas, the oblast, and the autonomous republic. They have been called upon to raise to a qualitatively new level the development of all branches of the agroindustrial complex. And the first examination for these associations will be the preparation for the entire cycle of springtime field operations, the carrying out of the sowing of spring crops at the best times and on a high agrotechnical level.

The chief task that confronts the rural workers today was defined by the decisions of the May 982 Plenum of the CPSU Central Committee and the requirements of the country's Food Program, AzSSR Minister of Agriculture M. G. Askerov said, opening the discussion period.

Speaking about the decisive importance of grain production, the speaker reported that during the past year, as compared with 1981, the republic produced 61,000 tons more grain. The average harvest yield on the kolkhozes was 28 quintals per hectare; on sovkhozes, 18 quintals per hectare. That, of course, does not correspond to the republic's capabilities. An alarming situation is developing this year when weak sprouts of winter crops came up on 23,000 hectares. Another alarming situation is the appearance on sown areas of agricultural pests in large quantity. This obliges the ministry to take timely steps to correct the situation. In the area of cotton-growing, the task consists in carrying out to the fullest extent all the agrotechnical measures, the decisive fight against moths and other pests, and guaranteeing promptly, at a high level, the wintering-over operations and the washing of the earth.

Shortcomings in animal husbandry are being eliminated slowly, and the main reasons for this lie in the lack of any solid fodder base and the poor quality of the fodders that are laid in at the farms and that are produced at state enterprises.

The minister reported on the measures that have been directed at the further reinforcement of the fodder base and about the new, highly-productive varieties of corn and other crops that have been recommended to the farms. Simultaneously it is necessary to make broader application of the experience of the Moscow and other animal-husbandry collectives in using artificial insemination, which can considerably increase the effectiveness of the branch.

The republic's grape-growers have successfully completed the year that has elapsed, said Deputy Chairman of the State Committee on Viticulture and Winemaking, Azerbaijan SSR, A. N. Asudullayev. At the same time he recognized the serious shortcomings in the work of the State Committee, especially in the area of grain-growing and animal husbandry. During the past year the average harvest yield of grain crops on farms included in his system was considerably lower than the republic indicators, especially in Dzebrail'skiy, Divichinskiy, and Angelanskiy Rayons. The livestock productivity is low on many animal farms.

Chairman of Goskomsel'khoztekhnika, AzSSR, Kh. G. Kerimov, stated that the serious shortcomings and omissions that were noted in the work of the agricultural agencies also exist in the activities of Goskomsel'khoztekhnika, chiefly with regard to the setting up of a smoothly operating, single engineering service in the system of the rayon agroindustrial complex. All the farms that lack a repair base have not yet been provided with the technical servicing of their machine-tractor pool. The repair of the equipment is being delayed at the repair bases and the "raysel'khoztekhnika's" and one still encounters instances of poor quality of repair.

The speaker admitted that the State Committee, its main administrations, and subordinate organizations have been engaging insufficiently in questions of the mechanization of animal husbandry and fodder production, and have not been rendering the proper technical assistance in the operation of the equipment on the animal farms or in the training of personnel. He reported that at the present time all the agricultural operations in the shops, on the animal farms, and at the repair plans have been taken under constant control and he gave assurances that the workers of Goskomsel'khoztekhnika will decisively eliminate from everyday practice any red-tape procedures, will actively participate in the work of the rayon agroindustrial associations, and will take all steps to promote their effectiveness.

The reasons for the insufficient return on the lands being irrigated were analyzed by Minister of Land Reclamation and Water Management, AsSSR, M. I. Aliyev. He spoke about the low level of operation and the technical condition of the irrigation and collection-and-drainage systems. A considerable part of the irrigation networks is in a neglected state. It is necessary to effect a fundamental improvement in the use of the irrigation water, the drawing of which greatly exceeds the established norms.

After dwelling on the steps being taken to eliminate the shortcomings that were mentioned, the speaker said that at the present time operations are under way to carry out the capital repair of a number of canals and other hydraulic structures. In order to assure the prompt preparation of the water-management structures for the irrigation seasons, it is planned to carry out the cleaning of the irrigation and collection-and-drainage network, and to repair the pumping stations and subartesian wells. Current washing of saline land will be carried out on an area of 80,000 hectares, and water-charging irrigations on 265,000 hectares. However, these operations are still lagging behind in all rayons, especially in Saatlinskiy, Kyurdamirskiy, Zhdanovskiy, Agdzhabedinskiy, Yevlakhskiy, Udzharskiy, and Sabirabadskiy Rayons. Irrigation of winter grain crops has, for the time being, been extended to smaller areas than as of the same date last year, although all the conditions exist for carrying out this operation.

A long speech at the meeting was given by First Secretary of the CPA Central Committee, Comrade K. M. Bagirov.

Our country, he said, has entered the third year, the middle year, of the 11th Five-Year Plan. Soviet citizens, who have marked with a tremendous amount of political and labor enthusiasm the nationwide holiday, the 60th anniversary of the formation of the USSR, have extended with new force the fight for the successful implementation of the decisions of the 26th CPSU Congress.

The festivities devoted to the holiday celebration of the USSR became an outstanding event in the life of our Motherland, an event of intransitory international social and political importance. The brilliant and deeply meaningful report by General Secretary of the CPSU Central Committee, Comrade Yu. V. Andropov at the festive session in Moscow was perceived by our party, by all the Soviet nation, and by public opinion throughout the world, as a document of tremendous political importance, as a new contribution to the cause of peace and detente, and to the development of the problems of communist construction in our country.

The celebration of the 60th anniversary of the Soviet Union demonstrated the brotherhood and unity of the peoples of our country, their monolithic solidarity around the Leninist Communist Party, its Central Committee, and the Politburo of the Central Committee. It was a graphic testimony of the triumph of our party's Leninist national policy, and a brilliant and impressive demonstration of the great achievements of socialism.

In the new year's message to the Soviet people, the CPSU Central Committee, the Presidium of the USSR Supreme Soviet, and the USSR Council of Ministers expressed the firm conviction that the workers, kolkhoz members, intellectuals, and all the Soviet citizens will mark the year of 1983 with new glorious achievements and will guarantee the further successful advancement of our country along the Leninist path.

In response to that message, the republic's party organization and all the workers of Azerbaijan declare their will and firm resolve, with even greater persistence and energy, to fight for the implementation of the decisions of the 26th CPSU Congress and the plans for 1983 and the entire 11th Five-Year Plan.

The working class, the kolkhoz peasantry, and the intellectual class in our republic, with a sense of deep gratitude, approve and support the constant and fruitful foreign-policy activities of our party, the Politburo of the Central Committee, and the Soviet government, which are directed at the maintenance of peace on earth, the lessening of international tension, the cessation of the arms race, and the elimination of the military threat.

A historic landmark in the foreign-policy activities of the socialist countries was the conference held on 4-5 January 1983 in Prague -- the conference of the Political Consultative Committee of the States Participating in the Warsaw Pact. That conference advanced a new peace initiative -- the conclusion of a treaty governing the reciprocal nonapplication of military force and the maintenance of peace between the states participating in the Warsaw Pact and in NATO. The Politburo of the CPSU Central Committee, the Presidium of the USSR Supreme Soviet, and the USSR Council of Ministers, after considering the results of the conference of the Political Consultative Committee of the States Participating in the Warsaw Pact, entirely and completely approved the activities of the Soviet delegation headed by General Secretary of the CPSU Central Committee, Comrade Yu. V. Andropov.

The workers of Azerbaijan, like the rest of the Soviet citizens, express their firm conviction that the consistent, constructive course aimed at peace, international security, and detente, which is being carried out by our party and by our country, jointly with the fraternal socialist states, will lead to the improvement of the international political climate and will preserve peace on our planet.

Comrades! Our party, the CPSU Central Committee, show special concern for the further development of agriculture, the fulfillment of our country's Food Program, which is directed at the full satisfaction of the growing needs of the Soviet nation. In his report at the ceremonies that were devoted to the 60th anniversary of the formation of the USSR, General Secretary of the CPSU Central Committee, Comrade Yu. V. Andropov, said, "The entire country is currently working to fulfill the Food Program. That program contains a clear definition of the specific tasks for all the union republics. And each of them will have to work hard to make a real contribution -- within the very near future -- to that very important job of assuring the continuous supplying of Soviet citizens with food supplies."

New evidence of the party's concern for the development of agriculture is provided by the measures that were developed by the CPSU Central Committee for organizing the exemplary preparation for spring sowing, which is supposed to guarantee high harvest in 1983.

The CPSU Central Committee has directed us toward the taking of the necessary steps to intensify the political and organizing work among the kolkhoz members, the sovkhoz workers, and the specialists in agriculture, and to guarantee the prompt and complete preparation for field operations so that the spring sowing operations in 1983 will be carried out in the most compressed periods of time.

The party and economic activists listened to the report by Secretary of the CPA Central Committee, Comrade I. A. Mamedov, and an informational report by the managers of ministries, and by the secretaries of the party's oblast and rayon committees about the state of affairs in the republic's agriculture, our achievements, and, chiefly, the shortcomings and tasks at that critical stage of the operations when the basis is being laid for the harvest in the third year of the five-year plan.

As can be seen in what was stated today in the statements made by our comrades, the republic is carrying out a large amount of intensive work in the outlying areas to prepare for that very important agricultural campaign -- the springtime sowing operations.

At the same time I would like once again to direct the attention of the administrators of ministries and departments, party and Soviet agencies, and managers and specialists in all links of the agroindustrial complex to the serious shortcomings, omissions, and unresolved questions that still exist.

The critical comments that were expressed and the tasks that were posed must form the basis of the entire organizing, political, and economic activity of every party organization, rayon, city, and oblast committee, and all the Soviet and economic agencies. It is necessary to create everywhere an atmosphere of high demandingness, of taking a critical attitude to what has been achieved, and to confirm in practical work the unity of word and deed. All this, in the final analysis, must guarantee for us the successful carrying out of the spring sowing and the examplary wintering-over of the livestock, and the achievement of good final results in our work of carrying out the Food Program.

Yesterday the Bureau of the CPA Central Committee adopted an extended decree about the tasks of the party, Soviet, and economic agencies in the republic to intensify the rates of agricultural operations in the light of the requirements of the CPSU Central Committee.

The Central Committee of the CPA notes that in the preparation for the spring sowing and the carrying out of other operations in agriculture, there exist serious shortcomings and omissions. It must be stated outright that we consider that what has been done so far is unsatisfactory.

The autumn plowing, despite the expiration of the optimal dates, has been carried out on only 89 percent of the area in the republic as a whole.

The fate of this year's harvest depends to a considerable degree upon the extent to which the farms are provided with irrigation water, and upon the precise, time-responsive operation of all the water-management organizations and their local subdivisions. At the present time it is especially important to accumulate promptly a sufficient reserve supply of water in the bodies of water, in order to guarantee the optimal irrigation norms throughout the agricultural year. The data that has been cited here would seem to give hopes to us, but one should not be complacent. It is necessary, without losing time, to put into complete order all the intrafarm and mainline canals, the collection-and-drainage network, the pumps, and the pumping stations. It is very important to introduce everywnere the progressive technological methods of irrigation, and take an economical, thrifty attitude toward irrigation water.

There is a large number of shortcomings in the work of the agricultural ministries and departments and their agencies in the outlying areas. No provision has been made for the laying in of the necessary quantity of seeds for spring crops, or the bringing of those seeds up to the sowing grades. The Ministry of Agriculture has been very slow and unorganized in redistributing the seeds of spring crops among the rayons and have not provided for the checking of the quality of the sowing material. The Ministry of Fruit and Vegetable Management and the State Committee on Viticulture and Winemaking have been unsatisfactorily reorganizing their work in seed production. Instead of carrying out purposeful, consistent work to guarantee the needs of the subordinate farms for seeds that they have produced themselves, they continue to put their reliance upon the obtaining of sowing material from state resources.

The Ministry of the Cotton-Ginning Industry has been unsatisfactorily carrying out the ginning of the seed cotton. And we are making serious claims against its leadership. Out of 141,200 tons of raw cotton, only 86,000 tons have been ginned, and only 80 percent of the plan for cotton seeds has been fulfilled.

We are especially alarmed by the fact that Goskomsel'khoztekhnika, the Ministry of Agriculture, the Ministry of Fruit and Vegetable Management, State Committee for Viticulture and Winemaking, and their agencies in the outlying areas are poorly carrying out the preparation of the agricultural technology for the springtime field operations.

Numerous subdivisions in those ministries and departments continue to concentrate their attention basically on questions of the distribution of technology and spare parts and engage usatisfactorily in the organizing of repair and technical servicing. As a result, the plan for the repair of tractors and trucks has been disrupted and the quality of the repair operations causes serious reproaches. As of 1 January 1983, the equipment that was technically unserviceable included a large number of tractors and trucks, almost one-sixth of the drills and cultivators, and there was a lag in the repair of the other technology.

Comrades, we are very alarmed by the serious situation that has developed with winter grain crops. The sowing plan was fulfilled by 96 percent. Fifteen rayons failed to cope with that work. Sprouts of winter crops for grain failed to appear on an area of 28,000 hectares. On a considerable area, the plants entered the winter in a weakened condition. With this state of affairs the agricultural ministries and departments, and the party's oblast, city, and rayon committees still have not been providing for the carrying out of a special complex of agrotechnical measures that is aimed at obtaining fully profitable hectares, and the conversion to grain of the winter crops that were sown for green fodder is being carried out unsatisfactorily. The areas that are to be repaired and resown have not been finally established, and the question of providing the repair operations with seeds has not been resolved.

The republic's kolkhozes and sovkhozes disrupted the plan for the planting of orchards and vineyards, as well as the assignments to eliminate sparseness, the assignments to espalier the grapevines, to carry out pruning and other agrotechnical operations in caring for perennial plantings. A large delay in the planting of vineyards occurred on farms in Nakhichevan ASSR, and in Akhsuinskiy, Dzhalilabadskiy, Dzhebrail'skiy, Fizulinskiy, and other rayons. One would think that the administrators in thos rayons should make the serious conclusions from today's criticism.

Serious shortcomings exist in animal husbandry. In 1982 the farms in NKAO [Nagorno-Karabakh Autonomous Oblast], and Agdashskiy, Geokchayskiy, and Divichinskiy Rayons failed to cope with the plans for procurement of livestock and poultry; and the farms in Kusarskiy and Divichinskiy Rayons failed to cope with the plans for procurement of milk. In 21 rayons, as compared with 1981, there was a reduction in the volume of procurement of livestock and poultry, and in Nakhichevan ASSR in seven rayons, milk, and 18 rayons, eggs.

For the republic as a whole, no provision has been made for the fulfillment of the task assigned by the CPA Central Committee for increasing, during the winter period as compared with last year's wintering-over operations, the amounts of milk produced per cow, and the procurement of livestock, poultry, and milk, and we are absolutely unable to reconcile ourselves to this.

The ministries, departments, and rayon organizations have not provided the proper preparation for wintering-over operations, and in a number of rayons the fodder-preparation technology, equipment, and machinery on the animal farms have not been put in good working order. Justified criticism here has been directed at the leadership of Gossnab and Goskomsel'khoztekhnika, which failed to provide the farms with building materials for repairing the animal-husbandry facilities.

All the areas of uncompleted work that exist are the result of the poor work by the Ministry of Agriculture, the Ministry of Fruit and Vegetable Management, the

State Committee for Viticulture and Winemaking, and Goskomsel'khoztekhnika, which have been doing insufficient work to mobilize the apparatus and the rayon agencies for the time-responsive resolution of the first-priority tasks of agricultural production and have not been showing the proper demandingness toward the administrators and specialists in their subordinate subdivisions.

The party's oblast, city, and rayon committees have not extended the proper organizing and mass-political work to mobilize the efforts of the rural workers for the prompt and efficient conducting of the agrotechnical measures, and one can sense their incomprehensible complacency and uncritical attitude toward the job at hand. In a number of rayons, no socialist competition for highly productive labor or for the successful carrying out of the livestock wintering-over operations has been extended, and the proper production and cultural conditions for the animal-growers, mechanizers, and other categories of workers have not been created.

The CPA Central Committee feels that the work of the Ministry of Agriculture, the Ministry of Fruit and Vegetable Management, the State Committee for Viticulture and Winemaking, and Goskomsel'khoztekhnika in preparing for the sowing of the spring crops, and for the carrying out of other operations in vegetable husbandry and animal husbandry, does not meet the requirements of the May and November 1982 Plenums of the CPSU Central Committee or the plenum of the CPA Central Committee that was held in December 1982.

The CPA Central Committee directs the attention of Minister of Agriculture Comrade M. G. Askerov, Minister of Fruit and Vegetable Management Comrade T. Kh. Orudzhev, Chairman of the State Committee for Viticulture and Winemaking Comrade Yu. K. Ryazev, Chairman of Goskomsel'khoztekhnika Comrade Kh. G. Kerimov, and all their deputies to their personal responsibility for the elimination of the existing shortcomings and omissions in the preparation for the sowing of the spring crops, in the carrying out of livestock wintering-over operations, and other agricultural operations.

The CPA Central Committee has required the Ministry of Agriculture, Ministry of Fruit and Vegetable Management, the State Committee for Viticulture and Winemaking, Goskomsel'khoztekhnika, the Ministry of Land Reclamation and Water Management, Ministry of Procurements, Azersel'khozkhimiya, Ministry of the Cotton-Ginning Industry, Gossnab, the State Committee for Supplying Petroleum Products, Glavazmeliovodstroy, the party oblast, city, and rayon committees, and the oblast and rayon agroindustrial associations to develop and carry out specific measures to assure the prompt and efficient preparation for and carrying out of the spring sowing, the obtaining of fully productive hectares on the entire winter field, the considerable intensification of the operations in the orchards and vineyards, and the attainment of the high productivity of the farms during the winter period.

The agricultural ministries and departments and the party's oblast, city, and rayon committees must guarantee the effective use of the winter period for the training and retraining of agricultural personnel, for the purpose of teaching workers at the middle-management level and in mass occupations, and for the purpose of having the administrative party, Soviet, and economic workers and specialists study the peculiarities of working under conditions of the agroindustrial associations.

We decided to listen, at the CPA Central Committee in early February 1983, to the report from the managers of the agricultural ministries and departments about the fulfillment of the adopted decree. Therefore I would like once again to warn our comrades about the importance and responsibility of this question.

Comrades, it is necessary for us, as the party requires, to establish the strictest party control over the course of the entire complex of agricultural operations in all sectors, in all links. It is necessary to increase demandingness, the demand for concrete affairs, concrete work with every administrator and executor, and to achieve effective and unconditional fulfillment of every decision.

Large and responsible tasks confront the republic's mass-information media. I would like to emphasize that our newspapers, radio, and television have not yet extended any active work to throw light upon the rate of preparation for the spring sowing. There have been no sharp critical statements that would reveal the shortcomings and omissions, or would mention the names of the persons to blame for disrupting important measures. Advanced experience is being poorly propagandized and revealed.

The CPSU Central Committee requires the strictest fulfillment of the decisions of the May 1982 Plenum of the Central Committee, and the high responsibility of all the party, Soviet, and economic administrators at all levels for the carrying out of all agricultural operations. The same strict demand, the same demandingness, must be made of the administrators of all ranks, both toward themselves and toward their subordinates.

We know that in our ministries and departments, and in the outlying areas, not everyone has proved to be ready for that approach. A demanding, businesslike style is not yet typical of the activities of the administrators and apparatus everywhere. Taking into consideration the importance of this question, the CPA Central Committee requires each administrator to reorganize his work and, within a short period of time, to eliminate the shortcomings and change his attitude to the important job.

We have been receiving signals to the effect that the administrators of the party, Soviet, and economic agencies have been unjustifiably and needlessly interfering in the work of the kolkhozes and sovkhozes, have frequently been taking people away from their work, and have been issuing instructions dealing with the tiniest economic questions. Comrades, it is necessary to stop that, and to give a large amount of independence to the farm administrators, to stop acting as a guardian and distracting people for trivial reasons, and to act decisively to reduce the number of conferences and meetings on insignificant questions.

I would like once again to dwell on a certain urgent problem. As you know, in execution of the decisions of the 26th CPSU Congress and the May 1982 Plenum of the Central Committee, the country is carrying out a large amount of work to achieve the further improvement of the administration of agriculture and the branches linked with it.

According to the decree issued by the party and the government, appropriate agencies of administration are being formed -- rayon, oblast, and republic (in the autonomous republics) agroindustrial associations -- RAPO [rayon agroindustrial associations], the members of which are the administrators of all the organizations operating within the rayon agroindustrial complex.

The activities of these associations and their councils are currently being given exceptionally great importance. They must exert a complete effect upon increasing the production of products of agriculture and must independently resolve all the questions that arise.

Our republic has completed the organizational part of the work of creating the Nakhichevan republic, Nagorno-Karabakh oblast, and all the rayon agroindustrial associations (RAPO); the councils of those associations have been formed; and the chairmen of the councils have been elected -- they are also the first deputy chairmen of the rayon executive committees. The RAPO structure has been approved, the size of the apparatus has been defined, etc.

Thus, the first steps have been taken. But it will be necessary to do a lot more. As was pointed out by the inspection and discussion at the Central Committee's Bureau of the question of creating RAPO's in Sabirabadskiy, Shamkhorskiy, and Agdashskiy Rayons, the party's rayon committees have been underevaluating the role and importance of the agroindustrial association in realizing the decisions of the May 1982 Plenum of the CPSU Central Committee and in the further development of economic production; they have been slow to create and organize smooth operations of that very important link in the administration of the agroindustrial complex. There has been no proper resolution of the questions of staffing the RAPO's with skilled, innovative personnel who possess good organizing capabilities. In these and many rayons there is an insufficiently clear idea of the tasks and functions of the RAPO's themselves. It is necessary for these very important and responsible jobs to be filled by competent, experienced specialists with a thorough knowledge of their job, people who are able to analyze things well and make the correct decisions not only with regard to agricultural questions, but also with regard to the coordination and direction of the work of all the related branches represented in the RAPO.

Comrades in the outlying areas must completely realize that the RAPO is a very important agency of administration for producing food products, and its council is the highest agency of administration in that complex.

The RAPO's and their councils have been assigned responsible tasks involving the highly productive use of the land, the involvement of that land in agricultural circulation, in the efficient use of capital investments, the material-technical, labor, financial, and other resources of the entire complex, proceeding from the need to concentrate them in the most important sectors; the centralization of the fulfillment of individual production-economic functions, as well as a number of other very important functions, up to and including the carrying out of measures for developing the personal subsidiary farms run by citizens and the rural subsidiary farms run by enterprises and organizations; and in the comprehensive reorganization of rural everyday life.

The carrying out of these important tasks and functions requires the large independence of the RAPO's and their councils, and the rendering to them, in their everyday activities, of complete aid on the part of the republic's ministries and departments and, without a doubt, primarily on the part of the rayon party committees and rayon executive committees.

When increasing the responsibility and authority of the RAPO's and all their links for the successful resolution of the tasks that have been assigned to the association, and when showing demandingness toward its personnel and the rayon party committees, it is necessary to depart decisively from petty guardianship in their work.

The creation of RAPO's, comrades, must be viewed first of all as the intensification of party management of agriculture on a correct, scientific basis, and it must contribute to increasing the party responsibility of the party's rayon committees for the work of the entire agroindustrial complex, for the state of affairs in each of its sectors.

The rayon committees are obliged to coordinate and direct the efforts of all the primary party organizations in the agroindustrial complex, to generalize and disseminate the advanced experience, to answer for the placement and selection of personnel, to reinforce all the most important sectors with skilled specialists and capable organizers. The party organizations must concentrate all their organizing and political work on assuring that everyone works with the complete application of his efforts, and does as much as he can to accelerate the rates of development of the rates of agricultural production and to increase the effectiveness of production and increase the labor productivity.

Comrades! It would seem that our discussion today about the current tasks that are confronting our republic's attitude, was a productive and beneficial one. Our activists' agenda contains one more very important question. It will be necessary for us today to consider and to accept the socialist pledge from the republic for 1983. The draft version of the socialist pledges generalizes everything that was stipulated by the socialist pledges that were taken by all the collectives of workers in the republic. It summarizes all those rough drafts that every worker, every kolkhoz member, every laborer in the republic defined for himself for 1983.

The industrial workers, implementing the decisions of the 26th CPSU Congress and the 30th CPA Congress and having broadly extended the socialist competition for the worthy greeting of the 60th anniversary of the formation of the USSR, successfully fulfilled the plans and pledges for the celebration year and the first two years of the 11th Five-Year Plan.

The 1982 plan for the sale of output and for the production of many very important types of articles was fulfilled ahead of schedule, on 28 December. The amount of output sold in addition to the plan was valued at 140.1 million rubles. The growth rate for the volume of industrial production was 4.9 percent, as compared with the 3.2 percent according to the refined plan. During the first two years of the current five-year plan, the volume of industrial production in the republic increased by 12.3 percent, as compared with an assignment of 11 percent.

A further increase in the effectiveness of production and the quality of work has been assured. Labor productivity increased by 3.9 percent, with a developed plan of 0.8 percent. The increase in labor productivity accounted for 79.6 percent of the increase in industrial output. Since the beginning of the five-year plan, labor productivity in industry increased by 9.7 percent, as compared with the assignment of 8.7 percent for the five-year plan.

The volume of production of output with a higher category of quality increased by 8.4 percent. Its share in the overall volume of production was 15.3 percent, as compared with a developed plan of 14.8 percent.

Large and responsible tasks confront our republic's industry during the current year. The labor collectives in industry pledged, on the basis of complete intensification of production, the increase in its effectiveness, the acceleration of scientific-technical progress, and the improvement of the management style and methods, that they would guarantee the preterm fulfillment of the plan for the first three years of the 11th Five-Year Plan for industrial production. The socialist pledges stipulate the achievement of the overfulfillment of the established annual assignment for increase in the volume of production and labor productivity by 5 percent; the reduction of the net costs of production; the obtaining of 7 million rubles of profit in excess of plan; the increase in return on investments by one percent; and a 20-percent overfulfillment of the assignment for the production of articles with a higher category of quality. It is planned, by means of the introduction of efficiency-improvement suggestions and inventions, to obtain an economic benefit of more than 70 million rubles.

The industrial workers decided that they would produce in excess of plan a considerable amount of natural gas, electric energy, fuel, mineral fertilizers, oil-field and electrical-engineering equipment, chemical and petrochemical output, and many very important types of consumer goods.

It is planned to accelerate the redesigning, expansion, and technical re-equipping of existing enterprises, to achieve the comprehensive mechanization and automation of dozens of enterprises, shops and sectors, to introduce into production 100 mechanized and automated flow lines, and to assimilate the production of many new types of machinery, equipment, instruments, and consumer goods.

The labor collectives of transportation organizations pledged, by means of the acceleration of the railroad-car turnover, the precise interaction and coordination of all types of transportation, to haul, in excess of plan, 1.8 million tons of freight for the national economy.

An important place in the socialist pledges has been given to questions of increasing the rigidity of measures for ensuring economy and thrift, and for the efficient use of fuel-and-energy resources and resources of raw and other materials. The pledges for 1983 provide for the economizing of 16,000 tons of metal, 150,000 tons of conventional fuel, 31,000 tons of diesel fuel; 22,000 tons of motor-vehicle gasoline, 250 million kilowatt-hours of electric energy, and 600,000 gigacalories of thermal energy.

As can be seen from the figures that have been cited, the socialist pledges of the republic's industrial workers for 1983 are extremely strained. Their realization requires all ministries, departments, enterprises, party, Soviet, and economic agencies, and trade-union and Komsomol organizations to locate and activate all the existing reserves and opportunities for the maximum mobilization of the efforts of all the labor collectives toward the further increase in the effectiveness of production, its intensification, and the unconditional fulfillment of the assignments for increase of labor productivity and the other technical-economic indicators, and toward bringing them consistently closer to the high results achieved by the advanced collectives in the appropriate branches.

At the same time, as has been indicated by an analysis of last year's results, all the reserves in industry have not been used with sufficient effectiveness. In the work of a number of ministries, departments, and enterprises one continues to see substantial shortcomings and omissions. Those shortcomings were discussed very sharply by us at the plenum of the CPA Central Committee that was held in December 1982. Therefore, without going into the details, I would like once again to direct attention only to certain key questions that require their decision during the current year.

First of all, there is the absolute observance of planning discipline, the unconditional fulfillment of the established assignments in all respects. Special attention must be devoted to contractual obligations involving shipments, since it is impossible to consider it to be normal when, on the basis of last year's results, the plans for sale of output were not fulfilled by 23 associations and enterprises, or 4.6 percent of their total number, which undersold output valued at more than 103.5 million rubles. Twenty-four enterprises and associations, or 4.8 percent, failed to cope with the assignment for volume of production. They underproduced output valued at 86.6 million rubles. The greatest number of lagging enterprises is in Minlegprom, Minmestprom, the Kaspmorneftegazprom VPO [All-Union Industrial Association], in the industry of the cities of Baku, Kirovabad, Sumgait, Mingechaur, etc.

Plan disruptions that are extremely inadmissible are those involving the sale of output with a consideration of the fulfillment of contractual obligations pertaining to shipments. For the republic's industry as a whole, the contractual obligations were not fulfilled by 186 enterprises, or 36 percent of their total number; they underdelivered output, as against the concluded contracts and pledges, valued at 342.2 million rubles. I must subject to very serious criticism Minneftekhimprom, Minpromstroymaterialov, Minlesprom, Minpishcheprom, Minlegprom, and others, where the largest number of such enterprises exists. The situation is unsatisfactory with the fulfillment of plan according to the products list.

The economic administrators and party and Soviet agencies in the outlying areas must become solidly aware that there is no plan without discipline in its execution. It is only high planning discipline that is the guarantee of the successful realization of the tasks of the further development of the national economy.

The successful fulfillment of the plans and the accepted high socialist pledges must rely on the maximum use of the available reserves for increasing the effectiveness of production, and primarily the labor productivity, and the improvement of the qualitative indicators of work.

In this regard it is completely inadmissible that, with regard to last year's results, the plans for labor productivity were not fulfilled by 38 associations and enterprises, or 8.8 percent of their total number.

There exists a large amount of unused opportunities for the further increase in the production of output with a higher category of quality. Despite the overfulfillment, for industry as a whole, of the 1982 plan for the production of such output, 18 enterprises, or almost every fifth one, failed to cope with the plan for that indicator, underproducing output with the Seal of Quality with a total value of 25.6 million rubles.

A special role in resolving the forthcoming tasks is given to the transportation organizations. During the current year it is planned to increase the freight turnover by all types of transportation by 1.4 percent; and passenger turnover by 2.4 percent. The successful fulfillment of the established assignments requires well-coordinated and precise work by all the links in the transportation conveyor belt, and primarily the Azerbaijan Railroad. And yet, during the very first days of January, we can sense the great tension in the work of the railroad, frequent disruptions in the shipments of very important freight for the national economy, and other serious shortcomings and breakdowns. The hauling of passengers is not being carried out at the proper level; there is a lack of the most elementary efficiency in providing services to the passengers either at the train stations or while en route.

All this forces one to doubt whether, in general, the administrators of the Azerbaijan Railroad can cope with the duties entrusted to them.

We demand once again that the administrators of the transportation organizations, and primarily the Azerbaijan Railroad, make, finally, the proper conclusions from the criticism directed at them, that they create a major improvement in their work, and sharply increase the labor discipline, and the responsibility of the administrators of the services and subdivisions for raising the level of organization of the operational work, the effectiveness of using the rolling stock, and the introduction of the proper order in all links of transportation. Speaking frankly, we have already become ashamed to hear the criticism directed at the Azerbaijan Railroad on the part of the CPSU Central Committee, the union Ministry of Railroads, and the neighboring railroads. The questions of improving the work of the railroad and of all the transportation enterprises should be the object of constant attention by our party committees. However, the Baku City Committee and the party's rayon committees deal very little with the organizations of railroad transportation.

The administrators of the ministries and departments should also devote serious attention to questions of the prompt unloading of the railroad cars and the removal of freight shipments that have accumulated in large number at the warehouses and stations.

Comrades! As you know, exceptionally complicated weather conditions developed last year for agriculture. Frequent rain storms, flood waters, and hail storms inflicted considerable losses on the harvest and created a large amount of strain in carrying out the agricultural operations. However, thanks to the high level of organization and their increased skills, the rural workers successfully coped with all the difficulties and fulfilled the plans and socialist pledges for the production and sale of all products of vegetable and animal husbandry. A record-beaking volume of grapes, vegetables, fruits, potatoes, and other produce was turned over to the state.

According to preliminary data, the volume of gross output of agriculture in 1982 will be 2.722 billion rubles, or 5.2 percent more than 1981, or 33.6 percent more when compared with the average annual volume for 1976-1980. The fulfillment of the plan for that indicator will be 117 percent.

During the past year the labor productivity in agriculture increased by 5 percent; and the plan for labor productivity was fulfilled by 17.4 percent. Comrades, those are good indicators and they give us cause to rejoice.

Complicated tasks confront us in capital construction. At the November Plenum of the CPSU Central Committee, Comrade Yu. V. Andropov especially emphasized the necessity for the effective use of the funds channeled into the development of the economy, the creation of new capacities, the contruction of housing and other projects intended for cultural and everyday needs. In 1982 the republic's capital construction achieved definite positive results. The volumes of capital investments and of construction-and-installation and contractual operations surpassed the high indicators of 1981. As a whole, there was a considerable overfulfillment of the established plans for the construction of projects built for national needs and slated for activation in the next reporting period, which were under the control of the CPSU Central Committee, at very important construction projects that were approved by a decision of the CPA Central Committee.

A large social program has been carried out. Approximately 15,000 families received new, well-appointed apartments; a considerable number of children's preschool institutions were handed over for operation; the fulfillment of the plans for activation of schools, hospitals, clinics, and occupational and trade schools was guaranteed; and a large-scale automatic long-distance telephone system in Baku, and a number of enterprises for trade and the providing of everyday services to the public were activated.

In a word, construction workers worked strenuously and made their worthy contribution to the further reinforcement of our republic's economic potential, and to raising the workers' standard of living and the fulfillment of the socialist pledges that were taken.

However, it must be noted that an analysis of the results of last year indicates that the republic construction complex still has a large number of serious shortcomings. Because of the poor concentration of efforts and means at the construction projects that are slated for activation in the next reporting period, the activation of a number of projects and capacities has been disrupted; the plan for activation of fixed assets was not fulfilled; and there was a reduction to last year's level for that very important indicator of capital construction. All this had a detrimental influence upon the effectiveness of capital investments and led to a rise in the level of uncompleted construction.

The failure to activate these and a number of other very important projects, and especially housing, attests to the fact that insufficient attention is still being paid to capital construction, and to the fact that its importance in the economic and social development of the cities and rayons is being underestimated on the part of the party and Soviet agencies in the outlying areas, which are doing little to monitor the state of affairs at the construction sites, which do not show the proper demandingness toward the administrators of the contract organizations for the fulfillment of the established plans and the socialist pledges, and do not render any effective aid to the collectives in their work.

The party, Soviet, and economic administrators should wage a decisive struggle against the deeply-rooted shortcomings in capital construction at all its stages, from planning to the preparation for the operation of projects in which the construction has been completed. In their practical activities they must be guided daily by the principle that was stated in the speech at the November Plenum by Comrade Yu. V. Andropov, that the establishment of order in capital construction is one of the central tasks in the national economy.

A large amount of intensive construction will have to be carried out this year. The pledges provide for high growth rates in the volumes of capital investments, construction-and-installation operations, the activation of fixed assets, housing, and other projects designed to meet social needs. This puts a large amount of responsibility on the collectives of construction and installation organizations.

In 1983 they pledged to guarantee the preterm activation of the power units at the Azerbaijan GRES and the Shamkhorskaya GES, and the capacities at the BEMZ imeni 50-letiye Komsomola Azerbaydzhana and at the Azerelektrosvet Association, the Sumgait Superphosphate Plant, and a number of other very important projects. It is especially gratifying that the construction and installation workers, completely aware of the exceptionally great importance of the May Plenum of the party's Central Committee, took socialist pledges for the accelerated construction of a large number of projects for the republic's Food Program.

The successful fulfillment of the pledges that were taken requires all ministries, departments, and customer enterprises, and contract organizations to carry out, as early as January, a large amount of organizing work to concentrate their forces and resources in the most important construction projects that are scheduled for activation in the next reporting period, and primarily the projects for the Food Program. During the current year there will be a considerable increase in the volumes of social construction. State capital investments will finance the activation of approximately a million square meters of total housing area and a large number of schools, children's preschool institutions, and other projects intended for communal and everyday purposes.

At the present time it is necessary within the shortest periods of time to complete the work of formalizing the financing of the construction projects, of concluding contract agreements, of refining the deadlines for the shipments of equipment to the projects that are scheduled for activation. The construction organizations must considerably intensify their activities to extend broadly at the construction sites the brigade contract, to achieve a further rise in the level of industrialization of the operations, to reduce the application of manual labor by using means of minor mechanization, and to increase the shift factor in the operation of machines and machinery.

Special attention must be devoted to the prompt and rhythmical material-technical supplying of the construction sites and to the introduction of the proper order at the construction sites. All this must become the basis of the activities of the construction complex for the successful fulfillment of the tasks that confront them, and the realization of the plans and socialist pledges for 1983.

The demands, interests, and needs of the workers are attested to by their letters and statements made to the party, Soviet, and economic agencies. The workers' letters and complaints are an objective barometer of public opinion, a live, pulsating link between the party and the masses, and they define their moods. A brilliant and graphic example of the constant and sharpened attention that is devoted by our party to this very important matter, and a guide to action for every party organization, is the recent discussion by the Politburo of the CPSU Central Committee of the question of working with workers' letters and the receiving of citizens.

I would like to bring to your attention the fact that the CPA Central Committee, devoting primary attention to this question, has adopted a decision to discuss it at the next plenum of the Central Committee.

A very important condition for the successful implementation of the plans that have been set down and the socialist pledges that have been taken is the further reinforcement of labor and production discipline in every sector. As was noted in his speech at the November 1982 Plenum of the CPSU Central Committee by Comrade Yu. V. Andropov, "it is necessary more decisively to wage the fight against any violations of party, state, and labor discipline."

Guided by these instructions, the advanced collectives in Moscow recently came forward with an important initiative -- they extended the movement for the further reinforcement of labor and production discipline and took pledges aimed at the decisive improvement of the organization of labor, the intensification of the fight against poor business practices, and the creation of exemplary order in all work sectors.

It is the duty of the party organizations and all the labor collectives in the republic to take up on a broad scale and to disseminate the undertaking of the Muscovites, to achieve a situation in which, at every enterprise, at every construction project, on every kolkhoz and sovkhoz, in every institution, there exists strict order and supervision of the observance of discipline, and in which work time is completely devoted to work.

Unfortunately, in our republic's national economy the losses of work time continue to be high, and this is very disturbing to us. Something else that continues to be high is the personnel turnover rate. Last year the turnover rate for workers in industry was almost 9 percent; in construction, 14.5 percent; and in motor transport, 6.5 percent.

The advanced collectives at enterprise in industry, construction projects, transportation, and other branches of the republic's national economy are already waging an active struggle for the taking of all steps to reinforce labor discipline, for high organizational spirit in every sector and at every work site, for the elimination of work-time losses, for the creation of an atmosphere of businesslike efficiency and high mutual demandingness. However, this is only the beginning of the large practical job which we will have to carry out in this direction.

The task of the party, Soviet, and economic agencies, and the trade-union and Komsomol organizations lies in carrying out planned, purposeful work to create everywhere an atmosphere of intolerance toward every instance of violation of labor and production discipline, and to take the attitude to every instance of absenteeism, late arrival for work, and unauthorized departure from production as being an emergency situation. The condition of discipline in the labor collectives must continue to be viewed as one of the chief indicators in the socialist competition, and the results of their activity as a whole.

It is necessary to intensify the demands for labor discipline on the part of the enterprise and association directions and the middle-management administrators, who must bear personal responsibility for the correct, effective organization of labor, for the guaranteeing of rhythmical and continuous work in every sector. The production administrators themselves must be, for their collective, a model of high self-discipline, an example of conscientiousness and an innovative attitude toward the job at hand.

A reserve of no small importance in the reinforcement of awareness and order is the planned resolution of social tasks, the improvement of the working, everyday, and recreational conditions for people. All these questions must be studied more deeply on a daily basis by the party and Soviet agencies in the outlying areas and by the trade-union and Komsomol organizations. In the fight for the reinforcement of discipline, one needs not high-sounding words, but, rather, deeds, the precise organizing work that has been directed at the use of all the internal reserves of production and at increasing the effectiveness of the economy.

Comrades! Today, summing up the results of the work in 1982, we restate the remarkable traditions of the Azerbaijan party organization, the tremendous mobilizing role in the republic's successes during the years of the 9th and 10th Five-Year Plans and the first two years of the 11th Five-Year Plan that was played by the Central Committee of the Communist Party of Azerbaijan. The very basis of all our achievements has been the high rate of participation of the party members, the constant aim at the intensification of responsibility and demandingness in every work sector, and strict party and state discipline. In reinforcing and developing the successes, the party members and all the other workers in the republic have pledges to fulfill even more intensively, even more consistently, the decisions of the 26th CPSU Congress and the November 1982 Plenum of the CPSU Central Committee, and the plans and pledges for the present year and the entire 11th Five-Year Plan. It is our duty, our answer, by deed, to the party's demands, to the the tasks that were advanced by the CPSU Central Committee, the Politburo of the Central Committee, and General Secretary of the CPSU Central Committee, Comrade Yu. V. Andropov at the present-day stage.

The fight for the fulfillment of the plans for the third year, the middle year, of the five-year plan was begun by us in an atmosphere of high political and labor upsurge. Our task lies in assuring that the plans and pledges are absolutely fulfilled by all enterprises and construction projects, every month and every quarter. Rigid daily party control must be established at all work sectors, in every collective. That will be a decisive pledge of the achievements of success in the 1983 All-Union Socialist Competition, and the contribution by our republic's workers to the social and economic development of our country.

Please allow me, in your name and in the name of the republic's party organization, to assure the CPSU Central Committee, the Politburo of the CPSU Central Committee, that the Communist Party members and all the workers of Azerbaijan will make 1983 a year of shock labor, will fulfill their high socialist pledges, and will multiply their efforts to carry out the decisions of the 26th Congress of their beloved Leninist Communist Party.

(The speech by Comrade K. M. Bagirov was listened to with a large amount of attention and was repeatedly interrupted by prolonged applause.)

The meeting of the activists convincingly demonstrated the readiness of the party organizations and all the workers of Azerbaijan to fulfill with distinction the large and responsible tasks that are confronting our republic in the year that has begun, and to mark it with new labor achievements.

The participants in the meeting unanimously accepted the socialist pledges of the workers of Azerbaijan SSR for 1983. (Azerinform [Azerbaijan News Agency].)

USSR MINISTER SHKABARDNYA VISITS AZERBAIJAN

Baku BAKINSKIY RABOCHIY in Russian 15 Jan 83 p 1

[Text] Comrade M. S. Shkabardnya, USSR minister of instrument making, automation equipment, and control systems, was in the republic 12 to 15 January.

Comrade M. S. Shkabardnya visited instrument building enterprises--the Baku Instrument Building Plant, the Experimental Plant imeni Kalinin, and the Ali-Bayramly Plant for the Production of Automatic Control Units for Household Appliances imeni 60th Anniversary of the USSR. He met with managers of enterprises, shops and sections and chatted with workers and specialists. In the course of these meetings, the tasks of the sector's workers arising from the decisions of the November (1982) Plenum of the CPSU Central Committee and the address to the Plenum by Yu. V. Andropov, general secretary of the CPSU Central Committee, were examined in detail.

Comrade M. S. Shkabardnya familiarized himself in detail with the course of construction and assimilation of newly introduced capacities and with fulfillment of plans and socialist pledges by labor collectives. He pointed to the necessity of full utilization of available reserves and resources to innrease production and the output of the most important types of instruments, means of automation and control systems, and to improve their quality.

M. S. Shkabardnya also visited the sector's Scientific Research and Design Institute for Full Automation of the Petrochemical Industry in the city of Sumgait and the "Neftekhimpribor" SKB [Special Design Bureau] with an experimental plant, and familiarized himself with the status of scientific research and planning and design developments of new advanced directions in instrument building.

Comrade M. S. Shkabardnya acquainted himself with the sights of the city of Baku.

A conversation was held at the Azerbaijan Communist Party Central Committee between Comrade K. M. Bagirov, first secretary of the Azerbaijan Communist Party Central Committee, and Comrade M. S. Shkabardnya. The prospects for development of the sector's enterprises and an increase in the production growth rate and problems associated with expansion and re-equipment of operating enterprises and acceleration of the rate of construction of new enterprises and projects for social, cultural and public amenities purposes, with the development and assimilation of new advanced forms of instrument building and consumer goods output, were examined.

Accompanying M. S. Shkabardnya at the instrument building enterprises were G. N. Seidov, chairman of the AzSSR Council of Ministers, S. B. Tatliyev, first deputy chairman of the AzSSR Council of Ministers, and A. T. Rasi-Zade, head of the machine building department of the Azerbaijan Communist Party Central Committee.

REGIONAL

UKRAINIAN MEETING STRESSES ROLE OF AGRICULTURAL DEPARTMENTS

Kiev PRAVDA UKRAINY in Russian 7 Dec 82 p 3

[Text] A republican seminar of chiefs of agricultural departments of party raykoms and gorkoms, organized by the Ukrainian Communist Party Central Committee, took place in Kiev.

For 2 weeks the leaders of these departments, which were created in compliance with the decisions of the May (1982) Plenum of the CPSU Central Committee, studied questions concerning present-day agrarian policies of our party, the work experience of party, soviet and agricultural organs in the implemention of the Food Program and in raising the effectiveness of agricultural production. Lectures were given by the chief of the agricultural department of the Ukrainian CP Central Committee, A D Kovalenko; the secretaries of the party obkoms: for Kharkov--S V Lutsenko, for Chernigov--M S Shostak, for Cherkassy--K F Yastreb; the executives of the Ukrainian CP Central Committee: UkSSR ministers N A Garkusha, N F Kulinich, V K Solomakha, V I Cherep; the chairman of the republican committee of the union of agricultural workers, V I Butenko; teachers of the Higher Party School of the Ukrainian CP Central Committee and the scientific research institutes of Kiev, nepropetrovsk and Kharkov. There was an exchange of opinions about the paths to improving the style and method of work of the agricultural departments of party committees.

Participants in the seminar spent time in the Vasilkov and Borispolsk Rayons of the Kiev Oblast. In the party gorkoms there were talks about the activities of their agricultural departments, of the primary rayon party organizations dealing with the fulfillment of the decisions of the 26th CPSU Congress and the May and November (1982) Plenum of the CPSU Central Committee, and the further development of the agroindustrial complex. Party workers visited a series of progressive kolkhozes and sovkhozes, where they familiarized themselves with the organizational and political work of party organizations for the fulfillment of the plans of socio-economic development and the increase in the production of agricultural products.

Meetings of seminar participants with the leaders of republican agricultural ministries and departments and scientists of the Southern Section of the All-Union Academy of Agricultural Sciences imeni Lenina were organized; they acquainted themselves with the UkSSR Exhibition of Economic Achievements.

In conclusion the seminar participants were addressed by Politburo member, secretary of the Ukranian CPCC, I A Mozgovoy. He described in detail the tasks of party organizations for the fulfillment of the directives of the 26th Party Congress and the May and November (1982) Plenum of the CPSU Central Committee on questions concerning the development of the agroindustrial complex. It was emphasized in the address that a large role in the implementation of party decisions and the Food Program belongs to the recently created agricultural departments of party raykoms and gorkoms. The departments, by no means substituting for Soviet and agricultural organs or becoming involved in day to day business, should constantly concern themselves with long-term fundamental problems and should ensure their solution by party methods.

The responsibility of workers of agricultural departments of party raykoms and gorkoms is to bring about systematic control over the fulfillment of economic plans of production and sale to the government of agricultural produce and to strengthen the executive discipline of leaders of all levels and specialists. It is particularly necessary to divide work with farms and enterprises that are lagging behind. Principal energies should be concentrated on improving the selection, placement, and education of cadres and on preparing an active reserve. The departments should be supported in their work by specialists; they should take their opinions into account, develop initiative and independence, foster a high level of discipline and responsibility for entrusted work. Working with cadres of the mass professions, organizing their training and raising their qualifications is also important. It is necessary to keep constantly in one's field of vision questions concerning professional orientation of students and to be concerned with creating appropriate conditions in rural schools for the preparation of machine operators and livestock farmers.

It is necessary to be constantly concerned with introducing progressive methods, further develop socialist competition and supporting valuable undertakings.

In the address much consideration was given to increasing the aggressiveness of primary party organizations. It is necessary to proceed from the directives of the 26th Ukrainian CP Congress so that not one fundamental question, whether it concerns production or the mode of life, the training and placement of cadres of the education of workers, can or should be decided without participation and regard for the opinion of the primary party organization. It is important always to aid secretaries of party organizations to improve work planning, to rationally place communists in production, to educate the people and strengthen party discipline.

The work of the agricultural department of the party committee is work with people, and its chief method is persuasion. In the final analysis, the essence of all activity, emphasized I A Mozgovoy, rests in the ability to organize friendly, fruitful work of primary party organizations, economic leaders and specialists, and all organizations of the rayon team.

UKRAINIAN AGROINDUSTRIAL COMPLEX COMMISSION HOLDS SESSION

Kiev PRAVDA UKRAINY in Russian 12 Dec 82 p 3

[Text] On 10 December a regular session of the Agroindustrial Complex Commission of the Presidum of the Ukrainian SSR Council of Ministers took place in Kiev. The Deputy Minister of Agriculture for the UkSSR, N M Russol, delivered an address on the introduction of progressive forms of labor organization in kolkhozes and sovkhozes, based on brigade contracts and piecework bonus pay.

It was noted at the meeting that experience farm work and the data of scientific institutions testify to the fact that the best production indices are achieved by brigades and teams which apply piecework bonus pay with peridical advances. Such collectives have a higher yield of agricultural crops, animal productivity and labor output. Thus, in the kolkhoz imeni Kalinia in the Berdyansk Rayon of Zaporozhye Oblast, thanks to the introduction of a collective contract in plantgrowing and livestock raising, cadres were successfully stabilized labor and technological discipline were strengthened, and as a result the farm's overall worth increased. Gross output production during the 10th Five-Year Plan was 16 percent greater here, more than twice the average in the rayon, net profit was 8 percent greater and the level of profitability exceeded 31 percent.

Quite a bit has been done to improve work by the introduction of progressive organization of labor in many other oblasts, chiefly in the steppe zone which is characterized by a small proportion of cultivated crops and a comparatively high level of mechanization of agricultural work. A significant part of such subdivisions is concentrated in the kolkhozes of the Nikolayev, Kherson and Zaporozhye Oblasts, in the sovkhozes of the "Khersonzhivprom" [animal industry] trust of the UkSSR Sovkhoz Ministry, and of the Crimean, Kherson and Nikolayev sovkhozvintrestov [sovkhoz viticulture trusts] of the UkSSR Glavplodvinprom [Main Administration of the Fruit and Viticulture Industry]. All together they now number more than 2,500 in the republic, 700 more than in the previous year.

Moreover, the possibilities of a brigade contract, a progressive form of work which allows an increase in the volume of agricultural output and increases the production efficiency in kolkhozes and sovkhozes, is not yet being fully utilized. It is slowly being introduced in the Kirovgrad, Ternopol and Poltava Oblasts. On many farms the process of stabilization of such labor collectives is being delayed; groundless interference is allowed in their production activity, contractual relations, and conditions of payment for work are not being fulfilled. Also, there is a lack of active cost-accounting within the brigades.

It is necessary for ministries and departments of the agricultural complex together with the scientific-research institutions to take every measure to ensure that the collective contract with the piecework bonus system of payment becomes the basic form of work in the kolkhozes and sovkhozes. The decisions of the November (1982) Plenum of the CPSU Central Committee are aimed at this; it results from the tasks involved in implementing the country's Food Program. Within the next 1 or 2 years it is also necessary to bring about the transition to payment of the workers for their labor according to ultimate results on the farms of scientific-research institutions under the republican ministries and departments.

At its meeting the commission closely examined the work of the enterprises of the UkSSR Ministry of Meat and Milk Industry, directed at the expansion of the proven method of receiving livestock and milk directly at the farms. V K Solomakhi noted that in the republic definite work is being carried out in that direction. In the last 5 years, for example, the centralized export of livestock and milk has almost doubled. In the 10 months of the present year 30 percent of the animals and almost 15 percent of the milk from total volumes of purchases was delivered to the receiving stations by specialized transport. The best results in this trend were achieved by the unions of the Chernovitsy, Kharkov, Ternopol and other oblasts.

Critically analyzing what has been achieved, the lecturer and speakers pointed out that the organization of centralized export of livestock and milk still has substantial shortcomings. The tasks set for this year by the Ministry are on the whole not being fulfilled: the efficiency of transports remains low: necessary attention is not being paid to building garages and repair bases. It was emphasized that ministries, departments and obispolkoms are urged to stimulate work for expanding the reception of livestock produce directly on the farms. It is important to put the observance of transport schedules under special control and to organize highly efficient utilization of auto transport. The systematic preparation of farms for their transition to centralized export of livestock and milk should be improved. For this purpose it is necessary first of all to provide specialized kolkhozes and sovkhozes with complete equipment for initial milk processing, cooling and storage. It is necessary to see to the construction of special stations for the delivery of livestock, equipping them with scales and platforms. Hard-surface roads should be layed to these stations.

First deputy chairman of the UkSSR Gosplan, deputy chairman of the Agroindustrial Complex Commission of the Presidium of the UkSSR Council of Ministers, V P Popov, and the chairman of the UkSSR Government Commission on Agricultural Technology, V L Filonenko, gave information about the distribution of agricultural technology during 1983.

The work plan of the Agroindustrial Complex Commission of the Presidium of the UkSSR Council of Ministers was confirmed for the first half of 1983.

The meeting of the commission was also addressed by UkCP CC Politburo candidate member, first deputy chairman of the UkSSR Council of Ministers, chairman of the Agroindustrial Complex Commission of the Presidium of the UkSSR Council of Ministers, Ya A Kolomiyets.

Executives of the UkSSR Council of Ministers and a number of ministries and departments of the republic also took part in the work of the commission.

RASHIDOV SPEECH AT UZBEK CP CENTRAL COMMITTEE PLENUM

Tashkent PRAVDA VOSTOKA in Russian 30 Nov 83 pp 2-3

[Speech by Comrade Sh. R. Rashidov: "Keep Marching On, Keep Striving for More: The Tasks of the Republic's Party Organization in Achieving the Further Development of Vegetable and Animal Husbandry in the Light of the Decisions of the 26th CPSU Congress and the May and November 1982 Plenums of the CPSU Central Committee"]

[Text] Comrades!

The entire social and political life in our country is currently proceeding under the sign of the carrying out of the historic decisions of the 26th CPSU Congress. Soviet citizens, under the guidance of the Leninist party, are firmly resolved to fulfill the complicated tasks that are confronting them, and to guarantee the further increase in the effectiveness of the national economy and the steady forward movement of our country along the Leninist path to communism.

This was confirmed with new force by the recent Plenum of the CPSU Central Committee and the 7th Session of the USSR Supreme Soviet.

The November Plenum discussed the questions dealing with the draft versions of the State Plan for the Economic and Social Development and the State Budget of the USSR for 1983.

The Plenum of the Central Committee approved the decree of the CPSU Central Committee, the Presidium of the USSR Supreme Soviet, and the USSR Council of Ministers, entitled "Immortalizing the Memory of Leonid Il'ich Brezhnev."

The USSR Supreme Soviet adopted the Law entitled "The State Plan for the Economic and Social Development of the USSR in 1983" and the Law entitled "The 1983 USSR State Budget."

A long, brilliant speech was given at the Plenum by General Secretary of the CPSU Central Committee, Comrade Yu. V. Andropov. In his statement he mentioned the succession of the domestic and foreign policy of the party and described the plan and budget for the next year of the five-year plan. His statement contained a complete analysis of the present-day state of the Soviet economy and a well-principled evaluation of our successes and shortcomings, a definition of the vitally important tasks that are confronting the national economy, and an indication of the ways and means to fulfill those tasks.

Comrade Yu. V. Andropov's speech directs the party organizations toward the need to accelerate the intensification of production, to improve the quality of work, to achieve a considerable improvement of capital construction, to improve the planning and administration of the national economy, to improve the methods of economizing, and to reinforce labor and executive discipline.

The workers of Uzbekistan, like all the rest of the Soviet citizens, respond to the concern shown by the party for the welfare of the people by performing selfless labor. They ardently support the decisions of the November Plenum and the session of the USSR Supreme Soviet, and the domestic and foreign policy of the CPSU and the Soviet state, and cordially congratulate Comrade Yuriy Vladimirovich Andropov on his having been elected General Secretary of the CPSU Central Committee.

The Plenum's decisions are unanimously evaluated by the workers as evidence of the consistent activities of the CPSU Central Committee and its Politburo in reinforcing the economic and defensive might of our Motherland and in raising the standard of living of the Soviet nation.

The November Plenum of the CPSU Central Committee gave the party and Soviet organizations, the trade-union and Komsomol organizations, and the ministries and departments the concrete task of concentrating their attention on the successful completion of the assignments for the current year, and the fulfillment and overfulfilmment of the plan for 1983 and for the five-year plan as a whole.

The Plenum once again drew the attention of the party, Soviet, and economic agencies, scientists, and the managers and specialists on kolkhozes and sovkhozes to the need to carry out cardinal measures for the further development of vegetable and animal husbandry.

In his speech at the Plenum, Comrade Yu. V. Andropov emphasized that the central place in our plans is occupied by steps that are linked with the realization of the Food Program, and with the increase in the production of foodstuffs. This is a question that is exceptionally important both economically and socially.

Our plenum has also been called upon to carry out a thorough discussion of the tasks of our republic's party organization in achieving a further increase in the production of output of vegetable and animal husbandry in the light of the decisions of the 26th CPSU Congress and the May and November 1982 Plenums of the CPSU Central Committee.

Comrades! In implementing the party's intentions, our republic's workers are successfully completing the second year of the five-year plan and are fulfilling high socialist pledges.

Industry has fulfilled ahead of schedule the plan for the first 11 months. Output valued at more than 300 million rubles has been sold in excess of plan, including consumer goods valued at 270 million rubles. The growth rates for the production of these commodities were 7.2 percent.

The construction organizations and collectives at enterprises of transportation and communication, institutions of science and culture, have been coping successfully with the established assignments.

The rural workers have demonstrated faithfulness to their word and their outstanding skills. And, as you know, this is genuine patriotism, and internationalism, in action. The vegetable husbandrymen, under unprecedentedly difficult climatic conditions, grew a good harvest of agricultural crops. They overfulfilled the plans for sales to the state of cotton and grain, kenaf and vegetables, potatoes and melon crops, fruits and grapes, silk cocoons, karakul and wool. The plans for procurements of meat, milk, and eggs are being completed. The pledges for shipments of all types of output to the nationwide fund have been fulfilled with distinction.

The state purchased more than a million tons of grain and more than 3 million tons of fruit and vegetable produce. The country's industrial centers received more than a million tons of fruits and vegetables.

The tremendous labor victory achieved by the kolkhoz members, sovkhoz workers, mechanizers, specialists in agriculture and water management in the republic, the workers in procurement, transportation, and processing agencies, and all the workers in the republic were warmly and cordially congratulated by Leonid Il'ich Brezhnev.

The labor performed by the cotton-growers is especially deserving of recognition. The fight for the harvest of 1982 will go down in the history of vegetable husbandry as a symbol of the heroic labor meritoriously performed by our glorious cotton-growers.

That unbelievably difficult victory was forged in the intensive, selfless struggle against the forces of nature. During the spring, during the sowing days, there was an unusually long hot spell, the upper layer of the soil dried out quickly, additional sprinklings of water were needed, and that delayed the appearance of the sprouts and led to a large amount of late-blooming cotton plants. Tangible losses were caused to the harvest by hurricane winds, rain storms, and hail storms, the most severe lack of water in rivers and other bodies of water, the burning-hot dry winds in the summer, and the heavy snowfalls and continuous rains in the autumn.

All the plantings of cotton suffered, and the resowings were conducted until June. On considerable areas the cotton had to be dried out and there was a massive amount of damage to the bolls.

It was as though nature was giving the cotton-growers a durability test. The harvesting was carried out under especially difficult conditions. The cotton-growers were confronted by snowfalls and rains, frosts, and winds. There was a very small number of days during which the machines could operate. And despite all that, the cotton-growers stood firm, and, in the face of the onslaughts of nature, demonstrated their stubbornness, heroic labor, and high level of skill. Relying upon the aid provided by the party and the state, they not only stood their ground, but also emerged victorious.

And so today, with a sense of a duty having been executed, and with pride and joy, we report to the party and to the entire Soviet nation that we have 6 million tons of Uzbekistan cotton!

A worthy contribution to the nation's struggle for the harvest in the second year of the five-year plan was made by Kara-Kalpak ASSR, and all the oblasts, rayons, kolkhozes, and sovkhozes in the republic.

As in previous years, the first to fulfill the plan and socialist pledges were the workers in Tashkent Oblast. The experience of the Tashkent cotton-growers demonstrated once again that the introduction of mechanized technology, the observance of agrotechnology, and the precise organization of all the field operations make it possible to obtain a high and early harvest under any weather conditions. Even during the current year, which was an unusually complicated one, the people of Tashkent Oblast reported on 15 October that they had fulfilled the state plan for cotton procurements.

Despite the capricious autumn, the decisive role in the bringing in of the harvest this year was played by the machinery. Using every hour of fine weather, and skilling employing the technology, the mechanizers harvested more than 3 million tons of cotton. Truly heroic labor was performed by the cotton-growers employed in manual harvesting. In rain and snow, in any kind of weather, the fight to bring in the harvest continued, without an interruption of even a single day.

An inestimable amount of aid was provided by the workers in the cities and the rayon centers, and by the students and schoolchildren. In response to the summons issued by the Communist Party of Uzbekistan [CPU] Central Committee, the Presidium of the UzSSR Supreme Soviet, and the UzSSR Council of Ministers, they wholeheartedly worked in an inspired manner, shoulder to shoulder with the cotton-growers, to bring in the harvest.

Please allow me, in the name of the CPU Central Committee, the Presidium of the UzSSR Supreme Soviet, and the UzSSR Council of Ministers, and in your name, dear comrades, to express profound gratitude to the creators of the 1982 harvest -- to the kolkhoz members, sovkhoz workers, mechanizers, specialists in agriculture and water management, aviators, workers in the procurement agencies, and workers in the transportation and processing enterprises.

We express heartfelt thanks to all those who, at this difficult time, came to the aid of the republic's vegetable husbandrymen -- thanks to our remarkable city-dwellers, workers and employees, students and schoolchildren.

Heartfelt thanks also go to the glorious experts in cotton-growing who achieved record-breaking harvests under the conditions of this very difficult year. The workers in 19 rayons harvested more than 40 quintals per hectare, and the vegetable husbandrymen in Gurlenskiy, Khankinskiy, and Gizhduvanskiy Rayons harvested more than 45 quintals.

The achievements of our vegetable husbandrymen are incontestible and convincing. Their labor deserves the most profound respect and recognition. A good basis has been laid for the further progress ahead, for the reaching of new goals.

We have only one path for the development of cotton-growing -- it is the consistent intensification of the branch, the raising of the harvest yield on the basis of the acceleration of scientific-technical progress, the further development of comprehensive mechanization and the improvement of agrotechnology. It is the attainment not only of big harvests, but also of early ones.

For these purposes it is necessary to reconsider the variety structure that has developed, and to make broader application of early-ripening, medium-fiber, and fine-fiber varieties.

A factor of very great importance for obtaining an early harvest is the complete introduction of progressive mechanized technological methods. These technological methods are used in many rayons and on many farms and always provide excellent results, guaranteeing an early harvest under any weather conditions. At the same time they require high technological discipline and the execution of all the agrotechnical measures within compressed periods of time, in accordance with reduced cycles.

In other words, they manifest themselves only in skilled hands, in the hands of those who believe in them, and clearly see their advantages.

I would like to cite the following example. Thanks to the introduction of these technological methods, the cotton-growers of Bukinskiy Rayon, during a period of 17 work days, until the advent of the bad weather on 2 October, fulfilled the plan for procurements of cotton and harvested, by means of machinery, 87 percent of the harvest. All the cotton was turned over basically in the first grades.

The rayon produced 79,000 tons of the "white gold," bringing in from each hectare an average of 36.5 quintals. The plan was fulfilled by 118 percent. That success was achieved thanks to the fact that the people in Bukinskiy Rayon, working with early deadlines, in 7 days completed the sowing of the cotton plants, carrying out the sowing with the use of precision-sowing drills, and with bare seeds, the bulk of which had been processed by stimulants. That made it possible for them to obtain strong early shoots with the natural moisture, and to guarantee the early maturation of the bolls. They carried out the defoliation on 5 September, and in mid-September extended a massive machine harvesting. Most of the farms introduced the brigade-contract method. That is the precise, well-coordinated way that the work must be arranged on all our farms.

A large amount of experience in the skillful application of these technological methods has been accumulated in Leninyul'skiy Rayon, the cotton-growers of which have currently obtained 45 quintals of fine-fibered cotton per hectare.

A task of great importance is the increased fight against wilt, and the broader use of the opportunities that we have available to us. In addition to cotton and alfalfa crop rotations, it is necessary to show more boldness in alternating cotton with corn, grain crops, annual and intermediate fodder crops, and vegetable and other crops.

There has already been frequent mention of the need for the better use of mineral fertilizers. It is necessary to take more decisive steps to eliminate the shortcomings in this matter. At the same time, it is impossible, simply by the use of mineral fertilizers, to guarantee an increase in the fertility of the soils. It is only if there is the correct combination of mineral fertilizers with organic ones that one can count on a high return from the land.

A problem that is no less important is the problem of reducing the expenditures for the production of output, the fight to increase the harvest yield on the basis of material self-interestedness. As has been demonstrated by the experience of many farms, high effectiveness in cotton-growing and in other branches of vegetable husbandry is provided by the conversion of the brigades and links to the brigade contract -- the system of organizing labor without work orders, but with payment for the final result, that is, payment for the harvest. At the present time, 14,000 brigades and 12,000 links in our republic are operating according to this system.

In these brigades, the sense of impersonal responsibility has been eliminated, the harvest yield and the labor productivity are higher, and the production costs are lower. As a rule, those brigades complete the harvesting earlier, without bringing in manpower from the outside. An example of precisely this kind of work, that guarantees a high final result, is provided by the brigades of Khalbuva Rustamova on the Sovkhoz imeni Ul'yanov, Pakhtakorskiy Rayon; Khasan Mukhtarov, on the Kyzyl Oktyabr' Kolkhoz, Kumkurganskiy Rayon; Adolat Ruzmatova, on the Kolkhoz imeni Lenin, Bekabadskiy Rayon; and many others.

The party's oblast and rayon committees must penetrate more deeply into questions of organizing production, of increasing the effectiveness of cotton-growing and other branches, and must broadly introduce progressive forms of organizing labor.

A factor of primary importance is improving the quality of cotton. This is directly linked with the expansion of the capacities of the cotton-ginning industry. It is necessary to devote more attention to the construction of new and the remodeling of existing cotton-ginning plants, drying and cleaning shops, warehouses for cotton, fiber, and seeds, and to take them under constant supervision. At the same time it is necessary to make better use of the available capacities, to raise the productivity of the plants and SOTs's [expansion unknown], and to guarantee the processing of all the cotton in 5-6 months.

It is very important for the raw cotton in the lower grades to be processed immediately after its procurement, rather than after it has been stored for a long period of time, as has been the practice until recently. Only in this case can one preserve the natural qualities of the fiber and increase the amount of fiber produced.

It is necessary to change over more rapidly to the acceptance of the cotton from the brigades themselves, and to equip the procurement points with more up-to-date instruments for determining the quality and grade of the cotton.

Comrades! In the resolution of the Food Program a special place is given to increasing the production of grain. The accelerated and steady buildup of the rates of grain production, as was noted at the May 1982 Plenum of the CPSU Central Committee, is the key problem in the development of agriculutre. The party has posed the task of eliminating the need to import grain, of completely satisfying our country's growing needs for edible and fodder grain. The November 1982 Plenum of the CPSU Central Committee directs us toward the resolution of that task.

The republic's party organization during recent years carried out a number of large-scale measures to raise the grain management. The production of grain during the past three five-year plans tripled. Every year the kolkhozes and sovkhozes sell the state a million or more tons of grain.

And during the current year, despite the drought that completely killed the grain crops on nonirrigated land, the grain-growers of our republic achieved definite success -- the gross grain harvest will be approximately 3 million tons.

The republic has taken additional steps to increase the production of corn. They have shown their effectiveness. Specialized corn-growing sovkhozes have been created, and the sown areas have been expanded on all other farms. The promised 2 million tons of corn have been produced, and we reported that to the CPSU Central Committee.

The production of grain in the republic will continue to grow even more. The 20th CPU Congress posed the task of increasing the gross grain harvest in 1985 to 5 million tons. That is a realistic task, and all the opportunities for resolving it are available to us. Next year we are supposed to increase the grain production to 3.7-3.8 million tons. Proceeding from the realistic capabilities, the Kara-Kalpak ASSR could produce 626,000 tons; Andizhan Oblast, 181,000; Bukhara Oblast, 220,000; Dzhizak Oblast, 368,000; Kashka-Darya Oblast, 501,000; Navoi Oblast, 120,000; Namangan Oblast, 190,000; Samarkand Oblast, 304,000; Surkhan-Darya Oblast, 283,000; Syr-Darya Oblast, 263,000; Tashkent Oblast, 325,000; Fergana, 205,000; and Khorezm Oblast, 241,000 tons.

The main direction in the development of grain management continues to be the further increase in the production of corn and rice. The sown area for corn grown for grain in 1983 must be increased by us to 340,000 hectares. This will make it possible to produce approximately 2.5 million tons of grain.

An important reserve in this matter is the specialized corn-growing and grain and animal-husbandry sovkhozes, of which we already have approximately 70. On these sovkhozes it is necessary, as rapidly as possible, to build production and cultural-everyday items, to assimilate the land, to provide the land with technology and transport, so that, by 1983, they will provide a considerable increase in the production of grain and products of animal husbandry.

Every brigade must fight to produce, per hectare, 100 quintals of grain and 500 quintals of green mass. This requires the application of the varieties with the highest harvest yields and the varieties that are earliest to ripen. It also requires the purposeful conducting of an entire complex of agrotechnical measures and the guaranteeing of the maturation of the harvest in 90-95 days, and its harvesting in 10-15 days. It is necessary to organize the work in such a way that, by July, the harvesting of the grain will be completed and the repeated crops will be sown.

We have developed measures to increase the rice harvests. In 1983 it will be necessary to produce no less than 550,000 tons of rice. The way to resolve this task is not only to expand the sown areas, but also to carry out the further reinforcement of the material-technical base at the rice-growing sovkhozes, and the guaranteeing of them with up-to-date, highly productive technology, fertilizers, herbicides, and other material-technical resources.

It is necessary to strive constantly to improve the efficiency of vegetable husbandry, to introduce crop rotations, to improve seed management, and to improve the agrotechnology of rice-growing in order to obtain early and high harvests -- no less than 60 quintals per hectare for the republic on the average -- and to complete the harvesting of the rice in September.

Every oblast has a large number of farms that are reaching harvests such as these and that are skillfully carrying out their operations. Sovkhozes in Khorezm Oblast -- Sovkhoz imeni Al'-Khorezmi, Yangiabad, Gulistan, and Bagat -- produced this year 66 quintals of rice per hectare; Kolkhoz Kommunizm, Gurlenskiy Rayon, 69; Leningrad Kolkhoz, Galabinskiy Rayon, 80 quintals. There is also a large number of farms with high harvest yields in Kara-Kalpak ASSR.

An important reserve in increasing the production of grain is the increase in the harvest yield of grain cereal crops grown on irrigated land. By setting aside valuable irrigated land for the purpose of growing these crops, we must produce high, stable harvests -- 40 or more quintals per hectare on clean sowings and 25-30 quintals on combined. For these purposes it is necessary to expand the sowings of winter crops, to improve the efficiency of vegetable husbandry, and to allocate a sufficient quantity of organic and mineral fertilizers.

It is necessary to make broader use of the opportunities provided by nonirrigated land. The path to this is fallow-grain crop rotations. The party's oblast and rayon committees and the agricultural agencies must increase their demandingness to the managers of farms for the setting aside of land to be used as fallow areas, and for the quality of preparation of the soil and the care of the sowings, in order to produce regularly there 15 or more quintals of grain per hectare.

As a result of the sharp increase in the production of grain, especially corn, many farms now have the need to expand their warehouse facilities for the drying and storage of grain. We must organize the accelerated construction of such warehouses with the use of reinforced-concrete arch-type structurals which are used in the construction of structures for animal husbandry. These facilities, after being cleared of grain, can be used successfully for the raising of silkworms.

The Ministry of Agriculture and its construction-design institutes must think this question out very well and must prepare the appropriate recommendations.

Comrades! As we have already mentioned at the 6th Plenum of the CPU Central Committee, the Food Program puts a special responsibility on our republic for improving the rate at which the public is supplied with fruits and vegetables. The production of this kind of produce is growing rapidly. And this is the result of the steps that were taken in the republic to introduce specialization and concentration into the branch. During the past five years alone, within the system of the Ministry of Fruit and Vegetable Management, 158 new specialized sovkhozes have been created, and the total number of them that we currently have is 278.

The Ministry of Fruit and Vegetable Management must take more decisive steps to achieve the organizational and economic reinforcement of the new sovkhozes, and to construct production structures and structures for social, cultural, and everyday needs there.

A question that requires special attention is the question of increasing the production of potatoes. By the end of the current five-year plan we must increase its gross harvest to one million tons and must completely satisfy our needs for potatoes. We can and must grow 150-200 quintals of potatoes on every hectare. In 1983 it is necessary to guarantee the production of potatoes at no less than 500,000 tons.

During recent years, definite successes were achieved in viticulture. At the same time, many farms have not yet established the proper procedures for taking care of the vineyards, and this is leading to an underharvesting of the grapes. Insufficient attention is still being devoted to the production of raisins and dried fruits.

The Ministry of Fruit and Vegetable Management, as well as the Ministry of Agriculture, must carry out effective measures to eliminate the shortcomings that still exist, to expand the plantings of grapes grown for table use and for the production of raisins, and to increase the volumes of production of raisins and dried fruits.

The party and Soviet agencies and the ministries must devote more attention to the construction of vegetable and fruit storage facilities and of other projects for the fruit and vegetable management, must engage more actively in questions of the preservation rate and processing of fruit and vegetable produce, and must introduce progressive forms of trade.

The Ministry of Fruit and Vegetable Management and Uzbekbrlyash must take all steps to develope direct contacts between trade and the kolkhozes and sovkhozes, and must strive for a situation in which the produce that has been grown by the selfless labor of the vegetable husbandrymen is taken directly from the field to the store, rapidly, without any losses and with good quality.

When speaking about the tasks of the workers in the agroindustrial complex, Comrade Yu. V. Andropov stated at the November Plenum of the CPSU Central Committee, "The workers in the agroindustrial complex must, from day to day, increase their efforts. They must work in such a way that the tremendous amounts of money that are being channeled into the resolution of this task will provide a return today and an even greater return tomorrow."

Comrades! The resolution of the Food Program moves into the foreground the task of the more rapid development of animal husbandry. During recent years this branch has been developing steadily and dynamically in our republic.

During the first ten months, the production of meat and eggs increased by 9 percent; and milk, by 7 percent. There was an increase in the number of head of all types of livestock and poultry, and an increase in their productivity. The annual plans and pledges for procurements of products of animal husbandry are being fulfilled successfully.

However, we also have a large number of those rayons and farms which have not been guaranteeing the intensive development of animal husbandry, and where their managers are failing to take decisive steps to correct the situation. This is precisely the manner in which one explains the fact that Oktyabr'skiy, Uychinskiy, Sariasiyskiy, Bayautskiy, Kommunisticheskiy, Shumanayskiy, Uzbekistanskiy, and certain other rayons have reduced the production of meat as compared with last year.

The party's oblast committees must carefully analyze the reasons why these rayons have been lagging behind and must take steps to establish strict order. It is necessary first of all to achieve a sharp increase in the weight gains of animals being grown and fattened, and to increase the turnover weight of the livestock to 420-450 kilograms. The farms in Kashka-Darya, Tashkent, and Fergana Oblasts are already coping successfully with this task.

Meanwhile many kolkhozes and sovkhozes are continuing to hand over for meat livestock that is underweight. For example, the farms in Takhtakupyrskiy, Khodzheyliyskiy, Bozatauskiy, Bol'shevistskiy, Il'ichevskiy, and Khvastskiy Rayons handed over this year livestock weighing 300-330 kilograms. This practice leads to the overexpenditure of fodders, labor, and means, and to losses of a tremendous quantity of meat. It is necessary by accelerated rates to develop specialized meat-type livestock-raising and to create large-scale farms with herds of animals intended for meat production. At the same time it is necessary to take all steps to develop hog-raising, sheep-raising, and poultry-raising and to increase their effectiveness.

The CPU Central Committee has approved the measures of Zhivprom, Ptitseprom, and Karakul'prom to increase the production of meat. The results of the first ten months indicate that Zhivprom and Karakul'prom are keeping their word. As for Ptitseprom, many of its enterprises have reduced their productivity and have failed to meet the plans for production and turnover of poultry meat and eggs. Minsel'khoz and Ptitseprom must take all steps to guarantee the fulfillment of the volumes that were planned.

In order to increase the meat resources it is necessary to devote more attention to the development of horse-raising, the raising of camels and rabbits, and fish breeding.

It is necessary to achieve a sharp increase in milk production. The chief way here is to increase the number of cows and to increase their productivity. Unfortunately, many farms and rayons, instead of increasing the productivity, have had a reduction in the productivity of the milk herd. There was a reduction of the productivity of cows on the kolkhozes and sovkhozes in Narynskiy, Sherabadskiy, Shurchinskiy, Mekhnatatabskiy, Akaltynskiy, Turtkul'skiy, Altyarynskiy, and certain other rayons. This can be explained only by the underestimation of animal husbandry and by the failure to understand the sense of the Food Program.

The work practice on the advanced farms in Tashkent Oblast attests to the large opportunities for developing the highly productive dairy animal husbandry. In the first ten months, every cow produced 3,600-3,700 kilograms of milk on farms in Kalininskiy, Kommunisticheskiy, and Yangiyul'skiy Rayons. Their experience should be made the property of all the kolkhozes and sovkhozes in the republic.

We must guarantee an annual increase in the number of head of livestock on kolkhozes and state farms by 7-8 percent, so that, by the end of the five-year plan, we shall have 600,000 cows. This task is a completely realistic one -- annually we obtain no less than 200,000 head of herd increase by the birth of calves. And we also have sufficient facilities at our disposal.

It is very important to increase the number of cows on each kolihoz to no less than 400-500, and on each sovkhoz, to 800-1000. In addition, we have organized approximately 70 grain and animal-husbandry sovkhozes and on each one of them the number of head of cows must be increased during this five-year plan to 600, and in the next five-year plan to 1000. During the subsequent years of the five-year plan we intend to construct a large number of additional animal farms and dairy complexes.

During recent years there has been a noticeable increase in the annual increase in the number of cows on the public's private plots. By the end of 1985 it is expected that the kolkhoz members, workers, and employees will have 1.1 million head. And that means that in all categories of farms, as of the beginning of 1986, there can be 1.7 million cows and the gross milk production can be increased to 4 million tons, or, in per-capita terms for each inhabitant of our republic, 210 kilograms. This is considerably more than is currently being consumed.

It is necessary to improve sharply the reproduction of the herd, in order to guarantee the planned increase in the number of head of cows -- and, moreover, cows that are good, purebred ones -- to reduce decisively the number of animals that are culled, to combat barrenness in cows and the keeping of cows and calves in a nonproductive status for too long, and to set up smoothly operating stations for the artificial insemination of the animals.

The Ministry of Agriculture and the Central Asian Branch of VASKhNIL must organize the effective activities of a scientific-production association for blood-line work in animal husbandry and at the pedigree center, and move more rapidly to create pedigree plants and other subdivisions.

In developing animal husbandry and increasing the production of output, an important role belongs to the public's personal plots. It is necessary for every family living in rural areas to have a cow and other livestock and poultry. The kolkhozes and sovkhozes must provide them with assistance in acquiring young animals and poultry, in laying in supplies of feeds and fodders, and in providing them with "zooveterinarian" services.

An important contribution to increasing the production of animal-husbandry output will have to be made by the subsidiary farms at enterprises and organizations. But, for the time being, they have been producing a small amount of output. We must engage more actively in that question, must achieve a sharp increase in the number of subsidiary farms and the volumes of the output produced by them, and achieve a broader dissemination of the advanced experience.

And this kind of experience exists, and is extremely illustrative. For example, the subsidiary farms in the city of Yangiyul have already produced, for every worker, 29 kilograms of meat; and in the city of Yangiyer, 22 kilograms. This work is well organized at enterprises in Chirchii, Angren, and Kattakurgan.

At the same time, individual ministries and departments have not been taking the properly responsible attitude toward the fulfillment of the party's decree dealing with this important question. Many enterprises and organizations in Bukhara, Navoi, Samarkand, Termez, and Fergana have not yet created any subsidiary farms, and the party committees have been reconciled to this.

We must strive for a situation in which, beginning with the next year, all the major enterprises and organizations will have subsidiary farms.

Something that has won broad support and has been widely disseminated is the valuable initiative of the field-cultivation brigades in Surkhan-Darya Oblast with regard to the fattening of livestock. The cotton-growing brigade of Khavokhon Abdulllayeva, on the Sotsializm Kolkhoz, Dzharnurganskiy Rayon, raised 14 head of cattle and sold the state 5400 kilograms of meat; the livestock were turned over in live weight, at 490 kilograms each. Brigades that turned over 5 or more tons of meat included those of Eshmamat Buriyev, Pogranichnik Sovkhoz, Gagarinskiy Rayon; and Khasan Mukhtarov, Kyzyl Oktyabr' Kolkhoz, Kumkurganskiy Rayon. There is a large number of such examples.

It is necessary to continue to develop this patriotic undertaking of the rural workers, and to strive for a situation in which every field-cultivation brigade raises and hands over to the state no less than 2 tons of meat.

For the further development of animal husbandry, the party, Soviet, and agricultural agencies must guarantee the intensification of fodder production. On all kolkhozes and sovkhozes it is necessary to create specialized brigades, to provide material incentives for them, and to devote special attention to guaranteeing the proper balancing of the fodders with regard to protein and other components, to improving quality and reducing the losses of fodders.

It is necessary to grow more soybeans and other legumes so that every animal farm will prepare artificial milk for the calves. On the basis of the introduction of crop rotations, we must expand the sowings of alfalfa, corn grown for grain and for silage, and root crops, and we must considerably increase their harvest yield and introduce the most effective systems for the green conveyor belt. It is necessary to continue to expand the plantings of rape, rye, "tretikale," "perko," and other intermediate crops in order to provide the livestock with green and succulent fodders during the wintertime. It is necessary to ensure on every farm, the production of no less than 10-12 tons of fodder units per hectare of plantings of fodder crops.

Every farm must have fodder shops and must feed the animals the fodders only in processed form. It is necessary to make wide use of the capabilities of producing and using suspensions of "khlorella," whole-milk substitute, fodder yeast, and enzymes.

It is necessary to take all steps to improve the mechanization of animal husbandry, and to increase the labor productivity of the workers engaged in that branch. It is necessary to improve sharply the technical services provided to the animal farms and the complexes, using the efforts of the enterprises of Goskomsel'khoztekhnika.

Comrades! The implementation of the measures planned by the 26th CPSU Congress and the May and November 1982 Plenums of the Central Committee requires the further intensification of agricultural production as a whole.

Questions that take on an especially vital urgency are thos involving the intensification of production under our conditions, when the reserves for expanding the sown areas are extremely limited. In questions of intensification, an important role must be played by agricultural science.

The chief task of the Academy of Sciences and the Central Asian Branch of VASKhNIL, and all the scientific institutions in the republic, is the thorough elaboration of the questions of the further improvement of the technology of raising agricultural crops, of developing mechanization, and creating more productive technology for cotton-growing and other branches of vegetable and animal husbandry.

A large amount of attention must be devoted to developing chemicalization, to increasing the effectiveness of the application of mineral fertilizers, herbicides, and other chemical means, to the creation of even more effective growth stimulants for plans and of nontoxic defoliants, and to the broad use of the biomethod.

The further development of agriculture, the fulfillment of the Food Program, is inseparably linked with irrigation and land reclamation. The unprecedently low levels of water this year caused substantial damage. That situation may be repeated. It is aggravated by the fact that in the major reservoirs -- Toktogul'skoye, Nurekskoye, and others -- the water reserves that have been accumulated over a number of years have been completely depleted.

All this causes well-substantiated concern about the fate of the future harvest. It is necessary right now to begin urgently to carry out measures to combat the low water supply, and to render practical assistance to the rayons that particularly suffered from the drought. The task of the party's oblast and rayon committees and the Soviet and economic agencies in the outlying areas consists in mobilizing the manpower and material-technical resources to lay cement linings in the canals, to drill wells, to install irrigation systems and to electrify them, and to construct bodies of water and small-scale reservoirs. It is necessary to take under special surveillance the preparation for vegetation at all the existing pumping stations and for the accumulation of water in the reservoirs.

Comrades! Our plenum will discuss the State Plan for the Economic and Social Development and the draft version of the State Budget for the republic for 1983. In the drafts that have been submitted by the government to the republic, there is a definition of the specific tasks for all branches of the economy and culture for every oblast and the Kara-Kalpak Autonomous Republic.

Inasmuch as agriculture has already been mentioned, please allow me to dwell on several of the key tasks for the republic's party organization in developing other branches of the national economy.

The preliminary results of the current year make it possible to conclude that most of the branches of the national economy will successfully fulfill the established plans and socialist pledges.

However, if one approaches everything achieved from the positions of the requirements stated at the 26th CPSU Congress and the May and November Plenums of the CPSU Central Committee, one must admit that we have been making far from complete use of our opportunities and reserves.

A large number of shortcomings and unresolved problems exist in industry. The results of its work during the first ten months cannot fail to cause concern. With a planned rate of 5 percent for growth of production, it achieved only 3.6 percent. Only one-third of the increase in the volume of production was achieved as a result of an increase in labor productivity.

A difficult situation has been created in Andizhan Oblast. The industry in the oblast is feverish, there has been a worsening in the qualitative indicators, and during the first ten months of this year the rates for increase in the volumes of production were 98.4 percent, and labor productivitity, 89 percent. If no urgent steps are taken, the plan for the first two years of the five-year plan for these indicators and for the production of most of the types of the articles by the branch can be disrupted. The similar situation is also observed in Syr-Darya Oblast.

Many branches are making poor use of their production capacities, are failing to fulfill their delivery pledges, and are violating state and planning discipline.

In order to overcome this lag, it is necessary to use all the economic, organizational, and political means. It is necessary first of all to strive to increase the growth rates for labor productivity -- that very important indicator of the effectiveness of social production. Attention was directed to that once again at the November 1982 Plenum of the CPSU Central Committee.

In the very near future the party's oblast, city, and rayon committees, together with the ministries and departments, must carefully analyze the activities of every lagging enterprise, shop, and sector, and must determine the specific steps for eliminating the shortcomings. They must take that work under the strictest surveillance and must correct the situation rapidly.

A very important factor that is linked with the resolution of the problems confronting industry -- but not only industry -- is the further development and the steady operation of power engineering. That was emphasized in the strongest manner at the November Plenum of the CPSU Central Committee. All the party, Soviet, and economic organizations must regularly and concretely engage in questions of economizing and thrift, and must wage a decisive struggle against poor economic practices and waste.

A factor of exceptional importance for our republic is the development of agricultural machine-building. This is the very basis for the development of cotton-growing. The key problem here is the organizing of the production of more powerful tractors. It is extremely important for us, within two or three years, to create a mondern engine-building production entity, so that, by the 60th anniversary of our republic, we can begin the production of 100-horsepower engines for the MTZ tractors, and, in 1985, give our country's cotton-growers 100-horsepower tractors with a hermetically sealed cab.

At the Plenum of the CPSU Central Committee, emphasis was made of the need to accelerate scientific-technical progress, to achieve the broad and rapid introduction into production of the achievements of science, technology, and advanced experience. In September 1982 a plenum of the CPU Central Committee met to deal with this question. The plenum adopted specific measures for the further development of scientific research and for the introduction of new technology and new labor methods.

And now it is a matter of the practical implementation of those measures, the use of all the levers for encouraging the combination of science and production.

The questions that must be constantly in the center of attention of all the party and Soviet agencies are those involving the increase in the production of consumer goods. The enterprises that have been called upon to engage in the production of those commodities are not only the enterprises in group "B," but all the branches of industry. It is important to guarantee not only the increase in the production of these commodities, but also to improve their quality.

In the resolution of the tasks of increasing the production of consumer goods, a special role is played by the creation of branches of industrial enterprises in small cities and rural inhabited points.

At the present time 350 branches and shops are operating there, and they are producing output valued at 465 million rubles. By the end of the five-year plan the republic is supposed to construct, in addition, 400 such branches with an annual volume of production of commodities and articles valued at 2 billion rubles. They will make it possible to involve 110,000 persons in production.

The creation of branches requires the constant attention of the party committees and the administrators of ministries, departments, and associations. I feel that it is necessary to emphasize once more that this task is of great economic and social importance. It is a task whose resolution is linked with the further industrialization of the rural areas, the bringing of the village closer to the city. It is a task that is linked with the bringing into the ranks of the working class newer and newer segments of the population, and with the efficient use of labor resources.

We are mentioning this once again because the creation of branches has not been organized at the proper level everywhere. Frequently the branches are very small-scale and are equipped with obsolete equipment, and the personnel turnover rate is high there.

The UzSSR Council of Ministers must study the question of the further development of the branches of industrial enterprises in small cities and rural inhabited points and must make its recommendations.

Large tasks confront construction workers. The chief task, as was emphasized by the November Plenum of the CPSU Central Committee, is the further reduction of the volume of uncompleted construction and the acceleration of the rates of activation of fixed assets.

The party and Soviet agencies, the construction organizations, and all the ministries and departments in the republic must guarantee the prompt activation primarily of the projects that are scheduled for activation in the next reporting period, the maximum concentration of the labor, material, and financial resources at those projects, and the organizing of the prompt delivery or raw and other materials and construction-planning and estimate documents, and equipment. It is necessary to introduce on a broader scale the progressive forms of organizing labor in construction, and primarily the brigade contract.

A factor of great, and I might even say decisive, importance for the successful fulfillment of the plans for the current year and next year is the operation of transportation, especially rail transportation, because the precision and efficiency of its operation determines the prompt delivery of the output to the broad consumer.

The Administration of the Central Asian Railroad must take urgent and effective steps to satisfy the needs of the republic's national economy for shipments, the prompt delivery of raw and other materials, machines and machinery, agricultural output, fuel, and fertilizers.

Comrades! The resolution of the tasks posed by the 26th CPSU Congress and by the May and November 1982 Plenums of the party's Central Committee requires the improvement of the organizing, political, and ideological work.

It is necessary to mobilize all the means that are at our disposal, and to extend the broad propagandizing of the decisions of the Plenum of the CPSU Central Committee and the documents of the 7th Session of the USSR Supreme Soviet.

The party organizations must explain thoroughly the tasks posed in the speech by Comrade Yu. V. Andropov, and must link them inseparably with the assignments for the 1983 plan and with the practical affairs and tasks of every enterprise, every working collective, every worker.

The main thing here is to strive for a situation in which the tasks posed by the Plenum of the CPSU Central Committee are viewed not only in the branch cross-section, but also in the cross-section for each plant, shop, sector, and work site.

The decisions of the November Plenum of the CPSU Central Committee are a fighting program, a guide for action. The results of the Plenum of the CPSU Central Committee must be discussed at plenums of the oblast, city, and rayon committees, at meetings of party activists, and at meetings of the primary party organizations. It is very important for them to be conducted in a businesslike manner, creatively, with special emphasis being made on the manner in which the Food Program is being fulfilled.

The successful resolution of the tasks posed by the November Plenum of the CPSU Central Committee requires the improvement of the selection, assignment, and education of personnel.

The present difficult year has shown us once again that wherever the party, Soviet, and economic workers do not resort to stereotypes in resolving tasks, but, rather, resolve them creatively, analyzing the state of affairs thoroughly, and making the correct decisions, a high final result is achieved even under difficult conditions.

Much has been done in our republic to reinforce with cadres the kolkhozes, sovkhozes, agricultural agencies, and all the links in the agroindustrial complex.

At the same time, the present difficult year has indicated that not all our administrators have yet been able, under the complicated conditions, to find the ways to fulfill the plans. The party committees and the agricultural agencies must render assistance to these administrators and increase the demandingness toward them.

The November Plenum of the CPSU Central Committee emphasized that the successful fulfillment of these plans requires that the people standing in the decisive sectors must be politically mature individuals, who are competent and in possession of organizing capabilities and a sense of the new. In a word, they must be people who have those qualities without which, in our time, it is impossible to administer modern production.

The entire organizing and political work must be aimed at increasing the labor and political participation of the masses, at mobilizing them for the unconditional fulfillment of the plans and socialist pledges for the present year, and for the five-year plan as a whole. It is necessary to continue to develop the socialist competition, and to improve the organization of labor.

Today this is a very important task of the party committees and the trade-union and Komsomol organizations. They must strive for a situation in which every worker is well aware that the fulfillment of the plan depends upon his labor contribution.

Comrades! We are approaching a glorious event -- the 60th anniversary of the Union of Soviet Socialist Republics. That date is filled with great social and political content and with special meaning. It reflects the historic path that has been traveled by our great multinational Motherland, and demonstrates the indisolluble moral and political unity of our society, and the triumph of the Leninist ideas of the friendship of nations.

Under the leadership of the Communist Party, we have taken the heights. Ahead of us lie new goals. They have been defined by the decisions of the May and November Plenums of the CPSU Central Committee.

We are confronted by the task of fulfilling the high socialist pledges that were taken in all branches of the national economy for 1983. We are confronted by the task of achieving a further intensification of the entire social production, of increasing the effectiveness and quality of all our work, of increasing the labor productivity. We are confronted by the task of increasing the production of industrial output, and that of all branches of agriculture, of implementing the Food Program, of further developing our capital construction, developing the economy and culture, and raising the material standard of living of the nation.

Please allow me to assure the Leninist Central Committee and its Politburo that the Communist Party members and all the workers in our republic, as they march ahead toward the glorious 60th anniversary of the USSR, will apply all their efforts and knowledge, all their energy and skills, to complete the present year with distinction and to guarantee the unconditional fulfillment and overfulfillment of the assignments for 1983 and the 11th Five-Year Plan as a whole. (The report by Comrade Sh. R. Rashidov was listened to with a large amount of attention and was repeatedly interrupted by applause.)

SHEVARDNADZE CHAIRS SESSION OF REPUBLIC S&T COORDINATING COUNCIL

Tbilisi ZARYA VOSTOKA in Russian 15 Sep 83 pp 1, 3

[GruzINFORM [Georgian News Agency] item under rubric "At the Central Committee of the Communist Party of Georgia": "In the Spirit of the Demands of the Time"]

> [Text] Our republic is carrying out purposeful work to implement the decisions of the 6th Plenum of the Central Commitee of the Communist Party of Georgia [CPG]. An active search is being made for new forms of organizing the partnership between scientific-research and production organizations, there has been an expansion in the sphere of application of the target-program method of resolving major scientific-technical problems, and an increase in its effectiveness. The activities of the party agencies which are aimed at accelerating the scientific-technical progress have become more effective and more concrete.
>
> The chief organizer of the fulfillment of the plenum's decisions and the coordinator in concentrating the efforts in the development of science and in accelerating the scientific-technical progress is the Republic Coordinating Council on Science and Scientific-Technical Progress, which is headed by Candidate Member of the Politburo of the CPSU Central Committee, First Secretary of the CPG Central Committee E. A. Shevardnadze.

A regular session of the coordinating council was held. It was opened by Comrade E. A. Shevardnadze.

An informational report on the organizing work to fulfill the decisions of the 6th Plenum of the CPG Central Committee which is being carried out by the sections and working groups of the coordinating council was given by Second Secretary of the CPG Central Committee G. V. Kolbin; Chief of the Science and Educational Institutions Department of the CPG Central Committee, A. P. Sakvarelidze; Chief of the Propaganda and Agitation Department of the CPG Central Committee, N. Sh. Endeladze; and Secretary of Georgian Sovprof, L. S. Kharbediya.

Academic Secretary of the Chemistry and Chemical Technology Branch of the GSSR Academy of Sciences, academician of GSSR Academy of Sciences G. V. Tsitsishvili gave an informational report on the scientific research being carried out at the institutes of the Chemistry and Chemical Technology Branch and the future prospects for introducing the results of that research into production.

The rate of fulfillment of the republic plan for science and new technology was reported by Deputy Chairman of GSSR Gosplan I. S. Zhordaniya and First Deputy Chairman of the GSSR State Committee for Science and Technology, L. N. Okley.

The session participants were informed about the recommendations made by the GSSR Ministry of Higher and Secondary Special Education and the GSSR Ministry of Finance concerning the intensification of the ties of partnership between science at institutions of higher learning and production. A provisional statute was developed for the introduction, by way of an experiment, of a new, progressive system for the payment of labor and the providing of material incentives to the workers at institutions of higher learning and in production who successfully introduce innovations into practice. Corresponding recommendations will be submitted in the near future to the bureau of the CPG Central Committee. An informational report was given on the rate of implementation of the recommendations and reactions to the critical comments that were expressed at the 6th Plenum of the CPG Central Committee.

Those who made statements at the session included GSSR Ministry of Public Health G. G. Lezhava; Chief of the Party-Organizational Work Department of the CPG Central Committee, Zh. K. Shartava; President of the Academy of Sciences of Georgia, Ye. K. Kharadze; and Deputy Chairman of the GSSR Council of Ministers, O. Ye. Cherkeziya.

The results of the session was summed up by Comrade E. A. Shevarnadze.

It was mentioned at the session that the Republic Coordinating Council and its working agencies had increased the activity rate of its work that is aimed at achieving the unconditional fulfillment, within the planned volume and within the planned deadline, of the assignments and the measures that were approved by the 6th Plenum for scientific-technical progress in the branches of the national economy. At the same time, the speakers also sharpened the attention to the shortcomings in this important matter. There has been an unjustified prolonging of the resolution of a number of vitally important questions. In the actions of the ministries and departments one observes a certain sluggishness and inertia in reorganizing all the work in the spirit of the requirements of the plenum. Not all the party organizations and committees in the outlying areas have become imbued with the idea of the necessity of effecting a sharp turn toward questions of scientific-technical progress and have not defined any concrete tasks or plan of action for themselves. Certain working groups in the coordinating council have been engaging with an insufficient amount of aggressiveness in questions that are included within their competency.

Regional councils on science and scientific-technical progress have been created under many party rayon and city committees. However, they have not yet extended their work properly.

Recently there has been an improvement in the drawing up of draft versions of republic plans for science and new technology. They encompass the associations and enterprises of union subordination and they contain assignments in unionwide and republic-level comprehensive scientific-technical target programs. The state of balance with the material-technical and financial resources has been one of the reasons for the increase in the role of the plans for science and new technology in the job of accelerating the scientific-technical progress.

At the same time, the fulfillment of the plans for science and new technology reveal shortcomings and still have unresolved questions. The measures that are included in the plan continue to be undistinguished by any high effectiveness and they do not always correspond to the present-day level of domestic and foreign technology. As a whole the republic plan for science and new technology has not yet become the basic state planning document that effectively organizes the republic's entire national economy for the acceleration of scientific-technical progress.

The coordinating council approved the activities of the institutes of the Chemistry and Chemical Technology Branch of the Academy of Sciences of Georgia. It was noted that their collectives, in addition to research on fundamental problems of modern chemistry, pharmacochemistry, and metallurgy, devote a large amount of attention to introducing the results of scientific research into the national economy and to the search for new forms of partnership ties with industrial enterprises. At the same time the scientific potential of the institutes in the branch is not being used completely, and not all the projects of an applied nature which are carried out in them find their proper application in the practical situation.

It is the task of GKNT [State Committee on Science and Technology] and GSSR Gosplan to be concerned constantly about the introduction of the achievements of domestic and foreign science and technology into the national economy, and to assure that not a single completed scientific-research project that is of interest for the further social and economic development of the republic is left without practical use.

The coordinating council and its working agencies must work in a more purposeful manner with every ministry, large-scale industrial enterprise, and association. At the section sessions it is necessary to pose concrete questions and to make concrete decisions dealing with them, and to define specific deadlines for the elaborations, but, most importantly, the introduction.

The acceleration of the introduction of the achievements of science and technology into practice is one of the strategic lines in the new five-year plan. It is necessary to increase the personal demand upon the managers of departments, enterprises, and institutes for the elaboration, assimilation, and production of new types of output, and for the introduction of advanced technological schemes. It is necessary to eliminate everything that hinders the introduction of that which is new. Production must be vitally self-interested in the rapid assimilation of the fruits of the mind and labor of the scientists and designers. The developing industry requires the deepening of scientific research. The Georgian Academy of Sciences, and the State Committee for Science and Technology must deepen the cooperation between the institutes and the developing branches of industry. The search for new and improved forms of partnership is the chief task of the scientists and the production workers. In this direction it is necessary on a broader scale to study and use the experience of the union republics. Experience that is interesting, for example, is that of the Ukraine in the area of cooperation between the Academy of Sciences and the major enterprises, associations, and ministries. Large opportunities are contained here and they must be used.

The session participants discussed the need to introduce more broadly into the activities of the scientific institutions the principles of cost accountability. The institutes which can do that which is beneficial for production must seek additional sources for the formation of their budget. In this question there must be an increase in the role of the presidium of the Academy of Sciences and the State Committee on Science and Technology.

An important place in the statements was given to the ideological and organizational support of the work of accelerating the scientific-technical progress. The means of mass information -- the press, radio, television, and popular-science motion pictures -- must increase their rate of activity in the area of propagandizing the scientific-technical knowledge, advanced experience in the area of the increase in labor productivity, and the search for reserves to increase the economic potential.

In all this work a special role belongs to the Republic Coordinating Council and its working agencies -- the sections, subsections, and working groups. It is necessary for all of them to show more aggressiveness in resolving the questions that are included in their competency, and for them to locate and activate all the reserves. Work that deserves special attention is the work of accelerating scientific-technical progress which is being carried out in the regions.

With regard to all the questions that were discussed, the council specified definite measures and defined the responsible executors.

Participants at the council session included Comrades G. A. Andronikashvili, D. I. Patiashvili, Z. A. Chkheidze, Deputy Chairman of GSSR Council of Ministers V. I. Vadachkoriya, and chiefs of departments of the CPG Central Committee B. Z. Barsukov, B. D. Makharashvili, G. S. Mamatsashvili, L. I. Mgaloblishvili, and L. Ya. Khaburzaniya.

KOLKHOZ MARKET INVESTIGATION CONTINUES

[Editorial Report] Baku KOMMUNIST in Azerbaijani 1982 p 4 carries a 1500-word report on a kolkhoz markets investigation [the first article in this series appeared in October]. The following observations were made: certain trucks are not permitted to unload in the market which "is an aspect very discomfiting to sellers." The investigators also note that "perhaps it is 'too crowded' in the No. 6 kolkhoz market, but is there nowhere where incoming products could be received? No, they could put five times as much incoming goods in one corner of its large area." With regard to the Trade Service Bureaus, which are supposed to "bring more products into the market, keep prices down and increase consumer services" the inspectors noted that "it is very important that the AzSSR Ministry of Trade study the activities of the republic kolkhoz markets Administrative Trade Service bureaus and take effective steps for them to improve their work."

IRRIGATION TECHNOLOGY TO BE MODERNIZED

[Editorial Report] Baku KOMMUNIST in Azerbaijani 30 November 1982 p 2 carries a 1000-word article by A. Hajyev, Director of the Azerbaijan Institute for the Economic and Organizational Development of Scientific Research, and R. Aliyev, Section Director of the Institute, on the current state of irrigation technology. "One of the most important shortcomings is the archaic means of irrigation. For example, only two percent of 913.4 thousand hectares uses water-propelling machinery or pipelines."

'ROUND TABLE' ON INTERNATIONALISM

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azerbaijani 5 November 1982 pp 2-3 carries a 5000-word summarized version of a 'Round Table' on "One International Family" in which A. M. Mirahmadov, Director of the AzSSR Nizami Institute of Literature, Mukhtar Dadashov, film producer-director, Famil Mahdi, poet and Director of the Azerbaijan State University Journalism Faculty, Jahangir Gahramanov, Professor and Director of the Azerbaijan SSR Academy of Sciences Manuscript Archive, and Fuad Aliyev, Deputy Director for Scientific Affairs of the USSR Palace of the Friendship of Peoples, participated. Mirahmadov said: "Along with the internationalistic character of classical Azerbaijani literature which sung of and spread humanistic ideas from the times of Nizami and Khagani, the seven-volume 'Azerbaijan Literary History', which we have prepared for publication will be a new test for our scholars." Gahramanov stated: "The great Uzbek poet Gafur Gulam donated the 'Khamsa' of Nizami of Ganja, which was copied in the 16th century and was in his family library, to the Azerbaijan Academy of Sciences. Is this not a manifestation of the sincere friendship between two peoples?"

TWENTY VOLUME COMPENDIUM OF AZERBAIJANI LITERATURE PLANNED

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azerbaijani 19 November 1982 p 7 carries a 450-word Azerinform dispatch on the publication of the "Azerbaijan Classical Literature Library", volume one of which has come off the presses. It is to be finished in five years.

International

AFGHAN MAGAZINE PUBLISHES AZERBAIJANI SHORT STORY

[Baku ADABIYYAT VA INJASANAT in Azerbaijani 5 November 1982 p 7]

[Unsigned dispatch: "Published Abroad"]

[Text] "ZENAN magazine, which is published in the Afghanistan Peoples Republic, printed the short story 'Purple Flower' by the writer Seyran Sakhavat in this years tenth issue. Shahin Fazil [an Azerbaijani journalist and writer living in Kabul] translated the short story into Afghani."

AFGHAN TEACHERS TOUR AZERBAIJAN

[Editorial Report] Baku KOMMUNIST in Azerbaijani 27 November 1982 p 4 carries a 250-word Azerinform report on the tour of an Afghan teachers' delegation headed by Mahbuba Karmal, President of the central boarding school [internat] in Kabul. "Members of the delegation, while acquainting themselves with childrens' education in Azerbaijani schools and pre-schools, visited both the No. 8 internat and the J. Nakhchyvanski school."

NORTHERN POET ON SEPARATION FROM SOUTH

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azerbaijani 26 November 1982 p 4 carries a poem by Samad Isaoghlu which discusses the organic unity of Northern and Southern Azerbaijan, containing lines such as: "The Araz cuts its head like a sword/ The heart remained with me, the head fell there" and "Baku and Tabriz like two eyes/ Lived longing one for the other".

IBRAHIMOV ON DEMOCRATIC SOUTHERN LITERATURE

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azerbaijani 19 November 1982 p 7 carries a 2300-word speech by Mirza Ibrahimov to the plenum of the

USSR Writers Union ispolkom at the end of October. While discussing primarily Soviet and pre-Soviet Azerbaijani literature, he touches on the South at the end: "At this point one should note that progressive writers of Iran and Southern Azerbaijan now speak out more and more through poetry, prose and publicistic works against imperialism. Such works in Persian and Azerbaijani are included in democratically oriented journals published in Tehran and Tabriz after the fall of the shahist administration."

SOUTHERN WRITERS AND POETS IN AzSSR

[Baku ADABIYYAT VA INJASANAT in Azerbaijani 13 November 1982 p 5]

[Article by A. Mammadrza: "Meetings With Workers"]

[Text] "Recently a group of Southern Azerbaijani writers and poets were in Kirovabad, Ali Bayramly and Sumgait for the 60th anniversary of the founding of the USSR and literary meetings connected with the praising of the USSR in Southern Azerbaijani literature.

The literary meeting, held at the Jafar Jabbarly Kirovabad State Drama Threater, was opened by Balash Azeroghlu, Secretary of the Azerbaijan Writers Union ispolkom and Peoples Poet, who said that the creation of the USSR is one of the most significant events which occurred in human history and that all of progressive mankind's marking and celebration of this event together with the great Soviet people is relevant. The influence of Soviet literature, especially Azerbaijani literature, in adding ever-newer qualities and artistic enrichment is one of the major factors.

Azeroghlu said that our literature, along with reflecting the struggle of the Iranian people, specifically the people of Southern Azerbaijan, for freedom and independence, has repeatedly praised the well-wishing, generous, peace-loving policy of the great Union of Soviets, the banner-bearers of peace and socialism in the world.

At the meeting Altay Mammadov, Sabir Amirov, Mammadrza Afiyat, Firuz Sadygzade and Bahlul Rovshan spoke; Balash Azeroghlu, Sohrab Tahir, Ashyg Huseyn Javan, Tariyel Umid, Farida Alyarbayli, Suleyman Jahani, Imam Irani and others read new poetry. At the Ali Bayramly Central Library and the Nariman Narimanov House of Culture Balash Azeroghlu, Madina Gulgun, Sohrab Tahir, Mammadrza Afiyat, Sabir Amirov, Gulamrza Jamshidi and Nazim Rizvan spoke.

At the same meetings young poets of Kirovabad, Ali Bayramly and Sumgait also read poetry.

KASSR PLANNING CHIEF REVIEWS LIVING STANDARDS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 27 November 1982 carries on page 2 a 2100-word interview with Taufik Geleyevich Mukhamed-Rakhimov, deputy chairman of the KaSSR Council of Ministers and chairman of the KaSSR State Planning Committee on general levels of KaSSR development at the present time. The interview was recorded by S. Abdrakhmanov and is published to note the 60th anniversary of the USSR.

On the KaSSR's position within the Soviet Union, Mukhamed-Rakhimov notes its importance as a Soviet mineral and industrial base. The KaSSR, which is fourth in the Soviet Union in industrial production, produces 30 percent of USSR copper, 50 percent of its zinc, 70 percent of its lead, up to 90 percent of its phosphorous, nearly 100 percent of its chrome ore and large quantities of vanadium, tungsten and molybdenum. The republic is also second in the USSR in oil production and third in electrial energy, coal, rolled steel and agricultural machinery. KaSSR industry, moreover, Mukhamed-Rakhimov goes on, at present produces every 24 hours 52,000 tons of oil, 323,000 tons of coal, 70,000 tons of iron ore, 160 million kilowatt hours of electrical energy, 13,400 tons of cast iron, 16,600 tons of steel, 11,900 tons of rolled ferrous metals and enormous quantities of textiles and other products.

On agriculture, Mukhamed-Rakhimov has conspicuously less to say but does stress the high level of KaSSR development and the enormous investment, 17.4 billion rubles, in the KaSSR agro-industrial complex during the current five-year plan. Nothing is said about the yields of the just completed Kazakh harvest.

On levels of living Mukhamed-Rakhimov notes that the average republic monthly salary is now 169.5 rubles plus 238 rubles in payments and benefits from social consumption funds. Per capita expenditure on students in kindergarten and creches per year has attained an average of 484 rubles and 83.3 percent of all costs are state paid. For general education schools average annual expenditure per student has reached 170 rubles, 677 rubles in technicums and 944 rubles in higher educational institutions. Because of generous state support of higher and middle education 836 out of every 1000 KaSSR workers now have a higher or middle education.

COAL PRODUCTION LAGS IN KEY KARAGANDA FIELDS

[Editorial Report] Alma-Ata QAZAQ ADEBIYETI in Kazakh 16 November 1982 carries on page 7 a 2,400-word article by regular commentator Musa Rakhmanberdiyev on problems at the Karaganda Coal Field. The article, first of a series on the Karaganda Industrial Region, is the result of a journalists convocation held in Karaganda City on regional economic problems and prospects and is published under the regular rubric "Rhythm of the 11th Five-Year Plan."

Karaganda is the center of one of the largest industrial regions in the Soviet Union. The basis of it all is coal, 48 million tons a year at present production levels, to supply the giant Orsk-Khalilovsk and Magnitogorsk Metallurgical Combines and other industries within and without the Karaganda region.

In a series of short interviews with persons directly involved in Karaganda coal production, Rakhmanberdiyev brings out the great complexity of Karaganda coal mining and the many difficulties attendant upon operating underground mines. His informants freely admit, however, that many production plans are not being met, often with substantial shortfalls. As reasons for the failures, they complain of a shortage of up-to-date coal-processing and coal moving machinery in the mines, inadequate geological and methodological research, shortages of subterranean transport and a lack of mechanized shaft cutting and mine cleaning units. Moreover, Karaganda suffers from difficulties with other, supporting industries in the basin and an acute shortage of on-the-site housing has a major negative impact upon mine labor. Mine managers express confidence in their abilities to solve mining problems, through wider application of open pit mining methods and rail transport right up to production sites, for example, but feel impotent in dealing with housing and other outside issues.

YOUNG PEOPLE ABANDON RURAL AREAS

[Editorial Report] Alma-Ata QAZAQ ADEBIYETI in Kazakh 12 November 1982 carries on page 3 a 2,400-word article by Khaydolla Tilemisov on the problems of Satay village (Kustany Oblast) as typical of what is wrong with Kazakh agriculture. The article is published under the regular rubric "Questions to Look Into."

Tilemisov visits in Satay village where he lived a quarter of a century ago to see what survived of the old and sample the new.

Tilemisov stresses the great physical changes in Satay village--no longer, for example, are there sod huts sunk into the earth but row upon row of uniformly built houses, all with modern conveniences. However, certain disquieting facts emerge that contradict the impression given by the village's beautiful facade.

The upstanding seventy-year old herdsman Zhamaghali Eshmanov complained bitterly about the younger generation that seemed to spend all its time drinking and making trouble with no or little interest in the Satay village. The children of distinguished members of the community, Eshmanov goes on, are continually getting thrown in jail due to drinking or misbehavior. Part of the problem, is improper upbringing. But, Eshmanov concludes, part of the problem is Satay village itself. The best of the young people run away to the cities because there is nothing to keep them in Satay village--no television, theaters, etc. The ones that stay have nothing to do since times are easy there is plenty of opportunity for boozing--not like the good old days when a person could starve from not working.

Other villages echo Eshmanov's complaints, leading Tilemisov to ask why things are like this. In the old days, he noted, Kazakhs had little to do with the cities and were largely self-sufficient. Now all the young people are running away there. What has happened?

The head of a local tekhnikum notes that young people today are better educated and are drawn to a better life. After ten or more years of school, they are unwilling to take up the shovel and clean out the cowpen. They see rural life as a drudgery, and, if fact, there is too much drudgery, too little mechanization. The rural areas are too unsophisticated to absorb all the technically trained workers that are being produced. The new styling housing built to absorb the rural workers often stands empty. The new style housing may even be part of the problem since it and the facilities associated with it are not really suited to local needs and tend to isolate their inhabitants from rural life rather than involve them directly with it. There are, for example, no cattle and sheep pens associated with the new housing so that young workers are unable to raise stock personally and get involved, so to speak, with the real life of the village. The new housing, moreover, unlike the yurts of the old, is immobile so that villagers are unable to pasture their animals and there are no pastures close at hand. Pasturing is necessary since feed is in short supply. In short, the present organization of the village simply doesn't suit its way of life in the way that the older organization did.

Tilemisov also found that Satay village has an overly rapid turnover of village managers--sometimes two a year. As a result local managers lack the time to familiarize themselves with local problems.

The village's greatest problem is keeping its inhabitants employed on a regular basis. Relocating agro-complex industries in the village, as was done in the EsSSR, might provide year-round employment in the village. The profits from the relocated industries might be used to make the village itself more interesting to the young by providing clubs, theaters and other facilities. Villages need not be so underdeveloped since they are often close to urban areas and could be easily developed.

ECONOMIST OUTLINES HISTORY OF KAZAKH OIL, GAS INDUSTRY

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 11, November 1982 carries on pages 6-7 a 1,900 word article by Economist-Historian Bolebay Isabekov on the USSR oil and gas industry and the key position of the KaSSR within it. The article is third in a series published under the rubic "The Leninist Policy."

Oil and gas have played a major role in the development of the people's economy of the Soviet Union and there is hardly a sector of Soviet industry today that fails to use oil and gas and their many by-products. Today, moreover, the Soviet Union is one of the world leaders in oil and gas production with 603,000,000 tons of oil produced in 1980 (compared to 10,281,000 tons in 1913) and 435 billion cubic meters of gas. These figures are expected to rise to 620-645 million tons of oil a year and 600-640 billion cubic meters of gas by 1985. Some 385-395 million tons will come from the new west Siberian Tyumen field, now under development.

Soviet Kazakhstan has played no small part in bringing about these achievements and now ranks second among USSR republics in oil and gas production and exploration. Isabekov traces the history of the Kazakh industry, from the earliest field in 1899 down to the present time when developments are concentrated on the Mangoystau Peninsula. He also notes the many new fields that have been discovered in recent years in the KaSSR and will expand republic production still more in the future. By the end of the current five-year plan the KaSSR is expected to be producing 24,900,000 tons of oil a year and 7.9 billion cubic meters of gas.

KAZAKHS CULTIVATE 'WILD' DESERT PLANTS AS FODDER SOURCES

[Editoral Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 11, November 1982 carries on page 11 a 1,000-word article by O. Oqshiyev, chief agronomist of the Qarakil Scientific Research Production Union (Chimkent City), on the ongoing research to cultivate "wild" desert plants as fodder sources.

Further development of animal husbandry will require strengthening of its fodder base. If this is not done, in fact, any further expansion or enhancement of productivity within it will be completely impossible and we will be unable to meet the needs of the people for animal husbandry products. Thus the 26th Party Congress called for drawing up and carrying out a coordinated program to create a fodder base that is reliable and equal to the needs of Soviet animal husbandry. In this area, the May 82 CPSU Central Committee Plenum put the goal for 1985 at 500 million tons of fodder and for 1990 at 540-550 million tons of fodder. We will have to pull out all the stops and mobilize every possible resource to meet these goals.

In the KaSSR, where animal husbandry dominates and the problem is particularly severe, resources for expanding the fodder base are many. One of them is the wild plants of the desert and semi-desert areas that make up the majority of Kazakh pastures. These plants have long been used to supplement the limited yields of established pastures and recently experiments have been carried out involving limited cultivation of "wild" varieties of desert plants to enhance natural yields, most notably by the Qarakol scientific research production union.

Oqshiyev discusses three plants, namely "izen" (Artemisia frigida), black saxaul (Haloxylon sp.), and "terisken" (Oxytropis sp.), that have been the subject of experimentation. He lists the characteristics, peculiarities, yields and nutritive qualities of each. He notes, moreover, not only the greatly enhanced yields of the plants from limited cultivation, but also other indirect benefits in terms of decreased soil erosion and enhanced soil fertility and moisture content. He calls upon other production units to follow up the successful example of the Qarakol Scientific Research Production Union.

ARTICLE DETAILS SOVIET INTEREST IN SOLAR ENERGY

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK no 11, November 1982 carries on pages 20-21 a 2,000-word article by Asqarbek Qusayynov (Alma-Ata Energetics Institute) on Soviet interest in solar energy and ongoing research. The article is published under the regular rubric "At the Scientific Forefront."

According to estimates made by scientists, energy use has grown an average of 3 percent during each of the last 15 years. Energy use doubled during the first fifty years of this century, doubled again during the next 30 years and will probably double again during the next 15-20 years.

Since most of energy used today comes from fossil fuels, and supplies are limited, we face the danger of running out of energy in the future if our energy needs continue to depend upon them. One solution to this problem is changing our energy balance and using more energy from renewable sources. Although, Qusayynov emphasizes, the Soviet Union is extremely well supplied with fossil fuels and will suffer no shortages now or in the foreseeable future, the Basic Directions for the Development of the People's Economy and Culture During the Years 1981-1985 and in the Period Up Unitl 1990, nonetheless call for development of new sources, including solar and geothermal.

Qusayynov outlines efforts to develop one of these new sources, solar energy, in the world and in the Soviet Union. He begins with a brief history of solar energy use in human history and then moves on to a detailed discussion of the four main areas of current inquiry: thermotechnical, photoelectrical, biological and chemical production of solar energy. He summarizes the state of research in each area, noting thermotechnical solar energy production as the most effecient of methods currently being considered but also the most potentially problematical since there is difficulty handling the enormous amounts of heat produced. Qusayynov notes current Soviet interest in biological production of solar energy in passing.

WORK CONTINUES ON TIGHT SCHEDULE ON GREAT ALMA-ATA CANAL

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 11, November 1982 carries on pages 22-23 a 1,600-word article by Qadyr Alimqulov on progress being made on the Great Alma-Ata Canal. The article is one of a series on the canal and is published under the regular rubric "The Active Construction Fronts."

The Great Alma-Ata Canal is in truth one of the greatest constuction projects of the Semirecheye. The first section, reaching from Shelek to Alma-Ata, will reach 141 kilometers and will include 589 hydro-technical projects. When completed, moreover, the entire irrigation system supported by the canal will comprise 115,000 hectares and make possible a great improvement in Alma-Ata Oblast agriculture.

Alimqulov discusses in detail ongoing work on the canal with special reference to new technological accomplishments such as large diameter pipe and efforts to maintain a tight schedule. The Bartoghay reservoir, now closed by a 40 meter high dam, began to fill in August, marking a major milestone along the road to the completion of reservoir, canal and irrigation system.

DECLINE OF URAL THREATENS REGIONAL ECOLOGY

[Editorial Report] Alma-Ata PARTIYNAYA ZHIZN' KAZAKHSTANA in Russian No 11, November 1982 carries on pages 71-75 a 2,400-word article by V. Pod'yablonskiy, chairman of the executive committee of the Ural Oblast Soviet of People's Deputies, on environmental protection efforts by his and other Ural Oblast soviets, with particular regard to the declining Ural River. The article is published under the regular rubric "Environmental Protection, Under Party Control."

Environmental control is a regular part of the work of the Ural Oblast Soviet of Poeple's Deputies, its various subordinate units and other oblast soviets and is a function of growing importance. Pod'yablonskiy details efforts in the areas of land conservation and protection of forests, fisheries resources, fauna and the ecology fo the vital Ural Basin, of crucial importance not only for the economy of Ural Oblast but for a number of other KaSSR and RAFSR Oblast in a water short region.

There are only eight rivers in Ural Oblast with lengths of more than 200 kilometers. The Ural River is by far the most important, serving an agricultural and industrial region of more than 4 million. The river is a source of irrigation water, of animal feed, on account of the hay making resources found along its banks, of fisheries, as the major spawning grounds for the Caspian sturgeon, it also provides the cities and industries of the region, with drinking and industrial water, and has much wild fauna, particularly in the swamps and marsh lands near the mouth of the river.

Despite the importance of the river and efforts to protect it on the part of Ural Oblast in particular, the river continues to decline. Water flow has been cut in half by the building of large water reservoirs. Plans exist to build still more reservoirs that will againt cut river flow by half. On the upper Ural, 8.4 out of 9.2 cubic kilometers of annual flow will be regulated if these plans are carried out, reducing water flow to a trickle. Already fewer and fewer Caspian sturgeon are entering the Caspian each year; lakes and ponds are drying up along the lower Ural; meadows and woodlands are being destroyed and declining local fauna severely damaged.

Pod'yablonskiy calls for stopping the building of these new reserviors and for intensified efforts to rebuild Ural water flow, above all through the proposed Vogal-Ural Canal. He complains of a lack of regional planning for protecting the Ural, a lack of coordination between the work of the RSFSR and KaSSR authorities and formalism and irresponsibility. Also a problem is river pollution since untreated sewage is still being poured into the river despite its reduced flow.

The goal is to eliminate this pollution by 1985, with 24 out of 28 treatment projects being completed. Nevertheless, uncontrolled runoff from agricultural, industrial and residential areas constitutes an even greater problem with contamination of Ural waters by herbicides and mineral fertilizers.

COMMENTATOR DISCUSSES PROBLEM OF COORDINATED EKIBASTUZ DEVELOPMENT

[Editorial Report] Alma-Ata PARTIYNAYA ZHIZHN' KAZAKHSTANA in Russian No 11, November 1982 carries on pages 31-36 a 2,800-word article by P. Erpilov, first secretary of the Pavlodar Oblast Committee of the Kazakhstan CP, on problems of coordinated development at Ekibastuz. The article is published under the regular rubric "The Decisions of the 26th CPSU Congress in Action."

Thermo-electrical energy based upon the open pit mining of coal will play a key role in future Soviet economic development. Within this context, the key Pavlodar Ekibastuz Territorial Production Complex, with its associated mines (14 billion tons of proven reserves) and electrical energy plant, is vitally important.

Erpilov looks at Pavlodar-Ekibastuz energy production and the emergence of a whole regional production complex based upon it, as a coordinated development whole with the special emphasis on the fact that much more is involved at Ekibastuz than the simple construction of a mining and thermo-electrical energy base. Rather a whole industrial, economic and social infrastructure is being brought into being, one in which each part must be carefully coordinated to another. He seems to suggest, moreover, that failures in any one area can thus adversely influence the whole range of development.

Among problem areas delineated by Erpilov are serious construction lags, particularly mine construction, difficulty in equiping coal production units, very serious deficiencies in mine transport equipment construction and upkeep, a virtually non-existent repair and overhaul base and problems with moving workers from the worker settlements to the mines and thermo-electrical plants (State Rayon Electrical Station No 1 is 15 kilometers from Ekibastuz and station No 2 is 40 kilometers away). He also notes slow installation of power and communications lines as another area of difficulty.

By 1985, according to Erpilov, Ekibastuz mines will be producing 84 million tons of coal a year, compared to 67 million tons in 1980. Recently No 4 energy bloc of State Rayon Electrical Station No 1 began operation and existing facilities have now generated 12 billion kilowatt hours of electrical energy.

KAZAKHS USE AIRCRAFT TO FIGHT FOREST FIRES

[Editorial Report] Alma-Ata SOTSAILISTIK QAZAQSTAN in Kazakh 12 November 1982 carries on page 4 an 800-word article by A. Lazarev, unit commander of the Aviation Forest Protection Service, on the use of aircraft in KaSSR forest protection. The article is published under the regular rubric "Man and Nature."

A Forest Protection Kazakh Aviation Base was first organized in 1978 under the RSFSR Ministry of Forestry to patrol forests administered by the KaSSR Ministry of Forestry located in those parts of the KaSSR bordering on the RSFSR. This base now comprises 14 aviation divisions with Mil-2 and Mil-8 helicopters and An-2 conventional aircraft.

Lazarev underscores the great success of Kazakh Forest Protection Aviation in the years since its organization and notes the many new methods of forest fire prevention and fighting now employed in association with it. Among them is the wide use of smoke jumpers to nip small fires in the bud and organize resistence to larger fires. Lazarev criticizes, however, the KaSSR Ministry of Forestry for not supporting the aviation base as fully as it should and forcing it to borrow aircraft from the Kazakh Civil Aviation Administration when emergencies arise. He also criticizes the authorities for failure to take proper action against those starting forest fires.

Last year the base's aircraft helped put out 280 fires. In the future an automatic forest protection system is to be introduced in which aircraft will play an even greater role.

SUPERIOR SERVICE OF REPUBLIC MOTOR TRANSPORT HAILED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 17 November 1982 carries on page 4 an 1,100-word article by A. Qurmanghaliyev, deputy chief of the Personnel Transport Administration of the KaSSR Ministry of Motor Transport, on current achievements, problems and plans for the future of the KaSSR motor transport system. The article is published under the regular rubric "Service to the People, and Honored Duty."

Today some 420,000 kilometers of republic highways carry 9 million travelers a day, and 96 percent of republic kolkhozes and sovkhozes have access to republic transport on good quality motor roads. The problem of providing transport service to all areas of the republic is thus near solution.

Although Qurmanghaliyev's article is laudatory in character, he distinguishes problem areas, such as: 1) poor roads, even in oblast centers, that reduce equipment life and make regular service difficult in some areas, 2) inadequate repair bases that make it difficult to maintain equipment properly, 3) inadequate service in some areas, 4) bus stations crowded with watch, shoe repair and other service facilities that cannot themselves operate properly in the hustle and bustle and contribute excessively to it and 5) inadequate telephone connections with dispatchers for those seeking route and scheduling information.

To improve service, Qurmanghaliyev calls for more careful study of urban use patterns since 62 percent of the republic's population now lives in cities and most inhabitants of cities use public transportation 2-3 times a day. Planners need to look at population growth potential, traffic flow patterns and times of openings and closings and shift changes to use transportation resources properly. Qurmanghaliyev suggests that regional and local soviet deputies will want to play an active role in such planning since they are directly involved themselves more often than not with the use of public transport.

EDITORIAL STRESSES IMPORTANCE OF AUXILIARY FOOD ENTERPRISES FOR MEETING REPUBLIC NEEDS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 18 November 1982 carries on page 1 an 800-word editorial on the importance of auxiliary enterprises for meeting republic food needs. The article is expressive of a current flurry of interest in private plots and auxiliary enterprises due to continuing food shortages.

Experience has shown clearly that attention devoted by industries and factories to their auxiliary food producing enterprises yields results. Food produced by them, moreover, not only supplies workers cafeterias and restaurants with tasty delicacies but is also an important resource for supplementing overall republic food supplies.

At present there are nearly 900 such auxiliary enterprises functioning in the republic. Together they deliver more tahn 11,000 tons of meat, 14,000 tons of milk and many other kinds of agricultural products each year. Current plans call for the formation of 200 more by the end of the current year.

However, auxiliary food producing enterprises have failed to justify expectations in some parts of the republic and industries and factories under some KaSSR ministries, most notably the Ministry of the Light and Food Industry, have failed to organize the necessary number of auxiliary food producing enterprises within their systems. Moreover, available resources are not being exploited fully and there are organizational problems. And good organization, the editorial stresses, is the key to success.

Other problems affecting republic auxiliary food-producing enterprises are the still unresovled land problem, i.e. land shortage and the allotment of lands in remote areas or that is unsuitable or unusable for agricultural application, short supplies of fertilizers and equipment of all kinds and "improper attitudes" towards the auxiliary enterprises on the part of regional and local authorities. Equally a problem is the fact that some factories simply lack the resources on their own to run auxiliary food producing enterprises on their own. The editorail suggests pooling resources as the solution and also calls upon enterprises operators to meet actively with experts and specialists to improve the management of their auxiliary food production.

The editorial ends by stressing the tremendous potential impact of the auxiliary enterprises on KaSSR food production if they are operated properly. It also reemphasizes the substantial amount of still untapped resources that can be enlisted profitably for their development.

Social and Cultural Affairs

NOVEL BY AYTMATOV SUBJECT OF TURKISH FILM

[Editorial Report] Alma-Ata QAZAQ ADEBIYETI in Kazakh 6 November 1982 carries on page 8 a 700-word review by Fadiyan Aliyev of the Turkish film, "Red Kerchief" based on a novel by the noted Khirghiz writer Shynghiz Aytmatov. The review is published under the rubric "Something New, Something for Us All."

The works of Shynghiz Aytmatov, USSR State Prize Laureat, have been widely translated into foreign languages. His works, moreover, have been particularly appreciated by the Turks who have translated many of them and published editions of the translations.

Among works translated into Turkish is the novel "Poplar, My Poplar." This work formed the basis of a play performed in Alma-Ata, has been made into a two-part film in the KaSSR and has now been adapted as a screenplay of the Turkish director Atif Yylmaz' film "The Red Kerchief" (Yeshilclam Studio). This film was first shown in the Soviet Union in 1978 at Tashkent as part of the 5th Festival of Asian, African and Latin American films there, again in 1979 in Alma-Ata as part of a USSR-Turkey cultural exchange and widely since 1981 in a dubbed, Russian version. The film is the second Turkish film shown in the Soviet Union. Aliyev notes in his review that the film is not a straight adaptation of the Aytmatov story but has been altered to suit a Turkish environment and brought up to the present day.

KAZAKH NOVEL ON ARAL QUESTION

[Editorial Report] Alma-Ata QAZAQ ADEBIYETI in Kazakh 12 November 1982 carries on pages 6-7 a 2,400-word review by Beken Ybyryymov of Abdizhamil Nurpeyisov's novel "Seng" (Ice Floe) published serially in issues No 5 and No 6 for 1982 of the literary journal ZHULDYZ. The literature of socialist realism, the reviewer begins, looks at key problems of our times in philosophical, idealistic and literary terms. Among these problems is the relationship of man to natural environment, in Nurpeyisov's case, the relationship of man to the Aral Sea that is in such a sad state today.

The novel, reviewer Ybyryymov continues, draws upon the various objective views of the problem current in the Soviet Union today but also focuses upon the fate of the sea in human terms. Nurpeyisov, the reviewer notes, sees the sea not only as an economic base but also as a source of strength for living and of a feeling of fatherland, patriotism and moral purity, symbolizing these aspects of the sea for man through the various characters of the novel. The reviewer suggests that Nurpeyisov sees a higher duty for his characters than simple economic gain and the Aral question, for Nurpeyisov at least, is far more than an economic issue but also impinges upon the emotional, psychological and moral life on an entire region as well. Criticism of egotistical and greedy local powers by Nurpeyisov is emphasized by the reviewer.

RESPONSIBLE INSTITUTIONS NOT DOING ENOUGH TO PRESERVE RICH KAZAKH FOLKSONG TRADITIONS

[Editorial Report] Alma-Ata QAZAQ ADEBIYETI in Kazkah 16 November 1982 carries on page 8 a 1,600-word article by Marshall Abdikhalyqov on the rich folksong traditions of Mangyshlak Oblast in particular and failure by the responsible institutions to do enough to record and preserve them for posterity. The article is published under the regular rubric "The History of Art."

Kazakh folksong is one of the great cultural heritages and, as Abdikhalyqov makes clear, represents a tradition very much alive and flourishing, especially in his native Mangyshlak Oblast. As time passes, however, more and more is being lost as some of the older singers pass from the scene and as the histories and other significant details of the songs themselves so important, in Abkikhalyqov's view for their understanding and correct performance, become dim in the minds of both the performers and their audiences. It is often the case, for example, he laments, that songs are attributed to the wrong composer and the circumstances of their compositions are forgotten and this is even true for very popular songs known widely not only in Mangyshlak Oblast but in other parts of Kazakhstan as well.

We have expected, Abdikhalyqov goes on, institutions such as the Department of People's Music of the Alma-Ata Conservatory, the Art Department of the N. Avezov imeni Literature and Arts Institute and the republic House of People's Creativity to take the lead in recording, perserving and transmitting the important Kazakh folksong legacy but these organiztions have been doing much less than they should.

There are, however, Abdikhalyqov continues, fortunately numerous other resources for recording and perserving folksongs including oblast philharmonic orchestra groups and oblast houses of people's music, not to mention the many musically literate individuals capable of doing the job within the public at large. Recording studios are also numerous and likewise other technical facilities of the like. However, he continues, dispute continues about who is to do what and many resources remain unused while, in the meantime, opportunities are being wasted that will not come again. As one solution, Abdikhalyqov suggests setting up recording equipment at the weddings and feasts so loved by the Kazakhs and traditionally attended by musicians. Musicologists, he concludes, must take the lead in this important area.

TEACHER COMPLAINS OF POOR LANGUAGE USE IN KAZAKH NATIONAL SCHOOLS

[Editorial Report] Alma-Ata QAZAQ ADEBIYETI in Kazakh 12 November 1982 carries on page 15 a 1,100-word article by leading worker of KaSSR people's education Bodek Amanbayeva on poor language use in Kazakh national schools in particular and generally among the "Kazakh national intelligentsia." The article is published under the rubric "Some Thoughts to Share."

During 1980-81, Amanbayeva supervised the teaching of Kazakh language and literature in a number of republic schools. She was shocked to find even senior teachers using borken Kazakh mixed with Russian expressions. Moreover, many displayed a complete indifference to in depth use of the language and failed to encourage students to use Kazakh papers, magazines and books. The problem was even more severe among younger teachers and among teachers in other disciplines who claimed that teaching proper Kazakh was strictly the duty of language teachers.

How, Amanbayeva asks, are the young to learn proper Kazakh if even the teachers in the national schools fail to use the language properly and, she laments, the problem is by no means confined to the national schools but is broad based among the Kazakh "national intelligentsia" in general, a group that ought to be taking a leading role in this area. A man's spoken culture is a sign of his spiritual culture, she concludes, and calls for a new "family and school" journal to promote good Kazakh language use.

MISIDENTIFICATION OF KAZAKH HISTORICAL PHOTOGRAPHS CHARGED

[Editorial Report] Alma-Ata QAZAQ ADEBIYETI in Kazakh 26 November 1982 carries on page 15 a 900-word article by Abdikazim Akhmetov complaining of frequent misidentification and miscaptioning of historical photographs in the KaSSR. The article is published under the rubric "Complaints."

Rich resources of documentary photographs are available in the KaSSR to study the past and represent source materials that we have only recently begun to explore. However, Akhmetov continues, these rich historical sources must be used properly and accurately documented. He provides several examples to show how the opposite is more often the case than not with grossly misdated and misidentified photographs a frequent occurrence, even in local history museums, whose operators ought to know better. He calls for use, by all means, of photo-archival sources, but, at the same time, much more emphasis on accurate documentation.

KAZAKH TRADITION OF BIG WEDDINGS RIDICULED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 19 November 1982 carries on page 4 an 1,100-word article by N. Muftakhov on the trials and tribulations of a traditional Kazakh wedding that never got off the ground. The article is published under the regular rubric "Mores, the Root of it All."

Torequl of Dzhambul Oblast, a solid citizen, official in the Sverdlovskiy Rayon (Dzhambul Oblast) and CP member, was less than enthusiastic, Muftakhov informs us, when his son Talghat told him of his plans to marry, although still very young, in school and without a job. The match, however, with the daughter of an up and coming Alma-Ata college professor, seemed to be a good one and Torequl set out to do his fatherly duty.

No sooner, however, had Torequl established relations with the bride's family when the brides mother began making exhorbitant demands. At first it was 3,500 rubles to acquire an apartment for the young couple, then the sum rose to 4,500 rubles and finally 6,000 with a 120 ruble a month allotment while the apartment was being readied. Torequl also had to rent a restaurant for the wedding reception at a cost of 855 rubles, buy the bride's gold ring, items of clothing, take charge of the invitations and finally put up all the out of town wedding guests from Dzhambul at an Alma-Ata hotel at his expense.

At wit's end, Torequl suggested that the bride's family also bear a part of the burden but was rebuffed by the bride's mother who claimed that by tradition it was the duty of the groom's father to pay all such expenses. There was also a dispute over the bride's mother's demand for a kilem rug for the young couple. No felt mat would do.

The day of the wedding came and dispute continued. In the end everything had to be called off and Torequl was out thousands of rubles including 500 kept back by the bride's mother from money contributed by Toregul for the new apartment.

Muftakhov condemns the "buying" of feelings and freely ridicules both sets of parents for ever getting involved in a marriage transaction of this kind in the first place. As for the potential bride and groom, they quickly lost interest in one another and the "money was not forthcoming" and now lead separate lives.

International

KAZAKH CONNECTIONS OF TURKIC "BOOK OF DEDE KORKUT" STRESSED

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 11, November 1982 carries on pages 13-15 a 3,800-word article by Academician Alkey Marghulan outlining the Kazakh connections of the old Turkic "Book of Dede Korkut." The article is published under the regular rubric "Chronicle of the Centuries."

Dede Korkut was a famous figure of the Turkic past (8th-9th century) who ruled over the Oghyz, Kifjaq and Qangly tribes of Siberia and Turkestan. In the book which bears his name, written down in the 16th century but based upon a long oral tradition, we meet Korkut himself, along with other wise and famous men of his time, in story, anecdote and song.

In his discussion, Marghulan stresses Kazakh connections with this ancient masterpiece of old Turkic literature, noting not only the many apparent references to the ancestors of the modern Kazakhs in it, but also early occurrences of what later became key elements of Kazakh folk tradition. He takes this as proving not only that the Oghuz and other tribes mentioned in the "Book of Dede Korkut" were, as has been suggested by V. V. Barthold' and others, direct ancestors of the modern Kazakhs, but that the "Book of Dede Korkut" itself must be studied and cherished as part of the Kazakh national tradition.

NEW BOOK STRESSES MIDEAST TIES TO KAZAKH LITERATURE

[Editorial Report] Alma-Ata QAZAQ ADEBIYETI in Kazakh 26 November 1982 carries on page 11 a 1,300-word review by Tolegen Toqbergenov of Absattar Derbisaliyev's new book "Shyngyrau Bulaqtar" (Deeply Rooted Sources), Zhazushy Press, 1982. Derbisaliyev's book is a history of Middle Eastern, above all Arabic, literary culture and its impact upon the development of Kazakh literature.

Since the Middle Ages, Toqbergenov begins, Indian, Iranian and Arabic cultures and literatures have had a strong influence on the Kazakhs. The Arabic "A Thousand and One Nights," for example, has become as much a property of the Central Asian people's as of the Arabic people. The Kazakh language is laced with Middle Eastern and Indian loan words. Moreover, the influence of Arabic, Persian and Indian literature was by no means confined to the literate classes in Central Asia but was widely spread among the masses by popular story-tellers. Although the Great October Socialist Revolution swept away the old society and culture in many respects, Middle Eastern and Indian influence remains a recognisable feature of Kazkah literature to this day, through the influential works of Abay and others.

Derbisaliyev's book, Toqbergenov continues, is thus concerned with one of the vital questions of Kazkah literary history, i.e. the problem of literary origins and subsequent lines of development. His book traces Arabic and Persian influences on Kazkah literature and culture from the 6th century in the context of a general history of Middle Eastern literature from its earliest origins down to the "progressive" literature of the present. The books makes special effort to show the Arabic, Persian and Islamic cultural impact on Central Asia, notes the role of Central Asian cities in promoting Arabic and Middle Eastern culture and looks in detail at individual writers and cultural figures of key importance for the transmittal and translation of Middle Eastern literary culture. The book also attempts to provide information on Kazakh topography and local history as they relate to the Middle Eastern and Islamic culture. In the last section of the book, Kazakh-Middle Eastern litarary relations of the present day are explored with emphasis on the leading "progressive" writers of Syria and other parts of the Middle East.

Political Affairs

PARTY'S ROLE IN AGRICULTURE IN TAJIK SSR

[Editorial Report] Dushanbe KOMMUNISTI TOJIKISTON in Tajik No 10, October 1982 carries on pages 72-76 a 2,100-word article by A. Salokhov (first secretary of Chirgatol Rayon Party committee) entitled "Thoughts of a Collective Member--Worker for Progress at Work".

The author opens with a discussion of the way Party members working on sovkhozes in the Chirgatol Rayon by their zeal set an example for their coworkers. However, there are some problems with the role of other Party members in sovkhoz life. Party organizations are not paying enough attention to the importance of mechanizing agriculture. As a result, the machines are only half as productive as they could be. A great deal of machinery is damaged through negelct. A few party members do their jobs poorly because of arrogance and careerism. They ignore the opinions of others. This leads to poor sovkhoz performance.

Economics

PROBLEMS CITED ON AN EXEMPLARY TAJIK SOVKHOZ

[Editorial Report] Dushanbe KOMMUNISTI TOJIKISTON in Tajik No 10, October 1982 carries a 2,700-word article on pages 35-40 "Our Part in Fulfilling the Food Program" by M. Davlatov (secretary of the party committee of the sovkhoz "Fiftieth Anniversary of Komsomol") in Orjonikidezeobod Rayon.

The sovkhoz "Fiftieth Anniversary of Komsomol" was rewarded in 1981 by Tajik republican officials for being especially productive. This year the members have vowed to overfulfill their plan quota substantially. The sovkhoz raises cattle, fodder, fruits and vegetables which are sent to markets in Dushanbe, Siberia, and the Soviet Far East as well as to a local processing plant.

The sovkhoz cannot bring new land under cultivation. It lacks the equipment, especially the "S-100" tractor, necessary to grade new land so that crops can be planted there. The author emphasizes the importance of political education and exhortations by sovkhoz administrative, Party, and Komsomol personnel as the way to increase productivity.

Another of the sovkhoz's problems is that some of its production is wasted. Market centers take little of its output. The local food processing plant, working at full capacity, cannot handle the vegetables produced by all the rayon's sovkhozes and kolkhozes. Sometimes the excess produce is returned, by this time rotten, to the sovkhoz. A lack of containers prevents the sovkhoz from harvesting its vegetables at the right time. The sovkhoz needs about 800,000 containers but was only allocated 250,000.

In order to make rural areas more attractive places in which to live so that village inhabitants will not move away, the sovkhoz has made a number of improvements, such as the acquisition of a bakery, schools, health care facilities, and the laying of pipes to carry drinking water to three villages. Nevertheless, other inadequacies remain. One village has no telephone cables. Also lacking are radio relay facilities, a library, movie theater, or club facilities. The sovkhoz has the money to build such things as schools and garages but cannot get construction materials. Construction units have been indifferent to this problem. The republic ministry of agriculture for fruits and vegetables has ordered that help be provided to this sovkhoz to make it more attractive.

DEVELOPMENT BRINGS PROGRESS AND PROBLEMS TO A TAJIK RAYON

[Editorial Report] Dushanbe SADOI SHARQ in Tajik No 8, August 1982 carries on pages 38-49 a 4,800-word article by Rahim Karim entitled "The Burning Desert Today".

The author discusses the transformation of the Yovon valley from the uninhabited desert he first saw decades ago to the growing agricultural and industrial region that has developed in recent years as a result of massive irrigation work.

The author describes several aspects of village life. The typical family has between eight and ten children. In winter, with the harvest work completed, there is not enough to do in the villages. People fill in the time with calisthenics and sports. The author gives an enthusiastic account of the villagers' fondness for buzhashi and notes how boys look forward to competing at it when they grow up. He notes that "Tajiks also have many other national games" which village boys learn from their grandfathers.

Yovon city has grown up very rapidly around its main industry, an electrochemical plant. In addition to Tajiks, Yavon's inhabitants include Russians, Ukrainians, Belorussians, and Armenians, who work as engineers, teachers, doctors, chemists, and agricultural specialists. Although the author initially describes the city as a modern place embodying progress, he later indicates that it is really a village with a factory and suffers from many growing pains. The city's population was 80,000 by 1982, a six-fold increase in two years. It has some apartment buildings but none the less faces a serious housing shortage. Five hundred more units are needed just to accomodate the existing factory personnel and much more will be needed for the thousand workers the factory is scheduled to add in the next few years. Some of the existing houses lack heat or hot water. The city also lacks adequate telephone and mail service. To be a true city and one which will attract and hold workers, it should have various amenities, such as a movie theater, a concert hall, a polyclinic, libraries, and sports facilities. Some of the city's inhabitants, including some Party members, assume that the problmes cannot be remedied (an attitude decried by the author.)

The Yovon electro-chemical plant (completed in 1980) has some serious problems. The plant suffers from a shortage both of experienced, skilled workers and young trainees. Overall, it does not have nearly as many workers as it needs. Technicians working at the plant come not only from the Tajik SSR but also from Volgograd, Cherepovets, the Urals, and the Ukraine. There are problems with the graduates of Tajik technical schools. Many leave after working at the Yovon plant for a short time. Many are poorly prepared because the schools lack the proper equipment on which to train them. A large proportion of the graduates are originally villagers, with strong ties to their homes. Half of the technical school students return to their villages upon graduation. Yovon city cannot compete in attracting workers because of its disporportionately low standard of living. The electro-chemical plant also suffers because of inadequate transportation facilities.

Authorities have neglected the problems in Yavon city while paying more attention to the problems of such comparable cities as Tol'iatti, Naberezhnye Chelny, and Volgodonsk. Some of Yovon's problmes are attributable to official indifference to construction needs. Requests for various construction materials have not been met. In 1982, Gosplan and Gosstroy gave scant attention to the provision of building materials, leaving rayon and village construction matters to the republics. The Tajik SSR's funding for construction in Yovon has been far too low and was cut sharply in 1982. The author expresses the hope that the Chemical Industry Ministry of the USSR will solve the problem.

Social and Cultural Affairs

PROGRESS MADE IN TAJIK NATIONALITY ISSUES

[Editorial Report] Dushanbe KOMMUNISTI TOJIKISTON in Tajik No 9, September 1982 carries a 3,300-word article on pages 15-21 by A. Muhabbatov entitled "The Role of the Vanguard of the Working Class in the International Unity of Soviet Society."

The population of the Tajik SSR includes representatives of about one hundred nationalities and peoples living in harmony. In 1979, people who came from outside the republic comprised 41.2 percent of its total population. Some people living in republics where they are not of the local population know the local languages and customs better than others in that situation. Which republic a person lives in is not the important thing. What matters is that the person is a conscientious worker and does his part to promote the general well being.

These inhabitants of non-local origin contribute to the republic's economic development and deserve a voice in party and state organs. L. I. Brezhnev noted the presence of non-local inhabitants in several republics and observed that these people have their own languages, customs, cultures, and needs. This issue needs deeper study by the central committees at the all-union, republic, and oblast' level in order to achieve a speedy resolution.

In the 1970's, great strides were made in equalizing the standard of living for workers in the various union republics and autonomous regions. However, past differences have a continuing impact. The 26th CPSU Congress identified this as a major issue.

The author praises the USRR's Leninist nationalities policy and hails the evolution of a new social entity: the Soviet People. He cites the importance of the Russian language as the lingua franca of all inhabitants of the USSR and its use as the means of communications in economic, technical and cultural matters. However, he also notes the persistence of distinctive traditions, ways of life of nationalities and ethnic groups. He calls for strengthening the international unity of the Soviet people.

HEAD OF TAJIK WRITERS' UNION PRAISES TRADITIONAL LITERATURE

[Editorial Report] Dushanbe ADOI SHARQ in Tajik No 8, August 1982 carries on pages 86-95 a 4,500-word interview with Mu'min Qanoat entitled "Thoughts on Contemporary Poetry."

In response to a question about the relation of poetry to the new Soviet society, Qanoat states that for poets, there is nothing, however new, which is not linked to tradition. The only way to discern the evolution of human thoughts and feelings is from the vantage point of tradition. Heroes of the past, including writers, are relevant today. Literature of earlier times has bearing on contemporary struggles. The fight against evil should be waged with all available weapons, not just one.

Qanoat would like some aspects of the Tajik poetic tradition updated to take into account contemporary human issues. This would be appreciated by Tajiks and, with time, by all Persian speakers. The proper approach is to combine classical style with service to the revolutionary cause. While Qanoat thinks that some contemporary Tajik poets make good use of historical elements, he faults others for writing "one-sided works", which focus on their own group instead of promoting the closeness of various peoples and states. One must see things in international terms.

Tajik poetry has "national traditions" going back a thousand years. "Thus the language and rules of our poetry [today] are the same as the language and rules of poetry of Rudaki..." Qanoat is concerned with the development of Tajik as a powerful, expressive language which all Persian speakers will understand and appreciate. The sources of inspiration are the powerful vernacular preserved by the Tajik masses and the writings of the great classical poets of the ninth and tenth centuries. Those writers, including Rudaki and Firdausi, perfected the use of language. That language became the basis for the Persian literary language, including Tajik and Dari, and has survived virtually unchanged to the present. According to Qanoat, "we speak it." On several occasions, Qanoat calls the language "Tajik-Persian".

Persian-language poetry is now available to the broad Persian-speaking community, including Persians and Afghans, and is appreciated. Qanoat cites the international influence of the Tajik writers Ayni and Lahuti. He says that most of the Afghan intelligentsia learned about the Bolshevik revolution by reading Ayni. Afghan radio and television broadcast readings of Lahuti's poems dealing with the human issues in the revolution in the East. Lahuti's vivid writing about the revolution is valued by Persian and Urdu speakers in India.

BREZHNEV'S CONTRIBUTIONS TO UZBEKISTAN'S PROGRESS PRAISED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 16 November 1982 carries on page 3 a 500-word eulogy by the Uzbek writer Hamid Ghulom, Laureate of the USSR State Prize, titled "Great Human Being." Ghulom hyperbolizes the contributions which Brezhnev made to the socioeconomic and cultural progress of Uzbekistan and other Soviet republics. Claiming that Brezhnev's 60 years of service to workers earned him their love, Ghulom thinks the dead leader will be eternally remembered as the "loyal and skillful continuator of Lenin's work." Further, the writer considers Brezhnev's ideas on internationalist friendship and brotherhood of peoples to be the basis of the party's nationality policy: "Every nationality and every subnationality sincerely acknowledges L.I. Brezhnev as its venerable father.

KIEV GORKOM SECRETARY ON FACT-FINDING TOUR IN UZBEKISTAN

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 2 November 1982 carries on page 2 a 1,100-word article by D.B. Golovko, a secretary of the Kiev Gorkum, titled "In the Country of 'White Gold'." Golovko shares his impressions of various cultural and agricultural aspects of Uzbekistan and urges cooperation between Kievan and Tashkent elites in the area of coordinating scientific and production forces. During his tour in Uzbekistan to observe economic activities, Golovko was impressed by the concentration of all material and labor resources on the cotton harvest and credits its success to the "Leninist organizational work" of the leadership of the CPUz Central Committee, and especially of its First Secretary Sharaf Rashidov. Golovko also remarks that this organizational work is evident "in the initiative and boldness of Samarkand Communists." After commenting on the architectural, historical, and cultural glories of Uzbekistan, Golovko outlines a system for accelerating scientific and technological progress that has been created in Kiev.

CONDUCT OF PRIVILEGED PARTY ELITES SCORED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 5 November 1982 carries on page 1 a 900-word lead editorial titled "The Communist's Stance in Life." The editorial criticizes the increasing number of Uzbek party elites who are aloof, apathetic, and self-indulgent. Information reaching the newspaper's editorial office indicates that a number of communists are ignoring advice, useful suggestions, opinions, and constructive criticism, with the result that they are unable to eliminate shortcomings and to display the necessary vanguardism in production and society. Party committees are increasingly obliged to uncompromisingly deal with party workers who are indifferent to or attempt to conceal shortcomings. Another type of communist who causes problems is the one who pretends to be on the initiative and who constantly sermonizes, but who takes cover when the time comes to carry out a task. The editorial is particularly scornful of passivity, apathy, and the laissez-faire attitude of some communists: "It is well-known that petty bourgeois philistinism, consumerism, excessive pomp, and toadyism are inflicting damage on our public work."

RASHIDOV'S ROLE IN UZBEKISTAN'S PROGRESS NOTED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN'ATI in Uzbek 19 November 1982 carries on page 2 a 1,100-word article by Maqsud Qoriyev, Chief Editor of SOVET OZBEKISTONI, titled "Man's Love in Every Cotton Boll." The article, which deals with the progress of cotton cultivation in Uzbekistan, contains remarks praising the role of Sharaf Rashidov, First Secretary of the CPUz Central Committee, in this field. Qoriyev recounts a conversation with an elderly man on a farm in Kitab Rayon of Kashkadarya Oblast who told him that Sharaf Rashidov had paid that farm the "honor" of a visit to make recommendations. The journalist continues: "There's no place in our republic where Sharaf Rashidovich Rashidov has not been, where his auspicious step has not touched. A person who wholeheartedly carries out his assignments can expect the honor and privilege of having Sharaf-aka tell him he has carried out these assignments."

RASHIDOV'S FICTIONAL WORK ON WORLD WAR II ACCLAIMED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN'ATI in Uzbek 12 November 1982 carries on page 3 a full page 3,200-word review of Sharaf Rashidov's story DIL AMRI ("Heart's Command") printed in Uzbek in SHARQ YULDUZI No 11, 1982, by Hafiz Abdusamatov, Chief Editor of SHARQ YULDUZI, titled "The Homeland and Man." The review provides a detailed survey of the themes and artistic merits of the most recent fictional work of Sharaf Rashidov, First Secretary of the CPUz Central Committee. The story is set in Berezovka Village near Moscow in the second half of 1941 when the area was under German attack and explores the theme of the Homeland through characters who defend or betray it. Abdusamatov points out that Rashidov is the first Uzbek author to treat the subject of Russia on a broad scale and to create multi-dimensional Russian characters. Rashidov also includes several minor Uzbek characters who reflect "the nature and national characteristics of Uzbekistan." Abdusamatov describes Rashidov as a public figure, theoretician, and artist who has made and continues to make, through his practical actions, theoretical and scientific works, and artistic writings, unparalleled contributions to the advancement of literary ties and friendship among Soviet peoples. The reviewer points out that a few passages of Rashidov's new work are "excessively rhetorical", but expresses his conviction that "Heart's Command" will be translated into many languages and become known and famous throughout the world.

PEOPLE'S CONTROL COMMITTEE STRENGTHENS LOWER LINKS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 17 November 1982 carries on page 2 a 1,500-word article by M. Tolipov, Chief of the Organizational Department of the UzSSR People's Control Committee, titled "Front of Activism." Tolipov describes the work of republic control committees in raising the level of activism, legal knowledge, and working methods of people's control groups and posts and people's supervisors. A number of examples are cited of such work in the Fergana, Samarkand, Surkhandarya, and Namangan Oblasts. Tolipov reminds the many control committees who are still not actively and effectively organizing lower links that report and election meetings will be held in 1983. These meetings will be an important phase in the organizational strengthening of committees which should not delay in carrying out the tasks of developing the structure, tightening the internal structure, and improving the quantity and quality of control groups and posts and people's supervisors in enterprises, kolkhozes, organizations, and institutions. Otherwise, supervision over the fulfillment of party and government directives will be ensured by the election of activists with initiative and high party principles.

UZBEK FILM WORKERS TOUR NONCHERNOZEM

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 5 November 1982 carries on page 2 a 1,600-word article by film director Ghiyos Shermuhamedov titled "A Thriving Region." Shermuhamedov describes a tour which he and other film workers made to sites in Vladimir, Ivanovo, and Novgorod Oblasts where Uzbek detachments are working to reclaim areas of the Nonchernozem region of the RSFSR. During their tour, the film workers filmed both documentary and artistic scenes for the purpose of creating movies depicting the heroism of Uzbeks working in the Nonchernozem.

NONCHERNOZEM BRIEFS

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 7 November 1982 carries on page 2 a 300-word item by newspaper special correspondent S. Rustamov titled "Volunteer." Rustamov describes a May 1982 meeting with the Andizhanian Qochqorboy Tugalov who has worked on several projects in Novgorod Oblast and is presently a section superintendent for the "Tashkent" column in Lesnaya Settlement. Tugalov told him that his section of 25 workers--including Uzbeks, Russians, Tajiks, and Kazakhs--is presently building a 33-unit apartment building.

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 11 November 1982 carries on page 2 a 200-word item by R. Fozilova, an employee of the GIDROSTROYEVETS newspaper in Andizhan Oblast, titled "Initiative Takers." Fozilova reports on the progress of a detachment of 20 workers from Sovetabad Rayon who left in spring 1982 to build a kindergarten for 320 children in Yur'yevich Settlement of Vladimir Oblast. Thus far, the group has completed 45,000 rubles work on the project whose total volume will be 461,000 rubles.

UZBEK HIGHWAY CONSTRUCTION TRUST FINISHES BRIDGES, ROAD SECTIONS IN TYUMEN

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 18 November 1982 carries on page 1 a 500-word report by UzTAG correspondent A. Baranov titled "No Distance Too Far for Friendship." Baranov reports that the "Uztyumendorstroy" Trust has delivered for use ahead of schedule a 40-kilometer stretch of highway and two bridges in the Tyumen region of West Siberia. The first of the bridges spans the Nyagan'-Yugan-Tayga River, while the second--apparently still under construction--is to be a 3-pier, 70-meter long bridge over the Khugot River. The 40-kilometer stretch of highway was finished a quarter ahead of schedule and was given a "good" rating by the state commission. Completion of this stretch will make it possible to go by motor transport to the Tala oil field, previously accessible only by helicopter. The report concludes that the Uzbek road builders will continue to display their feelings of brotherhood and proletarian internationalism by advancing the highway to the Yem-Yegovsk oil fields.

UZBEK HIGHWAY CONSTRUCTION WORKERS' SETTLEMENT IN TYUMEN DESCRIBED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 21 November 1982 carries on page 2 a 300-word caption to an UzTAG photograph by A. Usmonov titled "Line of Courage." The caption notes that workers of the "Uztyumendorstroy" Trust have finished work on a 40-kilometer stretch of highway that includes two bridges in the Tyumen region of West Siberia, and briefly describes the settlement of these workers. The settlement was founded at the third kilometer of the highway and consists of apartment complexes for the workers and their families, two kindergartens for their children, and a restaurant and stores.

TASHKENT PLANTS SHIP 1983 MATERIEL TO UZBEKS IN NOVGOROD

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 20 November 1982 carries on page 2 a 300-word report by UzTAG correspondent D. Yusufjonova titled "Uzbekistan to Novgorod." Yusufjonova reports that a long freight train loaded with materials and machinery for Uzbek workers in Novgorod Oblast of the Nonchernozem Zone has departed Tashkent's Tovarnaya Railroad Station. The "Uznovgorodvodstroy" Trust, consisting of six special mechanized columns deployed in five rayons of Novgorod Oblast, has drained 25,000 hectares of land, built 48,000 square meters housing, and erected the central settlement of the "Tashkentskiy" Sovkhoz, in the seven years since its formation. Now, Uzbekistan industrial enterprises that supply the trust with its materiel--including the Uzbekistan Metallurgical Combine, Akhangaran Cement Combine, Tashkent Excavator Plant, and Chirchik Glass Factory--have shipped ahead of schedule to this trust its goods allocated in the second year plan of the 11th FYP.

RESEARCH AT PEDAGOGICAL COLLEGES KEYS ON ECONOMIC ISSUES

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 24 November 1982 carries on page 3 a 900-word article by S.D. Ziyayev, Chief of the Administration for Higher and Secondary Pedagogical Colleges of the UzSSR

Ministry of Education, and K.R. Kholiqov, Chief of the Department for Scientific and Advanced Training of the UzSSR Ministry of Education, titled "Demand of the Age." The authors briefly describe some of the research projects dealing with economic issues at republic pedagogical schools. The authors state that the 3,586 scientific workers at the republic's 14 higher pedagogical colleges, along with the Pedagogical Institute imeni T.N. Kary-Niyaziy and its filial in the Karakalpak ASSR, are currently conducting 447 research projects on 275 themes, including 54 major projects on 33 of the most pressing economic problems. Scholars at the Bukhara and Karshi State Pedinstitutes have been researching exploitation of solar energy, a problem recently turned to at the Syrdarya, Termez, and Dzhizak Pedinstitutes. Research on semiconductors is being pursued at Fergana Pedinstitute. Andizhan scholars hare studying ways to improve storage of cotton, as well as uses of industrial waste products. Scholars at Dzhizak State Pedinstitute are researching the use of various species of fish to keep irrigation canals clean of excessive plant life. These and other research projects are coordinated through the USSR and UzSSR Academies of Science and the USSR Academy of Pedagogical Sciences. Finally, the authors note that the republic still experiences a shortage of doctors and candidates of sciences in the fields of technical sciences and mathematical physics.

KOMSOMOL STUDIES PROGRAM TO EMPHASIZE ECONOMIC TRAINING

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 13 November 1982 carries on page 4 a 700-word article by V. Bogdasarov, Deputy Chief of the Propagit Department of the Uzbekistan LKSM Central Committee, titled "An Important Factor in Quality and Productiveness." The article outlines some of the measures that will be taken to improve the economic knowledge of komsomols in the new study year beginning 16 November. The number of economics schools and seminars are to be increased over the 1981 figure of 1,500, along with the number of zonal seminars for komsomol ideological activists. The "Yosh Gvardiya" Publishing House plans to print methodological handbooks and syllabuses on economics in Uzbek language to aid propagandists. Advanced learning and instructional methods will be introduced into this year's program, including contests for the best posters and the best essays on socioeconomic themes.

STEPS TO SOLVE ANDIZHAN GAS, WATER SHORTAGES URGED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 18 November 1982 carries on page 2 a 600-word article by newspaper correspondent A. Quronboyev titled "Hoping for Gas." The article deals with long-standing serious gas and water shortages in Andizhan City and other areas of Andizhan Oblast. For many years, gas and water supplies have been rationed in the city, but despite many appeals to higher organizations little has been done to correct the situation. According to Saidakbar Zikiryayev, Chief Engineer for the Andizhan Oblast Water Resources Administration, more than 199,000 homes in the oblast are supplied with gas--67,000 with natural gas, 132,000 with tank gas. In addition, 1,164 agencies, organizations, and kindergartens, and 53 industrial sites have natural gas. During the last 10 months 426 million cubic meters of gas has been sold to all users. Nonetheless, users require 2.5 million cubic meters of gas daily, whereas they receive 1.7 million cubic meters. Their gas supply further declines when cold weather sets in. Among the causes of these shortages are old and leaky gas pipes and non-funded use of gas by enterprises and individuals. Among the steps urged to eliminate these shortages are completion of the Namangan-Andizhan and the Fergana-Kuva-Leninsk pipelines, whose construction lags in part due to labor shortages, and building an underground gas storage facility in the Khodzhabad area to hold 700 million cubic meters of gas. In conclusion, the correspondent urges the "Soyuzbekgazprom" and the Andizhan Obkom to direct their attention and assistance to the solution of these problems.

FOOD PROCESSING INDUSTRY CRITICIZED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 November 1982 carries on page 1 a 900-word lead editorial titled "Important Link in the Food Program." The editorial criticizes shortcomings in the preparation, storage, and processing of livestock and agricultural products by the food processing industry. Although 250 million rubles in capital expenditures have been laid out in the last 10 years to build and operate new enterprises many of these are still not carrying out their assignments. Violations of discipline and excessive waste are common in the oil extraction and baking sectors, and problems in storage and utilization of production capabilities plague canning and bottling plants. Leaders of party, soviet, trade union, and komsomol organizations, and of the ministries of the meat and dairy, and fruit and vegetables industries, and of the state committee for the fishing industry and the "Uzbekbirlashuv", are urged to make every effort to instill a strong sense of responsibility, discipline, and cohesiveness in workers and specialists of the food processing industry.

RECLAMATION PROJECT IN CENTRAL FERGANA STEPPES REVAMPED

[Editorial Report] Tashkent SOVET OZBEKSTONI in Uzbek 10 November 1982 carries on page 2 a 1,100-word article by newspaper correspondent O. Hakimov titled "Bright Horizons." Hakimov reveals that after 20 years of stagnant development a major reclamation project in the Central Fergana Steppes has undergone reorganization and reorientation. The project was begun in the middle 1950's with the assignment of sites to be reclaimed to "mobile brigades". Experience has shown that use of such brigades, which operate farther and farther from transport and communications means, is not productive. Yields on these isolated steppe farms still only average 10-15 centners cotton per hectare. Finally, in 1981, the republic party and government issued a special resolution calling for a radically new approach to the reclamation project, which has been adhered to by the Fergana Obkom and Obispolkom. The UzSSR Ministry for Land Reclamation and Water Resources has allocated 216.5 million rubles for capital construction work during the 11th Five-Year Plan, enabling the reclamation of 11,000 hectares of virgin lands. Most construction will be on new farms with central settlements that provide housing, schools, and children's health and public service facilities, the lack of which has plagued the project up til now. All the large construction trusts and home building combines in the oblast have been mobilized for the new campaign. Construction of sovkhozes, irrigation branches, livestock raising complexes, and thousands of dwellings has been accelerated. In the last two years 200 kilometers of asphalt roads connecting rayon centers with farms have been laid, and another 300 kilometers will be laid during the 11th Five-Year Plan. The Fergana Obkom First Secretary Kh. Umarov has pledged that the 80,000 hectares of the Central Fergana Steppes will become productive and fertile in years to come.

KARASUV RESERVOIR BOTTOM LINED WITH PLASTIC

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 13 November 1982 carries on page 4 a 200-word item by O. Jumaniyozov titled "Kasansay Sea." The item reports that the Karasuv Reservoir, presently being built in Kasansay Rayon of Namangan Oblast, has had a plastic liner installed on its bottom. This is the first use of such a liner to cut down on water absorption in Central Asia. Jumaniyozov notes that when completed the reservoir will hold 10 million cubic meters of water.

Social and Cultural Affairs

DISGRACED WRITER RENOUNCES WORK, DENOUNCES WESTERN RADIOS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN'ATI in Uzbek 26 November 1982 carries on page 8 a 1,300-word article by Mamadali Mahmudov, Laureate of the Uzbekistan Lenin Komsomol Prize, titled "White is not Black." Mahmudov, author of a 1981 story OLMAS QOYALAR ["Immortal Cliffs"] whose treatment of the Russian Conquest of Central Asia and nationality themes drew severe criticism in republic media, renounces the weaknesses of his work, denounces Western radio accounts of the episode, and proclaims his allegiance to the Soviet Union and love for the Russian people.

Mahmudov begins this piece with a sketch of work on a cotton kolkhoz in Syrdarya Oblast whose success he attributes to the unity and friendship among the 19 nationalities working on the farm. He states: "I have come to love these simple, straightforward, labor-loving people, and I have compared myself with them. In this way my various shortcomings and the errors I have sometimes made in life have passed one-by-one before my eyes. In particular, opinion concerning my novel "Immortal Cliffs", and especially the groundless statements made about it by foreign radios, have led me to deep reflection." Mahmudov attributes problems in the work to his lack of profound knowledge about the socioeconomic conditions of the 19th century and to a certain immaturity in his artistic abilities. He remarks that he has recently finished another story and is continuing to rework "Immortal Cliffs" whose revised version he hopes to publish by the end of 1982. Mahmudov offers his literary activity as a refutation of Western propaganda: "Foreign radios have been spreading all sorts of worthless rumors about me. But white cannot be made black. I am not under surveillance as they suppose. In my Homeland I am free to live and free to work among my fellow writers."

At several points in the article, Mahmudov expresses such feelings as the following: "I came to love the straightforward, labor-loving, simple, and fair Russian people." "Progressive European culture, science, and technology reached us through the Russian people. The Russians are a spacious-hearted people, a brave-spirited [bogatyr'] people." Finally, Mahmudov expresses his allegiance to the Soviet Union in such passages as the following: "I love with body and soul my people and my Homeland, and I know that our path leading to Communism is the correct and honorable path. I am a child of this great Homeland, I am a citizen of the USSR." "Peoples of the USSR... are boldly marching toward Communism! I will always be in their ranks."

[For background on this issue see FBIS Foreign Press Note #30, 13 May 82 entitled "Nationalist Tendencies in Uzbek Novel Attacked".]

TASHKENT PROSECUTOR DISCUSSES DRINKING, HOOLIGANISM AT VUZES

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 2 November 1982 carries on page 4 a 1,100-word article by Gh. Bukhorov, Tashkent City Prosecutor, titled "A Bad Deed Causes Trouble." Bukhorov cites some recent cases of drunken carousing, disorderly conduct, hooliganism, and other crimes at Tashkent universities and institutes. He attributes the occurrence of crime among the student population to laxity on the part of administrative, komsomol, and trade union organizations in legal and political indoctrination work. In a recent period 117 students at Tashkent State University, Polytech, Cultural Institute, and other institutes have undergone administrative action for acts of hooliganism, while another 100 students have spent the night in sobering-up stations: "The majority of the students committing crimes are komsomol members." Bukhorov cites several specific cases and concludes that komsomol organizations at vuzes must radically improve their work of legally and politically indoctrinating students.

HEALTH OFFICIAL URGES SANITATION, HYGIENE MEASURES IN COTTON FIELDS

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 11 November 1982 carries on page 4 a 600-word article by M. Rahmonov, Deputy Chief of the Main Administration for Sanitation Epidemiology Stations of the UzSSR Ministry of Health, titled "Health is the Guarantor of Achievement." Rahmonov calls for sanitation and hygiene measures to be implemented among field workers during the on-going cotton harvest to reduce outbreaks of colds, diseases of higher respiratory organs, and stomach and intestinal diseases. Health workers at republic sanitation epidemiology stations set up by cotton fields monitor worker hygiene, prepare hot meals for them, provide them with running water and boiled [drinking] water, and supervise preventive measures against stomach and intestinal diseases. Rahmonov notes that recent fluctuations in temperature have heightened chances for the outbreak of these diseases. He advises that field stations, camps, and tents be cleaned and aired out and disinfected, that all waste matter and garbage be kept in special containers which must be frequently disinfected with chlorine, that good drinking water be provided, that meals be served in clean areas at least 100 meters away from agricultural chemicals and fertilizers, and that care be taken to avoid serving spoiled food.

KOMSOMOL POLICE URGED TO FOCUS ON JUVENILE CRIME

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 10 November 1982 carries on pages 1 and 3 a 1,300-word article by N. Ibragimov, UzSSR Deputy Minister of Internal Affairs, titled "The People's Guards." Ibragimov stresses the important role which young and komsomol police can play in the fight against juvenile crime, particularly in view of the fact that thousands of youths with komsomol educations have entered police ranks in recent years. In July 1982 a republic meeting of Internal Affairs komsomol organization secretaries and ministry departmental deputy chiefs for political indoctrination of komsomol and young police workers was held to discuss this role. It was proposed that komsomol organizations work with police by giving lectures, providing political information, holding evenings and conferences on pertinent themes, and arranging meetings with public figures, scientists, and writers. Fighting juvenile crime is an extremely complicated but urgent task, which must go hand in hand with efforts to prevent juvenile crime. On 19 October 1982 a meeting was held in Tashkent for secretaries of primary party organizations of internal affairs organs, and was attended by CPUz Central Committee First Secretary Sharaf Rashidov, Second Secretary L.I. Grekov, and USSR First Deputy Minister of Internal Affairs Yu. M. Churbanov. Participants in the meeting discussed ways to prevent juvenile crime, and stressed the need for party organizations to deal firmly with manifestations of indifference, passivity, and complacency among young police workers.

WRITERS' TREATMENT OF POLICE REVIEWED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN'ATI in Uzbek 26 November 1982 carries on page 7 a 1,200-word article by Nikolay Strizhkov, Chief of the Administration for Political Indoctrination Affairs of the UzSSR Ministry of Internal Affairs, titled "Creative People and the Police." Strizhkov reviews official activities aimed at strengthening Uzbek writers' involvement in literary treatments of the police over the last decade. In 1974, the Ministry of Internal Affairs and UzSSR Union of Writers sponsored a contest for stories about policemen; winning entries were published as a book titled "My Policeman." In 1979, they sponsored an All-Union conference in Tashkent on the treatment of moral and legal problems in literature. In 1980, a second republic contest was held that elicited 80 works, of which 10 received awards and are to be published in two collections. In May 1982, the Ministry of Internal Affairs held a seminar with republic cinema workers to review problems connected with the depiction of police work in movies. In October 1982, internal affairs officials met with heads of republic creative unions to discuss ways that writers and artists can use their art as a vehicle to arouse public anger toward evil and injustice.

INTERNAL AFFAIRS MINISTER DISCUSSES LAW ENFORCEMENT TRENDS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 November 1982 carries on page 3 a 1,000-word article by K. Ergashev, UzSSR Minister of Internal Affairs, titled "Trustworthy Guard." Published in conjunction with Soviet Militia Day, the article surveys current problems and trends in the law enforcement field in Uzbekistan. Ergashev notes that efforts have increased to require from militia exactingness, responsibility for assignments, conduct guided by party principles, uncompromisingness toward law breakers, and constant elevation of legal and professional skills. In connection with the tasks of the Food Program police have also been charged with the urgent duty to uncover every criminal act that harms the economic foundation of the state. Ergashev notes that the republic party and government have especially recently helped fill out police ranks with the best representatives of worker collectives. Further, the ministry's academy and system of special higher and secondary schools trains cadres to head sections and fundamental service posts, with emphasis now being placed on cadres with legal, criminological, psychological, economic, sociological, and engineering training. The CPUz Central Committee recently held a council of secretaries of primary partorgs of republic internal affairs organs and departments at which measures were outlined aimed at improving the placement of politically mature workers in operational services. Police are being provided with radically improved telephone and radio communications, a developed security alarm system, and a growing number of patrol cars and special transport vehicles. The formation of voluntary people's guards, public enforcement stations, and crime prevention councils at enterprises, is also contributing to the maintenance of social order. As a result of all these measures and developments, Ergashev concludes, the number of law violations, especially of violent crimes, is declining.

UZBEKISTAN ZNANIYE SOCIETY TO STEP UP ATHEISTIC PROPAGANDA

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 2 November 1982 carries on page 2 a 100-word item under the "Following Up SOVET OZBEKISTONI Materials" rubric that contains the response of the Uzbekistan Znaniye Society to an anonymously published article titled "Frauds", which lambasted unofficial Islamic activities that appeared in the 26 September 1982 issue of the newspaper. The item states that members of the republic Atheism House and the Scientific Methodology Council for Scientific Atheistic Propaganda of the Znaniye Society held a meeting to discuss the article and concluded that it accurately portrays an urgent problem. The meeting produced measures aimed at broadening lectures, displays and press propaganda, and at improving the work of the republic Atheism House and its oblast filials.

DEPUTY HEALTH MINISTER SURVEYS RURAL MEDICAL SERVICES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 November 1982 carries on page 4 a 500-word article by Q. Tolaganov, UzSSR Deputy Minister of Health and Chief of the Tashkent City Main Health Administration, titled "Medical Science on the Developmental Path." The deputy minister surveys past and recent developments in the provision of medical services to the rural population. In recent years, the quality of the primary links in the republic health care system and its material and technical base have been strengthened, which has contributed to an improvement of rural medical services. There are now 513 treatment dispensaries and stations in rural areas. At these and rural polyclinics there are more than 8,000 medical workers. Rayon center hospitals have been enlarged such that each has an average of 400 beds, while oblast center hospitals average 900 beds. In recent years, traveling brigades of specialists have been providing specialized medical treatment to the rural population, while also conducting clinical, biochemical, and bacteriological research. Seasonal field clinics have been set up in several areas of Kashkadarya Oblast which have offices for therapy, surgery, stomatology, and ear, throat and nose diseases, as well as "special sanitation equipment for emergency service." Tolaganov states that development of therapeutic and such specialized services in rural dispensaries and polyclinics will be discussed at a plenum of the All-Union Society of Therapists to be held in Tashkent on 11-12 November. He concludes by acknowledging that considerable work remains in raising the quality of rural medical services and bringing them closer to urban standards.

TUBERCULOSIS INSTITUTE DIRECTOR INTERVIEWED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 28 November 1982 carries on page 4 an 800-word interview with Prof Dr of Medicine Abdunabi Kalonkhojayev, Director of the Tuberculosis Scientific Research Institute imeni Sh.A. Alimov, by newspaper correspondent R. Qosimov, titled "Safeguarding Health." Interviewed in connection with the 50th anniversary of the institute Kalonkhojayev describes past and present developments in the prevention, diagnosis and treatment of tuberculosis. Uzbek academician Sh. Alimov, who headed the institute during 1951-1976, was instrumental both in organizing its work and in epidemiological research that helped to sharply curb the incidence of tuberculosis in Uzbekistan. Today, the institute conducts research aimed at eradicating this disease, develops methods to fight it "in various rayons of our republic," and studies methods of pathogenetic therapy. The institute operates a treatment sanitarium, which also trains physicians in 17 specialties and medical nurses. Several years ago the institute set up a children's section to study preventive measures to protect the health of children by keeping them away from contact with the disease and inoculating them. The institute also conducts research on the diagnosis and treatment of tuberculosis of the bones, joints, and other areas of the body beside the lungs. Its clinic has 750 beds and the latest equipment and instruments. Its staff consists of 50 scientific associates, including 4 doctors and 32 candidates of science.

SUBSCRIPTIONS DOWN FOR MAJOR PARTY PERIODICALS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 5 November 1982 carries on page 4 an 800-word newspaper interview with E.H. Hamidov, Chief of the Press Distribution Administration of the UzSSR Ministry of Communications, titled "Newspapers and Journals for Every Family." Interviewed in connection with the approaching deadline for renewing periodical subscriptions for 1983, Hamidov reveals that subscriptions to center and republic party periodicals are down from last year in most oblasts of Uzbekistan. He urges distributors to step up subscriptions to the newspapers PRAVDA, IZVESTIYA, SEL'SKAYA ZHIZN', EKONOMICHESKAYA GAZETA, SOVET OZBEKISTONI, PRAVDA VOSTOKA, all party journals, and the journal SOVETSKIY SOYUZ. He notes, however, that subscriptions to party periodicals in Samarkand, Bukhara, and Khorezm Oblasts are ahead of last year due to the practical assistance provided by these obkoms to distributors. Hamidov states that this year unlimited subscriptions to periodicals are being accepted from the rural population, despite which subscriptions to the newspapers SEL'SKAYA ZHIZN' and SEL'SKAYA PRAVDA are far below the desired number. In conclusion, he acknowledges that the 1,914 kiosks and 24 "Soyuzpechat'" stores in the republic which handle the retail trade for periodicals have yet to satisfactorily organize their sale in hotels, railroad stations, and vacation spots.

TASHKENT WIRE, POSTAL SERVICES TERMED 'CRIPPLED'

[Editorial Report] Tashkent SOVET OZBEKSTONI in Uzbek 21 November 1982 carries on page 4 an 800-word feuilleton by H. Ibrohimov titled "Crippled Telegrams." Ibrohimov criticizes the extreme delays and mix-ups in deliveries of telegrams and mail by Tashkent postal services. He cites cases of telegrams being delivered a month late, being placed in mailboxes instead of handed to the recipients, and being delivered to the wrong address or after a long delay. Ibrohimov asked postal workers at the main office what causes these problems. Most answered that the motor pool used by the postal service to deliver telegrams provided insufficient vehicles so that carriers fell behind. Ordinarily they could only deliver urgent wires concerning death or telephone calls. However, Ibrohimov rejects their justifications and urges the UzSSR Ministry of Communications to take immediate steps to prevent the further "crippling" of communications services.

POPULATION FIGURE FOR UZBEK CHILDREN CITED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN'ATI in Uzbek 5 November 1982 carries on page 4 a 1,300-word article by Khudoyberdi Tokhtaboyev titled "We Owe a Debt to Children." In the course of this discussion of current problems in the writing and publication of Uzbek children's literature Tokhtaboyev cites a figure for the Uzbek population under the age of 14. Noting that whereas in the Ukraine and Baltic republics five copies of children's books are published for every child Tokhtaboyev demonstrates that this figure stands at one copy per Uzbek child: "I would like to cite some figures: it has been calculated that as of the end of 1981 there were 6,800,000 children under the age of 14 in our republic; that is, they constitute 41 percent of the republic population. This year the "Yosh Gvardiya" Publishing House printed a total of 5,374,000 copies of books intended for children and adolescents; that is, this does not even correspond to one book per child."

KARAKALPAKISTAN REACHES ONE MILLION POPULATION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 November 1982 carries on page 4 a 100-word item titled "One Millionth Citizen." The item states: "The Karakalpak ASSR has reached a population of one million on the eve of the Great October Holiday. The mother of the millionth infant is a worker at the Nukus Knitwear Factory named Anor Nauruzbayeva, the father is a builder named Qurbonboy Nauruzbayev. They named their son Azamat.

Establishment of the people's government in the Central Asian republics has boundlessly improved the health, well-being and standard of living of the population. This in turn has played a significant role in increasing the population. Since 1926 the population of the Karakalpak ASSR has tripled. This birthrate is the highest in the country."

INTERETHNIC MARRIAGES IN NEW CITY BY TUYAMUYIN RESERVOIR HIGHLIGHTED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 13 November 1982 carries on page 4 a 500-word article by M. Obidov of Druzhba City in Khorezm Oblast titled "City of Friendship and Youth." Obidov provides a general description of the city of Druzhba, formerly the settlement for builders of the Tuyamuyin Reservoir in Khorezm Oblast, and remarks that a number of interethnic marriages have occurred among its basically young population. Apart from the builders of the water complex, most of them from other regions of the USSR, there are also river transport, railroad, cotton, and rice workers, as well as industrial workers at enterprises being founded in connection with the formation of a city economy. Obidov quotes Chairman of the Druzhba Gorispolkom Yodgor Rozmetov: "Hundreds of new families have been formed in the city of friendship and youth. The Uzbek Pirnafas Otajonov and the Mordvin Anastasiya Zenkina, the Russian Andrey Yemel'yanov and the Bashkir Rohila Fozilova, the Turkmen Nurmuhammadquli Yoqubov and the Uzbek Ra'no Haitova, and the Ukrainian Serget Zan'ko and the Ossete Irina Gasina have all met during the construction of the hydroelectric station and tied their fates together."

TRADITIONAL WEDDINGS SUPPLANTED IN VILLAGE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 24 November 1982 carries on page 4 a 900-word article by newspaper correspondent A. Dilmurodov titled "Beautiful Days in Aksay." Dilmurodov describes the replacement of traditional by new-style weddings in the village of Aksay in Sovetabad Rayon of Samarkand Oblast. A village committee for the dissemination of new customs and ceremonies was formed in 1980 with a board of 11 village elders. The committee formed commissions for conducting new-style weddings and ceremonies, for greening, for working with youths, for dissemination of knowledge among women, for medicine and cleanliness, and for combatting violations of social order. The commission for conducting new-style weddings "put a complete stop to the older beliefs, superstitions, and harmful customs that had reigned here." Aksay families had competed with each other to hold lavish weddings, consume alcohol, and waste food, with the result that many of them had gone deeply into debt. The commission for working with youth also helps to resolve important social problems by instilling in village youth feelings of love for people and work, friendship, and patriotism. Labor veterans meet with the young men and talk about "modern life, peace, good, and the sacredness of communism."

WRITERS URGED TO DISPUTE WESTERN ANTI-SOVIET PROPAGANDA

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN'ATI in Uzbek 19 November 1982 carries on page 8 a 300-word item titled "At the UzSSR

Union of Writers." The item reports that the secretariat of the writers' union met on 16 November to discuss the problem of encouraging sketch and publicistics writers to deal with current issues: "It is well-known that bourgeois ideologs are spreading fabrications and slander concerning the Soviet regime, not to mention life in our country. Producing intelligent articles that expose such fabrications and intrigues is the sacred obligation of every Soviet writer today. This problem was examined in depth at the meeting and it was concluded that writers must show greater activism against Western propaganda, and that editorial offices of republic newspapers and journals must especially show greater activism in this regard."

TURKMEN LABOR HERO LISTS FRATERNAL, LABOR TIES IN KHOREZM OASIS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 17 November 1982 carries on page 3 a 1,300-word article by Hero of Socialist Labor Khuduk Muradov, Chairman of Kolkhoz imeni Kuybishev in Takhtu Rayon of Tashauz Oblast of the Turkmen SSR, titled "Most Sacred Treasure." Muradov lists socialist competition ties with other cotton kolkhozes, as well as relations with other cotton farmers in the Khorezm Oasis. He professes pride in living in the Soviet Union whose successful nationality policy is vividly expressed in the warmth and friendship between the "blood and soul brother peoples of the Amu River Valley." His kolkhoz has long been in socialist competition with Kolkhoz imeni Akhunbabayev in Khorezm Oblast and with Kolkhoz imeni Altybay Kurbanov in the Karakalpak ASSR. He notes that the Takhiatash GRES in Turkmenistan provides energy for the whole Amu River Valley while the Tuyamuyin Hydroelectric Station in Khorezm Oblast serves the Khorezm, Tashauz and Karakalpak Oblasts--"we share everything like brothers." Stating that he has "many brothers in Uzbekistan," Muradov lists the names of several Khorezmians. He concludes: "Workers of Soviet Turkmenistan stand in a single row with all fraternal peoples and go forth along the glorious path indicated by the Leninist Central Committee of our party."

AZERI COTTON WORKER ACKNOWLEDGES UZBEKS AS COTTON MASTERS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 21 November 1982 carries on page 2 an 800-word article by Vahiba Mirzayeva, machine operator on "Moskva" Kolkhoz in Saatli Rayon of the Azerbaijan SSR, titled "Happily Laughing Peoples." Mirzayeva comments on connections between the Azeris and Uzbeks and pronounces the latter to be the masters of the former in cotton cultivation. Along with professing gratitude to "our great older brothers, the Russian people," she asserts: "The professions, customs, and manners of the Azeri people and the Uzbek people are the same. Azerbaijan oil, just as Uzbekistan gas, is world-famous. The fame of the 'white gold' of both republics has spread through the seven climes. If Uzbekistan is the master in Soviet cotton cultivation Azerbaijan is the disciple." She goes on to express appreciation for the friendship and assistance of Uzbek cotton farmers and concludes: "We are of one breath, one soul, one body with Uzbek cotton farmers."

UZBEK LANGUAGE TEACHING HOURS TERMED INSUFFICIENT

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 3 November 1982 carries on page 2 a 1,500-word article by Candidate of Philology H. Rustamov, Docent at Fergana State Pedinstitute, titled "The Planned Program and Life's Requirements." Rustamov discusses aspects of a plan for native language teaching in the 4th-8th grades drawn up by the Uzbek Language and Literature Teaching Methodology Section of the republic Pedagogical Institute imeni T.N. Kary-Niyaziy, and argues against its provisions for the 6th grade. He states: "In recent years the number of hours set aside for the native language has considerably declined to two hours a week in the 6th-8th grades. While we do not object too much to allotting two hours for the 7th and 8th grades providing [only] two hours for the 6th grade makes teaching the native language--which is considered the basic tool for learning subjects--extremely difficult, and such "hurrying" in teaching the native language has a detrimental effect on the quality of education. This must be decisively and immediately halted. Teachers of the native language in Fergana and its environs recognize that allotting two hours for the 6th grade is completely insufficient and urge that the number of hours per week be raised to 3-4."

International Affairs

KARMAL'S WIFE HEADS TEACHERS DELEGATION TO TASHKENT

[Editorial Report] Tashkent YOL LENINCHI in Uzbek 20 November 1982 carries on page 1 a 300-word report by an unnamed newspaper correspondent titled "Meeting with Afghan Friends." The report states that on 18 November officials of the UzSSR Ministry of Education met with a delegation of Afghan educators headed by Mahbuba Karmal, wife of Babrak Karmal and President of the "Vatan" Central School and Internat in Kabul. In her remarks, Mahbuba Karmal said: "The friendship of the Afghan and Soviet peoples has a long history. V.I. Lenin laid the foundation for this friendship in the first years of the Soviet government. The development of cooperation between our peoples was renewed following the victory of the April Revolution and especially after its second stage when radical changes took place in the life of the Afghan people." She stated that the Afghan people are profoundly satisfied with measures taken by the government to provide education to the young generation, and expressed gratitude to the UzSSR Ministry of Education for its great assistance in this task. The report notes that the Afghan delegation left Tashkent on 20 November for Dushanbe and will also visit Baku.

UZBEKISTAN REPRESENTS SOVIET CULTURE IN DENMARK

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 7 November 1982 carries on page 4 a 100-word report by an unnamed TASS correspondent titled "Journey of an Uzbek Delegation." The item is datelined 4 November, Copenhagen, and reports that a delegation of the union of Soviet societies for friendship and cultural relations with foreign countries, led by B.R. Rakhimov, Deputy Chairman of the UzSSR Council of Ministers and Deputy of the UzSSR Supreme Soviet, arrived in Copenhagen in connection with the beginning of Days of Soviet Culture in Denmark. The economic, social, and cultural achievements of the multinational family of Soviet peoples will be illustrated through the example of the Uzbek SSR. Photographic exhibits and folk craft displays will tell of the republic's accomplishments, while the "Bakhor" and "Shodlik" dance ensembles will perform concerts. The delegation led by Rakhimov will take part in opening ceremonies.

UNESCO PUBLISHES ARCHITECTURAL ALBUM BY UZBEK SCHOLARS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 28 November 1982 carries on page 4 a 600-word interview with Uzbek SSR Academy of Sciences Academician and Prof Dr of Fine Arts G.A. Pugachenkova, head of the art history section of the Institute of Fine Arts imeni Khamza, by D. Mahmudova titled "A Book Created Through Cooperation." Pugachenkova, author of 25 monographs and hundreds of articles on Uzbek art history, answers questions concerning the publication of her new work "Central Asian Architectural Treasures of the 14th-15th Centuries" published in French in France. The work grew out of a symposium sponsored by UNESCO and held in Samarkand on the culture of the Timurids (14-15 th cc.). Scholars from France, England, India, Pakistan, Afghanistan, Iran, and other countries attended the meeting, which ended with a resolution to prepare two albums, one on Central Asian miniatures and the other on Central Asian architecture of the 14th-15th centuries. The second project was assigned to the Institute of Fine Arts and thus represents "the fruit of cooperation between Uzbek, Afghani, and Iranian scholars." Because publication abroad is taken as a great honor and responsibility only scholars with great experience and erudition were selected for the project: Z. Hakimov, L. Man'kovskaya, and P. Zohidov [and G. Pugachenkova]. Mutual cooperation between Afghani, Iranian, and Uzbek scholars during the compilation of the album made possible a deeper and broader understanding of the art and architecture of the period. The textual portion of the album was prepared in France and the photographic part in Italy. Pugachenkova justifies the publication of the album in France by saying that it will help to satisfy the growing interest among European peoples in the architectural monuments in Central Asia.

ARABIC TRANSLATIONS OF UZBEK LITERATURE LISTED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN'ATI in Uzbek 5 November 1982 carries on page 7 a 300-word article by Muzaffar Khojayev titled "Uzbek Literature in Arabic." Khojayev reviews the Uzbek literary works translated into Arabic and edited by the Tashkent Department of "Raduga" [formerly "Progress"] Publishing House. Altogether, the Arabic section of the Tashkent department has published nearly 80 sociopolitical, popular scientific, and literary works.

INTERNATIONAL WORK OF KOMSOMOLS NOTED

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 10 November 1982 carries on page 4 a 1,100-word article by S. Orazov, Executive Secretary of the Uzbekistan Youth Organizations Committee, titled "With the Planet's Youth." Orazov notes republic komsomol work abroad and with foreign students in Uzbekistan. Uzbek komsomols are currently working on economic and public projects in Afghanistan, Iran, Laos, Sri Lanka, Yemen, Ethiopia, Angola, Algeria, Syria, Libya, and Egypt. The Youth Organizations Committee also works with the more than 2,000 students from 73 countries studying at Uzbekistan vuzes: "Last year 289 students from Cuba, Zambia, Yemen, Laos, Vietnam, and Afghanistan, did 150,000 rubles work on republic construction sites." Orazov also notes that more than 50 youths and student organizations have recently sent delegations to Uzbekistan, while Uzbek komsomol youths have joined Soviet youth delegations to Afghanistan, East Germany, Nicaragua, Yugoslavia, Spain, and Hungary.

SOVIET YOUTH SAID TO SUPPORT EUROPEAN 'PEACE MARCH'

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 11 November 1982 carries on page 2 an 800-word commentary by F. Rahimov under the "Commentator's Pulpit" rubric titled "So That Life May Be Safe." Rahimov comments on the European "Peace March" movement which he claims arose in reaction to aggressive policies of the United States and its NATO allies and is supported by Soviet youth. He remarks that European participants in the movement visited the Soviet Union despite attempts by Western propagandists to scare them off by talk of the "slyness and aggressiveness" and "barbarism" of the Soviet people. Instead, he claims, participants found that the Soviet Union is waging a relentless battle for peace and that the Soviet people are "warm and hospitable." Rahimov asserts that Soviet youth, including "Soviet participants in the 'Peace March'" have sent 13 million letters to NATO headquarters demanding peace.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

VAYNO SPEECH AT TENTH PLENUM OF ESTONIAN CENTRAL COMMITTEE

Tallinn SOVETSKAYA ESTONIYA in Russian 10 Apr 83 pp 1-2

[ETA report: "Speech by K.G. Vayno, first secretary of the Estonian Communist Party Central Committee, at the Estonian Communist Party Central Committee 10th Plenum"; date and place not specified]

[Text] Comrades. The questions raised at the discussions in today's plenum are not only of great socioeconomic but also political significance. They touch in a most direct way upon the interests of all strata of the population.

Although we have examined the two question separately and although they cover different spheres of the republic's national economy, it can nevertheless be said that today's entire discussion has taken place, as it were, along the same channel. The fact is that the Food Program and the production of consumer goods have, figuratively speaking, a common denominator--the purposeful approach to further improvements in the well-being of the people.

The main reports and discussion provided a sufficiently precise picture of the state of affairs, and work completed was critically considered and ways of correcting shortcomings were proposed. Now, deeds must follow our words.

Why, then, comrades, the urgency of the problem?

First, a certain lack of coordination between the population's monetary income and the availability of goods is making itself painfully felt. There is a rule of economics as old as the world that wages growth should not outstrip labor productivity. And in principle everyone agrees with this rule and knows quite well what its violation threatens. But in practice it is violated. The CPSU Central Committee general secretary comrade Yu.V. Andropov talked about this in his speech to machine tool workers in Moscow.

Increases in wages without an accompanying growth in labor productivity and increases in consumer goods lead to disproportions. And the joy of having extra money in one's pocket is short-lived since the necessary goods are unavailable.

Second, improving well-being presupposes constant expansion of the range of and improvements in both industrial and agricultural products, that is, the maximum possible approximation of supply and demand at any given stage.

Accordingly, questions of the production of consumer goods and increasing their output should always be at the center of attention in our party, soviet and economic organs.

The members of the Estonian Communist Party Central Committee Bureau recently visited an exhibition of consumer goods that industry in the republic is proposing to produce next year. The exhibition was large and it left a generally fair impression.

But what did we see? Somehow it all was all familiar and ordinary. And when we asked the leaders of some of the ministries and enterprises what proportion of output is being renewed each year, we heard in reply that the average is 10-12 percent. We think that this is very little.

Many beautiful and well-made articles were shown at the exhibition. They will indisputably beautify our everyday life and bring joy to the purchasers. But in many cases the trade representatives remarked quite emphatically that these kinds of good are in short supply and more of them should be made. And with respect to a whole range of goods that have now been in production for many consecutive years, the opinion was quite different: there is no demand for them. Misgivings were expressed that the trade organizations are not able to sell the volume of output offered.

What, then, is going on? There is a run on some goods, but not many are being made, while the buyer has no special interest in others and but they wtill stubbornly continue to produce them. Of course, the solution to this contradiction is not as simple as it seems at first glance. In fact, sometimes the necessary raw materials are in short supply, and there is lack of up-to-date technological equipment. These are objective difficulties and they must be taken into account. But very often in arguments among industrial managers you also hear the following: some goods are unprofitable to produce, their profitability is low.

The impression is created that individual comrades fail completely to understand, or do not want to understand, the demands of the times associated with growing consumer demand. If we continue to adopt this attitude toward the fulfillment of our obligations, the renewal of the products list and satisfying orders from trade, then we shall not only fail to carry out our duty to society but also place trade, and indeed industry itself, in a very difficult position. It is not fortuitous that in recent times the plan for commodity turnover in the republic has not been fulfilled. You do not have to be an economist to understand that this poses a threat for the future. References to inadequate profitability in the production of certain consumer goods are excuses in the arguments of, say, a rank-and-file planner in an enterprise. Our prices for goods are indeed still not perfect, and they vary and offer varying profitability. But the managers of state enterprises are obliged to think more broadly and to act in a party spirit and a statesmanlike way and not to strive "at any price" to carve out profit for the enterprise.

The trading organizations should be more persistent and demanding in setting up production of the necessary goods, invoke their sanctions more fully when contracts are broken, and report instances of an unstatesmanlike approach to the organs of people's control and superior organizations and the party committees. That is, trade workers must also improve themselves in many things and show greater initiative.

Managers in light industry, the food industry and local industry, and indeed in trade, must draw the most serious conclusions from today's discussion in the plenum. The party gorkoms and raykoms and the primary party organizations and the departments of the central committee must enhance the responsibility of economic personnel and increase the demands made of them to improve the quality of goods and the range of goods and improve trade in consumer goods. In all this it is very important to arouse and support initiative and to be bolder in making various experiments; that is, there should be constant quest.

This is our duty and our primary obligation as communists. As has been stated today, great reserves for the production of consumer goods are available at enterprises in machine toolmaking and other sectors of heavy industry. The successful utilization of these possibilities depends on the initiative of the party organizations and our economic cadres.

Starting from this year, for republics, ministries and administrations, and associations and enterprises of all-union subordination, a new indicator has been established for the output volume of consumer goods, namely the production of these goods per ruble of the wages fund. This indicator will provide a precise landmark for enterprise collectives in the heavy industrial sectors: to bring the final count of consumer goods produced up to a volume equal to the entire wages fund.

Of course, when defining these tasks there must be a differential approach and a comprehensive consideration of the specific nature and capabilities of the labor collectives and of the level of consumer goods output reached.

If we take a look at the products list for consumer goods produced by enterprises in machine toolmaking and instrument building in our republic, we can find many very simple, nonstandard articles that are manufactured in small batches with a high expenditure of labor. Of course, such articles are essential to consumers, but from the viewpoint of the efficient use of production potential at these enterprise it would be more expedient to lay emphasis on the production of technically complicated articles. And the simplest kinds of consumer goods are completely available to the enterprises of the Estonian SSR Ministry of Local Industry, the kolkhozes and interkolkhoz organizations and the Estonian Republic Union of Consumers' Societies.

It is no simple matter for industry of all-union subordination to specialize in the output of consumer goods whose technical level would accord with that of its main output. But it is essential to do this work, persistently and constantly. Evidently, using the experience gained in Belorussia and Latvia, our planning organs and trade should set about dividing up the products list for cultural and everyday goods among the sectors of heavy industry and local industry, taking into account the complexity of production.

Here, however, there should be no going to extremes, as they say, or having merely a formal attitude toward the task. Thus, the "Promptibor" association has for a number of years been making official requests to have certain nonstandard articles removed from its list of manufactured goods and passed to other enterprises; this list includes articles such as locks, vegetable slicers, covers for jars, meat grinders and meat safes. Instead of these articles the association management is suggesting that it set up production of certain electrical and electronic products.

In principle, the question is being posed correctly. And it would seem that everyone would vote for this proposal with both hands, without turning a hair. But as it turns out, only 26 kopecks per ruble of the wages fund is used to produce consumer goods at the "Prompribor" association. And only 15 people are engaged in the manufacture of these nonstandard items. And are the meat safes and vegetable slicers, which are essential for many people, really jamming up the roads and interfering with the assimilation of standard products? The argument is most doubtful. It is somehow not convincing. Would it not be better for the management of this esteemed enterprise to show its sense of principle in some other way: produce both the standard and the nonstandard products? It would get a big "thankyou" from the purchaser.

The time is certainly ripe for the republic council of ministers to set up under the ESSR Gosplan an interdepartmental commission to organize the production of consumer goods, which would consider and resolve on an operational basis all questions connected with the specialization of associations and enterprises and the expansion of cooperation within the republic in the manufacture of these goods, and would regulate relations between industry and trade.

To note fine initiatives and to assess them in good time: this is what is required of us. There are businesslike and enterprising people filled with initiative in every collective. Energetic party support, and sometimes merely a word of encouragement, imparts the desired impetus to a fine initiative. Nor should it be forgotten that the innovation always goes through its birth pangs and in the initial period particularly, needs solicitous attention, and often also protection.

For example, all praise is due the organization of the production of wood blocks at the Tallinn plywood and furniture combine. Sawdust, wood shavings, wood chips and even wood dust, none of which had any use before, are all used in this. And as a result we have a fine, cheap fuel. The initiative of the enterprise and the republic Ministry of the Timber and Wood Processing Industry has been supported by the union ministry.

An interesting economic experiment is now being worked out in the republic Ministry of Light Industry. It is aimed at forming a more efficient system for supplying enterprises and marketing otuput. A close amalgamation of efforts is envisaged between the "Estlegsnabsbyt" wholsesale and retail trade organizations and the industrial enterprises. The idea of the experiment is to enhance the responsibility of all links in the chain: supply-production-trade. It is aimed at achieving higher final results.

According to preliminary outlines, by galvanizing the activity of all those participating in the experiment and liquidating losses at the "interfaces" it is possible to insure an additional R50 million of consumer goods output and extend the range.

The Ministry of Light Industry is taking a bold step. It is being supported in Gosplan and the USSR State Committee for Science and Technology and the USSR Ministry of Light Industry. Authoritative specialists from the CEMA countrie have also spoken out in its favor; they were in Tallinn recently where a meeting on questions of improving the economic mechanism was held on the base of the ESSR Ministry of Light Industry.

In general, comrades, the production of consumer goods here has available many additional possibilities that the republic party organization should use and thus make an extra contriubtion to the country's commodity resources.

Comrades. The ESSR Food Program for the period through 1990 has just been approved at the plenum. It must be said that the republic Gosplan, ministries and administrations and regional party and economic organs put in much serious work on this document. The intermediate drafts for the program were discussed repeatedly in the Estonian Communist Party Central Commuttee Bureau, the republic council of ministers and the USSR Gosplan. In the draft that was presented, consideration had been given to comments on it and many extra points were included.

In the main the republic's Food Program is balanced in terms of capital investments and the reources of material-technical support. However, each of us must clearly understand that its succssful implementation is guaranteed only given the thrifty, businesslike use of allocated funds and, finally, a creative approach to the utilization of available internal reserves.

The Food Program is becoming a main directive document defining the development of the republic's agrarian-industrial complex over the next 7 years on which we shall collate our work. Up to now, however, we still lag behind the set indicators. We have several rayon leaders who have already convinced themselves that the planned growth rates do not match our possibilities and who think that the plans should be amended by lowering them against the five-year targets, as was done this year for purchases of livestock farming products. But that amendment should be regarded as an exception, connected with the consequences of 1981, which was a very difficult year for us. It must be understood, comrades, that we are responsible to the country for managing our affairs throughout the entire five-year plan in such a way as to insure that it is fulfilled. Meanwhile, compared to the five-year plan, within the republic preferential purchases are being made only of grain, vegetables and eggs. We are still behind the plan for the first 2 years for purchases of cattle and poultry.

This situation must be corrected. The main weight of organizing this work falls on the party raykoms and the rayon agrarian-industrial associations. Now, after the adoption of the republic Food Program, a detailed analysis must be made of the coordination between the rayon food programs and the comprehensive plans for measures at farms; and the need to liquidate the lagging that has been permitted must be taken into consideration.

I would like particularly to deal with upcoming work connected with the introduction of the collective contract in kolkhoz and sovkhoz production.

This question was recently discussed in the CPSU Central Committee Politburo and then a representative, all-union meeting took place in Belgorod, at which CPSU Central Committee secretary comared M.S. Gorbachev spoke.

Why is it that today the CPSU Central Committee attaches such great significance to the collective contract, and the brigade organization of labor in general?

It is because it promotes greater efficiency in agricultural labor and strengthens labor and production discipline. The collective contract is aimed at achieving high final results and--something that is especially important at this stage--without additional capital investments.

In a number of the fraternal republics, over many years considerable expeirence has been gained in work using the collective contract brigades, farm sections and mechanized links. Practice shows that the labor collectives that see themselves as an independent economic cell regularly obtain from a unit area 20-30 percent more output that the others.

Unfortunately, up to now our own experience in this field is meager. Today we can name no more than a dozen or so places where collective contracts are in force.

For example, at the "Kommunist" sovkhoz in Valgaskiy rayon, a fodder procurment detachment led by communist Kheyno Saar is operating successfully.

The experience of the cost-accounting contract at the so-called "family farms" has well recommended itself.

Everything, it would seem, is clear: the effect is there for all to see. Then why, up to now, has the collective contract not been extensively employed among us? All the prerequisites for it are to hand: the opportunity to repeat earlier experience, skilled personnel, the essential equipment. The explanation lies mainly in an underestimation of the importance of a new progressive form of cost accounting and being accustomed to the old organization of labor that has come about over the years.

Moreover, at many of the republic's farms, there has been a recent extraordinary interest in material incentive for fulfilling individual agrotechnical operations and sizable bonuses are paid for the successful completion of the harvest, interrow work, crop picking, applying fertilizers and other one-time operations. As a result, the total sum is substantial, and often it is unconnected with the final result--the harvest. It is therefore no subtlety that when it is suggested to a vehicle operator on piecework rates that he join a brigade and work under a collective contract, he reasons thus: the final accounting under the contract will be only at the end of the year and we not not know until then how much will be available for the brigade purse, while at present I receive my money for each operation immediately and in full.

So we have many problems and complexities here. And together with the economic, trade union and Komsomol organizations, the party organizations at farms and the party raykoms must carry out much painstaking explanatory and organizational work in order to overcome the existing psychological barriers and build a broad highway for the collective contract in agricultural production. On this plane we also await the qualified recommendations of scientists and econonomists, taking into account the conditions and features of individual sectors of agricultural production and individual rayons and even farms.

I would like to caution against a hasty and formal attitude toward this new matter. What is required is mandatory observance of the principle of voluntary participation and giving the brigades the right to resolve their own internal questions. We have instances in which the innovation has not been thought through to its conclusion or has been unregulated economically or not brought to the attention of each member of a collective; and the innovation has failed and the very idea discredited.

There is no need to pursue quantity immediately. Small is beautiful. If a collective working on a unified contract has already been created, care must be taken to make it a real beacon and propagandist of the innovation. In brief, there is no call for haste; but also it is not for communists to spend overlong on bestirring themselves or on making references to objective difficulties. Perhaps we should set ourselves the target of having at least one such briagade at every farm this year.

Thus, comrades, in agriculture we have come close to a definite boundary, and the agenda contains basically different approaches to the organization of labor. One of the keys to improving production efficiency, and perhaps the chief and most reliable, is the introduction of effective cost accounting in all links of agriculture. And primarily the collective contract in the primary labor collectives. We have to create the best conditions for stimulating good quality, productive labor, a sense of initiative and enterprise, thrift and economy, and a conscientious labor discipline and order.

Comrades. The next large and important question that I would like to address is improvements in the management field in agriculture in the spirit of the decisions of the CPSU Central Committee May (1982) Plenum.

During the last decade much has been done in the republic to improve and further develop the way in which the management of the national economy and its individual elements is organized. Dozens of associations and combines have been set up, many enterprises and kolkhozes and sovkhozes have been amalgamated, the interfarm organizations have appeared, and the computer data services have been spread extensively. All this has promoted improved efficiency in social production.

The economic potential of the countryside has grown rapidly and the numbers of management links have been increased many times over. Production specialization and cooperation have taken place. Naturally, all of this has also required improvements in management.

One-and-a-half years ago, the agrarian-industrial associations were set up in all the republic's rayons to replace the agricultural management boards; qualitatively different principles form the basis of their activity. And now, as you already know, a central management and coordination organ has now been formed at the republic level within the system of the agrarian-industrial complex, namely the ESSR Agroprom.

The idea of Agroprom has been maturing for a long time, and it has more than once been talked about by the farm managers, economists and party workers. The Estonian Communist Party Central Committee Bureau and the council of ministers approached the formulation of this idea very carefully, comprehensively weighing all the "pros" before making this serious decision.

Our proposal to set up an unified organ to manage agriculture in the republic was reviewed and approved by the CPSU Central Committee Politburo. Many all-union ministries and administrations have supported us.

What then, was wrong with the earlier management structure? Primarily, narrow departmentalism. While acquiring position and a certain weight, the organizations formed at different times to service agriculture had no sense of responsibility for the final results of agricultural production They had their own indicators, the notorious "gross volume," in whose pursuit abnormal forms were sometimes used, often cutting across the interests of kolkhozes and sovkhozes, that is, the direct producers. How paradoxical it is that because of the existing structure even the ministry of agriculture itself was far removed from the fields and farms, the fulfillment of state tasks for procurement, and insuring an uninterrupted supply of consumer foodstuffs.

This separateness led to a situation is which, as their leaders justifiably complained, at the kolkhozes and sovkhozes there were many different bosses and not one of them was a real boss in whose hands was concentrated full authority backed by economic levers.

Now the republic Agroprom has been set up, a unified management and coordination center. It combines the functions of the Ministry of Agriculture, the State Committee for the Supply of Production Equipment for Agriculture, and the State Committee for Land Reclamation and Water Resources. That is, its authority extends across the entire sphere of agricultural production. In addition, through its presidium and council, Agroprom has been given the rights of coordinator and controller of the activity of all republic ministries and administrations included in the Agrarian-industrial complex; and the Agroprom chairman, as a first deputy chairman of the ESSR Council of Ministers, bears the direct responsibiltiy for the work of these ministries and administrations.

And here the qustion may be emphatically asked: why, in this case, does Agroprom not include the republic's entire agrarian-industrial complex, including the financial-management activity of the procurement and processing sectors and the Ministry of the Fruit and Vegetable Industry? Ideally, this would probably be the correct thing to do. But we must be realists; we must not run before we can walk. The present agrarian-industrial complex is a collection of complex sectors of the national economy, so bulky and cumbersome a thing that to entrust its management entirely to a single organ would today be very risky, and in any case beyond the power of a single organ. And, when concentrating its main attention, efforts and funds on improving production efficiency in agriculture, which as we know is already an extraordinarily complicated and difficult matter, how can Agroprom also deal successfully with complex matters such as procurements, storage, processing and other very specific sectors that require large capital investments, skilled personnel, complex equipment and much else? Agroprom has been set up, and it is a far from simple mechanism. Let it first find its feet, grow strong, and have time to show what it can do. And then it will be able to take further steps.

This also applies equally to the Ministry of the Fruit and Vegetable Industry. This organization is still relatively young and is still in the stage of formation. We are dealing with a quite specific and complicated matter. Today it is a major independent sector of agriculture, not only producing but also processing and marketing fruit and vegetable products. It also includes specialized transportation facilities. The state has allocated large funds to develop the sector. This organization also has close interrepublic ties for the delivery of vegetables and fruit, and for us this is not an unimportant matter.

Last year all the farms of the Ministry of the Fruit and Vegetable Industry overfulfilled their plans for the sale of produce, and within the system plans were also fulfilled for retail trade turnover, potato and vegetable procurement and the output of industrial products. Positive shifts have already been seen in the supplies of vegetables and fruit for cities and settlements; the shortages have been constantly and tangibly felt for many years. Of course, the position is still far from ideal, and we undertsand this. But there is every justification for looking with optimism to the future. Thus, is it worth taking an as yet uncompleted restructuring and replacing it with another? This is why today the Ministry of the Fruit and Vegetable Industry has not been included directly in Agroprom.

I would like to say something else about the reorganization that has been carried out. In their desire to put the entire agrarian-industrial complex under one roof, some farm managers and leaders of rayon organs see mainly not the solution to questions of more operational and smoother operations by all those participating in production and the processing of agricultural output but a source for redistributing the profits of the industrial enterprises. This, let us state directly, is an illusion, an erroneous view. Of course the processing enterprises make a profit. But is is a planned profit. And profits are assigned not to the enterprises, or the kolkhozes and sovkhozes, not to the sector, not even to the ministry, but to the state budget. And they are alocated by the Ministry of Finance on instructions from the union government. They are used as a funding source for our public health, education and many other of the country's needs. And incidentally, a considerable proportion of this money goes into agriculture through higher buying prices.

The creation of Agroprom places a large measure of responsibility on the republic party organization. It is a new business and it should not be forgotten that the entire country will be following our experiment with great interest.

The structure of the Agrarian-Industrial Association has been organized set so that in general it will operate precisely and on an operational basis. The main administrations and administrations have combined some of the functions formerly carried out in parallel by both the Ministry of Agriculture and the State Committee for the Supply of Production Equipment for Agriculture. The apparatus of the amalgamtion is less bulky. It has 80 less people than the three administrations that have been disbanded. The number of primary managers has been reduced from 15 to 9. Thus, in creating the association an important goal has been pursued--to make the new management organ different in terms of substance, and monolithic and capable of functioning. In the future, the best things in the republic Agroprom organ will be extended to the rayon associations.

Agroprom has to do much work to extend the sphere of action for cost accounting, strengthen the role of economic methods in management, improve planning, and enhance the efficiency of agricultural production.

One very important matter is that of the style of the organization's work. The further development rates of agriculture in the republic and the fate of the Food Program will depend largely on how urgent questions are resolved at top management level.

On this plane, it is not redundant to caution against certain errors. The reorganization that is taking place is not merely a change of sign or a rearrangement of the armchairs; it is a serious internal restructuring of all operations.

There is a danger that attempts will be made to mechanically transfer to the newly created structure the present composition of the functional services without the necessary analysis of their suitability in the new conditions, along with the old shortcomings, without careful work on the interrelationships and interactions of the new management system.

Orientation on the final result, and this is precisely the aim of the entire restructuring that has been undertaken, envisages that the new management structure is not merely the simple sum of earlier functions. It is neccessary to insure a combination, a "fusion," so to speak, of the different parts of the new organization into a single whole. Here, fundamental importance attaches to establishing mutual understanding between officials and workers in the new management apparatus who come from different organizations, and to setting up horizontal and vertical links.

It is not the task of the Agrarian-Industrial Association to send out instructions to the rayons on how to "plough and sow and reap and mow." The specialists in the rayon associations and farms, and we have adequate numbers of these specialists, are skilled people who know better than they do in Tallinn what to do on the fields and farmsteads and when to do it.

From Agroprom we expect, first of all, decisions on those numerous questions that are being raised by the rayon associations: the timely delivery of fertilizers, spares, fuel and other resources, the implementation of a unified technical policy, solutions to the complex problems occurring at the "interface" between sectors on the timely and complete realization of funds for machinery and building materials, and also questions whose solution depends on other republic and all-union organs.

The question of management efficiency on the part of Agroprom is particularly serious and urgent since not only must the appropriate demands for its style of work be worked out today, but there must also be help in creating a businesslike style among the rayon agrarian-industrial associations that make up the decisive wing of management in agriculture. The rayon agrarian-industrial associations are directly linked to the kolkhozes and sovkhozes and to production. It is th;refore right to make high demands of them, the more so since many associations still lack initiative and boldness and specificity in dealing with matters. Instead of a deep subject analysis of the situation at the farms and focusing attention on the laggards and spreading leading experience at the local level, a multitude of meetings are held on general questions, in the old way.

As a rule, all the managers and chief specialists assemble at these meetings, including those from farms where things are going well. These meetings have little to offer the latter; people are just taken away from their work. And neither are they much use for the laggards; as a rule, they need solutions to and help in specific questions.

The final result should be the main criterion in analyzing any question. When the position remains unaltered it means that meetings and conferences have lost their efficacy. The only thing that is obvious is the illusion of work. Unfortunately, this happens frequently.

More use will be served if a group of specialists from the apparatus and authoritative practical people are sent to the lagging farms every week or two, and a serious economic analysis is made of the situation and methods for dealing with lagging farms planned in a calm atmosphere; and a determination made of what the agrarian-industrial association should do and what the farm itself should do. Perhaps it would be proper to have something like a consultative brigade in all the rayons, together with ad hoc groups working on goal-oriented problems. This would be of real assistance to the kolkhozes and sovkhozes.

It is essential to seek out and introduce into practical work new forms of cooperation and mutual help for farms, links with patrons, the maneuvering of labor and material-technical resources. In the countryside there are many internal reserves for production growth. It is the task of the rayon associations to reveal them and enable them to be brought into play.

A major restructuring from top to bottom is taking place throughout the entire agrarian-industrial complex. We have started this at the republic level and the establishment of management at the rayon level continues; life dictates the need to introduce new management forms at the kolkhoz and sovkhoz level, in the brigades and the farm sections.

All this places on our cadres a mandatory obligation to be imbued with a businesslike style and to do their work specifically, with intelligence and initiative.

The party raykoms must be the guides in this great matter, teach people to work in the new style, raise the responsibility of cadres, and help them to be equal to today's tasks.

A few words on discipline. For in the final analysis, everything that we are talking today comes down to bringing order in all things, great and small. It must penetrate into the consciousness that one-time campaigns will not succeed in doing this, and even less in maintaining it.

If we understand discipline in the broad sense, and this is how we should see it, then long and painstaking work lies ahead. Up to now we have barely scatched the surface of a major problem--labor discipline. However, it is here that we must start. The initial results are already being felt. More complete use is being made of working time and many management questions are being solved on an operational basis.

But we must go further. Through administrative methods it is possible to achieve a situation in which people arrive at work on time. But in order to make them work well, productively and responsibly, much remains to be done.

At each enterprise, at each kolkhoz and sovkhoz, in each establishment, the mechanism of moral and material incentive should be set up in such a way that it would be disadvantageous and bring shame before the collective to work negligently or irresponsibly.

How can this be done?

There are no universal recipes. Everywhere the work is different, the conditions different. The details must be worked out at the local level. But if we speak in general terms, there are tried and tested forms. They are really well-organized competition, the brigade form of labor, work in accordance with collective contracts. But all these forms should be brought into play.

This year, 1983, is the first year that the decisions of the CPSU Central Committee May and November (1982) plenums have started to be really embodied in our business. The first quarter of the year has just ended. What is there to say about the results?

Industry, agriculture and construction have worked not at all badly. In industry the plan for output sales was fulfilled 102.1 percent, and compared with the first quarter of last year the growth rate was 6.1 percent. This is higher than envisaged by the five-year plan. Above-plan output worth R24.7 million has been achieved through labor productivity growth.

It is a long time since we have had these kinds of rates and indicators.

In construction, the commissioning of new fixed capital was fulfilled 108 percent, including in housing 109 percent. The plan for construction and assembly work was fulfilled 106 percent. It is especially pleasing that the contract organizations fulfilled the plan 103 percent through their own efforts and provided 5 percent more output than last year.

Finally, agriculture. The present overwintering is taking place well. First and foremost we must mention the increased productiveness of the milking herd. Five of the last six months of the overwintering have been record-breaking in terms of milk yield per cow, and the total increase is 280 kilograms compared with milk output in the previous stall period. Daily weight increases for fattened hogs and cattle have been higher than last year.

It should be noted that creation of the essential reserves of fodder last year and the skillful organization of production at farms during the winter period have insured output growth and the fulfillment of plans for sales of output to the state. For the first time in many years the republic has fulfilled the meat and milk purchase plans for the first quarter, 103 percent and 107 percent respectively. The quarterly plans for milk purchases have been fulfilled by all rayons, and for meat by 11 rayons.

Substantial aid from the state has played a major role here. For the first half of this year we have been allocated 90,000 tons of concentrated feeds above the plan.

We now have good work done in advance to achieve this year an overfulfillment of socialist pledges for milk yield per cow and to return to the high level of productiveness that we achieved 6 years ago in 1977.

The spring sowing draws near. In a week-and-a-half the sowing machines will go out onto the fields at the farms. Although the general level of preparedness for the spring sowing may be characterized as good, individual checks of the disposition of labor, fuel supplies and the reinforcement of vehicle operators are still required. We must carry out the spring field work in an organized way and complete the sowing of grains and potatoes in no more than 2 weeks, and the entire sowing within 20-25 working days.

Many great matters lie ahead. The main thought in the upcoming work is in imparting new impetus on all directions of economic building. This has been well described in comrade Yu.V. Andropov's report at the ceremonial meeting in Moscow devoted to the 60th anniversary of the USSR and in his article "The Teaching of Karl Marx and Certain Questions of the Building of Socialism in the USSR," published in the third edition of KOMMUNIST. In particular, it is noted that "today the paramount task is to think through and consistently impelement measures capable of providing greater scope for the action of the colossal creative forces inherent in our economy."

This has also been the subject of our talk here in the plenum. It has reflected an understanding of the seriousness of the tasks that we face and an ability to evaluate critically the work that has been done, and a burning desire to achieve with optimism and faith the targets set for solving new urgent questions. On this plane, I think, the plenum has fulfilled its task.

In conclusion, permit me on behalf of the plenum participants to assure the CPSU Leninist Central Committee and its Politburo and the central committee general secretary comrade Yu.V. Andropov personally that the Estonian party organization and all the workers of the republic will spare no effort or knowledge in working efficiently and will successfully complete the third year of the five-year plan.

VAYNO ADDRESS TO CONGRESS OF WOMEN

Tallinn SOVETSKAYA ESTONIYA in Russian 15 Apr 83 pp 1-2

[ETA report: "The Speech of Estonian Communist Party Central Committee first secretary K.G. Vayno at the Congress of Women of the Estonian SSR"]

[Text] Honored delegates. Dear guests. Comrades. Permit me first of all to convey to the congress of women of the Estonian SSR warm and sincere greetings from the Estonian Communist Party Central Committee and the republic supreme soviet presidium and councl of ministers, and to wish you successful and fruitful work.

Women have sent as delegates to their congress the leading female workers from the plants and construction sites, remarkable female workers of the fields and farms, the best representatives of the people's intelligentsia. Today there is probably no sector of the national economy in the republic where women are not working, where they are not displaying their abilities and talents to the full. They rightly occupy many key positions in the economy and culture. Some 47 of them have been awarded the high title of Hero of Socialist Labor for their selfless labor, and almost 90,000 women have been awarded orders and medals. And this perhaps is the best adornment that any women have ever carried.

All our achievements, everything in which we take justified pride. have been gained largely thanks to women. And so permit me from this high rostrum, to say to you and through you to all the female workers in the republic, an enormous thankyou, from the bottom of my heart, for your inspired labor for the good of the people and on behalf of the burgeoning of our motherland.

But Soviet women are not only remarkable workers. Without their active participation, today's public life would be simply inconceivable. And it is quite natural that there are present in this hall deputies from all the organs of soviet power, from the rural organs to the country's supreme soviet. It would perhaps be apropos to recall here that the number of women in the state duma of bourgeois Estonia could be counted on the fingers of one hand, and in the last duma there were no women at all. But now, women make up more than one-third of the republic supreme soviet and they deal on an equal footing with men with questions of state importance. The congress delegates also include many party, trade union and Komsomol workers and activists in various public organizations. Each in her place, you are engaged in a great common cause, make a substantial contribution to fulfillment of the tasks of the 11th Five-Year Plan, and participate actively in public life. And a big thankyou to you for this.

We are pleased to welcome at this congress veteran organizers of work among women. They stood at the very sources of that difficult and complex work that radically altered the destinies of hundreds of thousands of women in our young republic and asserted their human dignity and true equality. Conditions for the comprehensive development of women and the rise in the level of their education and culture are now insured through the fullness of state power. The position of a woman today, and her participation in all matters great and small, in the republic and in the country, and her high sense of civic spirit and the breadth of her interests are the living embodiment of those noble goals that were set at the beginning of the path. And for all this we bow low before you, honored veterans!

Decades separate us from the first congresses of women, which took place in the Forties. During this time the role of the woman has grown immeasurably and she has become a significant force, accelerating the material, social and spiritual progress of society. Today, the task is not to assert women's rights, stir women to self-consciousness, and attract the masses of women into active participation in the building of socialism. This task was resolved long ago and irrevocably. Now another question sounds out: how best and most skillfully, in the interests of the development of the entire republic to use that enormous creative, constructive potential that women have at their disposal? to increase their contribution to the education of the new man? This is what is important today, this is why after a long interval it was decided to convene a congress of the women of the Estonian SSR.

Our congress, therefore, is not only a holiday at which it is customary to deliver pleasant speeches. It is first and foremost a working congress that will discuss large and serious problems.

Let us take the sphere of labor, in which the economic and social role of women in the life of society is being asserted. Here, on an equal footing with men, women have secured their constitutional rights to receive an education and training for a profession, for equal pay for equal labor, for advancement in service. And it must be said that women are making good use of their rights.

According to the figures from the last census, in our republic 94.6 percent of women of working age are working or studying. This is a very high index. Women make up more than one-half of all workers and employees and the major part--almost 63 percent--of workers engaged in intellectual labor. It is noteworthy that in recent times there has been a marked erosion of the boundaries between the so-called "male" and "female" professions and even sectors. Thus, in industry, in terms of the numbers of working women, machine toolmaking is overtaking light industry--the traditional field of female employment.

On the whole these processes can be considered positive. However, we must also look at the other side of the coin. In his time, V.I. Lenin cautioned against an oversimplified understanding of equality. What we are talking about, Vladimir Ilich said, when addressing workers in Moscow, "is making women equal in labor productivity, the scope of work, its duration, labor conditions and so forth." Thus, for a socialist society the decisive factor is both the number of women involved in production and the nature of their work.

A whole list of party and state documents could be cited, aimed at improving labor and everyday conditions for women, along with the measures adopted to implement these documents. In particular, the reconstruction and installation of new and improved equipment are underway at the "Krengol'mskaya manufaktura," the Pyarnu flax combine, and "Baltiyskaya manufaktura" where most of the workers are women. In the new shops the work will be more productive and easier.

Unfortunately, on this plane there are many unresolved questions. For example, many women in our republic work on the night shifts. And the leaders of the ministries, especially the ministries of light industry and industrial construction materials, and of the "Estonslanets," "Slantsekhim" and "Estonbumprom" production associations, where the percentage of workers on the night shift is particularly high among women, must address this problem seriously and in a planned way.

The problem of reducing heavy manual labor is a very urgent problem, the more so since it affects predominantly women. Of course, it is impossible to solve everything all in a moment. But when the situation remains unchanged for years and when no persistence or initiative is displayed it is quite inexcusable.

Much has been done within the republic to remove women from dangerous and harmful work. But at some enterprises this question remains acute, because, they say, there are not enough men for the job. More attention should be given to enabling women to acquire the mass skills that through the historical division of labor have been predominantly female and will probably remain so for a long time to come.

In the cities we have shortages of weavers and spinners, nurses, salespeople and seamstresses; in the countryside there are no skilled milkmaids or pig tenders, calfherds or poultry handlers to be found. The prestige of these occupations should be enhanced and they should be taught in school. This is something on which no energy should be spared!

We men are still in your debt because we are doing little to lighten that double burden that you bear in production and in the home. The task is to achieve a real change here. There must be a change because the total work load on women is more than on men. In short, the essence of this problem is expressed by the formula: equal rights for unequal burdens.

Undoubtedly, at your congress there will be talk of this. And calls will probably ring out for the men to help more in the home, to assume some of the care in bringing up children. All this is correct. Meanwhile, the sociologists assert that men are slowly but surely taking on their shoulders the common family burden. But much can also be done at the enterprises and establishments. In this connection I would like to raise the question of more flexible conditions, which are still being introduced too slowly and too timidly.

Practice shows that part-time working arrangements for women with young children has a not insignificant economic and social effect. Thus, last year at a number of the republic's light industry enterprises there were no cases of quitting because of the need to look after children among women working on this basis. Another important fact is that many women who have not worked for some time because they have been raising children return to their collective if they are given an opportunity to work part-time; and this enables these women to work in the same occupation for which they had trained earlier and to retain their skills and labor habits.

It is understandable that part-time working also causes complications, especially at industrial enterprises. But these complications can be dealt with and the benefit is undisputed. So the task is to extend the practice of part-time working in the future.

The same kind of attentive attitude should be shown toward the more extensive use of staggered working hours, especially in labor collectives where many women work.

For our republic this is in general nothing new. Moreover, the people at Kokhtla-Yarve were pioneers in the use of staggered working hours. Nevertheless, it has still not been broadly disseminated. Worse, even a decrease has been noted. Evidently in this a not insignificant role is played by an attachment to the ingrained forms and the fear of innovation and the conservative thinking of individual managers. All this can and should be overcome. In this connection I would like to draw attention to the ethical aspect of this problem.

In order to clarify my meaning I would like to make a small digression here. As you well know, a broad movement has now been developed within the country to strengthen discipline. The party is trying to make it a deep movement and it cautions against reducing the struggle to strengthen discipline merely to keeping track of how many minutes people are late for work. In this regard, staggered working hours are seen as an effective means of strengthening self-discipline. And if we are talking about using staggered working hours for women, there should be no apprehensions or doubts. For it is well known that one outstanding feature of women has always been their high sense of discipline and their responsible attitude toward labor. And so, staggered working hours must be introduced more boldy and more broadly; the interests of the matter and the need to take effective steps to improve working conditions and domestic and leisure conditions for women demand this.

There is probaly no need to talk to this audience about the importance of family leisure. But the way things stand, it seems, to put it mildy, unimportant. Even the few leisure centers that we have are far from meeting the essential requirements.

But there are examples of good plans. The comrades at the Ministry of Higher and Secondary Specialized Education approach with a deep understanding and with concern the creation of good domestic conditions for young families; I am thinking of the construction of family student hostels. The first such hostel was built last year for the Tartu State University. Some 80 student families are now living in it, comfortably and harmoniously. Next year construction will start on a family hostel for students at the Tallinn Polytechnical Institute.

Since 1981 one of the detachments of the student construction volunteer militia has been formed from married students. They spend the summer labor semester with their children. This means that sore subjects can be resolved. All that is needed is initiative and a readiness to put a good idea into practice.

It is in no way fortuitous that I have cited these particular examples and brought them to your attention. It is a question not simply and not only of creating normal conditions for women for study, labor and leisure, but also of strengthening the family, the primary unit of society.

When considering the relationship between the family and society, the eminent Soviet pedagogue Anton Semenovich Makarenko wrote that "the family brings a full life, the family brings happiness, but in the features of life in a socialist society each family is primarily a major matter of state significance." This should not be forgotten! It is essential to improve the moral education of young people and provide them with more knowledge about family life and help them at those difficult times when the family can still save them. The problem is complex and multifaceted, and it should be approached with all seriousness.

Ethical problems should also be at the center of attention for women. For a frank talk woman to woman can sometimes be more effective than dozens of lectures on the harm of alcohol and smoking. These problems must all be seriously addressed by party, trade union and Komsomol organizations and state organs.

Women should be happy! This is a public not a personal question. Because when women are happy, everyone is happy. Much still remains to be done to make the happiness of women durable and lasting. But for this, really, we must work.

There is probably a certain symbolism in the fact that the congress of women is taking place in spring, when the stirred earth begins its new cycle of life. And this should remind us of the eternal truth that everything great and beautiful in this world has its origins in woman, that mankind's immortality rests on boundless maternal love. The wondrous, incomparable joy of motherhood and the care for the home, whence the country's young citizens step forth into the world, are combined in women. They rear their sons and daughters to be honest, conscientious, labor-loving. They want to see them as ardent lovers of their motherland, strong in spirit and body. They want them to be happy. And certainly they want them to have more than they did. And this is natural. May the fine, unselfish hearts of the mothers never grow cold! I would like these lofty words to sound out not only on the occasion of today's ceremonials; they come from the heart, from a sense of gratitude and appreciation.

The congress of women that has now started is undoubtedly a great and notable event in the public life of our republic. In this connection the Estonian Communist Party Central Committee has sent to you, the congress delegates, and to all the women of Soviet Estonia the greetings message published in today's press. It contains a party assessment of the enormous role of working women and mothers. It expresses sincere gratitude to women for their beautiful spiritual qualities, for their untiring labor in passing on the moral values of Soviet society to the rising generation.

The Estonian Communist Party Central Committee and the republic council of ministers have entrusted me with the task of testifying once again from this rostrum to this high assessment of the labor of women, and of expressing to you sincere gratitude and profound respect; and this I do with great satisfaction. Along with the greetings, please accept my best wishes for great success in your work, and permit me to express the conviction that the working women of Soviet Estonia will spare no effort, knowledge or energy in order to successfully fulfill the tasks set for the Soviet people by the 26th CPSU Congress.

TRADE UNION PLENUM CRITICAL OF MANY ENTERPRISES

Tallinn SOVETSKAYA ESTONIYA in Russian 24 Apr 83 pp 1,3

[ETA report: "The Trade Unions and Labor Discipline"]

> [Text] On 23 April the Fifth Plenum of the Estonian republic Trade Unions Council took place in Tallinn. It discussed the work of trade union organizations in strengthening labor discipline and further improving working conditions in production. Estonian Communist Party Central Committee Bureau member and chairman of the Estonian republic Trade Unions Council, N. Yuganson, presented the report.

It was stressed at the plenum that at the present stage, when the scales and tempo of social production have been immeasurably expanded and the value of every hour, every minute of working time has been increased, the trade unions face a task of exceptional importance: to create the kind of conditions--economic and organizational--that would provide incentive for good quality and highly productive labor and the strict observance of the requirements and rules of labor routines at every working place. One example of this kind of approach can be seen in the work of the trade union committee and the administration at the sewn goods production association imeni V. Klementi--an enterprise of communist labor. Constant concern for improving technology and labor organization and and improving labor conditions and everyday and leisure conditions is yielding good results: personnel turnover and losses of working time associated with violations of labor discipline at the enterprise are only one-third the average for the republic and the sector. The struggle for discipline is being successfully waged at the "Krengol'mskaya manufaktura" combine, the "Il'marine" plant and the "Norma" association.

At the same time, it was noted at the plenum, it must be acknowledged that many trade union organs and committees are still participating only feebly in bringing model order at the local level and are failing to make full use of their rights and opportunities for decisively strengthening discipline, reducing losses and making better use of working time in production.

Leaders and trade union committees in the republic ministries of procurement, the food industry and the meat and dairy industry are giving insufficient attention to questions of improving labor organization and working and everyday conditions for the workers, which last year led to an increase in personnel turnover, losses of working time, absenteeism and other violations of labor and production discipline at enterprises in these sectors.

Serious criticism was leveled at trade union organizations that reconcile themselves to lack of rhythm in production and bad labor organization giving rise to rush work, overtime work and shift stoppages. The efforts of the standing production conference should be directed toward liquidating and preventing these negative phenomena, and progressive collective forms of organizing and providing incentive for work must be introduced more extensively, and control must be strengthened over the fulfillment of collective agreements. In this regard instructive experience has been gained at a number of enterprises in our republic, in particular at the Tallinn housing construction combine where the standing production conference provides real help for the administration in solving many production and social problems. At the plenum brigade leader at the housing construction combine, Ye. Komarov, described how this work is organized.

Now, under conditions of republic, sector and intraplant socialist competition, substantial addition have been made aimed at strengthening labor discipline, making more efficient use of working time and reducing personnel turnover. As was stated at the plenum, their aim is to make the slogan "Honor and Glory for Labor!" a specific and active form in the struggle against wage leveling and violations of labor and production discipline and mismanagement, and to make it promote the creation at each enterprise of an atmosphere of creative, highly productive labor and initiative.

The brigade form of labor organization and incentive is called upon to play a major role here. Questions connected with its introduction at industrial enterprises and in agricultural production were reflected both in the report and in the speeches of the plenum participants. It was noted that more than two-thirds of all workers who are members of brigades are now working on a single-job schedule. The experience of enterprises like the "RET" and "Slantsekhim" associations, the Tallinn machine toolmaking plant imeni I. Lauristin and the "Il'marine" plant, where the brigade contract is used very extensively, shows its great effectiveness. Nevertheless, the advantages of the brigade form are not being used to the full in the republic and at some enterprises it is employed without adequate preparation, just in a formal manner. At most of the republic's kolkhozes and sovkhozes the collective contract is being introduced at impermissibly slow rates.

One urgent task for the trade union committees is to activate work on disseminating the experience of enterprises in Rostov and Vladimir oblasts, where on the initiative of the workers the obsolete working norms which no longer insure a close link between wages and the final results of labor are being reviewed. In his speech O.Dobrokhotov, first deputy chairman of the Estonian SSR State Committee for Labor, noted with anxiety that within the republic, of late there has been a weakening of attention to the introduction of more progressive, technically sound norms, which, on the one hand leads to lower labor productivity growth rates, and on the other, places honest workers in the same conditions as dishonest workers when the wages and bonuses are calculated.

The level of worker education, particularly economics education, affects in a most direct way the inculcation of a creative, conscientious attitude toward labor and the strengthening of discipline. It should actively promote the formation of economic thinking among the workers and broad and interested participation in production management and the all-around strengthening of labor discipline and model order. This also determines the role of the schools of communist labor that have been set up everywhere, in which some 114,000 students are now enrolled. We have plenty of examples of how effectively they influence the fulfillment of production tasks by labor collectives. The secretariat of the Estonian republic trade unions council has approved the experience of the schools of communist labor at the "RET" and "Tallinavtotrans" associations where all students are leaders in socialist competition to improve production efficiency and economy and thrift and are showing an example of a truly communist attitude toward labor. It was stated at the plenum, however, that there are still many examples of another kind, when the studies are of an abstract and formal nature and are unconnected with everyday management practice. It is not everywhere that the trade union committees and their public methodological councils for economic education are concerning themselves with the practical avenues of the teaching process or paying sufficient attention to improving the skills of the propaganda cadres for the schools of communist labor.

The plenum participants discussed a broad range of questions connected with the education of the young working successors. It is precisely in this contingent that personnel turnover is especially high, and it is the young workers who permit violations of labor discipline. We cannot reconcile ourselves to the fact that at many enterprises the trade union committees have neglected work on the development of training. Thus, in agriculture, construction, communications and the everyday services sphere only about 50 percent of workers are involved in training. Serious shortcomings exist in the selection of the trainers themselves, whose overall educational level in many instances is low. The question of organizing training for them remains unresolved in a number of ministries and administrations.

Interest was shown in the report presented at the plenum by dispatcher Ya. Kil'P, the chairman of the preceptors' council at the "Norma" association; he talked about how urgent problems with young people are resolved at the enterprise.

In the struggle for firm labor discipline poor use is being made of the educational force of the working collectives. Work on worker education, especially young workers, and instilling in them a sense of pride in their profession and collective is rarely carried out, and when it is it is often only formal in character. These problems are often considered and resolved only superficially, without serious preparation. At the plenum, S. Voronenko, a female worker at the Tallinn veneer and furniture combine, talked about how to correct the situation and along which avenues to conduct the search.

In his speech E. Lill, chairman of the trade union committee at the "Silikat" association, touched on urgent questions of the comrades' courts. The plenum participants called for an end to the liberal attitude toward those who abuse the right to labor guaranteed by the USSR Constitution, and for a decisive struggle to be waged against them by the public. For this, the trade union committees must make more complete use of the rights afforded them.

The plenum also discussed the task of further improving work with letters and statements and the organization of receptions for workers in the republic's trade union organs.

An organizational problem was considered. In connection with her retirement, the secretary of the Estonian republic Trade Unions Council, A. Volostnykh, was relieved of her duties. Ya. Tiygi, a former chairman of the communication workers trade union, was elected as the new secretary.

Estonian Communist Party Central Committee second secretary A. Kudryavtsev participated in the work of the plenum. V. Renzer, Estonian Communist Party Central Committee department chief, also participated in the work of the plenum.

INFORMATION REPORT ON ESTONIAN CONGRESS OF WOMEN

Tallinn SOVETSKAYA ESTONIYA in Russian 15 Apr 83 p 1

[Unattributed report: "A Congress of the Women of the Estonian SSR. An Information Report"]

[Text] A congress of women of the Estonian SSR started its work 14 April in Tallinn in the "Estoniya" hall.

The congress was opened by party veteran O. Lauristin.

The leading organs for the congress were elected. The CPSU Central Committee Politburo was elected with great enthusiasm as an honorary presidium.

K. Vayno, CPSU Central Committee member and first secretary of the Estonian Communist Party Central Committee, who was warmly greeted, delivered a speech.

A. Aben, chief of the Estonian Communist Party Central Committee Department of Science and Educational Institutions, chairwoman of the Estonian republic council for work among women, delivered a report entitled "The Role of Women in the Economic and Sociocultural Development of the Estonian SSR and Implementation of the Decisions of the 26th CPSU Congress."

A. Biryukova, secretary of the AUCCTU, then delivered a speech.

The following spoke during the discussions: K. Nyu, chief animal technician at the "Orissaare" kolkhoz, Kingiseppskiy rayon; V. Marmuleva, dressmaker at the Sillamyaeskiy everyday services production administration; the writer E. Niyt-Kross; V. Kaminskaya, a teacher at the Pyarnu No 2 secondary school imeni L. Koydul; E. Sakkool', a brigade leader at the livestock sovkhoz imeni R. Pyal'son; E. Mets, section inspector for juvenile affairs in the internal affairs department of the Khaapsaluskiy rayispolkom; E. Khion, special correspondent for Estonian radio; L. Allika, director of the Tallinn sewn articles production association imeni V. Klementi; T. Lafertova, weaver at the "Krengol'mskaya manufaktura" cotton combine; doctor of juridical sciences V. Kel'der, chief of the faculty of civic rights and procedural law at the Tallinn State University; V. Khamburg, director of the self-service department store under the Tallinn No 1 Food Trade Organization; E. Tomberg, chief of the ESSR Ministry of Health Administration for Therapeutic and Prophylactic Aid to Children and Mothers; G. Smolina, leader of a brigade of female asphalt workers at the Kokhtla-Yarve construction trust; sculptor Kh. Pal'm; L. Sil'd, brigade leader of the Komsomol youth brigade at the "Vambola" kolkhoz, Vil'yandiskiy rayon; and candidate of medical sciences Ye. Myullerbek, department chief at the ESSR Ministry of Health Institute of Experimental and Clinical Medicine.

Greetings messages were sent to the congress by V. Vavilina, chief editor of the journal RABOTNITSA; L. Turova, secretary of the Moscow city trade unions council; Hero of Socialist Labor V. Parshina, vegetable-growing brigade leader at the at the "Detskosel'skoye" sovkhoz association, Leningrad Oblast; Hero of Socialist Labor Ya. Solov'yeva, a worker at the Minsk "Integral" production association; professor A. Baldinene from the Kaunas Medical Institute; V. Pikhel, Latvian SSR minister of social security and chairwoman of the republic council of women; and pioneers and schoolchildren of the republic.

The following took part in the work of the congress: comrades A. Ryuytel', V. Klauson, V. Kyao, L. Lentsman, O. Merimaa, R. Ristlaan, A-B. Upsi, N. Yuganson, D. Visnapuu, M. Pedak, and L. Shishov; M. Vannas, deputy chairman of the ESSR Supreme Soviet Presidium; deputy chairmen of the ESSR Council of Ministers Kh. Veld'di, A. Gren, A. Tregubov and G. Tynspoyeg; and other leading workers in the republic.

The congress of women of the Estonian SSR continues it work on 15 April.

SHORTCOMINGS IN CITY OF NARVA SUBJECT OF ESTONIAN SUPREME SOVIET SESSION

Tallinn SOVETSKAYA ESTONIYA in Russian 30 Apr 83 p 1

[ETA report: "To Improve Production Efficiency. A Session of the Estonian SSR Supreme Soviet Presidium in Narva"]

[Text] On 28 April the members of the ESSR Supreme Soviet Presidium visited a number of enterprises in Narva city. They familiarized themselves with the work of the collectives in implementing party directions and the decisions contained in decrees by government organs on improving production efficiency and work quality and insuring discipline and organization, and also with the work of the city council on state leadership of labor collectvies and the comprehensive development of the city. The presidium members spoke at meetings of the workers.

On 29 April a session of the ESSR Supreme Soviet Presidium took place, chaired by ESSR Supreme Soviet Presidium chairman A. Ryuytel'. Those participating included the elected deputies of the USSR Supreme Soviet and the ESSR Supreme Soviet for Narva city, leading workers from the Estonian Communist Party gorkom and its apparatus, members of the gorsovet executive committee, department chiefs, administration chiefs, enterprise, establishment and organization managers, and other officials and representatives of the public organizations.

At the session a report was heard from E. Ryzhakov, chairman of the Narva city soviet of working people's deputies executive committee, on the course of fulfillment of the USSR Supreme Soviet Presidium resolution "On the Tasks of Soviets of Working People's Deputies in Further Strengthening State and Labor Discipline and Improving the Utilization of Labor Resources." The following spoke in the discussion on the report: L. Pudova, chairman of the trade union committee at the "Krengol'mskaya manufaktura" combine; Ye. Begishev and M. Obukhov, the directors of the Narva construction materials combine and the bus and taxicab depot; Ye. Volkov, ESSR deputy minister of internal affairs; M. Vannas, deputy chairman of the ESSR Supreme Soviet Presidium, and V. Beekman, member of the ESSR Supreme Soviet Presidium, both deputies of the ESSR Supreme Soviet; K. Kimmel', ESSR procurator; and V. Chetvergov, first secretary of the Estonian Communist Party Narva gorkom. Results were summed up by A. Ryuytel', chairman of the ESSR Supreme Soviet Presidium.

A resolution was adopted in which it was noted that the Narva city soviet of working people's deputies, guided by the decisions of the 26th CPSU Congress and the CPSU Central Committee November (1982) Plenum and exercising its constitutional powers, is carrying out purposeful work to insure observance of the labor law and the strengthening of state and labor discipline, and to strengthen control over the utilization of the labor force.

At a number of enterprises in the city, primarily the "Baltiyets" plant, the "Krengol'mskaya manufaktura" combine, and the Narva furniture combine, stable labor collectives have been formed and 45 percent of the city's industrial production personnel are covered by progressive forms of labor. There has been improvement in the trade union orientation and training of young people. Personnel turnover is being reduced and losses of working time resulting from stoppages and absenteeism, and also from sickness among workers and employees, are being reduced. The program for social building and improvements in labor and everyday conditions for the workers is being implemented on a large scale. All this is exerting a favorable effect on improving labor productivity in the industrial and other sectors of the national economy. Labor productivity growth rates and output growth during the first quarter of this year were higher than during the corresponding periods of the last 2 years.

It was also noted that organizational work by the city soviet to implement party economic and social policy, improve production efficiency and work quality, and instill a communist attitude toward labor is still producing inadequate results. Decisions made by the soviet and its executive committee are not always underpinned with practical measures.

Because of the existing shortcomings in the oragnization of production and dissatisfaction among some workers with the labor and everyday conditions at the Narva construction materials combine, the Baltic ferroconcrete articles and structures plant, the Narva ferroconcrete plant, the Narva experimental foundry and mechanical plant and some others, labor discipline is poor and large personnel turnover is observed. The labor productivity growth rates planned for these enterprises are not being achieved.

For the city as a whole losses of working time are being reduced only slowly, especially losses of entire days allowed with the permission of the administration; these full-day losses calculated per worker are in excess of the corresponding average indicator for the republic. Losses of working time connected with the imperfect organization of labor, lack of rhythm in work, and unproductive expenditures resulting from the elimination of defects and faulty work, and imperfect planning, are also still great. The level of manual labor, including low-productivity heavy physical labor, is also being lowered only slowly. There are substantial shortcomings in consumer social and cultural and everyday services in the city housing development that have been constructed in recent years.

In its work the city soviet executive committee is still failing to rely sufficiently on the soviet's permanent commissions and the deputy groups, and it is not making use of all facilities to activate for this purpose the activity of the comrades' courts, the councils to prevent lawbreaking and other public organs.

The ESSR Supreme Soviet Presidium drew the attention of the city soviet and its executive committee to the need to enhance the role of the planning commission and other subdivisions of the executive committee's apparatus in planning and monitoring the rational utilization of the labor force, reinforcing control over the implementation of measures to reduce personnel turnover and consistently reducing manual labor, primarily heavy physical labor, improving vocational training and skills for workers, taking steps to replenish the labor force through training student youth for labor, recruiting to the maximum women, and also pensioners and invalids, for production, carrying out job-placement work and involving in production persons who are not permanently engaged in socially useful labor. It is essential to implement in a practical way the CPSU course aimed at comprehensive economic and social development, constant improvement in labor efficiency, and increasingly full satisfaction of the workers' growing material and cultural needs.

The executive committee must insure strict control over the fulfillment of the decisions adopted, activate control activity in the permanent commissions and strengthen their interaction with the organs of people's control, law-enforcement organs, trade unions, the Komsomol and other public organizations in the matter of making each of them exercise their powers in strengthening discipline and organization in all elements of production and management.

It is the task of the executive committee to improve state leadership of the labor collectives and in this connection to enhance in every possible way the role of the people's deputies, and to activate the activity of the deputy groups at enterprises and reinforce their contacts with the public organizations in acting to instill creative labor discipline.

It is essential to develop businesslike production initiative among the managers of enterprises, establishments and organizations, and to enhance their personal responsibility for the state of state and labor discipline in the collectives that they lead, and for the rational utilization of the labor force and working time.

The presidium recommended to the executive committee that during the course of work on discussion by the workers of the draft USSR law on labor collectives and enhancement of their role in the management of enterprises, establishments and organizations, it take practical steps to enable the city's labor collectives to exercise their constititutional powers in production and public life. In this sphere, specific tasks were placed on the executive committee regarding the meetings of the labor collectivs at the Narva construction materials combine, the Baltic ferroconcrete articles and structures plant, the Narva ferroconcrete plant, and the Narva experimental foundry and mechanical plant.

WESTERN FALSIFICATIONS OF SOVIET ATHEISM POLICY SCORED

Tallinn SOVETSKAYA ESTONIYA in Russian 2 Apr 83 p 2

/Article by V. Nosovich, candidate of philosophical sciences: "From Illusions to Science"/

> /Text/ "Theism[*]is envious in its attitude toward man and the world; it does not present anything good to them.... But atheism is liberal, bountiful, and free-thinking; it grants to each being his own will, his own talent; it rejoices from the heart in the beauty of nature and the good deeds of man: joy and love do not destroy but give life and affirm."
>
> L. Feuerbach

The late A. Osipov, who devoted many years of his life to serving the Russian Orthodox Church, and who achieved great successes in the field of this service (he became a master of theology and an inspector at the Leningrad Seminary), and then broke with the Orthodox Church and with religion in general, has told us in one of his books that clergymen have designated atheism and non-belief as a dislocation of the consciousness. Of course, in their public activity, in their sermons and publications, the clergy does not risk defining atheism as a psychological anomaly because, of course, the church must operate in a society where such an anomaly has become the norm, and, under these conditions, it is rather belief in God which is a deviation from the norm. Therefore, in order to support the authority of the faith, they resort to masked forms of discrediting the atheist world view, let's say, by means of designating it as a perverse manifestation of religiosity. Thus, it turns out that, as a mass phenomenon, atheism has never existed and can never exist in principle.

To defend this thesis in a society where there is a dominant world view openly proclaiming its own atheistic thrust is quite complicated indeed, and, if we are true to the rules of logic, this is simply impossible. And it is for this reason that they have recourse to various kinds of sophistic devices.

---

[*] Theism (from the Ancient Greek word "theos"--god) signifies faith in a personal god.

Thus, one prominent Orthodox theologian declared that when an atheist or a non-believer commits a good deed, this is Christ acting within him. But atheism is a formal characteristic of a personality, something which has no relation to its active, that is, religious essence.

In the present-day ideological struggle, which, thanks to the efforts of the American administration, has been turned into a psychological war against the USSR and the other countries of the socialist community, the attempt to discredit Marxism-Leninism is very frequently dressed in the clothing of religious democracy. In particular, they have formulated the thesis of the impossibility in principle of living in the world with communists precisely because they are atheists. It was precisely with a reference to atheism that President Reagan in his speech in the British Parliament in June of last year based his call to bury the ideology of Marxism-Leninism in the ash-heap of history.

In the "best" case our ideological and political opponents consider communism as a perverted form of religion, as a "Godless theology," as a doctrine in which the Communist Party is accorded the functions of an all-mighty god. As a rule, the attacks are carried out by way of contrasting atheism with humanistic morality and culture. Thus, the ideologists of Catholic extremism in the Polish People's Republic have designated atheism as the lowest level of human culture, as a factor in the destruction of national traditions and customs, of "that which is most dear in our past." That which is most dear here is religion, Catholicism.

The history of mankind, however, is not a dead body being arbitrarily cut up by a surgeon's scalpel in a dissecting-room. It is a living, developing organism, in which everything is inter-related and inter-acting; everything has its own reason. This also includes atheism and, on a broader scale, free thinking. They must not be thrown overboard from the ship of culture, not only because they have always expressed the interests of the progressive social classes and groups, but also because, in one form or another, they have been a part of every culture and have not been just some kind of annoying exception. Even religious culture itself has been unable to overcome the skeptical attitude toward its own values, as expressed by its own members. In the sacred writing of the Jews and Christians, in the Bible, the following words are uttered by King Solomon in the Book of Ecclesiastes: "The lot of the sons of men and the lot of the animals is one and the same; as these perish so also do those perish, and there is one breath in all, and men have no advantage over the beasts.... All go to one place; all come from dust and all return to dust. Who knows that the spirits of the sons of men rise up and the spirits of animals go down below into the ground?" Nor let us forget the fact that in the epic heritage of every people, including tales, myths, and sagas theomachistic plots are far from rare. And it is precisely therein that the opinion of a people is expressed concerning the true value of human life, of human destiny, and of what is being done to man by man. It was not by chance that K. Marx called the hero of the ancient world Prometheus, who hurled a challenge at the gods in the name of the happiness of all people, the most noble saint and martyr in the philosophical calendar.

The history of European civilization and culture hardly began 2,000 years ago along with the emergence of Christianity, and it would be all the more incorrect to explain its achievements by way of the beneficial influence of this religion. But, you know, this is exactly the viewpoint which the theologians of all the Christian confessions are attempting to impose on the public opinion of all the European peoples, especially in connection with the approaching "round" dates of the Christian calendar; the 500th anniversary of the birthdate of Martin Luther, the baptism of Lithuania and Kievan Rus', the 2000th anniversary of Christianity. It is impossible to blot out of mankind's memory the genuine "godfathers" of spiritual and social progress--Heraclitus and Democritus, Epicurus and Lucretius Carus, Giordano Bruno and Benedict Spinoza, Diderot and Holbach, Herzen and Chernyshevskiy, and thousands and thousands of other thinkers who placed their lives on the altar of struggling for the freedom of the human spirit's development. But they were all materialists and hence atheists.

Thus, what we are talking about is one of the principles of cultural development, and Marxist atheism is the clearest expression of this principle, a legitimate successor and heir to the line of humanism and atheistic materialism. But, at the same time, it has also qualitatively renewed the treasure-house of world free thinking. First of all, the thought that religion is not only and not so much a result of ignorance, a lack of culture, and deceit. For, of course, it is well known that it is possible to be educated and cultured but also a believer. Moreover, believers are encountered even among natural scientists. Hence also Marx's very important viewpoint of religion as a fantastic expression of social powerlessness, poverty, and injustice--these constant companions of mankind right up to the socialist revolution. By soothing believers with the promise of a Heavenly reward for the misery of their life on Earth, religion thereby reconciles them with this misery and so also falcilitates its reinforcement. Therefore, the struggle against religion is a struggle against that world which has brought it to life. As K. Marx wrote, "criticism of Heaven turns into criticism of Earth." Hence, scientific atheism is humane and moral in the true meaning of these words; its highest goal is to give people genuine happiness, and for this purpose it is also necessary to reveal the illusory quality and the transparency of the happiness accorded by religion.

But why then does criticism, or more correctly put, the falsification of scientific atheism have such a definite influence in present-day anti-communist propaganda? In the first place, because religion over the course of many millenia has occupied monopolistic positions in the spiritual life of society. To put it more simply, society has been a believing society and continues to remain such, insofar as capitalism exists, which engenders religion, along with the bourgeoisie, which is vitally concerned with utilizing it. Hence also the opinion about the random quality or even the abnormality of atheism. Furthermore, as long ago as the last century, when the hostility of capitalism to the basic interests of the popular masses began to fully manifest itself, when it became clear that, on the level of principle, capitalism was becoming exhausted, certain ideologists of the bourgeoisie began to link this crisis to the adherance to religious ideals. They, for example, the German philosopher F. Nietzsche, linked the possibility of social rebirth (on the old, that is, private-property-owning basis) with the overcoming of religion, particularly Christianity. "God is dead," Nietzsche proclaimed, and consequently a freedom ensued which had previously been suppressed by Christian morality. Atheism of such a kind is essentially moral nihilism; it has nothing in common with the atheism of Marx and Lenin.

The rejection of the slander directed at scientific atheism, the rejection of retrograde public opinion which puts an equals sign between godlessness and immorality ("you have no cross"), takes place, above all, not in theory, not in discussion, but in practice, in life itself. And indeed, how is the value of a person in a socialist society determined in the first place? By the fullness of the development within him of genuinely human, moral qualities. It is precisely communist morality which calls upon him to be a human being under any circumstances, to preserve within himself human dignity not with the idea of obtaining a profit, tranquility, or because of fear (which does take place in religion), but in the name of the inherent value of the human personality, the real interests of all the members of society.

A person, however, is not an ideal construct, created in accordance with some kind of ethical scheme. The traits of his personality, his opinions, and hence also his acts are the products of the conditions of his life and, consequently, of the life of the society in which he lives. But the society which exists today first arose not on the basis of itself alone but as the result of its previous development. It contains both the old and the new; it is contradictory, for it lives and develops without standing still. And one would have to "commit a sin" against elementary honor, against morality, to see only the old, that which has outlived its time, and not to note (consciously or unconsciously) that which constitutes the principal thrust of building communism--the formation of a universally developed and hence also highly moral personality. Socialism and communism, in K. Marx's opinion, constitute the real humanism. And, therefore, atheistic indoctrination and criticism of the illusory religious ideals comprise a moral task in the highest degree.

IDEA THAT SCIENCE CAN SUPPORT RELIGIOUS FAITH SCORED

Moscow LITERATURNAYA GAZETA in Russian No 10, 9 Mar 83 p 2

[Article: "From Knowledge to Faith?"]

/Text/ A Reader's Letter

Dear Comrades!

I am turning to your newspaper inasmuch as I consider that my questions will be of some interest to you. To a certain extent, of course, they affect our literature and the world-view positions of writers.

Last year's August issue of the journal NAUKA I RELIGIYA published what was, in my opinion, an interesting interview with Academician of the LiSSR Academy of Sciences A. I. Merkis, touching upon important methodological aspects of atheistic propaganda. I will not speak about the indisputably correct statements uttered by this scientist. I wish to draw attention to merely one factor. Concern has been sounded anew regarding the alleged "world-view outlays of education," as I call them. But the academician has not completely successfully, in my opinion, expressed the thought of this phenomenon. He says that presumably "the time has come when not only ignorance but also knowledge among certain people who have obtained an education can serve as a basis for idealistic, even religious, ideas about the world." And he adds: "It seems to me that this has been shown very convincingly by the writer V. Tendryakov in his novella, "Apostol'skaya Komandirovka" ["Apostolic Mission"].

The unusual characterization of the "time which has come" and the high estimate of the novella on this level have evoked at least two questions: how can knowledge serve as the basis for false ideas about the world? What precisely did V. Tendryakov "convincingly show" in his book?

I read this novella--to be sure, a very long time ago--and I could have forgotten something. However, I have the impression that the nature of the doubts of the hero of "The Apostolic Business Trip" is different than what it seems to the scientist who appeared in the journal. And, in any case, it was not knowledge which was bothering Ryl'nikov, this hero....

V. FILIMONOV
Engineer-technologist
Yaroslav Oblast

A Scholar's Reply

At present not only is the pressure of religious ideology not weakening, but the theologians are stating more and more frequently and persistently the thesis of the limitedness of human knowledge, the incapacity of science to provide absolute truth. Moreover, they are proclaiming themselves to be the friends of science and are endeavoring to find in it a justification for the belief in God; they are trying to instill in us the thought that present-day natural science has rejected materialism and has led scientists to an acknowledgement of an "intelligent creator."

The logic of those who reject atheism is simple: since you do not know how the original living cell came into being, and you cannot re-create it in the laboratory, therefore, you should acknowledge that life is God's creation! Purely "scientific arguments" are also brought in here. Utilizing the latest discoveries of molecular biology and genetics, they try to convince us that without God such a super-miracle as the living cell and nature itself could not have been created.

Clergymen are literally trumpeting the fact that the stormy development of knowledge has, so to speak, resolved the former contradiction between science and religion, that now, as they say, the scientists themselves, having exchanged excessive pride for humility, are finding God: some--in the hypothesis of the expanding universe, others--in sub-atomic physics, a third group--in microbiology.... American sociologists have even calculated that nowadays there are presumably more believers among persons with a higher education than among persons with a secondary education. (If this logic is followed, one could assume that illiterate persons, of whom there are quite a few in America, are primarily atheists.)

In his interview Academician Merkis stated correctly: the ideological struggle is now in such a phase wherein atheistic propaganda, as never before, cannot be limited to a criticism of Biblical legends and traditions. It must "make the transition to a criticism of the methodology of the theological grounds" for cognition of the world, to a scientific critique of religion as an illusory world view, to an exposure of the defenders of faith. We must tirelessly demonstrate how the religious world view ACTS LIKE A PARASITE on the living tree of objective human knowledge.

Acts like a parasite.... Right here, I think, is the essence of the matter. As regards the matter of whether or not knowledge can become a basis for the belief in God, on the one hand, it is impossible to speak of knowledge as a guarantee of the scientific world view, and, on the other hand, not to be compelled to see the absolute incommensurability between science and religion. The subjective desires of theologians to present modern-day scientific discoveries as confirmations of the existence of God constitute one thing, and the objective, philosophical importance of these discoveries is something completely different.

We must more decisively and uncompromisingly propagandize the truth that no scientific knowledge could ever constitute the basis of a religious doctrine, to which, as V. I. Lenin noted, "no kind of objective reality corresponds." On the contrary, the epistemological basis of religious inventions has always consisted of ignorance and a lack of knowledge.

I am sure that Merkis understands this truth as well as others. His interview does not give any cause to doubt this. Only the formulation of the thought has been unsuccessfully coordinated, a fact which the reader of your newspaper has mentioned. It is not knowledge which impels "educated" persons toward a religious concept of the world, but ersatz knowledge, pseudo-knowledge. And, I suppose, this special qualification was overlooked in the journal publication.

But what exactly was it that V. Tendryakov "showed completely convincingly" in his novella? Its hero--Yuriy Andreyevich Ryl'nikov--graduated from a Moscow institute, and having majored in theoretical physics, is working as a department head on a popular-scientific journal; he writes articles and collects materials for a future book of which he has some twenty printers' sheets and in which there must resound a "fantastic hymn, frightening the reader by the greatness of nature."

It would seem that everything shaped up normally in the life of this young intellectual. He has an interesting job, a solid family, and realistic dreams about a book. And then something improbable occurs. Ryl'nikov falls prey to a strange illness--a loss of self. As the son of atheists, from whom he inherited a "loving delight in science," he suddenly began to have doubts about its force and necessity. Having "discovered" that people are mortal, this educated person began "to think about death with horror." Science was unable to help.... God to the rescue! "And I arrived at faith," as the hero himself explains it, "from knowledge."

But was it really that way? Was it really from knowledge? In reading this novella, one becomes convinced that Yuriy Andreyevich is not telling the truth. It is not from an abundance of knowledge that he arrives at faith but, on the contrary, from a limitedness of knowledge--both personal and in general human knowledge.

Above all, he is concerned about the relativity of the scientific concepts of the universe. Scientists, he says, have produced many hypotheses about the "creation of the world," but they themselves do not believe in them. "Some place the universe in the cold, while others furnish it with a hot form." But how it was in reality, no one knows. The disillusionment of this journalist is reinforced by a "renowned" physics professor, who in an interview with him frankly declares that all the scientific answers to questions about the creation of the world will be "empty vibrations in the air." And so it turns out that there is no place to go. It's a dead end....

Let us assume that a philosophical naivete and an insufficient knowledge of dialectics have played a bad joke on this young specialist, and he has taken as the truth an old sophism of the advocates of the primacy of faith over reason--the Fideists: "our knowledge is an island in an infinite ocean of the unknown, and the larger the island becomes, the longer become its borders with the unknown."

But is it really the "truth" to say that with the growth of knowledge there is also growth of ignorance? No. With the increase of the known there occurs a reduction of the unknown in the world, although all kinds of problems remain as before, and quite a few new ones are emerging. Therefore, Yuriy Andreyevich's assertion sounds absurd, to the effect that "the modern-day scientist does not know anymore than the ignorant medieval scholastic," as well as his question: is science really necessary? In sum, V. Tendryakov, in my opinion, has successfully reflected something which is quite widespread among a portion of young persons, a "neglect of philosophical education," as a result of which there is an instability of world views among some of them.

The hero of this novella asks provocatively: "And who will prove to me that this God does not exist? Scientists with telescopes and radar installations?" And he himself resolves the dispute as follows: since there are no proofs of the non-existence of God, "therefore, nothing prevents me from adopting such an axiom."

At first glance this point of view may seem harmless and neutral--after all, it does not contain an assertion of the existence of God; it evaluates with equal skepticism the possibility of theism and atheism.... Not everyone knows, however, that if at one time such skepticism was directed against religious dogma and cleared the path for materialism, at the present time it is being directed against the foundations of the scientific world view and is pouring water into the mill of Fideism.

In concluding my reply to the letter which V. Filimonov wrote to LITERATURNAYA GAZETA, I wish to emphasize the following: he has correctly posed the questions. Their very appearance is testimony to the mature, scientific world view of the overwhelming majority of our people. And the everyday task of literature, our press, is to develop and reinforce what has been achieved in this sphere. The main thing is obvious: from knowledge people do not proceed to faith or to seeking after God.

GEORGIAN DISSIDENT 'SCHIZOPHRENIC, NOT MARTYR'

Tbilisi ZARYA VOSTOKA in Russian 6 May 83 p 4

[Article: "But Was She a Martyr? or Concerning the Regular Inventions of Anti-Soviets"]

[Text] Among the many lies spread by the well-known "Liberty" and other Western radio stations we have heard a regular "startling piece of news": "According to a communication from French correspondents in Moscow, the dissident Nazi Shamanauri whom the authorities tried to declare mentally ill, has died in a Tbilisi prison on a hunger strike."

Similar falsifications have already been made use of by certain groups in the West for attacks on our country. And a regular "Soul on Ice" communication about prison, a hunger strike and the malicious intrigues of psychiatrists is clearly more intended for frightening the average man in the West than it is aimed at the reaction of the Soviet people, in whom it is meant to evoke at least perplexity. Thus, the assertion that a "defender of the truth" is well-known, with whose name, in fact, the readers are now just becoming acquainted. However, Nazi Shamanauri was familiar to other citizens of our Republic, in particular Dushetskiy Rayon, where she was known for ridiculous and, at times, scandalous, pranks.

One does not speak ill of the dead. It would be more just to speak no more of the "Shamanauri affair." But there was no good in this affair and likewise, incidentally, there was no such "affair." It was the great personal tragedy of a woman who, in her forties, was unable to settle down with a family, form friendships or pursue any occupation. Why? This is the very thing about which we would rather not speak. But what about the memory of the deceased in black anti-Soviet propaganda? It was a regular "sensation" with a bad taste, but it was unimportant whose name was sullied.

Justice demands that truth be restored. Truth is unavoidable, even if it serves the purpose of showing that the actions and intentions attributed to Nazi Shamanauri bore no relationship to her life. In this spirit, the present correspondent's report is intended to remove from Nazi's name the entire fabric of foul lies with which imaginary "friends" are trying zealously to cover her.

A brilliant future lay before her. To the fatherless girl, the state gave a fine education. She graduated from the Institute of Foreign Languages imeni I. Chavchavadze and the Journalism Faculty, Tbilisi State University.

Nazi's father died at the front when she was only three. Another man, a married man with children, appeared in her home. The general opinion in the rural settlement was sensitive to this sort of thing. Thus, the original family of Nazi's stepfather was destroyed. A wall of alienation, which the daughter experienced in groups of children, rose up around the mother, Sara Inashvili. Then the stepfather returned to his original family. Sara Inashvili became hostile toward the entire world. The poison of distrust toward the good, unifying strength of people penetrated the daughter's emotions.

It is hard to say why the young girl, who had received a good education, as mentioned above, and was working on the newspaper staff of "Soplis Tskhovreba" left Tbilisi and returned to Dusheti. A number of reasons have been suggested, but Nazi's own aunt probably mentioned the chief one: "She felt sorry for her lonely mother."

Again, Nazi entered an oppressive atmosphere. Six heavy iron bolts separated her from the world outside. They were opened only for occasional trips for groceries by the two lonely women. Nazi was beautiful. Many men were ready to offer her hand and heart. But Nazi did not marry. She refused a proffered position (the school needed a teacher of French) and withdrew into herself. In her mind, the idea took form that everything around her was wicked.

"We tried several times to strike up a relationship to my sister and niece," recalls Nazi's uncle, Vano Inashvili, "but each time they accused us of wanting to do away with them and literally drove us out of the house. But once, on New Year's, I made another attempt at reconciliation and brought something for them to eat and drink. Sara threw everything down, screaming, 'You're trying to poison us! You won't succeed!' And she cursed at my son . . ."

The paranoia developed in Nazi as well in time. Along with her mother she began to fear still others besides those close to her. She was convinced that workers at agencies of internal affairs were trying to poison her, for which reason they strewed arsenic over the windows and doors of the house. She explained her lethargy by the statement that the evil eye had fallen upon her face from an opened newspaper. Secret agents living in the women and an oversensitive imagination persecuted them even during trips beyond the boundaries of the Republic. Nazi and her mother "hid" from them in Moscow, Odessa and Yessentuki, rushing by headlong on the streets so that local people whom they happened to meet spoke in consternation. Next the paranoia took on international dimensions: two years ago the ispolkom received Shamanauri's request to protect her from two local inhabitants "who met under her windows, conspiring with an American spy to burn the house down".

All Nazi's "persecutions" were regularly communicated to the most varied authorities. To read and consider a letter was to verify that its statements were absurd.

Little by little the illness took on dangerous forms. Late in the night, glass was smashed to smithereens in the windows of the inspection office for youth affairs of the Dushetskiy Rayon Office of Internal Affairs. Next a row of windows was smashed on the premises of the Office for Assignment of Living Space, as were the display windows of a grocery store. Mother and daughter shattered them by throwing stones. The reason? The windows and shop windows faced the Shamanauri house and from them laser beams radiated the persecuted pair. But the patience of the others was exhausted when Nazi Shamanauri played one additional rowdy prank in public, trying to disrupt the "Vazhaoba" national holiday. Militiamen had to restrain her from rowdiness. But one may not demand from a person, the abnormality of whose behavior is apparent, that she give an account of her actions, even illegal ones, until the doctors have had their say. And so Shamanauri was taken to the outpatient clinic of the forensic medical board in Tbilisi.

Incidentally, if this were not done--what a thought!--foreign "human rights zealots" would turn around 180 degrees and begin to prophesy that the insane woman had been taken into custody without a medical examination.

This is the preface to the appearance of attendants in white coats at Nazi Shamanauri's side in pictures. Yet the story was one that did not cross the boundaries of one mountainous region, a story of one person's mental illness and her relatives' pain and anxiety. No, in this story, there could not be "defenders of justice" or "harsh authorities." Nothing equivalent to this would have happened in any prison. Legally, if there is mental aberration behind antisocial acts, a person is not accused.

But let us return to the expert authority in forensic medicine. According to the finding of the outpatient examination clinic, Nazi Shamanauri behaved in an excited way at the time of the committee hearing; she cried out and scolded the reyon administrators who "wanted to destroy" her. The patient was sent to the inpatient clinic of the expert authority.

"I conversed many times with the patient, was chairman of the in-patient clinic of the expert authority and declare with all the accountability of a specialist in psychiatry that we are dealing with a mental patient, a schizophrenic," states Candidate of Medical Sciences A. Mamardashvili, the leading psychiatrist in Tbilisi. "Naturally, Shamanauri was recognized as irresponsible and thus freed from guilt as an offender for malicious rioting."

The precise formulation by the expert commission ends with the following: "No corrections were added to the testimony of the patient. She was agitated and cried out. Her thinking is paralogical, with a tendency to argumentation and inner tension. She had no objectivity about her situation."

On the basis of the documents of the affair, the psychological and psychiatric consideration of it included, the Commission concluded that "In the course of recent years N. Shamanauri manifested and gradually developed delirious persecution ideas and fears such as that of being poisoned that increased to generalized insanity, social maladaptation and inadequate behavior indicating progressive illness with distraction in thought, emotion and judgement. The progressive illness took the form of schizophrenia. Like a mentally disturbed person, Shamanauri cannot take responsibility in the matter of incriminating slander and is declared irresponsible."

As a result of the finding of the Peoples' Court of Dushetskiy Rayon, it was resolved to leave Shamanauri for treatment in the hospital. In October 1982 she was transferred to the general women's ward of the GSSR clinical psychiatric hospital.

"It was not easy for us to handle her," says the physician who treated Nazi, M. Gogichaishvili. "The patient was in constant tension, maintaining that we were being bribed to poison her food."

"We often talked with her," contributes Z. Kostandova, chief physician of the ward. "She listened attentively, understood everything, and then repeated: "The newspapers are poisoned; there is venom in them; you have been sent."

In the language of specialists, the behavior of Shamanauri is characterized thus: schizophrenia, expressed in critical utterances, thoughts of poisoning and persecution and fear of consuming food. These are the words of Sh. Gamkrelidze, M.D., ward administrator.

"Along with my colleagues, I often held consultations with Shamanauri," adds Corresponding Member of the GSSR Academy of Sciences B. Naneyshvili, head psychiatrist at the GSSR Ministry of Health. "I attest to the following: the illness was clearly manifested. Timely measures were necessary."

As we see there has been nothing in these events of secrecy, bias or malicious intent. There have been people doing all they can to relieve human misery.

We are in the office of the Director, Scientific Research Institute for Psychiatry imeni M. Asatiani, GSSR Ministry of Health. We are speaking with A. Zurabashvili, one of the best-known figures in the Republic, Academician of the GSSR Academy of Sciences and of the USSR Academy of Medical Sciences. His consternation and distress are easy to understand.

"A report that a certain "dissident" Shamanauri had died a martyr's death in prison was a coarse fabrication," says Avlipiy Davidovich. I have talked at length with Nazi and advised her and hereby state that the schizophrenic illness was so pronounced that any medical student could have diagnosed it. She was afraid of everything and everyone, refused to eat at times and then had to be force-fed."

Why did Nazi Shamanauri die?

The specialists have diagnosed the cause of her death quite adequately: the patient developed so-called surgical abdomen, impassability of food, a condition from which any of us may suffer in the course of a lifetime. After consultation with the "emergency care" physicians, the surgeon and physician treating her, it was judged necessary to transfer her to the surgical clinic.

Thus, a sudden illness necessitated surgical measures. The documents of the Tbilisi Institute for Completion of Medical Education, USSR Ministry of Health, attest to what followed.

N. Shamanauri entered the surgical ward of the institute's clinic, was examined by the physician on duty, Candidate of Medical Sciences A. Arveladze, assistant in the academic department of surgery, who confirmed that the patient's general condition was serious and decided that an operation was urgent. An hour after the patient had entered the clinic, A. Arveladze opened her abdominal cavity and confirmed the dynamic ileus diagnosis. This is a condition which, although causing no macroscopic changes in the intestine, leaves it unable to pass its contents. To restore the intestinal function, the surgeon placed a novocaine blockade on the mesentery of the small intestine. After the operation N. Shamanauri was brought to the resuscitation and intensive care ward under the observation of experienced physicians. In the general (resuscitation) ward, highly trained specialists attended her often. A diagnosis--sepsis--was made and the appropriate treatment carried out.

Let us leave the word to those who were with her in these difficult hour.

The Department of Surgery Head, Professor O. Mamamtavrishvili:

I examined the patient frequently. Her condition was extremely serious as it had been before the operation. Unfortunately the treatment did not help. The organism's general weakness and the lowering of the immune system were taking their toll.

Resuscitation and Anesthesiology Ward Head, Professor G. Tsanava:

The operation was carried out as a result of irrefutable medical indications; it was performed with technical adequacy and was not accompanied by complications. Shamanauri was unconscious the entire time; we surrounded her with maximum attention and care, as we do each and every one of our patients.

"The patient was brought to our clinic in extremely serious condition and stayed with us one week. She was operated on promptly by an experienced physician, was under constant observation in the intensive care ward by highly trained physicians" summarizes the Rector, Tbilisi Institute for Completion of Medical Education, Academician of the USSR Academy of Medical Sciences, Lenin Prize Laureate S. Khechinashvili. "The cause of death was sepsis. The pathological-anatomical investigation confirmed this clinical diagnosis."

We must think of the expression used by Academician A. Zurabashvili: "The regrettable fact of this woman's mental illness has been used by certain Western groups for unsavory propaganda efforts. I am disturbed by this insinuation and consider it amoral in regard to the memory of the deceased."

In Western propaganda, such tricks are accepted. When necessary, it is acceptable to tell any lie at all, as long as one speaks out. The account is simple: even if it is disproved, a small black seed still remains in the minds of some average citizens.

For this reason we have told the "sensational" story of the "affair of the dissident Shamanauri." Dirty propaganda is made with dirty hands.

JEHOVAH'S WITNESSES LINKED TO NAZI WAR CRIMES

Moscow KOMSOMOLSKAYA PRAVDA in Russian 13 Jan 83 p 4

[Article by Aleksandr Kupriyanov, KOMSOMOLSKAYA PRAVDA correspondent for Khabarovsk Kray and Magadan Oblast: "The Witnesses"]

[Text] But just what was it in the painting that left the heart so apathetic? The low sky without a horizon? The old belfry amid the cold calmness of the water? The tree limbs, just like broken arms, wearily stretching to the sky?

But no, I convinced myself, for an amateur artist, the painting was skillfully done. To be sure, the theme.... Well, is it really only joy which is woven into our life?

I looked at another work by Anatoliy Ovcharik--it showed a fantastic ship fleeing into the unknown. What kind of winds were filling its sails? Why was the sun such a sickly yellow?

There was an inexplicable "something" here, preventing belief in these canvases. Here is what it was! The paintings contained neither human beings nor time. They had been painted, so to speak, from the sidelines, by an observer of life and not by a participant in it.

I remember how they came into the KOMSOMOLSKAYA PRAVDA's correspondents' center. They were apparently fully contemporary young persons. They attentively looked at the book-shelves. And then, just as if on command, they pulled out of their pockets small, thick volumes. The Bible. Their sole textbook of life.

No, Anatoliy Ovcharik and Galina Grigor'yeva had not come for advice. Nor with a complaint. And not even to argue. They had come to save me from the "great punishment."

"Do you think that you are sitting in an armchair now? No! You are sitting on the bench of the accused! God is judging you, and we are the witnesses," Galina announced.

Jehovah's Witnesses.... But what is it that they promise to people?

A day of "great sorrow"--the Holy War of Armageddon, and then the "thousand-year kingdom of Christ, the son of the great God Jehovah." But who will live in this "kingdom"? The chosen ones--the servants of Jehovah. The other people will supposedly be killed by the "heavenly warriors."

I asked Anatoliy: "And what will happen to the little children whose reason is not yet prepared to accept the 'truth'"?

With downcast eyes he answered as follows: "Their parents will answer for them."

And what about your own mother, Anatoliy? Will it come about that her "egotistical struggle for life" (a formulation from the book of Jehovah's Witnesses entitled "From Paradise Lost to Paradise Regained," published in the United States) will be punished?

Anatoliy's mama is a non-believer. But she attentively listens to every word of the dispute (this time we are sitting in Ovcharikov's house). Unable to restrain herself, she interrupts as follows: "Tolya, a person is afraid for you--you know, you're heading into a dead end; you're running away from people and hiding from life!"

"What dead end? I'm studying music, painting...."

I had occasion to see some slides with scenes from a show put on by believers: with costumes, make-up, and a completely professional stage-set. Perhaps, Tolya's talent is suitable for him to become an artist.

Let's analyze this more thoroughly. In present-day Christianity there is the concept of modernism. The theologians are attempting to adapt religious doctrine to contemporary life, to harmonize it with the achievements of science and culture. Hence such--certainly not religious--forms of communication among the believers. Once, for example, in the Ukraine I had occasion to attend a rehearsal of a vocal-instrumental ensemble of Pentacostalists.

All this is to attract the interest of young people. Let's not forget, however, that the shows put on by the Jehovah's Witnesses are on Biblical themes, the songs are religious, and the painting is abstractly gloomy. In such art, if I may call it that, the leitmotif is the frailty of life on earth, the flight from real life. Anatoliy's mother noted this correctly.

And just try to show a personal active interest "in the world"! Galina Frolova was expelled from the Khabarovsk group of the Witnesses. She had provoked the dissatisfaction of the pastors by purchasing tickets for the theater and participating in the publication of a wall newspaper. Her fellow-believers strictly warned her. However, the girl did not heed their injunctions. Furthermore, she married a "Godless man": an unforgivable act of self-will!

For this same reason the Witnesses expelled Lyudmila Krotova from their ranks. She had dared to find her love outside of the worshippers of the Bible.

No, the festival of life, its beauty, its worries, dreams, and problems are not for the Jehovah's Witnesses. They reject even the natural human attachments. I do not wish to be unsubstantiated: "We detest our own personal relatives in the flesh--father, mother, wife, brothers, and sisters, to be more precise, we love them less." (Here and below citations are drawn from the journals of the Jehovah's Witnesses -- THE WATCHTOWER and AWAKE! that are published in the United States).

They are supposed to remain unmarried until the beginning of Armageddon, not to settle down in married life with children, or at least to have only a few of them so as not to expend on them funds or spiritual forces, and this type of life should be continued not just for a year or two but for dozens of years.

This "mankind-loving" faith rots and breaks the destinies of persons. He who is capable of understanding its true essence in time breaks with the Witnesses without any regrets. Persons of unstable views, who are weak in character and passive yield to the insinuating exhortations of the preachers. If only we could stretch out a helping hand to them in their moments of doubt, if we could argue and demonstrate to them where the truth lies and where lying and deceit occur. Unfortunately, it does not always happen this way.

Anatoliy studied at the Khabarovsk Polytechnical Institute in the Faculty of Architecture. He used to attend Komsomol meetings, where his peers argued about what the man of the future would be like, and he listened. But in his soul he was probably gloating as follows: go ahead and argue; a little place in the future "thousand-year kingdom of Christ" has been prepared for me but not for you.... They did not notice this ambivalence of their comrade-in-study.

I visited the institute. In the Komsomol organizations--the students' and the instructors'--they only shrugged their shoulders: "To this very day we are weak in our atheistic propaganda." In the Khabarovsk City Committee of the Komsomol they showed me an accurate file--a roll of the atheist school. Was I interested in what was studied in school? "They study theory and prepare summaries." But are there among the Komsomol workers persons who are capable of having a little talk with believers, winning them over to social work, in short, practical atheists? Unfortunately, there are no such persons. The school has been in existence for only two years, and it has only five persons from each district of Khabarovsk.

Of course, it is necessary to study theory and to listen to lectures on religion. But it is even more necessary to apply this knowledge in life. You know, the trouble is not only in the fact that Anatoliy has been stupefied by the pastors. He and those like him, while enjoying all the blessings of our society, want to remain on the sidelines of its concerns. Even during election days they demonstratively leave their long-occupied places: "Our main choice has been made. We have only one God and judge--Jehovah."

Moreover, under the influence of their leaders, the sects openly incite their believers to violate Soviet laws. For example, the Jehovah's Witnesses refuse to serve in the ranks of the Soviet Army--"to disarm their own hearts." And this during the present-day anxious times....

Religion has prepared for Anatoliy and Galina a life with a double bottom. My requests to visit a meeting ("workshop") of the Witnesses or a baptism in water always met with a refusal. No, this would be impossible: "my heart is closed to the word of God." But perhaps there was another reason for this -- a conspiracy, the direct observance of which is proscribed by Brooklyn [publications]? There is, you know, a set of instructions on this score. It is called "Organizational Directives for the Heralds of the Kingdom." Look into it and you will be astounded: the terminology here is directly from the arsenal of the imperialist special services! Judge for yourselves: "codes, secret book, cipher, messenger, courier...." If it were only a case of the terminology....

The Witnesses assemble for their prayer meetings one by one, looking back over their shoulder. The literature is illegally shipped in from abroad, re-copied by hand, reprinted, re-photographed, and disseminated through secret channels.

I saw a whole bundle of this literature which had been seized from the underground, and I read it. Therein the socialist community is called nothing else but the "dictatorial-totalitarian bloc." On the other hand, the attitude toward the United States in the Brooklyn publications is deemed most "blessed."

In permitting the publication and reading of religious texts, our legislation assumes that they must not incite believers to violate Soviet laws. However, most of the publications bearing the label "Manufactured in Brooklyn" do not belong to this category. Moreover, I repeat, they are being shipped into the USSR illegally.

THE WATCHTOWER in English (that is, the journal designed to be read by the believers in the capitalist countries) states the following: "We see how the workers in this world attempt to deceive their employers and do not work conscientiously. But the Bible teaches: Slaves, obey your masters in everything."

But in the publications in Russian the attention of the believers is concentrated on the fact that they should not fulfill their assigned tasks.

In their activities the pastors recommend for "hooks" (for drawing young people into the movement) that recruiting methods be employed. It was not by chance that I used the word "hooks." This is precisely the word used to designate attracting new members into the organization by one of the leaders of the Khabarovsk sect, A. G. Voronin, in his own handwritten summary. Therein he provides a detailed description of how the recruiter should be dressed, what tone he should use in speaking, and how he should begin the conversation.

Voronin prepared himself very carefully for the stealing of souls: "In order to favorably dispose young people to yourself, it is necessary to speak of a splendid future, with women--about problems in the family, with men--about justice."

What is this? Instructions for an agent? A textbook for a spy? No, this is a unique kind of textbook for the secret instruction of young believers.

"A Pastor's Diary" was discovered by chance when the police confiscated from Voronin... 18 bottles of kerosene and a tubful of liquid soap. This sinner turned out to be a pastor of the Jehovah's Witnesses. While working as a modest railroad-car cleaner, he had been, to put it simply, engaged in theft. This story was told in the newspaper TIKHOOKEANSKAYA ZVEZDA. Anatoliy Georgiyevich had been pilfering government goods from the station on the sly. Perhaps he had been storing them up in case of Armageddon. Voronin was compelled to answer to a court--a human one, not a divine one. And not for the first time: in the not-too-distant past Voronin had been punished for anti-Soviet activities.

Often the Jehovah's Witnesses use their faith to cover up various--far from divine--affairs and deals. Wherein lies, for example, the "holiness" of the Raykovs (husband and wife), who were convicted of black-marketeering in deficit goods in the Khabarovsk commodity market. Still another Jehovah's Witness--Yuriy Ruban--used to fill up the tank of his motorcycle with stolen gasoline.

Sometimes among the pretenders to the "thousand-year kingdom" one discovers not only present-day sins but also an infamous past.

A. S. Nepochatov is one of the former leaders of the Far Eastern groups of Jehovah's Witnesses. In the role of spiritual mentor he operated at first in the maritime city of Artem and then in Komsomolsk-na-Amur. The believers could hardly have known what A. S. Nepochatov was engaged in during the wartime years. This is mentioned in documents.

From the testimony given during the investigation:

"In May 1941, while in the Trayniki Camp (Poland), I voluntarily entered into service to the Germans in the capacity of 'wachtmann' of the SS guard service.

"My duties as 'wachtmann' included guarding Soviet citizens who were prisoners of the Germans in the concentration camp as well as escorting them to work and back.... I did not take part in round-ups of partisans and Jews nor in the shooting of prisoners, since no one appointed me to do this work."

In 1947 Nepochatov was condemned for treason to the Motherland by a military tribunal of the Kalinin Garrison. In 1965 yet another group of traitors to the Motherland was discovered. One of them--Matviyenko--it turned out, knew Nepochatov.

From the testimony at the investigation of the accused N. G. Matviyenko, dated 20 January 1965, in the city of Krasnodar:

"I knew Nepochatov from our joint service in the Lublin SS Command. Later he was in charge of a 'wachtmann' group in Warsaw; he served with us in L'vov and, as far as I can remember, he was a corporal of the guard in the Buchenwald concentration camp. It would sometimes happen that a certain 'wachtmann' would hesitate, and Nepochatov would show him what to do, that is, to kill the victim."

Matviyenko was sentenced to the highest measure of punishment. Nepochatov managed to avoid the most severe punishment: there were no more living witnesses; not many returned home from the fascist torture-chambers....

Today Aleks Nepochatov shows himself to be an example of service to God. He soothingly intones the words: do not kill, disarm your heart. Voronin instills the advice: do not steal. A truly unprecedented Pharisaical attitude!

It is understandable why Nepochatov and Voronin out of the multiplicity of religious doctrines chose precisely the faith of the Jehovah's Witnesses, which is directed by their "brothers" from across the ocean. This faith is very convenient for them: it offers them the greatest operational scope for anti-social activity and slanderous propaganda. They need the underground structure for far-ranging goals. And, you know, they have calculated things very precisely from a psychological point of view: joint participation in a secret cause binds people together. And the conspiratorial rules of the sect allow the keeping in secret of what the rank-and-file believer does not need to know, but what is known all too well in Brooklyn.

Of course, we must not identify all believers with the personalities of Nepochatov and Voronin. Many of them are sincere in their wandering quests. But why this secret, covered with obscurity, this almost detective-like existence, why should this be for them who wish to live openly and honestly? Why should young people hate this country, which they are being taught to hate by the Nepochatovs? They themselves betrayed it long ago and denied their own people during the difficult days, and now they loudly express their opinions about faith, human rights, and freedom of conscience.

The Jehovah's Witnesses.... In waiting for the advent of the advent of the mythical kingdom of Christ, they have become indifferent to real life. They are only witnesses. A sad fate.

COUNCIL OF MINISTERS ASSESSES LATVIAN PLAN FULFILLMENT

Riga **SOVETSKAYA** LATVIYA in Russian 29 Apr 83 p 1

[Information Item: "In the Council of Ministers Latvian SSR"]

[Text] There has been a meeting of the Latvian SSR Council of Ministers at which the results of the fulfillment of the Latvian SSR State Plan of Economic and Social Development and the Latvian SSR State Budget for the first quarter of 1983 were considered.

It was noted at the meeting that in carrying out the decisions of the May and November (1982) Plenums of the Central Committee of the CPSU, the republic's labor collectives have been directing their efforts toward the accomplishment of the tasks of social and economic construction. There has been a further growth in the economy of the Latvian SSR and an improvement of the well-being of the workers.

The assignments of the State Plan for the first quarter have been fulfilled for all of the most important indicators. Compared with the corresponding period of last year, the industrial production increased by 3.6 percent. Labor productivity increased by 3.7 percent, and the entire increase in industrial production was obtained on this basis. The cost and materials intensiveness of products decreased. Above-plan output worth 37.8 million rubles was sold. The assignments for the production of the highest quality category output have been overfulfilled. The planned increase in the production of consumer goods was achieved.

The republic's kolkhozes and sovkhozes achieved a marked increase in livestock productivity compared to the first quarter of 1982. Our agricultural workers have prepared for the spring field work whose front has been expanding from day to day in a more careful and organized manner than in previous years.

The republic's State Budget was fulfilled for income by 102.4 percent and for expenditures by 95.2 percent. The income plans for the republic budget and for all of the budgets of the rayons and cities of republic subordination have been fulfilled.

At the same time, shortcomings were also noted at the meeting of the Latvian SSR Council of Ministers. The production associations and enterprises of the ministries of light, food, local, woodworking, and construction materials industries and certain others did not deliver output to consumers in accordance with their contracts. The plan for the production of certain types of output--paper, leather footwear, high-grade dishware--was not fulfilled. Individual production associations and enterprises did not fulfill their plans for labor productivity, output costs, accumulations, and technological progress. Increased production in certain branches of industry was held back on account of delays in the commissioning and mastery of the capacities of new enterprises and facilities, and also a lagging in the fulfillment of the shipment plan for a number of highly important economic cargoes.

Shortcomings were taken note of in the field of capital construction, and in certain branches of agricultural production. Individual ministries and departments are performing poor control and analysis work on the results of the financial activities of subordinate enterprises and organizations, which leads to a failure to fulfill profits plans. This applies first of all to the Ministry of the Food Industry, Ministry of Procurements, Ministry of Construction, and Ministry of Communications.

The Latvian SSR Council of Ministers has bound the leaders of the republic's ministries and departments, of the ispolkoms of the local soviets, associations, and enterprises and organizations of union subordination located on the territory of the republic to comprehensively and carefully analyze the results of the fulfillment of the planning assignments for the first quarter of 1983 and, guiding themselves by the decisions of the 26th CPSU Congress and the May and November (1982) Plenums of the CPSU Central Committee, and by the theses and conclusions contained in the addresses of the General Secretary of the CPSU Central Committee Comrade Yu. V. Andropov, to work out and realize measures to eliminate the existing shortcomings and to ensure the fulfillment and overfulfillment of the planning assignments and socialist commitments for 1983 which have been adopted by labor collectives on the basis of a thorough increase in labor productivity, an improvement of the style and methods of economic management, and a strengthening of control over the execution of decisions which have been made.

Especial attention has been directed to the tasks connected with increasing state, labor, and planning discipline, and with the fulfillment of contract commitments for output deliveries.

The Latvian SSR Council of Ministers has bound the leaders of the Ministry of Agriculture, the Ministry of the Fruit and Vegetable Enterprise, the State Committee for Sel'khoztekhnika, and the rayon agro-industrial associations to take all of the necessary measures to ensure the unconditional fulfillment of the assignments for 1983 as stipulated by the Latvian SSR Food Program. The chief attention here has to be concentrated on the performance of the spring sowing rapidly and in the best agro-technical times, on the effective use of equipment and fertilizers, on the punctual preparation of pasture lands, and on the organized transfer of livestock to pasture maintenance. The work aimed at an extensive introduction into agricultural production of team contracting has to be improved.

The decision which was adopted defines concrete measures to eliminate shortcomings in capital construction, expand the assortment and improve the quality of consumer goods, and improve the work of the service sphere.

The meeting was addressed by the Chairman of the Latvian SSR Council of Ministers Yu. Ya. Ruben.

The work of the meeting was participated in by the Secretary of the Central Committee of the Communist Party of Latvia E. Ya. Aushkap.

DYBENKO REVIEWS LITHUANIAN WORK WITH LETTERS

Vilnius SOVETSKAYA LITVA in Russian 16 Apr 83 p 2

[Speech by N.K. Dybenko, second secretary of the Lithuanian CP Central Committee, at the 9th plenum of the Lithuanian CP Central Committee held 14 April 1983: "On The Course of Fulfillment of the Decree of the 16h Plenum of the Central Committee of the Communist Party of Lithuania of 26 August 1980 "On Further Improving Work with Letters and Improving Reception of Workers at Party, Soviet and Economic Organs and Public Organizations in the Light of Requirements of the CPSU Central Committee"]

[Text] Thorough analysis of the work of the republic party organization on implementing the decisions of the 26th party congress, subsequent plenums of the CPSU Central Committee stemming from the address of General Secretary of the CPSU Central Committee Comrade Yu.V. Andropov "The USSR Is 60 Years Old," offered in the substantive report of Comrade P.P. Grishkyavichus, first secretary of the Central Committee of the Communist Party of Lithuania and in the presentations of participants of the present plenum convincingly attests to the fact that the republic's party, komsomol and trade-union organizations, state organs and soviets of people's deputies are doing a great deal of work on further boosting the productive forces of science and culture and developing and strengthening the fraternity and friendship of the peoples of our country and also strengthening collective social relationships, Soviet statehood and democracy as well as educating the socialist and international consciousness of the workers. As emphasized in the address of General Secretary of the CPSU Central Committee Comrade Yu.V. Andropov "The USSR Is 60 Years Old," the solution of these tasks is of major importance for "the increasingly broad participation of workers of all nationalities in the management of public and state affairs."

It can be pointed out with satisfaction that during the time that has elapsed since the 16th Plenum of the Central Committee of the Communist Party of Lithuania party, soviet, trade-union and economic organizations of the republic have markedly raised the level of work in fulfilling the decree of the CPSU Central Committee "On Measures for Further Improving Work with Letters and Proposals of Workers in the Light of the Decisions of the 26th CPSU Congress." It has become an integral part of the organizationl and political work of party committees in the fulfillment of tasks set by the 26th party congress.

The scale and scope of this work can be judged on the basis of the following data: in the past 2 years alone, the Central Committee of the Communist Party of Lithuania received 12,700 letters and about 3,800 visitors were received. Party gorkoms and raykoms have examined 17,480 letters and 15,500 persons were received. No less a load is carried in this regard by soviet, economic, trade-union and komsomol organs and editorial boards of newspapers, journals, television and radio of the republic.

Without a doubt, this tremendous work requires of all organs and their heads a high level of organization, preciseness, enterprise, sensitivity and determined and deeper penetration into problems on both the state and personal levels, which considerations are brought out by workers in letters or in personal contacts. The tone of such an attitude is primarily set by the CPSU Central Committee. Local party organs regularly receive summarizing data of letters and petitions of citizens and provide questions and exhaustive recommendations for their solution. In analysis of the most pressing problems and complaints, frequently officials of the apparatus of the CPSU Central Committee or on their behalf heads of union ministries and departments directly take part locally.

The television-program series entitled "Solved Locally," organized on the initiative of the Letter Department of the CPSU Central Committee, enjoys great popularity among the population. It not only summarizes work methods acquired locally in dealing with citizens but also reveal unfinished items of work and spell out ways and means of effectively eliminating them.

Finally, we are all acquainted with the recently adopted decree of the Politburo of the CPSU Central Committee which again requires the application of a genuine party attitude to the letters and proposals of workers, emphasizing in this connection the fact that every party and soviet worker, every head of an enterprise or institution has the obligation of looking on this work as a duty to the people and the party.

On the basis of the requirements of the CPSU Central Committee and in fulfillment of the decisions of the 16th Plenum of the Central Committee of the Communist Party of Lithuania, the Bureau and the secretariat of the Central Committee of the Communist Party of Lithuania, the Presidium of the Supreme Council and the Council of Ministers of Lithuanian SSR and party, soviet, trade-union and komsomol organizations of the republic as well as economic heads have paid and continue to pay daily attention to this work.

Thus, in the past 2 years, 87 questions relating to proposals, petitions and complaints were examined at meetings of the Bureau and the secretariat of the Central Committee of the Communist Party of Lithuania and in the Presidium of the Lithuanian SSR Supreme Soviet and Council of Ministers. There were adopted, for example, such joint decrees of the Lithuanian SSR Communist Party and the Council of Ministers as "On Upgrading the Role of Ministries, Departments and Local Organs in Increasing the Production and the Quality of Consumer Goods," "On Additional Measures for Improvement of the Population's Health Protection, "On Measures for Further Improvement of Housing, Municipal-Everyday and Social-Cultural Conditions of the Life of the Rural Population," "On Further Developing the Network of Dining Rooms and Improving Public Dining at Kolkhozes, Sovkhozes and Other State Establishments of the Republic During 1982-1985 and a number of other decrees. Questions derived from letters were discussed at 19 plenums and many meetings of bureaus of party gorkoms and raykoms, sessions of city and rayon soviets of people's deputies, at trade-union and komsomol organs and at collegia of ministries and departments. More than half of the letters received at the Central Committee of the Communist Party of Lithuania were directly examined by secretaries of the Central Committee and 85 percent were monitored by personnel of the apparatus of the Central Committee.

The leadership of the Central Committee of the Communist Party is regularly informed on the character of received petitions, how such messages are used and what is specifically done by these or those organs in realization of the proposals, critical comments and valid requests.

The state of this work has been checked at almost 400 organizations, and 92 memorandums and other information materials were prepared.

In accordance with the decisions of the plenum of the Central Committee of the Communist Party of Lithuania, reports of heads to their own collectives on work with letters and oral statements of workers have become widespread in the republic. During the 2 years, almost 5,000 heads reported on these questions at enterprises, organizations and farms.

Single political days have become popular and vitally necessary for workers; work at place of residence has become more active.

Further improvement of work with letters and arrangements for reception of citizens is being abetted by television and radio broadcasts of "Open Letter Days" conducted by party committees jointly with editors of newspapers and journals in cities, rural rayons and at individual enterprises and on farms.

Recently the holding of rural gatherings in villages and settlements was revived. These end as a rule with individual reception of rural workers by heads of local soviets and rayon organizations.

In most of the republic's departments and institutions the necessary order has been established in arrangements for reception of citizens on personal problems. Work with letters and reception of citizens has been perceptibly improved at the Presidium of the Supreme Soviet, the Council of Ministers, the republic Committee of People's Control, the Lithuanian Republic Trade-Union Council and the Ministries of Railways, Finances and the Construction Materials Industry and at the Klaypeda, Shyaulyay and Alitus city organizations and the Novovil'nyaskiy, Paneveshskiy, Kupishkskiy, Shyaulyayskiy, Shal'chininkskiy, Shvencheyskiy and a number of other rayon party organizations.

The single-minded work of the republic party organization on improving activity relating to the fulfillment of the decisions of the 16th Plenum of the Central Committee of the Communist Party of Lithuania pertaining to improvement of work with letters and complaints of workers and reception arrangements for personal problems have made it possible to significantly improve organization of this work in other parts of the party, state and social apparatus and public organizations.

For example, the receipt of repeat letters addressed to the CPSU Central Committee from the republic in the last 2 years was reduced 22 percent, while the number of letters and complaints dealing with questions of operation of administrative organs, pension provisions, health care and medical services was reduced 30 percent. The great majority of letters and petitions were examined in prescribed periods; of these, each fourth received a positive solution; as for the remaining notifications, exhaustive answers were provided.

All this has contributed to the further development of the labor, social and political activity of workers and the expansion of opportunities for active participation of workers, kolkhoz farmers and the intelligentsia in the operation of enterprises, institutions and organizations and in the final analysis promoted the enhancement of the role of the labor collective in the life of our socialist society, which is prescribed by the draft of a USSR law on this question now under discussion.

At the 16th Plenum of the Central Committee of the Communist Party of Lithuania, criticism was leveled at a number of party, soviet and economic organs for defects and lapses in solution of the housing problem, which has produced a large flow of letters and complaints by citizens. It should be noted that many heads have made the proper conclusions and have applied a great deal of effort and energy for liquidation of the lag in housing construction and establishment of order in allocations of housing. This is borne out by a reduction in the number of petitions and complaints reaching the Central Committee of Lithuania and other republic organs concerning these questions.

In the republic, during the 2 years of the 11th Five-Year Plan, almost 3.5 million square meters of floorspace were made available for use. State funds alone made it possible to turn over for use 125,000 square meters of housing for use. Housing construction is successfully proceeding with the use of kolkhoz funds.

It is necessary to point out the work done in recent years on improvement of quality of housing construction. Thus whereas in 1980 a rating of "good" and "excellent" was given to 74 percent of housing erected with the use of state and cooperative funds, in 1982 this indicator reached 85 percent. The time of moving in new tenants into newly opened dwellings was reduced. A number of measures were adopted on further improving operation and maintenance of housing; 426 old buildings were torn down, while the 1,335 families living in these houses received well-appointed accommodations. Huts were eliminated and emergency housing was reduced in many cities and rayons of the republics. Carefully thought out work in its turn reduced the number of letters on housing problems.

At the same time, despite general positive results, serious defects and lapses have occurred in the development of housing construction and municipal services in the republic, increasing the flow of complaints and criticisms of workers. For example, last year a lag was permitted to happen in opening up of housing for the Ministry of Agriculture, the State Committee for Selkhoztekhnika and a number of other clients. During the 2 years of the 11th Five-Year Plan, there failed to go into use almost 30,000 square meters of floorspace built with cooperative funds. Cooperative housing failed to complete plans in rural areas of Ignalinskiy, Shyaulyayskiy, Akmyanskiy, Alitusskiy, Moletsskiy, Tel'shyayskiy and a number of other rayons.

Cases exist of poor-quality performance of construction work. Forty-four houses erected by Kaunasstroy Trust, Klaypeda Construction Trust and Shyaulyayskiy House Construction Combine and checked last year by Gosstroy disclosed that 41 had significant defects. This situation is being aggravated by the fact that in the fourth quarter about 40 percent of the annual volume of planned housing construction is being turned over for use, and rush work never results in good quality.

For example, since 1981 the residents of Experimental High Rise No 67 on Ulitsa Arkhitektu have been complaining of serious flaws in work that occurred during construction. They turned with collective requests to the housing operation service, the rayispolkom and gorispolkom, the house construction combine and other departments, which as a rule assure the persons involved that these defects will be immediately rectified. Finally, they received an answer from the Vilnius City Party Committee in which it was stated "that the reason for the leaks of atmospheric water via the awning to the main entrance would be investigated until 1 July 1983; it was also proposed to the Oktyabr'skiy Rayon Ispolkom to improve propaganda work among the residents of the house."

As a rule provision of amenities lags in the areas of the new regions of mass construction. For example, at the beginning of the current year, the lag in scheduled work on provision of amenities amounted roughly to 2 million rubles. This especially applies to the microrayons of Sheshkine in Vilnius, Engulyay and Kalnechyay in Kaunas and the cities of Alitus, Mazheykyay, Gargzhday and others.

As before, there are many defects in the work of housing and municipal services. The flow of letters and complaints relating to these questions is particularly great from Vilnius, where the area of old decrepit houses exceeds 300,000 square meters; these are inhabited by more than 10,000 families. Recently, the Bureau of the Central Committee of the Communist Party of Lithuania studied the question "On the Work of Party and Soviet Organizations of the City of Vilnius on Improvement of Housing, Municipal and Transport Services for the Population in the Light of the Decisions of the 26th CPSU Congress." This question was then discussed at a plenum of the Vilnius Party Gorkom. It is a matter of honor for the city party organization to successfully fulfill outlined measures and to significantly improve municipal and consumer services for the population of the capital.

We know that the new housing legislation provides for first priority granting of housing to a large group of citizens, in which connection, of course, priority is moved back for other persons, which provokes dissatisfaction in them. The legislation raises the level of guarantees of rights of citizens for housing; specifically, this significantly restricts the eviction of citizens from housing they occupy without provision of other housing space.

It is necessary that party, soviet, trade-union and economic organs effectively engage in the work of explaining the new housing legislation. This is also dictated by the fact that as a result of poor procuratorial surveillance, gross violations of housing legislation still occur at a number of organizations belonging to the Ministry of Rural Construction, the Lithuanian Union of Consumer Cooperatives, the Zarasayskiy Rayon Association of the State Committee for Selkhoztekhnika, the Shakyayskoye Motor Highway Administration, the Taurage Plant for Calculating-Machine Parts, the Panevezhis Sugar Refinery and several other enterprises and organizations.

Frequently, the constitutional rights of citizens to housing are violated because of legal ignorance and poor preparation of materials. Of the total number of suits initiated in 1982 by ispolkoms and departments for eviction of citizens without provision of other housing, almost 30 percent of the suits were rejected. Many such cases were stopped by ispolkoms and departments because of their incompatibility with the law. Existing circumstances increase still further the flow of complaints of workers that need not have occurred with an intelligent approach to the solution of housing problems. Some local party organizations still do not provide a principled evaluation to the actions of economic and trade-union heads, allowing cases of violation of legislation in allocation of housing. For example, in the allocation of apartments at a building built by the Taurage Administration of Mezhkolkhozstroy, the chairman of the local-trade union committee, Comrade Andriyekus, possessing a 4-room well-appointed apartment, obtained an apartment in the new house, and a number of other heads of this administration illegally obtained apartments, while the family of a female worker, an invalid of the second group at Eskerayte, living in a private apartment, was provided no housing. Such "fair" allocation was approved by the rayon party commitee and the rayispolkom.

The Central Committee of the Communist Party of Lithuania, the Council of Ministers and appropriate ministries and departments of the republic are implementing a number of concrete steps for the further improvement of consumer services. Specifically, the Ministry of Trade and the board of the Lithuanian Union of Consumer Cooperatives changed the operational regimes of 2,000 stores and 320 public-dining enterprises. The operation of stores dealing in manufactured goods was extended by one hour. A group of the stores dealing in manufactured goods was assigned to stay open on Mondays; in microrayons of cities stores operate with extended hours. During spring field work, enterprises of trade and public dining of the union of consumer cooperatives will work extended hours, taking into account the wishes of rural workers. But positive changes should not serve as a screen for existing defects in this matter.

Trade organizations still exert an insufficient influence on the establishment of targets for the production of consumer goods and tolerate violations of state discipline in the fulfillment of contractual obligations relating to their delivery. Interruptions are allowed to occur in the sale of goods that are available at depots and warehouses. In the city of Kaunas and in Ionavskiy, Shyaulyayskiy and Myazheykskiy rayons, order is being introduced slowly in observance of trade rules.

The operational conditions of consumer-service enterprises have also been changed. At the present time, 72 percent of the collectives of consumer services in cities and 88 percent in rural areas operate at a time that is most convenient for the population. But it should be pointed out that many defects are also to be found in the operation of consumer services. Here scheduled time for completion of orders is frequently not adhered to; production and service standards are low, and possibilites are not fully realized for the development of such services as repair of radio and television equipment, household machines and instruments, housing repairs and a number of others. Rural consumer services are insufficiently developed. These questions require the constant attention of rayon party committees and rayon ispolkoms.

Taking into account the wishes and critical comments of citizens, efforts are being applied to improve the operation of transport. A number of railroad stations and bus terminals have either been put into operation or remodeled, and the material base of transport enterprises has been improved. Thirty-seven city, 77 suburban and 33 intercity bus routes have been newly opened with a total length of 8,000 kilometers.

Prior sale of tickets will help save passengers' time and reduce the load at railroad and bus stations. In Vilnius, the railroad ticket booth sells daily in this way an average of roughly 1,660 tickets.

The republic's aviation industry has not done badly in boosting the quality of passenger service, improving advertising work and selling and delivering tickets to the population at place of work, rest or residence.

But despite the measures adopted for improving passenger service, many lapses still exist in transport operations. Analysis of passenger complaints shows that most of them are due to trip interruptions and low standards of service. The present route system of motor transport does not always completely satisfy the population's needs. One of the reasons for this is the fact that some gorispolkoms are not adopting serious measures for differentiation of the time of start and finish of work of organizations, enterprises and educational institutions.

Trolleybus transport still does not operate efficiently. Residents of Vilnius and Kaunas frequently complain of nonadherence to schedules and overloading of buses during peak hours. Of late, down time of trolleybuses has increased because of technical inoperativeness; at the same time, the capacities of trolleybuses today permit normal servicing of only 52 percent of the machines. The construction of Trolleybus Depot No 2 in Vilnius has been going on since 1979, but the amount of completed work amounts to only 28 percent of estimated cost. Despite repeated demands on transport organizations and the soviet organs of a number of rayons, many terminals in Plungeskiy, Radvilishkskiy and other rayons continue to present a neglected and unsightly appearance.

Comrades! At the 16th Plenum of the Central Committee of the Communist Party of Lithuania, the republic Ministry of Health was criticized because it feebly reacted to notification and complaints concerning defects in the operation of therapeutic and preventive institutions and abuses of some physicians.

These questions were the subject of discussion at the Bureau of the Central Committee of the Communist Party of Lithuania. It should be said that at the present time the top leadership of the ministry is adopting decisive measures for bringing in order into medical institutions; notifications and signals coming from the population are carefully verified with trips to affected places by the minister, Comrade I. Platukis,and officials of the apparatus. Effective measures are being adopted on their basis.

In the light of tasks advanced by the November (1982) Plenum of the CPSU Central Committee, an operational regime has been outlined for polyclinics and information on the manner of receiving patients has been improved.

The reduction of complaints in the sphere of medical service is being abetted by systematically organized meetings of chief physicians of therapy and preventive [medicine] institutions that service the districts and the population attached to them. Public councils have done important work. They monitor work with letters and propsals at therapy and preventive [medicine] institutions. A number of medical personnel had criminal proceedings instituted against them for bribery and abuse of official position.

At the same time, it should be pointed out that the republic Ministry of Health does not fully utilized the possibilities of improving the quality of medical assistance rendered to the population of the republic. Deficiencies in the operation of stations, first-aid divisions and certain polyclinical and pharmacy institutions is being eliminated particarly slowly. Preventive work has not been duly developed especially in the prevention of certain widespread diseases. More attention should be given to further improvement of educational work at collectives of medical institutions.

There is still another category of letters with which we are concerned--these are complaints relating to labor questions: illegal firings, transfers to other work without the consent of the worker, limitations in wages. In 2 years just the Central Committee of the Communist Party of Lithuania, the Lithuanian Republic Trade-Union Council and republic ministries as well as organs of the public prosecutor received in excess of 3,670 letters concerning labor disputes. Analysis shows that the leadership of trade-union organizations has not derived the necessary conclusions from criticism by the Central Committee of the Communist Party at the plenum. Complaints and notifications are received most frequently from enterprises, institutions and organizations of the Ministries of Motor Transport and Highways, Trade, Consumer Services and Light Industry. Analysis of the letters shows that most of the complaints raised in the letters can be solved locally directly by management together with the trade-union committee; it is not because of lack of attention to signals but more frequently because of a lack of desire to penetrate deeply into the heart of labor conflicts that workers find themselves obliged to turn to superior organs. Thus, at Tetenay Sovokhoz in Shal'chinikskiy Rayon an order of the former director M. Sidlyarevich dismissed a brigade of builders, a portion of the workers were illegally transferred to other work and still others were fired. For this reason the brigade did not work for 2 weeks; the problem was rightly settled only after the workers appealed to the Central Committee of the Communist Party of Lithuania.

Violations of laws regulating the labor of women and young people have not been eliminated. It is enough to say that enterprises of the meat and dairy industry of the republic alone employed last year almost 1,500 women in the performance of heavy physical labor.

Trade-Union committees and commissions for labor disputes frequently examine labor disputes of workers without a thorough verification and investigation of notifications. They do not always require of management the presentation of necessary documents and dismissals. Adopted decisions are poorly explained and are not always based on existing legislation. According to statistical reporting data, of the total number of decisions appealed by workers in people's courts, 56 percent of the decisions of trade union committees were ack acknowledged as not being in accordance with labor legislation requirements.

The Lithuanian Republic Trade-Union Council and its republic committees are still analyzing insufficiently deeply the reasons for violations of labor laws and are exercising poor control over the work of ministries and departments in straightening things out and defending the rights of workers and employes and do not always hold strictly accountable violators of labor legislation.

At the 16th Plenum of the Central Committee of the Communist Party of Lithuania, special concern was voiced about complaints of workers concerning unseemly behavior of a number of supervisors and their abuses of their official position. This was also discussed in detail at a meeting of the republic party-economic aktiv deliberating tasks of party, soviet and economic organs of the republic relating to strengthening of state and labor discipline in the light of the requirements of the November (1982) Plenum of the CPSU Central Committee. But today the number of complaints about individual supervisors not only has not been reduced but, on the contrary, has even grown. Letters dealing with this question most of all comes from the cities of Kaunas, Shyaulyay, Panevezhis and Plungeskiy, Skuodasskiy, Ukmergskiy, Ignalinskiy and Vil'nyusskiy rayons.

In the last 2 years, republic and union organs have received a large number of letters concerning defects in the organization of collective gardening in the suburban areas of Vilnius and other cities. The Central Committee of the Communist Party of Lithuania has studied this question. In the course of preparation for it, many cases were disclosed of unjustified allocation of garden plots and and issuing of permits for building of cottages, illegal acquisition of construction materials and use of construction machines and transport. For committing improper actions in the fitting out of garden plots, 700 gardeners, who are members of the CPSU, were imposed party penalties. A number of comrades were punished administratively or had criminal proceedings instituted against them. Basic measures were outlined for the regulation of thhis matter, and they are being undeviatingly fulfilled. At the same time these questions should be under the unrelenting control of party, soviet and trade-union organizations.

Comrades! We must undeviatingly see to it that all sectors of production and distribution have in operation a well-defined system of strict accounting and control eliminating any possibility of looting of state or public property. The responsibility of economic heads should be increased in every possible way for the safety of socialist property, assurance of economical expenditure of material and financial resources. A decisive end should be put to the practice of total absolution and taking away of accountability of persons exposed of thefts or guilty of inflicting some material damage to whom measures prescribed by legislation frequently are not applied.

We cannot but help be concerned with the state of affairs relating to crime in the republic, which increased in the last quarter.

Administrative organs are still insufficiently actively working on imposing the necessary order in this regard with respect to the fulfillment of the directives of the CPSU Central Committee on increasing the struggle against thefts, bribery and speculation. The task of party and soviet organs is to provide effective assistance in this.

At the 16th Plenum of the Central Committee of the Communist Party of Lithuania, much attention was given to questions of satisfying the needs and wishes of participants of the Great Patriotic War. Questions pertaining to war veterans are regularly discussed at the Central Committee of the Communist Party of Lithuania, the Presidium of the Supreme Soviet and the Council of Ministers of the republic and at ministries and departments. Additional measures are being carried out with respect to improving their housing, material and living conditions. Everywhere, a systematic checkup of their health at place of residence, and immediate services at medical institutions have been organized.

After the 16th Plenum of the Central Committee of the Communist Party of Lithuania, the housing conditions of more than 300 veterans of the Great Patriotic War and 55 families of dead soldiers were improved.

A large number of letters of former front-line soldiers express enthusiastic gratitude to the party and the state for the granting of benefits and privileges to them. But letters of veterans are also received to the effect that their request was not honored and that they have been refused allotment of sanatorium trip passes or the granting of other benefits. Party, soviet, trade-union and economic organs must adopt effective measures for the eradication of formalism and red tape in the satisfaction of valid requests and wishes of participants of the war and the families of killed soldiers.

Comrades! In conclusion, I would like to express my thoughts today on the question of so-called anonymous letters and notifications of workers. Their number has been growing from year to year. Last year, 1,194 such appeals were received. Each second letter from Anikshchyayskiy, Kupishkskiy and Skuodasskiy Rayon and each third letter from Kedaynskiy, Ionavskiy, Raseynskiy and Yurbarkskiy Rayon was unsigned. Something like 962 letters of the number of those verified under the control of apparatus personnel dealt with questions of unseemly conduct of personnel and with abuse of their official position. In checking, partial or complete confirmation was found for the facts pointed out in 48 percent of the letters. In such a case, it is understandable that the authors, fearing reactions to their communications, deliberately concealed their names. At the same time, more than half of the facts were not confirmed and were false. Their authors as a rule deliberately distort the facts and engage in the slander of honest workers; they blacken our conditions. Frequently, the conducted checks as a rule traumatize perfectly innocent people and instill in them lack of confidence in their work and behavior and making of decisions. They create around persons in authority an atmosphere of false suspicion or lack of trust. It would seem that such an approach to the matter does not correspond to the directives of the 26th CPSU Congress where it was clearly and precisely stated that "when it comes to any kind of anonymous slander, the party point of view is well known: it must have no place in our life! Those who come out with the truth and businesslike criticism have no reason to hide their faces." Unfortunately, we still have such people who have two faces--one that is friendly and smiling, the other filled with gall and hatred toward all the life around him. The latter, hiding under fictitious names and addresses, cast mud on Soviet and socialist life and on our worthy people. Of course, such people among us are only isolated individuals, but it would be desirable for them not to be around.

Realization of the decisions of the 26th CPSU Congress, the decrees of the Politburo of the CPSU Central Committee, demands of the party for constant improvement of work with letters and oral appeals of workers is not a short-tern campaign but rather purposeful and creative work not only with respect to the satisfaction of the daily needs of workers and the elimination of the reasons responsible for criticisms and complaints and active work of involving the broad masses in management of production and in the solution of state problems. Improvement of work with letters, constant contacts with people constitute an improvement in the style of work of party committees and all communists for mobilization of workers for the fulfillment of plans of economic and social development and of the targets of the 11th Five-Year Plan.

Allow me to assure the CPSU Central Commitee that the republic party organization will honorably fulfill the set tasks.

HOUSING CONSTRUCTION PROBLEMS FOCUS OF LATVIAN BURO SESSION

Riga SOVETSKAYA LATVIYA in Russian 14 Apr 83 p 1

[Information Item: "In the Central Committee of the Communist Party of Latvia"]

[Text] The strengthening of organizational work to introduce the collective contract into kolkhoz and sovkhoz production was examined at a regular meeting of the Bureau of the Central Committee of the Communist Party of Latvia. During the course of the discussion it was noted that the Central Committee of the Communist Party of Latvia attributes great importance to the extensive introduction of the collective contract as one of the most important means of increasing the labor activeness of rural workers, strengthening discipline and cost accounting, and successfully fulfilling the Food Program. On the basis of the experience which has been gained both in our republic and in various zones of the country, measures have been mapped out for the extensive introduction of the collective contract in the agricultural production of the Latvian SSR, and concrete tasks have been set for the Commission on the Agro-Industrial Complex of the Presidium of the Latvian SSR Council of Ministers, the party raykoms, rayispolkoms, the raykoms of the agricultural workers' trade union, and the primary party organizations of the kolkhozes and sovkhozes.

The Bureau of the Central Committee of the Communist Party of Latvia also considered the question of measures to ensure the fulfillment of the plans for the construction of apartment houses and everyday social objects. It was noted that in accordance with the decisions of the 26th CPSU Congress and the Latvian SSR social and economic development programs for the 11th Five-Year Plan, housing and cultural and domestic construction have been initiated on a wide scale in the republic. However, the work which is being done in this direction does not yet fully correspond to the party's demands. In a number of ministries and departments the necessary concern is not being shown for the fulfillment of housing construction plans. The construction of housing is being performed with great lagging in Aluksnenskiy, Balvskiy, Gulbenskiy, Tukumskiy, and Ventspilsskiy Rayons. The construction of apartment houses with the monies of housing construction cooperatives and individual builders is poorly organized. Insufficient attention is being given to the preservation of the existing housing fund, and to punctual and quality capital repairs for it. There has been a serious lagging in the construction of children's preschool institutions and general educational schools. Many construction organizations are conducting their work on a low organizational and technical level. There are essential shortcomings in supplying construction projects with structural elements and products, and full use is not being made of the capacities of house building.

The leaders of ministries and departments and the ispolkoms of the Soviets of People's Deputies have been ordered to fundamentally change their attitude toward civil housing construction, and to develop and carry out additional measures which will ensure the commissioning of houses and social and domestic facilities in accordance with the assignments of the 5-year plan. The decree of the Bureau of the Central Committee of the Communist Party of Latvia binds city and rayon party committees to ensure the performance of well-directed organizational work, and to increase the effectiveness of the control and the demands made upon cadres for the unconditional fulfillment of housing and cultural and domestic construction plans.

The meeting examined the work of the Bauskiy raykom of the party in directing the training of cadres in the mass occupations for agricultural production and making them permanent in the village. While taking note of certain positive aspects of this work, the Bureau at the same time pointed out that the Bauskiy raykom, the rayispolkom, the raykom of the Komsomol, and the kolkhozes and sovkhozes were also marked by important shortcomings. A shortage of cadres of mechanization and animal husbandry specialists and construction workers continues to be an acute problem on the rayon's farms. Labor turnover continues to be high. On a number of farms the necessary attention is not being given to raising the general educational level and the occupational level of the mechanization specialists. The necessary working and living conditions are being created slowly for rural inhabitants. The decree which has been adopted on this matter provides for measures to eliminate these shortcomings, and to improve the entire work of training cadres in the mass occupations for agricultural production and making them permanent in the village. Concrete tasks have been set in this regard for the Bauskiy party raykom, the rayispolkom, the rayon agro-industrial association, the raykom of the Komsomol, the Latvian SSR State Committee for Vocational and Technical Education, and the party, trade union, and Komsomol organizations of the kolkhozes and sovkhozes.

REGIONAL

POST-WAR ACTIVITIES OF LITHUANIAN PARTISAN BANDS RECALLED

Struggle Against Kulaks, Nationalists

Vilnius TIESA in Lithuanian 11 Mar 83 p 2

/Article by Antanas Virsulis: 'The Memory of the Heart Is Always Alive: A publicist's Thoughts about the Post-War Struggles of the People's defenders against the Armed Bands of Bourgeois Nationalists"/

[Excerpts] In every person's life there are events which stick deeply and for all time in the memory. For people of my generation such scenes come mostly from the initial years after the war. Historical changes were taking place in Lithuania at that time; they came to every family, every house. Many dramatic and frightful episodes were left in the receptive memory of adolescents and youths; they touched not only our close ones and family, but we ourselves would become participants in them...

These events not only decided life's eternal question, the fateful "how will it be?" The question of existence and life itself was being decided.

Now many young people no longer remember those times. Every year reduces the number of those who lived through those dramatic events. That is why every time the fateful news is heard, there is a desire to utter: "Falcon brothers...".

My falcon brothers were the people's defenders from those far-off times of 1945-50. Not only the lads from my rural district, together with whom I went on marches, and ate, and slept wherever possible, but also those whom I had met later and those whom I never happened to see. I know well that their battle, their life and the blood they spilled are alive in the people's memory. This was also shown by the meeting of former people's defenders at the editorail offices of SVYTURYS magazine which had a write-up about it at the end of last year. Letters, telephone calls, warm true words on visits to the rayons....

In those post-war years a class struggle was taking place in the countryside. At the beginning the kulaks opposed land reform and later collectivization. The kulaks, who were the social support of the armed nationalistic underground, tried to hinder the socialist reconstruction of the countryside. They sabotaged purveyance, evaded taxes, and so on.

The violent opposition of the bourgeois nationalist underground and the kulaks to Soviet rule and the means it was using could not prevent the creation of a new socialist society. Led by the Communist Party, workers of the republic labored in a self-sacrificing manner in all areas of economic and cultural construction. And they were engaged in a life-and-death struggle.

On 24 Aug 1944 the government of Soviet Lithuania decided to set up exterminator detachments in the districts. In December of that same year they were already being organized in all the rural districts.

The experience of Soviet brother republics was drawn upon in the struggle against the terror of nationalistic bands. After all, when the Civil War ended, special assignment troops also acted in the struggle against the organized political banditry of the class enemy in these republics. When the Great Patriotic War started, destroyer battalions were created for the front-line area's struggle against Fascist paratroopers and the extermination of saboteurs and spies. Without leaving their personal jobs, workers, collective farmers and active party, soviet and Komsomol members voluntarily helped internal affairs organs to fight the enemy's agents and anti-state elements. The first to become fighters in the exterminator detachments in our republic (strictly according to the volunteer principle) were former Soviet partisans, workers, demobilized soldiers, party, soviet and Komsomol activists. Mostly, however, the exterminator detachments were made up of farmers--formerly landless and poor peasants. The Soviet regime gave them land. That land, however, had to be defended, along with oneself and one's family.... Former exterminators quickly aquired a new name, that of people's defenders, which suited more their task--the defense of workers' interests. This honorable title which carried obligations was justified.

In my long years of journalistic work in various places in the republic I learned the details of many frightful events and met witnesses of nationalists' crimes against the people. It was necessary to inform people not only about the life and death struggle but also about those who carried the burden of bloody class struggle and who, ignoring danger and death, fought for a new life and continued the traditions of the heroic revolutionary struggle of workers and the feats of the Great Patriotic War. It was necessary also to tell the truth about those who have always been grave-diggers of the Lithuanian nation.

The historical experience which teaches that the overthrown exploiting classes and the powers and traditions of the old world always stubbornly oppose socialist construction is now clear to everyone. This theoretical proposition is totally confirmed by the whole of our history, and not only in our country.

And how did all this appear in life? Who belonged to the armed nationalistic bands, what were they striving for and how?

It is perfectly well known for what purposes the Hitlerite occupiers tried to employ the bourgeois nationalists who supported them in all kinds of ways during the occupation years and spilled the blood of many Soviet people. When

Lithuanian territory was liberated, the Hitlerites used the bourgeois nationalists for sabotage and espionage on the Soviet home front.

The logic of Hitlerite intelligence and Gestapo at that time appears rather strange: the Soviet Army had advanced unchecked from Moscow and Stalingrad to the Neman /River/ and battles took place right by the border of Hitler's Germany and later in German territory itself, yet in the schools of Klenuvka, Treugenhof, Ne[illegible]hof, Konitz, Stratenz, Nisen, Shlisselburg and elsewhere bourgeois nationalists were being trained as spies, radio operators and saboteurs, so that they could later be dropped into liberated Soviet Lithuania. Quite a number of these paratroopers were captured by the organs of the People's Commissariat of Internal Affairs (the first fighters in the exterminator detachments also participated in these operations). The spies and saboteurs who survived, however, quickly made contact with the nationalist bands or organized such bands themselves.

Did they not see the foolishness of this struggle? They were encouraged by the urgings of the ringleaders of the Western bourgeois nationalist underground who had escaped and made contact with the intelligence services of the imperialist nations, by their blind hate for Soviet rule and by the fear of responsibility for their crimes. It is well known that the secret service of the USA, England and other imperialist states instructed and trained the nationalists to spy and then paid them for the information they gathered; it is also known that the ring-leaders of the bourgeois nationalists relied more and more on the "cold war" incited by the imperialists, which, in their opinion, was to develop into a full-scale war.

Thus the account for the bloody terror in the post-war years, for thousands of lost lives and for marred destinies should be handed to the overseas instigators, the inspirers of band activities who are now hiding behind the torn guise of liberators and defenders of the nation.

The nucleus of the nationalist bands was made up of former activists of bourgeois Lithuania's parties and organizations, of Smetona's army officers, policemen, secret agents and reactionary priests.

Already in the first post-war years the nationalist bands developed widespread terror as they sought to paralyze economic and social reconstruction by the Soviet government. The most active party-soviet and Komsomol members especially suffered from the bands. There was not only an attempt to diminish by bloody terror the influence of the Communist Party and the Komsomol, to hinder growth in their ranks and to make difficult the activities of the organs of Soviet power. Those who suffered most from the bands were the poor peasants, former settlers with little or no land who, of course, felt in their hearts that Soviet government was dear to them. Mass slaughters were carried out at night. On 14 June 1946 in the rural district of Alove the bandits killed 24 people, on 1 August—70 people, including 16 children, on 26 October—18 people, on 15 November—37 people. And here are the massacres in Samogitia: in 1947 bandits in the Taurage Rayon killed 8, in Silaine--11, in

Silute--7, in Jurbarkas--5, in Raseiniai--4 DZDT chairmen and secretaries. Along with Soviet workers and activists, the bandits also killed their families and children.

In the collections prepared by the Lithuanian SSR Academy of Sciences editorial staff in charge of releasing archival documents, a great number of frightful stories are published about the crimes of the bands as told by the bandits themselves. Leafing through them now makes one shudder. Threats to the peasants not to join the collective farms. And not just threats; they were confirmed by killings and fires.... The devastation of country schools and village libraries when books were torn up and burned. And slaughter, slaughter, slaughter....

In the summer of 1965 in the Silavotas woods of the Prenayskiy Rayon archival documents of a nationalist band which had raged in the area were found. I got to flip through those faded, browned pages. On each of them were dates and names. It was truly a ledger of death and suffering, witnesses to the tragedy of many workers. With those pages as a guide, I walked for several days through the villages, looking for witnesses to the events mentioned in the bandits' papers.

In the documents of the bandit band there were reports about the plunder of the "Saltinis" collective farm in the former Silavotas rural district in 1950 ("four cows and 40 centners of cereals"), about the destruction of the documents of the Gyviskiai and Sargine village libraries and the Zvaigzde collective farm. The Zvaigzde collective farm at that time was just taking its first steps--it had only 15 pigs, 2 horses and 18 cows. The bandits drove away the horses and took away the grain....

In a bandit instruction book found in 1947 it is written; "Persons who voted of their own free will are to be punished....A part of the property of people who had voted and are being punished is to be confiscated....Persons who are not to be trusted and who also voted at the ballot boxes are to be punished by death."

The reports and accounts in the band's archives also contained other types of documents. They were instructions and orders of band ringleaders who were trained by the secret service of Western imperialist states. Besides instructions on how to spy on traffic and collect information on airports and bridges, there are also lessons for local inhabitants not to attend the funeral of persons killed by the bands and to hide the murdered persons in such a way "that no one will ever find them..."

The list of crimes of the bourgeois nationalists is long, very long. The Lithuanian people will never forget their bloody deeds, their dreadful crimes. They must not forget!

Work of Defense Detachments

Vilnius TIESA in Lithuanian 12 Mar 83 p 2

[Excerpts] The organizers of the bourgeois nationalist underground, finding themselves in the intelligence service of the imperialists, initially of the USA, and having become the political and ideological tool of the anti-Communists, tried, of course, to sell their services at a higher price. They tried to portray the massacres organized by the bandit bands as a serious force of opposition. The reactionary emigration still portrays the nationalist murderers as freedom fighters; the people of our country, however, know well that they were genuine criminal offenders. The terror of the bands did not budge Soviet power in Lithuania which was chosen and fought for by the people. And they couldn't move it! But the bandits killed people, often innocent ones, simply because they tilled the land. They killed children and old people, robbed stores and establishments, seized personal or state-owned property--from machine and horse renting stations--from cooperatives....Are such things tolerated in any other state?

It should be recalled that amnesties to bandits who left the bands of their own free will were an undeniable expression of the humanism of the Communist Party and Soviet power. These amnesties were taken advantage of by people who were politically uneducated and who were influenced and seduced by nationalist clerical propaganda.

Such was the enemy. The people, strong in their unity and resolution, stood up against them. The detachments of people's defenders struggled against them.

The band leaders used not only weapons and bloody terror in their struggle against Soviet rule. Abominable lies, incredible inventions, all sorts of gossip and rumors--all this was in their arsenal; the Hitlerite occupants left them not only entire dumps of weapons and ammunition, but also passed on to them the methods of Goebbels. Finally, there were cases of attempts to stick band collaborators into the groups of people's defenders. Sometimes one or another person in the detachment, enticed by the promises of a band leader or having come to believe in the new war promised by Western propaganda, would go over to the side of the murderers. Such persons were quickly unconvered, but at what a price!

All these lessons were paid for in blood!

And the price paid for trust.... If a neighbor says there are no bandits, it means there aren't any. But there probably wasn't even time to hear the series of shots from behind the door. If a woman with dishevelled hair came running to announce that a few kilometers away a band was on the rampage, everyone would quickly hurry off there so that perhaps the people could be saved in time. And they would come right into an ambush. If girls that you know invite you to a Saturday night dance, why not go? But on the way back a corpse would be returned, if it was ever found. If an acquiantance or even a distant relative whom you meet on the road asks where you are are going, what is there to hide? But many did not come back. If someone decided to visit their parents (or children), or if that patch of land desperately needed to be plow off they would go. They likewise often did not return.

Many of them died in those first years, after the occupiers had been chased out and the war had ended, when the government gave out land and seed and children could go to school, when goods began to appear in the stores and it seemed as if you could live and be happy; the countryside really was happy, the earth breathed with life, the orchards bloomed, the grain swayed....

But at night the shots cracked, the fires blazed and terror was produced by news of murders, fires, shootings and hangings....I will not forget the pillows sprinkled with blood in the wagons by the dispensary; I would see them in the morning when a settler or activist wounded during the night was brought in to the town's medical assistant. Just as, it seems, I will always dream of the extraordinarily enlarged cavern of a bandit's gun barrel and the gun salutes which would raise a flock of birds from the district cemetery as friends were buried....

The hands which had taken up a weapon were used to the plow and scythe, not to a gun. And yet there was fighting....How many of the most dramatic episodes, episodes of life and death struggle, there were in the villages and farmsteads, on paths and in forest thickets that have long ago vanished. And perhaps more significant is the fact that the line dividing the two sides often crossed not only between the huts of neighbors, but also through the hearts of simple people.... It would often happen, after all, that a former farm-hand or hired man would clash with his former masters who employed him and with his neighbors. And how the gossip and inventions spread by the kulak lackeys of the bandits, that snake-like hissing, oppressed the families and friends of the people's defenders! As did the anxiousness of not knowing: will a husband or son return from the next march. Today we remember with great respect the determination and self-sacrifice of people at that time; after all, the former farm-hands and hired men did not join the detachments of people's defenders for the sake of becoming wealthy, nor were they thinking of privileges or material advantages.

Now even I am surprised by the extraordinary determination and self-sacrifice of the Komsomol youth of that time. They often joined the detachments of people's defenders straight out of junior high school, postponing their great thirst for schooling and forsaking all their other personal plans.

Of course, no one forced them or could force them to do it. It was necessary to fight, however, and that word NECESSARY, the feeling of duty, as more important, than personal intentions, wants and desires.

For many Komsomol members the path of life was often cut short near bushes or woods. And when the bands were liquidated the best years were gone, that which had been learned was forgotten, and in many cases those years of struggle deeply affected one's health. The former people's defenders who gathered at the editorial offices of the magazine SVYTURYS told many stories about this, as did the letters which were received when material about this meeting was printed.

When the collective farm "Pirmunas" was established by the town of Butrimoniai, the band of the bandit Gervickas was still rampaging throughout the district. The Komsomol members Vladas Stanevicius, Antanas Baliukynas and Vincas Gurskas would take along weapons on their way to work in the fields of the kolkhoz. The gun sling hurt their shoulders as they were plowing and sowing. They never forgot that shots could ring out from the woods or the thickets of young pine; they always looked around to see where an attacker could be expected. They were attacked by the village of Gelvénai as they carted hay. Luckily, people's defenders hurried over when they heard the shots. In 1949 Vladas Stanevicius, together with other Komsomol members joined a detachment of people's defenders because new recruits were needed. He took part in the last long battle with the last bandit band. Having turned in his weapon, Vladas returned to the kolkhoz....

If I remember correctly, it was in 1946 that in the town of Gelvonai the bandit Daraskevicius was tried in an open session of the court. Crowds of people came to the hall, mostly those whose family and friends had suffered at the bloody hands of that band. When the verdict was announced and the bandit was being led from the hall, the women and old men shouted: "Blood-sucker!," "Why my children!..." It seemed as if the people's hate and the spilled blood would grind the murderer to dust. An how the people's defenders, the same ones who for a long time had chased the band and whose friends had died from its bullets, held back the seething wall of people....

The detachments of people's defenders were also joined by those whose families, parents and brothers had been killed by the bandits. Their hate, however, did not blind their eyes or muddle their brains.

Much water has flowed under the bridge since those days. New generations have grown up and our countryside has changed unrecognizably: the paths of the people's defenders have been overgrown, the earth has covered what used to be the bunker holes of the bandits. The former fighters who were lucky can now see what they had fought for. From the ranks of the people's defenders Heroes of Socialist Labor have emerged--Povilas Maskoliunas, Kazimieras Rakauskas, Kostas Glikas, Major General Stasys Lisauskas, professor Dr. Adolfas Urbonas. People who are known throughout the republic: farm managers, industrial workers, teachers in high institutions of learning. They cannot all be named. They always recall those days.

In our hearts we remember those post-war years of struggle for people's rule, for socialism and for the present-day life in our country. Everyone needs this--those who died during those years, those who worked but did not live to see our day, as well as the living and their children and grandchildren--everyone whose biography is graced by the line: I was a defender of the people. And all contemporary people need it, so that they will know that the people's defenders fought for our life during the most complex stage of the class struggle, when the groundwork for a socialist Lithuania was being laid.

For the memory of the heart is always alive....

GEORGIAN KOMSOMOL URGED TO ASSIST IN DISCIPLINE CAMPAIGN

Tbilisi ZARYA VOSTOKA in Russian 26 Apr 83 p 1

/Article: "Komsomol of Georgia: Strengthen Discipline, Improve Organizational Quality"/

> /Excerpts/ The letter of the Central Committee of the Communist Party of Georgia to the Komsomol organizations, all Komsomol members, young fellows and girls in the republic determined the contents of the work of the Plenum of the Georgian Komsomol CC. It imparted a special nature to the discussion there of the problems of the republic's Komsomol committees with regard to strengthening discipline, improving the organizational quality and responsibility of the Komsomol members and young people, and intensifying the militancy of the primary Komsomol organizations.

The Plenum began with the proclamation of the Letter of the CP of Georgia CC. It was noted that this program document constitutes yet one more manifestation of the enormous party support, its unceasing concern for the Komsomol, the youth, the rising generation of this republic, while the tasks set forth therein represent a militant program of action for Georgia's Komsomol for the long-term future.

The Plenum charged the CC Bureau of the republic's Komsomol with the task of working out a specific program for the practical implementation of the tasks formulated in the Letter of the CC of the CP of Georgia.

Delivering the report at the Plenum was the first secretary of the Komsomol of Georgia CC, V. Lordkipanidze.

At the same time, it was emphasized at the Plenum that the activities of individual Komsomol committees and primary Komsomol committees with regard to strengthening labor and production discipline, as well as improving the style of Komsomol work still do not meet the increased requirements of the present day. Not all Komsomol organizations engage in the necessary evaluation of manifestations of mismanagement, losses of work time, the production of poor-quality output. The work of the Komsomol committees suffers at times from a superficial, incompetent approach to the questions of forming an active, vital point of view among young people.

The Plenum outlined specific measures to enhance the role of the Komsomol organizations in strengthening socialist discipline everywhere and in everything. Indicated in particular was the importance of the close connection between ideological, indoctrinational work with the specific tasks of labor groups, the activation of initiative among young people, formation among the rising generation of industriousness, conscientiousness, and good organization. It was emphasized that the struggle to strengthen discipline must be unleashed in every sector of activity of the Komsomol organizations; in every group--production, management, education--a situation must be attained whereby every young worker is made aware of his personal responsibility for his own work and for the results of the entire group's work.

An appropriate decree was adopted on the question under discussion. The Plenum approved the operating plan of the Komsomol of Georgia CC for the current year aimed at increasing the role of the republic's Komsomol in the struggle to strengthen discipline, intensify the regime of savings and thrift in the light of the decisions of the November (1982) Plenum of the CPSU CC, the 11th Plenum of the CP of Georgia CC, and the Letter of the CC of the CP of Georgia to the Komsomol organizations and to all Komsomol members, young fellows and girls in the republic.

Political Affairs

PLANNING FOR 'POLITICAL DAYS'

[Editorial Report] Baku KOMMUNIST in Azeri 14 January 1983 page 1 carries a 1,300-word lead editorial on preparations for mass meetings on "political days." It notes that "questions posted on political days are not analyzed and generalized everywhere, and results of political days are rarely discussed in bureau meetings of gorkoms and raykoms." Also, "educational institutions, worker and student dormitories and small labor collectives" are often forgotten by organizers. Party committees are asked to provide "operational leadership."

PARTY INVOLVEMENT IN PRODUCTION MUST INCREASE

[Editorial Report] Baku KOMMUNIST in Azeri 21 January 1983 page 1 carries a 1,000-word lead editorial on the necessity for party involvement in fighting corruption. It is noted that "there are collectives which do not work with all their strength. One can also come across the padding of figures and the overlooking of other similar manifestations." It is added that "the party cannot take a conciliatory position vis-a-vis such violations of living norms or of labor discipline."

Social and Cultural Affairs

ATHEISM, IDEOLOGICAL EDUCATION AND RELIGIOUS REMNANTS

[Editorial Report] Baku KOMMUNIST in Azeri 28 January 1983 page 1 carries a 1,000-word lead editorial which notes that "the ongoing process of the dying out of religious beliefs and concepts is being strengthened. But the formation of a scientific-materialist worldview among all Soviet people has not yet been realized. Thus, one meets some religious remnants in life and living patterns one way or the other." Heightened atheistic education has had a positive effect in some cities and rayons (Mingachevir and Sumgait cities, Gakh, Aghdam, Barda and Ismayyly rayons). However, "there are still communists and Komsomols who are unconcerned about religious habits, practices and rites and, in some cases, even participate in them themselves. As for the party and Komsomol organizations, they are not evaluating the action of such peoples from a position of principle." Furthermore, "an atheistic belief is not being formed among youth studying in a number of middle schools, institutes, technical and technician training schools." Another factor is that "the number of foreign radio stations making religious broadcasts in a number of languages of nations of the Soviet Union has significantly increased. Imperialist forces, exploiting events in Poland, Afghanistan and Iran, are working hard to strengthen religious propaganda." With regard to Azerbaijan "it has not escaped notice that a number of 'holy places' are active. Rogues, concealing themselves behind the veil of religion, are turning these places into sources of profit for themselves. One must oppose them. Ispolkoms of Soviets of Peoples Deputies must strengthen the struggle against these rogues." Specifically, "it is a pity that party and soviet organizations in Julfa, Davachi, Yardymly, Pushkin, Guba and other rayons approach the struggle with religious remnants as a secondary problem. Thus, a part of the population in these rayons celebrate religious traditions such as Gurban Bayram (the sacrifice) and Muharram."

LITERATURE INSTITUTE AND 'COMMON EASTERN INFLUENCE'

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 1 January 1983 pages 1, 2 carries a 1,800-word article by Yashar Garayev, deputy director, Nizami literature Institute, in which he reviews the institute's history and current work. Its work in developing an Azerbaijani national literature, the study of the classical heritage and folklore are discussed. Also, "the world and especially the common Eastern importance of our national literature occupy an important place in the center of the institute's research plans." Thus, "the 'common Eastern' influence of Azerbaijani literature and its significant role in the Islamic world and in an Asian context stands at the center of attention of our contemporary research, primarily in the preparation of the seven-volume literary history. Working on and publishing a multi-volume independent history of 'Southern Azerbaijani' literature is included in the series of duties whose time has come."

STATE PUBLISHING PLANS DISCUSSED

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 21 January 1983 page 6 carries a 750-word article on a discussion at the State Publishing Committee on plans for the future, especially with regard to thematics. "Organization and implementation of thematic plans require great responsibility. The thematic plan productively relates ideological and economic factors in its composition so that the literary output, by attaining its important ideological function, also plays an important role in the economics of publishing so that it compensates for the readers' demand and need for the book and that all aspects of it are profitable." In discussing plans, it is noted that "by recommendation of the Writers Union, the publication of examples of Southern Azerbaijani literature has also been considered. One should note, however, that a significant number of books have been published in Azerbaijani in the Arabic script. During the discussion recommendations on further improvement of work in this sector were submitted."

SOCIOLOGICAL RESEARCH IN FACTORIES

[Editorial Report] Baku KOMMUNIST in Azeri 20 January 1983 page 4 carries a 1,000-word report by Mohbaddin Samad on sociological research conducted in plants and factories of the Ministry for Local Industry. One of the objectives was to study the causes of labor turnover. It was determined that in one plant "60 of the 411 workers questioned (14.6 percent) were dissatisfied with work conditions. The cause of cadre turnover was dissatisfaction with work and living conditions." Also, "another cause was that a significant percentage (27.4) lived in dormitories or rented rooms." It is noted that ultimately this research "will improve work harmony and exert a positive influence on the production of high quality goods."

POEM ON CHARACTER IN AYTMATOV NOVEL

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 21 January 1983 page 4 carries a poem titled "Mankurt" by Famil Mehdi. The poem was inspired "while reading Chingiz Aytmatov's 'I dol'she veka dlitsya den'.'" It concerns Mankurt's (a character in the novel) identity crisis.

POET'S 'SOUTHERN AZERBAIJAN NUANCES' LAUDED

[Editorial Report] Baku KOMMUNIST in Azeri 22 January 1983 page 4 carries a 1,150-word review by Professor Yusif Seyidov of Bekhtiyar Vahabzade's collection of poetry "Summer Thoughts." It is noted that "in B. Vahabzade's comprehension of the Fatherland one nuance is strongly voiced. This is the southern Azerbaijan nuance. Six of the poet's poems on this subject are included in the book. In other poems there are also verses relevant to this subject: 'We are two brothers with the same mother'; and the strong belief in the unity of the people and the Fatherland is stated as 'our separate countries will, sooner or later, unite.'"

International

AFGHANS EDUCATED IN AZERBAIJAN

[Editorial Report] Baku KOMMUNIST in Azeri 1 January 1983 page 3 carries a 400-word article by Abdul Rahim, a second-year Afghan student in the Geology-Geography faculty of the Azerbaijan State University and the group representative for the Afghan students. "Our teachers, along with teaching us our future field, also help us master Russian." He adds that "on this day when the New Year is launched, accept the sincere thanks of the Afghan youth being trained in your sunny republic."

BOOKS FOR AFGHANISTAN

[Editorial Report] Baku KOMMUNIST in Azeri 12 January 1983 page 4 carries a 200-word Azerinform report which says "books published in our country especially for Afghanistan could form a complete library. Works of Nizami, Khagani and modern Azerbaijani writers have been published in Persian at the request of our Afghan friends. The publication of children's literature occupies a special place." In addition to children's stories "an alphabet book is being published for Afghan students in their native tongue." Also, "a political dictionary is being published which will acquaint Afghan readers with modern political problems."

AFGHAN CENTRAL COMMITTEE MEMBER INTERVIEWED

[Editorial Report] Baku KOMMUNIST in Azeri 16 January 1983 page 4 carries a 1,600-word interview conducted by SIRUS with Abdulla Naibi, "director of the Cultural Sector of the Central Committee of the Afghanistan Democratic Party and author of the lyrics of the new republic's hymn." It is noted that Naibi "became a member of both the Afghanistan peoples Democratic Party and the French Communist Party" at the same time while a student in Strasbourg. Babrak Karmal is quoted on his pro-Soviet attitude: When asked by a friend of Naibi if he was 100 percent pro-Soviet he answered: "That is incorrect, I am not 100 percent...I am 200 percent pro-Soviet."

CLERICAL SOVIETOLOGISTS ATTACKED

[Editorial Report] Baku KOMMUNIST in Azeri 5 January 1983 page 3 carries a 1,500-word article by M. Goldenberg on how the West attempts to manipulate religion in the USSR. "Bourgeois communication organs slander with ever greater anger the unity of the Soviet people, which grows stronger every day, and its successes. And there are not a few 'sovietologists' in the front ranks of the slanderers. They use the basest means to sow the seed of nationalism by making use of religious remnants and to disturb the friendship of peoples." The ECONOMIST is quoted to the effect that "the orthodox creed is 'the support of Russian nationalism'" and "they claim that even today orthodoxy significantly helps the regime." Carrere d'Encausse claims that "Muslims in the USSR are a 'closely-knit community' and that they lean toward a 'world Muslim nation.'" The JEWISH WORLD (London) and DOCUMENTATION FRANCAISE write that "assimilation of the Jews is one of the goals of the Kremlin." The author concludes: "There is a basic similarity in the corrupt movements of the clerics--they have absolutely no future."

RADIO LIBERTY 'AZERBAIJAN DESK' ATTACKED

[Editorial Report] Baku KOMMUNIST in Azeri 4 January 1983 page 4 carries a 1,900 word article by R. Naghyev attacking two editors on the Radio Liberty Azerbaijan desk, Ismail Akber and Suleyman Tekiner. "How can these men talk about 'liberty?' In the United States which, until recently, called itself an enemy of nazism--what does one call its defense of Nazis? It seems that for the United States it no longer matters."

POETRY MANUSCRIPT RECEIVED FROM SOUTH

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 21 January 1983 page 8 carries an 850-word article by Azeroghlu on the receipt of a poetry manuscript written by a poet writing under the pen name 'Settar' and who lives in southern Azerbaijan. Mehemmed Garadaghly, a southern poet, says that the poet's real name is Settar Gulmehemmed. Garadaghly writes further that "the poet was born in Garadagh. He received elementary and middle education in Ahad and Tabriz. Returning to the village when he was 25 he began writing poetry. The great Sabir's 'Hophopname' and Vurghun's 'Song of the Future' influenced the poet." It is added by Azeroghlu that "undoubtedly our literary language has developed and expanded due to the people's very rich sources of creativity and will continue to do so. Our hope is that our creative brethren in the south, always learning from the people, will continue to develop their creativity and help to enrich our literary language."

KAZAKH SSR

Political Affairs

LEADERSHIP ROLE OF PARTY MUST BE ENHANCED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 8 January 1983 carries on page 1 a 1,000-word bold face editorial titled "Communists Initiative." Providing leadership is the very purpose of the CP and the primary duty of every CP member. Party members must never forget this duty as they strive to carry out party decisions efficiently, manage Soviet politics and government, actively participate in economic and cultural construction, wage a struggle against bourgeoise ideology, come forward as critics and exposers of deficiencies, point out the path to improvement and fight to overcome conceit, disinterest and parochialism.

Unfortunately, the editorial continues, communists everywhere do not always take their leadership duties seriously. Some communists, it stresses, are lethargic in their attitude towards their duties. Some totally dishonor their reputation as communists and even commit acts inimical to the Soviet way of life and misuse their positions of authority. Party organizations, which are the key since a communist is not just an individual but also part of a group, a collective, must take actions against such persons and insist upon full responsibility for all actions. The editorial repeatedly stresses the need for such enhanced responsibility and for a more active party leadership and management if current goals are to be met.

Economics

KARAGANDA COAL DELIVERIES AHEAD OF PLAN GOALS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 6 January 1983 carries on page 2 a 2,100-word article by S. Bayzhanov, Z. Saqiyev and E. Ebikenov, on Karaganda coal production and plans for the future. The article is the first in a series of five on Karaganda and its industries.

Karaganda is a large industrial center for coal, ferrous metallurgy, machinery manufacture, chemicals, food and light industrial products and energy. Coal, however, is the basis of it all, 48 million tons or more in a year. Karaganda coal includes the rare, highly valuable cokeing coal. The Soviet Union has only 10 cokeing coal sources. Karaganda is one of four major production centers for this valuable industrial commodity (along with the Donbass, the Kuzbass and the Pechora Deposits).

Coal mining at Karaganda is complicated due to water and gas deposits occurring with the coal and the depth of the mines (up to 600 meters in some areas). Karaganda mines are leaders in the entire Soviet Union both in terms of the degree to which mining operations are mechanized and in the use of advanced technology. They have high daily production levels per gallery--an average of 1,036 tons. Karaganda mines are ahead of planned goals in their efforts to produce 243.8 million tons (recently raised from 238 million tons) during the current five-year plan.

VIOLATION OF LABOR DISCIPLINE WILL NOT BE TOLERATED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 9 January 1983 carries on page 1 a 900-word bold face editorial titled "Discipline, the Basis of Success."

Labor discipline, the editorial states, has great importance in our highly technological society since just as the potential productivity of labor is great, so the potential loss from failure to use technology properly is also great. Unfortunately, it continues, many Soviet workers are unconcerned about this fact, as is demonstrated by their late appearance at work, failure to appear at all on some occasions, wasting of valuable time and their resulting inability to fulfill plans. We must, the editorial stresses, treat such violations of labor discipline as if they were personal insults and call upon party members to take a leading role in bringing this about. The level of party work of a given party unit, it continues, must be judged, first and foremost, by how production goals are fulfilled, how productivity is raised through labor discipline and how the struggle against waste and idleness is waged.

The individual, it concludes, must be made to feel a part of the communist construction that is going on and proper labor discipline plays an important role in creating the required moral atmosphere for this and for associated productivity gains. Those violating discipline, causing waste etc. must be dealt with severely and made to bear the material consequences. It calls upon various informal organizations such as courts of arbitration to take an active role in assisting party units to achieve their goals and notes that labor discipline is not just important in material production but also in services as well.

DISTRICT POLICE INSPECTOR PUTS IDLERS BACK TO WORK

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 14 January 1983 carries on page 1 a 700-word boldface editorial titled "District Police Inspector." Comrade Yu. V. Andropov placed special emphasis on labor discipline in his speech to the November 1982 CPSU Central Committee Plenum. This is because that without strict discipline and high level responsibility at the work place the Soviet economy and Soviet culture will not develop and it will be impossible to raise the living standards of the Soviet people.

The intellectual attitudes and worldviews of the workers play a major role in maintaining labor discipline and internal affairs organs, district inspectors in particular, have an important function to perform in nurturing such attitudes and views and thus in maintaining labor discipline. This is because district inspectors work closely with the public, both on the beat and through mass organizations and auxiliary police support groups.

The editorial provides numerous examples of district inspectors who are living up to their duties and making an active contribution towards the maintenance of labor discipline and social order. Included is one district inspector who frequently went to work places on his beat, mobilized goldbrickers and put idlers to work. The editorial condemns supernumerary district inspectors who are only concerned about direct violations of public order in the streets and with checking passports and who are unwilling to work actively with the masses to eliminate labor discipline violations and other forms of anti-social behavior.

KARAGANDA MINES WORKING CONDITIONS IMPROVE

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 7 January 1983 carries on page 3 a 1,900-word article by S. Bayzhanov, Z. Saqiyev and E. Ebikenov on the miners of Karaganda and their improved working conditions. The article is the second in a series of five on Karaganda and its industries.

Much of Bayzhanov, Saqiyev and Ebikenov's second article deals with a discussion of socialist competition and the incentives system employed at the mines. They emphasize the great difficulty, uncertainty and danger in mining but also underscore the highly favorable impact of new technology and high levels of mechanization in all areas of mine work. Miners interviewed by them suggest that the improved working conditions and better mine management have resulted in smoother, more stable and consistent operations with resulting major gains in output. The miners, Bayzhanov, Saqiyev and Ebikenov suggest, are well pleased by new conditions at Karaganda, both on and off the job, and have responded with enthusiasm, cooperation and high productivity to plan goals.

KARAGANDA MINERS TUNNEL BENEATH CITY TO INCREASE PRODUCTION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 8 January 1983 carries on page 2 a 2,300-word article by S. Bayzhanov, Z. Saqiyev and E. Ebikenov on the 50th Anniversary of the October Revolution imeni Coal Mines of Karaganda. The article is the third of five on Karaganda and its industries.

The 50th Anniversary of the October Revolution Coal Mines were first opened in 1960 and then produced one-half million tons of coal a year. They now produce more than three million tons from 185 kilometers of subterranean mines, some as much as 600 meters deep. In pursuit of even higher yields they have now even begun to mine under new Karaganda, a city of one million. Some eight million tons of coal are expected to be mined from the galleries now being built beneath the city.

DIRECT PARTY LEADERSHIP BASIS OF SUCCESS AT KARAGANDA

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 9 January 1983 carries on page 2 a 2,200-word article by S. Bayzhanov, Z. Saqiyev and E. Ebikenov on the role of the party in organizing for Karaganda mining success. The article is the fourth in a series of five articles about Karaganda and its industries.

Mine face cutters and shaft cleaners play a key role in Karaganda coal mining. Without them there is no coal, no air, no light and life in the mines. When these vital workers fail to perform their tasks, or perform them slowly, they slow down or halt mine production completely.

In the next to the last in their series of articles, Bayzhanov, Saqiyev and Ebikenov introduce us to just such a "lagging" brigade of face cutters and shaft cleaners and show how the party, in the person of communist Dulat Aqqoshqarov, took control, solved the problems affecting brigade performance and turned a "lagging" into a leading brigade in less than 3 months. The article stresses the use of intellectual, moral and economic measures to pressure the members of the brigade to work at required levels, the importance of weeding out problem workers and the relationship of production success to labor discipline and morale.

SERIOUS SHORTAGES OF CONSUMER GOODS IN RURAL AREAS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 11 January 1983 carries on page 1 a 700-word boldface editorial titled "Let There Be an Abundance of Consumer Goods." Large scale production of consumer goods to meet the needs of the people is one sign of the great concern of the party for Soviet citizens, for the improvement of their working and living conditions and spiritual development. Thus the attention devoted by the November CPSU Central Committee Plenum to increasing consumer goods production and improving their quality, an area particularly emphasized by comrade Yu. V. Andropov, first secretary of the CPSU Central Committee.

Unfortunately, the editorial continues, many quite ordinary, high demand consumer goods are simply not reaching rural areas. Among them are skirts, freezers, washing machines, tea sets, etc. with shortages of saddle cloths, felt shoes, fur coats and warm, light and waterproof outer clothing. Even such simple items as horse-drawn sleds are unavailable in spite of the present winter conditions and great needs for such items.

The editorial calls upon local authorities and party and other units to do everything possible to overcome these shortages. It stresses the need for good labor discipline, increased responsibility and better organization in consumer goods industries.

DIVERSE INDUSTRIES LOCATED IN PAVLODAR

[Editorial Report] Alma-Ata MADENIYET ZHANE TURMYS in Kazakh No 10, October 1982 carries on pages 2-5 a 2,300-word article by Baqytzhan Zhiyenghaliyev and Okim Zhaylawov on the industries of Pavlodar City. The article is the first in a series of at least three articles published under the rubric "At the Pavlodar-Ekibastuz Territorial Production Complex."

The Basic Directions, and editorial note begins, for the Development of the People's Economy and Culture during the years 1981-85 and in the period up until 1990 call for "increased production of coal and alumina at the Pavlodar-Ekibastuz Territorial Production Complex, continuing construction of 4-million kilowatt hour capacity state rayon electrical stations there, completion of an oil refining factory and completion of the reconstruction of the Pavlodar Tractor Factory." With all of these projects, the Pavlodar-Ekibastuz Territorial Production Complex will become a major center of development not just for the KaSSR, but for the entire Soviet Union.

Zhiyenghaliyev and Zhaylawov trace the background to this development as it relates to Pavlodar Oblast, which had virtually no industry before 1950 but now produces 42 percent of KaSSR electricity, 58 percent of its coal, 60 percent of its ferro-alloy, along with tractors and other heavy equipment and the products of the various industries of Pavlodar City, other than those mentioned above, some quite new. Key to Pavlodar development has been the Pavlodar Tractor Factory which will soon complete its half-millionth tractor, but the industry with perhaps the greatest future potential is the oil refining industry that has developed since 1978. Pavlodar is also a center of nonferrous metallurgy, primarily for aluminum, but also for rare metals such as gallium, and now produces production line robats.

PLANNING COMMITTEE CHIEF OUTLINES KAZAKH CONSTRUCTION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 16 January 1983 carries on page 1 a 1,200-word interview with Oktyabr' Ivanovich Zheltikov, first deputy chairman of the KaSSR State Planning Committee, on current major construction in the KaSSR. The interview was recorded by A. Ysymov.

Zheltikov begins with an outline of the financing for major Kazakh construction and then moves on to a sector by sector summary of new and on-going projects. Plans for 1983 call for an expenditure of 7.3 billion rubles of complex funding on Kazakh construction, a 3.2 percent increase over 1982. Of this funding, 73.2 percent will be spent on industrial projects, 21.5 percent on housing and 5.3 percent on other projects. Among major projects to be completed in 1983 will be energy blocs 6, 7 and 8 of Ekibastuz State Rayon Electrical Station No 1 and new oil refining capacity at Pavlodar.

IRON ORE SHORTAGE LIMITS KARAGANDA METALLURGY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 11 January 1983 carries on page 2 a 2,500-word article by S. Bayzhanov, Z. Saqiyev and E.

Ebikenov on Karaganda's other major industry, metallurgy. The article is fifth and last in a series.

The industries of Karaganda produce about 3 billion rubles of finished products each year, including 5.5 million tons of cast iron, 6 million tons of steel, 4.3 million tons of forgings and other metallurgical products and 1 billion kilowatt hours of electrical energy. Included among their products is 40 percent of the USSR's carbide and 60 percent of its commercial carbide.

The industrial base, described in detail, is, Bayzhanov, Saqiyev and Ebikenov emphasize, sufficient at Karaganda. Karaganda industries are well positioned in terms of transportation and the particular mix of coal and other raw materials necessary to support its metallurgy. The problem now, as was pointed out at the November CPSU Central Committee Plenum, is purposeful and conserving use of the existing industrial base to produce the greatest possible product at least expense in terms of production costs and raw materials use. However, Bayzhanov, Saqiyev and Ebikenov do acknowledge a shortage of iron ores. The main source at Lisakov can't meet current needs and there are apparently problems in the quality of ores and in the extraction of by-products including phosphorus and vanadium. The Qarazhal mine is also singled out as a problem area as ore deposits are depleted.

Bayzhanov and Saqiyev and Ebikenov echo official calls for solving this potentially crippling problem through efforts to bring new iron ore mines into production, new production technology, including automatic management systems based on computers, and re-equipment of inefficient and obsolete plants. They also stress the need to extend the range of products produced by Karaganda metallurgy and provide several examples of what is being done to that end.

EKIBASTUZ TRANSMISSION LINES COMPLETED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 20 January 1983 carries on page 1 a 300-word announcement by O. Qaliyev reporting on the completion of two key Ekibastuz transmission lines. The Ekibastuz-Omby, LEP-500 high voltage line has been completed and has begun to transmit power, an event marking a major milestone in the utilization of cheap electric power generated at Ekibastuz. The new transmission line will improve the supply to electricity to the Omby region and a planned 6 billion kilowatt hours of electrical energy will be transmitted through the new lines each year. Also completed was the Ekibastuz-Kokshetau segment of the Ekibastuz-Ural 1,150 volt line. Completion of these lines will free considerable amounts of rail transport formerly used to carry coal to local power stations.

SIBERIAN, CENTRAL ASIAN PLASTICS INDUSTRY EXPERIENCES RAPID GROWTH

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 1, January 1983 carries on page 7 a 1,400-word article by Malik Abdikarimov on plastics and the Soviet and Kazakh plastics industry. The article is published under the regular rubric "Science and Production."

Abdikarimov reviews the current emphasis on polymers in the Soviet Union since the 26th CPSU Congress, which called for a rapid quantitative and qualitative build-up of Soviet polymer production. He notes the great importance of polymers got preserving raw materials such as metal and wood. One ton of polymers, for example, can replace 8 tons of wood and 5 tons of metal and polymers are not subject to decay or corrosion. In treeless areas such as southern Kazakhstan, polymers do more than conserve resources, they make certain tasks possible. Polymers are cheaper and more easily produced than wood and metals.

Today, 91 percent of Soviet polymers are produced in the western part of the Soviet Union and 5 percent in Siberia and Kazakhstan. With the large scale tapping of cheap Siberian gas resources, however, polymer production in the Soviet Union will move east. The Kazakh plastics industry is centered on Omby and Shevchenko Cities. Kazakh scientists are actively seeking for new polymers to be produced with Siberian gas.

KAZAKH INDUSTRY SERIES LOOKS AT MACHINE BUILDING, TRANSPORT, CONSTRUCTION

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 1, January 1983 carries on pages 9-10 a 1,400-word article by economist-historian Bolebay Isabekov on the Kazakh machinery building, transport and construction industries. The article is the fifth in a series of articles published under the heading "The Leninist Policy" and the regular rubric "University of Economic Problems."

Bolebay discusses each of the three areas that are the subject of his article historically, noting their respective roles in Kazakh development. In terms of machinery building, Isabekov records the total absence of a Kazakh machinery industry before the revolution and its rapid emergence since then. Current plans call for a 1.5 fold increase in the output of the industry by the end of the current 5-year plan with more than 400 different kinds of machinery to be produced in Kazakhstan.

Isabekov gives a detailed history of the creation of the various Kazakh rail lines and of their development from a total of 2,081 kilometers in 1913 to 14,240 kilometers in 1980. Recently, 1,100 kilometers more were added with the completion of the Sayaq-Aqtoghay mainline.

SERIOUS ALMA-ATA AIR POLLUTION WORSENS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 20 January 1983 carries on page 4 a 900-word article by Professor M. Dauletbaqova, prorektor for scientific research at the Alma-Ata State Medical Institute, on research being carried out by her institute on the effects of Alma-Ata environmental and noise pollution on the health of its inhabitants. The article is published under the regular rubric "Science Forum."

The 26th CPSU Congress set out a complex program of scientific research that placed high demands on Soviet scientists. As part of its contributions towards carrying out this program, the Alma-Ata State Medical Institute is engaged in a large scale research program to identify polluting and other negative factors in Alma-Ata's environment and determine their effects on the physiology of the inhabitants of the city.

It's no secret, Dauletbaqova begins, that chemical, physical and biological influences of man's work place and residence can have a negative impact upon his physiology. Alma-Ata has a major problem with air pollution, she goes on, due to poor air circulation. Research has shown, Dauletbaqova notes, that, on the average or at times of maximum concentration, smoke pollution there was 11.6 times greater than the maximum permissible levels, soot 27 times, coal dust 31 times, acid anhydride pollution 5 times and nitrate dust 10 times above permissible levels in 1976. Three years later, in 1979, levels were even higher and air pollution components now average 24-40 times above acceptable levels. Also a problem in Alma-Ata is chemical and micro-organism pollution of drinking water and a high background noise level, 80-90 decibels. Dauletbaqova notes that much of her institute's research is now concentration on determining the clinical impact of such pollution levels and contamination.

KOMSOMOL JOURNAL INTRODUCES NEW ENVIRONMENTAL RUBRIC

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 1, January 1983 carries on page 19 a 1,000-word editorial note and article by Musilim Baytenov, department chief of the KaSSR Academy of Sciences Botanical Institute, introducing a new rubric, the "BILIM ZHANE ENGBEK Little Red Book," which is to be devoted to articles on the rare floral species of the KaSSR. Kazakhstan, the editorial note begins, is rich in all forms of plant life. However, it continues, as rich as this plant life is, it must be protected and used wisely to prevent its destruction.

In 1978, the editorial note goes on, the first of two volumes of the Kazakh "Red Book" of endangered species appeared. This first volume was on endangered fauna, but a second volume, on endangered flora, appeared in 1981. In response to the effort represented by the writing of the Kazakh floral "Red Book," the note continues, BILIM ZHANE ENGBEK is introducing its new rubric "Little Red Book" to inform the public about endangered plant species and encourage mass participation in their protection.

In the first article published under the new rubric, Musilim Baytenov describes the all but extinct Berqara River Poplar, now limited to a stand of 10 or so trees in a remote area of the Karatau Mountains, and the reasons for its present endangered state. According to Baytenov, the tree was once widespread in Kazakhstan in the Ice Age but became a good source for fuel and building materials for early man with devastating results for the tree. He stresses the need for strict, effective protection of this remnant of what once was a common component of the Kazakh natural environment.

SUPPLIES OF PRECIOUS FRESH WATER MUST BE CONSERVED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 22 January 1983 carries on page 4 a 700-word article by S. Abishev, chief of the Subterranean Water Protection Division of the "Kazgidpogeologiya" Scientific Production

Union's Experimental Methods Division, and F. Shestakov, senior research worker of the Hydro-Geological and Hydro-Physical Institute of the KaSSR Academy of Sciences, on the problem of fresh water supply in the KaSSR. The article is published under the regular rubric "Science Forum."

Fresh water supply is one of the key problems of the KaSSR, but in spite of this there is currently considerable waste. Artesian wells, Abishev and Shestakov go on, are left running continuously, for example, wasting water and causing water tables to fall.

A new system of fines for overconsumption of water has been introduced with the current year, but enforcement is still lax and many industries either lack water meters or have inaccurate ones. A stricter accounting is needed.

In the course of their discussion, Abishev and Shestakov note that water is comparatively expensive but not overly so in the KaSSR. Whereas the Soviet range for a cubic meter of fresh water is from .1 to 2.72 rubles, the range is .98 to 1.78 rubles in the KaSSR. The cheapest is from Lake Balkash and the most expensive from Lakes Embi, Oyyl and Saghyz.

EXPERT DENIES SIBERIAN RIVERS PROJECT WILL HARM ENVIRONMENT

[Editorial Report] Alma-Ata QAZAQ ADEBIYETI in Kazakh 28 January 1983 carries on page 3 a 1,700-word interview with Academician Shapyq Shokiuly Shokin, director of the Kazakh Energetics Scientific Research Institute, on Kazakh water problems and the potential role of the Siberian rivers and other projects for solving them. The interview is published under the regular rubric "Questions to Look Into" and was conducted by writer Qalmuqan Isabayev.

Shokin is asked in the interview about the Ertis-Karaganda Canal as a precursor in miniature of the Siberian rivers project, about the present state of planning for the latter project itself, the nature of the opposition to it, his own views on specific objections raised, the relationship of the Siberian rivers project to the Aral Sea problem, the reasons for environmental damage along the Ertis after the construction of the Buqtyrma State Electrical Station and certain misconceptions about Siberian waters and their connection with Kazakhstan. The body of the interview, however, is taken up with a defense of the Siberian rivers project against its critics.

Shokin divides these objections into three categories: scientific, constructional and "resistance of the new." Among the objections discussed is that a reduction of fresh water flow into the Arctic Ocean will result in decreased ice formation there and flooding of some coastal areas, that a shortage of drinking water will result for those downstream on the Ob', that Siberian rivers may salt up for lack of flow, that diversion of Siberian waters will harm regional drainage and the project may seriously harm the environment, among other things, through exchanges of cold and warm region fauna and flora.

In answering the objections about water loss, Shokin notes that the amount of water taken will be too small to have much impact, only 25 cubic kilometers at first and 60 cubic kilometers later, out of a total Ob' flow of 400 cubic kilometers annually (total fresh water flow from Soviet territory into the Arctic Ocean each year is 2,000 cubic kilometers). He denies that the project will have any of the other ill-effects suggested either, but does acknowledge that many questions about the project remain unanswered. However, he continues, 150 research organizations, including 10 in the KaSSR (one of them his own), are actively working on the project and its problems so that the answers will be forthcoming before the project is completed.

On the highly damaging Buqtyrma State Electrical Station, which has resulted in a major environmental deterioration along parts of the Ertis flood plain, Shokin does admit to a "bad ... one-sided plan" but does note efforts to solve the problem through diversion of Siberian waters as part of the Siberian rivers project. Apparently this can be done without major replanning.

Shokin repeatedly ridicules opponents of the Siberian project in his remarks and attempts to suggest that their ideas are half-baked. In his final words he underscores the fact that Kazakhstan's water shortage is so severe that Soviet planners have no choice but to proceed. The interviewer himself may be among opponents to the project, judging by his questions.

MASS DESTRUCTION OF KAZAKH WILDLIFE BY AGRICULTURE MUST STOP

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 January 1983 carries on page 4 a 1,100-word article by S. Makhmutov calling for an end to large scale destruction of Kazakh wildlife in the name of agriculture. The article is published under the rubric "Man and Nature" and the subrubric "Economy and Ecology."

Today, if agriculture is not developed, the economy of the nation will not be improved and it will be impossible to raise the living standards of the people. However, in developing agriculture upon a scientific and technological basis we must take care not to have an overly negative impact upon the natural environment.

As things stand now, the shape of the land is being completely altered by technological means and the environment of the birds and other animals living on it is becoming unrecognizable and, in some cases, totally uninhabitable for them. Moreover, the process of technological development of the land itself destroys much of its fauna as does harvesting, hay-making and other agricultural activities. Harvest equipment, for example, destroys nests and lairs of birds and field animals and crushes them by the hundreds.

Makhmutov underscores the fact that he is not proposing a total cessation of all agricultural activities harming animals, but is merely supporting a minimalization of fauna loss through care, attention and technical redesign where necessary. Agriculture, he suggests, can be far less environmentally harmful and destructive than it is.

Makhmutov also expresses concern in his article over the misuse of mineral fertilizers, insecticides and other agricultural chemicals that are being allowed to enter the environment freely. He likewise stresses the need to protect reed resources since they constitute an important part of the Kazakh natural environment and afford protection and shelter to wild animals. Makhmutov also calls for a census of agricultural animal kills to determine the scope of the problem.

Social and Cultural Affairs

SURVEY CONDEMNS SURVIVAL OF LARGE KAZAKH WEDDING

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 12 January 1983 carries on page 4 a 1,200-word article by distinguished KaSSR Cultural Worker Abduali Qaraghulov summarizing the results of a survey carried out among persons being treated at Alma-Ata's Qarghaly Sanatorium Outpatient Clinic on some of their thoughts on the "cultural levels" of daily life and ways to raise them. The article is published under the rubric "Advice Column" and is part of continuing discussion in this area by SOTSIALISTIK QAZAQSTAN.

A large portion of Qaraghulov's article is devoted to the problem of marriage feasts that "get out of hand" and become orgies of eating, drinking and boasting with hosts cataloging their accomplishments, parading their wealth and generally "setting a bad example" for the younger generation. Qaraghulov, claiming to speak for many Kazakhs surveyed, calls for more dignified marriage feasts having an educational value for the young and offering an example of high cultural levels and sophistication. Qaraghulov also calls for making wedding feasts expressions of the changes that have taken place in and the good life of an entire community since such festivals should not just express the cultural levels of an individual but of a collective as a whole.

AKTYUBINSK POSTAL AUTHORITY COVERS UP PACKAGE LOSSES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 January 1983 carries on page 2 a 1,900-word article by T. Ysqaqov exposing incompetent and criminal communications authorities in Aktyubinsk Oblast. The article is published under the regular rubric "Honest Service to the People."

At first glance, everything seemed to be in order with the Aktyubinsk Oblast Production-Technical Communications Administration. Plans were being fulfilled, work was being done and problems solved, or so it seemed. A glance below the surface, however, revealed a real muddle of confusion, chaos and criminality.

On the one hand, the telephone system works poorly, with long waits for long distance service. On the other, there are problems with newspaper deliveries--local papers are a day late, papers from outlying areas are a week late. In addition 175 parcels were lost in 1979, 200 in 1980 and more than 50 a quarter in 1982.

The problem of lost packages, moreover, it turns out, has been a problem since 1976 but has come to official attention only recently. Before that the authorities had had the impression that the post agency of the communications authority, the office losing the packages, had been operating well and efficiently.

And there was good reason for this impression, Ysqaqov continues, namely altered records and a cover up.

S. Orazghaliyev, Ysqaqov goes on, the chief of the post agency, simply failed to record the number of packages being lost and illegally extorted money from post agency employees to repay patrons their losses. Recently, however, the problem became too large to hide and the whole sordid business has become public knowledge.

Ysqaqov summarizes actions taken against Orazghaliyev, suggesting that he is, in fact, being made a scapegoat for others. Ysqaqov calls upon local party and other officials to end the problems of the communications administration once and for all.

KAZAKHS INVESTIGATE ABAT-BAYTAQ MAUSOLEUM

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 1, January 1983 carries on pages 20-21 a 1,300-word article by S. Azhighaliyev, worker of the KaSSR Society for the Protection of Historical and Cultural Monuments, on the Abat-Baytaq Mausoleum of Khobdinskiy Rayon of Aktyubinsk Oblast and its uniqueness in Kazakh architectual history. The article is published under the regular rubric "BILIM ZHANE ENGBEK Archaeological Expedition."

In recent years, Azhighaliyev begins, investigators of the early religious monumental art of the Kazakhs have increasingly turned their attention to western Kazakhstan which has proved to be virgin territory for their inquiries. Moreover, not only is the area rich in monuments, but they are of a unique style not found in other parts of Kazakhstan that is, by and large, native to the area and reflect nomadic traditions of architecture.

However, Azhighaliyev continues, our investigations, including a 1979 expedition to little known monuments in Aktyubinsk Oblast, have done no more than scratch the surface and the area south of the Emby River remains largely unexplored. In fact, he goes on, it is a rich area of potential investigation with an uninterrupted series of mausoleums and other monuments extending from the Middle Ages to the early 20th century.

Azhighaliyev describes one of these monuments in detail, the Baytaq or Abat-Baytaq mausoleum of the 14th-15th century. He traces the history of its discovery, describes the monument itself, relates it to other similar monuments within and without the area and stresses its uniqueness as a Kazakh architectual monument. In his discussion, he repeatedly calls for better investigation of this and other south Emby monuments.

GROWING NUMBERS OF VEHICLES COMPLICATE TASK OF ALMA-ATA TRAFFIC POLICE

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 1, January 1983 carries on pages 22-23 a 1,200-word article by police colonel Nilolay Alekseyev, chief of the State Vehicle Inspectorate under the Alma-Ata City Internal

Affairs Administration, on traffic problems and traffic control in the Kazakh capital. The article is published under the regular rubric "Science in Service to the People."

The 20th century is the age of space, of cybernetics and also of the automobile, and the USSR is a leader in this area with 2,199,000 vehicles produced last year including 787,000 trucks and 1,327,000 light vehicles.

The great expansion of vehicles on the roads, coupled with the high speeds of modern trucks and cars, cause problems for the State Vehicle Inspectorate. Alekseyev describes its operations beginning with a historical synopsis of Russian and Soviet traffic law and then moving on to the methods currently employed by the inspectorate to monitor and control traffic in Alma-Ata. He notes, for example, the existence of a computerized control center at inspectorate headquarters that is constantly updated with information by special monitoring points and also describes the inspectorate's diagnostic center that carries out vehicles inspections. Alma-Ata, with a total population of a little over 1 million, currently has 130,000 vehicles.

MUSEUM PRESENTATION FOCUSES ON DEDE KORKUT THEME

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 25 January 1983 carries on page 4 an 800-word article by A. Taraqov announcing a forthcoming presentation on the Dede Korkut theme. The article is published under the rubric "The People, A Treasury of Art."

The Mukhtar Awezov Museum (of Alma-Ata), in association with the regular program of the People's University on Kazakh literature and art, will be offering a series of presentations on the "Book of Dede Korkut" with the participation of noted traditional singer Musabek Zharqynbekov. Zharqynbekov, who is a folklorist trained in the Kazakh oral tradition, will perform various old Kazakh lays and songs associated with Dede Korkut and his time. The article provides detailed information on Zharqynbekov's background and past efforts, in cooperation with many others, to study and record traditional Kazakh lays and songs. The presentations are part of a continuing emphasis on the common Turkic literature of the past.

KAZAKH STUDENTS POORLY PREPARED FOR COLLEGE

[Editorial Report] Alma-Ata QAZAQ ADEBIYETI in Kazakh 28 January 1983 carries on page 10 a 2,400-word article by leading KaSSR Worker in People's Education Yesbergen Yestayev on the poor quality education being received by many Kazakh students and their poor preparation for college. The article is published under the regular rubric "Questions To Look Into."

Kazakh students, even leading "gold medalists," are being rejected in record numbers by colleges and universities. Detailed examination of their work, moreover, shows functional illiteracy on a massive scale and extremely poor training in mathematics and the sciences. As a result, he goes on, Kazakh higher education institutions are only able to fill their enrollment quotas through admitting students via "special paths," e.g. from the military, etc.

Looking for the causes of this situation, Yestayev discovers a universal lack of attention to real qualifications for diplomas and certificates, a nonexistent review process on gold medal and other awards, acute shortages of lab equipment and experimental materials, lack of control over educational content from above, poorly qualified teachers, students who fail to understand what is expected of them and a lack of emphasis on homework. Yestayev calls for higher standards for students entering college, better experienced teachers, improved material bases for the schools and more control and supervision from above. One major problem, judging from Yestayev's account, is that Kazakh pedagogical institutions themselves receive poorly qualified students and prepare poorly qualified teachers while many of the best in the education system seek jobs outside it. Also a problem apparently is a lack of appropriate teaching materials and texts in the Kazakh language, although this is not mentioned directly.

EFFORTS TO COMBAT RELIGIOUS VESTIGES IN GRAMMAR SCHOOL DESCRIBED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 14 January 1983 carries on page 4 a 1,000-word article by O. Qashqarov, teacher at the Matay Bayysov imeni Middle School (Taldy-Kurganskiy Rayon, Taldy-Kurgan Oblast), on his efforts, and those of his fellow teachers, to deal with religious vestiges among middle school students. The article is published under the regular rubric "School Life."

Qashqarov describes, in this context, efforts made in his school to reeducate three believer students in atheism. He shows how their religious views were resulting in poor academic performance, anti-social behavior and social isolation and details the specific methods, including teachers and communist agitators working directly with the three students, confrontations with their fellow students on questions of atheism and visits to the believers' homes, employed in a reeducation process which, Qashqarov stresses, was ultimately successful and led to total behavioral changes. In his article, Qashqarov also reviews his school's atheism work in general, including use of physical and biological sciences lessons to propagandize atheism.

KAZAKH 'OTAN' SOCIETY MEETING DESCRIBED

[Editorial Report] Alma-Ata BIZDING OTAN in Kazakh No 147, January 1983 carries on page 2 an 800-word unsigned report on a recently convened plenum of the Administration of the Kazakh "Otan" Society, which is charged with maintaining cultural connections with Kazakh and Uighur emigres living abroad. The plenum was keynoted by Academician Smet Kenesbayev, who discussed the current position of the KaSSR as a multi-national, multi-cultural state and outlined what the "Otan" Society is now doing to meet the "cravings" of emigre Kazakhs and Uighurs for the culture of the Kazakhstan homeland. To this end, he noted in his speech, efforts are being made to send literary works, school texts, dictionaries, collections of songs and of poetry to Kazakhs and Uighurs living abroad, with two specially written manuals for learning modern Kazakh and modern

Uighur scheduled for publication during the present year. Also discussed by Kenesbayev were the publication of the paper BIZDING OTAN in Kazakh and Uighur and the many visits by Kazakh and Uighur emigres to the homeland. He noted, in particular, the presence of emigre children in KaSSR schools and pioneer camps and other recreational facilities. Also among participants in the plenum was Jolqarnai Qaji, imam of the Dzhambul oblast Merke Mosque, and other Moslem clergy.

ARTICLE CALLS FOR REPUBLIC COOPERATION IN INVESTIGATING COMMON TURKIC LINGUISTIC PAST

[Editorial Report] Alma-Ata BIZDING OTAN in Kazakh No 148, January 1983 carries on page 2 an 800-word article by Belbuteiuy and Enesuy, junior research workers of the Linguistics Institute of the KaSSR Academy of Sciences, on a conference of young Turkologists recently convened in Alma-Ata. In terms of numbers, Belbuteiuy and Enesuy begin, the 40 million persons speaking some 25 Turkic languages rank second only to the Slavs in the Soviet Union. The languages spoken by them, moreover, have great sociological, ideological and political importance; thus the special significance of their linguistic investigation today.

With this introduction, Belbuteiuy and Enesuy review the circumstances giving rise to the recently held conference and the wide range of topics discussed. They stress the close relationships of the Turkic languages--even to the degree of mutual comprehensibility for knowledgeable speakers of Noghay, Karakalpak, Bashqurt, Khirghiz and Kazakh, on the one side, and Uighur, Uzbek, Azeri, Turkmen and Turkish, on the other--and the great need for joint investigation of a common Turkic linguistic past and present. The authors suggest, moreover, that the conference is only the first step towards this end and that inter-republic scholastic exchanges will be stepped up in the future. The Soviet Union as the Turkic homeland is stressed.

International

IT'S UP TO THE AMERICANS IN NUCLEAR DISARMAMENT

[Editorial Report] Alma-Ata QAZAQ ADEBIYETI in Kazakh 1 January 1983 carries on page 14 a 2,000-word article by Kamal Smaylov on the dangers of the nuclear arms race. The article is published under the rubric "Humanity Calls."

Thirty-seven years ago the first atomic bomb was dropped on Hiroshima. Now there are more than 50,000 atomic weapons, in all a million times more powerful than the Hiroshima bomb; 3.5 tons of TNT for every human on earth. The nuclear arsenal still grows with the United States now undertaking a major build-up with the claim that the Soviet Union is leading in the nuclear arms race, and in fact, Smaylov admits, an arms build-up is going on both sides.

Smaylov looks at the arms race in detail, cataloging the respective arsenals of both the West and the Soviet Union, predictably concluding that it is in fact the West rather than the Soviet Union that is ahead and still building up its offensive capabilities. He stresses the great destructiveness of nuclear war, its potential for ending life on earth and the great danger of an "automatic" or accidental nuclear war with the deployment of new, short-warning-time Pershing IRBMS. He restates Soviet disarmament offers and calls upon the United States to make the next move.

KIRGHIZ SSR

· Political Affairs

SPEECHES AT KIRGHIZ PLENUMS PUBLISHED

[Editorial Report] Frunze LENINCHIL JASH in Kirghiz 2 December 1982 page 2 carries an abbreviated 3,600-word account of a speech by Ye. G. Semenenko, second secretary of the Kirghizia Komsomol Central Committee, on the tasks of further strengthening the patriotic and internationalist upbringing of young people by the republic's Komsomol organizations in conformity with the resolutions of the 26th CPSU Congress and the 19th LKSM Congress. Semenenko devotes much of his speech to "shortcomings and formalism" in the organization of work responsibilities for young people. For instance, although in recent months 1,500 young volunteers have been sent out by the Komsomol of Kirghizia to the construction sites of a gold mine and a carpet combine and to sites in Frunze, the need for construction cadres has not nearly been met. Semenenko also criticizes the "very many" shortcomings in the activity of the Sputnik tourist bureau and the serious deficiencies in some rayon Komsomol organizations in the preparation of young people for military service, and he insists that it is necessary for Komsomol committees to struggle decisively against any influence of religious fanatics upon the young. On page 1 of the same issue of the newspaper is the 500-word announcement of the plenum at which this speech was given. The announcement contains information on changes in personnel, such as a change in the leadership of the Sputnik tourist bureau, not to be found in the short KirTAG account of the plenum published in SOVETSKAYA KIRGIZIYA 1 December 1982 page 1. In addition, LENINCHIL JASH 28 December 1982 page 2 carries a 4,300-word abbreviated version of a speech presented by the new first secretary of the Kirghizia Komsomol Central Committee, O.A. Abdykalykov, at the fourth plenum of the Komsomol Central Committee 25 December 1982. Abdykalykov surveys some achievements of Komsomol members in the past year and the tasks ahead in 1983. One point emphasized by him is that the republic's Komsomol organizations are not sufficiently taking advantage of reserves and opportunities in the formation of Komsomol-youth brigades; in the republic as a whole only 10 percent of the young people, and in the countryside only 7.5 percent, have been organized into youth collectives. He also stresses the role of young people in overcoming problems in certain key sectors of the economy, in transportation, capital construction, and food production.

KIRGHIZ FIRST SECRETARY SUPPORTS RUSSIAN LANGUAGE STUDY

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 12, December 1982 pages 20-31 carries a 5,000-word article by Turdakun Usubaliyev, first secretary of the

CPKi Central Committee, titled "Soviet Kirghizia in the United Family of Fraternal Peoples." This article introduces a set of articles devoted to the 60th anniversary of the founding of the USSR, a series which makes up almost all of this issue of KOMMUNIST, with the exception of material pertaining to the death of Leonid Brezhnev. Usubaliyev begins the article with a tribute to Brezhnev and with praise for the new party leader Yuriy Andropov. He illustrates the progress made in the republic over the last 60 years by contrasting the conditions prevailing in Kirghizia early in the century with the present-day situation. At one point, he emphasizes the role of the Russian language as the language of communication between nationalities, but he also maintains that the further development of the Kirghiz language in the republic is inseparable from the spread of Russian and alludes to the publication of dictionaries and the Kirghiz encyclopedia as measures promoting the development of the Kirghiz language. In this article, Usubaliyev does not refer to problem areas in the economy of the republic, and he touches upon international topics only very briefly.

Economics

AGRICULTURAL OUTPUT IN KIRGHIZIA SHOWS SEVERE SHORTFALLS

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 1 December 1982 page 1 carries a 900-word lead article on agricultural development in Kirghizia this year. According to the article, farmers in the republic have harvested a good crop of sugar beet seed for use in the fields of other republics next year. The editorial also notes successes in the harvest of potatoes and vegetables as well as good crop results in some areas, but it also mentions serious shortcomings. Panfilovskiy Rayon is singled out as failing to keep up with last year's pace in the sale of meat and milk to the state. In addition, the editorial points out that the wintering campaign for livestock will be especially difficult this year in connection with the lower supply of fodder resulting from the drought and shortage of irrigation water earlier in the year. The campaign is called a test in which the fate of the plan targets of not only 1983 but also the whole 11th Five-Year period will be resolved. On the same page of the newspaper is an 800-word report on the economic progress of Kirghizia in the first 10 months of the year in industry, capital construction, transportation, and agriculture. According to the report, when taken as a whole, 1,771,400 tons of fodder were prepared in the January-October period, which represents 90 percent of the plan. This amounts to 228,000 less than was produced in the same period last year. On 24 December 1982 page 1 the same newspaper carries an 800-word report on economic results achieved during the first 11 months of the year in industry and agriculture. The report asserts that the harvest of field crops and fodder has been completed for the year and that good results were obtained in the preparation of tobacco, potatoes, and honey as compared with last year. However, as of 1 December, farms prepared only 500,800 quintals of grain crop seed (other than corn), or 80 percent of what is required. Osh Oblast, with 31 percent, and Alamedinskiy Rayon, with 47 percent, were the regions with the lowest indices in this regard. Although the sale of livestock and poultry, milk, and wool exceeded that of last year in the republic as a whole, Osh Oblast, with 75 percent of the plan, and some other areas have lagged behind in this respect. The average output of milk per cow up to 1 December was 2,416 kilograms, as compared to 2,453 last year, again with Osh Oblast showing results poorer than last year's output.

CONSTRUCTION OF KIRGHIZ GOLD MINE COMBINE UNSATISFACTORY

[Editorial Report] Frunze LENINSHIL JASH in Kirghiz 25 December 1982 page 2 carries a 500-word article by E. Prokhorovskiy on the construction of the Kirghiz Gold Mine Combine in Toguz-Toro (Naryn Oblast). While much has been accomplished since 1978 when construction began, there are many complex problems yet to be resolved, especially when the problems are viewed from a long-term perspective. Prokhorovskiy states that in general the present-day state of construction at the combine is unsatisfactory, and that if at least 20 million rubles worth of work is carried out each year in 1983-1985, will construction be completed by the end of the current five-year plan. The reasons for the unsatisfactory progress include the distance of the construction site from supplies, the shortage of labor, and a weakness in the organization of work. For instance, in No 264 Mobile Mechanized Column there should be at least 1,200 builders, but there are only 500 at present. In addition, many construction foremen and superintendents come from agricultural construction projects, and they thus lack the experience needed for working in the construction of a gold mine combine. Prokhorovskiy concludes his article by noting that the year plan for many construction projects is in danger of not being fulfilled and by warning that this matter should cause the KiSSR Ministry of Construction to do some more thinking.

KIRGHIZ CONTROL COMMITTEES URGED TO EXERCISE LEADERSHIP

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 28 December 1982 carries on page 2, a page devoted to the activities of the republic's People's Control organization, a 1,000-word article by T. Amanaliyev, first deputy chairman of the KiSSR People's Control Committee. Amanaliyev presents his assessment of the problems facing his organization: despite the 109,000 people's inspectors in the republic, they lag behind the level of demand and permit many shortcomings in the realm of organization. In the last 2 years people's inspectors have conducted superficially. The reason for this, according to Amanaliyev, is that rayon, city, and oblast control committees have weakened their leadership over the groups and posts that they serve. Another basic cause of passivity among control organizations lies in the neglect of established rules. Amanaliyev also complains about the lack of proper training for many of the republic's people's inspectors. When report-and-election meetings are held in 1983 in control groups and posts, they must ensure the strengthening of the system and the activization of its lower units.

Social and Cultural Affairs

RUSSIAN THEATER GROUP FAULTED FOR APATHY TOWARD KIRGHIZ WRITERS

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 2 December 1982 pages 12-13 carries a 1,600-word article by B. Alagushov highly critical of various aspects of theater life in the capital city of Kirghizia, Frunze. To

Alagushov, it is regrettable that the A. Maldybayev Opera and Ballet Theater is not staging the new works of local authors. In fact, for 8 years the Maldybayev Theater has not performed even a single new opera by a Kirghiz composer. Although one Kirghiz ballet was staged last year, the one before that was performed 6 years ago. Alagushov maintains that while the main fault for this lies with composers who avoid writing such works, the leadership of the theater is also to blame for failing to cooperate with composers in developing this complex art form. In fact, the initiative in giving assistance to inexperienced composers in their creative work should be on the part of the theater's leaders; otherwise, the operatic genre suffers. Alagushov also criticizes the Maldybayev Theater for failing to make efforts to attract spectators--a dereliction that once led to a turnout of only 30 spectators at a recent performance of a ballet by a Kirghiz. But according to Alagushov, the Maldybayev Theater is not the only one in Frunze to witness a drop in the number of spectators from year to year; the N. K. Krupskaya Russian Drama Theater is also failing to cultivate potential audiences. This theater has performed only eight works by Kirghiz writers since its inception 47 years ago. In recent years, the Russian Theater has completely severed its ties with local authors for some reason. Finally, Alagushov complains about general inadequacies in the advertising of current theater productions in Frunze.

NEED FOR ATHEIST PROPAGANDA IN KIRGHIZIA CONTINUES

[Editorial Report] Frunze KYRGYZSTAN MADANIYATY in Kirghiz 9 December 1982 pages 12-13 carries a 2,100-word article by A. Kaybyldayev, which is a contribution to a contest sponsored in part by the newspaper for the best writing on the topic of atheism. Kaybyldayev is concerned with certain undesirable features found in customary practices of the Kirghiz which he attributes to the influence of religion. In honoring the dead at the time of burial, every people has traditions. It is bad, however, when this tradition involves slaughtering two or three large animals, the consuming of vodka, and giving money. He points out that the Uzbeks, who know the suras of the Quran better than the Kirghiz, honor their dead with recitations from the Quran and do not engage in the sacrifice of animals or in measuring generosity by the wasteful squandering of money. He also condemns the "petty bourgeois, philistine" attitude in some people that is demonstrated most vividly in the exchange of gifts at the time of a wedding. He also discusses the practice of "tergoo," conventionalized forms of address, which arose from former class inequality but today has developed into a means of showing respect to others. He criticizes those overzealous atheists who interpret modern forms of the "tergoo" in a one-sided fashion and consider it as a totally harmful custom. Kaybyldayev, however, sees much of the positive in certain forms of respect. He concludes his article by maintaining that in the face of imperialist assaults on the Soviet Union, atheist propaganda cannot be relaxed for even a minute but must be conducted on three main fronts--among teenagers, parents, and young adults.

LACK OF KIRGHIZ FOLK ITEMS CRITICIZED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 14 December 1982 page 3 carries an 800-word article by T. Tologonov on the Kyyal Association of folk handicraftsmen. Tologonov cites many of the awards received by the association and its successes in plan fulfillment, but he maintains that the work of the association is not without its shortcomings. In particular, he feels it would be good if the association would investigate the wide variety of Kirghiz national dress and crafts more and satisfy fully the growing demand of the people for such goods. He lists a number of traditional Kirghiz items that he believes the association should not be neglecting. He also complains of the limited selection of national handicrafts available at the three branches of the Kyyal Association in Frunze; aside from certain standard items, the rest of the shelves are stocked with souvenirs, ceramics, crystal goods, and chess sets. According to Tologonov, in these stores, "there are as yet very few of the Kirghiz national goods and clothing that have been in use since the days of our ancestors...."

KIRGHIZ ENCYCLOPEDIA HEAD DISCUSSES FUTURE PLANS

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 28 December 1982 page 3 carries a 1,500-word interview with B. Oruzbayeva, chief editor of the Kirghiz Soviet Encyclopedia, an academician with the Kirghiz SSR Academy of Sciences, and a doctor of the philological sciences. The brief introduction to the interview notes that the latest volume in the encyclopedia, a special Russian-language volume devoted to the Kirghiz SSR, has recently appeared and that when the Kirghiz-language version of this volume and an index appear, this will mark the completion of the encyclopedia. Oruzbayeva mentions that of the 26,363 articles in the encyclopedia 30 percent deal with Kirghiz national or local topics. She states that the publication run was 25,000 copies, of which 1,000 went to readers abroad, in Bulgaria, Japan, France, the United States, Hong Kong, etc. In discussing future plans for the encyclopedia staff, she points to the experiences amassed by other republics in compiling encyclopedias devoted to specific topics, such as the encyclopedia of cybernetics in the Ukraine and of cotton growing in Uzbekistan, and states that she thinks it would be possible to compile an encyclopedia on livestock raising or perhaps the Kirghiz national epic the "Manas." But she qualifies her proposal by adding, "of course, the future will tell about this."

EDUCATIONAL SYSTEM IN KIRGHIZIA EXAMINED

[Editorial Report] Frunze EL AGARTUU in Kirghiz No 12, December 1982 pages 1-13 carries a 6,800-word leading article by Amanbek K. Karypkulov, chief of the Science and Educational Institutions Department of the CPKi Central Committee and a corresponding member of the KiSSR Academy of Sciences, on the educational system in Kirghizia as a part of the educational system of the entire country. He is mainly concerned with the historical developments and theoretical considerations underlying the system. For instance, he cites 10 principles arising from the bases of the Leninist nationality policy that demonstrate the democraticism of the socialist system of universal education as contrasted with the system in capitalist countries. He also examines the role of vocational and technical educational institutions in building up the working class from among nationalities like the Kirghiz so as to expand the main social force behind the internationalization of peoples. There is also much interchange among the republics of the USSR for educational purposes: every year more than 1,000 young people, mainly Kirghiz, are sent from the KiSSR to educational facilities in the RSFSR and other republics, and nearly 300 people come to study in the educational institutions of Kirghizia. Immediately following this article on pages 14-18 of the journal is a 1,900-word article by Mukash Bazarkulov, the KiSSR minister of education, surveying the progress made in Kirghizia in the field of education. One feature of present-day education in the republic emphasized by Bazarkulov is the language of instruction and the study of the Russian language in the schools. Thus, 24 percent of all pupils in the republic study in schools conducted in two or three languages, and in some rayons 90 percent of the pupils in schools where instruction is in Russian are Kirghiz. Following this on pages 18-22 is a 2,300-word article by N. I. Ivanenko, first deputy minister of higher and secondary specialized education, surveying the 10 higher education institutions in the republic. One issue discussed by Ivanenko concerns the preparation of a professorial-teaching staff for higher and secondary specialized institutions: in some disciplines, in particular in physics, mathematics, and the technical sciences, the training of scientific cadres is proceeding slowly.

Military

PROBLEMS IN KIRGHIZIA DOSAAF ORGANIZATION SKETCHED

[Editorial Report] Frunze SOVETTIK KYRGYZSTAN in Kirghiz 2 December 1982 page 1 carries a 900-word lead article apparently connected with the current report-and-election meetings of the committees of the Voluntary Society for the Promotion of the Army, Aviation, and Navy KiSSR. The editorial states that the DOSAAF organization of Kirghizia has achieved a great deal in providing a military-patriotic education for young people, and certain local schools are cited as exemplary in this matter. But in other schools instructional materials and technical equipment are not being used widely, and the experience of advanced schools is not being disseminated. There are not just a few DOSAAF primary organizations in which work is treated formally and is limited to the collection of membership dues. It is well known that in many schools there are not opportunities to develop technical and military-applied types of sports, a circumstance which is having an adverse effect upon expanding the mass nature of these sports and upon raising the skills of athletes. In the 10th Five-Year Plan period, houses of military-technical preparedness and sports complexes have been built in some cities and rayons of the republic, and during the current 5-year period such work will be carried out on a large scale. However, there are a number of shortcomings in the construction of such sites.

Economics

TAJIK WOMEN GRADUATES FAIL TO ENTER JOB MARKET

[Editorial Report] Dushanbe ZANONI TOJIKISTON in Tajiki No 8, August 1982 carries on pages 6-7 a 900-word article, "The Flood," by Akobir Narziyev.

The article is a biographical sketch of Onajon Sattorova, who was elected to the Central Committee of the Tajik Communist Party in 1981. She graduated from the pedagogical institute in Dushanbe in 1974 and became a middle school teacher of English, later a school director. She is concerned with the large number of girls who simply return home when they finish middle school. Sattorova attributes this to parental insistence which ignores the daughters' own wishes. She works for the more active involvement of women in public affairs.

FEW WOMEN WORK IN TAJIK FACTORIES

[Editorial Report] Dushanbe ZANONI TOJIKISTON in Tajiki No 8, August 1982 carries on page 10 a 600-word article, "Khosiat," by Otamurod Bekmurodov.

The article focuses on the importance of women working in factories by discussing one woman, Khosiat Qurbonova, who works at a machine factory in Kuliab, where she is a foreman and leader of a women's group. The article points out that one should not assume that only men can or do work in factories. However there are very few women working at Khosiat Qurbonova's factory. At the end of the article the author notes a general shortage of skilled workers at that factory and comments that the situation would improve if there were a vocational-technical school nearby.

FACTORY COMPLEX ATTRACTS WOMEN WORKERS

[Editorial Report] Dushanbe ZANONI TOJIKISTON in Tajiki No 9, September 1982 carries on pages 12-13 a 900-word article, "Celebration in the Complex," by Mahbuba Ne'matova.

The article is a positive portrayal of women's employment at a silk spinning and weaving complex in Dushanbe. The plant is one of the largest industrial enterprises in the Tajik SSR and employs some 2,200 workers, most of them women, from 32 Soviet nationalities.

When the factory first opened in 1932, it attracted women to work there. These earliest women workers agitated among their friends to come do "liberated work." Perfidious religious believers feared women going to work at this factory and killed two of the first who did so. However this did not stop the growth of female employment there.

Regarding the women working there now, the point is made that this is a good job to have when one's children have grown up and left home and the mother is lonely, or in any case, has less work to do around the house. At some unspecified time in the past decade, a shortage of workers at the plant led to the recruiting of more than 500 rural young women who had graduated from middle schools to come work at the factory. The factory provides its workers with various services, including several dining facilities, shops, two kindergartens, a pharmacy, and a dormitory. More than 800 workers' children can go to a Pioneer vacation camp. The factory gives workers vacations in health resorts and trips to other Soviet republics and foreign countries.

TAJIK AGRICULTURE NEEDS SUBSTANTIAL IMPROVEMENT

[Editorial Report] Dushanbe KOMMUNISTI TOJIKISTON in Tajiki No 12, December 1982 carries on pages 20-24 a 1,880-word unsigned article, "Resolutions of the 7th Plenum of the Communist Party of Tajikistan."

The article begins with a favorable assessment of the production of cereals and animal feed grain in the Tajik SSR but then states that some rayons "have been lagging behind for no reason." Some places have not introduced the technology for cultivating corn as a feed grain. There are problems with inadequate planting and irrigation. Pastures and unirrigated lands are not used well. Many kolkhozes and sovkhozes harvested little grain for human or animal consumption. In many cases fertilizer was not applied to the land where cereals were grown. The Tajik SSR ministries and agencies that are in charge of irrigating new lands and improving agriculture are not making a vigorous effort. There are also problems in employing agricultural technology: agricultural complexes are not being mechanized; there is a shortage of skilled machine operators. There are problems in the way agricultural labor is organized and paid. Tajik scientific institutions are not leading the way in the improvement of agriculture. Their recommendations are sometimes inappropriate. The republic ministry and agencies involved in rural construction are not fulfilling the resolutions of the May 1982 plenum of the Central Committee of the CPSU. A wide range of construction projects, including schools and trade and public service facilities are not being completed promptly. The party also shares in the responsibility for the agricultural problems, particularly committees at the oblast', city, and rayon levels, primary party organizations, professional organizations, and Komsomol. Agricultural workers' demands for consumer goods, food, and fundamental educational and cultural services are being neglected by experts in the relevant fields. Newspapers, magazines, radio, and television do not give enough attention or provide sufficient explanation of party policy on agriculture, the aims of leaders in agricultural production, and the most successful agricultural complexes.

FOREIGN LANGUAGE STUDY IN THE UZBEK SSR

[Editorial Report] Tashkent HAQIQATI UZBEKISTON in Tajiki 7 November 1982 carries on page 4 a 260-word article, "United Hearts," by Kholnazar Urolov, a candidate in philology and teacher at the F. Engels State Pedagogical Institute of Foreign Languages in Tashkent.

In the past year, there were 43 schools of higher learning functioning in Uzbekistan with students from various nationalities of the republic and the USSR. Students also came from foreign countries on good terms with the USSR.

In schools in the Uzbek SSR, "All study the language of the Great Lenin with great zeal." Since Russian is the language of friendship among the Soviet nations, it is studied in Uzbek kindergartens, schools, and universities. If a person knows his mother tongue well and if everyone were to know Russian well then learning a host of other languages would be easier. Languages studied at the F. Engels State Pedagogical Institute of Foreign Languages in Tashkent include English, German, French, Persian, and others.

UZBEK MILITIA ACTIVITIES DESCRIBED

[Editorial Report] Tashkent HAQIQATI UZBEKISTON in Tajiki 7 November 1982 carries on page 4 a 1,400-word article, "A Glorious Road," by M. Sultonov, who is a major-general in the militia and deputy minister of Internal Affairs.

Sultonov notes approvingly that now most leaders of internal affairs organs have middle and higher education. Young militia members attend meetings with veteran members, who teach their young co-workers about patriotism and courage. The technical equipment of the Uzbek militia is improving steadily. Its members make many contributions to science and technology. Members' knowledge of their trade and politics has increased greatly. Internal affairs organs and primary party organizations are engaged in increasing "socialist competition" in the field of ideological training. This has brought good results in such activities as clubs and film presentation as well as in the systematization of university instruction. Militia members are active in "prophylactic" groups in kolkhozes, sovkhozes, factories, and basic organizational work. The Uzbek militia is supplemented by more than 270,000 druzhiniki. Examples of druzhiniki include a rayon-level Komsomol head, a Komsomol official at the Tashkent Pediatrics Institute, students at the Tashkent justice technical school, and an assistant professor of biology at the Samarkand Agricultural Institute.

TURKMEN SSR

Economics

ELECTRICAL POWER GENERATION INCREASING

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 1 January 1983 page 2 carries a 500-word report by M. Govkyev, chairman of the Mary GRES Economic Planning Section, on recent developments in the generation of energy. "In the 2d year of the 11th Five-Year Plan GRES power has increased significantly. After adding on the sixth energy block the total energy output of the station reached 1.26 million kilowatts. Since the GRES began operation more than 35 million kilowatts have been generated. In the last jubilee year better than 6.5 million kilowatts have been produced."

TRANSITION FROM ANIMAL HUSBANDRY TO FARMING ON KARAKUM CANAL

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 9 January 1983 page 2 carries a 1,450-word article by A. Akmyradov on the transition from an animal herding way of life to farming as a result of the arrival of the Karakum Canal in Gyzylarbat. In this transition "difficulties which have emerged have impeded the workers of Gyzylarbat rayon." For example, "initially the people avoided farm work." Also, "water specialists, because they lacked experience in handling water had to turn off the water in July and August and, due to the dryness of the season, production was very low." To compensate for this, groups are to be sent to enterprises engaged in farming "in order to learn from their work experience."

FIRST SOLAR ELECTRICITY STATION ENTERS SERVICE

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 15 January 1983 page 3 carries a photograph (unclear) of an engineer installing some photovoltaic cells in a solar energy station. The caption is: The first solar electricity station in Turkmenistan has been put into service. It assures the scientific center in the Ashkhabad foothills of electrical energy. Experimental equipment in the testing area was constructed in the Turkmenistan section of the All-Union Scientific Research Institute, which has established the sources of current here.

QUALITY CONTROL STRESSED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 21 January 1983 page 1 carries a 1,100-word lead editorial on the importance of quality control in industrial production. "The most reliable and profitable was to further increase industrial production and raise quality and results is by mastering new and modern inspection of industrial products and installing progressive technology and new techniques. Most factories and units, ministries and departments exceed the plan with the installation of new techniques. There are still, however, some branches which are not giving enough attention to this important aspect. Included among these are the TuSSR Automobile Road Building and Construction Materials ministries, the 'Turkmenrybprom' production unit and others."

PHYSICS-TECHNOLOGY INSTITUTE HIGHLIGHTED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 1 January 1983 page 3 carries a 1,300-word interview with Aman Ashyrov, deputy director for science of the TuSSR Academy of Sciences Physics-Technology Institute, on current work. It is noted that "the institute is working on important problems such as solar-earth physical relationships, semiconductors and ultrasonics." Together with other socialist countries the institute is participating in the "Planetary Geophysical Research" project, specifically in the "International Project for Middle-Level Atmospheric Research." On the local level "our scientific research is used in many branches of our country's economy. Among them are radio-electronic and electric energy correspondences."

REPAIR OF AGRICULTURAL MACHINERY STRESSED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 5 January 1983 page 1 carries a 1,000-word lead editorial on the maintenance of agricultural machinery. "Now there are close to 48,000 tractors, more than 10,000 cotton harvesters, 12,000 trucks and other miscellaneous agricultural equipment." Noting the priorities placed on maintenance of this equipment, it is added that "more than 10,000 tractors and similar machinery will be repaired and maintained this season." Certain regions, however, are slow in this work: "In enterprises in Krasnovodsk, Ashkhabad and Mary oblasts repair is proceeding slowly; in Gokdepe, Kaka, Sayat, Tagtabazar, Dashkhovuz and Tagta rayons repair work is being conducted extremely slowly. The reason for this is that the majority of machines are sent to repair shops from field work all at once and there are not enough mechanics to deal with them. For example, 1,680 mechanics were supposed to have been sent from kolkhozes and sovkhozes and now only 1,000 came "to do this work." Finally, party and agricultural organizations "must guarantee enough mechanics to repair the machinery."

Social and Cultural Affairs

ATHEISTIC EDUCATION AT CENTER OF ATTENTION

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 29 January 1983 page 2 carries a 1,950-word article by G. Agalyev, secretary of the TCP Krasnovodsk obkom, on progress being made in atheistic education. "In the last 2 years it has become more systematic and relevant. In the plans the strong interrelationship of atheistic education with political, work, moral, patriotic, international, legal and esthetic education finds its expression." Also, "measures to expose the anti-social actions of pseudo-moullas have made major headway. In these, the possibilities of mass communication, village meetings, social gatherings and comrade courts are widely used." An example is given of a fireman in Gyzylarbat city who, "for a long time taught religious traditions to some believers, listened to religious programs of foreign radio stations and discussed their content in his circle. His illegal actions were examined by the comrade court of his administration and he was strongly rebuked." With regard to the "holy places," "a place illegally built at the grave of Shivlanbaba was turned into a forestry school for children and turned over to the Sunt Khasardag forest preserve by decree of the soviet organs. A former shrine in Gyzylarbat was reconstructed and will open as a museum for regional historical study in a short time. Preparatory work is being done at the mausoleum of Paravbibi in order to open a branch of this museum." The problem in atheistic education at present is that many party organizations "were not interested in atheistic education for years and did not conduct a sharp enough campaign against religious thought."

PEOPLES THEATER SPOTLIGHTED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 8 January 1983 page 1 carries a 1,100-word lead editorial noting that "special attention is being given to raising the cultural standards of rural workers in our republic and increasing their spiritual potential." Further, "in this context the work in peoples theaters on kolkhozes and sovkhozes deserves special praise." It is added that many of these theaters show a high degree of professionalism in acting, staging and selection. "However, the peoples theater in Garrygala, Bakherden, Tagtabazar and Koneurgench rayons and the Maksim Gorkiy kolkhoz peoples theater are opening the way to indecisiveness in their methods of staging their work. Antiquated work style, only staging dramas one time, nonutilization of progressive experience and the rapid turnover of collective members exert a depressing influence on the effect of the work and its artistic depth in these collectives." It is pointed out that "all possibilities must be exploited to advance the work, to stage the plays the rural population likes frequently and to increase the expertise of every member of the drama collective."

CONTROL OVER 'PARASITES' INTENSIFIES

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 7 January 1983 page 4 carries a 1,200-word article by R. Berdiev, TuSSR minister of internal affairs, about "deviations" violating the work process. "Even now one comes across parasitic elements who, counter to the nature of our society, do not want honest work--more specifically, those who try to eat without working. Brigands and parasites are a dark legacy from the past. While there are very few of them among the soviet people, their social danger is great." It is added that "their danger is intensified due to the tendency of such people to various criminal deeds." When all attempts to convince such elements to perform work useful to society fail, "the Presidium of the TuSSR Supreme Soviet, by the Decree of 30 November 1982, increased the criminal responsibility for those evading socially useful work. If a person engaged in parasitism or begging had already been sentenced under Section 1 Article 238 of the TuSSR Criminal Code to 1 year of imprisonment or corrective labor, according to the new Decree they can be imprisoned or sentenced to corrective labor for 1 to 2 years."

'PROGRESSIVE TRADITIONS' AND ISLAM

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 8 January 1983 page 2 carries a 1,950-word article by N. Bayramsakhedov on new traditions and Islam. "A new social life, the growth of peoples knowledge, the change in the way of life, the firm implanting of technology into production-- all of these have sapped the power of religion and deprived it of its previous strength. But in family gatherings Islam has not entirely lost its position. Even in our day some people continue to practice holidays and traditions related to religion. As for Muslim clerics, all religious traditions and holidays are an important part of national life; they persistently stress ideas which they claim are national traditions and do all they can to preserve religious traditions." However, "in recent years holidays and traditions have been established in our republic in the life of the urban and rural population, and a number of old traditions have a new content. Although these do not oppose religious remnants they help to reduce the religious ideology and way of life in both content and spirit."

International

RADIO LIBERTY 'TURKESTAN DESK' ATTACKED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 18 January 1983 page 3 carries a 2,200-word article attacking Radio Liberty's Turkestan Desk, specifically the Turkmen section. "Workers of Radio 'Liberty' assiduously study newspapers and magazines published in Ashkhabad. Only one thing interests them in all the media--critical materials, economic difficulties and negative events. In order to make the specific general the Munich radio saboteurs 'cover' them." Attacked by name are two Turkmen journalists working at the radio--Aman Murat and Murat Tachmurat.

AMERICA THROUGH SOVIET EYES

[Editorial Report] Ashkhabad ADEBIYAT VE SUNGAT in Turkmen 7 January 1983 pages 14-15 carries a 4,200-word reportage by Yu. Izyumov on a journey made to New York, Cleveland and Chicago in which housing and food costs are discussed, i.e., "1 pound tomatoes, 60 cents; 1 pound cucumbers, $1.60; 1 pound beef, $4-5.00; 1 pound pork, $2.50-3.00; wurst products, $4-8.00." Thus, "according to our calculations it costs a family of three $150 a week to eat." Child labor is also discussed: "children work a full day along with everyone else. Normally speaking they are paid two to three times less than adults. The broad exploitation of child labor in all branches of the American economy is an open secret."

POLITICAL AFFAIRS

KOMSOMOL REPORT, ELECTION MEETINGS SUMMARIZED

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 20 January 1983 carries on page 2 a 1,600-word article by R.V. Abduqodirov, chief of the Department of Komsomol Organizations of the Uzbekistan Komsomol Central Committee, titled "In Harmony With the Age." Abduqodirov summarizes some of the main results and issues raised at recently completed report and election meetings of republic Komsomol organizations. An important result of the meetings was the growth of organizations in terms of size and quality. Some 88,000 workers and kolkhoz farmers were elected. Communists now head up 62.2 percent of primary Komsomol organizations, and 56 percent of these are women. Central topics at meetings included increasing Komsomol effectiveness in trade and consumer services enterprises, agricultural brigades, construction detachments, and schools.

KOMSOMOL ORGANIZATIONS URGED TO BE FACTOR IN LABOR DISCIPLINE BATTLE

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 14 January 1983 carries on pages 1-2 a 1,600-word article by A.P. Volodarskiy, second secretary of the Uzbekistan Komsomol Central Committee, titled "Discipline Is the Guarantee of Success." Volodarskiy outlines current labor discipline problems and urges Komsomol committees to increase their influence over young workers in an effort to help strengthen discipline. Komsomol committees can play a key role in solving such problems because half or often more of the labor force in most enterprises is young. They can push the formation of Komsomol collectives, the use of the unregulated pay method (in which individuals get a share of the collective's pay), and conduct reviews of causes for labor turnover. He points out that too many committees do not adopt a business-like approach to problems, but are content with paperwork and official activities.

The same paper on 28 January 1983 carries on page 1 a 900-word lead editorial titled "High Discipline Is the Guarantee of Success!" The editorial criticizes the failure of Komsomol organizations to direct serious attention to the question of loss of work time. The editorial concludes that Komsomol organizations must instill in young workers the proper attitudes toward discipline and toward protection of the people's property.

KOMSOMOL MOVES TO RAISE STUDENTS' SCIENCE KNOWLEDGE

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 7 January 1983 carries on page 1 a 900-word lead editorial titled "School Komsomol Organizations." The editorial deals with the problem of the continuing poor performance of republic schools in science education which was recently discussed at the Third Plenum of the Uzbekistan LKSM Central Committee. The plenum assigned Komsomol organizations of higher and secondary specialized schools the task of indoctrinating students with a sense of responsibility toward their science studies and of cooperating with departments to raise the quality of instruction. In particular, Komsomol organizations must direct their efforts toward students in the freshman class, especially in technical schools, the majority of whom have not been mastering the various sciences, with the result that the number of students with below-average knowledge of the sciences has not been declining.

PARTY COMMITTEES CRITICIZED FOR POOR SUPERVISORY WORK

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 16 January 1983 carries on page 1 a 1,000-word lead editorial titled "Militant Foundation of the Party." The editorial criticizes party committees for their failure to properly supervise and stimulate the work of primary party organizations. It points out that cases have been reported where party committees restrict the role of primary party organizations in production and hold back the work of farm and enterprise leaders. Some party workers rarely visit primary party organizations to provide practical assistance, with the result that party discipline is slack in such organizations and party influence is inadequate in the collectives in which they work. Partkoms must radically improve their political and organization work among primary party organizations, for it is the latter which indoctrinate workers in a spirit of loyalty to the party and of love for the Motherland.

WORK OF PRIMARY PARTY ORGANIZATIONS CRITICIZED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 January 1983 carries on page 1 a 1,000-word lead editorial titled "The Communist Obligation." The editorial criticizes party organizations for their failure to motivate communists in the production place. It states that many party organizations are insufficiently concerned with the necessity of increasing the vanguardism, militancy, and activism of communists, or are passive toward their failure to carry out work assignments and party and socialist obligations. As a result, communists are not setting the proper example in the production place as the party's political soldiers. The editorial cites the "Mubarakgaz" Mining Union and sovkhozes in Leninyul Rayon of Surkhandarya Oblast where party organizations have failed to properly supervise the work of communists.

STRUCTURE OF PARTY CONTROL COMMISSIONS DESCRIBED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 29 January 1983 carries on page 2 a 1,300-word article by Yu. Vlasov, instructor in the Party Organization Department of the CPUz Central Committee, titled "Inviolable Law."

Vlasov describes the structure and work of party commissions. There are presently over 18,000 party commissions in the republic, including more than 900 that control construction aimed at improving transport capabilities, and 3,500 that control such labor functions as plan fulfillment, economizing, workers' complaints, equipment security, introduction of new technology, mechanization, and automation. In the last 5 years, the number of members in all commissions has grown by nearly 1.5 times--40 percent are workers and 16 percent are farmers. Vlasov points out that the majority of enterprise leaders are responsive to the proposals and suggestions of control commissions, although a number are not. He also criticizes those primary party organizations who do not take full advantage of their control function to influence the administrative process often because they form control commissions only in an official sense, but do not specify their duties clearly. He concludes by urging party committes to work with such party organizations in order to increase the influence of their commissions.

PARTY PUBLISHING HOUSE DIRECTOR INTERVIEWED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATA in Uzbek 28 January 1983 carries on page 2 a 1,300-word interview with Islom Shoghulomov, director of the CPUz Central Committee Publishing House. In his response to a question on the new offset printing machinery installed at the publishing house, Shoghulomov dwells on some problems that have arisen in the operation of this machinery. He states that three of the new units were faultily manufactured by the Polygrapher Machinery Plant in Odessa. Due to these faults production at the publishing house is frequently stalled and considerable time is wasted. Presently, representatives from the Odessa plant are trying to eliminate these deficiencies which, according to Shoghulomov, should have been recognized prior to their shipping and installation. In his reply to a question about the problem of late delivery of newspapers, Shoghulomov states that a large share of the responsibility for this falls on leaders of "Soyuzpechat" and mail services subordinate to the UzSSR Ministry of Communications. He remarks: "In my view communications enterprises, mail carriers, and particularly shops trading in newspapers and journals, have to begin radically improving their work in this field. The truth is that the job of delivering newspapers and journals to agricultural workers is in a completely unsatisfactory condition."

INSTITUTE OF PARTY HISTORY DIRECTOR DISCUSSES PARTY DISCIPLINES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 21 January 1983 carries on pages 2-3 a 2,100-word essay by H. Tursunov, corresponding academician of the UzSSR Academy of Sciences [and director of the republic Institute of Party History], titled "Leninist Party Discipline." The essay addresses the general nature of party discipline and the demands it places on the behavior of communists. Tursunov traces the origins of its principles to Lenin's work on "The Children's Disease of 'Leftism' in Communism," and emphasizes that the "Rules of the CPSU" are binding. He defines the conscientious communist as one who adopts an activist and highly ethical stance in society and the production place; who fights cases of hooliganism, disrespect toward elders and women, alcoholism, and neglect of parents; who doesn't tolerate speculation, self-interest, parasitism, claiming that unfinished work is done, or living ostentatiously or lavishly. Today, republic party organs are stepping up their organizational work to motivate workers to observe the three disciplines of party, state, and work, in order to reach new peaks of socialist competition. Tursunov concludes that this effort will demand that every communist keep the interests of the party, state, and people foremost in his mind, and that he maintain "iron discipline" and an activist attitude toward work.

PEOPLE'S CONTROL COMMITTEE DEPUTY REVIEWS LABOR DISCIPLINE VIOLATIONS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 25 January 1983 carries on page 2 a 1,500-word article by S. Rashidov, deputy chairman of the UzSSR People's Control Committee, titled "Work Time Is the Nation's Wealth." Rashidov reviews some of the major causes for violations of labor and production discipline. A major problem is that numerous unions and enterprises are complacent toward late and malingering workers instead of docking them for the lost work time. A great deal of work time is lost due to hitches in the supply of materials and deficiencies in the planning and organization of labor. Equipment failures and delays in servicing and repairs contribute heavily to loss of work time. Rashidov cites as one example of the result of such problems the Kattakurgan Cotton Machinery Plant, where loss of work time amounted to 4,000 man workdays. As a second example, he cites the Vehicle Administration Departments of "Golodnostepstroy," where 1,655 man workdays were lost in 1982, a figure equivalent to the loss of 150 drivers a day. He urges PC organs to concentrate on cases of loss of work time and production of worthless goods.

UZBEK PUBLICATIONS ON COMMUNISM, INDOCTRINATION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 8 January 1983 carries on page 2 a 300-word notice of the publication of three Uzbek books by "Uzbekistan" Publishing House titled "Books for Your World." The collective volume DUNYONI OZGARTIRUVCHI TA"LIMOT ["Doctrines That are Changing the World"] has a section containing materials on the lives of Marx, Engels, and Lenin, a section dealing with the accomplishments and tasks of developed socialism and the building of communism, and a section on the present revolutionary-transformational role of Marxism-Leninism. The collective volume RIVOJLANGAN SOTSIALIZM: NAZARIYA VA PRAKTIKA PROBLEMALARI ["Developed Socialism: Problems in Theory and Practice"] addresses urgent problems such as the characteristics of developed socialism in all phases of social life, its place in the modern world, and its effect on relations between and on the world revolutionary process. Sh. Karimov's RIVOJLANGAN SOTSIALIZM SHAROITIDA STUDENTLARNI KOMMUNISTIK RUHDA TARBIYALASH ["The Communistic Indoctrination of Students in Conditions of Developed Socialism"] deals with the party's leadership role in the indoctrination of students during the period 1959-1980, and examines three mutually related processes of indoctrination: ideological-political, ethical, and labor.

UZBEKS TO RECLAIM LANDS BY VOLGA-TEZA CANAL IN IVANOVO OBLAST

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 1 January 1983 carries on page 3 a 700-word article by Jora Kholqosimov titled "Chalice." Kholqosimov reports that G.I. Razumov, a secretary of the Ivanovo Obkom, informed him by telephone that Uzbeks will begin in 1983 to reclaim lands in the Teza River Basin. The lands are part of the 20,000 hectares which will be irrigated when the 23-kilometer Volga-Teza Canal is completed by the end of the 11th FYP.

Kholqosimov also talked to Georgiy Magradze, manager of the "Uznovgorodvodstroy" Trust, who informed him that workers of the trust drained 25,000 hectares, performed ameliorative work on 2,000 hectares, and built 48,000 square meters housing, since its formation. Finally, Kholqosimov talked with Jumanazar Shermatov, a worker on the "Tashkent" Sovkhoz in Lesnaya Village of Novgorod Oblast, who is home on vacation in his native Chust with his Russian wife Zhenya and their two children.

TASHKENT INSTITUTES PLANS VOLGA-TEZA CANAL

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 20 January 1983 carries on page 1 an 800-word article by UzTAG correspondent G. Lipshits titled "Volga Construction Project Begun in Tashkent." Lipshits reports that the "Sredazgiprovodkhlopok" Planning and Research Institute in Tashkent has been drawing up plans for a canal that will carry water from the Volga River to the Teza River in Ivanovo Oblast. According to calculations, diversion of Volga water into the nearly dry Teza will make it possible to cultivate some 20,000 hectares in feed grains in the Furmanov, Rodnikov, Vichugsk, Ivanovo, Shuya Savinskiy, and Yuzhsk Rayons. The institute has sent an expedition to the region to determine the best route for the canal--through or along the edge of the Kozlov Swamp lying between the two rivers. When completed water will be pumped from a station to be erected by the Gorkiy Reservoir through the 20-23 kilometer canal.

EDITORIALS FOCUS ON LABOR DISCIPLINE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 9 January 1983 carries on page 1 a 900-word lead editorial titled "The Value of Minutes." The editorial deals with the loss of work time at various enterprises due to inexcusable truancy and idleness and to following procedures that are costly in terms of time. It singles out the party organizations of the Angren Ceramics Combine, Tashkent Excavator Plant, Kattakurgen Milk Plant, and Andizhan and Bukhara Textile Combines, for their neglect of such deficiencies. Tashkent SOVET OZBEKISTONI in Uzbek 13 January 1983 carries on page 1 a 900-word lead editorial titled "A Sense of Responsibility." The editorial urges party and enterprise leaders to improve the organization of labor, implement cost-saving programs, prevent waste, decrease labor turnover, and enforce labor discipline. It singles out enterprises of the UzSSR Ministries of Light, Food, and Cotton Industries, where considerable waste of work time is taking place;

Tashkent Oblast industrial enterprises, where violations of labor and production discipline resulted in a loss of 25 million rubles goods in 1982; and the UzSSR Ministries of Construction and Rural Construction, where numerous cases of lack of demandingness and complacency toward discipline violators are being encountered. Tashkent SOVET OZBEKISTONI in Uzbek 21 January 1983 carries on page 1 an 800-word lead editorial titled "Conscientious, Communist Discipline." The editorial stresses that widespread laxity of labor and production discipline are responsible for the slow increase in labor productivity, which in turn accounts for the sluggish growth of republic industrial production. In 1982 some 84 enterprises suffered a decline in production of goods due to labor discipline problems. Numerous enterprises subordinate to the UzSSR Ministries of the Cotton Cleaning, Light, and Fruit and Vegetable Industries are experiencing substantial losses in man workdays. Leaders of the Ministry of the Construction Materials Industry adopted a set of nine measures designed to protect the working environment in its enterprises several years ago, but has yet to implement five of them. Director Mansurov and Chief Engineer Raskov of the "Sredazgazavtomatika" Plant not only tolerate the waste of precious metal units but even permit their outside sale. One-third of the enterprises within the system of the Ministry of Consumer Services, including one-half of its enterprises in the oblasts, failed to carry out their 1982 plans. Much the same situation is found at the "Uzptitseprom" Union, and numerous enterprises and farms remain indebted to the state. Tashkent SOVET OZBEKISTONI in Uzbek 22 January 1983 carries on page 1 a 1,100-word lead editorial titled "The Young Man's Word Is a True Word." The editorial stresses that the only way to meet the high socialist obligations pledged for 1983 is to dramatically improve the enforcement of production, plan and labor discipline. It points out that in 1982 the unsatisfactory utilization of production capabilities resulted in a shortfall of 100 million rubles industrial goods. Some ministries and agencies fail to meet their plans because they permit the waste of allocated materials and sums in construction and the incorrect utilization of labor resources--this is especially true of organizations of the UzSSR Ministry of Installation and Special Construction, and of construction organizations in Kashkadarya Oblast, the "Samarkandkhimstroy" Union, and the Navoi Construction Administration. The editorial also cites the annual loss of work time due to truancy and tardiness within the system of the Ministry of the Construction Industry as being equivalent to one construction administration shutting down per day.

ENERGY CHIEF REVEALS ELECTRIC ENERGY WASTE IN INDUSTRY

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 16 January 1983 carries on page 2 a 1,100-word article by T. Ahmedov, chief of the UzSSR State Energy Supervision Office, titled "There's no Room for Excuses." Ahmedov provides some statistics on recent energy use in Uzbekistan and reveals that electric energy is still being wasted in republic industrial enterprises. In the last decade energy use has tripled in Uzbekistan, including 2.5 times in industry and 7 times in agriculture. During 1982 more than 35 billion kilowatt hours electricity and 20 million gigacalories thermal energy was used by consumers. Ahmedov calculates equivalents in savings of just 1 percent of electric and thermal energy consumption: 4 million kilowatt hours in consumer sector, 190 million kilowatt hours in industry, 80 million kilowatt hours in agriculture;

or 274,000 tons coal or 3.3 million rubles. In 1982 republic industrial enterprises economized as a whole 450 million kilowatt hours electric energy and 300,000 gigacalories thermal energy. However, many enterprises failed to economize. Figures show that in the first 11 months of 1982 some 11 enterprises used 10 million kilowatt hours electric energy over norm. These enterprises include the Andizhan Hydrolysis Plant and the Urgench and Bukhara Oil Extraction Plants of the Ministry of the Food Industry and several others subordinate to the Ministry of the Construction Materials Industry.

ANGREN COAL MINERS OVERFULFILL PLAN

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 16 January 1983 carries on page 2 a 300-word report from UzTAG titled "Creators of 'Black Gold.'" The report states that the "Angrenskiy" Coal Section of the "Sredazugol'" Production Union excavated more than 5 million tons of coal in 1982, 150,000 tons over plan. Now the section is working with new rotor excavators that can dig 630 tons an hour.

FIRST STAGE OF TUYAMUYIN HYDROELECTRIC COMPLEX

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 23 January 1983 carries on page 1 a 200-word report from UzTAG titled "Tuyamuyin in the Nation's Service." The report states that the first stage of the Tuyamuyin Irrigation and Energy Complex, built along the middle and lower courses of the Amudarya, has been officially accepted for use. The first stage includes two reservoirs, the already full Kaparas Reservoir and the filling Ozan Reservoir, which altogether will hold 2.6 billion cubic meters water. The water will irrigate more than 250,000 hectares in Karakalpakistan, Khorezm Oblast, and Chardzhou Oblast (Turkmenistan). Work has already begun on the irrigation projects of the second stage.

NEW IRRIGATION, WATER WORKS PROJECTS DESCRIBED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 16 January 1983 carries on page 1 a 100-word report from UzTAG titled "Steel Rivers." The report covers three items: 1) A water pipe 42 kilometers long has been laid to bring water to 12,000 hectares of the Baykurgan-Gandzha pastures in Kashkadarya Oblast. 2) Recently a water pipe was laid to supply Amudarya water to pastures of karakul breeding farms in Turtkul and Beruniy Rayons of Karakalpakistan. 3) In 1982 the republic pasture reclamation construction union laid pipes to supply water to 313,000 hectares as part of a general program to provide the steppes with water.

EDITOR BACKS WATER, ENVIRONMENTAL PROTECTION MEASURES

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 14 January 1983 carries on pages 1-2 a 1,500-word article by Maqsud Qoriyev [chief editor of SOVET OZBEKISTONI] titled "Our Sacred Obligation." Qoriyev discusses the need for and some recent measures aimed at protection of the environment, particularly of water resources in the republic. He points out that despite the growing water shortage there are still numerous cases of waste of irrigation water, pollution of drinking water, and waste of mineral water.

Too many industrial enterprises dump polluted water into the river system; e.g., enterprises along the upper banks of the Chirchik River dump wastes with harmful chemical and other substances into the river and thus pollute a network of reservoirs and canals which presents a clear danger to the water supplies of Tashkent, Chirchik, Yangiyul, and other cities. He also cites the concern of specialists that the enlarging bottomfill of stone and sand in the Chirchik River is altering its course so that part of its water flows underground to the Hungry Steppe where it is absorbed. Qoriyev approves of the special resolution recently adopted by the republic party and government on the need for human and environmental protection, and notes that nearly 80 million rubles have been allocated for this in 1983. Another good sign in his opinion is that the use of harmful chemicals like DDT has declined in recent years in favor of biological methods of plant protection. Still, Qoriyev concludes, with the ever greater demands being placed by agriculture and industry on shrinking water resources the need to protect water is becoming more acute. He urges journalists to provide more coverage of such environmental issues.

CULTIVATION OF LONG-STAPLE COTTON URGED FOR THREE OBLASTS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 January 1983 carries on page 3 a 1,200-word article by M. Isamuhamedov, deputy director of the Public Institute of the History of Collective and State Farms, titled "Specialization Is the Main Task." Isamuhamedov urges that long-staple variety cotton be broadly cultivated in Kashkadarya, Bukhara, and Navoi Oblasts. The three oblasts share the climatic conditions conducive to this variety with Surkhandarya Oblast, which in 1982 harvested 276,000 tons of long-staple, more than half its total yield, and far and away the best in the republic. Kashkadarya Oblast harvested 131,000 tons, and Bukhara and Navoi Oblasts together 47,000 tons long-staple in 1982. Isamuhamedov cites estimates that if 250,000 hectares, or 14 percent of the republic's 1.9 million hectares under cotton cultivation, planted in long-staple variety the yield would be 750,000 tons annually, far above the 11th FYP goal of 500,000 tons. He rejects as insufficient the plan of Bukharan Oblast leaders to plant long-staple on all newly reclaimed lands, and urges that all three oblasts begin switching over all fields to the variety at once.

DZHIZAK OBKOM PUSHES FORMATION OF SUBSIDIARY FARMS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 5 January 1983 carries on page 3 a 1,600-word article by newspaper correspondent Turob Maqsudov titled "Is the Subsidiary Farm a Subsidiary Field?" Maqsudov cites extensively from statements by T.B. Baymirov, Dzhizak Obkom first secretary, on obkom efforts to develop the subsidiary farm sector. He notes that there are 103 subsidiary farms in the oblast, including the 40 that were formed in 1982, during which these farms produced nearly 200 tons meat, 200 tons milk, and 40,000 eggs. Baymirov states that the formation of such farms by enterprises and organizations helps bind their workers to them by offering them products at a cheaper price and fostering their spirit of collectivism. The obkom provides considerable support to such farms. It mobilizes communists to help supply them with equipment, money, materials, and cadres, and sends specialists into the rayons to help start up such farms.

BOOK ON AGROINDUSTRIAL COMPLEX PUBLISHED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 12 January 1983 carries on page 2 a 200-word item titled "New Books." The item announces the publication of N. Tukhliyev's OBOBSHCHESTVLENIYE PROIZVODSTVA I AGROPROMYSHLENNAYA INTEGRATSIYA ["Socialization of Production and Agroindustrial Integration"] (Tashkent: "Fan," 1982). The book is devoted to the role of the agroindustrial complex in solving problems in the intensification of agricultural production and in increasing agricultural productiveness.

'UZSTROYINDUSTRIYA' INTRODUCING QUALITY CONTROL SYSTEM

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 8 January 1983 carries on page 2 a 200-word item titled "Quality Control System." The item states that the Tashkent Experimental Machinery Plant of the "Uzstroyindustriya" Union has introduced, effective the beginning of 1983, a general system of product quality control. The quality of a product will be judged by how many of the 17 standards in the system it meets, and the material and spiritual incentives of workers will also depend on this. If successful the plant stands to save 40,000 rubles and 10 tons of metal annually. The system will be introduced in all enterprises of "Uzstroyindustriya" by the end of 1983.

PLAN FAILURES LINKED TO LABOR PRODUCTIVITY PROBLEMS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 22 January 1983 carries on page 2 a 700-word economic report titled "The Way To Achieve Results." The report states that a number of industrial enterprises, construction organizations, and transport branches, did not increase their labor productivity and hence failed to meet their plans. It is particularly critical of "the worthless practice of mobilizing additional labor forces" which numerous enterprises indulged in to fulfill their 1982 plans: "This accomplishes nothing more than opening the way to even greater expenditures rather than increasing labor productivity!" The report singles out enterprises of the oil, petrochemical, coal, nonferrous metallurgy, and chemical industries, as being especially indifferent to the need to increase labor productivity in order to increase production volume. It cites the worse offender as being the Mubarak Gas Refinery, which had a production shortfall of 5.2 million rubles in 1982.

UZBEK AGRICULTURE NEEDS MORE COOPERATION FROM REPUBLIC MINISTRIES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 8 January 1983 carries on page 2 a 1,400-word report by newspaper correspondent A. Qorjovov titled "The Militant Work of All." Qorjovov publishes comments by V. Yesin, Navoi Obkom first secretary, on agricultural and other developmental problems in the oblast. Yesin states that in order for the oblast to considerably increase cotton, grain, and other crop production, the water supply and land amelioration work must be quickly improved. The UzSSR Ministry of Land Reclamation and Water Resources "must cooperate with our oblast organizations to produce concrete measures that will change present conditions." The UzSSR Ministries of Agriculture and the Fruit and Vegetable Industry "must accelerate construction of housing, schools, public and production facilities in order to develop the cotton, grape, and livestock raising sovkhozes formed in recent years." He also points out that one-fourth of the ammonium nitrate and all of the "kotoran" used in mineral fertilizers are produced by oblast enterprises, and would be even more productive were interruptions in the supply of raw materials to them halted.

Social and Cultural Affairs

KIRGHIZ-UZBEK TIES DISCUSSED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 14 January 1983 carries on page 3 a 900-word article by Hero of Socialist Labor Yusupjan Mombekov, chairman of Kolkhoz imeni Kalinin in Lenin Rayon of Osh Oblast, Kirgiz SSR, titled "Each Other's Master." Mombekov, whose kolkhoz is in socialist competition with one of Izbaskan Rayon of Andizhan Oblast, discusses the nature of traditional and regional ties between the Kirgiz and Uzbek peoples. He states: "The hearts and fates of the Kirgiz and the Uzbeks are mingled like mother earth. Their languages are close. One can understand the other without translation. In the Fergana Valley you can meet a great many Kirgiz who speak Uzbek and Uzbeks who speak Kirgiz. Their customs are quite familiar to one another. Kirgiz lovelies are cherished brides in Uzbek families and Uzbek beauties are found in Kirgiz families. The peoples are mixed like the harmonious melodies of song." He notes that throughout the Andizhan-Osh region there are Kirgiz and Uzbek villages interspersed with one another and sometimes mixed in the same village. His kolkhoz has 850 members, of which 40 percent are Uzbeks. Uzbek is taught in its schools, and Uzbek newspapers and journals and radio broadcasts are followed. Mombekov concludes with the statement: "Always following the example of our great older brother the Russian people, we shall henceforth try even harder to strengthen the eternal friendship and mutual assistance between the Kirgiz and Uzbek peoples."

ESSAY VIEWS INTERNATIONALISM AS BASIS OF MULTINATIONAL STATE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 29 January 1983 carries on pages 2-3 a 1,700-word essay by Prof Dr of History V. Shapovalenko titled "Leninist Internationalism." Shapovalenko states that proletarian internationalism is the basis of the multinational Soviet state and of the foreign and domestic policies of the CPSU. He argues that Lenin developed and applied Marx's ideas of the dictatorship of the proletariat and proletarian internationalism, and warns that anticommunists try to fool workers by claiming that Marxist ideals do not apply to the modern situation in the USSR or that Leninism is not applicable to other countries. He claims that following national delimitation in 1924 the Uzbek, Kazakh, Turkmen and Kirgiz party organizations were formed from the Turkestan, Bukhara, and Khorezm Communist Parties on the basis of the principle of internationalization, which was a key factor in solving the nationality question in republics of the Soviet East. He considers the chief tendency of nationality relations at the stage of developed socialism to be the further rapprochement of nationalities and subnationalities, which requires an even stronger federal state. In conclusion Shapovalenko refers to the 26th CPSU Congress where it was repeatedly stressed that in republics of the Soviet East production forces would be developed and training of skilled cadres from the local populations, especially from among rural youths, would be expanded. He notes that Yuri Andropov, in his speech on the occasion of the 60th Jubilee of the USSR, also touched on the fact that not all problems in nationality relations have been solved.

BOOK ON NATIONALITY LANGUAGE PROBLEMS REVIEWED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 5 January 1983 carries on page 2 a 1,100-word review of K. Khanazarov's RESHENIYE NATSIONAL'NO-YAZYKOVOY PROBLEMY V SSSR ["Resolution of the Nationality Language Problem in the USSR"] (Moscow: "Politizdat," 1982) by Dr of Philology A. Mahmudov titled "Loyalty to a Great Friendship." The review indicates the contents of the chapters of this book by the director of the Institute of Philosophy and Law of the UzSSR Academy of Sciences, which is a general treatment of language development problems at the stage of mature socialism, and of the historical necessity and future of bilingualism in the USSR.

RUSSIAN TEACHING AT KARSHI PEDINSTITUTE OUTLINED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 9 January 1983 carries on page 2 a 700-word article by A. Jumashev, docent and dean of the Russian Language and Literature Faculty at Karshi State Pedinstitute, titled "Powerful Instrument." Jumashev outlines the Russian teaching program at Karshi Pedinstitute. The faculty has at its disposal three linguaphone offices and an equipment supply office. It arranges seminars for teachers in all departments on important problems of Russian linguistics, literary studies, and teaching methodology. Evening discussions are held on themes such as "Russian: Our Second Native Language," "Russian: Language of Friendship and Cooperation," and "Powerful and Great Language." Students may use Russian study rooms for guided and independent studies, attend Russian language days and weeks, listen to the weekly Russian broadcast from the institute's radio center "Our Second Native Language," read the departmentally published wall newspaper RUSSKOYE SLOVO, or join a Russian study circle. The institute also holds Russian language conferences at rayon schools and joint assemblies with pedagogical soviets of secondary schools, at which problems of improving oral and written skills are discussed. Faculty members also sit in on classes in secondary schools and provide critiques.

RUSSIAN TEACHER UNDERLINES IMPORTANCE OF UZBEK LANGUAGE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 8 January 1983 carries on page 3 a 1,200-word article by M. Avezov titled "Architect of the Heart." Avezov sketches the career of the Russian language teacher Mavjuda Samadova, who has taught in secondary schools in the Uzbek mahalla of Chilanzar in Tashkent for decades. Samadova states: "Russian is Lenin's language, the language of friendship. Knowing it is both an obligation and a debt. It is also necessary to know one's native language. Studying Russian, our second native language, depends on this."

COLLECTION OF UZBEK PROVERBS REVIEWED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 7 January 1983 carries on page 5 a 700-word review of OZBEK KHALQ MAQOLLARI ["Uzbek Proverbs"] (Tashkent: "Fan," 1982) by Berdaq Yusupov titled "The Language's Wealth Is the Nation's Wealth." The collection contains 4,500 Uzbek proverbs, and is the first such large publication. The proverbs are arranged according to thematic groups: homeland and patriotism, collectivism, friendship, laziness, parasitism, science, trades, wisdom and ignorance, good and evil, modesty and conceit, hospitality, justice, respect, love, fidelity and infidelity, family, children, education, seasons and nature, and also "proverbs fashioned by the people about exploitators and clericals." Yusupov notes that some Uzbek proverbs are very old and cites one that appeared in the 11th century encyclopedia of Mahmud al-Qashgari: "There is no cap without a head, no Turk without a Persian" [i.e., all Turks are mixed with Persians]. He goes on to remark on the identity or similarity of numerous Uzbek and Tajik proverbs, and to regret that several dozen Tajik words in this collection were not annotated by its compilers. Yusupov concludes: "The book was only recently printed in a tirazh of 10,000, but it's extremely difficult to find in shops. I think it should be republished in a much larger tirazh since it's an important source for the study of the people's history and language."

RUSSIAN EDITION OF UZBEK EPIC REVIEWED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 26 January 1983 carries on page 4 a 400-word review of Dzhura Mirzayev's Russian language edition of the Uzbek heroic epic "Alpamish" (Leningrad: "Sovetskiy Pisatel'," 1982) by Dr of Philology Malik Murodov and Hojiakbar Shaykhov titled "Second Spring of 'Alpamish'." The reviewers briefly indicate the episodes of the epic and point out that some of its fantastic motifs are also characteristic of other Uzbek epic romances. Nonetheless, recent researches prove that "Alpamish" is the only example of Uzbek folklore that embodies all the features of the heroic epic. It not only depicts the glorious past of the Uzbek people, but also reflects its daily life, customs, and best hopes and ideals in a monumental and idealized form. The reviewers refer to the opinion of V.M. Zhirmunskiy who considered "Alpamish" to be one of the most outstanding examples of the heroic epic in the world, and comparable to the Homeric epics. They point out that the present Russian translation is based on that of the Uzbek poet Khamid Alimdzhan whose 1949 edition marked the beginning of the present scientific stage of "Alpamish" studies. The reviewers conclude that the present publication "makes 'Alpamish' the property of the All-Union student and is a great event in our cultural life."

WRITERS' UNION STRESSES INVESTIGATIVE JOURNALISM

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 28 January 1983 carries on page 1 a 500-word report titled "Militant Obligation of a Militant Genre." The report concerns the annual meeting of the sketch and publicistics council of the UzSSR Union of Writers. Prof Dr of Philology Ochil Toghayev spoke on the importance of investigative journalism and cited the fact that some recent sketches published in OZBEKISTON ADABIYOTI VA SAN"ATI, GULISTON, and YOSHLIK, have prompted several ministries, organizations, and agencies to adopt special resolutions to deal with the problems raised in them. Nonetheless, Toghayev pointed out, the majority of newspapers and journals in the republic do not publish works that address the pressing issues of today. He singled out the excellent work in this field being done by Sharof Ubaydullayev, Norqul Hayitqulov, and Shokirali Nuraliyev. Then, Vladimir Tyurikov, Uzbekistan correspondent for LITERATURNAYA GAZETA, followed up Toghayev's thoughts and also dealt with problems being raised--and often ignored--in sketches published in the journal ZVEZDA VOSTOKA. He also stressed that special attention must be paid to the problems of translation from Uzbek to Russian. Officials from major Uzbek language periodicals also spoke at the meeting.

EDUCATION MINISTRY ADOPTS NEW MEASURES FOR RUSSIAN LANGUAGE TEACHING

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 15 January 1983 carries on pages 1, 3 a 3,100-word article under the "At the UzSSR Ministry of Education" rubric titled "We Shall Further Develop Russian Language Teaching." The article details the provisions of a decree issued by the UzSSR Ministry of Education "On additional measures for fulfilling the 29 June 1981 resolution of the collegium of the UzSSR Ministry of Education [titled] 'On further developing the study and teaching of Russian language and literature in schools, preschool and extraschool establishments, and pedagogical colleges,' and on further improving the promotion of Russian language teaching and study." As a result of the 1981 resolution, the number of groups for teaching spoken Russian to kindergarten children has reached 1,513, and Russian is the language of education and indoctrination in 3,597 of the republic's 7,816 preschool establishments. Moreover, there are not 26,395 Russian language teachers, including 19,699 in rural areas, in republic secondary schools, and 609 Russian language teachers in pedagogical schools. Despite this progress, shortcomings exist in many areas. Provisions in the new decree assign tasks to various educational organs that are designed to further improve their work. Among the provisions are measures calling for greater emphasis on active spoken command of Russian and less reliance on materials that require only passive learning: raising the skills of teachers and the quality of instruction; increasing the use of modern language teaching equipment, forms, and methods; forming more intensive language schools and school-internats, particularly in Syrdarya Oblast and Karakalpakistan: and, where relevant, vastly improving the teaching of Russian to teenagers at ages prior to induction in the military.

EDUCATORS TOLD TO BEEF UP MILITARY, PATRIOTIC INDOCTRINATION

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 26 January 1983 carries on page 1 a 1,000-word lead editorial titled "Loyalty to Militant Traditions." The editorial criticizes shortcomings in the work of republic educational organs in the area of military-patriotic indoctrination which it attributes to their failure to create an adequate material and technical base and to the lack of sufficient knowledge and skills on the part of primary military indoctrination teachers. It calls for greater attention to raising the skills of such teachers, strengthening ties between military commissariats, DOSAAF, and patriotic organizations, and better utilization of this kind of indoctrination in literature, history and social sciences classes. The editorial concludes with the statement: "Today, the sons and grandsons of the heroes of the Great Patriotic War stand in the ranks of the Homeland's defenders. They have not passed the difficult tests that faced their fathers and grandfathers. Despite this, they are loyal to the heroic traditions of our army and our people."

BOTANY'S ROLE IN ATHEISTIC INDOCTRINATION STRESSED

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 26 January 1983 carries on page 2 an 800-word article by Cand of Biology Q. Haydarov titled "The Botany Lesson and Atheistic Indoctrination." Haydarov discusses the fifth-sixth grade botany teachers can bring in atheistic explanations during their lectures on seeds. He notes that since ancient times the farmers have sown seeds with the hope that God would grant an abundant harvest. Botany teachers can point out that good yields must be taken from nature through such techniques as seed selection. They can also discuss religious beliefs connected with various plants and provide a materialistic explanation. For example, the wheat porridge called sumalak is considered to be the dish of Fatima, so that whoever eats this dish imagines he will be freed from all sins. It has become customary to eat sumalak during the Navroz Bayrami [Spring Festival]. Botany teachers can explain that the reason the people eat sumalak is that it is rich in vitamins. Haydarov concludes that in order for scientific atheism to be successfully integrated into botany lessons teachers are needed who are themselves atheists, armed with materialistic concepts, knowledgable about natural laws, and capable of utilizing scientific results in lessons.

LOCAL HOLY PLACES SUBJECT OF ATHEISTIC INDOCTRINATION

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 22 January 1983 carries on page 4 a 200-word article by B. Qoshmonov titled "Attending to Atheistic Indoctrination." Qoshmonov describes the efforts being made in a Namangan secondary school to integrate atheistic indoctrination with instruction. Besides providing materialistic explanations of various natural phenomena during lessons, teachers also take part in lectures and discussions on themes such as "Science and Religion," "Earthquakes and Their Causes," and "Astronomy and Religion." The 40 students in the school's atheism circle also take regular excursions to places of worship that are considered holy, including a recent trip to the curative springs at Kichik Tashbulak. They studied the area and understood that the notion spread by clericals that the springs could increase wealth was false. Now the site has been cleaned up and turned into a spot where workers can rest.

ZONAL SEMINAR ON ATHEISTIC INDOCTRINATION

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 29 January 1983 carries on page 2 a 100-word report from UzTAG titled "Zonal Seminar." The report states that a zonal seminar devoted to problems in increasing the effectiveness of atheistic indoctrination was held in Andizhan. Obkom, raykom, and gorkom secretaries, propagit department chiefs, and ideological activists of Andizhan, Namangan, and Fergana Oblasts exchanged thoughts on current problems in instilling an atheistic worldview in students and young people.

REPUBLIC PROCURATOR KEYS ON THEFT, RECOVERY OF LOSSES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 25 January 1983 carries on page 3 a 200-word item titled "At the Uzbek SSR Procurator Office." The item reports that the procurator office held its regular session on 20 January and discussed ways of protecting state property from theft and of recovering losses incurred by the state. Several participants stressed that the work of ministries and agencies in this area falls far short of demand. N. Borikhojayev, the republic procurator, emphasized that leaders of ministries and agencies must show considerably more responsibility in fighting theft and recovering losses.

OFFICIALS ACCUSED OF ABETTING PRODUCE SPECULATION IN RSFSR

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 23 January 1983 carries on page 4 a 1,300-word feuilleton by Rafiq Tursunov titled "Can the Leopard Change His Spots?" The feuilleton deals with a group of Uzbeks from several rayons in Namangan Oblast who truck fruit and vegetables to cities such as Chelyabinsk and Sverdlovsk and to the Tyumen region. He makes the point that this group operates with the knowledge and assistance of rayon and farm officials who provide the necessary papers.

UZBEK TEXTBOOK ON STATE, LAW THEORY REVIEWED

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 19 January 1983 carries on page 4 a 300-word review of A.A. A"zamkhojayev and Sh.Z. Orazayev's DAVLAT VA HUQUQ NAZARIYASI ["State and Law Theory"] (Tashkent: "Oqituvchilar," 1982) by Cand of Law M. Saidazimov titled "Important Manual." The reviewer points out that creating an Uzbek language manual for students on the theory of state and law has been one of the most pressing and complex tasks facing scholars. The present work consists of three basic parts: the first discusses the nature of state and law theory, types of exploitative societies, and other questions; the second analyzes functions and legal relations of the state and law in a socialist society; and the third explores the conditions for abolishing the state and law in a communist society. The reviewer concludes that "the manual will doubtlessly be considered a fascinating work."

International Affairs

PAKISTAN SAID TO REPLACE IRAN AS U.S. SURROGATE IN MIDDLE EAST

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 6 January 1983 carries on page 2 a 1,100-word commentary by F. Rahimov under the "Commentator's Pulpit" rubric in the world news section titled "New Policeman." Rahimov argues that since the Iranian revolution toppled the shah in 1979 the United States has attempted to develop Pakistan's "reactionary military regime" headed by Gen Zia-ul-Haq as its "policeman" in the Middle East and Indian Ocean. He notes that Pakistan is an ideal candidate for such a role due to its strategic location, with borders on Iran, Afghanistan, and China, and its willingness to serve the demands of Washington. Citing the Indian weekly NATIONAL HERALD he points out that America's rapid deployment forces are to use the navy base in Gwardar and that American planes are being repaired and serviced in Peshawar, where all the equipment necessary for U-2 spy planes is maintained. Rahimov cites reports on Pakistan's efforts to develop a nuclear bomb and delivery capability. According to him Gen Zia-ul-Haq attempts to disguise hostile actions against the Soviet Union, Afghanistan, and India under the cloak of a "Soviet threat," and has traveled to Romania, Yugoslavia, Italy, and France to convince these governments that he supports peace and is supported by the Pakistani population. Yet, Rahimov continues, Islamabad refuses to recognize the government of Babrak Karmal and allows Afghan Basmachi and counterrevolutionary groups to maintain 80 military camps on Pakistani territory. Moreover, according to Rahimov, the regime has arrested thousands of citizens who marched to protest the use of Pakistan as a staging ground for an undeclared war against Afghanistan that serves U.S. policies. The commentator concludes that the regime of Zia-ul-Haq has become the new U.S. policeman in the Middle East, one that stands in the way of the national liberation struggle and poses a serious threat to the sovereignty of countries in this region.

TIES BETWEEN UZBEK, AFGHAN YOUTH NOTED

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 8 January 1983 carries on page 2 a 1,100-word article by V. Bagdasarov, deputy chairman of the UzSSR Committee of Youth Organizations, titled "Always in the Front Rank." In his review of the international activites of Uzbek youth organizations, Bagdasarov states: "Relations between Uzbek Komsomols and Afghan youth are getting stronger. Cadres that are needed for Afghanistan's economy are being trained in our republic, and pioneer camp vacations for Afghan children are being arranged. Komsomol organizations are sending books, musical instruments, and other things to Afghan youth. A fruitful collaboration between Kabul and Tashkent State Universities is being realized."

AFGHAN EDUCATORS IN TASHKENT

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 1 January 1983 carries on page 1 a 100-word item titled "Meeting With Afghan Educators." The item reports that on 31 December the UzSSR Ministry of Education held a meeting for a delegation of educators from Afghanistan that included Muhammad Sarvar Puya, chief of the administration of primary schools of the Afghanistan Ministry of Education, Ruhabza Kamiyar and Abdul Ghafur Asmaniy, deputy chiefs, and Abdul Karim and Sirojiddin, inspectors. Uzbek Minister of Education S. Shermukhamedov spoke on the development of Uzbek education under the Soviet government, and Deputy Minister I. S. Mominov and other officials attended the meeting.

AFGHAN EDUCATOR INTERVIEWED

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 5 January 1983 carries on page 2 a 600-word interview with Ruhabza Kamiyar, deputy chief of the administration of primary schools of the Afghanistan Ministry of Education, by correspondent Ye. Pavshukova, titled "Shining Impressions." Asked to comment on the current educational situation in Afghanistan, Kamiyar replies that they are looking with trust to the future and that they consider their most important task to be putting in order the system of people's education. Asked her impressions of what she has seen in Tashkent, Kamiyar states that when they visited the Lenin Museum "We all deeply sensed how similar the fates of your republic and our country are to one another." In response to a question about which experiences were the most interesting and which would be the most useful in her country, Kamiyar replies that everything they witness is of interest and benefit since Afghanistan is starting from scratch. For that reason the delegation especially looked at problems of communistic indoctrination of students, selection of trades, and so on.

PUSHTU BOOKS TO BE PUBLISHED IN TASHKENT

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 22 January 1983 carries on page 2 a 100-word report from UzTAG titled "The General Number of Copies Is One Million." The report states that the number of books printed at the Tashkent department of "Raduga" Publishing House has reached one million with the publication of Persian translation of M. Prilezhayeva's "Life of Lenin." Works by Marx, Engels, and Lenin occupy a leading place among "Raduga's" publications in Arabic, Hindu, Urdu, Dari and Persian. Now the Tashkent department will also start to publish books in Pushtu and is projecting the publication of literary works in Bengali.

TURKISH MILITARY GOVERNMENT ACCUSED OF PERSECUTING WRITERS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 28 January 1983 carries on page 7 a 600-word commentary by M. Kamolov under the "Commentator's Pulpit" rubric titled "Attack Against Freedom Loving Forces." Kamolov focuses his commentary on the trial in an Istanbul military court of 18 leaders of a syndicate of Turkish writers. He reviews the takeover of the Turkish Government by a group of military officers headed by General Evren in September 1980 and its moves to halt political and bureaucratic instability. While Kamolov commends the easing of internal conflict and termination of terrorist and neofascist groups in the last 2 years, he censures the military leaders for pursuing a policy of militarization, as evidenced in Turkey's improved relations with the United States and NATO and the stationing of U.S. troops on Turkish soil. He asserts that the true goal of the present "cleaning up" is to stifle the people's struggle for freedom, and cites as proof the regime's imprisonment of 300 army officers and 2,000 others suspected of having "Communist sympathies." Kamolov then discusses the case of the Turkish writer Aziz Nesin who, along with 17 other leaders of a syndicate of Turkish writers, are on trial in an Istanbul military court on charges that include organizing and participating in a May Day demonstration, clandestine observation of the 80th anniversary of the Turkish poet Nazim Hikmet, and having affiliations with the Turkish Society of Supporters of Peace, the Confederation of Trade Unions of Revolutionary Workers, and other organizations that operated prior to September 1980. The military prosecutor is calling for 8-15 year sentences for the writers. Kamolov concludes that the military government is persecuting these creative figures.

MOZAMBIQUE FARMERS COMPLETE COTTON CULTIVATION COURSE IN DZHIZAK

[Editorial Report] Tashkent SOVETOZBEKISTONI in Uzbek 5 January 1983 carries on page 3 a 300-word report from UzTAG under the "Uzbekistan and the World" rubric in the world news section titled "In Accordance With the Law of Brotherhood." The report states that the first group of Mozambique farmers has completed a training course in cotton cultivation on Sovkhoz imeni Yulius Fuchik and "Moskva" Kolkhoz in Dzhizak Oblast as part of a broad program of cooperation between the two countries. The Mozambiques have left for their native Nampul Province where they will collaborate with Uzbek ameliorators and cotton farmers in reclaiming lands and erecting buildings for three large state cotton farms. Through the use of Soviet technology they aim to raise the present yield of these lands from 4-6 centners per hectare to 15 centners. Uzbekistan has delivered ahead of schedule more than 100 tractors, 30 seeding machines, 100 harrows, and dozens of other machines.

AFGHANISTAN SETTLEMENT PROPOSAL, MUJAHIDIN OPERATIONS AIRED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 15 January 1983 carries on page 3 a 500-word commentary by Cand of History N. Tojiboyev in the world news section titled "Get Your Hands Off Afghanistan!" Tojiboyev discusses [for the first time in an Uzbek language newspaper commentary] proposals for settlement of the Afghanistan problem, effects of Mujahidin operations, and U.S. charges that Soviet troops are using chemical weapons in Afghanistan. Tojiboyev refers to a TASS release in connection with U.S. charges that the Soviet Union is using chemical weapons which stated that the limited Soviet military troops would leave Afghanistan only if convincing international guarantees were made that outside interference in Afghan internal affairs would cease and not be repeated. Further, talks on the Afghanistan problem can only commence on the basis of proposals advanced by the Afghan government on 14 May 1980 and 24 August 1981. Tojiboyev asserts that no guarantees have been offered while reactionary forces continue to conduct subversive operations against state agencies, schools, hospitals, and other public places. He recalls that on 12 November 1982 bombs exploded in 4 Kabul restaurants, killing 21 and wounding 28, for which 3 members of the counterrevolutionary group "Hizbi Islamiya" were sentenced to death. He cites Najih, a member of the politburo of the Afghanistan People's Democratic Party Central Committee and chief of the state's security administration, who claimed that enemies of the revolution have shot nearly 1,500 school and government officials, killed hundreds of innocent people, destroyed 53 bridges, and 23 mosques, since December 1980.

AFGHANISTAN WRITERS' UNION JOURNAL BEGINS PUBLICATION

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 7 January 1983 carries on page 7 a 300-word "Letter From Afghanistan" by A. Abduazizov [an Uzbek cultural representative in Kabul] titled "Militant Words." Abduazizov writes that issues 1 and 2 of the journal JUVANDUN ["Life"], which has become the organ of the Afghanistan Writers' Union, have been published. They contain poems and stories in Dari, Pushtu, and Uzbek, as well as samples from Russian and other progressive world literatures. The first issue opens with an article by Asadulla Habib, chairman of the writers' union and rector of Kabul University. The second issue has samples of writings by Hungarian, Palestinian, and Bulgarian authors, and an article on the Days of Afghan Literature in the USSR. Abduazizov also reports that the writers' union organized a recent conference devoted to problems of language and style in writing articles.

PROPOSED WARSAW PACT-NATO ACCORD VIEWED AS MAJOR PEACE INITIATIVE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 8 January 1983 carries on page 3 a 200-word commentary by newspaper foreign affairs commentator T. Soliyev under the "Our Commentary" rubric in the world news section titled "Important Document." Soliyev states that member countries of the Warsaw Pact signed a document in Prague on 7 January that is a major new initiative in easing international tensions and bringing peace to the peoples of Europe. In particular, the Prague Declaration proposed that Warsaw Pact and NATO countries agree not to be the first to use nuclear or other military forces against one another. The same paper on 14 January 1983 carries on page 7 a 600-word commentary by F. Shohismoilov under the "Commentator's Pulpit" rubric titled "Most Important Task." Shohismoilov stresses the importance of the Prague Declaration, with its proposal that Warsaw Pact and NATO countries agree not to be the first to use nuclear and military force against one another, and also refers to remarks on U.S. imperialism and militarism made by Yuri Andropov in an interview with the Czech newspaper RUDE PRAVO. He states that the Soviet Union is making every effort to assure that reason triumphs in international affairs, and that it follows the Leninist policy of peaceful existence with states of other social systems.

COMMENTATOR SATIRIZES AMERICAN, BRITISH UNEMPLOYMENT

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 January 1983 carries on page 3 a 500-word satirical commentary by F. Shohismoilov under the "Face of the 'Free World'" rubric in the world news section titled "'Be Well....'" The satire concerns a DAILY WORLD newspaper correspondent named Oscar who checks out a story told him by an unemployed acquaintance named Dennis "Deymen" that a medical institute in Cincinnati, Ohio, pays out-of-work men to be injected with an experimental flu vaccine. Oscar goes to the institute, where its director Gilbert "Shiff" tells him he's too skinny, that the institute only needs strong, healthy men. The point of the satire is that in a country of 12 million unemployed such an institute can afford to be selective. The same paper on 29 January 1983 carries on page 3 a 400-word satirical commentary by F. Shohismoilov under the "Face of the 'Free World'" rubric in the world news section titled "Slap in the Face." The satire is aimed at the English general Jeremy Moore who served his country all his life, fighting in the jungles of Malaysia and Borneo and then on the stony wastes of the Falkland Islands. After receiving England's highest honors Jeremy Moore was retired by the government, and was unable to find work because of an "army of 4 million unemployed in the service of the kingdom." Moreover the house that went with his position was taken away from Jeremy Moore. Unemployed, homeless, crushed, Jeremy Moore could never have imagined that this was how the "free world" valued an individual. The satire ends: "However, he got what he deserved for not thinking about the misfortunes which the militaristic policy of the Tory government in England has brought upon the English."

U.S.-SOUTH KOREAN MILITARY EXERCISES SEEN AS PROVOCATION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 30 January 1983 carries on page 2 a 300-word commentary by A. Roxiyev under the "Commentator's Pulpit" rubric in the world news section titled "Crude Provocations." Roziyev comments on the military exercises called "Team Spirit-83" to be jointly conducted by the United States and South Korea in February-April, and terms the exercises "just another link in the chain of U.S. and South Korean military provocations along the border of the Korean People's Democratic Republic." He argues that the exercises are also meant to bolster the standing of the military fascist regime in Seoul, which must suppress the people's movement for democracy in order to exist. Roziyev blames U.S. military and other aid to this regime, and its stationing of occupation troops on Korean soil, as the major cause of continuing tension on the peninsula and a barrier to the unification of the Korean people.

UZBEK, KIRGIZ REPUBLICS IMPRESS INDIAN STUDENT

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 15 January 1983 carries on page 3 a 200-word report from a TASS correspondent in Delhi under the "Uzbekistan and the World" rubric in the world news section titled "Unforgettable Impressions." The item quotes remarks made by the Indian student D. Upadhai, who was a member of a student delegation to the USSR: "Uzbekistan and Kirgizstan left an unforgettable impression.... I was astonished at the fraternal friendship that binds Soviet peoples into a multinational family. Places that were at one time backward provinces of Tsarist Russia have turned into a thriving region with a modern industry and highly developed agriculture thanks to the selfless labor of representatives of the Kirgiz, Uzbek, and other nationalities."

BOOK ON CENTRAL ASIAN-INDIAN CULTURAL RELATIONS REVIEWED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 21 January 1983 carries on page 5 a 500-word review of Ilyas Nizamiddinov's OCHERKI ISTORII KUL'TURNYKH SVYAZEY SREDNEY AZII I INDIA V XVI-NACHALE XX V. ["Sketches in the History of the Cultural Relations of Central Asia and India in the 16th to the Beginning of the 20th Centuries."] (Tashkent: "Fan," 1982) by Cand of Art Studies Abdumajid Madraimov titled "Ancient and Firmly Established Cooperation." The reviewer commends the author for basing most of the book on original historical sources in Turkic and Persian and on the latest factual material in the works of European scholars. Nizamiddinov's analysis of literary and artistic relations demonstrates the great contributions which Uzbeks made to Indian culture in this period, and provides further evidence that there exists a foundation for the strengthening of modern Soviet-Indian relations.

UZBEK SCHOLARS ATTEND MOSCOW INDIAN STUDIES CONFERENCE

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 7 January 1983 carries on page 7 a 300-word report by D. Bekayeva titled "Forum for Indologists." Bekayeva reports that the Third All-Union Conference of Indologists was held in Moscow under the sponsorship of the Institute of Oriental Studies. Scholars from Moscow, Leningrad, Tashkent, Samarkand, Dushanbe, Tbilisi, Riga, and Tartu, as well as from East European countries took part. Scholars from Uzbekistan included Dr of History T. Ghiyosov, Docent T. Kholmirzayev, Cand of Philology U. Oripov, Cand of History I. Hoshimov, Cand of Philology S. Yermakova, and Cand of History P. Rasulzoda.

AFRO-ASIAN WRITERS' CONFERENCE PLANNED FOR TASHKENT

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 1 January 1983 carries on page 3 a 400-word item titled "The Tashkent Spirit Lives." The item consists of information provided by Sarvar Azimov, chairman of the UzSSR Writers' Union, chairman of the Soviet Committee for Relations with Asian and African Writers, and deputy secretary-general of the Union of Asian and African Writers, concerning the results of a session of the union's executive council recently held in Ho Chi Min City and Hanoi. Azimov recalls the years and sites of the conferences of Asian and African writers--Tashkent 1958, Cairo 1962, Beirut 1967, Delhi 1970, Alma-Ata 1973 [omits 6th conference in Luanda, Angola, 1979]--and notes that the session in Vietnam was devoted to the question of the seventh conference to be held in Tashkent in October 1983. A committee consisting of representatives of 13 countries has been formed to plan the conference which will deal with "a broad spectrum of problems in the struggle against imperialist aggression, Zionism, and racism, and for national independence, peace, and progress."

EAST EUROPEAN WRITERS VISIT UZBEKISTAN

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 7 January 1983 carries on page 7 a 200-word report by V. Nikolayev titled "Fruitful Literary Relations." The report states that in the fall of 1982 the Hungarian writer Janos Szilagy came to Uzbekistan on assignment. Following his visit the Hungarian writers Eva Lenart, Pal Keteles, and Laszlo Pasz were received at the Writers' Union to discuss their plans to gather materials for a book about Uzbekistan. The Czechoslovakian writers "Peter Shterlinger" and "Lyubosh Yurik" traveled to Uzbekistan, where they visited the Julius Fucik Museum House in Tashkent and also met with sovkhoz workers in Syrdarya Oblast. Lyupcho Stoymenski, a translator from Skoplje, has also toured Uzbekistan to become more familiar with the life, customs, and language of the Uzbek people. Stoymenski is preparing a Macedonian translation of Uzbek poetry.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

U.S. MILITARY SPACE PLANS CRITICIZED

LD251147 Moscow in English to North America 2300 GMT 24 Jul 83

[Text] A quarter of a century ago the two Soviet satellites circling the earth at that time were joined by an American satellite, the Explorer. Following that Canada and many other countries began to use outer space after the Soviet Union and the United States. Today practically all countries have some space vehicles in orbit around the earth. But space exploration has also added some trouble for mankind, that's the topic of a commentary contributed by a Radio Moscow military observer, Aleksey Vasiliyev, and this is what he writes:

It is indeed worrying that the United States is making a tremendous effort to place space exploration, a new field of activity for mankind, at the service of the Pentagon's interests. When the current administration came into office the total American spending for military use of space had already stood at 100 billion dollars but President Reagan decided to expand still further preparations along these lines with his course for America's so-called rearmament for gaining military superiority. A Pentagon directive headlined Fiscal 1984-88, Defense Guidance, said bluntly it is necessary to deploy at full strength the already developed systems of space weapons that are ready for use. The creation of a space military command was announced. More recently the United States President put forward a proposal to create an anti-missile system in space that had been justly described as preparation for a star war.

The spending is rising accordingly. Whereas in the past the federal spending on space projects for the Pentagon was less than that on the civil agency NASA it is now much higher.

In the current fiscal year the funds to be used for military purposes stand at eight and a half billion dollars but even this figure is not final because the money on using space for military purposes is also appropriated from the budgets of civilian organizations. For example, the total funds of 5.3 billion dollars for NASA's research this year include one and a half billion for work related to military purposes. A considerably part of the Pentagon's effort in the military use of outer space is taken up by systems developed specially for warfare and these include spacecraft for destroying enemy space vehicles and for conducting combat operations from space against targets on the ground, in the air and at sea. The priority plans of the United States in this field are linked with deploying anti-satellites. At airfields of the United States Air Force bases at Langley, Virginia, and at McChord, Washington, F-15 planes are being prepared for installing such craft.

The United States administration also links with militarization of outer space its adventuristic plans for setting up a potential for delivering the first nuclear strike. The emphasis is laid on developing laser weapons with the help of which the Pentagon could make obsolete the present arsenal of the potential enemy's strategic means, according to Senator Malcolm Wallop. It is obvious that these designs of the American leaders to use the achievements of science and technology for militarization of outer space carry a direct threat to peace. I can only agree with the statement by a renowned American physicist, Richard Garwin, who is a Pentagon adviser on the weapons sytems, that the path the United States Government has chosen can only bring about a war in space.

But that's not an alternative to a war on earth. It would be the prelude to the ground war.

For its part, the Soviet Union has repeatedly urged the United States and other powers to take immediate steps to prevent the extension of the arms race to outer space. Something has already been done in this respect but the international agreements concluded are not enough. Two years ago the Soviet Union proposed a ban on the deployment of any weapons in space. The proposal won support at the United Nations General Assembly yet the United States resisted it. Some time ago, at a Soviet parliament session, a new proposal was made--to agree about a general ban on the use of force in space itself and form space against the earth. The Soviet Union is ready for immediate talks on this issue and regards such talks as essential.

UKRAINIAN KGB GENERAL ON BORDERGUARD DAY

Kiev RADYANS'KA UKRAYINA in Ukrainian 28 May 83 p 4

[Article by Lieutenant-General I. Kalynychenko]

[Text] "You are ordered to guard the state borders of the Union of Soviet Socialist Republics!" These are solemn words to border guard duty details leaving for the frontier of the beloved fatherland.

The state border! We speak these words and before your eyes appear the outer frontiers of the Union of Soviet Socialist Republics. They pass through arctic tundra, mountain ranges, taiga brushwood, burning sands and Carpathian pastures. And everywhere, in daytime and at night border guards are on permanent patrol. For sixty-five years they have held their posts from the memorable date, May 28, 1918, when V.I. Lenin signed a decree of the Soviet of Peoples' Commissars about the establishment of border guard troops.

The western USSR border always occupied an important place in the adventurous plans of imperialist countries and their intelligence agencies. Here enemies of the Soviet state often tried to test the strength of our borders.

At the border everything speaks of austere romanticism. Each rock is a witness to the heroic deeds of the fatherland's guards. Sava Karpovych Chub, the leader of a search dog, was widely popular in the area. With the help of the sheep dog Zenta he found dozens of bandits, smugglers and foreign agents. Enemies watched the border guard, tried to destroy his Zenta but nothing came of it. Sava Chub had many pupils and followers who also defended the border well.

In the beginning of the 1940's the situation on the western front became even more complex and tense. Getting ready for a war against the Soviet Union, intelligence agents of Hitler's Germany conducted espionage-subversive work on the widest scale possible. The strong force of fighting and moral-political qualities of the troops in green caps was especially evident in the difficult years of the Great Patriotic War. On 22 June 1941 border guards felt the first blows of German-Fascist armies. Counting on their advantage in live force and battle technology Hitler's command planned to destroy frontier posts, capture bridges and crossings through border rivers in thirty minutes.

The Bug frontier post under the command of Lieutenant Lopatin and political instructor Hlasov held out for eleven days. Fascist attack was held off for ten hours by Victor Usov's frontier post. Leaving on approach hundreds of dead, fascists broke into frontier post territory only after there were no more guards left.

Border guard troops took part in the defense of Moscow, Kiev, Odessa, Sevastopol, Leningrad, Stalingrad, Novorossiysk and Kerch. "Where border guard units and formations fought," noted MSU H.K. Zhukov, "we were always sure of the success of their actions." The fatherland valued their war efforts highly: More than 150 of them were named Heroes of the Soviet Union; orders and medals were awarded to thousands.

Wartime storms passed but the situation on the western front remained complex and tense for a long time. In the first years after the Great Patriotic War a fierce struggle had to be waged with fascist agent remnants and bourgeois nationalist bands. Often bloody confrontations took place in border cities. Semen Pustel'nykov and Mykola Shnyrykov, after whom border posts were named, died a hero's death in such battles with Bandera's followers. But heroes don't die. They are always ready, constantly on patrol. Their achievements educate ever new generations of border guards. Named frontier posts, we have about twenty-six, are our pride and glory. They are not only history but also present day borders. In them--a relay of border guard troop valor.

For almost forty years the sky above our country has been clear. But the world is troubled. The success of the Soviet people in building communism elicits anger on the part of imperialist circles. Harboring aggressive plans directed against the USSR and other socialist countries, U.S. imperialists and their partners in NATO, as before, devote much attention to intelligence gathering and other subversive activity. "If they are unsuccessful in this," stressed comrade Yu. V. Andropov, "if most of the unusual events on the borders of our country do not go beyond efforts to violate the state border, it is only thanks to the tremendously persevering work, heroism and high vigilance of the guards of fatherland--the border guard troops."

The following happened at the frontier post imeni Hero of Soviet Union A. Kizhevatov. The warning group revealed a border transgression quickly. Results of the matter were decided by minutes. Everyone understood this. "Notify the frontier post," shouted Ensign Chubenko to Corporal Kostrov and together with Private Pohodin ran along the meadow covered with new grass.

Corporal Volodymyr Vyskryvets' saw the transgressor first. A man in a grey jacket, bent over, was carefully and quickly making his way through thin brushwood, about twenty meters from him. Vyskryvets' lowered his rifle. At this moment the stranger suddenly turned and also noticed him.

For a second they stood in silence, the Soviet boy in a green cap and the man who came from the other side.

"Stop! Hands up!" shouted Volodymyr hoarsely for some reason.

His heart was beating rapidly.

The stranger jumped abruptly to the side, rustling branches.

"Stop!"

The ground under him disappeared in jolts, branches whipped his face painfully. Volodymyr ran and only saw a grey patch--the back of the transgressor. The distance between them diminished. Twenty meters, fifteen... Running Vyskryvets' pulled the trigger. As if tripping, the transgressor fell into the bushes. In a moment Voldymyr was next to him.

"Get up!" he ordered. "Get up!"

At night the commander of the frontier post wrote out a commendation. Today Corporal V. Vyskryvets' owns a shining medal for "distinction in guarding the USSR state borders".

There are many such instances in the lives of the troops in our area.

Border guards at control-passage points have particularly responsible service. They always deal with efforts at illegal transport of subversive literature into the USSR. Thus, the days of our border guards and customs officers are full of goal-directed, tense work. Only in the OKPP area alone the soldiers-controllers each year exclude tens of thousands of publications directed against communist ideology and morals. In addition, they detain millions of rubles' worth of smuggled goods, among which there is a considerable amount of hostile character production.

The passage of the law "On USSR State Borders" was new evidence of the continuous CPSU and Soviet government care about the preservation of the fatherland's sacred borders.

As is noted in the law, Soviet border troops, thanks to the fatherland's daily care, are equipped with everything essential for the fulfillment of the complex and responsible tasks placed upon them--they have contemporary battle gear, first class technology and, most important, experienced, qualified cadres, utterly devoted to the fatherland.

Soldiers of the Red Flag Simferopol Borderguard detachment commanded by General D. Tkachenko are meeting the 65th anniversary of USSR border guard troops with high indices in service and combat education.

The lives of soldiers-controllers OKPP "Odessa", "Mostys'ka" and other units and area subsectors are filled with examples of great stress.

The glorious troop history of our area shows that one of the most important sources of strength for our border guards is the continuously growing friendship of troops and workers in the border areas. The USSR border is guarded by all people. This is proof of Soviet people's patriotism, their genuine interest in preventing any enemy from crossing the Soviet borders. Not long ago, tractor brigade leader S. Pavlov and machine operator I. Maksymchuk were awarded medals for "distinction in guarding USSR state borders" for their vigilance.

We, the border guards, are strong because of the people's support. Today we express our sincere gratitude to party, soviet and Komsomol organs in border areas for tremendous help in strengthening promising border protection of our fatherland.

Soviet border guard troops are the live personification of socialist internationalism. It is no accident that our western border is called a border of friendship and combat cooperation. Along with border guards of socialist friendship nations the area troops provide promising protection for the outer edge of socialist friendship.

Border guards are always on patrol, always in combat readiness.

CENTRAL ASIAN REPUBLICS HONOR BORDERGUARDS

Turkmen Borderguards Praised

Ashkhabad TURMENSKAYA ISKRA in Russian 28 May 83 p 3

[Article by Major General V.F. Zaporozhchenko, chief of the USSR Committee for State Security Red Banner Central Asian Border District Political Directorate: "Constantly on Patrol"]

[Text] Today the Soviet peole and their troops ceremonially mark Border Guards Day. Created 65 years ago, the border guards vigilantly protect the motherland's borders against the intrigues of enemies and stand as an unassailable bastion in the path of spies, saboteurs and smugglers.

The Soviet border guards set out on their combat path on 28 May 1918 when V.I. Lenin signed the Council of People's Commissars decree "On Establishing a Border Guard." Since then their combat activity has been inseparably linked with the heroic history of our people.

"... The question of safeguarding the border.. is acute," F.E. Dzerzhinskiy wrote. "The USSR border must be closed against counterrevolutionaries and smugglers, come what may. The border guards protect the economic independence of the soviets and guard Soviet land against penetration by bandits and spies."

The communist party was the organizer and teacher of the border guards. At all stages in their development it has defined the tasks of personnel and the forms and methods for safeguarding the borders, taking into account the international situation.

The party central committee and V.I. Lenin personally were constantly interested in border protection and the formation of the troops. Ilich showed particular concern for selecting as troops people who were capable of insuring a high moral spirit among personnel, together with iron discipline and vigilance. On 14 May 1921 at a meeting of the central committee politburo, in the resolution on the question "On Safeguarding the Borders," one of the points read:"To strengthen the border troops with communists."

V.I. Lenin insistently cautioned the party against any kind of underestimation of the significance of safeguarding the Soviet borders. In his letter to the December 1922 Plenum of the Russian Communist Party (of Bolsheviks) Central Committee he pointed out that even a partial opening of the borders was fraught with serious dangers in the sense of the penetration of all kinds of agents into our country.

Many bright pages in the combat history of the troops were written in the prewar years. The border guards smashed the basmachi in Central Asia and the bandit gangs on the western borders and in the Far East, and they detained thousands and thousands of spies, saboteurs and smugglers. The feats of A. Korobitstin, L. Kravchenko, D. Yaroshevskiy, A. Makhalin and many others demonstrated the remarkable qualities of the patriot-troops educated by our Soviet system.

Along with their combat service, the troops in the green caps carried out much political and cultural work with the workers in the border areas. In December 1927 the newspaper TURKMENSKAYA ISKRA wrote: "The border zone is not only a fire zone... but also a zone of enormous cultural influence on the Central Asian peasantry. The chains of pickets are not only sentry posts but also cultural points, cultural oases to which the peasants come with all their questions and needs."

The Soviet border guards who bore the first brunt of the attack by the fascists fought courageously. Hitler's command had allotted only 30 minutes to destroy the border posts. But the enemy miscalculated. A total of 485 border posts engaged in combat and not one of them retreated without orders. Armed with only rifles and grenades the border guards engaged in heavy fighting with the enemy's superior forces. Each border post became a "little Brest." The names of the heroes in the initial fighting against the fascists are written in letters of gold in the history of the border guard troops: Aleksey Lopatin, Andrey Kizhevatyy, Viktor Usov, Fedor Morin, Nikita Kaymanov, and many, many others.

The troops of the Central Asian Border District also inscribed many bright pages during the history of the Great Patriotic War. The regiments of the 162nd division formed from the border guards of Central Asia marched and fought over thousands of kilometers. Many commanders and political workers who showed themselves to be brave and experienced military commanders were promoted to responsible posts. They included I.I. Maslennikov, V.S. Polenov and A.A. Antipenko. The names of border guards from our district were also numbered among those awarded the title Hero of the Soviet Union: M.N. Morozov, G.I. Vakholkov, P.T. Taran, M.N. Yenshin, I.D. Zinov'yev, G.V. Yatsenko, I.I. Maslennikov.

The border guards remaining behind at the border posts also vigilantly carried out their duties at that time. Thousands of border violators and dozens of smashed gangs: this was the sum of their operational service activity in those difficult years.

And when the final salvos of the Great Patriotic War had been fired the sentries on the new borders of the motherland performed many new feats. The nature of imperialism has not changed; it was reactionary and aggressive and it remains so. This is convincingly confirmed by the present policy of the ruling circles in the United States and the other NATO countries. The Soviet Armed Forces play an enormous part in restraining the aggressive aspirations of imperialism and insuring peace and international security.

The country's defense capability also includes reliable protection of the borders. The party is tirelessly concerned with the impenetratbility of the motherland's borders and for the soldiers standing their at their posts. Thanks to the enormous concern and constant attention by the party, the border guards have everything they need to successfully carry out their missions.

The border guards report with pride to the party and the people that the borders are reliably guarded along their entire length, and that the ranks of outstanding guards in combat and political training, and of outstanding sentry posts and ships, are swelling. One in three of the troops is now rated outstanding. The communists and Komsomol members act in all the life and combat activities of the units and subunits [podrazdeleniya] as the flankers. In any troop collective, large or small, they make up the combat nucleus and are the commander's buttress in the organization of service and the training and education of personnel. They provide an example of model fulfillment of military duty.

Our troops derive their strength from the firm friendship with the people, sensing the constant support of the populations in the border areas. At the first call they come to the aid of the troops and frequently themselves detain border violators. The roots of friendship lie in the unity of the army and the people.

One such who grew up along the border is captain G. Amanov. His grandfather, Hero of Socialist Labor A. Pirnazarov, took part in the struggle against the Basmachi and was the organizer of the first kolkhozes in Turkmenia. His father, A. Amanov, led the volunteer people's militia and was awarded an Order of the Red Star for his active help to the border guards. During the war years more than 30 children of front-line fighters were looked after by the Amanov family.

Gel'dy Atayevich Amanov went to the border at the call of his heart, thus crowning the will of his own great family and the legacy of his grandfather. He has been a political worker and chief of an outstanding sentry post. He has been awarded the medal "For Combat Service." Now he teaches in a military academy.

It is with great gratitude that we perceive the great activeness with which the party and Komsomol workers, production leaders and scientific and cultural figures participate in the education of the border guards. Speaking at the border posts and on the ships, they help the troops to see today's achievements and the great propsects for Turkmenistan and our entire motherland. In turn, the border guards of the district try to do their bit in resolving the national economic tasks facing the workers of the border regions, giving them help in gathering in the cotton harvest and in construction and repair work.

Firm businesslike mutual relations based on the unity of aims and interests have been established between the population and the border guards. It is precisely this unity that is embodied in the motto "All the People Safeguard the Border of the USSR."

The border guards of the district are rallied closely about our own communist party and they warmly approve its domestic and foreign policies. On their holiday they assure the CPSU Central Committee and the Soviet government and all our people that they will henceforth also stand vigilantly on guard over the sacred borders of the land of the soviets as required by the law "On the USSR State Border."

Borderguards' Role Surveyed

Frunze SOVETSKAYA KIRGIZIYA in Russian 28 May 83 p 3

[Article by Major General B. Korovin, deputy chief of the USSR Committee for State Security Border Guards Political Directorate: "On Guard over the Motherland's Borders"]

> [Text] Each year on 28 May the Soviet people honor the border guards who through their steadfastness, courage and valor shown in safeguarding the borders of the motherland enjoy universal love and gratitude.

V.I. Lenin signed the decree "On Establishing a Border Guard" 65 years ago. These years have been filled with the glorious and heroic deeds of the border guards. After the end of the civil war, when the hordes of interventionists had been smashed, the border guards waged a fierce struggle against imperialist spies, smashed the Basmachi and White Guard bands in Central Asia, and repulsed the Japanese samurai on Lake Khasan and the Khalkhin-Gol River.

The troops in the green caps were the first to bear the brunt of the suprise attack by Hitler's hordes when the Great Patriotic War erupted. Each sentry post held to the death and no one left his combat post without orders. The border regiments took part in the defense of Moscow, Leningrad, Odessa and Sevastopol, fought heoricially at the walls of Stalingrad and in the Polar regions and the Causcasus and on the Kursk Bulge, and they were in the storming of Berlin. Together with the organs of state security the border guards fought against the agents of fascist intelligence in the front-line zone.

More than 200 border guards were awarded the title of Hero of the Soviet Union for the the courage and heroism they displayed on the battlefields of the Great Patriotic War, and thousands of soldiers and commanders received orders and medals. Dozens of border guard units were awarded orders and many received honorific designations.

Some 38 years have passed since the end of the war. Through all these years the new generations of border guards have shown boundless loyalty to the service and demonstrated the best features of their fathers and grandfathers who defended the Soviet borders in the prewar years and participated in the Great Patriotic War.

The adoption by the USSR Supreme Soviet Seventh Session of the USSR law "On the USSR State Border" was a vivid new manifestation of the concern of the CPSU and Soviet government to strengthen the borders of the motherland. This document, which came into force on 1 March 1983, is of great political and practical significance and is an important contribution to Leninist theory on the defense of the socialist motherland. It is aimed at insuring the reliable protection of its borders, serves to further improve the activities of the border guards and the state organs whose duties include border protection and the maintenance of the necessary order, and promotes a development of activity and a strengthening of the vigilance of Soviet people.

The border guards are marking their 65th anniversary at a significant time. The decisions of the CPSU Central Committee November (1982) Plenum and the conclusions and recommendations contained in the statements of CPSU Central Committee general secretary comrade Yu.V. Andropov have been warmly approved and received the unanimous support of all our people and the border guard troops. The peace-loving Leninist foreign policy course is being pursued firmly and consistently in the world arena. In the struggle for peace our party acts in a principled way, consistently and with due consideration. But each step on the road to strengthening peace is difficult. "In recent times," CPSU Central Committee general secretary comrade Yu.V. Andropov has said, "from Washington there is erupting a direct flow of talk dealing with just one thing--military preparation, military programs, the development of new kinds of weapons." The aggressive intrigues of imperialism are forcing the Soviet Union and the fraternal socialist countries to concern themselves seriously with maintaining defense capability at the necessary level.

Under these conditions, the political, economic and military significance of safeguarding the borders as an inseparable, integral part of defending the socialist motherland is growing immeasurably. The imperialists and their accomplices are trying to create hotbeds of tension close to our borders and activate subversive actions. The enemy's subversive and intelligence activities have increased in the channels of international dealings. There has been an increase in the number of attempts to use them to send agents and emissaries into the USSR. The amount of material of a malicious anti-Soviet and slanderous nature confiscated has grown.

The following occurred at one of the border sections. A passenger bus approached the border control point in the middle of the day. Some 50 foreigners were preparing to cross the USSR state border. But by no means all of them crossed that border and set off on their journeys around our country. It turned out that some had come not with tourist aims. Ideologically harmful literature was found in luggage and suitcases with false bottoms, and in purses and rucksacks. Propaganda brochures were secured to the body with sticking plaster and sewn into the linings of suits and overcoats. It did no good! Almost 3,000 copies of books were confiscated from the ideological saboteurs who had attempted to bring this pulp literature into our country. And many such examples could be cited.

Our party, under whose leadership all the activity of the border guards takes place, teaches us to watch vigilantly for the intrigues of enemies and to cut short attempts at hostile actions at the border in good time and decisively.

Thanks to the concern of the CPSU and the Soviet government, today the border guards have everything they need to further improve border protection and enhance vigilance and combat readiness. All this has enabled the border guards to take a new qualitative step forward in their development.

But no matter how the level of military-technical equipment for the troops rises, the main role in safeguarding the border will always belong to the border guard. It is on the soldier and the officer that the reliable protection of the border primarily depends. Therefore, under present conditions, particularly high demands are made of the professional training, political tempering and moral-combat qualities of the border guards. The troops have now been manned [ukomplektovanny] with mature, well-trained command-and-political personnel. They are successfully organizing the protection of the state borders on land and at sea and the combat and special training of border guards. The best representatives of Soviet youth are serving at the sentry posts, on the ships and in the other subunits.

Modern technology has come to the border: radio detectors, electronics, searchlight stations, reliable means of communication, fast ships and cutters, aircraft and helicopters, cross-country vehicles and much else. During their service the young troops master a whole range of professions and specialties. The qualities of collectivism, responsibility, steadfastness and selflessness are developed and reinforced in them. In short, the border service is a wonderful school of courage and moral fiber, a school of combat friendship and military comradeship.

Socialist competition under the slogan "To Enhance Vigilance and Reliably Insure the Protection of the USSR State Borders" now taking place among the troops is promoting further improvement in the safeguarding of the border. Much is being done among the troops to make the competition fully involve all aspects of life in the subunits and units on the border with its influence.

Year after year the friendship of the Soviet border guards with the troops of the fraternal socialist countries grows. Side by side, fulfilling their international duty, they safeguard the borders of their own countries and the entire socialist community.

Soviet border guards are marking the 65th anniversary of the creation of the troops with new successes in service and combat and political training. As before they are filled with determination to serve the motherland wholeheartedly, reliably preserve and augment the glorious combat and Chekist traditions, and devote their efforts to the noble cause of safeguarding and protecting the borders of the Soviet motherland!

Eastern Borderguards Saluted

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 28 May 83 p 3

[Article by Lieutenant General V.S. Donskov, commander of the USSR Committee for State Security Red Banner Eastern Border District: "In the Battle Outpost"]

[Text] Today, Soviet people and the border guards mark the 65th anniversary of the glorious Soviet border guard troops. Created by V.I. Lenin, nourished by the party, and tempered in the struggle to defend the gains of the October, the border guards reliably protect the borders of our beloved motherland. Acting on a strictly constitutional basis and in full accordance with the USSR law "On the USSR State Border," they occupy an important place in the system that insures the defense capability and state security of the country.

The people see in the person of the troops with the green caps who carry out their difficult and highly crucial service along the enormous stretches of our state borders their own worthy, valorous and loyal sons, and they honor them.

The Soviet border guards and the troops of the southeastern border within their ranks are marking the present holiday in an atmosphere of high political and service activity resulting from the sense of pride in the successes of Soviet people in communist creativity and the impressive results in fulfilling the historic decisions of the 26th CPSU Congress and the CPSU Central Committee May and November (1982) plenums.

Border guards have adopted as a combat program for practical work the tasks set for the CPSU and the Soviet people by CPSU Central Committee general secretary comrade Yu.V. Andropov, the requirements of the USSR law "On the USSR State Border," and the recommendations and decisions of the recent meeting of secretaries of the party organizations of the border guard troops. The aspiration of each soldier to do better and more in his own place in order to implement the plans outlined by the party is typical today of the moral-political atmosphere in the units and subunits in the district, and it serves as a source of inspiration, selflessness and initiative in all the combat work of personnel.

On this holiday the border guards--the veterans and the young troops--once again look back with a thoughtful gaze to the heroic past of the border and, as it were, leaf through the pages of its glorious annals, remembering with gratitude the names and feats of those who gave their lives in the struggle to make the motherland's borders inviolable.

The law-governed result of the party's first steps to insure the protection of the interests of the young Soviet Republic on its borders was the signing by V.I. Lenin on 28 May 1918 of the RSFSR Council of People's Commissars decree "On Establishing a Border Guard."

In the mid-Twenties a new organizational structure, one that has been retained to this day, was introduced for the border guards, naval forces were formed to protect the border, and the political organs and party and Komsomol organizations were set up. The party sent into the border guard troops thousands of communists--people whose presence, as one of the documents of the time puts it, was weighed more carefully than weapons and ammunition when determining the combat capabilities of the units.

F.E. Dzerzhinskiy made an exceptionally great contribution to substantiating the significance of border protection, forming the border guards and working out the fundamental bases of their activity and the special moral-political code of the border guard Chekist.

The creation of the border guard in Kazakhstan coincided with the end of the civil war and the establishment there of Soviet power, and with the struggle against the kulak and landowner bands. The best units of the Red Army--regiments that had gained glory under the leadership of M.V. Frunze--were dispatched to protect the state border on the republic's territory. The combat cooperation between the border guards and the Chekists served as a strong barrier against all who were violating the border at that time and against those who later repeatedly threatened it; and today the Soviet borders are inviolable.

Our Eastern Border District was created on 25 February 1924. In the complex situation of those years the ranks of the border guards were reinforced and their combat skill and moral-political tempering grew. In the first 10 years of the district's existence alone the border guards smashed more than 100 bands made up of the remnants of the Annenkov, Dutovskiy and other anti-Soviet rabble, prevented a large number of the top people among the big landowners from slipping through the cordon, and seized several thousand weapons.

This combat account, along with the liquidation of banditry in the border regions and closing the border to the entry of spies and saboteurs, was the worthy contribution made by the border guards to the cause of the building of socialism in Kazakhstan and in the Pamirs and the Altay during the prewar period.

The hard times gave birth to a pleiad of remarkable heroes. The feats of A. Bestsennyy, V. Kandyurin, S. Krivoshein, G. Mezentsev, A. Onopko and A. Sidorov have been inscribed in the annals of glorious border deeds; the border sentry posts where they served and marched into heroic immortality now bear their names.

The Soviet people will always remember the date of 22 June 1941. The motherland will never forget the immortal feats of the sentries on the western borders who were the first to fearlessly face Hitler's hordes, displaying very great courage and self-denial in the uneven battle. The fascist generals of the "Blitzkrieg," who had alloted 30-40 minutes for moving across the border, were unable in many places to reach this objective for several days.

The unparalleled heroism of the border guards, the unprecedented steadfastness of the defenders of the fortress at Brest, the fierce resistance offered the enemy by thousands and thousands of Soviet troops who inflicted unprecedented losses on the Wehrmacht, were in a real sense a prologue to the great victory.

In November 1942 the 162nd Central Asian Division was formed from units in the district and became one of the units [soyedineniye] of the 70th Army that fought heroically on the Kursk Bulge and along the Dnepr and the Visla, and on to Berlin. The combat deeds of the division were honored with an Order of Suvorov and the honorific designation "Novgorod-Severskaya."

Hundreds of the border guards in the district were awarded orders and medals for their services to the motherland during the war years. The most outstanding--I. Belyakov, L. Vagin, M. Vlasov, K. Gelovskiy, V. Likhotvorik, M. Merkulov, F. Ozmitel', M. Prudnikov and S. Smirnov--became Heroes of the Soviet Union.

Almost four decades separate us from the victory in the Great Patriotic War. During this time our country's economic potential has grown immeasurably. A developed socialist society has been built in the Soviet Union. The lives of Soviet people have become much brighter and richer. But our successes are not to the liking of imperialist forces. They are whipping up an unprecedented arms race and activating ideological sabotage against the Soviet Union and the other socialist countries. This is why safeguarding the motherland's frontiers is, as before, an important, integral part of the motherland's defense. This is why the combat routine of today's borders is so uneasy and anxious, why the life of the border posts never slackens for a moment.

The Soviet border guard troops have all the combat potential they need to carry out the tasks set for them: a high level of technical equipment, military skills, and the adamantine moral spirit of personnel.

The sources of the troops' strength are mighty and inexhaustible. Their entire life and activity are built under the leadership of the party, which constantly keeps in view questions of safeguarding the state border and works out the tasks and the ways of developing and improving the border guard troops and measures for their all-around support. And the high sociopolitical and military morale of personnel in the district, resulting from this truly paternal concern, is vividly reflected in the socialist competion being conducted under the motto "To Enhance Vigilance and Reliably Insure the Protection of the USSR State Borders." Troops in the collectives headed by officers A. Bryukhovetskiy, A. Kotlyarov, I. Kolenchuk, B. Borisov, V. Semenov and others obtained the best results in competition in honor of the 65th anniversary of the border guard troops.

The communists march in the front ranks of the competitiors, in the vanguard of all matters, great and small. They are the combat backbone of personnel in the district--the commanders and political workers and representatives of other specialties. In terms of their professional training and political and moral qualities the border officers are remarkable people. Many of them are scions of the glorious smithies of border troop cadres at the USSR Committee for State Security Order of the October Revolution, Order of the Red Banner Higher Border Command School imeni F.E. Dzerzhinskiy.

Within the district many dynasties of officers have come into being and are serving outstandingly. Lieutenant Colonel of the Reserves Anuarbek Khalilovich Tasbergenov gave almost 30 years to the border, to Chekist labor. Now his elder son is serving on the border, and his younger son soon will be--he is a border guard trainee.

As comrade Yu.V. Andropov has stressed, the border guard is not simply a serviceman; he is a political warrior, the plenipotentiary of our great state on the sector assigned to him. Our troops always remember this and persistently master the Marxist-Leninist world outlook and improve their ideological tempering, political culture and moral spirit. Combined with their great skills, this makes them invincible in encounters with any enemy. The border guards led by sergeants A. Krylov and A. Lapa took literally only minutes to detain violators of the state border. The high moral-combat readiness to intercept a violation at any moment along the assigned sector of border and the technical facilities available to the border guards enabled them to detect in time preparations for a border violation; and the skillful use of a searchlight and radio direction-finding equipment, hammered home repeatedly during training in methods of interaction and communications, enabled them to detain the violators by surpise, and, as they say, without a shot being fired [bezzvuchno].

The border guard troops carry out their tasks in close unity with the people, relying on the broad support of the party and state organs and the public organizations. This has now been reflected in the USSR law "On the USSR State Border." Since long ago a great friendship has linked the troops of the district and the workers of multinational Kazakhstan. As a result of the daily concern of the CPSU Central Committee, the local party committees and the soviet and Komsomol organs, protection of the southeast borders has become truly a matter for all the people. Responsibility for border inviolability and a constant readiness to assist the border guards are typical of most workers in the border areas, people of all ages and professions. The border guards value this highly, quite justifiably considering the entire population in the border regions their reliable reserve.

The volunteers in the people's militia set up in the populated points along the border, offer the most active assistance to the troops. The people's militia volunteers have many times displayed high vigilance, tenacity and resourcefulness along the border. Take just this one example from many such. Member of the people's volunteer militia driver A. Ilimsupiyev was once on a regular route near the border when he noticed that someone was moving into our rear from the border, taking cover behind the trees along the road. His behavior alerted the driver. He stopped, called to the stranger and offered to give him a lift, to which the stranger unwillingly agreed. Knowing what should be done in such cases, the driver delivered his passenger to the nearest border detail.

The great patronage work done for the district troops is yet another notable manifestation of the attention of the party to border affairs and the people near the border. The border guards are profoundly grateful to their patrons--the representatives of the labor collectives at many of Kazakhstan's industrial enterprises and the republic's scientific and cultural workers--for the great help that they give the border troops.

The border guards of the district protect the security of the motherland's southeast borders side by side with troops of the Red Banner Central Asian Border District with whom they are united in firm combat friendship and comradeship.

In the second half of the seventh decade of the life and activities of the Soviet border guards, the troops of the southeast border are acting closely rallied about the CPSU, and henceforth too they will serve their people and the ideals of communism selflessly, stand guard vigilantly and tirelessly over the gains of the Great October, and devote all their strength, knowledge and capabilities to the cause of insuring the security of the beloved motherland and the reliable protection of its sacred borders.

Transcaucasian Borderguards Hailed

Dushanbe KOMMUNIST TADZHIKISTANA in Russian 28 May 83 p 1

[Article by Major General B.Ye. Sentyurin, commander of the USSR Committee for State Security Red Banner Transcaucasus Border District: "On Guard over the Motherland"]

[Text] Today the Soviet people and their armed forces ceremonially mark the 65th anniversary of the USSR Committee for State Security border guard troops.

Our country and the troops of the army, navy and border guards have welcomed this holiday in the atmosphere of great political and labor enthusiasm resulting from the decisions of the CPSU Central Committee May and November (1982) plenums and the successful implementation of the party's majestic plans.

At the same time we can never forget for a moment that the most reactionary circles in the imperialist states, led by the United States and its allies in aggresssive military blocks, have not abandoned their attempts to speak to our country from a position of strength. Pushing the world to the brink of nuclear catastrophe, they have developed an arms race that is unprecedented in scale. Our class enemy is actively and massively waging total espionage against the Soviet Union, conducting ideological sabotage, and trying to harm our economy, using the state border as one of the critical sectors for this.

"The aggressive intrigues of imperialism," CPSU Central Committee general secretary comrade Yu.V. Andropov noted at the CPSU Central Committee November (1982) Plenum, "are forcing us and the fraternal socialist countries to concern ourselves, and seriously, with maintaing the defense capability at the necessary level."

The present USSR law "On the USSR State Border" adopted by the USSR Supreme Soviet Tenth Convocation, Seventh Session and coming into force on 1 March this year, has become a new and graphic manifestation of the constant concern of the party and government to insure the country's state security. Complying with its requirements and taking pride in the trust placed in them by their party and people, the troops of the Red Banner Transcaucasus Border District are vigilantly and reliably protecting the motherland's southern borders.

The creation and establishment of the Soviet border guard troops and the development of the principles for protecting the state border are inseparably linked with the name of Vladimir Ilich Lenin. On 28 May 1918 V.I. Lenin signed the decree "On Establishing a Border Guard." The decades have passed, and now this date is marked each year as a national holiday--Border Guards Day. All the service activities of our border guard troops over six-and-half decades have been inseparably linked with the country's history and the organs of state security. Today we recall the major milestones of this glorious path.

Literally in the first months following the victory of the Great October, when the young land of the soviets stood within a ring of fire from its enemies, at the call of the Leninist party the Chekist fighting men--journeymen of the legendary knight of the revolution F.E. Dzerzhinskiy--led by the communists, rose up in defense of its borders. Ardent Soviet patriots, they courageously resisted the numerous attempts of the imperialist secret services to send spies and saboteurs into our country and dispatch well-armed bands as they stood on guard over the building of socialism.

The Soviet border guards covered themselves in undying glory during the terrible days of the Great Patriotic War. They were the first to engage the fascist hordes along an enormous front stretching from the Baltic to the Black Sea. The tiny garrisons of the border posts fought to the last bullet and not one of them retreated a single step unless ordered to do so. More than 200 border guards were awarded the title of Hero of the Soviet Union and more than 30,000 more awarded orders and medals for their great contribution to the victory over Hitler's Germany.

The feats of these heroes offer to the present generation of border guards examples of boundless loyalty to the CPSU and the Soviet people. In today's complex situation, like their fathers and grandfathers at the front line, they are selflessly carrying out their military duty to protect and defend the state border.

Last year our Red Banner Transcaucasus Border District--one of the oldest of the country's border districts--marked its own 60th anniversary. The contribution made by the Transcaucasian border guards to the cause of insuring the state security of the motherland is great.

The feats of the border guards of the Twenties and Thirties--Andrey Babushkin, Petr Saykin, Nikolay Golubnitskiy, Andrey Bochkarev and others--are known far beyond the borders of Transcaucasia; today's border posts and schools and streets bear their names.

We are rightly proud that our district reared 32 Heroes of the Soviet Union and many great military chiefs who commanded the glorious units and formations during the Great Patriotic War.

They included Colonel L. Dudka and Warrant Officer 2nd class G. Kuropyatnikov, Lieutenant General N. Vasil'yev and Junior Lieutenant P. Guzhvin, Army General I. Maslennikov and Sergeant P. Taran...

The border guards of Transcaucasia heroically fought the hated enemy at Moscow, by the walls of Stalingrad, on the Kursk Bulge; and they took part in the battle for the Caucasus and marched into the very lair of the fascist beast--Berlin.

Educated in the heroic traditions, the border guards of the Eighties carry on with dignity and honor the work of their predecessors and stand vigilantly on guard over the peaceful labor of the Soviet people. Fulfilling the demands of the USSR law "On the USSR State Border," day after day they enhance their vigilance and combat readiness and strengthen discipline and organization. This year alone the Transcaucasian border guards have detained dozens of violators and intercepted numerous attempts to bring in contraband and ideologically harmful literature. Officers I. Galkin, A. Kotov, I. Mel'nikov, T. Tikanashvili, A. Mustafayev and others have been awarded orders and medals of the Soviet Union for their successes in service, combat, political and special training.

And what is the "secret" of success among the border posts, patrol boats, control and crossing points and other troop subunits and units in the district?

First, it is the wise leadership of the CPSU in the building and all service and combat activities of the border guard troops. Thanks to this we now have at our disposal ideologically tempered, well-trained personnel and everything needed to insure the reliable protection of the assigned sector of the border, everything from up-to-date weapons to very complex electronic instruments.

Second, it is in the indissoluble unity with the people, with all the workers of the border areas. Today the members of numerous volunteer people's militias and young pioneer detachments wear on their chests the medal "For Excellence in Safeguarding the USSR State Border" and the decorations of border valor. It is really difficult to overestimate their contribution in the matter of safeguarding the motherland's southern borders.

And third and finally, it is in the close cooperation between the border guards and the organs of state security, the troops of the Soviet Army, and all interested state and public institutions.

We are truly grateful for the constant help and support in the matter of safeguarding the state border that we receive from the Georgian Communist Party Central Committee led by CPSU Central Committee Politburo candidate member and first secretary of the Georgian Communist Party Central Committee comrade E.A. Shevardnadze, the Azerbaijan Communist Party Central Committee led by the republic communist party central committee first secretary comrade K.M. Bagirov, the Armenian Communist Party Central Committee led by republic communist party central committee first secretary comrade K.S. Demirchyan, the CPSU Krasnodar kraykom led by kraykom party secretary comrade V.I. Vorotnikov, and the local party, soviet and Komsomol organs. They give their unremitting attention to questions of the motherland's state security and the life and everyday conditions of the troops in the green caps.

On this day I would like to express words of profound thanks to our remarkable veterans who have given decades of service in safeguarding the state border. Many of them are now in the reserves but some are still on active service. But both the former and the latter are doing great work in educating the troops in the best revolutionary, combat and Chekist traditions and in passing on their own rich experience.

The troops of the Red Banner Transcaucasus Border District are boundlessly devoted to their own CPSU and the Soviet grvernment, and to all our people, and henceforth too will vigilantly and reliably safeguard the motherland's state border, raise combat readiness, strengthen discipline and organization, and do everything needed to fully implement the decisions of the 26th CPSU Congress.

BALTIC REPUBLICS CELEBRATE 'BORDERGUARD DAY'

In Estonian SSR

Tallinn SOVETSKAYA ESTONIYA in Russian 28 May 83 p 2

[Article by Maj Gen V. Vinogradov, chief of Political Department, troops of the Red Banner Baltic Border District, KGB USSR: "Guarding the Soviet Borders"]

[Text] Today, our country is honoring the men of one of the glorious combat detachments of the Soviet Armed Forces--the Border Troops. For 65 years already, they have been guarding the sacred boundaries of the fatherland, reliably protecting them against the encroachments of the class enemies.

The Border Guards acknowledge with pride their participation in public deeds and concerns. By soldierly shock labor and a further rise in vigilance and combat readiness, they are striving to multiply their contribution to the struggle of the Soviet people for the successful realization of the party's designs and to the cause of ensuring the reliable defense of the country and its state security.

During the 65 years of their existence, the Border Troops have travelled a glorious combat path. And looking over the pages of their heroic past and present today with a mental glance, we see the continuous connection of the entire history of the formation and development of the protection of the Soviet borders with the leading and directing activity of the Communist Party.

The decree of the Council of People's Commissars on instituting the border guards which was signed by V. I. Lenin on 28 May 1918, marked the beginning of the Border Troops' activity. And from the very first days of their existence, they waged a selfless struggle against the numerous intrigues of the enemies of the revolution and accomplished their assigned missions in a worthy manner. During the years of the Civil War, the Border Troops fought heroically against the interventionists and White Guardists as part of the active army, and reliable sentinals again stood at the borders of the Soviet state after the routing of the combined forces of foreign and internal counterrevolution.

The basis for our Border Troop units was formed at that time by the best army formations from among the celebrated divisions and brigades which were commanded by V. I. Chapayev, N. A. Shchors, G. I. Kotovskiy, and other legendary popular heroes. In particular, one of the border detachments was formed from the 24th Samaro-Simbirskaya

(Ul'yanovskaya) Iron Division which received this honorable name for unusual steadfastness and courage of its men. By now having been awarded the Red Banner twice, this detachment continues to guard the country's borders vigilantly as part of our district's units. Here, Vladimir Il'ich Lenin and Aleksey Maksimovich Gor'kiy have been elected honorary border guards and the men of the border especially treasure them and are proud of them.

On the very first day of the war, the outposts of the Baltic Border District also engaged the aggressors in the single line of border subunits which absorbed the battering-ram strike of the fascist hordes. They stood to the death, heroically repelling the onslaught of enemy forces which were many times superior.

In the combat formation of the motherland's armed defenders which was crowned with glory, the Baltic border troops fought on the fronts of the Great Patriotic War in a worthy manner, making their contribution to the utter destruction of the enemy. The exploits of Feodor Okk, Mikhail Pasternak, Vasiliy Utin, Aleksey Loshmanov, Platon Kubov, Petr Rodionov and many other heroes of the border whose names are borne today by outposts are inscribed in the history of our troops in gold letters.

The wartime salvoes fell silent long ago; however, even now the forward edge of the fatherland remains an uneasy feature and active front in the struggle against the subversive activity of imperialist intelligence services, foreign anti-Soviet centers, and their accomplices. Under conditions where the international situation has become aggravated to the extreme through the fault of imperialist forces and primarily of the United States and where the class enemies are sparing no forces and means to accomplish ideological sabotage and other subversive acts against the USSR, our party, government, and people are assigning a matter of great state importance to the border guards--to increase the strength of the Soviet borders and provide a reliable screen against any hostile intrigues on the country's land and sea borders and on the channels of international communication. And the border troops are justifying the confidence placed in them by deed and are accomplishing their missions with honor.

Today their soldierly labor is structured on a new legal basis--in accordance with the requirements of the Law on the Soviet State Border, which went into effect on 1 March of this year. Its adoption was one more striking illustration of the tireless concern of the CPSU and the Soviet government for the strengthening of the protection of the motherland's borders, for the defense of its political and economic interests, and for guarantees of the strict observance of socialist legality and law and order on the border and the creation of of all necessary conditions for the effective activity of state organs and border troops in this direction. Commanders, political organs, and party and Komsomol organizations of the district's troops have initiated great organizational and political work to put the law's provisions into practice and for the unconditional accomplishment of all its requirements.

The contemporary stage of development of the Border Troops is characterized by a further strengthening of the party's role in their activity. The CPSU Central Committee constantly keeps within its field of view questions of ensuring state security and defines the main directions and indicates practical ways for improving the guarding of the border and the strengthening of the Border Troops. As a result, we have today a profound, scientifically substantiated program for the further development of the Border Troops which are armed with fundamentally important aims toward questions of protecting the borders, party-political work, and the communist indoctrination of the men.

The motherland is giving the border guards everything necessary for the successful accomplishment of their assigned missions. Today, our troops have contemporary combat and special equipment, excellent armament, and most important--excellent personnel and well-trained cadres of commanders and political officers. Among the troops of our district are many leading organizers of service who skillfully structure work and experienced teachers and indoctrinators of the men. Among them are officers R. Kazradis, A. Kachkin, P. Korobkov, V. Stotskiy, I. Tamulenis, and many others.

The personnel's profound understanding of the requirements of the party and the government which are imposed on the Border Troops finds its reflection in the specific deeds of the border guards--in their vigilant service and exemplary training and in those soldierly gifts with which they approached their holiday. In the course of the socialist competition which was widely initiated among the troops under the slogan: "Increase vigilance, ensure the reliable protection of the Soviet state border," in the district one out of every three border guards has become an expert in combat and political training and the number of excellent outposts, ships and subunits, crews and squads, and sections has grown. Also in the rank of the right flank is the military collective where officer Ye. Ivchenko serves which, for high indices in soldierly labor, was awarded the challenge Red Banner of the Central Committee of the Estonian Communist Party and the Presidium of the Estonian SSR's Supreme Soviet and its Council of Ministers.

Our district is a multinational combat border family. And many envoys of Estonia represent their republic in it in a worthy manner. Good examples in the performance of military duty are officer A. Gaav, Warrant Officer [praporshchik] U. Kal'dveye, Junior Sergeants A. Kyule and E. Otsus, Privates T. Treym, Ya. Kivistik, M. Nyupuu, and M. Keerma, and many of their comrades who were called up from Estonia.

In their service activity, the border guards of the district rely on the active assistance of the party and Soviet organs of the Soviet Baltic's republics, including Estonia and Kaliningrad Oblast, members of the voluntary people's squads and detachments of YuDP [young friends of the border troops], and of all workers of the border area. For this, we express to them our sincere gratitude and thankfulness and we assure them that in the future, too, we will tirelessly develop our traditional friendship and business collaboration in the interests of the common cause--strengthening the protection of our motherland's sacred borders.

The border guards, vigilantly guarding the peaceful labor of the Soviet people, are performing their service in a single combat formation with the men of the Armed Forces and in close coordination with the organs of the KGB and MVD. Their forces are multiplied by consciousness of the importance and responsibility of the missions being accomplished and the striving to accomplish with honor the combat order of our party which was sounded in the words of the General Secretary of the CPSU Central Committee, Comrade Yu. V. Andropov: "In the difficult international situation, when the forces of imperialism are trying to thrust peoples onto the path of hostility and military confrontation, the party and the state will firmly defend the vital interests of our motherland and will maintain high vigilance and a readiness to give a crushing rebuff to any attempt at aggression."

Loyal to their constitutional duty and boundlessly devoted to the party, the motherland, and the people, the Soviet border guards are always on the alert and reliably guarding the security and inviolability of the borders of the country of Soviets.

In Latvian SSR

Riga SOVETSKAYA LATVIYA in Russian 28 May 83 p 2

[Article by Maj Gen G. F. Moiseyenko, commander Red Banner Baltic Border District, KGB USSR: "Sentinals of the Motherland"]

[Text] The state borders of our motherland--land and sea--stretch for more than 60,000 kilometers. The men of the Border Troops are guarding them reliably day and night.

On 28 May 1918, V. I. Lenin signed the decree of the Council of People's Commissars on instituting the border guards. This day is marked as the traditional holiday of the Border Troops. For 65 years, the Border Troops have been ensuring the inviolability of the motherland's borders.

We are greeting our holiday in an atmosphere of the high political and labor enthusiasm of the Soviet people, including the men of the Army and Navy and the Border Troops. The Soviet people are successfully putting into practice the historic decisions of the 26th CPSU Congress and the May and November (1982) plenums of the CPSU Central Committee. The Baltic border guards ardently and unanimously approve and support the Leninist course for the domestic and foreign policy of the party and the Soviet government and the propositions and conclusions contained in the reports, speeches, and statements of the CPSU Central Committee's General Secretary, Yu. V. Andropov.

An event of tremendous mobilizing force for the border guards was the adoption, by the country's highest organ of state authority, of the law of the Soviet Union, "On the Soviet State Border," which went into effect on 1 March 1983. The men of the Baltic see in this a new manifestation of the concern of the party and the government for the guarding of the border, for the defense of the country's political and economic interests, and for guarantees of the strict observance of socialist legality and law and order on the motherland's borders.

In 65 years, the Border Troops have covered a glorious combat path. After the Civil War and the routing of the hordes of foreign interventionists, the border guards waged a struggle with the Basmatch movement in Central Asia, successfully fought the White Guardist bands in the western and southern republics, and repelled numerous provocations of the Japanese militarists. On land, sea, and river sectors of the border they detained tens of thousands of spies, saboteurs, and contrabandists and thwarted the hostile actions of accomplices of the bourgeois intelligence services.

After the Civil War, many Latvian Red Riflemen became border guards. Among them were fearless knights of the revolution Ya. Yu. Libert, F. M. Krumin', N. P. Pupol', R. F. Varkaln, R. K. Shkil'ter, and others. Being in the border formation, they sacredly cherished the soldierly, combat, and Chekist traditions which were born in the battles for Soviet power. Their military glory is now being inherited in a worthy manner by new generations of border guards. One of the leading outposts today bears the name of the Latvian Red Riflemen.

At the terrible hour of the invasion of our country by the German-fascist aggressors, the fighting men and commanders in the green service caps were the first to accept the enemy blow. The border subunits and units fought to the last cartridge and to the last drop of blood. "The border guards fought like lions," wrote the newspaper PRAVDA on 24 June 1941. Together with the men of the Army and the Navy, the sentinels of the motherland's borders fought bravely on all fronts.

For courage and heroism displayed on the fronts of the Great Patriotic War, more than 150 border guards were awarded the title of Hero of the Soviet Union and more than 13,000 were awarded orders and medals. Orders beamed on the battle standards of 50 units of the border guards while 32 units received designations of honor.

The units of the Red Banner Baltic Border District also covered their battle standards with undying glory. In battles with the enemy, heroism and valor were displayed by Captains M. F. Pasternak and A. G. Loshmanov, political instructor P. A. Rodionov, assistant political instructor V. I. Utin, Lieutenant P. M. Kubov, and others whose names are borne today by the best outposts.

In greeting their traditional holiday, the border guards of our district realize clearly that they are guarding the state border in a difficult international situation. The reactionary forces of imperialism and, first of all, of the United States are striving to attain military-strategic superiority over the USSR at any price. The Reagan administration is conducting a policy of further militarization of the country's entire economy in the interests of the production of qualitatively new types of nuclear missiles, chemical weapons, and other weapons of mass destruction and is realizing plans for the use of outer space for military purposes. Foreign centers for ideological sabotage and anticommunist organizations have made their subversive activity against our country more active.

The present international situation is exerting a great influence on the situation on the USSR's state border, too. The imperialists and their accomplices are striving to make the borders of the Soviet Union, including those of the Soviet Baltic, zones of constant tension. However, the Soviet border guards, equipped with the most modern equipment and armament, are reliably guarding and defending the state border.

The ideological and political-indoctrinational work conducted among the troops plays a tremendous role in the accomplishment of tasks of service and training. It was especially intensified after the All-Union Conference of Secretaries of Border Troop Party Organizations which took place this year. The combat and Chekist traditions of the Border Troops--our rustproof weapon--have permanent significance.

The struggle to raise the quality and effectiveness of border service and for a growth in the combat and technical skill of the personnel is expanding among the troops of the district. Communists and Komsomol activists are marching in the vanguard of the competition. The outpost imeni the Latvian Red Riflemen which is commanded by Major V. N. Kuteynikov serves as a worthy example. This multinational subunit has retained the title of excellent for several years and has been awarded the challenge Red Banner of the Latvian Komsomol Central Committee.

The personnel of the "Riga" OKPP [separate frontier control post] have achieved great successes in service and combat and political training. This collective of border guards has been awarded the challenge Red Banner of the Central Committee of the Latvian Communist Party and the republic's Presidium of the Supreme Soviet and Council of Ministers. The lofty awards inspire us to new, soldierly achievements.

A worthy example in the accomplishment of military duty is provided by Major G. Demichev, Captain 2d Rank V. Zhuravlev, Warrant Officers [praporshchik] V. Vinogradov, Ya. Gulbis, and P. Pikina, Senior Sergeant A. Orlov, Sergeants N. Pakalin, A. Yermakov, and V. Chalyy, Petty Officers 2d Class S. Yudin and Yu. Bulyshev, Privates First Class P. Lizunov, R. Aznayev, and V. Zemmer, and many others.

The entire people is guarding our state borders. The strength of the border guards is in the love of the people and their boundless support. On the alarm signal, the voluntary people's squads take part in the search for and detention of violators. M. Pauska, T. Noorkyyv, and others were recently awarded the medal "For Distinction in Guarding the State Border of the USSR."

From year to year, the patronage ties of the Baltic border troops with labor collectives and various public organizations and scientific, cultural, and educational institutions of the Latvian SSR are becoming stronger and stronger. And we are grateful to the Central Committee of the Latvian Communist Party and the republic's Supreme Soviet Presidium and government as well as local party, Soviet, and Komsomol organs, patron labor collectives, workers of science and culture, and all our good friends for constant assistance, attention, and support.

On the day of our holiday, we assure our native Communist Party and the Soviet people that the Border Troops of the Red Banner Baltic Border District, in a common formation with the personnel of the Red Banner Baltic Military District and the twice Red Banner Baltic Fleet, will always accomplish with honor the party's requirements for the defense of the socialist fatherland.

In Lithuanian SSR

Vilnius SOVETSKAYA LITVA in Russian 28 May 83 p 2

[Article by Maj Gen I. Matveyev, chief of staff, Red Banner Baltic Border District: "Guarding the Soviet Borders"]

[Text] Created 65 years ago in accordance with Lenin's decree, brought up by the Communist Party, and tempered in the fire of the fierce struggle with the enemies of the socialist motherland, the Border Troops of the KGB USSR are reliably guarding and defending our country's sacred borders and ensuring their inviolability and indestructibility. The Soviet border guards are greeting their holiday in an atmosphere of high labor and political enthusiasm caused by the decisions of the November (1982) plenum of the CPSU Central Committee and the conclusions and recommendations of the General Secretary of the CPSU Central Committee, Comrade Yu. V. Andropov, which are contained in his speech at the plenum and in the report "Sixty-five Years of the USSR" which received the fervent approval and unanimous support of the Soviet people and the men of the border.

As was noted in a number of party documents, the present international situation is causing serious concern for the Soviet people by imperialism's anticommunist, anti-Soviet strategy. The ruling circles of the United States and their NATO allies are expanding the front of the secret war against the Soviet Union and other countries of the socialist commonwealth, modernizing their intelligence services and subversive ideological centers and organizations, and undertaking intensive measures for the expansion of intelligence actions against our country.

The acuteness and complexity of the moment which is being endured require the highest vigilance. Under the conditions of this severe reality, the political, economic, and military significance of the guarding of the state borders as an integral part of the defense of the socialist fatherland is growing immeasurably.

The Soviet state border is not only a line which separates the territories of states; it is also a constantly operating front. The CPSU Central Committee and the Soviet government are displaying tireless concern for the further strengthening of the protection of the country of Soviets' border. Adoption of the law of the USSR, "On the Soviet State Border," which signifies a new stage in the life and activity of the Border Troops has become a new, shining manifestation of this.

The Communist Party and the Soviet people provided the Border Troops with everything necessary for the successful accomplishment of the missions in the reliable protection and defense of the motherland's borders. Thus, the men of the Red Banner Baltic Border District are armed with first-class weapons and improved combat equipment which are in skillful and reliable hands. The Baltic border guards constantly display high vigilance, improve military skill, and raise combat readiness.

In looking at the heroic combat path which has been travelled by the Border Troops, the question is automatically posed--what is the secret of our successes in the struggle with a strong, cunning, and experienced enemy? The only correct answer is as follows: the wise leadership of the Communist Party. It is namely it, our Leninist party, which determined and determines the specific missions for the Border Troops at all stages of the building of the country of Soviets. It is namely it which arms us with a clear understanding of the lofty goals of service and tempers us ideologically and instills in the hearts courage and heroism and boundless devotion to the socialist motherland and the ideals of communism. The party is tirelessly concerned about the impregnability of Soviet borders and about the men, and in this we find the inexhaustible source of inspiration for the border guards and their resolve to give their strength to the service of the beloved fatherland.

In the great and many-faceted activity for the accomplishment of tasks in the further improvement of the border's protection, a special place is occupied by questions of raising the political vigilance of the personnel. At its basis lies lofty ideological content, flaming Soviet patriotism, a profound understanding of personal responsibility for the security of the socialist motherland, and class irreconcilability toward bourgeois ideology and morals. It is namely these qualities which distinguish the men of the leading subunits of the Red Banner Baltic Border District in which officers A. Gusel'nikov, I. Alalykin, B. Smirnov, I. Monkus, and others are serving.

Historical experience indicates that the unity of the Border Troops with the people is embodied in their very predestination. In a developed socialist society the role of the local population in guarding the border was raised even higher. In analyzing the results of service, we note the following fact from year to year: almost one fourth of all border violators detained are the share of residents of the border area. This indicator is vivid evidence of that tremendous, truly inestimable assistance which members of the voluntary people's squads and the entire local population render to the men.

These days, we should like to express special words of gratitude for concern about guarding the border to the party and Soviet organs of the Lithuanian SSR which are located in the border area and to the sentinals of the second line--the members of the DND [voluntary people's squads] who are doing everything possible to assist the men in the green service caps. Among the voluntary helpers of the border guards we can name today A. Kuznetsov, A. Maslov, I. Norkyavichyus, S. Filatov, and G. Dikshas who were repeatedly recognized with badges of border valor, and many others. The border guards treasure friendship with the local population, are strengthening it in every possible way, and see in it the guarantee of further successes in guarding the motherland's borders.

The guardians of the border are greeting their glorious anniversary with new soldierly deeds, steadfastness, and courage in the continuous, strained struggle on a front which knows no truces and respites. In the future, too, they will accomplish their responsible mission as required by the Soviet people and the Communist Party.

BORDERGUARD DAY COMMEMORATED IN UKRAINE, BELORUSSIA, MOLDAVIA

In Belorussian SSR

Minsk SOVETSKAYA BELORUSSIYA in Russian 28 May 83 p 2

[Article by Col G. Milovanov, deputy chief of Political Department, troops of the Red Banner Western Border District, KGB USSR: "The Motherland's Sentinals"]

> [Text] The boundaries of the Soviet Union stretched for more than 60,000 kilometers. The state border, which determines the limits of the great Soviet power, runs in Europe and Asia, along the banks of the Bug and the islands of the Kuril ridge, in the Arctic Ocean and the mountains of the Pamir, in the sands of the Karakum, and in the swamps of Karelia.
>
> The history of the creation of the Border Troops is linked with the name of V. I. Lenin. The development of the basic principles in establishing the boundaries of the Soviet state belongs to him. On his initiative and with his personal participation, all necessary measures were undertaken for the creation, establishment, and strengthening of the Soviet Border Troops.
>
> Following the Lenin instructions, the Communist Party of the Soviet Union has always displayed and displays tireless concern for the strengthening of the protection of our country's borders.

The life and activity of the Border Troops are inseparably connected with the heroic history of our people and with the basic stages in the development of the Soviet state, its Armed Forces, and the organs of state security. The history of the Border Troops is a combat chronicle of boundless devotion to their motherland and the courage, heroism, and valor of the men in the green service caps who are guarding the country against the penetration of the secret service of international capital, thwarting economic smuggling, and destroying bandits of every stripe. In the battles with Savinkov's and Tyutyunnik's bands in the West, in the conflict on the Chinese Eastern Railroad, in the clashes with the Basmatchi in Central Asia and the Mussavatists in the Transcaucasus, and in battles with the Japanese samurai at Lake Khasan and on the Khalkhin-Gol River and on the Soviet-Finnish border in 1939-1940, the men of the border were examples in the accomplishment of their military duty and of high combat skill. The exploits of Andrey Korobitsin, Grigoriy Kofanov, Valeriy Kotel'nikov, Nikita Karatsupa, and many hundreds and thousands of border guards are inscribed in the history of the Border Troops in gold letters.

For the men of the border, the prewar years were a school of courage, combat skill, and ideological tempering which prepared them for the formidable wartime tests. Together with the organs of state security, the border guards managed to paralyze the intrigues of fascist intelligence in the border areas to a considerable degree.

The lofty moral-political and combat qualities of the border guards were displayed with special force in the years of the Great Patriotic War. They fought heroically with the German-fascist aggressors and were the first to accept the blow of the fascist troops. The outpost under the command of Lieutenant Lopatin and political instructor Glasov held out on the Bug for 11 days. The Hitlerite troops advanced far into the depth of the Soviet territory, but the outpost, like a fortress, stood to the last soldier. Eight border guards of the outpost headed by their chief, Fedor Morin, went into the last bayonet attack singing the "Internationale." The names of border guards Andrey Kizhevatov, Aleksandr Sivachev, Aleksey Novikov, Ivan Belyayev, and Fedor Noskov are inscribed in the chronicle of heroism and courage displayed on the land of Belorussia,

Border units and large units took part in all big battles of the Great Patriotic War: the Battles of Moscow, Stalingrad, and Kursk, in the Belorussian operation, in the battle for Berlin, and in the routing of the Japanese militarists. From among the border guards in the years of the war arose many famous commanders and commissars of big partisan large units, leaders of the communist underground, and organizers of the national struggle in the enemy rear. Partisan detachments and brigades under the command of border guards Nikolay Shestopal, Vasiliy Nikitin, Mikhail Zhuravlev, and others operated successfully on Belorussian soil. The following note was made on service card for Gerasim Alekseyevich Kirpich which is stored in the personnel department of the Main Border Troops Directorate: "Junior Lieutenant G. Kirpich disappeared." Two and a half years later, at the very end of the war, a new line appeared in the same card: "Colonel G. A. Kirpich is alive and is under orders of the Belorussian headquarters of the partisan movement." Thus, two short notes reflected the difficult and truly heroic path travelled by the border officer in the war years.

The motherland evaluated highly the combat services of the border guards. Tens of thousands of men were awarded orders and medals and more than 150 of them were awarded the lofty title of Hero of the Soviet Union. Forty-nine border units were awarded orders and medals. Thirty-two received honorable designations. The names of many border heroes are now borne by outposts which are guarding the western borders.

The workers of our country celebrated the 38th anniversary of the victory over Hitlerite Germany. Thanks to the wise peace-loving policy of the Communist Party, the Soviet people have been working under peaceful conditions for 38 years. But the men of the border are also accomplishing combat missions in peacetime. The stubborn struggle against the secret service of imperialist intelligence, ideological saboteurs, and smugglers on the borders does not abate for even one day. The men in the green service caps are standing their watch steadfastly and courageously.

In accomplishing the grandiose tasks in the building of a communist society in our country, the Communist Party is accomplishing consistently and persistently the program of the further struggle for peace and international collaboration which was adopted by the 26th CPSU Congress. All progressive mankind ardently approves the wise, peace-loving policy of the Soviet Union. At the same time, our party and government consider that the forces of reaction and aggression are striving in every possible way to prevent good changes in the world. As formerly, the imperialist circles are conducting a course for the further aggravation of the international situation. From year to year the military expenditures of the United States and other NATO countries are growing and the arms race is intensifying. The imperialists are intensifying subversive activity and ideological sabotage against the USSR and the socialist countries.

A new and striking manifestation of the party's concern for the strengthening of the country's defensive capability and the inviolability of its borders was the law, "On the Soviet State Border," which was adopted by the USSR Supreme Soviet. The law considers completely the ideas and provisions of the first legislative act on the border--the decree of the RSFSR Council of People's Commissars, "On Instituting the Border Guards," which was personally edited and signed on 28 May 1918 by V. I. Lenin. Under conditions of an aggravated international situation, the law reflects the increased necessity for the further strengthening of the Soviet state border. It comprehensively regulates the entire intricate complex of relations connected with the establishment of the border, the procedure for crossing and protection, and it clearly defines the rights and obligations of the Border Troops.

The provisions of the law reflect the basic principles of the Soviet state's foreign policy and its readiness to do everything necessary to strengthen good-neighbor relations with contiguous countries and strengthen the peace between peoples. The law embodies the norms of relations with adjacent countries of the socialist commonwealth which are profoundly internationalist in their nature. The border with them is a border of a new type, a border of friendship and collaboration.

The men in the green service caps who are guarding the border on Belorussian soil are greeting their holiday with new successes in service and combat training. The number of excellent subunits and experts in the units has grown, dozens of border violators have been detained, and many thousands of copies of ideologically harmful materials and contraband worth a considerable sum have been confiscated. The title of excellent has been held for several years by border outposts and KPP [frontier control post] subunits which are commanded by officers I. I. Pinyashko, V. A. Strel'nikov, M. N. Kuznetsov, M. A. Pavlov, L. M. Mayorov, E. I. Tararin, and others.

The attainment of high results in service in guarding the border is furthered by skillfully presented party-political work. The party and Komsomol organizations of the troops are living a full-blooded life. They serve as the cementing force of the troop collectives and direct their efforts toward ensuring the vanguard role of the communists and Komsomols in the accomplishment of standing missions and the mobilization of the personnel for the attainment of even higher results in combat and political training and the strengthening of military discipline.

The strength of the Border Troops is in their tie with the people. Firm friendship with the population of the border regions was, is, and remains one of the most important traditions of the Border Troops. Our men are sacredly preserving and adding to this tradition. In their difficult service, they constantly feel the support, concern, and attention on the part of the Central Committee of the Belorussian Communist Party and the government of the republic and on the part of local party, Soviet, and Komsomol organizations and the entire population of the border areas. The high vigilance of the residents of the border area has often become an insurmountable screen in the path of violators. The new law consolidates the participation of the workers in the guarding of the Soviet state border as one of the important forms for the Soviet citizens' accomplishment of their patriotic duty in the defense of the fatherland which developed long ago.

On their holiday, the men of the western borders of the motherland assure their party and the Soviet people that, in the future, too, they will carry high the title of Soviet border guard and will spare no strength for the borders of the motherland of October always to be sacred and inviolable.

Kiev PRAVDA UKRAINY in Russian 28 May 83 p 2

[Article by Maj Gen V. Yarlychenko, chief of Political Department, troops of the Red Banner Western Border District, KGB USSR, candidate of historical sciences: "Plenipotentiaries of a Great Power"]

> [Text] The third spring month is rich with holiday dates. The streets of the villages and cities of our immense motherland did not succeed in putting out the blaze of red calico of the May First demonstrations when they were adorned again with flags and transparencies--together with all progressive mankind the Soviet people celebrated Victory Day. These solemn dates are close in their essence and filled with deep meaning.
>
> And next to them stands Borderguard Day. For the 65th time the people in the green service caps, whose service is inseparably connected with peace and the victory, are marking their professional holiday. Namely--professional, because there is no more honorable profession than defending the motherland!
>
> The General Secretary of the CPSU Central Committee, Yu. V. Andropov, provided the definition of the man of the border briefly and capaciously: "The border guard is not simply a serviceman; he is a political fighter, if you will, a plenipotentiary of our great power on the sector charged to him."

The border always lived and lives in the same heroic rhythm with the country. Its fighting men derived and derive their strength from the inexhaustible sources, the name for which is motherland, party, and socialism. The history of the Border Troops is the history of hundreds and thousands of heroes who consciously went for an exploit on the road indicated by V. I. Lenin. We are proud that the leader of the proletarian revolution stood at the cradle of border protection and edited and signed the decree on its formation on 28 May 1918. He profoundly substantiated the teaching on the defense of the socialist fatherland and guarding the borders of the Soviet state. The Lenin proposition about state borders, their inviolability, and peaceful settlement of quarrels is consolidated in the Soviet constitution and received further development in the law, "On the Soviet State Border ," which went into effect from March of this year.

In the years of the Civil War and the foreign intervention the border guards, pouring into the formations of the Red Army, waged battles with the enemies of our motherland for more than three years, displaying courage and genuine revolutionary heroism. The plenipontiaries of the power were the fighting men of the famous Samaro-Ul'yanovskaya Iron Division, Bogunites and Tarashchites, who had to perform border service under difficult conditions. The country had only begun to heal its wounds. There was not enough of the very necessities for the life and living conditions of the men. But patrols guarded the borders in any weather. During several months alone--from 1 June through 26 December 1921--6,213 violators were detained on the Western border. Already in the 1920's, sprouts of socialist competition appeared on the border and the communists were at its sources. Here is what the newspaper KOMMUNIST wrote on 22 November 1922 about the party cell of the 19th Border Battalion of the Western District: "All members of this organization are imbued with conscious party discipline. The influence of the battalion cell extends to all aspects of the battalion's life. The communists are occupied daily with questions of guarding the border and indoctrinating the personnel. They have initiated an active struggle for the 'best cordon' in the battalion."

The plenipotentiaries of the power were the men in the green service caps at the end of the 1930's when imperialism, trying to feel through the fortress of our Far Eastern and Northwestern borders, organized big armed provocations at Lake Khasan, the Khalkhin-Gol River, and on the Soviet-Finnish Border. The Border Troops also participated in repelling them together with units of the Red Army. For courage and heroism in battles, 18 border guards were awarded the title of Hero of the Soviet Union, more than 2,000 men were cited with government awards, and 2 border districts and 16 units became order-bearing.

The motherland's sentinals were the first to receive the treacherous strike at dawn on 22 June 1941 when regular troops of the fascist army attacked our border units on a front from the Baltic to the Black Sea. Four hundred eighty-five border outposts never wavered and, on that day, not one withdrew from the positions on which the majority of the Chekists held their last defense of their lives. The legendary exploit of the men under the command of A. Lopatin, V. Usov, F. Morin, and many other known and unknown heroes entered the chronicle of the Great Patriotic War as a brilliant page. Today, many of them are forever enrolled as members of dozens and hundreds of worker collectives of the Ukraine.

The Border Troops participated actively in the routing of the German-fascist aggressors at Moscow, fought selflessly in the battles for Kiev, Odessa, and Sevastopol', and participated in the assault on Berlin. The party and the government evaluated highly the services of the Border Troops in the years of the Great Patriotic War: 33 units were awarded orders of the USSR, 20 units were awarded honorable designations, and more than 150 Chekist fighters became Heroes of the Soviet Union. Today, the sentinals of the Western border are proud that under the battle standards of the district served Heroes of the Soviet Union K. F. Vetchinkin, K. Ye. Grebennik, P. I. Derzhavin, N. S. Ivanov, G. A. Kuropyatnikov, V. S. Likhotvorik, V. G. Khomrach, and many others.

The Soviet people will never forget the exploits of their valiant defenders. Touching their boundless heroism with their hearts, today's border guards are firmly holding their combat weapons in their hands and vigilantly guarding the fatherland's frontiers.

Like a sensitive barometer, the state border reflects all the complexities of the international situation. The communists--the driving force of the Border Troops--understand this well. They are constantly on the alert, their political vigilance is indefatigable, and they mobilize the personnel of the district for constant readiness to frustrate at any moment the dark intentions of those for whom the unprecedented successes of the USSR and its constantly growing international authority give no peace and cause tides of fury and malice.

The course of recent international events shows that imperialism and, first of all, American, in disregarding the lessons of history has not abandoned hegemonistic intentions and reliance on military force. Militant circles of the United States and NATO, taking cover behind the smokescreen of the delirious myth of a "Soviet military threat," have set their course for a change in the approximately equal correlation of military-strategic forces in the world arena in their favor.

"...The present administration of the United States continues to follow an extremely dangerous path," noted Comrade Yu. V. Andropov in answering questions of a PRAVDA correspondent. "There should not be such a flippant attitude toward questions of war and peace. All vain attempts to achieve military superiority over the USSR are futile. The Soviet Union will never permit it; it will never find itself defenseless when facing any threat."

The border guards of the Western border understand perfectly their role and place in the overall system of ensuring the country's state security. No one can pass across the state border unnoticed. Frustrating the intrigues of foreign intelligence services and various foreign anti-Soviet centers and disarming spies, violators, and ideological saboteurs, the Chekist fighters are ensuring the defense of the fatherland's interests as is required by the law, "On the Soviet State Border."

Thanks to the tireless concern of the Communist Party, the Soviet government, and the entire people our Border Troops have everything necessary for the successful accomplishment of their assigned missions. They have been provided with first-class weapons and equipment. An atmosphere of high vigilance and combat readiness is constantly maintained among them. They possess excellent special training and combat ability. Today's officers, warrant officers [praporshchik and michman], sergeants and petty officers, soldiers and seamen--they are flaming patriots, educated and highly cultured people, and genuine plenipotentiaries of the Soviet power on its sacred borders. And for them, just as for our entire people, the tradition of greeting their professional holiday with remarkable successes has become an immutable law.

We are pleased to report today--the state border is being guarded vigilantly and reliably. Socialist obligations assumed in honor of Borderguard Day have been accomplished successfully. Among the troops of the district, new hundreds of men have attained positions of excellent service. The best results in service, training, and discipline were attained by the personnel of the Simferopol' Red Banner Border Detachment, the Red Banner Sea Unit, the "Odessa" and "Mostika" OKPP's [separate frontier control post], and others.

Just as in the labor successes of the production collectives of the Soviet Ukraine, at the border outposts, on ships, and in the subunits of the district the communists move as the leaders of all good initiatives and accomplishments. What is he, today's communist of the border? He is the best serviceman who is vigilantly guarding the assigned sector, a leader in combat and political training, and an innovator who is constantly thinking about improving service and strictly accomplishes the requirements of the oath and the regulations and the moral code of the builder of communism. There is no matter in our border life, no initiative and achievement in which the influence of the party organization, the party soul, passion, seething energy, and the organizational talent of the communists would not be felt. This is flaring up especially vividly now in the course of the socialist competition under the slogan: "Increase vigilance, ensure the reliable protection of the Soviet state border" An entire mine of valuable undertakings was born and received a permanent visa: "From excellent outpost--to an outpost of experts!", "Named--means excellent!", "Know the equipment to perfection, handle it with care!", "Hit the target with the first round!", and others. Just as small streams, joining together, feed mighty rivers abounding in water, so are these initiatives which are originated by individual collectives an inexhaustible source of the common successes.

The active and purposeful work of political organs and the party and Komsomol organizations of the district's troops has become a powerful generator which provides the energy for the forward movement of all personnel toward new achievements in soldierly labor. Being guided by the decisions of the November (1982) plenum and the tasks which follow from the speeches of the General Secretary of the CPSU Central Committee, Comrade Yu. V. Andropov, they are instilling in the men a high sense of personal responsibility for the reliable protection of the borders. And in formation today are the flaming word, combat experience, and example of the veterans of the troops, of those who travelled with honor along the difficult patrol paths and roads of the Great Patriotic War.

The border guards of the district are performing their honorable and responsible service in close coordination with their combat brothers in arms--the men of the border guard of the socialist countries. This makes our borders even stronger and more inaccessible for the common enemy--the agents of the imperialist intelligence services and ideological saboteurs.

The law, "On the Soviet State Border," legally confirmed the participation of the workers of the border region and of state and public organization in the guarding of the state border--a provision which received its right to life from the first days of the creation of border protection. During all these years, the friendship and mutual assistance of the Chekist soldiers and the Soviet people was established. We rightfully call the members of the voluntary people's squads and detachments of the YuDP [Young Friends of the Border Troops], workers, kolkhoz farmers, employees, and schoolchildren of the border region the sentinals of the second line. In any weather, day and night, they hurry on the first signal to keep violators from our beloved soil. Oblast Komsomol organizations have been patrons of border outposts, ships, and subunits for 55 years already.

As the mighty Antaeus drew strength from Mother Earth, so are the Soviet border guards strong with the support of the people. Today, on this day of celebration, it is pleasant for me to express words of most sincere thanks and gratitude to the party, Soviet, and Komsomol organizations of the border oblasts and rayons for active and comprehensive support of the men of our district in the accomplishment of our common honorable mission of carrying out the law's requirements--to ensure state order on the state border.

Closely rallied around the Communist Party and boundlessly devoted to the Soviet people, the plenipotentiaries of the power are filled with resolve, just as formerly, persistently to improve their soldierly skill, raise political vigilance and combat readiness, strengthen discipline, and reliably guard and defend the inviolability of the fatherland's borders.

In Moldavian SSR

Kishinev SOVETSKAYA MOLDAVIA in Russian 28 May 83 p 2

[Article by Maj Gen B. Korovin, deputy chief of Political Directorate, Border Troops, KGB USSR: "Guarding the Fatherland's Borders"]

> [Text] Each year, on 28 May the Soviet people honor the Border Troops who, by their steadfastness, courage, and valor displayed in the defense of the motherland's borders, won universal love and gratitude.

Sixty-five years ago V. I. Lenin signed the decree, "On Instituting the Border Guards." These years have been filled with the glorious heroic deeds of the border guards. After the conclusion of the Civil War, when the hordes of interventionists were smashed, the Border Troops conducted a fierce struggle against the imperialist secret service, smashed the Basmatch and White Guards bands in Central Asia and on the western and southern borders, and rebuffed the Japanese samurai at Lake Khasan and on the Khalkhin-Gol River.

The men in the green service caps were the first to receive the surprise blow of the Hitlerite hordes when the Great Patriotic War broke out. Each outpost stood to the death and no one abandoned his battle station without orders. Border regiments took part in the defense of Moscow, Leningrad, Odessa, and Sevastopol', fought heroically at the walls of Stalingrad, in the Arctic, in the Caucasus, and on the Kursk Bulge, and stormed Berlin. Together with the organs of state security, the Border Troops fought the agents of fascist intelligence in the zone at the front.

For courage and heroism displayed on the fields of battle of the Great Patriotic War, more than 200 border guards were awarded the title of Hero of the Soviet Union and thousands of fighting men and commanders were awarded orders and medals. Dozens of border units became order-bearing and many received honorable designations.

Thirty-seven years have passed since the conclusion of the war. During all these years the younger generations of Border Troops have been displaying boundless devotion to the motherland and selflessness in service, and they have been demonstrating those better features which were inherent in their fathers and grandfathers--the defenders of the Soviet borders in the prewar years and participants in the Great Patriotic War.

A new and vivid manifestation of the concern of the Communist Party and the Soviet government for strengthening the protection of the motherland's borders was the adoption, by the 7th session of the USSR Supreme Soviet, of the Soviet law, "On the Soviet State Border." This document, which went into effect on 1 March 1983, has great political and practical significance and is an important contribution to the development of the Leninist theory on the defense of the socialist motherland. It is directed toward ensuring the reliability of the protection of its borders, serves the further improvement of the activity of the Border Troops and state organs whose duties include protection of the border and the maintenance of proper order on it, and furthers the development of the activity and strengthening of the vigilance of the Soviet people.

The Border Troops are marking their 65th anniversary at a significant time. The decisions of the November (1982) plenum of the CPSU Central Committee and the conclusions and recommendations contained in the statements of the General Secretary of the CPSU Central Committee, Comrade Yu. V. Andropov, received ardent approval and the unanimous support of our entire people and the men of the border. The peace-loving Leninist foreign-policy course is being conducted firmly and consistently in the world arena. In the struggle for peace, our party operates in a principled manner, consistently, and in a considered manner. But each step on the path of strengthening peace does not come easy. "Recently," said the General Secretary of the CPSU Central Committee, Comrade Yu. V. Andropov, "a stream of speeches has been disgorged directly, nevertheless, from Washington which are devoted to one thing--military preparations, military programs, and the creation of new types of weapons." The aggressive intrigues of imperialism force the Soviet Union, together with the fraternal socialist countries, to be seriously concerned about maintaining their defensive capability at the proper level.

Under these conditions, the political, economic, and military significance of guarding the border, an integral component part of the defense of the socialist fatherland, is growing. The imperialists and their accomplices are trying to create centers of tension close to our borders and to increase the activity of subversive actions. The enemy's subversive and intelligence activity has been intensified on channels of international communications. The number of attempts to use them to hurl agents and emissaries at the USSR has increased. The quantity of confiscated materials of a malicious anti-Soviet, slanderous nature has increased.

...This occurred on one of the border sectors. A passenger bus approached a border traffic regulating point in the middle of the day. Fifty foreigners prepared to cross the Soviet state border. But far from all of them crossed it and set off on a trip through our country. As was learned, some people came to us not at all with tourist goals. Ideologically harmful literature was discovered in baggage chests, in suitcases with a false bottom, and in purses and rucksacks. Propaganda pamphlets were fastened to the body with adhesive tape and were sewn under the linings of suits and overcoats. It did not help! Almost 3,000 copies of books were confiscated from ideological saboteurs who tried to carry this vulgar and badly written literature to us. And many such examples can be presented.

Our party, under whose leadership all the activity of the Border Troops takes place, teaches us to follow the intrigues of the enemies vigilantly and to stop attempts at hostile actions in good time and decisively at the border. Thanks to the concern of the Communist Party and the Soviet government, today the Border Troops have everything necessary for further improvement of the border's protection and to raise vigilance and combat readiness. All this permitted the troops to take a new, qualitative step in their development.

But however high the level of military-technical equipping of the troops may rise, the main role in guarding the border will always belong to the soldier. The reliability of the border's protection depends, first of all, namely on the soldier and officer. Therefore, under present-day conditions especially high requirements are imposed on the professional training, political tempering, and moral-combat qualities of the men of the border. Now, the troops are staffed with mature, well-trained command and political personnel. They are successfully organizing the protection of the state border on land and on sea and the combat and special training of the Border Troops. The best representatives of the Soviet youth are serving at the outposts, on ships, and in other subunits.

Contemporary equipment has now reached the border: radars, electronics, searchlight stations, powerful optics, reliable communications equipment, fast ships and boats, airplanes and helicopters, all-terrain vehicles, and much more. During their service, the young soldiers master an entire series of professions and specialties. Such qualities as collectivism, responsibility, persistence, and selflessness are developed and consolidated in them. In short, the border service is an excellent school for courage and ideological conviction and a school for combat friendship and military comradeship.

Further improvement in the guarding of the border is furthered by socialist competition which is taking place among the troops under the slogan: "Increase vigilance, ensure the reliable protection of the Soviet state border." Among the troops, much is being done so that the competition completely encompasses all aspects of the life of the border subunits and units with its influence.

The friendship of the Soviet border guards with the men of the border of the fraternal socialist countries is becoming stronger from year to year. Performing their international duty shoulder to shoulder, they are guarding the borders of their countries and of the entire socialist commonwealth.

The Soviet Border Troops are greeting the 65th anniversary of their creation with new successes in service and combat and political training. Just as formerly, they are filled with the resolve to serve the motherland selflessly, to preserve and multiply the glorious combat and Chekist traditions in a worthy manner, and to give all their strength to the noble cause of guarding and defending the borders of the Soviet fatherland.

CAUCASIAN REPUBLICS CELEBRATE BORDERGUARD DAY

In Azerbaijan SSR

Baku BAKINSKIY RABOCHIY in Russian 28 May 83 p 3

[Article by Maj Gen M. Nasirov, deputy commander Red Banner Transcausasus Border District, KGB USSR: "Always on the Alert"]

[Text] For the 65th time, the Soviet people are marking a significant day--Borderguard Day. Closely rallied around their Communist Party under whose leadership all activity of the Border Troops takes place, the men in the green service caps are greeting this significant anniversary with lofty successes in combat and political training.

A new and vivid manifestation of the concern of the CPSU and the Soviet state for the strengthening of the protection of the Soviet motherland's borders was the adoption, by the 7th session of the USSR Supreme Soviet, of the Soviet law, "On the Soviet State Border." This document, which went into effect on 1 March 1983, has great political and practical significance and is an important contribution to the development of the Lenin theory on the defense of the socialist fatherland. It is directed toward ensuring the reliability of the protection of its sacred borders and serves the further improvement of the border guards' activity.

The party is doing everything to ensure the peaceful, creative labor of the Soviet people. As was stressed by the General Secretary of the CPSU Central Committee, Yu. V. Andropov, in the difficult international situation, when the forces of imperialism are trying to push the peoples onto the path of hostility and confrontation, the party and the state will steadfastly defend the vital interests of our motherland and maintain high vigilance and a readiness to give a crushing rebuff to any attempt at aggression.

In preparing to greet the glorious 65th anniversary jubilee of the Border Troops in a worthy manner, the men of the Transcaucasus Border District, together with the entire Soviet people, compare their designs and deeds again and again with the Leninist program for the building of a communist society and are striving to accomplish their lofty military duty to our beloved motherland even better.

The Soviet Border Troops were created by the decree of the Council of People's Commissars on the institution of the border guards which was signed by V. I. Lenin on 28 May 1918. This act of the Soviet government shows the great significance which the leader of the proletariat attached to guarding the Soviet state borders. He saw in their inviolability one of the most important factors for ensuring the state security of the Soviet republic.

The troops of the Red Banner Transcaucasus Border District take their combat history from the time when the first border battalions formed from the subunits and units of the Red Army went out to guard the Soviet Transcaucasus in 1922. It was difficult to guard the borders of the young Republic of Soviets which resisted capitalist encirclement face to face in those distant unforgettable years. The imperialists, who were unable to strangle the October revolution in the cradle, stepped forth as the main organizers of espionage-sabotage activity and political gangsterism in the border areas. Smuggling acquired a large scale. But the men in the green service caps successfully accomplished their assigned missions and demonstrated high vigilance, courage, and valor. The names of Andrey Babushkin, Petr Saykin, Timofey Lyukshin, and many other men who accomplished hero's exploits in battles with the enemies in the 1930's are inscribed in the district's history in gold letters. The glorious names of these remarkable sentinals of the motherland are preserved with care in the hearts of the people and are borne by border outposts, streets, schools, clubs, and pioneer detachments. Named in honor of A. Babushkin is a secondary rural school in whose courtyard a bust of the valiant soldier was placed by the Komsomols of the village and the border guards.

When the Great Patriotic War broke out, the border guards were the first to meet the enemy. In battles with the aggressors, they displayed models of valor and courage. It is namely these qualities which were displayed in the exploits of the Transcaucasus border guards who participated in battles with the hated occupiers. It is with special pride that we mention the names of 31 border guards, alumni of our district, who were awarded the title of Hero of the Soviet Union. Among them--Army General I. Maslennikov, Lieutenant General N. Vasil'yev, Major Generals M. Yenshin, N. Mikhaylov, B. Pankov, and P. Firsov, officers N. Belyakov, I. Bogatyr', I. Voronkov, I. Vazherkin, F. D'yachenko, L. Dudka, N. Kaymanov, and others. Many of them died a hero's death, but their exploit is immortal and border outposts have been given their names.

Border regiments, which were formed in the border detachments of the Transcaucasus, fought at Moscow and Stalingrad and on other sectors of the front and participated in the storming of Berlin. In the battle for the Caucasus, the 26th Rifle Border Regiment which was formed from among the border guards of the Azerbaijan District distinguished itself. In these battles, Junior Lieutenant P. Guzhvin and Sergeant P. Taran, who were awarded the title of Hero of the Soviet Union posthumously, displayed selfless bravery. Their names have been awarded to outposts which are guarding the border in the republic where they served prior to departing for the front.

During the war years, the guarding of the motherland's southern borders became an important component part of the struggle to ensure the normal operation of the rear and to assist the front. The men of the Transcaucasus in the green service caps waged a struggle against the enemy agents not only at the line of the border, but also against sabotage groups which were air-dropped into the border areas.

The victory of the Soviet people in the Great Patriotic War, the formation of the socialist commonwealth, and the further strengthening of the economic and military might of the Soviet Union caused imperialism's fury. Under these conditions, the Border Troops, hand in hand with the Chekists, vigilantly guarded the motherland's sacred borders and exposed the enemy's treacherous intrigues.

The border guards of the Transcaucasus waged a courageous struggle against all attempts to destroy the inviolability of the Soviet state. In 1945-1950, thousands of violators were detained on the border and among them were many hardened agents. The decisive struggle against the intelligence-sabotage activity of international imperialism and the vigilant guarding of the Soviet border required the straining of strength, courage, and vigilance. It was namely in the postwar years that Colonels D. Leonov and N. Karatsupa, Private V. Babanskiy, and others became Heroes of the Soviet Union. Serving now on the border are the sons and grandsons of the frontline fighters who, by their soldierly labor, are multiplying the glorious combat and Chekist traditions of the troops and demonstrating monolithic solidarity around the Leninist Communist Party.

Under contemporary conditions, when reactionary Western circles have chosen the road of resurrection of the "cold war" and initiated shameless anti-Soviet propaganda, the border has become that front line which the enemy is trying to surmount to accomplish ideological sabotage. Ideologically harmful materials which have been confiscated in recent years number hundreds of thousands of copies, and contraband goods--millions of rubles.

The Central Committee of the Azerbaijan Communist Party and the republic's government devote constant attention to questions of guarding the state border. The men in the green service caps express their tremendous gratitude to the workers of Azerbaijan for their great assistance in guarding the motherland's sacred borders and for patron concern.

In surveying the long and glorious path which has been traveled by our troops, we recall with special love the veterans of the border who made a large contribution to the organization and improvement of border service. The present generation of border guards is learning from veterans gray with age how to serve their fatherland and the cause of communism with inspiration.

The high combat readiness of the Border Troops is the guarantee for ensuring the inviolability of the borders of the country of Soviets. In organizing the protection of the state border, our commanders, political organs, and staffs are devoting special attention to raising the personal responsibility of each border guard for the assigned sector of service, for ideological tempering and the military and technical training of the personnel, and for the creative use of all available men and equipment.

In going to meet the 65th anniversary of the Border Troops of the USSR KGB, high indices in combat and political training and service in guarding the border were attained by the victors in the socialist competition--the collectives where officers P. Tarasenko, O. Vertinskiy, V. Basenko, S. Ageyev, G. Dobryakov, V. Cherkashin, F. Seyfullayev, V. Zaporozhets, N. Khazilov, R. and N. Godzheyev, and others serve.

The men of the border realize their lofty duty and responsibility for the assigned matter. Boundlessly devoted to the Communist Party and the Soviet people, in the future, too, they will give all their strength to the great cause of fighting for communism and, shoulder to shoulder with the men of the Soviet Armed Forces, will reliably ensure the security of the motherland.

In the Transcaucasus

Yerevan KOMMUNIST in Russian 28 May 83 p 3

[Article by Maj Gen B. Ye. Sentyurin, commander Red Banner Transcaucasus Border District, KGB USSR: "Guarding the Fatherland"]

[Text] Today the Soviet people and their Armed Forces are solemnly marking the 65th anniversary of the Border Troops of the USSR Committee of State Security.

Our country and the men of the Army, Navy, and Border Troops are greeting this holiday in an atmosphere of great political and labor enthusiasm caused by the decisions of the May and November (1982) plenums of the CPSU Central Committee and the successful realization of the party's majestic designs.

Along with this, we cannot forget even for a minute that the most reactionary circles of the imperialist states headed by the United States and its allies in aggressive military blocs are not abandoning attempts to speak with our country from a position of strength. Nudging the world to the edge of nuclear catastrophe, they have initiated an arms race unprecedented in its scales. Our class enemy is conducting total espionage actively and massively against the Soviet Union, accomplishing ideological sabotage, and striving to inflict harm on our economy, using such a critical sector of the competition as the state border.

"Imperialism's aggressive intrigues," noted the General Secretary of the CPSU Central Committee, Comrade Yu. V. Andropov, at the November (1982) plenum of the CPSU Central Committee, "force us, together with the fraternal socialist states, to be concerned and seriously concerned about maintaining the defensive capability at the proper level."

The law, "On the Soviet State Border," which was adopted by the 7th session of the USSR Supreme Soviet, 10th convocation, and which went into effect from 1 March of this year became a new and vivid manifestation of this constant concern of the party and the government for ensuring the country's state security. In implementing its requirements and taking pride in the confidence given to them by the party and the people, the men of the Red Banner Transcaucasus Border District are guarding the motherland's southern borders vigilantly and reliably.

The creation and establishment of the Soviet Border Troops and the development of the basic principles for guarding the state border are inseparably linked with the name of Vladimir Il'ich Lenin. On 28 May 1918, V. I. Lenin signed the decree, "On Instituting the Border Guards." Decades have passed, and now this date is marked annually as a national holiday--Borderguard Day. For six and a half decades, all the service and combat activity of our Border Troops has been inseparable from the history of the country and the organs of state security. Today, let us recall the basic landmarks of this glorious path.

Literally in the very first months after the victory of the Great October, when the young country of Soviets found itself in the fiery ring of enemies Chekist fighters, pupils of the legendary knight of the revolution, F. E. Dzerzhinskiy, headed by communists rose to the defense of its borders on the call of the Leninist party.

Flaming Soviet patriots, they bravely opposed the numerous attempts of the imperialist intelligence services to send spies and saboteurs to our country and to hurl well armed bands as they guarded the building of socialism.

The Soviet border guards covered themselves with immortal glory in the terrible years of the Great Patriotic War. They were the first to meet the fascist hordes on a tremendous front from the Baltic to the Black Sea. The small garrisons of the border outposts fought to the last round and not one of them withdrew a step without orders. For the great contribution to the attainment of victory over Hitlerite Germany, more than 200 border guards were awarded the title of Hero of the Soviet Union and more than 13,000 were awarded orders and medals.

For the present generation of border guards, the exploits of the heroes are examples of selfless devotion to the cause of the Communist Party and the Soviet people. In the difficult contemporary situation they, just as their fathers and frontline-fighter grandfathers, are performing their military duty selflessly for the guarding and defense of the state border.

Last year, our Red Banner Transcaucasus Border District--one of the oldest border districts in the country--marked its 60th anniversary. The contribution of the Transcaucasus border guards to the cause of ensuring the motherland's state security is ponderable.

Known far beyond the limits of the Transcaucasus are the exploits of border guards of the 1920's and 1930's: Andrey Babushkin, Petr Saykin, Nikolay Golubnitskiy, Andrey Bochkarev, and others whose names are borne today by border outposts, schools, and streets.

We are justly proud that our district raised 32 Heroes of the Soviet Union and many military commanders who commanded famous units and large units in the years of the Great Patriotic War.

Among them--Colonel L. Dudka and Petty Officer 2d Class G. Kuropyatnikov, Lieutenant General N. Vasil'yev and Junior Lieutenant P. Guzhvin, Army General I. Maslennikov and Sergeant P. Taran...

The Transcaucasus border guards fought heroically with the hated enemy at Moscow, at the walls of Stalingrad, and on the Kursk Bulge, took part in the battle for the Caucasus, and fought through to the very lair of the fascist beast--Berlin.

Brought up in the heroic traditions, the border guards of the 1980's are continuing the cause of their predecessors with dignity and honor, standing vigilant guard over the peaceful labor of the Soviet people. In accomplishing the requirements of the law, "On the Soviet State Border," from day to day they are raising vigilance and combat readiness and strengthening discipline and organization. This year alone, the Transcaucasus border guards detained dozens of violators and stopped numerous attempts to transport contraband and ideologically harmful literature. For successes in service and combat, political, and special training officers I. Galkin, V. Ivanov, A. Kotov, N. Mel'nikov, T. Tikanashvili, A. Mustafayev, and others were awarded orders and medals of the Soviet Union.

What is the "secret" of the success of the border outposts, patrol cutters, traffic regulating points, and other subunits and units of the district's troops?

First, the Communist Party's wise leadership of the organizational development and all the service and combat activity of the Border Troops. Thanks to this, we now have ideologically tempered, well-trained personnel and everything necessary to ensure the reliable protection of the entrusted sector of the border, beginning with contemporary weapons and up to the most complex electronic instruments.

Second, the inseparable unity with the people and with all workers of the border region. Today members of the numerous voluntary people's squads and detachments of young friends of the border guards wear on their chests the medal "For Distinction in Guarding the Soviet State Border," and badges of border valor. Their contribution to the cause of guarding the fatherland's southern borders is truly difficult to overestimate.

And finally, third--the close interaction of the border guards with the organs of state security, the men of the Armed Forces, and with all interested state and public institutions.

For constant assistance and support in the matter of guarding the state border, we are sincerely grateful to the Central Committee of the Georgian Communist Party headed by Candidate Member of the CPSU Central Committee Politburo and First Secretary of the Central Committee of the republic's Communist Party, Comrade E. A. Shevardnadze, the Central Committee of the Azerbaijan Communist Party headed by the First Secretary of the Central Committee of the republic's Communist Party, Comrade K. M. Bagirov, the Central Committee of the Armenian Communist Party headed by the First Secretary of the Central Committee of the republic's Communist Party, Comrade K. S. Demirchyan, the Krasnodar kraykom of the CPSU headed by the first secretary of the party kraykom, Comrade V. I. Vorotnikov, and local party, Soviet, and Komsomol organs. They are devoting the most fixed attention to questions of the motherland's state security and the life and living conditions of the men in the green service caps.

On this day, I should like to address words of profound gratitude to our remarkable veterans who have given dozens of years of service in guarding the state border. Many of them are now in the reserves or retirement while a number of comrades, as formerly, remain in formation. But both are conducting important work on the indoctrination of the men in the best revolutionary, combat, and Chekist traditions and are transferring their wealth of experience to them.

In the future, too, the men of the Red Banner Transcaucasus Border District who are selflessly devoted to their Communist Party, the Soviet government, and all our people will guard the motherland's state boundary vigilantly and reliably, will raise combat readiness, will strengthen discipline and organization, and will do everything to realize completely the historic decisions of the 26th CPSU Congress.

UZBEK CP CC DISCUSSES RUSSIAN LANGUAGE TEACHING, OTHER TOPICS

Tashkent PRAVDA VOSTOKA in Russian 1 Jul 83 p 1

[Unattributed article: "In the Uzbek CP Central Committee Buro"]

[Text] The regular meeting of the Uzbek CP Central Committee Buro discussed the work of the Samarkand Gorkom in further developing trade and consumer services for the population and pointed out the numerous shortcomings and oversights which exist in this endeavor. The Samarkand Gorkom was instructed to eliminate the shortcomings in the shortest possible time, reinforce the most important sections of these sectors with qualified workers, and significantly raise the level of services for the population.

The Buro examined the work of Uzbekkhlopkomash Production Association in producing modern equipment for retooling the cotton refining industry. Leaders of the association are instructed to mobilize the sector's labor collectives to create highly effective production lines and equipment complexes to provide for complete mechanization and automation of technological processes and raise the quality of raw cotton processing.

Measures were discussed for further improving services to foreign tourists and imposing order in facilities to be shown to guests.

The Buro examined the question of ways to further improve individual residential construction in the countryside.

Examining the plans for August conferences of teachers in general educational schools and instructors in professional-technical schools, the Buro recommended that these conferences discuss measures for improving Russian language study in general educational schools and other educational establishments of the republic.

The Buro also discussed other questions of party, economic, and cultural construction, and took appropriate decisions concerning them.

HISTORY OF ESTONIAN WORKING CLASS DISCUSSED

Tallinn RAHVA HAAL in Estonian 17 May 83 p 3

[Article by Raimo Pullat, doctor of history, and Kulno Kala, candidate of history: "Principal Trends in the Development of the Estonian Working Class. Passages in boldface enclosed in slantlines.]

[Text] The development of the Soviet Estonian working class is closely linked to the entire republic's socio-economic and cultural development. With the restoration of Soviet power and with the first socialist transformations (nationalization of industry, land and banks, the imposition of a planned economy, and Soviet land reform) the social position of the Estonian working class changed markedly--the exploited proletariat became the main holder of the means of production and the ruling class, not only the major productive force of the society, but also the leading socio-political force. All of this formed the basis for a transformation of the social face of the working class that took place during the entire period of transition from capitalism to socialism. The function of the working class as the major productive force in the society now had to be expressed also from the standpoint of the master of the means of production, the leading class of the society.

The vanguard part of the working class in the revolutionary transformation of society was expressed in the dictatorship of the proletariat that was at the same time the suppression of the exploiting classes as well as a creative and constructive function. The proletariat took power not for its perpetual use, but rather to destroy all kinds of class domination, class differences, and to achieve social equality in the society. "Only this class is capable of helping the working masses to unite, join and defend to the end, secure to the end a communist society and to construct it to the finish." (V. I. Lenin, Works, vol 31, p 260).

In spite of the difficult consequences of the Fascist occupation that interrupted the building of socialism the Soviet Estonian working class under the leadership of the Communist Party and in close alliance with the working rural population restored the national economy rapidly to its pre-war level. Even during the first post-war five year period marked steps were taken toward the republic's industrialization, with industry becoming the basic component of the national economy. The collectivization of agriculture liquidated the kulaks as a class, and socialist production became the dominant force in the countryside as well. The tasks of the cultural revolution were successfully met. With the close cooperation of the fraternal republics and their contribution socialism was basically established in the Estonian SSR by the early 50's.

In the period of transition from capitalism to socialism the Estonian working class consolidated and became a socialist working class. Under the direction of the Communist Party it learned to manage production, rule the state, and direct the development of the entire society. It created a new, socialist discipline, imposed a new attitude toward work, and developed broad work-related and socio-political activity. The working class recruited the broad masses of workers to construct socialism.

By the late 1950's the economic and social development of the Estonian SSR reached that of the older federal republics and Estonia together with them stepped into the period of developed socialism, characterized by a high level of development in production, the increasing influence of the scientific-technical revolution, an intensive development in all branches of the national economy, a rise in the welfare of the people, and a flourishing of the intellectual life of the society.

The influence of the working class on the social progress of Soviet society is multi-faceted. Quantitative growth has increased the importance of the work-working class in the society's social structure. Changes in the distribution of the working class according to the branches of the national economy and internal structural changes have a direct effect in drawing together the working class, the kolkhoz farmer and all social segments of the Soviet society.

The period of socialist construction and consolidation was characterized by the rapid growth of the Estonian working class, something that was especially pronounced in the period of the republic's socialist industrialization.

Before the restoration of Soviet power the Estonian urban and rural proletariat numbered almost 150,000 (without family members). Workers in large industries--the best organized and most aware part of the proletariat--exceeded 40,000. According to the 1959 census the Estonian population numbered 1,196,791, including 660,560 workers (with family members). In 1970 these numbers were 1,354,613 and 813,574, and in 1979 1,465,800 and 892,379. By the end of the 1970's the number of workers amongst the population (with family members) exceeded 60 percent. The number of industrial workers--the core of the working class--was 42,900 in 1945, 86,700 in 1950, 137,200 in 1960, 182,100 in 1970, and 186,500 in 1975.

The quantitative growth of the working class was closely connected to the sources of its replenishment. The working class received recruits primarily from youth reaching adulthood, workers from other branches of the national economy, and people capable of work but not participating in social production. Important sources for increasing the working class immediately after the war were the demobilized and those returning home. With the massive collectivization of agriculture the rural people began filling the ranks of the republic's working class, especially in the early 50's. Housewives and retirees played an important part in expanding the working class ranks. During this period of developed socialism the Estonian working class is basically being replenished by youth and migrating peoples. The internationalization of the working class is an objective process throughout the USSR. The influence of inter-republic migration was especially pronounced in Estonia in the first postwar years. Within the working class the proportion of the fraternal nationalities rose to 31 percent in 1948 and kept growing. Together with Estonian workers we have many workers of other nationalities. As a result of inter-republic economic integration the number of Estonian workers working outside their republic's borders is also increasing, especially in the development of the eastern areas of the Soviet Union.

Even in the late 1950's labor use in Estonia was considerably higher than the all-Union average, and beginning with the second half of the 60's the growth in the size of the working class began to slow as labor resources became exhausted.

The largest group within the working class is that of the industrial workers, with those employed in all the industrial branches of the national economy making up almost two-thirds of the Estonian working class. The number of industrial workers has increased the fastest in those branches where the influence of the scientific-technical revolution is the greatest. In our republic this includes energy, machine building, electronics and chemical industry, etc. The period of developed socialism is characterized by a rapid growth of workers in the services. About one-tenth of the republic's workers are agricultural, i.e. workers of the sovkhozes and other state agricultural enterprises.

In technical progress and economic development a major and ever increasing part in increasing production is played by rising productivity. From 1961-1970 the number of workers in the Estonian SSR industries rose by 32.7 percent, productivity by 78 percent. From 1960-1970 the number of workers in engineering-technical fields doubled, while their proportion in the industrial production personnel sector rose from 8.5 percent to 12.3 percent.

The growth of labor productivity is an important factor in developing modern production; besides technological equipment and scientific management improvements it also requires a new worker. Thus current social progress demands a qualitative improvement in the working class.

The main precondition for improving the professional training of the working class and its technical level and culture is a rise in the level of general education.

/In the first postwar years the majority of the Estonian working class had 4-6 years of schooling. By the early 50's almost two-thirds of the industrial workers had less than 7 years of schooling. The educational level of the working class began to rise markedly beginning in the late 1950's, as a result of the gradual implementation of the general mid-level education. From 1956-1965 60,000 young people graduated from the republic's secondary schools, ten years later (1966-1975) the figure was 97,000. In 1976-1977 alone there were more secondary school graduates than in the first 11 postwar years

(1945-1955)--the figures being 28,100 and 27,400 respectively. The educational level of the working class began to rise consistently due to the influx of younger workers./

The general qualifications of the Estonian working class is currently rising primarily due to the growth in the number of workers having higher qualifications and a reduction in the group of workers with the lowest qualifications, while the middle group of mid-level qualified workers is constant.

The development of productive forces, the introduction of new technology, comprehensive automation of production and an increase in energy-intensive labor have caused great changes in the professional composition of the workers and the character of their jobs. The number of manual workers is decreasing and the number of those using machines and mechanism is increasing. The increase of specialties demanding high professional qualifications is apparent in all the groupings of the working class. Among the industrial workers of the Estonian SSR the number of installers, galvanizers, laboratory workers, electricians, etc. has increased most rapidly, while many jobs demanding hard manual work are either declining or are about to disappear. Among construction workers the installers, machinists, operators and welders are in the forefront of bricklayers, carpenters, etc. As a result of extensive mechanization of agrarian work the jobs of agricultural workers have changed markedly.

Intellectual work is increasingly important in highly specialized jobs, and as a result the important differences between the working class and intelligentsia, between manul and intellectual workers are gradually disappearing. Specialized workers have very similar cultural needs and creative activity as the intelligentsia, and thus they form the social connective link between the working class and the engineering-technological intellgentsia. All of this shows the importance of the qualitative changes in the republic's working class in the social development and improvement of society.

The social development of the Estonian working class is progressing along lines that characterize the entire USSR working class. The republic's working class, being an inseparable part of the Soviet working class, has reached a new stage of development in the period of developing socialism. By perfecting and developing itself, it has a decisive influence on the development of the entire society. By fulfilling its leading part in society with the Communist Party at its head the Estonian working class is successfully solving its historical task--the achievement of social equality in the Soviet society.

LANGUAGE POLICY, NATIONALITIES QUESTION DISCUSSED

Tashkent PRAVDA VOSTOKA in Russian 1 Jul 83 p 3

[Article by V. Ten, candidate of historical sciences: "The CPSU and the Social-Political Unity of the Soviet People"]

[Excerpts] Indivisible Union of Free Republics

The Soviet Union is a multi-national federal state which embodies a state system of all the nations and nationalities of our country. International in its inner, social-class nature, it is the incarnation of the unity and indissolubility of the fundamental interests of working people of all the nationalities of our country. At the present time, the USSR is composed of 15 union and 20 autonomous republics, and also 18 national-state structures--8 autonomous oblasts and 10 autonomous okrugs. Some of these forms of national government unite several nations and nationalities, for example, Dagestan, Kabardino-Balkar, and Chechen-Ingush autonomous republics, and Chukotsk, Koryak, and Khanti-Mansiysk autonomous okrugs.

"Millions of Germans, Koreans, Kurds, and representatives of other nationalities," CPSU Central Committee General Secretary Yu. V. Andropov emphasized in his report dedicated to the 60th anniversary of the USSR, "are Soviet citizens enjoying full rights, for whom the Soviet Union has long been the homeland."

The Soviet state is a unified state common to all the people, all nations, nationalities, and national and ethnic groups. Thus it provides them with the best political conditions for active participation in the building of communism.

The party is constantly improving the Soviet federation. An important step in this direction was the adoption of the USSR Constitution in 1977.

The Soviet multi-national government organically combines sovereignty of the whole (federal) with sovereignty of its component parts--the union republics. As all-union principles are made stronger, the competence of the union republics is expanded. It is from this principle that the party proceeded in formulating the Fundamental Law of a developed socialist society.

The new USSR Constitution expands the rights of the union republic, on the one hand, because it gives greater authority to republic organs in resolving the tasks which provide for comprehensive economic and social development throughout its territory. At the same time, it strengthens all-union principles. Thus, it stipulates certain new powers for the USSR which were not in the 1936 USSR Constitution. These include, for example, the following: the establishment of general principles of organization and actiivty of republic and local organs of state rule and administration; ensuring unity of legislative regulation throughout the territory of the USSR; and carrying out a unified social-economic policy, guiding the country's economy, and determining the basic directions of scientific-technical progress and general measures for the rational use and preservation of natural resources.

Thus, the interests of strengthening the Soviet state demand consistent observance of the principle of democratic centralism indivisibly linked with the principle of socialist federalism.

The Soviet federation unfailingly provides for the political unity of the peoples of the USSR and creates favorable conditions for more intensive rapprochement of socialist nations. It will keep its significance in the future as well.

Political Basis of the USSR

The Party is meeting the task of further strengthening the political unity of socialist nations by increasing the role of the Soviets of People's Deputies, which form the political basis of our society. Because of the fact that at the present stage of communist construction the local soviets are "the central link of state organs, providing for the practical local implementation of party and government policies," the CPSU is strengthening in every possible way their ties with the great masses of working people, taking careful note of both the social-class structure and the national structure of republics, oblasts, and rayons. This is clearly confirmed by the composition of the deputies, which is systematically renovated. This helps the party engage as many citizens as possible in the administration of state and social affairs, and this is one of the most important tenets of the Marxist-Leninist classics. In addition, the party is striving to make the soviets into broad representations of all social layers and groups of Soviet society.

Among the deputies of local soviets are representatives of almost all the native and non-native nationalities living in the republic. Thus, in the February 1980 elections to the Uzbek local soviets, representatives of 47 nationalities were chosen.

By expanding the soviets; representation of all nationalities living in the republic, party organizations are trying to make local organs of state rule more fully reflect the interests of all working people, not only in social-economic aspects, but also in national aspects.

The membership of the republic's Supreme Soviet is also internationalist. The deputies of the Uzbek Supreme Soviet include representatives of 19 nationalities. It is worth noting that in recent decades the membership of deputies of Supreme and local soviets has steadily increased the proportion of representatives of peoples which do not have their own national-governmental institution in the form of a union republic. This testifies to the fact that central committees of union republics, kraykoms, obkoms, and raykoms are expanding the representation of non-native nationalities in the organs of state rule.

New Historic Community of People

Among the party's efforts toward further political unification of Soviet society, a special place belongs to the concern for reinforcing and developing the Soviet nation as a new historic community of people. The formation of the Soviet nation is the generalized result of many forms of the development of socialist society during the years of Soviet rule. It arose on a truly socialist basis and had fully formed by the time socialism was established in our country. Moreover, the Soviet nation is the result of a socialist resolution of the national question.

The national question, as party documents have more than once emphasized, has been finally and completely resolved in our country. That is, national oppression has been abolished, the right of nations to self-determination has been realized in practice, the equality of all nations and nationalities has been achieved, and the brotherhood and friendship of peoples of the USSR has been secured. The national question was one of the fruits of capitalism. Under the conditions of a capitalist regime, national relations are characterized by unfairness and inequality, repression of weaker nations, and international enmity and distrust. Only the victory of socialism can do away with national relations which are founded on the dominion of some nations and the subordination of others.

The resolution of the national question does not mean the elimination of national differences, and consequently, the problem remains to develop national relations, but of a socialist type. Under socialism, two progressive tendencies are operating in the development of nations and national relations--their blossoming and drawing closer together. Both these tendencies are closely linked and mutually support each other.

The uniqueness of the development of national relations under conditions of mature socialism lies in the fact that they develop within the framework of the Soviet nation--a social and international community infused with ideological unity on the basis of Marxism-Leninism and the principles of proletarian internationalism. This is the result of the Party's tireless work in the internationalist education of the working people. Internationalism has changed from an ideal of communists to the profound conviction and norm of behavior of millions of Soviet people.

Proletarian, socialist internationalism has a beneficial effect on the self-awareness of socialist nations. It engenders an all-Soviet national pride among Soviet people, regardless of their national affiliation. People's all-Soviet pride under conditions of multi-national government is a new, previously unseen type of national pride.

The Soviet man is distinguished by an active civic position and a deep interest in all state and social affairs. The new man is not just a remote ideal but a reality in our time.

"In this we see bright testimony," as the June CPSU Central Committee Plenum observed, "of the party's steadily growing influence on the masses, its firm links with the working class, the peasantry, and the intelligentsia, and the indissoluble unity of the party and the people."

In spreading the feeling of national pride throughout the internationalist community, the entire Soviet people, we see that it serves as an important factor in strengthening the political unity of Soviet society. The CPSU sees its social and national policies, which are directed toward developing and strengthening the Soviet people, as an important factor for the further political unification of Soviet society, and as the necessary condition for successful movement toward communism.

The Powerful Russian Language

In the further development of the Soviet nation, an ever greater significance belongs to the Russian language, which has been chosen and disseminated in our multi-national country as the language of international communication during the period of the building of communism. Under conditions of mature socialism, which is characterized by further growth in the cooperation and mutual aid of peoples of the USSR, its role is increasing, because it serves as the chief means of mutual communication of socialist nations and nationalities, and an important tool for exchanging experience in all spheres of social and production endeavors.

In our country, Russian is voluntarily studied by millions of people of non-Russian nationalities. In 1970, more than 61 million people, or 48 percent, of non-Russian nationalities fluently mastered it. In 1979, these figures were 77.6 million and 62.2 percent, respectively. V.I. Lenin's prediction, made long before Great October, has come true: "We believe that the great and powerful Russian language has no need to force anyone to study it under the lash"...

Many representatives of non-Russian peoples consciously tried to master Russian even before Great October.

The selection and broad dissemination of Russian as our country's means of international communication is not an obstacle to the development of national languages. They are also widely used in international communication depending on the specific conditions of their spread and mastery by people speaking other languages. The dialectics of linguistic life in the USSR are such that Russian and the national languages are found in an inseparable interrelationship.

The CPSU and all its contingents are making a strict assessment of the dialectics of linguistic processes. They are carrying out many different measures to expand the training of teachers and the organization of scientific-practical conferences for the improvement of Russian language instruction in the non-Russian schools, without diminishing the role of the native language in the process.

In Uzbekistan too the role of Russian as the language of international communication is expanding and becoming more secure, while at the same time the role of local languages is increasing. Thus, according to the 1970 All-Union Census, 49.3 percent of all Uzbeks have a fluent command of Russian, whereas in 1970 this figure was 14.5 percent.

The Heart of the Nation

An important condition for further strengthening the political unity of the peoples of the USSR is the party's constantly increasing influence on all aspects of life in Soviet society.

V.I. Lenin taught that the strength of the party is not only in strict, iron discipline, but also in full and selfless support of it by the entire mass of the working class, which is capable of bringing large groups of working people along with it. At the same time, Lenin emphasized that the party does not merely use this support but is distinguished by the ability "to communicate with, to approach, to flow together, if you will, with the broadest mass of working people..." The CPSU is faithfully following this Leninist behest. Uniting in its ranks numerous representatives of all nations and nationalities of our country, it is the living incarnation of the ideas of proletarian internationalism, and the friendship and brotherhood of peoples.

In contrast to the governmental structure of the USSR, which is based on the principles of federalism, the CPSU is a unified, centralized organization. This was made clear as early as the 8th Party Congress. Acknowledging the governmental status of a number of Soviet republics, the congress emphasized that "this does not at all mean that the Russian Communist Party must, in its turn, be organized on the basis of a federation of independent communist parties... The existence of a unified, centralized Communist Party with a unified Central Committee is necessary... All the decisions of the Russian Communist Party and its governing institutions are unconditionally binding for all components of the party, regardless of their national makeup."

As the vanguard of the multi-national Soviet nation, the CPSU unites in its ranks representatives of all the nations and nationalities of our country. The national contingents of the CPSU are multi-national as well. The Communist Party of Uzbekistan, for example, unites communists of 90 nationalities.

The party's influence on social development and the strengthening of the political unity of Soviet society is making remarkable growth under conditions of mature socialism. This is the result of the CPSU's purposeful work in increasing the role and fighting efficiency of party links, and developing within the party democracy, initiative, independence, and the active participation of all communists.

PARTY AUDITING COMMISSION UNDER FIRE

[Editorial Report] Baku KOMMUNIST in Azeri 12 March 1983 page 2 carries a 1,600-word article by M. Gazyyev, chairman of the AzCP Auditing Commission, on improving the work in the regional auditing commissions. "With this goal in mind, auditing commissions must work closely with party committees and concentrate their efforts on the major issues." A number of successful commissions are cited. "Some commissions approach the fulfillment of their duties in a superficial, formal manner, and audits and studies are lacking in quality. In some cases commission members acquaint themselves only with the obvious when they go to party committees, and do not study the causes of shortcomings deeply. Sufficient materials are often not given to party committees for discussing the results of studies." As a result, "in some city and rayon committees finances are in bad shape and the way is open to wasting party funds." A number of raykoms are mentioned in this regard.

STATE ARCHIVES TO BE REORGANIZED

[Editorial Report] Baku KOMMUNIST in Azeri 17 March 1983 page 3 carries a 300-word article on the "republic meeting of archive workers and specialists at the Institute of Party History under the CC AzCP." It was noted that "in the republic there are 6 central state archives, 15 branches, the Nakhchyvan ASSR State Archive, the Nagorno-Karabakhskaya State Archive and 49 rayon state archives." At the conference "participants discussed perfecting the leadership and administration of archive work, acquisition and optimalization of state archive materials and, in order to fulfill their concrete and political education duties, raising the effectiveness of utilizing historical documents."

REPUBLIC PEACE, DISARMAMENT GROUPS HOLD PLENUM

[Editorial Report] Baku KOMMUNIST in Azeri 18 March 1983 page 4 carries a 300-word dispatch on the joint plenum of the Republic Committee for the Defense of Peace and the Aid Commission to the Soviet Peace Fund in Baku on 16 March. Speakers stressed the "struggle for peace and disarmament everywhere in the world." Among the speakers were Major General N. Abbasov, responsible secretary of the Republic Committee for the Defense of Peace, and Sheykhul-Islam A. Pashazade, chairman of the Spiritual Administration for Transcaucasian

Muslims. The writer and republic State Prize laureate Magsud Ibrahimbeyov was elected chairman of the Republic Committee for the Defense of Peace. "R. A. Abutalybov, director of the Foreign Relations section of the CC AzCP participated in the work of the plenum."

Economics

BAKU CONSUMER SERVICE BUILDINGS REMODELED

[Editorial Report] Baku KOMMUNIST in Azeri 6 March 1983 page 4 carries a 500-word article by Z. Gasymov, rapporteur at the Baku gorispolkom. "In recent years special thought has been given to studying progressive forms and methods in consumer trade, effective use of commercial areas and improving the appearance of stores, cafes and restaurants. Their interiors are incorporating elements of national architecture." The construction, reconstruction and renovation projects are under the supervision of the Baku gorispolkom. Businesses affected are food stores, restaurants, wine sellers, household appliance and electronics stores.

Social and Cultural Affairs

FIGHT AGAINST CRIME INADEQUATE

[Editorial Report] Baku KOMMUNIST in Azeri 2 March 1983 page 1 carries a 1,600-word lead editorial calling for an intensification of the fight against crime. Noting that "our party demands that we conduct a militant struggle against everything that impedes our development and against all antipodes of socialist morality," the decree passed at the 30 November 1982 plenum of the CC AzCP, "On Serious Shortcomings in the Activity of Party, Soviet and Legal Organs of Narimanov Rayon," is discussed. Analysis of criminal instances shows that these organs are not conducting effective work in cutting off the roots of legal violations. There is no multi-faceted and good plan connecting these organs. Preventive work is poorly organized. Recently the number of crimes caused by drunkenness have increased. It is added that "while appropriation of state property and violations of the social order have lessened, the city is unsatisfactory in some cities and rayons." As a result of these problems "last year 259 procuracy and internal affairs workers were relieved of duty." It is asked that "the role of the voluntary peoples brigade [druzhina], comradely courts, local committees and other societal organs be increased by all means."

LAW ENFORCEMENT CRITICIZED IN NESIMI RAYON

[Editorial Report] Baku KOMMUNIST in Azeri 10 March 1983 page 2 carries a 1,200-word article by R. Memmedov on law enforcement in Nesimi rayon. "At present there are 18 law enforcement organizations with more than 1,200 communists active in the rayon." Also, "48 prevention councils in 9 regional labor collectives which were created to defend society's regulations, 108 comradely courts, 6 volunteer peoples brigade stations and 19 operational Komsomol groups are very helpful in the daily work of administrative organs." However,"there are still many serious crimes which occur basically as a result of drunkenness. A number of cases are still unsolved. This shows that the criminal investigation apparatus is not functioning well." A number of MVD officials are accused of "reprehensible actions." "One of the serious shortcomings is the insufficient importance given to preventive work. The rayon procuracy, courts and militia organs are not using the force of society in the struggles against violations of socialist order, theft of state property, extravagance, irresponsibility, drunkenness and hooliganism." Finally, many of the peoples voluntary organs' and comradely courts' actions exist only on paper. The situation is expected to improve in the future.

TEACHING CADRES AVOID RURAL SERVICE

[Editorial Report] Baku KOMMUNIST in Azeri 3 March 1983 page 3 carries a 1,650-word article, part one of a two part article compiled by the Science and Education section of KOMMUNIST. "Approximately 39,000 fulltime, part-time and correspondence school people graduate every year from the higher and middle schools of our republic and a significant number accept assignments in different sectors of the economy. But not all of these cadres are utilized effectively. Firstly, they run into various difficulties: they cannot secure work immediately in their specialties, or they change work places due to the lack of necessary living conditions." A number of letters sent to KOMMUNIST in this regard are analyzed. Baku KOMMUNIST 4 March 1983 page 3 carries a 1,600-word continuation charging that every year more than 300 young teachers do not go to their assigned places. Although there is a serious need for Russian teachers in rural schools, 191 of 1,978 Russian teachers (10 percent) ordered to such teaching positions by the Ministry of Education withdrew from their assignments. As a result, other teachers were overloaded with teaching assignments.

WRITER'S WAGES STANDARDIZED, RAISED

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 4 March 1983 pages 2, 7 carries a 1,700-word article by Nasib Alakbarov defining new wage scales for writers. Under the new decree, writers' wage norms for originals or translations have been defined and are basically at the level of union norms. For example, the writers' wage norms for fiction, including children's literature as well as scientific-esthetic works, plays and film scenarios with a printing of 10,000 have been set at 175, 200, 250, 300, 350 and 400 rubles; for works of poetry (including children's poetry and verse dramas) with a printing of 7,000, the writers' wage is 1.00, 1.25, 1.50, 1.75 and 2 rubles per line; for works of literary criticism, literary and art history with a printing of 4,000, the author's wage norms are 165, 245, 330 and 400 rubles. For mass printings, the writer's wage norms are 265, 330 and 400 rubles per 10,000.

HISTORICAL NOVELS CLASSIFIED

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 18 March 1983 page 6 carries a 2,350-word review of Yavus Akhundov's critical study "The Soviet Azerbaijani Historical Novel" by Jingiz Huseynov, professor of Soviet Culture at the Social Sciences Academy of the CC CPSU. The reviewer says that "questions such as the innovative content of the Soviet historical novel--the broad interest in the life of the people, the multi-faceted view of the struggle for freedom, the examination of historical turning points, giving prominence to the social contradictions of a period and the action of the historical principle--are based on certain examples drawn from Azerbaijani literature." The novels are classified chronologically: "1933 (publication of the first Azerbaijani historical novel)--1945 (end of the Great Fatherland war) and 1945-1975." "If the first phase is characterized by the creation and formation of the Azerbaijani historical novel, then the second phase is characterized by description and the giving of meaning to events in the context of the fundamental changes which have taken place in the life of a society in the historical past." Numerous examples are given.

CALL FOR CENTRALIZED FOLKLORE COLLECTION

[Editorial Report] Baku KOMMUNIST in Azeri 19 March 1983 page 3 carries a 1,150-word article by Azad Nabiyev calling for a centralized organization for the collection of folklore materials. "At the present stage the collection of folklore examples according to territorial principles--Lenkeran folklore, Garabag, Kurdish, Shirvan or Lezgian folklore--is definitely wrong. Examples of the people's creativity in the mother tongue on our republic's territory must be transcribed on the basis of principles involved in compiling a single Azerbaijan folklore atlas. In this way it will be possible for the atlas to reflect the ethnic and dialectal characteristics of the folklore." It is pointed out that "there is no unified scientific center" for the collection and analysis of folklore. "One must strengthen the collection of our folklore under the aegis of the Republic Academy of Sciences. Here, an independent section occupied solely with the collection of folklore must be established."

International

IBM DISPLAY IN BAKU

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 25 March 1983 page 2 carries a 350-word dispatch on the IBM exhibit which demonstrated "equipment which considerably simplifies and expedites book and magazine production" at the House of Books in Baku. In a seminar at the opening of the exhibit N. S. Ibrahimbeyov, chairman of the AzSSR State Publishing Committee, and James Ingram [sic], president of IBM Europe, spoke.

PRESIDIUM RECEIVES IRANIAN CONSUL

Baku KOMMUNIST in Azeri 5 March 1983 page 2

[Unsigned: "Consul Received"]

[Text] "On 4 March G. A. Khalilov, chairman of the Presidium of the Azerbaijan SSR Supreme Soviet, received Ahad Garayi, consul general of the Islamic Republic of Iran, who has commenced his duties in Baku.... T. A. Tahirova, republic minister of foreign affairs, took part in the conversation."

BAKU AND DAKAR--FRATERNAL CITIES

[Editorial Report] Baku KOMMUNIST in Azeri 13 March 1983 page 4 carries a 150-word note on the arrival of a Senegalese delegation. "Inhabitants of Dakar will receive gifts--a maternity hospital, a kindergarten, a school geography department, equipment for a youth center and sporting goods--from their friends in the Soviet Union." Subsequently, "a representative committee will take part in the Baku Days which begin next week in Senegal's capital."

FRIENDSHIP SOCIETY TO STRENGTHEN PROPAGANDA

[Editorial Report] Baku KOMMUNIST in Azeri 16 March 1983 page 4 carries a 400-word note on the 15 March plenum of the Azerbaijan Society for Friendship and Cultural Relations With Foreign Countries, chaired by Nabi Khazri. "Participants at the plenum, along with noting how they have helped broaden the republic's international relations, said that the work of educating workers in the spirit of Soviet patriotism and proletarian internationalism must be perfected. One must enrich and creatively develop forms and methods of ideological work and strengthen the struggle against bourgeois influence. R. A. Abutalybov, director of the CC AzCP Foreign Relations section, participated in the work of the plenum."

EAST BLOC AMBASSADORS TO IRAN VISIT AZERBAIJAN

[Editorial Report] Baku KOMMUNIST in Azeri 20 March 1983 page 2 carries a 450-word Azerinform dispatch on a visit to Azerbaijan by three ambassadors to Iran. "Ministers Extraordinary and Plenipotentiary to Iran from the Bulgarian Peoples Republic, the Hungarian Peoples Republic and the Republic of Cuba S. Kh. Polendakov, [N. Layoni] and S. Luis Marisi acquainted themselves with the republic's achievements in the course of 3 days." In addition to tours of factories and archeological sites "the ambassadors met with T. A. Tahirova, republic minister of foreign affairs, and N. Kh. Akhmadov, chairman of the Baku gorispolkom. The ambassadors were received by I. N. Pugachov, second secretary of the CC AzCP."

AZERBAIJAN PUBLISHES BOOKS FOR AFGHANISTAN

[Editorial Report] Baku KOMMUNIST in Azeri 3 March 1983 page 2 carries a 500-word article on Azerbaijani publishing activity on behalf of Afghanistan. "Literature published for Afghanistan occupies a special place in the output of Soviet Azerbaijani publishers. Works of Nizami, Khagani and contemporary Azerbaijani writers have been printed in Persian with the permission of Afghani friends. Among books printed for the ADR is also the poetry of the famous Afghan poet, Abdulgadir Abkar." Books for children are also published. "The trip of N. S. Ibrahimov, chairman of the AzSSR State Publishing Committee and member of the joint permanent working committee for cooperation between the USSR State Publishing Committee and the ADR Ministry of Information and Culture for publication and distribution, was to further strengthen relations between the Soviet Union and the Afghanistan Democratic Republic in the sector of book publication. These questions were discussed during talks with N. Tulugani, chairman of the ADR State Press and Publication Committee, and M. Barelay, candidate member of the APDP and secretary of the CC."

GEOLOGIST DESCRIBES AZERBAIJAN INFLUENCE ON MEDIEVAL AFGHANISTAN ARCHITECTURE

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 4 March 1983 page 3 carries a 1,100-word article by Zulfugar Atakishiyev, geologist, describing the archeological monuments in and around Herat, 1,100 kilometers west of Kabul, which he studied while on a geological survey expedition in the area. He gives a detailed historical survey noting the participation of medieval Azerbaijani architects and artisans in the construction of some of the buildings. "It is even clearer from the example of Herat that deep cultural and economic relations between Azerbaijan and Afghanistan have existed since the earliest times. We see its continuation in the brilliant celebrations of the multi-faceted relations created between our peoples now."

MUSIC ENSEMBLE PERFORMS IN AFGHANISTAN

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 25 March 1983 page 2 carries a 100-word news item on the performance of the vocal-instrumental ensemble "Ashyglar" at the House of Soviet Science and Culture in Kabul. "The Soviet artists came here at the invitation of the CC of the Afghanistan Democratic Youth organization... The Azerbaijani ambassadors were also in Kunduz and Baglan. They performed before soldiers of the Afghan Army, the Peoples Militia and students at the 'Amani' and 'Istiglal' lycees in Kabul."

SOUTHERN WRITER WRITES POEM TO NORTHERN POETS AND WRITERS

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 4 March 1983 page 3 carries a poem by the Tehran Azerbaijani poet Sonmez, "It Comes and Goes" which enumerates the works and names of Soviet Azerbaijani writers who have devoted works to the Southern cause: Mirza Ibrahimov, Suleyman Rustam, Bekhtiyar Vahabzade, Abbas Zamanov and Nabi Khazri.

POETESS LONGS FOR UNION WITH SOUTH

Baku ADABIYYAT VA INJASANAT in Azeri 4 Mar 83 p 4

[Poem by Esmira Mirzayava: "Sooner or Later"]

[Text] I will cross the Khudaferin bridge
Sooner or later;
I will spit in the eyes of separation
Sooner or later.

I will reap the mourning song of the Araz,
The 'I long for' phrase,
The field of sorrow
Sooner or later.

I will sow the truth in 'maybes,'
Happiness in desires,
Pleasure in hearts,
Sooner or later.

I will tear down this sorrow, this torture,
This torment, this longing,
This vileness, this border,
Sooner or later.

SHORT STORY ON NATIONAL LIBERATION IN SOUTH

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 18 March 1983 page 4 carries a 3,100-word short story by Firuz Sadygzade titled "Bloody Oghan" about a confrontation between a band of Azerbaijani revolutionaries and the Iranian militia in a village near Sarab in Southern Azerbaijan. The story ends with the serious wounding of the protagonist who, though unarmed, was shot: "But now he felt a force, a power in his heart, his spirit, in the very fiber of his being: fire had to be fought with fire! But Memmed still did not know that this first bullet fired in Oghan in the Savalan foothills in the summer of 1941 would be the harbinger of the national liberation struggle in the near future--it was to be a signal for the flaring up of freedom."

BARD SINGS OF SOUTH

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 25 March 1983 page 5 carries a 900-word article by Abuzar Baghyrov on the bard Huseyn Javan timed to the 4th Congress of Azerbaijani Bards. Noting that he has composed "more than 50 songs," it is added that "the leitmotif of this vast work is the subject of the South. Longing for the Fatherland flaming in the poet's heart, it is converted to fiery verses." Numerous examples are given.

SOUTHERN WRITER'S 75TH BIRTHDAY MARKED

[Editorial Report] Baku KOMMUNIST in Azeri 27 March 1983 page 4 carries a 200-word note on a "literary meeting in honor of the 75th birthday of Ganjali Sabahi (Iranian Azerbaijan) at the Natevan Club of the Azerbaijan Writers Union. The meeting was opened by Mirza Ibrahimov. Other speakers were Firuz Sadygzade, a teacher at the Azerbaijan State University, Abbas Zamanov professor at the Azerbaijan State University, and Mirgasym Cheshmzer, scientific worker at the AzSSR Academy of Sciences Institute of the Peoples of the Near and Middle East. They spoke "about the progressive orientation of Ganjali Sabahi's work and his services to Iran in the development of scientific thought."

AUTHOR FETED ON BIRTHDAY; WORKS ON SOUTH DESCRIBED

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azeri 4 March 1983 page 6 carries a full page devoted to the author and playwrite Anvar Memmedkhanly on his 70th birthday. Arif Safiyev, in a 1,500-word article, writes "in stories written on the subject of Southern Azerbaijan his feeling of contemporaneity and the deep internal influence of events on his writing are manifest. While serving in Southern Azerbaijan during the war, he became intimately acquainted with the life here. Here he wrote the short stories 'The Caravan Halted,' 'On the Main Road,' 'Red Blossoms,' 'Statue of Honor,' and others." His play "In the Fire" (1950) deals with the national liberation struggle after the collapse of the ADR. Baku ADABIYYAT VA INJASANAT 4 March 1983 page 6 carries a 400-word open letter addressed to Memmedkhanly by the Azerbaijan Writers Union ispolkom, which says: "while still young you worked in different sectors of the press. During the Great Fatherland war you were a special correspondent on the southwest front, then were active in the Red Army newspaper published in Tabriz VATAN YOLUNDA."

Military

HIGHER MILITARY ACADEMIES ACCEPTING APPLICATIONS

[Editorial Report] Baku KOMMUNIST in Azeri 10 March 1983 page 2 carries a 1,000-word interview with Col. A. Alaskarov, head of the Political Section of the republic Military Commissariat, in which current requirements for admission to the higher military schools are explained. The interviewer notes that "hundreds of Azerbaijani youth are being educated in the higher military schools of whom 540 are graduates of the J. Nakhchyvanski republic specialized boarding school."

Political Affairs

PARTY MEMBERSHIP LINKED TO PRODUCTION SUCCESS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 3 March 1983 carries on page 1 an 800-word boldface editorial on conditions for enlisting young people into the communist party. The editorial emphasizes the need to select the right persons for party membership and stresses the importance of production success as a major criteria for enlistment. It condemns cases where communists have failed to fulfill plans as evidence of laxness on the part of primary party organizations which have thus failed to control their members or educate new party members in labor activism.

Economics

PARTY INTERVENTION SPEEDS PAVLODAR-EKIBASTUZ CONSTRUCTION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 10 March 1983 carries on page 2 a 1,400-word article by M. Makeyev, secretary of the Kazakh CP Pavlodar Oblast Committee, on party intervention in Pavlodar-Ekibastuz construction projects and its favorable impact. The article is published under the regular rubric "Let Us Carry Out the Decisions of the 26th CPSU Congress."

The 26th CPSU Congress pointed out the need to speed up construction, as much as possible, of highly productive, mass output industries and to reduce the number of uncompleted projects. The Pavlodar Oblast Committee of the Kazakh CP, in view of the importance of the Pavlodar-Ekibastuz Territorial Production Complex, which comes under its jurisdiction, has taken the party congress dictate as guidance and is now doing everything possible to speed up construction at the complex. This complex contributes 13 percent of total KaSSR industrial output, 57 percent of its coal, 46 percent of its electrical energy and 15 percent of its ferro-alloy.

Makeyev reviews party efforts to this end in detail, noting careful efforts to intervene at every level of a complex construction process and gain a full understanding of actual working conditions, with new oil-refining capacity a key area of current emphasis. As a result of such party efforts, he notes, most projects are running ahead of schedule. No 1 State Rayon Electrical Station, for example, was recently completed and work is now going forward actively on the first energy bloc of No 2 State Rayon Electrical Station.

MANAGEMENT RESPONSIBLE FOR CONSUMER GOODS SHORTAGE

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 1 March 1983 carries on page 1 a 1,000-word boldface editorial titled "Let Us Improve Trade Operations." The editorial states that while much has been done to improve trade operations in recent years in terms of organization and service, many deficiencies remain. These are largely due to poor management and improper supervision by party and soviet organizations.

Criticised are: nonfulfillment of trade turnover plans; erroneous transfer of goods vitally needed in one area to an area where an oversupply exists; failure of warehouses to distribute goods; and "indifference" to state property resulting in damaged, destroyed and lost goods. The editorial also castigates poorly qualified trade system workers in some areas and a system that allows workers fired by one trade system outlet or organization to be hired by another, even in cases where the original firing was for gross imcompetence or even theft, something that the editorial seems to suggest is rampant throughout the system. The book trade is singled out as a problem area.

NEW ELECTRICAL LINE FROM ALTAY TO EKIBASTUZ

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 1 March 1983 carries on page 2 a 100-word KazTAG Announcement on the beginning of a new Ekibastuz transmission line. The new 1,150 kilowatt transmission system will extend from Ekibastuz to Siberia and will improve energy supply to the Altay region.

FEEDER LINE PROBLEMS SLOW KAZAKH RAIL SYSTEM

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 1 March 1983 carries on page 2 a 1,300-word article by S. Otepbergenov on problems with Kazakh feeder lines and their impact upon the entire republic rail system. The article is the first of three exposes of the KaSSR rail system published under the rubric "The Railways--Economic Arteries."

Comrade Yu. V. Andropov pointed out at the November 1982 CPSU Central Committee Plenum, that Soviet railways have been characterized by delay and uncoordinated operations. Otepbergenov discusses the Alma-Ata Rail System and its many feeder lines. Such feeder lines, in fact, he notes, are probably as great in extent as the main line tracks of the system. Moreover, freighting, strictly speaking, begins and ends on them. Therefore, the way these feeder lines operate has a major impact upon the entire rail system, especially in terms of uniform operations, on-time delivery of freight and speedy turnover of freight cars. Unfortunately, the impact of feeder lines is largely negative since the transport organizations of the industries that control the feeder lines are, more often than not, badly run. Of the 19 industry feeder lines connected to the Turkistan Station, for example, 15 failed to fulfill freighting plans in 1981.

Otepbergenov examines one industry, the Ashchysay Polymetal Combine at Kentey and its feeder line. He discovers every kind of problem and inefficiency:

Too much time is spent in unloading cars; freight moves too slowly along the feeder lines, especially in winter, resulting in frozen and waterlogged cargos that require special effort and extra time to unload. Moreover, the feeder line rails themselves need major repairs. Locomotives lack the power to pull the large trains needed to meet local freight demands and there are too few in any case while an inadequate repair and maintenance base cannot keep even those in service.

Freight, Otepbergenov concludes, must move faster and more efficiently if development of the economy is to continue at required levels.

Little actually needs to be done to change things for the better but official insistence on continuing to do things as they have always been done is a large part of the problem.

KUSTANAY FARMERS MARKETS INADEQUATE

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 2 March 1983 carries on page 2 a 1,100-word article by P. Nikitin, chief of the Kustanay Oblast Public Markets Administration, on problems of sovkhoz, kolkhoz and other "farmers" markets in Kustanay Oblast. The article is published under the rubric "The Channels of the Food Program: Sales."

The kolkhoz market is, an editorial note begins, the glory of cities and large settlements and plays a key role in guaranteeing the supply of foodstuffs--vegetables, fruits, meat, milk, butter, honey, kymys, curds, etc.--to the people. Nikitin looks at the operation of such markets in Kustanay Oblast and how they are responding to a 5 August 1982 CPSU Central Committee and USSR Council of Ministers Resolution calling for improvement of farmers markets and strengthening of their material and technical bases.

He begins with a survey of the markets as they are today. He notes that the oblast has 13 regular and 4 seasonal markets with 7 filials and 4 special trade services bureaus organized to assist their operations with more markets and more services bureaus planned.

However, Nikitin continues, even when the new markets planned are completed (he lists some of the important on-going projects) their number will still be drastically inadequate. Market facilities, especially in rural areas, lack the enclosed facilities needed to withstand Kazakhstan's difficult weather conditions. He also criticizes failure of the authorities to aid individual producers in bringing their products to market--especially meat, which requires heavy transport--and sovkhozes and kolkhozes for, in many cases, failing to take maximum advantage of the markets as they exist. He also notes problems with cadres hindering organization locally and on an oblast level and seems to suggest difficulty with meeting seasonal labor demand to operate the markets properly.

GOODS STOLEN DURING KAZAKH RAILWAY TRANSPORT

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 2 March 1983 carries on page 2 a 1,500-word article by S. Otepbergenov on the problem of freighting losses along the Kazakh railways. The article is the second in a series of three on KaSSR railways and their many problems published in response to criticisms of Soviet transport advanced at the November 1982 CPSU Central Committee Plenum and is published under the rubric "The Railways--Economic Arteries."

If there is an interruption anywhere along the transport conveyor system, Otepbergenov begins, the coordination of the system is broken and freighting loss is often the result. And this, he goes on, can occur in many forms. It can be in terms of freight simply being lost and not arriving at the destination intended by its documentation. It can be in terms of destruction of the freight in whole or in part or it can involve theft and pilfering. Disappearence of a small part of each shipment seems to be the rule rather than the exception.

Otepbergenov gives specific examples of freighting loss in terms of the Alma-Ata Rails System's Turkistan and Arys stations (in Chimkent Oblast). Freight yards at both stations are littered with shipments without papers (some of which have been there for a long time), cars that have been broken into and must be unloaded for inspection, cars that have simply been left behind by departing trains, etc. At Turkistan station, Otepbergenov notes, there are 10-12 such cars every 24 hours. Although most are eventually sent to their destinations, delays are substantial and the process of reshipment and/or inspection of problem cars itself often results in further damage to freight, i.e. more loss, while the stalled cars themselves are again easy marks for thieves--theft often having been the reason for the delay in the first place.

Otepbergenov suggests that major and minor pilfering and theft of goods in transit (sometimes even before they are in transit, at points of origin) is a huge problem caused by the tolerance or even active participation of Kazakh railway workers. He calls for active efforts to instill a proper respect for state property in railway workers and for enhanced responsibility at every level by better trained personnel.

COURTS OF ARBITRATION MOBILIZED TO HALT LABOR INFRACTIONS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 2 March 1983 carries on page 4 a 1,100-word article by S. Zhamabayev, consultant of the Legal Propaganda Department of the KaSSR Ministry of Justice, on the enhanced role of courts of arbitration in the light of the decisions of the November 1982 CPSU Central Committee on labor discipline. The article is published under the regular rubric "Man and Law."

The November 1982 CPSU Central Committee Plenum called for enhanced general production and labor discipline and for irreconcilable struggle against unevenness with respect to work norm fulfillment. Courts of arbitration have a major role to fulfill in this area.

Zhamabayev reviews the legal basis, structure and functions of KaSSR courts of arbitration of which more than 16,000 now exist. He notes their important function in promoting labor discipline through encouraging mutual aid and mutual efforts to solve problems within labor collectives. He also goes into detail on the subject of their powers and reviews the wide range of weapons available to Kazakh courts of arbitration to force conformity to their decisions and enhance labor discipline, responsibility and observance of production rules and regulations. The struggle against drunkenness and, in one reference, narcotics abuse, is singled out as a particular area of arbitration court emphasis. Zhamabayev calls upon all local authorities to assist courts of arbitration in carrying out their duties.

PRODUCTION GAINS FROM NEW TECHNOLOGY FALL

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 3 March 1983 carries on page 2 a 1,400-word article by M. Munatayev, senior research worker at the Economics Institute of the KaSSR Academy of Sciences, on the need for increased labor productivity to counteract a falling growth in labor resources. The article is published under the regular rubric "Technological Progress--The Guarantee of Success."

One of the most important factors inhibiting USSR economic development, Munatayev begins, is a declining growth rate for Soviet labor resources. It is estimated that labor resources will grow three times more slowly during the 11th Five-Year Plan than they did in the 10th and still more slowly during the 12th Five-Year Plan. Moreover, the problem will be complicated by growing demands for workers by nonmaterial production and sales sectors, the increased difficulty in extracting quantitatively and qualitatively declining raw material resources and the need for enhanced attention to transport, communications and environmental protection.

Thus Munatayev emphasizes, labor resources are the key limitation to development in the 1980s and the solution to the labor resources problem lies in enhanced labor productivity through science and technology.

Turning to Kazakhstan, Munatayev finds a serious decline in the growth of labor productivity, from 30 percent in 1971-1975 to only 8 percent in 1976-1980. New technology is being introduced far more slowly than in the rest of the Soviet Union. Manual labor, he notes, is still of major proportions in Kazakh industry and is even on the rise in certain (e.g. mining) sectors. Munatayev sees the reasons for this in capitalization with further gains only coming from major expenditures. He emphasizes that investment rates for new technology are actually down. Other reasons are expensive, inefficient technological installations and units that increase rather than reduce demands for labor and equipment and units that are not really suited to the work that they perform. He calls for a coordinated effort by all concerned to help overcome these problems and, above all, replace the obsolete equipment in Kazakh industry with the new, highly productive, labor-saving equipment necessary to achieve productivity gains from redeployment of existing labor.

REBUILT, NEW KAZAKH RAIL SYSTEMS LESS EFFICIENT THAN OLD

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 6 March 1983 carries on page 2 a 1,800-word article by S. Otepbergenov on problems with a rebuilt and a new rail system in Chimkent Oblast. The article is last in a series of three and is published under the rubric "The Railways--Economic Arteries."

Because the party and the government have devoted great attention to development of the railway transport system, major changes have been taking place in the Chimkent Division of the Alma-Ata Rail System where major expenditures have been made in the last 7 years to update the lines, rebuild the Arys Station and build a new Qazyqurt Station. While the money spent has been considerable, a large return on the money has not resulted. Instead, stagnation and decline has resulted. There has been, for example, only a small growth in freight turnover and due to poor work quality trains are actually slowed rather than speeded. Capacity waste is greater than before and labor productivity is slowed down. Whereas, for example, it took only 5 hours to load a freight car at the Arys Station before it was rebuilt, the figure now is 11 hours.

Seeking reasons for these difficulties, Otepbergenov looks at the new facilities and new equipment at the Arys and Qazyqurt Stations. He discovers a pattern of rebuilding and building that was ill-conceived, ill-planned and slowly executed. Technical equipment rarely performs as intended. At the Arys Station, for example, an automatic marshalling yard that is supposed, through an automatic control system for freight car speeds, to accelerate car handling, has actually resulted in frequent freight car collisions and damage that puts cars out of service prematurely. At Qazyqurt, a station that was begun in 1972 and was to be completed in 1975 to serve a new Chimkent petroleum refining plant but is still under construction today, with no firm completion date yet in sight, problems are even more widespread. The original plans, for example, failed to make provision for all needed facilities that have had to be added on a haphazard basis, while a badly thought out scheme of work priorities has seen key facilities (oil cisterns, etc.!) put off till later, making the station only semi-operational even after more than a decade of work. There are also no housing, recreational and rest facilities for station workers, creating severe problems with cadre turnover.

Chimkent industries (Otepbergenov provides a detailed listing of the major factories and plants involved) must be guaranteed adequate, reliable and energetic transport. At the same time, the state must receive a return on its substantial investment in the Qazyqurt and Arys Stations. In the case of the former, he makes concrete proposals for solving constructional and other problems and calls for completing other projects by the end of 1983 to meet the demands of the November 1982 CPSU Central Committee Plenum for improved and better coordinated transport service.

REPUBLIC COMMITTEE PROTECTS MINERAL DEPOSITS, PROMOTES EFFICIENCY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 10 March 1983 carries on page 2 a 1,300-word article by O. Mulkibayev, vice-chairman of the KaSSR Council of Ministers State Committee for Overseeing Safety in Industrial and Mining Operations, on work by his committee to protect mineral reserves from misuse and promote more efficient, environmentally sensitive mining. The article is published under the regular rubric "Man and Nature" and the regular subrubric "Economy and Ecology."

Useful minerals are extremely abundant in the Soviet Union. Each year some 360 million tons are taken from the ground in the KaSSR alone. However, Mulkibayev goes on, as the needs of the Soviet economy grow, there is the necessity to search for new deposits, master existing deposits in a complex manner, increase ore yields and expand recycling. These goals are both economically and ecologically beneficial.

Mulkibayev discusses what his own committee is doing to achieve the goals, noting that the best way to conserve resources is to reduce loss as the minerals are removed from the earth, an area of emphasis in a number of republic mining industries including the Balkash Mining and Metallurgy and Oskemen Lead-Zinc Combines. With agents in more than 400 republic mining industries, the State Committee for Overseeing Safety in Industrial and Mining Operations works closely with industries to this end and Mulkibayev claims 17 million tons of minerals saved by such methods.

Mulkibayev also notes his committee's work to help industries reduce and use polluting wastes through its assistance in developing new mining and processing methods and encouragement of the use of waste to produce additional product. Mulkibayev complains that many industries are still mining in a highly inefficient manner; they extract only a small portion of raw materials in ores and actively pollute. He also laments uncontrolled mining in many areas and uncontrolled extraction of construction materials by various ministries, leading to pollution and, in some cases, destruction of valuable farm lands.

KAZAKH RAILWAYS CHIEF BLAMES SHIPPERS FOR CAPACITY WASTE

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 17 March 1983 carries on page 2 a 1,200-word article by O. Saqtanov, chief of the Oral Division of the Western Kazakhstan Railway, on the problem of wasted capacity in his division. The article is published under the rubric "The Railways--Economic Arteries."

Saqtanov begins his article with a catalog of the many successes of his administration, noting its maximum use of internal resources to achieve high productivity and overfulfill plans in many areas including freight car maintenance. However, he continues, his division has been unable to fulfill plans for reducing capacity waste, which has been running at high levels. He attributes the problem, however, not to his railway division but rather to shippers and receivers who are "irresponsible" about timely loading and unloading and are often simply unwilling to cooperate with the railways or with other shippers and receivers. He notes, for example, that the loss this year alone will be the equivalent of 12,470 cars of freight on account of capacity waste along the railway division's 53 feeder lines.

Saqtanov suggests that one reason for nonfulfillment of plans by many enterprises, including construction organizations, is simply their inability to depend on the rail systems for reliable supply of the raw materials and finished goods that they need to continue operating.

KZYL-KUM WATER WASTE ENORMOUS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 18 March 1983 carries on page 2 a 1,000-word article by O. Omirbekov on water waste and other problems associated with Kzyl-Kum irrigation. The article is published under the regular rubric "Problems, Analyses, Suggestions."

The USSR Food Program calls for continuation of the mastery of the Kzyl-Kum Desert. Bearing primary responsibility in this area is the "Chardarastroy" Reclamation Administration under the "Glavarissovkh ozstroy" Chief Administration. Since 1958, the "Chardarastroy" Administration has constructed a 5.7 billion cubic meter reservoir in the Kzyl-Kum, has completed the 116.5 kilometer long Kzyl-Kum Main Canal and has irrigated more than 60,000 hectares of virgin lands with 2,697 hectares added during the first year of the 11th Five-Year Plan alone. Based upon these lands, 6 rice and 3 cotton raising sovkhozes have been created and plans call for the creation of 11 more sovkhozes in the future based upon an expansion of the Kyzl-Kum Main Canal System.

However, Omirbekov continues, much of the canal system currently in use is not concrete lined and some 200,000 cubic meters of valuable water is wasted each year or at least 3 billion cubic meters in the 16-17 years that the canal has been in operation. Omirbekov notes the considerable amount of additional output that would be possible if this water could be put to productive use and calls for the reclamation administration and other authorities to take quick action. However, he acknowledges that part of the reason for the unlined canals and water waste has been a shortage of materials and of equipment on the part of the "Chardarastroy" Administration. He notes, for example, that much of the administration's equipment park is obsolete and that shortages of parts and assemblies (which must sometimes even be procured from other republics) is a major problem with using what equipment is available at full capacity. He ends by calling for attention to this problem and for the possible opening of a factory filial in area to serve heavy equipment.

KAZAKH INDUSTRY PRODUCT QUALITY LOW

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 19 March 1983 carries on page 1 a 1,000-word editorial titled "Product Quality--a Mirror of Production." Those areas of industry that have problems of labor organization, interrupted supplies of raw materials and technical resources and shortfalls of energy and transport, include electrical energy and coal production, agricultural machinery construction, mineral fertilizer, cement, reinforced concrete assemblies, meat, animal fat and whole milk products production along with various mining and metallurgical sectors in general. The editorial stresses the need for these production areas to overcome their problems and accord with the overall favorable republic picture.

SIBERIAN OIL PIPELINE COMES TO CHIMKENT

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 19 March 1983 carries on page 3 a 700-word article by A. Zholdasbekov reporting on the completion of the Tyumen-Pavlodar-Chimkent Oil Pipeline. The article is published under the rubric "At the Construction Sites of the 5-Year-Plan."

The Siberian Petroleum Pipeline, which stretches through 1,642 kilometers of difficult terrain from Tyumen to Pavlodar and then Chimkent (diameter of pipe 820 mm), has come to Chimkent and has begun filling the cisterns of the Chimkent Oil Refining Plant. The new pipeline, when the still uncompleted Chimkent Oil Refining Plant is finished, will make possible full supply of petroleum products to Central Asia and Kazakhstan and will free 5,000 tankcars formerly used to move petroleum products to the area by rail. The pipeline includes 13 pumping installations and was completed 20 days ahead of schedule.

ECOLOGICAL PROBLEMS IMPEDE EXPANSION IN CRAMPED PAVLODAR

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 23 March 1983 carries on page 4 a 1,200-word article by M. Mergenbayev on the negative ecological and other consequences of a proposed expansion of space-short Pavlodar City into the opposite Ertis flood plain. The article is published under the regular rubric "Man and Nature" and the subrubric "Problems, Analyses and Suggestions."

Pavlodar is one of Kazakhstan's largest and fastest growing centers. However, currently in Pavlodar every major avenue of growth is closed off to some degree. Plans to annex flood plain lands across the Ertis to solve the problem may be ill-advised due to potentially destructive floods, especially when spring run-off is released by the large Bugtarma and Shul'ba Reservoirs. Mergenbayev also underscores the importance of the areas under study for pasture since they are among the most fertile in the region.

Mergenbayev also notes the dangers of a declining Ertis river. Its biological productivity is falling due to widespread desiccation on account of the reduced flow of the Ertis. Urban expansion into the Ertis flood plain would only exacerbate an already severe local environmental decline occasioned by reservoir construction and the continuing process of urbanization and industrialization.

Mergenbayev discusses current plans to reverse the decline of the Ertis environment and calls for putting off major expansion decisions until they are developed fully. He also feels that there are lots of other choices for Pavlodar than expansion across the Ertis and calls for careful study of the problem.

EDITORIAL CASTIGATES EKIBASTUZ CONSTRUCTION DELAYS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 25 March 1983 carries on page 1 an 800-word boldface editorial titled "Let Us Speed Up the Pace of Construction." The decisive year of the 11th Five-Year Plan is at hand in the KaSSR as construction advances on 180 major projects for the energy, nonferrous and ferrous metallurgy, coal, oil, chemical, machinery construction and other industries. These projects, the editorial emphasizes, are vitally needed if the goals of the 5-year plan are to be met.

However, it goes on, while many projects are advancing at planned rates, others are not. The editorial goes on to castigate waste of funds and resources, inefficient use of funds and resources with respect to primary construction priorities and "planless" construction at some sites. Singled out for criticism is Pavlodar Oblast's "Ekibastuzenergostroy" Trust and its work on Ekibastuz No 2 State Rayon Electrical Station Energy Blocs 6 and 7.

KAZAKH RAIL CENTER CRITICIZED FOR POOR LABOR DISCIPLINE

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 26 March 1983 carries on page 1 a 1,000-word boldface editorial calling for enhanced efforts to preserve labor discipline in Kazakh industry. Among industries singled out for criticism is the Alma-Ata Railroad System's Arys Station (Chimkent Oblast), whose workers are faulted for idleness, lack of responsibility and lack of application, leading to serious difficulties in plan fulfillment by the station. There are, the editorial goes on, unfortunately too many enterprises and industries such as the Arys station and it calls for increased efforts to discover and punish all labor discipline infractions.

BARTOGHAY RESERVOIR CONSTRUCTION AHEAD OF SCHEDULE

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 30 March 1983 carries on page 2 a 1,300-word article by Q. Alimqulov on the general character and current state of construction of the Great Alma-Ata Canal. The article is the first of three published under the rubric "Great Alma-Ata Canal."

The Great Alma-Ata Canal, now under construction with a scheduled 1984 completion date, will provide a strong impetus to the economic and social development of Alma-Ata Oblast and will initiate a major improvement in oblast agriculture through 116,000 new irrigated hectares and improve overall water supply. Alimqulov describes the background, in CPSU 26th Congress and Kazakhstan CP decisions, to the canal and the current state of construction progress including recent construction milestones. Among the latter, are the completion of the 70 million cubic meter capacity first section of the Bartoghay Reservoir ahead of schedule and the beginning of construction on a 2.2 kilometer section of the canal in Alma-Ata City (out of 17 kilometers that will run through the city).

Alimqulov stresses the rapid pace of canal construction and the substantial amount of new technology involved. He seems to suggest completion of the entire canal, all 171 kilometers of it and its associated Bartoghay Reservoir, well ahead of time.

CONCERN FOR WORKERS KEY TO ALMA-ATA CANAL SUCCESS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 31 March 1983 carries on page 3 a 1,200-word article by Q. Alimqulov on the workers of the rapidly advancing Great Alma-Ata Canal. The article is the second in a series of three published under the rubric "Great Alma-Ata Canal."

The article stresses the difficulty and complexity of work on the canal but attributes great successes achieved to concern shown for workers and working conditions. Alimqulov describes in detail the components of this concern in terms of workers housing (including special railcar bunk units), food service, consumer services and cultural etc. He suggests that every effort is being made to meet the needs of the workers and that these efforts are being responded to, on their part, with discipline, application and high productivity.

Social and Cultural Affairs

POLICE LAXITY ABETS CRIME

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 4 March 1983 carries on pages 2-3 a 2,500-word article by O. Seyitov, KaSSR procurator and state first class legal counselor, on the enhanced role of republic procurator organizations in view of the November 1982 CPSU Central Committee Plenum decisions on state, labor and plan fulfillment discipline. The article is published under the regular rubric "Man and Law."

Although Seyitov defines labor discipline as it relates to agriculture in particular, he adds that many problems have arisen in the past due to lax enforcement of laws and regulations, paying heed to the instances of "white collar" (i.e. management) crime and violations above all. He suggests in his presentation pandemic thievery and pilfering at all levels, widespread abuse of power, misappropriations and larceny by management, general alcoholism (condemned in particular as the cause of transportation disasters, including one air crash), "technological crime," involving destruction of equipment, loafing, parasitism, refusal to perform duties, etc., all too often tolerated by the very agencies charged with preventing such "anti-social behavior."

Seyitov calls for stepped up efforts by procurator organizations to prevent and punish all violations of law and discipline and for all managers to take a more responsible approach to their duties. Among the new tools of procurator organizations is a new law that makes managers materially responsible for hiring persons convicted of crimes if such persons repeat their offenses. Seyitov criticizes the practice of some courts to condemn persons guilty of law and regulation violations to jail terms or other punishment, without actually requiring that the sentence be served. He suggests that those convicted of crimes in one area all too frequently simply remain where they have been or go to other, similar jobs where they repeat their offenses.

REGIONAL INSPECTORATES FIGHT AIR POLLUTION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 10 March 1983 carries on page 4 a 900-word article by T. Tolysbayev, chief of the (Alma-Ata) Regional State Inspectorate for the Control of Gas Cleaning and Dust Removal Equipment, on the fight of his agency against air pollution and apathy, in the face of the problem, on the part of many factory managers. The article is published under the regular rubric "Man and Nature."

A major area of emphasis in Soviet environmental protection is air pollution since, as the Soviet economy has grown, the air of its major industrial centers has become increasingly polluted. Among the many measures developed in response to this problem in the KaSSR is the July 1981 Law on "Protection of the Atmosphere," which, among other things, sets new requirements in the area of industrial gas and dust collectors to reduce the discharge of harmful materials into the atmosphere. Set up to review compliance were five Regional State Inspectorates for the Control of Gas Cleaning and Dust Removal Equipment.

Tolysbayev goes on to review the work of these agencies, noting the many new gas cleaners and dust removers being installed under its auspices by various Kazakh industrial establishments, including 65 new and 67 renovated pieces of equipment installed last year alone. However, he goes on, these achievements only scratch the surface and too little attention is still being devoted to the problem. He notes, for example, that more than 30 percent of republic industries have no anti-air pollution equipment at all, that almost a third of the equipment installed is ineffective for one reason or the other, especially in the Kazakh energy industry, that many industries fail to maintain their equipment or have neglected to install key components and that many simply refuse to use what is available. He condemns, moreover, overemphasis on plan fulfillment to the exclusion of everything else, including the environment, and restresses the harmful qualities of polluted air for man, animals and plants.

KAZAKH HEALTH MINISTER RESPONDS TO QUESTIONS ON RURAL CARE

[Editorial Report] Alma-Ata QAZAQ ADEBIYETI in Kazakh 4 March 1983 carries on page 6 a 1,900-word interview with KaSSR Minister of Health Mukhtar Aliuly Aliyev on republic health care system responses to new goals advanced by the November 1982 CPSU Central Committee Plenum in the area of improved services. The interview is published under the rubric "Ministerial Interview" and was recorded by writer Maghzom Supetov.

There are serious problems in securing well-qualified doctors and health professionals to staff less well-developed, "crude" rural health care facilities. Aliyev notes the increasing numbers of doctors and health professionals being turned out by the medical schools specifically for rural posts but acknowledges that getting them to stay where they have been assigned is a problem. He sees the cause of the difficulty as local cadres' lack of concern and refusal or inability to provide young doctors with necessary housing and other facilities.

Rural areas do have some attractive features. Young doctors and health professionals in rural areas can fully exercise their specialties (they cannot in overstaffed urban hospitals); satisfy a desire to practice general medicine; can maintain family ties.

Another attractive feature is the possibility of playing a more generalized social role in rural areas since rural doctors are not just doctors but, at the same time, organizers of a complete local health care delivery system.

Among responses to the November 1982 Plenum discussed by Aliyev are reorganizations of work and clinic hours to provide more and more convenient (for health care users) help to the sick. There are currently 50,000 doctors and 155,000 middle education health care workers in the KaSSR public health system.

BIZDING OTAN REVIEWS KAZAKH SOVIET ENCYCLOPEDIA PRESS

[Editorial Report] Alma-Ata BIZDING OTAN in Kazakh No 152, March 1983 carries on page 3 a 600-word article by Ebdelberi Bekbeiey, science editor of the Kazakh Soviet Encyclopedia Editorial Office, on the past achievements and future plans of the Kazakh Soviet Encyclopedia Press. The Chief Editorial Office of the Kazakh Soviet Encyclopedia was established in 1968, per a resolution of the Kazakhstan CP Central Committee and of the Kazakh government, to publish an encyclopedia in the Kazakh language. Its task completed in 1978, with the last of 15 volumes, the chief editorial office has since gone on to other projects, described by Bekbeiey. They include a single volume "Kazakh SSR" handbook published in Kazakh in 1980, a two-volume "Russian-Kazakh Dictionary" published between 1978 and 1981 and, most recently, a large reference encyclopedia on the KaSSR capital of Alma-Ata, first of a series of "specialized" encyclopedias planned by the editorial office. Others (not yet published) will include a four volume "regional" encyclopedia on the KaSSR in Kazakh and Russian and a three volume children's encyclopedia. Bekbeiey emphasizes the Soviet content of these works in his review for a non-Soviet audience.

KAZAKH REVIEWS FILM ON ACCIDENTAL NUCLEAR WAR THEME

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 8 March 1983 carries on page 4 a 1,000-word review by N. Muftakhov on a new Soviet film on the accidental nuclear war theme. The article is published under the regular rubric "Films."

Mikhail Tumanisvili's film "Incident in Quadrants 36-80" (Mosfilm, 1982?), which is based on the screenplay "Computer Error" by Yevgeniy Mesyatsev, deals realistically with the accidental nuclear war theme. It begins with scenes of the "beautiful and peaceful" Soviet arctic and moves on to ominous views of "phantom" fighters and hundreds of American warships "on exercise." The plot revolves around a stricken American nuclear submarine and the nuclear missiles carried by it aimed at units of the Soviet fleet. Unless the submarine, which has suffered reactor problems, can be aided swiftly, the film relates, there is danger that its missiles will be fired accidentally and start World War III and lead to the destruction of humanity. The American admiral in charge, however, spurns Soviet offers of aid and refuses also to scuttle the damaged vessel and take its missiles to the bottom of the ocean. In the end, a missile is fired but peace is saved since the missile is fortunately intercepted by the Soviet Navy before reaching its target.

The film, in the reviewer's words, shows the eagerness for war of American military commanders and their irreconcilability towards their "enemies," the Russians. It also shows, he goes on, the characters of the military preparation of both sides and the moral qualities of the opposing armies. The film, in

Muftakhov's view, engenders both love of country and patriotism in its viewers and demonstrates the need for enhanced military preparedness to counter the military superiority of U.S. imperialist aggressors. The film, he emphasizes, is only a film, but nonetheless shows only too well what could happen.

KAZAKH THEATER CRITICIZED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 20 March 1983 carries on page 1 a 700-word boldface editorial titled "The Theater and Contemporary Themes." The Belorussian Yanka Kupala imeni State Academic Theater, the editorial begins, was recently criticized in a CPSU Central Committee resolution for a lack of good plays on contemporary themes in its repertory. This problem, it goes on, is by no means confined to Belorussia and is characteristic of KaSSR theater repertories as well.

The editorial condemns the "impotence" of many of the presentations of the more than 30 professional theaters in the KaSSR that present plays in 5 languages. It calls for active party intervention to promote the proper creative and ideological atmosphere and for more party supervision of the process by which plays are selected for performance.

EFFECTIVE ENVIRONMENTAL LAWS NEEDED

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 2, February 1983 carries on pages 44-47 a 1,800-word article by N. Saduaqasov, research worker of the KaSSR Academy of Sciences Philosophy and Law Institute, on the need for enhanced, systematized and more effective environmental law. The article is published under the regular rubric "Theory and Practice of Ideological Work."

Saduaqasov stresses the need for systemization to encompass the great range of present environmental legislation. He also calls for more attention to penal provisions with efforts to require restitution of the real losses occasioned by pollution, poaching, etc. Saduaqasov condemns courts and other authorities that impose token punishments, such as confiscation of vehicles used to commit environmental crimes.

Many of the specific examples given in Saduaqasov's discussion deal with poaching and this seems, from his point of view at least, to be the commonest type of environmental infraction. He calls for stepped up education and propaganda efforts to reduce the number of environmental infractions of this sort.

RURAL DEMAND FOR SERVICES GROWS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 20 March 1983 carries on page 2 a 1,600-word article by KaSSR Minister of Consumer Services S. Tyumebayev on the current state of Kazakh consumer services and plans for the future. The article is published in note of Residential Cooperation and Consumer Services Workers Day.

Tyumebayev notes the expanded scope of consumer services in rural areas, where 95 percent of enterprises now have consumer services receiving points or rural consumer services centers. Moreover, the kinds of services now available in rural areas are increasingly the same as in urban areas with one-third of rural services needs now being fulfilled directly by urban factories and 521 varieties of service out of 827 total now offered in the republic now available in rural areas.

Rural dwellers demand dry cleaning (30 percent of all rural consumer services order) and television repair (which has grown fourfold since 1980). He suggests that consumer orders in these and other areas are being filled more rapidly and better than in the past.

DEVELOPING CITIES, SETTLEMENTS NEED GREENERY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 22 March 1983 carries on page 1 an 800-word boldface editorial on the need to beautify developing urban and rural areas with trees and other vegetation as part of an overall local concern with environmental protection. However, some urban and rural settlements have neglected their local environment, while growing rapidly in economic terms. Alma-Ata, it notes, is well provided with trees (700,000), parks and green areas of every sort, but many rural settlements are severely lacking in this area. Moreover, even when local efforts have been made to make a rural settlement green, follow-through is often poor and trees die for lack of care.

The editorial calls for large scale efforts to make settlements green during the spring planting season. It notes the potential importance of such efforts for the party food program since fruit trees are often the trees planted.

KAZAKH PROFESSIONAL-TECHNICAL SCHOOLS ENROLL MORE KAZAKHS, WOMEN

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 22 March 1983 carries on page 2 a 1,500-word interview with S. Zhandosov, chairman of the KaSSR State Committee for Professional and Technical Education, on the present state and future prospects of Kazakh professional and technical schools. The interview was recorded by A. Alibekov.

Zhandosov was asked about present levels of republic professional and technical school development, the state of the material and technical bases of the schools, changes that have occurred in KaSSR professional and technical school education in recent years, whether graduates are actually working within their assigned areas, the idealistic-political education of the schools and the specialities chosen by students. In answer to the first question, Zhandosov records that there are now 459 professional and technical schools in the republic with 183,000 students studying 347 specialties. He notes that 93,000 of these students are Kazakh (40 percent sic!), a reflection of emphasis by party leader Andropov on enlisting more nationalities into the professional and technical schools. Moreover, 47,000 students are women (28 percent). Zhandosov notes plans to increase female enrollment.

Zhandosov notes that major lags in school construction (25-46 percent plan fulfillments) seriously endanger education plans for the present 5-year-plan. As for the education in the schools itself, Zhandosov notes the higher quality of students now in the schools, meaning that educational plans can be fulfilled qualitatively as well as quantitatively.

Zhandosov acknowledges the fact that many students simply study in the schools (and draw stipends) to no good purpose and either fail completely to accept assignments or leave their jobs quickly. He, however, blames the industries and enterprises themselves for many of the problems with young specialists employed by them. He sees inadequate attention to their needs on the part of local managers with the result that urgently needed young cadres quickly move on to other, more pleasant jobs. He complains also of problem students in some schools (delinquents, etc.) and of indecision on the part of some young people about their careers. They must, Zhandosov emphasizes, give concern to the needs of society and make quick choices.

NEW KAZAKH NATURAL RESERVE ON CASPIAN

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 24 March 1983 carries on page 4 a 200-word KazTAG announcement by M. Groyser on the opening of a new natural reserve on the Caspian. The new Aqtavborashchy Reserve of 170 hectares, located near the Caspian oil fields, will protect various rare floral and faunal species, including 12 birds and land animals listed in the international and USSR red books. Parts of the new reserve will also be used for recreational purposes by oil workers.

NEW KAZAKH BIOLOGICAL INSTITUTE FOUNDED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 25 March 1983 carries on page 3 a 100-word KazTAG announcement of the creation of a new molecular biology and biochemical institute under the KaSSR Academy of Sciences. The new institute, created out of the Alma-Ata Botanical Institute, will be the 32nd research organization under the KaSSR Academy of Sciences. The new institute, like its predecessor, will continue to focus its research activities upon plants.

ALMA-ATA PEDESTRIANS IGNORE TRAFFIC LAWS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 25 March 1983 carries on page 4 a 1,000-word article by M. Qasymzhanova, worker of the Alma-Ata State Auto Inspectorate, and A. Ysymov on Alma-Ata traffic accidents and the role of pedestrians in causing them. The article is published under the rubric "Traffic Safety."

The continual expansion of the state automobile park has resulted in substantial benefits for the people's economy. However, at the same time, it has increased the importance of traffic safety.

The republic capital of Alma-Ata, Qasymazhanova and Ysymov go on, is a leader in this regard and has made special efforts to promote traffic safety in the process of establishing modern roads. Traffic movement along city streets, for example, is controlled by an automatic control system with 180 city traffic lights and lighted road signs. The city's diagnostic station, moreover, they continue, inspects vehicles to ensure their safety.

In spite of these measures, however, traffic accidents, more than 1,000 a year, are all too frequent occurrences and result in considerable loss to the state in money that could profitably be applied elsewhere. Seeking for explanations for the frequency of occurrence of such accidents, the authors note that 40-47 percent are the fault of pedestrians and that 50-60 persons are killed each year and more than 400 injured in them.

KZYL-ORDA PROCURATOR INVESTIGATES AGRICULTURE MISMANAGEMENT

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 25 March 1983 carries on page 4 a 1,500-word article by O. Boranbayev, procurator of the Kzyl-Orda Oblast and third class legal counselor, on actions by his office and its branches to halt numerous violations of law in Kzyl-Orda Oblast agriculture. The article is published under the regular rubric "Man and Law."

Boranbayev details some of the types of law violation uncovered, noting widespread petty theft, pilfering and embezzlements that are having a highly adverse effect on agricultural plan fulfillment. Although stressing the positive cooperation of all concerned to apprehend and punish those responsible, Boranbayev complains of unwillingness of the authorities to take action in some cases, even after crime has been discovered. He also complains of the presence of convicted felons on people's control committees and even within procurator organizations who use their positions of trust for crime.

KAZAKH PEDAGOGICAL INSTITUTE LAMBASTED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 30 March 1983 carries on page 4 a 1,500-word article by O. Ghabdeshev on poor education and other problems at the Gur'yev Pedagogical Institute. The article is published under the rubric "Discipline Has Been on the Slide at the Gur'yev Pedagogical Institute."

The Gur'yev Pedagogical Institute was the first and remains the only institution of higher learning in the Atyrav Region. Today it has some 3,600 day and external students, 27 departments and more than 200 teachers. Most of its graduates are assigned to rural schools of the oblast.

Ghabdeshev charges that the institute is poorly run, makes little effort to meet educational plans, is poorly managed and in general has a poor "moral-psychological atmosphere" that adversely influences students who often do poorly on the job or move on soon to other occupations. Ghabdeshev, moreover, condemns the faculty's "immorality," boozing, thievery, pilfering and other problems for the poor "moral-psychological atmosphere."

Ghabdeshev suggests that one reason that things have deteriorated to such a degree is the failure of higher authorities to intervene effectively to correct "poor labor discipline." He calls upon these authorities to take action since difficulties and problems at the institute have gone on long enough.

KAZAKH TELEVISION PLAYS MAJOR ARTS ROLE

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 2, February 1983 carries on pages 82-87 a 3,100-word article by S. Orazalinov, distinguised KaSSR cultural worker and chief editor of the Kazakh Television Literary-Drama News Programs chief editorial office, on the role of Kazakh television in promoting the arts. The article is published under the regular rubric "Press, Television, Radio."

Television today is one of the most powerful weapons for ideological and political education work among the masses, Orazalinov begins, since it can reach millions instantaneously and make them into eyewitnesses to important events and promote a proper understanding of them. It also has, he continues, a cultural role to play in the arts.

Orazalinov discusses the arts on Kazakh television since 1958 with special reference to the arts news functions of his own editorial office. He shows how Kazakh television has learned to transcend the early technical limitations of the media and advance to a high level of sophistication today with presentations to a public that Kazakh television has itself helped to educate. He complains, however, at the same time, of neglect of the medium by the Kazakh Ministry of Culture and its frequent lack of support in the form of making major theater and arts collectives available for television performances. He also castigates the quality of some arts news programs and a failure on the part of some program producers, performers, etc. to understand and come to grips with the peculiarities of the medium. These and other problems, he concludes, must be overcome both because of the importance of the medium and also because of its mass audience that is less tolerant of error and failure and deserves, as the largest arts mass audience, the best.

International

EMIGRES ASSURED KAZAKH LANGUAGE USE STRONG

[Editorial Report] Alma-Ata BIZDING OTAN in Kazakh No 152, March 1983 carries on pages 2-3 a 1,500-word article by Rabiga Syzdykova, corresponding member of the KaSSR Academy of Sciences, on the wide use of Kazakh in the KaSSR and the impact that this use is having on the language itself. Language changes due to its own, internal pressures and also due to the influence of its social role. Thus, Kazakh and other national languages of the Soviet Union are enjoying an unprecedented development and are flourishing due to official, state encouragement of their use in every area of national life, production and government.

To illustrate her point, Syzdykova reviews the broadened base of Kazakh language use in education, books, the press, on the mass media, on stage, in government and in other official connections and underscores the linguistic enrichment and change that has resulted. She notes, for example, that nearly 2,500 primary and secondary schools now exist in the KaSSR with more than 1 million students, in which the Kazakh language is the primary vehicle of instruction while the language is also used broadly in republic higher education institutions. As for books and the press, Syzdykova records that even in 1967 some 239 different books were published in the KaSSR in Kazakh on a wide variety of technical and nontechnical subjects and that numbers of books published and their printings have increased greatly since that time, with a particular emphasis on Kazakh literature which has attained unheard of heights. She also catalogues the many Kazakh language journals and papers now published (159 journals in all) including ZHULDYZ (circulation 160,000), QAZAQSTAN AYYELDERI (circulation 356,000) and the newspaper LENINSHIL ZHAS (circulation 235,000).

Syzdykova notes the importance of the fact that the language is widely used. As a result, new words and terms are needed. She notes that Russian is a source of new terms and words not only from Russian itself, but also from other languages through Russian.

Throughout her article, Syzdykova stresses the actual status of Kazakh as a widely used language in the KaSSR. This is no doubt intended to call to mind unfavorable comparisons with the repressed state of Kazakh language use outside the USSR (i.e. in the countries of BIZDING OTAN's readers).

Social and Cultural Affairs

TAJIK DISCUSSION OF 60TH ANNIVERSARY OF FORMATION OF USSR

[Editorial Report] Dushanbe KOMMUNISTI TOJIKISTON in Tajiki 1982 No 12 (December) carries on pages 41-47 under the rubric "Sixty Most Glorious Years" a 2,750-word article by M. Kholov (president of the Presidium of the Supreme Soviet of the Tajik SSR) titled "Celebration of Great Friendship and Brotherhood of the Masses" in honor of the 60th anniversary of the formation of the USSR.

Kholov notes that "one of the greatest victories of socialism is the liberation of women." He contrasts the ignorance and isolation of prerevolutionary Eastern women with their emancipation and economic and cultural activities in the Soviet era. Women account for 45 percent of those with middle or higher education in the Tajik SSR. They constitute 39 percent of the total labor force in the republic, 50 percent of the workforce in education, 73 percent in health, and 40 percent in science and science administration. Sixteen women are members of the Supreme Soviet of the USSR. In the Tajik SSR, 123 women hold high state office and 13,216 are deputies in local soviets. The fact that 46 inhabitants of the Tajik SSR are deputies in the Supreme Soviet of the USSR makes is possible "that the national characteristics and best interests of the republic be more fully taken into account."

TAJIK SSR'S POSITION AS PART OF USSR

[Editorial Report] Dushanbe KOMMUNISTI TOJIKISTON in Tajiki 1982 No 12 (December) carries on pages 65-71, under the rubric "Sixty Glorious Years," an article by V. Pripisnov titled "The Soviet People--Mankind's New Social and International Community." While paying tribute to the 60th anniversary of the formation of the Soviet Union, the author provides some specific information about the Tajik SSR. For the period from 1960 to 1979, the republic's working class grew by 2.6 percent while in the Armenian SSR it grew by 2.8 percent and in the Moldavian SSR by 3.3 percent. The author notes the importance of the Russian language in the formation of a unified international Soviet culture. He cites 1979 census data indicating that 16.3 million non-Russians speak Russian as their first language and another 61.3 million speak it as their second language. The author notes the rising percentage of nonlocal nationalities living in the Tajik SSR. In 1926, Russians accounted for 0.7 percent of the population; in 1979, 10.4 percent. Other nonlocal nationalities comprised 24.7 percent of the population in 1926 and 30.8 percent in 1979.

ETHNIC HARMONY IN A TAJIK SSR FACTORY

[Editorial Report] Dushanbe KOMMUNISTI TOJIKISTON in Tajiki, 1982 No 12 (December), carries on pages 84-87 a 1,450-word article by I. Kalonov (director of the "Krupskaia" silk complex in Dushanbe) titled "On the Basis of Unity and Friendship." The author's theme is that many different nationalities work together in friendly, comradely way at the "Krupskaia" silk complex. Kalonov reports that people from 37 different Soviet nationalities work at the factory, including Tajiks, Uzbeks, Russians, Ukrainians, Belorussians, Tatars, and Kalmyks. Three people's contributions are of special attention. One is a Tajik woman identified by her first name, Khosiat. She is an outstanding worker who has joined the party and is now deputy chief of the union at the complex. Ekaterina Goncharova has worked at the complex for a long time. She received medals for her especially productive work during the 10th and 11th Five-Year Plans. Much of her work involves training "girls of the local nationality." Tens of Tajik girls have been her students. Viktor Aleksandrovich Medvedev is head of the complex's largest department, weaving No 1, where 700 people work. Medvedev strives to increase further the prevailing spirit of brotherhood. "Here every worker, regardless of national affiliation, works very productively under the slogans 'One for all and all for one' [and] 'Let us work without laggards.'"

TEACHING PATRIOTISM IN A TAJIK SCHOOL

[Editorial Report] Dushanbe MAKTABI SOVETI in Tajiki 1982 No 9 (September) carries on pages 8-9 an 850-word article by Iu. Bobokhonov, titled "Teaching Belief in International Friendship." Bobokhonov, who teaches history and social science in a middle school, discusses how he teaches his students about patriotism. His students learn from the ideas of Brezhnev, Cicero, D. I. Fonvizin, F. Schiller, and M. I. Kalinin. At photograph exhibitions of Soviet heroes, the students are especially interested in M. V. Frunze, V. V. Kuibyshev, M. I. Kalinin, G. K. Ordzhonikidze, A. S. Shcherbakov, and S. M. Budennyi.

Economics

REPORT BY TAJIK CP FIRST SECRETARY ON STATE OF ECONOMY

[Editorial Report] Dushanbe KOMMUNISTI TOJIKISTON in Tajiki 1982 No 12 (December) carries on pages 25-40 a 7,600-word article by R. N. Nabiev (general secretary of the Tajik CP Central Committee) titled "Let Us Make Use of All Resources." This is the printed version of Nabiev's report to the Central Committee plenum.

Nabiev opens by discussing the progress made by the Tajik SSR in agricultural production since the mid-1960's and the importance of increased production of livestock and livestock feed. Nabiev also notes the republic's satisfactory 1982 harvest, with cotton the most important crop. He then proceeds to discuss a number of agricultural problems, including water shortages, technological backwardness, and a poor attitude on the part of some workers and party members.

Only 8 percent of the area of the Tajik SSR is currently farmed. The mountains, which reduce the amount of arable land, are also a source of water which can be used for irrigation. An expensive project for irrigating land in the foothills is currently under construction. The party does not pay sufficient attention to the importance of water for agriculture. Yet proper use of water is important for increasing agricultural output in general and livestock feed production in particular.

Crop allocation remains a problem. At issue is the proper balance among livestock feed, vegetables, and cotton. Cotton has predominated at the expense of the other two. Vegetable cultivation should be concentrated (although not exclusively) on land near cities. The use of the republic's 1.8 million hectares of forests requires careful study. Some 700,000 hectares of this has long been farmed by kolkhozes and sovkhozes but the productivity is low. While the party is concerned with increased production of all grains, corn production is the primary concern. Even though corn production has increased in the past 5 years, the level remains low because crop rotation is so little used, a problem which also affects cotton production. In the Tajik SSR, the yield per hectare of corn for silage is roughly half the minimum acceptable level. Tajik factories which process agricultural products currently lack the means to mix livestock feed grains. There is a shortage of granaries in the republic. Each year, fewer granaries are built than the 5-year plan requires. The existing facilities can accommodate only 60 percent of the silage produced. Pasturage provides a large part of the food for the republic's livestock. The pastures are not considered farm property. Therefore no one is concerned with them at harvest time. The increase of grain production in the republic will require increased investment on the local level but is also an issue Gosplan should consider. A majority of the Tajik SSR's grain for human consumption comes from outside the republic.

Livestock and poultry production are low. In some rayons there has been no increase; in others, production has declined. Milk production is also low in some rayons.

Agricultural technology is not what it should be, a problem which sometimes causes poor harvests. Where new machinery has been introduced for harvesting grain for livestock feed, its use has not been properly supervised. Therefore, most of the time the machinery is not used. The Ministry of Agriculture and the Ministry of Fruits and Vegetables are both working on the issues of training machine operators and the actual performance of such personnel. In some localities, the introduction of improved technology lags. Chemical fertilizer should be more widely used. The republic's scientists have not made a sufficient contribution to improving agriculture (especially livestock and forage production) although their contribution is increasing.

While some workers on Tajik sovkhozes and kolkhozes do good or superior work, others do not care. Nabiev particularly notes those workers who have some "objective" explanation for their shortcomings. In Kulyabskaya Oblast the party Committee produced good resolutions about the livestock problems but nothing has come of these resolutions in subsequent months. In parts of the oblast livestock production has failed to improve; in other parts it has grown worse. Throughout the republic there are hundreds of agricultural specialists who are working in jobs unrelated to agriculture. Something must be done about this.

Nabiev's solutions include increased criticism and self-criticism, devoting greater attention to training cadres, and the exercise of strict party and state discipline and supervision to ensure the execution of directives. The party's highest agricultural priorities are increases in animal forage production, fishing in lakes and canals, and fruit and vegetable production (especially citrus fruits). However party policy is not implemented with sufficient thoroughness. Tajik state organs, especially the Ministry of Agriculture and the Ministry of Fruits and Vegetables, must work for the full implementation of party policy. The primary reason for recurrent shortcomings in agricultural production is "weak supervision of the implementation of party and government resolutions..." This entails insufficient educational work among cadres and, sometimes, ignorance of local working conditions. Leadership training must be given to the young and to women. Party cadres need more political and specialized training. In some rayons, the turnover of cadres in charge of economic activities is too rapid, impeding specialists' work. The strengthening of party personnel, especially at the middle level, is a growing problem for which there is no answer. A full scale agitation/propaganda campaign is necessary in all agri-industrial complexes to mobilize all economic reserves for the overfulfillment of the second year of the plan. Newspapers, journals, radio, and television must all give clearer accounts of the activities of the party and government in resolving economic problems, exemplary work done in villages, etc. Party committees must direct Komsomol efforts towards leadership in animal husbandry, amassing stores of animal feed, corn cultivation, the education of machine operators, and the teaching of specialties to cadres in vocational and technical schools.

UZBEK SSR

Political Affairs

COMMUNISTS TOLD TO OBSERVE PARTY RULES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 20 March 1983 carries on page 1 a 1,200-word double-column lead editorial titled "The Communist Is the Party's Soldier." The editorial is critical of communists who are not guided by the Rules of the CPSU in their official, labor, and personal activities. When communists fail to act as the party's soldiers the healthy atmosphere of labor collectives is destroyed and indiscipline, disorganization, toadyism, and eyewash increase. Communists must be exacting in their observation of party rules and intolerant of individuals who violate party, state, and labor discipline, who do not observe Leninist norms of party life, who neglect their party obligations, and who use their party membership to create special privileges for themselves. The editorial cites the cases of two party officials in Urgench who were booted out for failure to fulfill their pledges and for tolerance toward those who violated party rules and ethical norms. It further states that partkoms must maintain the honor and prestige of the party and preserve the purity of its ranks. The editorial concludes that the Rules of the CPSU are binding on every communist: "No matter where or in what position communists work they are obligated to unceasingly observe this sacred law."

PARTY ORGANIZATIONS' CONTROL OVER EXECUTION OF DECISIONS CRITICIZED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 March 1983 carries on page 1 a 1,000-word lead editorial titled "Execution of the Decision." The editorial notes that party committees and party bureaus have reviewed how party and state directives are being carried out and have found that party organizations are not exercising adequate control toward this aspect of their duties. Many organizations are content to make reports and release information at their meetings instead of dealing with organizational problems and aiming for practical results. Reports from commissions responsible for controlling the activities of communists and administrators are rarely heard at these meetings. In addition, partorgs are apathetic toward the proposals and letters of workers, are insufficiently concerned with assuring that shop party organizations make directives operational, and generally do not follow a business-like approach to their work.

UZBEK WORKERS DECIDE TO STAY IN NONCHERNOZEM

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 25 March 1983 carries on page 2 a 700-word article by Gh. Shermuhamedov titled "Notes From the Nonchernozem Zone: [Part] I. Bravery." The introduction to this article explains that the author is an Uzbekfil'm Studio director who has visited the nonblack earth zone several times. Shermuhamedov tells of the work of Komsomol brigades from Uzbekistan in that area. The members of one detachment have sworn that "Until we turn the nonblack earth lands into a productive area, we won't go anywhere." Shermuhamedov cites the Trust head engineer Sergey Kudrya: "Most of the Komsomol youth have come to Novgorod Oblast to work here not just temporarily, but permanently [muqim]. Our kollektiv, consisting of representatives of 14 nationalities serving selflessly in the divisions of our trust, is presently working on construction of many buildings for housing, schools, kindergartens and storehouses for fruits and vegetables on the Tashkent State Farm. Beginning next year we will start work on building a stadium and a pool." The author provides some biographical data on members of a 40-person brigade from Andizhan. Gennadiy Toshmatov, detachment commissar, used to work in a motor transport factory in Sovetabad; his wife, Yevgeniya, is working as a bookkeeper in a village soviet; they have a son named Aleksey. Qobiljon Qobilov is a bricklayer. Tolib Qosimov, an installer from Leninsk, is married to Lidiya, who works in the same brigade as her husband as an automatic crane operator. They have two children, Vahojon and Viktoriya.

In 1982 there were 7 Komsomol weddings (in this detachment?); this year 12 young men and women will get married. The article emphasizes the improved living conditions enjoyed by those working in the region. It refers to athletic teams and the recently organized music ensemble "Tasvir." There have also been concerts by groups which have come on tour from Uzbekistan.

UZBEK BRIGADE PROLONGS STAY IN NONCHERNOZEM

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 24 March 1983 carries on page 2 a report by an unnamed TASS-UzTAG correspondent in Shimsk, Novgorod Oblast titled "Having a Part in the Renewal." The dispatch tells of Tursunpolat Rasulov who, as a Komsomol member, came several years ago from Uzbekistan to work in Shimsk settlement (Novgorod Oblast) in the special mechanized "Tashkent-1" column of the Uznovgorodvodstroy Trust. He has since been accepted into the Communist Party. The brigade with which Rasulov has worked has accomplished some very difficult tasks. "All members of the brigade are representatives of Uzbekistan. Although the period of their training was up quite a while ago, they are not thinking of leaving for their native regions: they have gotten married, received apartments, and most importantly, in their difficult pioneering work, they have come to understand true worker friendship which helps to be in the forefront of socialist competition."

PREPARATIONS FOR SPRING COTTON PLANTING STRESSED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 13 March 1983 carries on page 1 an 800-word lead editorial titled "The School of Advanced Experience." The editorial follows a decision of the CPUz Central Committee "Concerning measures for intensifying preparations for spring planting," which calls for bringing preparations to the level where planting can take place on every farm in the space of 5 or 6 days in order to make optimal use of the natural dampness of the soil. The editorial points out that failure to make adequate preparations usually results in harvest failures. In 1982, 301 collective and state farms failed to meet their plans and remained indebted to the state by 242,000 tons of cotton. Moreover, numerous farms had a yield factor below the republic average. Leaders of such farms tried to blame the weather and the water shortage for their shortcomings but the fault largely lay with their slackness in equipment repair, planting, and application of fertilizers.

SLOW GROWTH NOTED IN POTATO CULTIVATION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 15 March 1983 carries on page 3 a 900-word article by O. Tilovberdiyev titled "Problems in an Important Branch." The author reviews the development of and problems facing potato cultivation in the republic. During the 9th Five-Year Plan annual potato production was 102,800 tons, and during the 10th Five-Year Plan 141,200 tons. Following party decisions of November 1980 and September 1981 aimed at developing this branch production rose to 243,000 tons in 1981 and higher still in 1982. Farms in Kalinin, Orzhonikidze, Samarkand, Rishtan, and Yangikurgan Rayons became specialized in cotton cultivation. Unfortunately, the author continues, growth and productivity of this branch remain low. In 1982 Bukhara, Navoi, and Syrdarya Oblasts failed to meet their plans, and average yields were 40-45 tsentners per hectare or lower, compared to 190-200 tsentners elsewhere in the republic. Cultivation and harvesting are still largely done by hand, which increases costs. Construction of specialized sovkhozes, and particularly of warehouses, is way behind. A major problem is that the republic must still import 60,000-70,000 tons seed potatoes annually because measures to create a local seed base have not been implemented. This situation is worsened by the fact that 20-25 percent of these imported potatoes are lost due to rot or damage during shipping, loading, and storage. Tilovberdiyev also points out that numerous farms have failed to observe the directive of the 1981 decision calling for all cotton and rice farms to cultivate at least 15-20 hectares in potatoes.

APPEAL MADE FOR BIOLOGICAL PESTICIDES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 27 March 1983 carries on page 3 a 1,600-word article by Emin Usmonov titled "The Call of Duty." Usmonov addresses the problem of the environmental damage being caused by increasing use of chemical fertilizers, pesticides, and herbicides, and urges that new biological pesticides be used. He notes that because defoliants and other chemical preparations are spread from early spring to late fall a number of farmers have begun to fear going near fields. Also, in recent years, the application of excessive amounts of mineral fertilizers has led to cases of poisoning from eating contaminated vegetables and melons. Moreover, fish species are dying out in contaminated waters and medicinally beneficial plants are disappearing. Usmonov makes a plea for the use of a sulphuric powder named "suspenziya," an organic pesticide that was developed to replace a sulphur and lime mixture used to fight cotton spiders, and for the use of beneficial insects named "trikhogramma" and "khabrobrakon," which have proved to be effective against harmful pests. He expresses support for the establishment of a single republic center for research on biological plant protection, with a focus on "trikhogramma" and "khabrobrakon," and urges that obstacles to the production and dissemination of "suspenziya" be removed.

BREAD RESPECT CAMPAIGN MOUNTED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 20 March 1983 carries on page 2 a 400-word letter from S. Shermuhamedov, UzSSR minister of education, titled "Once More on Bread." The letter commends the newspaper for its timely and important campaign against the waste of bread, and pledges ministry support for the effort. Bread respect testimonials and articles revealing waste appeared in the newspaper throughout March.

GAS SUPPLY TO SYRDARYA GRES INCREASES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 25 March 1983 carries on page 2 a 100-word report from UzTAG titled "Thanks to the Shurtan Gas Workers." The report states that 1 billion cubic meters of gas has reached the Syrdarya GRES from the Shurtan Gas Complex since the beginning of 1983. This amount was reached 15 days earlier than in 1982 due to the expansion of capabilities at the complex and to the finishing of a 400-kilometer pipe leading from the Karshi Steppe to the GRES.

BRIEFS ON WATER WORKS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 2 March 1983 carries on page 2 a 100-word item titled "New Pump Station." The item states that with the recent launching of a pump station on "Kommuna" Kolkhoz in Pakhtaabad Rayon there are now 150 pump stations in Andizhan Oblast.

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 4 March 1983 carries on page 1 a 300-word report from UzTAG titled "Work, Amudarya!" The report states that beginning 1 March the turbines, equipment, and control system of the complex at Tuyamuyin GES underwent a 72-hour test in preparation for the launching of the first power block. The block is the first of six, each with 25,000 kilowatts power, which will be joined to the Central Asian Mutually Interrelated Power System by the end of the 11th Five-Year Plan.

COTTON, ANIMAL HUSBANDRY IMPROVEMENTS TARGETED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 5 March 1983 carries on page 1 a 1,700-word double-column lead editorial titled "Fulfilling Obligations Is Our Sacred Duty." The editorial reviews 1983 socialist obligations and keys on specific problems and goals in cotton cultivation and animal husbandry. The major goals in cotton cultivation are to increase the cultivation of long-staple variety cotton, raise productiveness through systematic application of local and mineral fertilizers, and expand the use of harvesting machines. In 1982 only 10-16 percent of the crop was machine harvested in some rayons of Bukhara, Kashkadarya, and Samarkand Oblasts, a situation that must be improved. In the area of animal husbandry more serious attention must be devoted to production of feed grains. Rotation of crops is vital to this goal, but unfortunately on many farms in Karakalpakistan, Kashkadarya, Syrdarya, and Khorezm Oblasts, this method is being utilized at only 25-40 percent of its potential. Animal husbandry is being put on an industrial footing. There are now 180 livestock, pig raising, and dairy complexes, and 48 poultry factories in the republic. A machine building industry for animal husbandry is coming into existence. The means for developing production is coming into existence. The means for developing production have been put into the hands of the republic's 159 agroindustrial unions, and a commission for dealing with the problems of the agroindustrial complex has been formed under the Presidium of the UzSSR Council of Ministers.

TYUMEN OIL SHIPPED TO FERGANA

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 17 March 1983 carries on page 1 a 200-word report from UzTAG titled "Tyumen Oil in Fergana." The report states that oil is being shipped by train to the "Fergananefteorgsintez" Union from the Surgut-Omsk-Pavlodar-Chimkent oil pipe in Southern Kazakhstan. Train shipments to the refinery take 2 days. The oil not only makes it possible to bring to full capabilities the previously idle refinery, but also provides a constant supply of oil for agricultural machinery in Central Asia.

PCC FINDS FUEL, ENERGY WASTE AT GOSKOMSEL'KHOZTEKHNIKA

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 29 March 1983 carries on page 2 a 500-word article under the "At the UzSSR People's Control Committee" rubric titled "The Result of Irresponsibility." The committee reports that the UzSSR State Committee for the Supply of Production Equipment for Agriculture and its divisions have not been carrying out directives on fuel and energy conservation. Investigation revealed that in 1982 seven oblast administrations failed to meet assignments on gasoline economizing. The Goskom's Main Administration for Repairs and its repair plants were also found to be wasting gasoline, diesel fuel, and oil products, as well as electric energy. Following its investigation the People's Control Committee took appropriate steps with respect to S. Lapushner, chief of the Main Administration of Repairs, and V. Podgayko, chief of the Main Administration of Repair Plants, for allowing waste of fuel and energy resources.

BUKHARA CANAL BEING RECONSTRUCTED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 March 1983 carries on page 2 a 900-word article by newspaper special correspondents U. Yusupov and H. Qodirov titled "Silver Belt." The correspondents review the capabilities of the Amu-Bukhara Canal and discuss the goals of reconstruction work.

The 233-kilometer long canal has made it possible to improve the irrigation of 73,000 hectares and to reclaim 20,000 hectares of land in the Urtachul, Malikchul, Kutchi, Dzhilvan, and Varakhsha massifs of Bukhara and Navoi Oblasts. The canal must now be reconstructed in order to reclaim land in the Karavulbazar massif, which will require expansion of its present flow of 270 cubic meters water per second to 315 cubic meters, and building an additional 33-kilometer long section. The "Amubukharakanalstroy" Administration has been charged with the task of completing reconstruction work by the time spring has set in. The correspondents note that the administration has been lagging in its work.

Social and Cultural Affairs

KOMSOMOL PAPER CALLS FOR ATHEISTIC PROPAGANDA, NEW RITES

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 22 March 1983 carries on page 1 a 700-word lead article titled "For Militant Atheism." The tone is set early in the article with a citation of Andropov's November 1982 call for improving the effectiveness of ideological and political training activity. The article also quotes a statement by Rashidov which says that bold activity in introducing new customs and ceremonies will help to raise the population's cultural level, and Rashidov's words that "It is necessary for us to widely use for our own benefit the most progressive popular traditions, introduce into them a new socialist content, and improve by all measures the atheistic upbringing of the population."

Although, the article notes, work is being carried out in a broad way to introduce new traditions in the republic, "we are struggling against reactionary, particularly religious, traditions and ways which are alien to the life of Soviet youth, to our ideology, and to our population." Propaganda is needed "because some young people understand the religious convictions of old believers as precepts for themselves, and attempt to blindly carry out religious traditions and ceremonies." The article stresses that scientific-atheistic propaganda plays an important role in ideological work. It also emphasizes the importance of new holidays such as May Day, Lenin's birthday, Armed Forces Day, International Women's Day, Victory Day and the anniversary of the October Revolution. These holidays play an important role in binding and bringing closer together the various nationalities and peoples who celebrate them, and in bringing up the younger generation in the feeling of nationwide [umummilliy] pride. Likewise, celebrations and traditions which concern certain trades, such as the Harvest Holiday, Hammer and Sickle and Navroz bayrami [Spring holiday] have found a place in our life. Personal celebrations, such as those commemorating birth registration and marriage, Komsomol celebrations and receipt of passport are widely practiced in every oblast of the republic. "Each of these traditions possesses its own content, order of celebration and customs, and preparation and celebration of them is helping to inculcate communist morality in our youth, and is acquiring great significance in the struggle against old survivals and reactionary religious traditions."

The article claims that "in recent years an integral coming together has been taking place of national and international traditions. By organically joining together and mutually enriching each other, they are becoming a powerful force in the struggle against religious traditions and customs." The article concludes by calling for further spread of new customs and ceremonies as a way to fight religious survivals.

FORMS OF ATHEISTIC PROPAGANDA OVER RECENT YEARS IN UzSSR OUTLINED

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 22 March 1983 carries on page 2 a 1,100-word article by M. Jabborova (senior methodologist of the Republic House of Scientific Atheism) titled "Fruitfulness of Atheistic Training." The article outlines some of the successes of atheistic propaganda in Uzbekistan over recent years. Among other things, it refers to the preparation of atheistic cadre in the local areas, the improvement in quality and quantity of lectures and discussions, the publication of many books and other materials on atheism, and the improvement of activities of atheistic schools and people's universities. There are filials of the Republic House of Scientific Atheism in every oblast of the republic. The themes of the lectures conducted by these organizations have included atheistic theory and history, Soviet Islamic studies aimed at revealing the modernist activities of present day Moslems, and propaganda of new customs. The number of conferences and seminars held concerning problems of scientific atheism at the oblast, city and rayon levels has grown in recent years. One seminar, jointly sponsored by the Tashkent City Education Department, the Institute for Raising Teacher Qualifications, and the city "Knowledge" Society was held in February. Among the lectures given at that seminar was one by B. Ibrohimov (city representative of the Religious Affairs Council of the USSR Council of Ministers) "On Activities of Official and Unofficial Religious Organizations and Societies of the City of Tashkent." There were 300 participants in that Tashkent seminar.

EVEN TODAY'S EDUCATED YOUTH REQUIRE ATHEISTIC TRAINING

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 22 March 1983 carries on page 2 an 800-word article by Sh. Botirov (candidate of Philosophical Sciences, Docent) titled "The Spiritual Face of Youth." The article emphasizes the need for atheistic training today, even though on the whole young people are well educated. Botirov claims that rapid changes in industry, agriculture, science and technology, culture, and people's spiritual world bring rapid changes in knowledge and thinking. This demands "a struggle against partially existing vestiges of old ways, religious concepts, reactionary remnants, and all manifestations of bourgeois ideology." "The education[al level] of today's youth is high, and its spiritual world is rich, but despite this it is necessary to follow the life of youth during many years and to conduct atheistic work among them. According to the conclusions of sociological research on the question of atheism and religion, it is necessary to say that religious survivals, vestiges of old ways and incorrect perceptions are still held in the psyche and consciousness of certain members of today's youth. The reason is the narrowness of their level of knowledge and their insufficient appreciation on the socialist way of life. The defenders of religion and modernists are very skillfully making use of this. The religious believers and their defenders in the local areas are adapting religious convictions and old style customs to young people's taste. Utilizing the experience of Islam over many centuries, they are attempting to make religious customs, learning, and especially religious morality attractive in the eyes of workers [mehnatkashlar], and in particular to show that these phenomena can incline people, especially young people, toward Islam.

"No old concept, in particular no religious survival connected with people's consciousness, their world view, conviction or customs will disappear on its own or give up its place easily. Therefore, in order to bring young people up in the spirit of scientific materialism, it is necessary to struggle against old survivals, religious remnants, and scientifically unfounded doctrines and concepts, and to expose them from a Marxist-Leninist perspective with simple, plain, comprehensible and real-life examples."

REGIONAL SEMINAR ON ATHEISTIC UPBRINGING IN ANDIZHAN

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 24 March 1983 carries on page 1 a 400-word report titled "Seminar Meeting of Organizers of Atheistic Upbringing." Yesterday a zonal seminar-meeting of organizers of atheistic upbringing of youth began work in Andizhan. Komsomol workers, lecturers and workers of youth newspapers from Azerbaijan, Kirghizia, Tajikistan, Turkmenistan and Uzbekistan are participating. The seminar-meeting, organized by the Komsomol Central Committee, will generalize experience gathered by Komsomol organizations in the atheistic upbringing of youth.

The first plenary meeting opened with an introduction by the Deputy Chief of Komsomol Central Committee Propaganda and Agitation Department V. A. Mal'yutin. Andizhan Oblast Party Committee Secretary M. Kh. Muhitdinov spoke on "The CPSU 26th Congress on One of the Directions of the Ideological Work of the Atheistic Upbringing of Workers." Mal'yutin gave a report "The Komsomol 19th Congress on the Tasks of the Komsomol Committee in Further Strengthening the Atheistic Upbringing of Youth." Director of Scientific Atheism Institute of the Academy of Social Sciences under the CPSU Central Committee V. A. Garadzha gave a report on "Religion and the Current Ideological Struggle," and the director of the Interrepublic Tashkent filial of the same institute, A. Q. Qochqorov, delivered a report "On Some Questions of Organizing Atheistic Work Among Young People." Also participating in the meeting were sector chief of the Uzbekistan Communist Party Central Committee D. N. Ghaniyev, Deputy Chairman of the Board of the All-Union "Knowledge" Society Yu. K. Fizhevskiy, department chairman of the Scientific Atheism Institute of the Academy of Social Sciences under the CPSU Central Committee K. M. Kerimov, and Uzbekistan Komsomol Central Committee Secretary O. J. Ismoilov. After lunch the participants broke into groups to visit various areas of Andizhan Oblast.

ATHEIST CONFERENCE IN ANDIZHAN CONTINUES

[Text] Tashkent YOSH LENINCHI in Uzbek 25 March 1983 page 1 "Atheistic Upbringing--An Important Matter," Andizhan (Reported by our special correspondent). The zonal seminar-meeting of organizers of atheistic upbringing for youth taking place here continued its work yesterday. The participants of the meeting heard the following reports: Deputy Chief of the Board of the

All-Union "Knowledge" Society Yu. K. Fizhevskiy on "The Propaganda of Scientific-Atheist Learning Among Youth"; Department Chief of the Religious Affairs Council under the USSR Council of Ministers A. A. Nurullayev on "Some Questions of the Present State of Religion in the USSR"; and Senior Research Associate of the Scientific Atheism Institute of the Academy of Social Sciences under the CPSU Central Committee K. Kerimov on "Social-Political Reasons for the International Scale Activization of Islam in the Countries of the Near and Middle East."

Today the participants of the seminar-meeting will take part in the discussion on the topic "Young People and Religion" at the Andizhan Cotton-Growing Institute and in the evening at the Yoshlik Palace of Culture.

The seminar-meeting will sum up its work today.

CLUB ATHEIST WORK INADEQUATE

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 24 March 1983 carries on page 2 a report by I. Nurinov (teacher of Tashkent State Institute of Culture) titled "The Club as a Center for Propaganda." The article focuses on atheist propaganda carried out by clubs. It notes that this activity in the republic leaves much to be desired. "In some rayons there are all conveniences for it, but the various methods of atheistic propaganda are not being utilized." Often clubs limit their work in this area to organizing evening sessions on general subjects. Examples are cited of club buildings which are used only for films; other examples are given of clubs which fail to organize atheistic activities for women's groups. Nurinov discusses various forms of atheistic propaganda; he notes that in individual discussions with believers to help them turn away from religion, the person conducting the discussion should approach sincerely, and not rudely those things which he finds interest the religious person.

CASE OF ILLEGAL RELIGIOUS HEALING

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 25 March 1983 page 1 carries a 200-word report by D. Borshov, second secretary of Nebit-Dag City Committee of Turkmenistan Komsomol, titled "A Word From a Seminar-Meeting Participant." The comments by the participant from Turkmenistan at the Andizhan zonal seminar-meeting on atheistic upbringing include the following: "The Komsomol organizations are carrying out special work among young believers. For example, a bulldozer operator named Arbadov of the Borsa-Kelmas Construction Administration was involved in illegal healing of sick people, and he freightened his own children into believing in God. An end was quickly put to his illegal activity."

ATHEISTIC UPBRINGING CONFERENCE COMPLETES WORK

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 26 March 1983 carries on page 1 a 200-word article "Seminar Meeting Sums Up." The article reports on the end of the meeting of organizers of atheistic upbringing held in Andizhan. The reports given the last day of the meeting were as follows: Secretary of the Uzbekistan Komsomol Central Committee O. J. Ismoilov "From the Experience of Work by Uzbekistan Komsomol Committees in the Field of Atheistic Upbringing of Youth"; Chief of the Cultural-Enlightenment Activities Administration of the UzSSR Ministry of Culture R. H. Khojayev on "Some Questions of Introducing New Customs and Ceremonies"; and Chief of the Atheism Kafedra of Kiev State University Yu. A. Kalinin "Precise Sociological Research of Atheistic Upbringing." Representatives of various republics also spoke about their respective work in order to share experience. The findings of the seminar-meeting were summed up by Chief of the Department of Propaganda and Agitation of the Komsomol Central Committee V. A. Malyutin.

SURKHANDARYA OBKOM SECRETARY ON ATHEISM CAMPAIGN

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 March 1983 carries on page 2 a 1,500-word article by Kh. Kholiyorov, secretary of the Surkhandarya Obkom, titled "Militant Atheism." Kholiyorov describes steps being taken by the oblast party committee to strengthen its scientific atheism indoctrination. In 1981 zonal seminars on scientific atheism conducted by workers of the Propagit Department of the CPUz Central Committee played a crucial role in enlivening the work of oblast lecturers. Today there are more than 300 atheism lecturers in the oblast nearly all of whom are deeply versed in Marxist-Leninist doctrines on religion and atheism and in methods of atheistic indoctrination. The obkom also offers a special training course and has formed a special division within the Marxist-Leninist University to train new cadres. The oblast filial of the republic Scientific Atheism House has now begun to play an important role in coordinating atheism propaganda. Its workers have studied the history of sites considered "holy" and compiled historical materials and maps of them which serve as a handbook for atheism lecturers. It has been found that when the true history of such "holy" places is explained the number of pilgrims sharply declines. Steps have also been taken to improve atheistic and scientific training in schools, where there are now 520 atheism corners and 500 young atheists circles. Broader coverage of atheistic themes is being provided by the press, radio, and television. Sections for the propagation of atheistic awareness have been formed under all city and rayon Znaniye organizations. Kholiyorov cites several recent episodes connected with religion. Mullah Muhammadi of a kolkhoz in Denau Rayon was exposed in the press as a fake. Rahmatulla Torayev of a kolkhoz in Saryasiya Rayon admitted to an atheism lecturer that he had falsely proclaimed himself a mullah. Such cases are evidence of the effectiveness of atheism propaganda. Kholiyorov also comments on people's customs and ceremonies that became entwined with religious notions such as the Navroz Bayrami ["Spring Festival"]. He notes that in recent years, thanks in large part to the work of women's soviets, this festival has been rescued from its religious trappings and its popular essence restored. Kholiyorov concludes with the remark that steps must be taken to similarly rescue weddings and other ceremonies from the past.

LOCAL ATHEISM LECTURES NOTED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 March 1983 carries on page 4 a 100-word item by R. Jumaniyozova titled "Important Theme." The item states that special attention is being devoted to increasing atheistic indoctrination in Khodzhaabad Rayon of Andizhan Oblast. It cites the example of a recent evening held in Bulakbashi Village at which Shukur Valiyev spoke on "Women and Religion," and several others spoke on measures pertaining to the introduction of new customs, traditions, and ceremonies.

SCHOOL'S ROLE IN ATHEISTIC TRAINING

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 3 March 1983 carries on page 4 a 400-word article by D. Yusupova and H. Mamajonov (teachers of School No 40, Chartak city of Namangan Oblast). The authors of the article note that although the social roots for religion no longer exist in the USSR, it is still necessary to carry out anti-religious work. School lessons on literature, history, social science, physics, chemistry and biology possess great potential in atheistic training. A teachers' kollektiv at the authors' school determines which families are religious and conducts individual work with them. The school has an atheistic corner with various exhibits.

ATHEISTIC TRAINING IN NAMANGAN OBLAST

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 1 March 1983 carries on page 4 a 200-word article by T. Fozilov titled "Effectiveness of Atheistic Training Increasing." The article tells of efforts at School No 25 in Naryn Rayon (Namangan Oblast) to improve the effectiveness of atheistic training. The school's "Young Atheist" circle, led by a history teacher, has 75 members. It has held lectures and discussions on the origin of Islam and its harmful consequences. The school has an atheist hall with various exhibits and a school wall newspaper which is issued regularly.

KOLKHOZ CLUB USED FOR NEW STYLE WEDDINGS

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 12 March 1983 carries on page 4 a 600-word article by Akramjon Vahobov (Moskva Rayon) titled "Everyone Full of Hope." The article reports on a wedding conducted at the recently constructed very ornate club building of Kolkhoz 60 Years of October. The new kolkhoz club has room for 600 people. The groom described in the article had lost his parents at a young age, so the kolkhoz took over the role of his parents in planning the wedding celebration. The celebration included a native song and dance ensemble. The young couple was promised a honeymoon trip to Bulgaria. The author of the article calls for more modern style weddings like this one to be held.

RUSSIAN WEEK HELD AT SCHOOL

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 31 March 1983 carries on page 4 a 200-word article by I. Rahmatullayeva (pupil of Tashkent School No 224) titled "Week Which Interested Everyone." The article reports on "Russian Language Week" recently organized by Tashkent School No 224's Russian Language Circle and Komsomol organization activists. For a whole week pupils of all classes in the school spoke to each other only in Russian. Every day there were special discussions held in Pioneer detachments and Komsomol groups.

"The week helped us more thoroughly master the Russian language, broaden our knowledge, and further increase our love for this great language of wisdom."

KOMSOMOL PAPER COMMEMORATES 70TH BIRTHDAY OF PURGED UZBEK POET

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 11 March 1983 carries on page 4 a 700-word article by Otkir Rashid (candidate of Philological Sciences) titled "Master of the Sharp Pen." The article commemorates the 70th anniversary of the birth of Uzbek poet Usman Nasir, who disappeared during the Purges. Rashid notes that already in the second half of the 1920's Nasir became a prominent Soviet Uzbek poet. The latest work mentioned in the article is one by Nasir written in 1935.

UZBEK ORTHOGRAPHY PROPOSALS CRITICIZED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 18 March 1983 pages 4-5 and 25 March 1983 pages 4-5 carry a 5,700-word article by Dr of Philology Azim Hojiyev titled "Concerning the Discussion of the Draft Plan of the Basic Principles of Uzbek Orthography." In a brief preface, Matyoqub Qoshjonov, director of the Pushkin Institute of Language and Literature of the UzSSR Academy of Sciences, explains that a group of institute scholars published a draft of "The Basic Principles of Uzbek Orthography and Punctuation" in OQITUVCHILAR GAZETASI 8 August 1981 for discussion. Nearly 50 articles were published on the draft in that newspaper and in OZBEKISTON ADABIYOTI VA SAN"ATI up to July 1982. Authors of the draft took into consideration some of those proposals in revising the draft. However, there were also a number of opinions that were not acceptable. These are dealt with by Azim Hojiyev.

Hojiyev begins with the statement that articles which concerned letters of the alphabet were irrelevant to the question of orthography and punctuation, and were thus not considered in the revision. These included proposals to correct letters that stood for two sounds, such as ж which is pronounced j in Uzbek words and zh in Russian words, or two letters that stand for one sound, such as нг for ŋ . Hojiyev states that too many scholars ignored the simple criterion that proposals had to do with spelling. He then turns to an examination of incorrect proposals that were relevant to spelling questions and devotes long sections to the use of hyphens and the spelling of compound words. In a final section, Hojiyev heavily criticizes the article of Nasim Mamatov titled "Once More on the Spelling of Compound Words" that appeared in OZBEKISTON ADABIYOTI VA SAN"ATI 30 July 1982. Not only did this article amount to a "personal draft plan" on this question--one published without the authority of any establishment or organization--but it was also fundamentally in error. The remainder of this article constitutes a detailed criticism of Mamatov's proposals.

EDITOR STRESSES IMPORTANCE OF RUSSIAN LANGUAGE

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 4 March 1983 carries on page 3 an 800-word article by Maqsud Qoriyev, chief editor of SOVET OZBEKISTONI, titled "Russian Language Teacher." Qoriyev bases this piece on reminiscences of his first Russian language teacher, Mamed Umarov, 43 years ago. He recalls that his year of instruction from Umarov was so influential that a life-long attraction for Russian literature and language was awakened in him. Although Russian language teaching was weak after the war, today Uzbek children have the opportunity to learn their native language well, and can also learn Russian in Russian schools. Qoriyev feels that Russian language teaching should be offered in all Uzbek schools, especially those in rural areas. Russian serves as the medium through which Uzbeks gain access to the works of great writers like Shakespeare, Byron, Dreiser, and Mark Twain. At the same time, knowing Russian expands the potential of writers "for preserving the purity of our national language, for creatively using the progressive traditions and forms of classical and modern Russian literature, for creating complex and fullbodied characters, and for profoundly reflecting on the life, work, thoughts, and way of life of our contemporaries." Qoriyev concludes with the statement: "For this all nationalities, peoples, and subnationalities living and working in the multi-national country of the Soviets are eternally grateful to the great Communist Party and its wise, Leninist nationality policy."

RUSSIAN TERMED 'ANCHOR' OF UZBEK LITERATURE

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 25 March 1983 carries on page 3 a 700-word article by Izzat Sulton titled "Miracle-working Anchor." This testimonial to the importance of Russian literature and language ends with the statement: "The ideological and esthetic experience of the vast Russian literature is our anchor. This anchor has two points. One is humanism, the other is artistic skill. I believe in the miracle-working properties of this anchor, because the creative achievements of hundreds of writers who have known how to use this anchor correctly stand before my eyes."

RUSSIAN CALLED VITAL TO UZBEK POETRY

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 25 March 1983 carries on page 3 a 600-word article by Jumaniyoz Jabborov titled "My Master Language." This testimonial to the importance of Russian literature and language includes the following statements: "There is no doubt that all of the great accomplishments of modern Uzbek literature and culture have been achieved in cooperation with the great Russian language." "The present high level of development of Uzbek poetry would be impossible to imagine without the enormous and vital influence of Russian poetry."

RUSSIAN LANGUAGE INSTRUCTION IN SYR-DARYA OBLAST

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 2 March 1983 carries on page 3 a 700-word article by A. Qolboyev (chief of Education Department, Voroshilov Rayon, Syr-Darya Oblast). This is a report on Russian language instruction in native language schools of Qolboyev's rayon. The author claims that recent years have witnessed improvement in Russian language teaching and learning in the schools and kindergartens of the rayon. Now Russian language is studied in 515 native [milliy] classes. There are 115 multi-member Russian language teacher detachments in the rayon. There are now seven schools in the rayon which have classes with enriched Russian language study. Last year the rayon held a competition for the best-equipped Russian language laboratory. The methodological laboratory of the rayon department of people's education is undertaking much work to study the most advanced experience of Russian language teachers, and to enrich and disseminate it. For example, the Syr-Darya State Pedagogical Institute imeni Gh. Ghulom held a scientific-theoretical conference called "My Second Mother Tongue."

SAMARKAND SCHOOLS FAIL TO USE AUDIO-VISUAL MATERIALS

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 2 March 1983 carries on page 3 a 900-word article by S. Muqimov (senior methodologist of Republic Educational-Methodology Cabinet of UzSSR Ministry of Education) and I. Uzbekova (YOSH LENINCHI correspondent). The article, "Let's Put an End to Apathy," printed under the heading "We Sound the Alarm" exposes the under-use and non-use of films in the schools of Samarkand.

RUSSIAN LANGUAGE STUDY IN BUKHARA

[Text] Tashkent OQITUVCHILAR GAZETASI in Uzbek 23 March 1983 page 2 (UzTAG Correspondent) "Studying the Russian Language" A literary quiz on the work of A. M. Gorkiy was held at the School imeni Il'ich of Romitan Rayon, Bukhara Oblast. The quiz [viktorina] has become a form for enriched study of Russian language and literature. This [latest] practice was held on one of the traditional Russian language days at the school--a Tuesday.

The regular broadcasts by the school radio center, thematic literary-artistic evenings, and correspondence with others of the same age in other areas of the country all help the study of the Russian language. The pupils in the upper classes organized their own "Small Tret'yakov Gallery." In this gallery are gathered reproductions of works by famous Russian painters. Acquaintance with their creative work also helps in perfecting the school pupils' knowledge.

IMPORTANCE OF KNOWING RUSSIAN STRESSED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 4 March 1983 No 10 carries on page 3 a 700-word article by Maqsud Qariyev titled "My Russian Teacher." The Uzbek writer recalls his days as a school pupil studying the Russian language and his Russian language teacher. He comments that "The lesson of experience of my many years [indicates] that due to the sluggishness or perhaps lack of thorough approach of some of my teachers when I was in school, I didn't pay enough attention to the Russian language. Therefore I sometimes have a hard time and cannot fully grasp all the qualities of this colorful, delicate and rich language. As for my children, along with a good knowledge of the Uzbek language [used] in life and at home, some of them study in Russian schools and are learning perfect Russian. This certainly sets a good example. But it is necessary to place even greater stress on the work of teaching Russian in all Uzbek schools, especially rural schools.

"When I think about it, I realize that the Russian language opened up the invaluable treasure of world literature to us writers, and thanks to this language we were enabled to read in our own native language the works of

Shakespeare and Byron, Maupassant and Dumas, Dreiser and Mark Twain, Stevenson and Heine, and other great authors.

"Good instruction, knowledge and ability to write freely in the Russian language opens up opportunities to preserve the purity of our own national language, to utilize creatively the most advanced traditions and forms of narration of classical and contemporary Russian literature, to create full-blooded complex images, and to discuss in depth the life, work ideas and everyday living of our contemporaries."

RUSSIAN LANGUAGE GAVE POET PRIDE IN HIS PEOPLE

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 4 March 1983 No 10 carries on page 3 a 150-word article by Erkin Vohidov titled "Ode to Freedom." In the series of articles by Uzbek writers about the role of Russian language and literature in their lives, one poet has the following to say: "Russian literature also taught me the feeling of pride. From great Russian literature I learned not merely to be openly proud of my own people, its glory, my forefathers and my present and future, but from Russian literature I also learned to care for and protect them."

UZBEK LITERATURE COUNCIL OF USSR WRITERS' UNION LOOKS AT CRIMEAN TATAR POETRY

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 11 March 1983, No 11 carries on page 1 a 500-word article by Cherkez-Ali titled "On the Eve of Spring." The article reports on a meeting of the Uzbek Literature Council under the USSR Writers' Union which was held 20 February under the leadership of Anatoliy Sofronov. The meeting discussed the activity in the area of Tatar poetry last year, and its present and future. "The Tatar poet Zokir Qurtnezir gave information about our literature. The works of four poets were analyzed in the discussion. The following expressed their thoughts and opinions about the poetic works at the meeting: renowned literary scholar Professor L. Klimovich; Candidate of Philological Sciences V. Sakharov; critics D. Moldavskiy and T. Davidova; poets and translators V. Vitkovich, R. Kazakova, V. Ghaniyev and D. Kholendro. Tatar authors writing in their native language but living in Moscow Ervin Umerov and Emil' Amitov also spoke." Cherkez-Ali reports some of Klimovich's remarks: "'There is an independent literature of this people written on the pages of a history going far back, but which has not been sufficiently analyzed. This literature, with its development, direction and culture side-by-side with the literatures of other Turkic peoples, at the same time is developing in its own particular style. Today's youth are also using this style and continuing these good traditions, and this is a very happy situation.' Other speakers and writers speaking at the gathering also noted this. At the same time, along with the successes achieved by Tatar literature, such shortcomings which had occurred--in particular shallowness of thought, repetitiveness and [excessive] closeness to each other--were also indicated in a friendly way."

Cherkez-Ali states that Tatar writers returned from the meeting extremely inspired. He thanks in the name of all Tatar writers the first secretaries of the USSR and Uzbekistan Writers' Unions, G. Markov and S. Azimov respectively, for their efforts in organizing this gathering which was very important for Tatar literature.

UZBEK MASTER CRAFTSMAN, RUSSIAN ARCHITECT COMPARED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 11 March 1983, No 11 carries on page 7 a 400-word article by Polat Zohidov titled "Master Toshpolat Arslonqulov." The article is accompanied by a photograph of the Russian architect Shchusev (who, among other objects, designed the Lenin mausoleum) and Uzbek ganch (carving) master Toshpolat Arslonqulov. Zohidov finds parallels in the two men's respective careers. In concluding his article, Zohidov calls for reissuing a book of photographs of Arslonqulov's works and naming one of Tashkent's new streets after him.

NEW PLAY ABOUT BABUR NEEDS MORE WORK

Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek No 11, 11 Mar 83 p 7

[Text] Haydar Muhammadi's drama "Babir" (Umrning bir dovoni [One of Life's Passes]) has been discussed by the repertoire Editorial Board of the Uzbekistan SSR Ministry of Culture Theatre Administration in cooperation with the Uzbekistan SSR Writers' Union and republic Theatre Society.

The life of Babir around Termez and in Kabul in 1503-1505 are taken as the basis for this work. Maksim Karimov, Toshpolat Tursunov, Sotimkhon Inomkhojayev, Yazdon Khudoqulov, Ne'mat Dostkhojayev, Sharofiddin Sharipov, Tora Mirza and others spoke about the play's achievements and shortcomings.

According to the decision of the Repertoire Editorial Board, it was found that it is necessary to continue work on this piece.

RUSSIAN TRANSLATIONS OF YOUNG CENTRAL ASIAN POETS PUBLISHED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 11 March 1983, No 11 carries on page 7 a 200-word notice titled "Young Poets of Central Asia." It announces the publication by Moscow's Molodaya Gvardiya Publishers of 'Molodye poety Sredney Azii' (Young Poets of Central Asia). The book, which consists of Russian translations of works by poets from Kazakhstan, Kirghizia, Tajikistan, Turkmenistan and Uzbekistan, follows in a series of books of analogous work by poets from other parts of the USSR.

CARTOON POKES FUN AT FATHERS WHO SKIP ALIMONY PAYMENTS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 11 March 1983, No 11 page 8. A cartoon by Rashid Abdulla shows a woman with a baby in one arm and waving a paper headed "Alimony" in the other. Escaping on a horse with wings is a man [presumably the first woman's ex-husband] and another woman. The man and second woman are apparently Uzbeks as indicated by the doppi on the man's head and the make-up on the woman's eyebrows.

TEACHERS INSTITUTE HOLDS CONFERENCE ON RASHIDOV'S WORK

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 18 March 1983, No 12 carries on page 1 a 300-word article by H. Ibrohimov titled "'Dil Amri' Discussed by Readers." Ibrohimov tells of a readers' conference at Tashkent State Pedagogical Institute imeni Nizomiy on the work 'Dil amri' (Command of the heart) by Sh. Rashidov. Ibrohimov refers to Rashidov as a "famous author" and claims Rashidov is the first to create a truly [tom ma"nodagi] Russian character in Uzbek literature.

SATIRICAL PIECE BY IRANIAN AUTHOR PUBLISHED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 18 March 1983, No 12 carries a 1,300-word translation of Khusrav Shohoniy's (Iranian author's) satirical piece titled "The Storm."

NURSERY OPERATING IN NAME ONLY

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 26 March 1983 carries on page 3 a 900-word article by Ibrohim Toshev and Otakhoja Abdakimov (correspondents of Pskentskiy Rayon newspaper MEHNAT BAYROGHI). The article is an expose under the rubric "We Sound the Alarm." It tells of unsatisfactory conditions at a sovkhoz nursery school. The nursery has places for 100 children; before the New Year there were 75 children in attendance. The day the reporters from the newspaper came there were only eight. These turned out to be children of people working there. The food was kept in unsanitary conditions; bags of grain were infested with mice. The administration claimed there was no coal to heat the building, and had given this excuse to the parents of children who might attend. In fact, there was plenty of it lying around. The school was still receiving shipments of food for 75 children even though few actually attended. In conclusion, the reporters ask: "Are the sovkhoz leadership or responsible comrades of the rayon Department of People's Education aware of the present activities of this nursery? Or don't they bother to take a look at this 'rest shelter' on the very edge of the rayon where today the teachers are thoroughly relaxing?"

PARTY-MINDEDNESS DEMANDED OF LITERARY CRITICS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 18 March 1983 carries on page 1 a 1,100-word lead editorial titled "Criticism and the Literary Process." The editorial discusses the role of literary criticism in improving the ideological and artistic level of Uzbek literature. The UzSSR Writers' Union has discussed over the last 2 months various Uzbek works that appeared in 1982. The conclusion has been reached that fundamental aspects of the literary process are integrally related to aspects of the development of the country as a whole. Thus, literature must be approached from the viewpoint of All-Union demands [repeats for emphasis]. No writer should proceed without such demands in mind because the work of a writer or artist of one nationality is read or viewed from Kamchatka to Klaipeda. The best works of senior Uzbek writers--Komil Yashin, Sharaf Rashidov, Uyghun, Nazir Safarov, Zulfiya, Sarvar Azimov--should be taken as examples of this level of exactingness. One of the most pressing demands of today is to assure that young writers and artists set lofty goals for themselves and to set the correct example for them. In order to inspire young creative people toward such goals literary criticism must renew its analytical weapons and reinforce its Marxist-Leninist theoretical base. This cannot be accomplished unless literary critics always adopt a party-minded position toward literature and art. Literary critics must have a correct relationship toward manifestations of petty themes, a lack of ideals disguised in various ways, meaningless formalism, a complete detachment from problems that affect the world, and works that reflect extremely petty interests. When truly party-minded standards of literary criticism are neglected cases of excessive praise of one work or another occur. The literary critic can only perform his function honorably when he deals with problems of the literary process and engages in healthy debates and discussions in journals and newspapers.

WRITERS UNION MEETING DISCUSSES PAST, FUTURE ACTIVITIES

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 18 March 1983 carries on page 1 a 900-word report titled "On the Basis of Demands of the Age." The report states that the secretariat of the UzSSR Writers Union met on 17 March to review 1982 activities and discuss the work of 1983. Sarvar Azimov, head of the Writers Union, recalled successful meetings and activities, and stressed the helpfulness of a CPSU Central Committee resolution on literary journals and of a CPUz Central Committee resolution on the Uzbek theater. Azimov noted that there remain a number of problems that must be resolved. There are still too few works being written that fully depict contemporaries, that demonstrate the leadership and organizational role of the party, that portray the heroic labor of industrial and agricultural workers, and that indoctrinate the Soviet people in a spirit of loyalty to communist ideals, patriotism, and socialist internationalism. Also, one of the most important tasks of writers is to devote their works to the struggle against imperialist and reactionary forces. Azimov also points out that there are too many works devoid of artistic and ideological value, particularly those of young writers.

CONSUMER SERVICES DEPUTY MINISTER INTERVIEWED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 20 March 1983 carries on page 2 a 700-word newspaper correspondent interview with Nazikha Jumayeva, UzSSR deputy minister of Consumer Services, titled "Standard of Prosperity." Asked what measures have been taken in 1981-1982 to improve consumer services Jumayeva replies that 39 million rubles in capital investments were spent on 150 large projects, including 23 consumer houses, 3 beauty salons, 16 radio and television repair shops, and 5 drycleaning enterprises. Special attention was paid to developing consumer services in rural areas where there are now 601 consumer houses and 1,303 general receiving points. Asked what measures will be taken to strengthen the ministry's material base Jumayeva responds that emphasis will be placed on home construction and repair, furniture-making and repair, radio and television repair, and automobile repair services. During 1983-1985 the volume of consumer services will increase 1.6 times overall, including 1.8 times in rural areas.

CONSUMER SERVICES BREAKDOWN IN BUKHARA OBLAST

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 5 March 1983 carries on page 2 a 1,000-word article by newspaper correspondent H. Qodirov titled "The Quality of Service Must Not Drop." Qodirov describes widespread failures among Bukhara Oblast consumer services combines and enterprises. The oblast average for services per person is 10.32 rubles, compared to 13.68 rubles in Samarkand Oblast and 13.73 for the republic as a whole. A number of services, including drycleaning and various repairs, are bogged down in backwardness. During 1982 consumer service enterprises hired 175 people and fired 612. Qodirov reviews cases of disorganization, disarray, indiscipline, and conspiracies to steal state property. For example, the director of the "Tekhslozhbitpribor" Union conspired to steal nearly 33,000 rubles worth of goods, and another group of combine officials in Kagan City doctored their accounts and embezzled 46,500 rubles. Qodirov expresses the opinion that ministry leaders must be aware of the disorganization, eyewash, and self-interest going on in the oblast.

SPRING FESTIVAL OBSERVED; WATER POLLUTION DECRIED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 22 March 1983 carries on page 3 a full page of articles and poems in celebration of the coming of spring. In a 1,100-word article titled "I Love the Good," Ibrohim Ghafurov, laureate of the Uzbekistan Lenin Komsomol Prize, speaks of the awakening of the earth and of the growing need for environmental protection. He writes that a number of people are beginning to sense that fruit tastes differently than it did 25 years ago, and he attributes this change to the increasing pollution of water resources. He decries the widespread lack of respect for the value of water and urges that steps be taken to protect its supply and purity before it is too late. Other features on the page deal with spring farming preparations and with spring's rejuvenating powers.

STATISTICS ON WOMEN CITED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 8 March 1983 carries on page 2 a list of figures concerning women, published in connection with international women's day: women account for more than half the workers and employees in the USSR national economy and 47 percent of kolkhoz members; more than 69,000 Uzbekistani working women have received orders and medals, including 115 Heroes of Socialist Labor; there are 178 woman deputies of the UzSSR Supreme Soviet (35 percent of total) and 121,000 women in the republic party; 42 percent of republic workers--or 2 million--are women; women account for 47 percent of industrial workers; there are now 2.7 million mothers raising 4 or more children in the republic, as well as 80,000 Heroine Mothers raising 10 or more.

HOUSING, MUNICIPAL SERVICES MINISTER REVIEWS SUCCESSES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 20 March 1983 carries on page 2 an 800-word article by A. Ilyukhin, UzSSR minister of housing and municipal services, titled "The Beauty of Cities." The article is published in conjunction with housing, municipal, and consumer services' workers day, and provides a review of 1982 achievements. Housing and municipal workers fulfilled their plan on 20 December, which meant an additional 11.7 million rubles in services. The plan for delivery of fixed assets was fulfilled, and the plan for construction and installation works was overfulfilled by 120 percent. Considerable sums were spent on improving plumbing, sanitation, and city parks, and on the preservation and maintenance of the housing funds. Workers of the ministry fulfilled social and economic development plans and socialist obligations. Ilyukhin cites organizations and individuals whose services were outstanding.

International

EXCESSIVE USE OF RUSSIAN TERMS IN UZBEK CHEMICAL TERMINOLOGY CRITICIZED

[Editorial Report] Tashkent OZBEK TILI VA ADABIYOTI in Uzbek No 3, 1982 carries on pages 20-24 a 1,800-word article by Abduvahob Madvaliyev titled "The Question of Doublets in Uzbek Terminology." Madvaliyev examines the question of what should be done in cases in which more than one word exists to express the same concept in Uzbek chemical terminology. He notes that for scientific terminology it is natural to attempt to avoid having more than one word for one concept. He divides the cases where there are presently two or more words into three categories. In the first category he places concepts for which an Uzbek word existed before, and for which later a duplicate word from Russian entered the language. One such example is 'margimush/mish'yak' (arsenic). The international form 'arsenik' has also been used. In this case Madvaliyev recommends keeping the form 'arsen' as a scientific term ['ilmiy termin'], while leaving 'margimush' as a technical [tekhnikaviy] term and for stylistic purposes in the general literary language. (He apparently sees no need for keeping the Russian form in these cases.) The second category which Madvaliyev discusses contains pairs of words which are equally used today. He gives the example 'qimya' 'khimiya' (chemistry). 'Qimya' is directly derived from Arabic, whereas the Russian 'khimiya' is derived indirectly from the same. In such cases Madvaliyev feels both forms can be left to coexist in the language. In the third case, where Russian and international words both exist in Uzbek terminology (such as in the case of 'uglerod/karbon' and in words derived from them) Madvaliyev sees no need for keeping the Russian word. Among other advantages, use of the word 'karbon' denotes the international character [internatsional kharakteri] of Uzbek chemical terminology.

NATIONAL, INTERNATIONAL TENDENCIES IN LITERATURE COMPATIBLE

[Editorial Report] Tashkent OZBEK TILI VA ADABIYOTI in Uzbek No 6, 1982 carries on pages 3-9 a 2,600-word article by Mahmudali Yunusov titled "The Dialectic of National Quality and International Quality in Literature." Yunusov discusses some questions regarding what makes literature "national" and "international," and the relationships between the two. He states that no nationality has existed in isolation from others and not learning from others. That no peoples have ever been able to live without cultural ties is demonstrated by the fact that not only the cultures of peoples close to Central Asia in religion, language and geography, but also the cultures of peoples of Asia, Greece and other parts of Europe (even though with great difficulty) reached Central Asia.

Yunusov quotes Marx in saying that "Every nation can and must learn from other nations." However, quoting Lenin, Yunusov emphasizes that "international culture is not non-national culture." Yunusov discusses whether a writer must include representatives of other nationalities if his work is to be considered "international." He concludes that the experience of masters of the work shows that this is certainly not necessary. The description of a representative of one's own people or of the life of one's own city or village can also be raised to an international height. And vice-versa, it is also possible to encounter failure to achieve anything when representatives of many peoples are included in a work." To illustrate his point Yunusov cites works of A. Tolstoy, L. Sobolyev, B. Polevoy and M. Sholokhov which do not include members of other nationalities.

"Will a single international literature swallow up the national literatures? Will it deprive them of their own characteristics? No, not at all. On the contrary, the unique characteristics of their content and literary form will continue to develop and will join as a contribution to international literature.

"Here it appears necessary to touch on another matter. Bourgeois literary scholars argue about national quality and national culture and write articles and books about them. Their writings as a rule possess an anti-Marxist reactionary essence. According to bourgeois theory, it is not necessary for nations to develop their individual cultures and languages, and they will be incorporated and disappear into such developed peoples as in America. The oppression carried out by American imperialism against the peoples of Africa and Latin America, its trampling by force over small nations and its attempts to destroy their culture are proof of this thought."

Yunusov scores such critics of Soviet policy as B. Hayit for claiming that Russification is taking place in Uzbekistan, as well as Rozi Nazar and G. Krankhel's.

"Such a famous Western writer as Herbert Wells predicted at the beginning of the century that in the 20th century the majority of the poorly developed languages would entirely disappear from use or else go to last place, and when they came into contact with languages used on a world scale, they would disappear. The same would happen with cultures. Continuing along this line, he asked the question 'What will the single world language be like?' He answered himself, 'Only the French, German and English languages will remain as the common tie uniting mankind. I don't think that other languages will be able to defend themselves in the future.'

"Notice that our socialist culture, fortunately, has not been the fulfillment of this science fiction writer's idea about the future. So many of the judgments of the bourgeois world were extinguished in the storm of the October

Revolution. Tens of small tribes and clan groups and peoples who were under threat of disappearing entirely before the October Revolution found a new life."

With regard to a world language, Yunusov cites Sh. Rashidov's words on the significance of the Russian language, but adds that "it has not oppressed any national language. Rather, it is helping their development in all sorts of ways."

Returning to the question of national literatures, Yunusov emphasizes that "every one of the literatures party-nature and popular-nature in its ideological spirit enriches All-Soviet literature with new images, colors and tones. It is primarily here that literature's national quality becomes apparent. National quality can be seen in the creative work of a writer who fully reflects his people's ethnographic characteristics, language and expressions, geographic conditions, natural environment and psyche."

UzSSR MINISTRY OF EDUCATION HOSTS GERMAN GUESTS

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 12 March 1983 carries on page 2 a 100-word article titled "Meeting at the Ministry." The report tells of a visit by a delegation from the Federal Republic of Germany's Educational Center. The guests were invited by the Board of the UzSSR "Knowledge" Society. Members of the delegation--the center's Commercial Director Mekhtil'd Merfel'd, President of the Working Group Gyunter Val'pusk and President of the International Commission Peter Vittelar met with the UzSSR Minister of Education S. Shermuhamedov. The UzSSR minister spoke about the development of education in the republic and answered questions from the group. UzSSR Deputy Minister of Education I. S. Mominov also took part in the meeting.

TASHKENT SCHOOL TEACHES HINDI FOR 25 YEARS

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 19 March 1983 carries on page 4 a 300-word article by H. Yoldoshev titled "Friendship Club." It reports on Tashkent Secondary School No 24 imeni L. B. Shastri where Hindi language has been taught for 25 years. Some former graduates are now studying Hindi at Tashkent State University. The school has had a friendship club for 20 years. It is directed by Hindi language teachers Lyudmila Alekseyena Semayea and Ra"no Akromova. The school has close links with Moscow's Secondary School No 26, where Hindi is also taught. The club also has a concert brigade and a lecturer group which are led by Hindi language teachers L. Tohirova and S. Hoshimova. Last year an Indian journalist visited the school. When he returned home he wrote an article about the school. The school received New Year's greetings from two pupils in India.

KABUL PUBLICATION ON HAIRATAN BRIDGE REVIEWED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 25 March 1983 carries on page 7 a 600-word review of the volume POL DOSTI ["Bridge of Friendship"] (in Dari; Kabul, 1983) by Dr of Philology A. Abduazizov titled

"Symbol of Brotherhood." The volume contains speeches by Sharaf Rashidov, Babrak Karmal, and Soltan Ali Keshtmand, delivered at the ceremonial opening of the bridge between Termez and Hairatan in May 1982. Also included are poems by Afghan poets Bariq Shafiy, Hilaliddin Badriy, Qavun Tofaniy, Muhammad Faqir Feruziy, Abdulla Bashir, Khasin, and Barzin Mehr, and Afghan Uzbek poet Ashraf Azimiy and Afghan Turkmen poet Muhammad Geldi. A piece from the epic "Golden Bridge" by the Soviet Uzbek poet Muhammad Ali, as well as his article that appeared in SOVET OZBEKISTONI 31 May 1982, are published in Dari translation. The volume has a preface by Anakhita Rotebzod, chairman of the Afghan-Soviet Friendship Society.

AFGHAN STUDENTS MEET UZBEK WRITERS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 4 March 1983 carries on page 7 a 100-word item by Sh. Vahobov titled "Meeting With Friends." The item states that a group of Afghan students recently met with Uzbekistan creative figures Turob Tola, Gulchehra Nurullayeva, Halima Khudoyberdiyeva, Abdulla Sher, and Lyudmila Yegoreva, at the Tashkent Higher Party School. Turob Tola spoke of the long history of fraternal relations and cultural cooperation between the Uzbek and Afghan peoples.

'ARAFAT, PLO SAID TO BE STRONGER

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 2 March 1983 carries on page 3 a 300-word commentary by F. Shohismoilov under the "Our Commentary" rubric titled "We Do Not Kneel." The commentator asserts that the PLO is a stronger, more cohesive organization since the Israeli invasion of Lebanon. A session of the Palestine National Council recently concluded its work in Algeria with a statement of firm resolve to continue the struggle for an independent Palestinian state. The session also elected Yasir 'Arafat to head the PLO, which proves that Palestinian patriots will intensify their fight against Zionists and imperialists. The PLO became even more cohesive during the Israeli aggression in Lebanon and today it is the only legitimate representative of the Palestinian people.

UZBEK DOCTORS IN MOZAMBIQUE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 4 March 1983 carries on page 4 a 200-word report by TASS correspondent V. Osipov in the world news section titled "Uzbek Doctors in Mozambique." The report states that thanks in part to the help of medical workers from various Soviet republics health services to Mozambique mothers and children has vastly improved and the infant mortality rate has declined. In 1982 Soviet medical workers treated 243,000 patients at 42,000 disease stations and operated on 20,000 people. The report cites Ahmad Zokirov, an experienced Uzbek surgeon who has done close to 1,000 operations in the last year at the central hospital in Maputu, and the Uzbek gynecologist Matlab Rasulov, who has been working at the central hospital in Nampula City for the last 2 years.

SOUTH AFRICAN RACISM CONDEMNED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 March 1983 carries on page 3 a 300-word commentary by F. Shohismoilov under the "Our Commentary" rubric in the world news section titled "Assault of the Racists." Shohismoilov comments on the death of T. S. Mndave, a member of the African National Congress who was imprisoned in Nedspreit City in South Africa. He dismisses the official statement that Mndave hanged himself in his cell and charges that police killed him as they have thousands of others who oppose the racist regime of South Africa. He states that the main goal of the fascist and terrorist methods being used is to assure the permanence of white minority rule in the country.

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 13 March 1983 carries on page 2 a 300-word commentary by A. Roziyev under the "Commentator's Pulpit" rubric in the world news section titled "Independence South African-Style." Roziyev claims that the apartheid regime of South Africa is turning the country into a huge prison by daily arrests and executions and by the formation of "independent" states called Bantustans for the native African majority. He states that in the last 20 years nearly 3 million blacks have been forcibly moved to such Bantustans in the desert wastes, and are utilized as a source of cheap labor for the farms and industry of the white minority.

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 20 March 1983 carries on page 3 a 700-word commentary by F. Shohismoilov and A. Roziyev under the "Commentator's Pulpit" rubric in the world news section titled "The Peoples Are Against Racism." The commentary is published in connection with the International Day of the Struggle To Eradicate Racial Discrimination, and is directed against the apartheid policies of the South African government. The commentators claim that the apartheid system makes it possible for capitalist monopolists to make larger profits through exploitation of Black Africans. They state that 500 U.S. companies have economic ties with South Africa and that U.S. capital investments in the country have reached $9 billion. In return for the support of the U.S. and its NATO allies South Africa serves as the U.S. "policeman" in the southern continent and launches attacks on Angola, Mozambique and other African countries that refuse to bend to the will of the White House. The commentators conclude with remarks on racial discrimination against Negroes, Puerto Ricans and Indians in the United States and on the abuse of Palestinian Arabs by the Israeli Zionists.

ISRAELI ARMS SALES IN LATIN AMERICA SCORED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 25 March 1983 carries on page 3 a 500-word commentary by Sh. Jorayev under the "Face of the 'Free World'" rubric in the world news section titled "Those Who Find Each Other in the Dark." Jorayev comments on Israeli arms sales to Latin American regimes. He states that the military industry of Israel does not lag behind that of the United States, France and England. Whereas in 1970 Israel sold $30 million worth of weapons, today it exports $2 billion worth annually, 75 percent of it to Latin America. Its chief customers are the reactionary regimes of Honduras, El Salvador, Guatemala, and Chile. Jorayev cites the journal MIDDLE EAST which reports that 80 percent of the weapons being bought by El Salvador are from Israel.

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 5 March 1983 carries on page 3 a 400-word commentary by newspaper international commentator F. Shohismoilov in the world news section titled "Death Merchants." Shohismoilov condemns Israeli arms sales to Latin American dictatorial regimes such as Salvador, Honduras, Guatemala, Paraguay, Chile, and Haiti. He claims that the arms are produced by the U.S. military industrial complex but are sold through Israelis due to pressures by the American people to halt such arms sales.

PEACE STATEMENT BY SOCIALIST WRITERS CITED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 25 March 1983 carries on page 7 a 400-word unsigned article titled "A Call for Peace." The article quotes from a statement released at the 19th meeting of writers of socialist countries in Hanoi. The statement pointed out that the Soviet Union and socialist countries have advanced concrete proposals aimed at averting nuclear war which must be promoted by writers. These proposals called for easing and normalizing the situation in the Far East and Indochina, and for turning the entire region into a zone of peace.

DOCTORS' ROLE IN PEACE MOVEMENT STRESSED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 March 1983 carries on page 4 an 800-word article by Prof J. Maqsumov, corresponding member of the USSR Academy of Medical Sciences, titled "Against Nuclear War." Maqsumov stresses that doctors have a prominent role in the struggle for peace at a time when imperialist forces are heightening the arms race and increasing international tensions. He recalls a March 1981 conference in "Eyrli" City near Washington in which doctors from 11 countries took part, including the Soviet Union. Conference participants issued a statement calling for talks to halt the arms race. In 1982 a second meeting of doctors from 32 countries was held in England, and again a statement of opposition to the arms race was released. Only recently the Soviet Committee of Doctors for the Prevention of Nuclear War met in Moscow and participants expressed their support for Soviet peace initiatives and their opposition to the arms race being heightened by the United States. Maqsumov states that he was a member of a Soviet delegation to the Japanese cities of Hiroshima and Nagasaki and witnessed the devastation caused by the atomic bombs dropped on the "military insignificant" cities by the United States.

WORLD PEACE INITIATIVES DISCUSSED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 11 March 1983 carries on page 7 a 600-word commentary by M. Kamolov under the "Commentator's Pulpit" rubric titled "Guarantee of Peace." The commentary discusses various peace initiatives that are being made in the face of increasingly militaristic actions taken by the United States and other imperialist forces. The Soviet Union and its socialist allies have proposed reductions in missiles, nuclear weapons, and troops in Europe, whereas the United States has pushed for the placement of an additional 527 nuclear missiles on the territory of its European allies. The Soviet Union not only supports the proposal of U.

Kekkonen, former president of Finland, for the establishment of a 300-kilometer wide "peace zone" in Europe, but would support its extension to 500 kilometers. The movement of nonaligned states is struggling to bring peace and cooperation into existence in many regions. Kamolov also cites the recent appeal of a group of French writers in which it was stated that opposition to the production of nuclear bombs is today the sacred obligation of every person and every state regardless of creed, religion, nationality or party.

PENTAGON STUDY OF SOVIET MILITARY REJECTED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 23 March 1983 carries on page 2 an 300-word commentary by newspaper international commentator Tal"at Soliyev in the world news section titled "New Publication of an Old Lie." Soliyev comments on a Pentagon study titled "The Soviet Military Power," first published in September 1981 and now reissued in a printing of 320,000 copies. He asserts that the study bears no resemblance to reality. For example, the study states that the U.S. Air Force has 241 B-52s although it has 574. The study states that the Soviet Union has 3 Kiev-class aircraft carriers but omits the fact that the U.S. has 21 carriers. Soliyev argues that the Pentagon study reflects U.S. efforts to heighten the "cold war" by spreading unjustified alarms about a "Soviet military threat."

U.S. CRIME, HANDGUN STATISTICS CITED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 26 March 1983 carries on page 3 a 300-word commentary by F. Minadzeli under the "Face of the 'Free World'" rubric in the world news section titled "When You Conceal a Sickness..." Minadzeli states that violence and crime are a part of daily American life. There is a murder every 24 minutes and an assault every 7 minutes. In a letter to Congress, President Reagan wrote that crime had become an epidemic and that no one is safe on the streets of American cities. Although he called for a "war against crime" the President has yet to take a single step to solve this problem. Minadzeli points out that with the growth of crime and violence Americans have begun to arm themselves and turn their homes into fortresses. According to official statistics there are already 55 million handguns and another one is purchased every 13 seconds in the United States. The commentary ends with the remark that even the President's wife owns a handgun.

BRAZINSKAS SKYJACKING RECALLED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 6 March 1983 carries on page 4 an 800-word article by Qodirjon Sobirov titled "The Clear, Blue Sky." Sobirov bases this article on a flight from Andizhan to Tashkent aboard the AN-24 that was skyjacked in October 1970 by a father and son named Brazinskas. The author recalls that they boarded the plane at Sukhumi and attempted to get into the pilot's cabin at gunpoint during the flight to Batumi. A stewardness named Nadezhda Kurchenko tried to block their way and was shot and killed. The skyjackers forced the pilot Aleksey Kim to fly to Trabzon, Turkey, where they were permitted to disembark. Later, they found asylum in America, which has refused Soviet demands for their return for the last 13 years. The airplane and its passengers returned to the Soviet Union, and today the AN-24 flies local routes in Uzbekistan.

IRAN-IRAQ WAR DISCUSSED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 4 March 1983 carries on page 7 a 500-word commentary by N. Muhammadiyev under the "Commentator's Pulpit" rubric titled "An Exhausting Confrontation." Muhammadiyev provides some historical background to the Iran-Iraq war and argues that it serves the interests of the United States and Israel. With the victory of the Iranian Revolution in February 1979 non-Persian nationalities began to press for autonomy. These political demands led to clashes between the government and the Kurds, Arabs, and Turkmen. Religion also played a role, since the Islamic Republic of Iran bases its policy on the Shiite sect of Islam and the Kurds, Arabs, and Turkmen are predominantly Sunni Muslims. Various reactionary religious groups incited conflicts between the two sects. The autonomy movement in southern Iran's Khuzistan Province, whose population is basically Arab, was supported by Iraq. Numerous border clashes have taken place between the two countries. In 1980 Iraqi troops occupied part of Khuzistan and have since been driven out due to an Iranian offensive. Not only are major battles being waged, with heavy losses of troops and material, but both countries are bombing oil fields and refineries and inflicting severe damage on each other's national economy. According to Muhammadiyev, the war plays into the hands of circles that are hostile to Iran and to the Arab liberation movement. He argues that American imperialists have used the confrontation as a pretext to step up its military preparedness in the Indian Ocean and Persian Gulf.

Military

UZBEKISTAN YOUTH URGED TO BECOME MILITARY OFFICERS

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 10 March 1983 carries on page 2 a 500-word article titled "True to Glorious Traditions." The article tells of several graduates of School No 218 imeni Mayakovskiy in Tashkent's Lenin Rayon who have expressed the wish to enter military education institutions (harbiy oquv yurtlari). The article attributes the desire of these and others to enter these military institutions at least in part to work of the rayon Komsomol organizations on military professions. Comments of three of the students (Fakhriddin Umarov, Vitaliy Polyayev and Georgiy Usmangaliyev) about their interest in the military are given. Umarov refers to the fact that both his father and grandfather were officers. Polyayev refers to his desire since childhood to be an officer. Usmangaliyev recalls a statement by Sh. Rashidov that "At present this [preparation of an office cadre] is a task of primary importance for the republic Komsomol and a most important party assignment." These comments are followed by the following note from YOSH LENINCHI editors: "Respected school-leavers and Komsomol members! To be an officer in the Soviet Armed Forces is a glorious and patriotic job for any youth. Many who leave our republic's schools, as well as our capital's

School No 218, are expressing the wish to enter military educational institutions. Perhaps you would also wish to become an officer? If you would like to share your hopes with others your age, please write us. Our address: GSP, 41 Lenin Street, YOSH LENINCHI."

UZBEK GRADUATES INTERESTED IN MILITARY ATTEND MEETING

[Editorial Report] Tashkent YOSH LENINCHI in Uzbek 15 March 1983 carries on page 3 a 200-word article by Y. Suyunov (chief of Propaganda and Mass Culture Affairs Department of Samarkand Oblast Komsomol Committee) titled "Gathering of Future Officers." An oblast gathering was recently held for graduates of general education and trade-technical schools of Samarkand Oblast who have expressed the desire to enter higher military education institutions. The article provides a list of speakers at the meeting. Komsomol directions to enter higher military education institutions were given to one group of the gathering's participants. The film "Officers" was shown at the gathering. The future officers visited the Samarkand Senior Military Automobile Commanders' Institution [?Samarqand Oliy harbiy avtomobil' komandirlari bilim yurti ?].

PRIMARY MILITARY EDUCATION IN SOVETABAD

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 30 March 1983 carries on page 2 a 200-word article by I. Karimov and S. Ismoilov titled "In the Spirit of Military Patriotism." It reports on military education lessons at Sovetabad Secondary School No 2 imeni Mayakovskiy. Among other things, authors note that extra lessons in Russian language, mathematics, physics, chemistry and literature are held for those pupils who have expressed the wish to enter military education institutions upon completion of secondary school.

RUSSIAN LANGUAGE FOR FUTURE SOLDIERS

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 16 March 1983 carries on page 2 a 700-word article titled "Primary Military Preparation and the Russian Language." The article concerns teaching of primary military preparedness in Tashkent schools and in particular the relation of this subject to the Russian language. It tells that an analysis of Tashkent city schools shows that in those places where the statutes on military preparedness are strictly observed, and where military and school leadership work closely with the party, Komsomol and trade union organizations, military-patriotic training and civil defense meet modern demands. "Unfortunately, one also encounters instances of military leadership having an apathetic attitude toward their assignments. The Tashkent City Executive Committee's Head Office of People's Education found such instances in School No 13 or Oktyabrskyi Rayon, School No 119 of Sabir Rakhimovskiy Rayon and in others. These instances demonstrated that instructional materials are being poorly kept, instruction time is not being utilized rationally, pupils are being given inflated grades and, finally, pupils are mastering the Russian language poorly. Thus, in some schools primary military preparedness classes are not conducted in Russian.

"This cannot be permitted, because a good knowledge of the Russian language is a necessary condition for successful service in the ranks of the Soviet Army.

The entire life, fighting and military preparedness [?jangovar va harbiy tayorgarlik] is conducted in the Soviet Army on the basis of statutes and orders written in Russian."

The article stresses the importance of creating environments where pupils use Russian. This can be done through organizing out of class activities in Russian. Russian days and weeks at schools with Uzbek language instruction, conferences and evenings devoted to great figures of Russian culture, contests and competitions of creative work in Russian, and various measures on military-patriotic training can play positive roles. In this area the yearly festivals held in Oktyabrskiy Rayon dedicated to the Russian language are held up as an example.

"Joint field lessons and campaigns mixing pupils of schools where instruction is in Russian and Uzbek [respectively] also helps to create the language environment.

"These questions of ways to perfect ideological-political, physical and linguistic preparedness of youths studying in native schools for successful preparation [sic] for USSR Armed Forces service were discussed at the city 6th Scientific-Practical Conference in Tashkent 14 March on the topic 'Perfecting the Instruction of Primary Military Preparedness in Russian in Native Schools.' The conference was organized by the Head Office of People's Education of the Tashkent City Executive Committee and the Tashkent City Institute of Raising Teacher Qualifications. The report of the Chief of the Head Office of People's Education of the Tashkent City Executive Committee H. Q. Yoldoshev and the words of school military leaders and directors illuminated questions of preparing young people to serve in the USSR Armed Forces. Responsible worker [mas"ul khodimi] of the UzSSR Council of Ministers V. Sh. Artunov participated in the work of the conference."

MILITARY EDUCATION IN NAMANGAN

Tashkent OQITUVCHILAR GAZETASI in Uzbek 23 Mar 83 p 3

[Article by M. Qodirjonov: "Attention to Military Education"]

[Text] Raising the younger generation in the spirit of loyalty to the Mother-Homeland and firmly preparing it in all aspects for military service are important tasks for today. The work carried out by Namangan Secondary School No 3 in this is exemplary. In this center for learning, primary military education lessons are being solidly and thoroughly taught to upper grade pupils using technical means.

A characteristic aspect is the recent organization in the school of a young fighters' university for pupils of 9th and 10th grades. The intended purpose is to prepare youths for service in the ranks of the USSR Armed Forces.

Primary military education teacher A. Kholiqov tells that "Since the university began operation, a special military education cabinet and shooting gallery have been organized by the efforts of the young people." The lessons are conducted by military specialists and veterans.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

U.S. MILITARY, POLITICAL PLANS FOR MICRONESIA ASSAILED

Moscow APN DAILY REVIEW in English 17 Aug 83 pp 1-2

[Article: "Washington-Style Trusteeship"]

[Text] Under this heading the newspaper KRASNAYA ZVEZDA (THE RED STAR) of August 16 carries a military-political commentary on questions related to United States trusteeship over the strategic territory of the Pacific Islands (Micronesia). In violation of its commitments to the United Nations, the newspaper writes, the United States uses the mandate for the temporary administration of Micronesia exclusively for purposes of its global expansionist policy. Today, the people of Micronesia is much further away from gaining independence than they were over three decades ago when the mandate for trusteeship was issued, the newspaper points out.

The world is aware of the tragedy of the people of Bikini and Enivetok Atolls that had been converted by the Pentagon into a nuclear test range. Another sixty or even ninety years will be required, KRASNAYA ZVEZDA cites the American magazine U.S. NEWS AND WORLD REPORT, before man will again be able to live there. The tremendous damage to the nature of the region, to the health not only to the present but also of the future generations of Micronesians, of course, cannot be compensated by the cash hand-outs Washington tries to pass off as "economic aid."

Recently, the newspaper continues, Washington has been exerting many efforts to finally annex this strategic territory. The status of "freely associated territory" or of some "commonwealth" with the United States is being imposed upon the population of some archipelagos.

The real causes of such cynical violation of the United Nations charter and of decisions by the world community, the commentary emphasizes, lie in the large-scale plans of the American military department for the further militarization of the Pacific.

In this context KRASNAYA ZVEZDA cites instances attesting to the Pentagon's use of Kwajalein Atoll for testing MX missiles and the Palau Islands as a naval base. The main port of Palau, the newspaper says, is to serve for the entry of missile-carrying submarines of the Trident system. Stockpiling of nuclear and chemical weapons are to be set up on Babelthuap Island which is part of the Palau archilepago. Thus, the author of the commentary sums up, the Pentagon creates a structure of bases and strongholds almost 1,500 kilometres long.

The White House, however, expects in vain that the United States will succeed in annexing Micronesia "on the sly." The word community demands that the right of the Micronesian people be safeguarded to a peaceful life, free of military or other neocolonialist fetters, free of fear for the future.

(KRASNAYA ZVEZDA, August 16. Summary.)

ICFTU STAND ON COOPERATION WITH WFTU, EAST-WEST ISSUES CRITICIZED

Moscow APN DAILY REVIEW in English 16 Aug 83 pp 1-9

[Article by B. Stolpovskiy, TRUD foreign news analyst: "Who Stands To Gain—About a Regular ICFTU Congress"]

[Text] The 13th Congress of the International Confederation of Free Trade Unions (ICFTU) was held in Oslo. This organization emerged in 1949 as a result of a split in the world trade union movement. It was set up and named "free" as a camouflage by the direct placement of the monopolies, first of all the American ones, which were the most powerful after the war. From the first day of the ICFTU its leadership rejected cooperation with the progressive trade unions of the world. Today, too, it serves those who fear like death mighty and militant trade unions and their unity. This has been demonstrated once again by a regular Congress of the ICFTU.

It was held in a situation when the monopolies have been feverishly seeking for a way out of the economic and currency troubles at the expense of the working people and through severer exploitation of them, and when imperialist reaction has been undermining detente and is engaged in the unbridled arms race. Big capital uses the advances of scientific and technical progress, automation and robatization not in the interests of the working people and of the nations but mainly for the enrichment of the military-industrial complex which is placing the world on the brink of a nuclear catastrophe.

The downturn and the structural and technological changes in the economy are exploited by the monopolies in their efforts to "curb the disobedient trade unions", as U.S. periodical BUSINESS WEEK has put it, to curb at least in the same way as they have done in the automobile and metallurgical industries of the United States when they made the trade unions "agree" to an unprecedented combination of pay cuts, changes in the production rules and renunciation of additional payments, as TIME magazine wrote.

At present, when the crisis is raging in the full sense of this word, the onslaught of reaction against the trade unions has sharply intensified and the question of defending not only the earlier-won rights but also the very existence of these mass organizations has become particularly acute. The forces of the extreme Right are trumpeting that the trade unions have become "outdated". Lionel Murray, general secretary of the British Trades Union Congress, is absolutely right to view the series of the anti-trade union laws and actions by the Tory cabinet as an attempt at "the very existence of the organized trade union movement" in Great Britain. This attack against the working people becomes particularly virulent in connection with the fact that a majority of trade unions have not stood aloof of the movement, which has been mounting in Europe and all over the world, against the war threat and against deployment of new American medium-range nuclear missiles in some West European countries, missiles which turn the continent into a nuclear hostage of the United States.

For all these reasons, today international trade union solidarity is becoming a question of life and death for many detachments of the trade union movement in the West. The call for unity of action, voiced forcefully by the 10th World Trade Union Congress, acquires particular topicality for them as well as for the entire world trade union movement. It is pertinent to recall here that this Congress specially addressed all the international trade union centres with a proposal to abandon the differences and to pool their efforts in the main areas of the working people's struggle for their vital rights and for universal peace.

Have the interests of the toiling people gained the upper hand at the ICFTU Congress, and has it displayed understanding of the necessity of unity of action, contacts and international cooperation in the ranks of the working people organized in trade unions? It is from this viewpoint that we shall try to analyze the work of the Congress and its results.

It is necessary to say right away that the developments at it took different courses. The Congress was held in an atmosphere of the struggle between those who take into consideration the realities of the present-day world and seek for answers to the pressing questions, and those who had come to the Congress with biased opinions and predetermined decisions forced upon them by the circles opposed to the interests of the working people. The latter were led by the rightist leaders of the American trade union federation AFL-CIO who behaved arrogantly. These leaders who, it might seem, are now pressed by life more than ever before to give thought to the interests of the working people of their country and to the destinies of peace, had arrived at the Congress in Oslo with a clear aim of pushing the international trade union movement toward the confrontation of the cold war time.

It is a striking fact that from the very beginning, from the opening of the Congress, ICFTU General Secretary John Vanderveken, who has taken this responsible post quite recently, decided to direct the work of the Congress along the road of deepening the split in the international trade union movement. We do not see any basis for cooperation with the World Federation of Trade Unions, he stated. The ICFTU general secretary added a big dose of anti-communism and anti-Sovietism to this statement.

In this way he ignored the existence of the problems that are common to all working people and which can be resolved only through joint efforts of trade unions regardless of their international affiliation and orientation. Furthermore, he right away divided the international trade union movement into utterly incompatible "flows", thereby reminding of the fact that the ICFTU emerged as a product of a split and retains this character in the main. It is also a good time to say here that, in the final analysis the AFL-CIO returned to the ICFTU on the condition that this international organization would remain "unshakably loyal" to the anti-communist postulates. As is known, in the past the AFL-CIO left the ICFTU, considering the Confederation to be insufficiently anti-communist. And now some leaders of the Confederation are going out of their way to please the rich American uncles.

It goes without saying that we are not inclined to turn a deaf ear to the existing differences and contradictions between trade unions of various trends and their international centres. However, with all the diversity of approaches to a number of problems they have still managed to jointly or simultaneously oppose the fascist coup in Chile, and the apartheid in Southern Africa. Both protested against U.S. interference in El Salvador's internal affairs. In the middle of June we witnessed the holding of the International Conference on Sanctions Against South Africa, which was attended by those centres. The Conference was held parallel with the 69th General Conference of the ILO. Meanwhile the Congress in Oslo exposed the untenability of the stance of those leaders of the International Confederation of Free Trade Unions (ICFTU) who stake on deepening the split at all costs. Such subjects it discussed as full employment and the need to put an end to poverty; union rights; and problems of peace, security and disarmament, are of interest not only to the ICFTU member-unions.

Incidentally, the WFTU and its member-organizations have more than once called for a dialogue and cooperation of unions of all trends on all these cardinal problems. But if so, how is one to see the ICFTU's approach to contacts, dialogue, and cooperation in the above fields? Is that a repetition of the old and worst ICFTU stances when in accordance with the worn out scripts by Meany relations with Soviet trade unions are tabooed? And this at a time when the governments of Western powers are conducting with the USSR and other socialist countries negotiations on problems of paramount importance both for peace, and consequently for solving most acute socioeconomic problems. The international trade union forum in Oslo again ignored the existing bilateral relations and contacts within the ILO group of the working people, and what is most important, the real cooperation in production of the capitalist countries with the socialist world, which provides millions of working people with jobs, weakening unemployment.

Such a stance is a boon for those who see the crisis and the continuing slump which ruins many branches of the economy, as a means for profiteering to the detriment of the working people and their unions. Much was said at the Congress about the economic and social disorganization in the West. Means were proposed to fight unemployment and poverty. But it is permissible to ask, how is the ICFTU going to implement them, if under the banner of anti-communism it rejects the main thing, the unity of action and cooperation between unions of diverse trends. There is hardly any need today to prove that the employers' alliances are striving to weaken the role and influence of the unions through their splitting, and, above all, through undermining their solidarity both nationally and internationally. It was no mere chance that under Margaret Thatcher's government strikes became punishable by law.

Neither has the Congress been able to bypass the violations of human and union rights, common to the capitalist world. Speakers at the Congress cited such violations, perpetrated in the United States, Canada, Britain and West Germany. This should really be thoroughly considered. The tragic fate of the air controllers' union which was trampled under foot by the Reagan administration was not something purely American. Suffice it to recall the new Thatcher-Tebbit draft anti-union legislation which jeopardizes the very existence of trade unions; or the "emergency laws" in West Germany, which Bonn officials have bluntly threatened the other day to use against trade unions and all massive movements. Why should not the ICFTU pay attention to those realities of capitalism, when the rights which are fixed in constitutions are reduced to fiction, whereas social concessions, wrung from the employers in a hard struggle, are reduced to naught or just annulled. Instead, an unseemly performance, directed by the AFL-CIO leaders is staged at the Congress, with the participation of a certain representative of the non-existent Polish Solidarity organization, and a campaign of slandering the working class and the people's government of Poland is stepped up, in the "cold war" spirit.

Who needs this? At any rate, this is not needed by workers and trade unions of European countries or countries of other continents. This is needed by those who would like to sidetrack their attention from the real problems of the trade union movement. These problems include the decisive problem--how to put up a bar to the arms race, to stop the slide of the world into the abyss of the nuclear confrontation. It was not fortuitous that some of the organizers of this campaign have ostentatiously stressed at the Congress the unwillingness to meet half-way the demand of millions upon millions of the working people to pool the efforts of various detachments of the trade union movement in the interests of peace and, hence, in the vital interests of the working class. Here the tone was set by representatives of the American trade union federation. Lane Kirkland, president of the AFL-CIO, made the main report of the topic "Peace, Security and Disarmament" in order to try to impose his line leading to the undermining of the increasing trend toward cohesion, toward united or parallel actions of various detachments of the trade union movement in the struggle against the military threat.

Does this have anything in common with the genuine interests and aspirations of the working people? Of course, it has not. This is so obvious that some speakers at the Congress, contrary to the efforts ot its organizers, have sharply criticized the AFL-CIO leaders. These delegates spoke with alarm about the terrible threat which has hung over mankind--the threat of a nuclear war. After the Second World War 130 armed conflicts have been unleashed on the Earth, mostly on the territory of developing countries. Last year alone, 650,000 million dollars were spent for military purposes. And that at a time when there are hundreds of millions of hungry and illiterate people in the world.

It is precisely these realities of the contemporary world which have urged the Congress to respond to the working people's requirements and to adopt a resolution on the topic "Peace, Security and Disarmament", which contains a number of rational and useful demands, although in too a general form. For instance, the resolution points out that the struggle for peace has become the main political problem. One can assess as progress for the ICFTU its commitment to contribute to international East-West detente and to the settlement of conflicts through negotiations and agreements. One's attention is attracted by the demand for an immediate end to the production and tests of nuclear weapons. The document notes that the ICFTU comes out for the tireless search for agreements leading to general disarmament and to the reduction of the strategic and Euro-strategic arsenals of the U.S. and the USSR, for the establishment and extension of nuclear-free zones, for the non-proliferation of nuclear weapons and for confidence-building measures.

But here too as regards the key problem--the threat of the deployment of new American nuclear weapons of first-strike capability in Western Europe--the ICFTU Congress has taken a stand which to a great extent is similar to Ronald Reagan's "zero option". This naturally questions the seriousness of the ICFTU's intention to follow its own statements about the striving for peace and disarmament.

Nor was there any lack of distortions and misrepresentations in the spirit of the right-wing leaders of the American trade union federation and their supporters. The resolution contains attempts to put the responsibility for the arms race on the USSR and the United States and misinterprets the causes of the aggravation of international tension. The top men of the International Confederation of Free Trade Unions have pushed through an instigatory resolution supporting the claims of Japan's revenge-seeking forces to Soviet territory--the Kuril Islands. One cannot fail to see that by doing so they have played into the hands of the most rabid militarist circles of Japan, which is against the interests of peace and security in the Far East.

The rostrum of the congress was also used by open anti-communists in order to try to vilify and discredit the anti-war movement, which has gained unprecedented scope throughout the world, its ideas and aims. Here, too, Lane Kirkland, chairman of the AFL-CIO, made his mark. He openly came out against the idea of freezing nuclear weapons, since, he said, it is supported by the communists. A representative of the French reformist trade union centre of Force Ouvriere, who echoed Kirkland, rejected the idea of nuclear-free zones and went so far as to repeat U.S. administration allegations that the movement of peace forces is orchestrated from Moscow.

True, these fabrications were exposed in several speeches at the congress. A. Vanden Broucke, president of General Labour Federation of Belgium, recalled, for example, that in 1981 over 200,000 people took part in a peace march through Brussels' streets. A similar demonstration against the arms race, and stationing of the new American missiles will be held in the country this autumn. And no one orchestrated us, stressed Vanden Broucke. Many other delegations, who rejected Kirkland's position, pointed to the need to freeze nuclear weapons for the period of negotiations and advocated a dialogue on questions of war and peace with the socialist countries. C. Dolan, chairman of the Australian Council of Trade Unions, proposed holding a world trade union conference on disarmament attended by delegates from all countries. That initiative, however, was turned down even without a vote.

There was a sharp clash of opinions at the congress over a resolution on the Middle East. To please the aggressive circles of imperialism and Zionism, it did not condemn Israel's barbarous actions on the unlawfully seized Arab territories, nor recognize the right of the people of Palestine to self-determination, something for which many delegates pressed. This alone, says the ACH-CHAAB, the newspaper of the Tunisian trade unions, shows that the International Confederation of Free Trade Unions, which calls itself a "free" organization, is blatantly ignoring its own principles and violating its own rules. The General Tunisian Labour Union, it will be recalled, has decided to suspend its activities in the ICFTU.

The conclusions suggest themselves. The Oslo Congress, as the facts show, was a gross attempt to put the international trade union movement back in a cold war position. And the initiative came again from the AFL-CIO top. And another thing emerged, too: it is not easy to keep the ICFTU ship on such course. This ship has representatives who would like to work in earnest for the solution of problems advanced by life, and are prepared for that to start a dialogue with those who consider it their duty to give all their energies to the cause of peace, disarmament and social progress.

CHERVOV DISCUSSES REASONS FOR INCLUDING FRENCH, BRITISH ARMS IN TNF TALKS

Moscow APN DAILY REVIEW in English 19 Aug 83 pp 1-7

[Article by Col-Gen Nikolay Chervov, department chief, General Staff, Soviet Armed Forces: "Who Is Craving for Missile Monopoly"]

[Text] The deployment of new American medium-range missiles on the territory of West Germany, Britain, Italy and some other West European countries, projected for the end of 1983, is part of the U.S. Administration's drive for military superiority. In its efforts to gain it, the United States resorts to all sorts of tricks, not stopping even at outright deception of the public. Its main aim is to prevent agreement at the talks on the limitation of nuclear armaments in Europe and to site its new first-strike missiles there.

One of the many concoctions zealously spread by Washington in recent time, is about Soviet "monopoly" on the so-called nuclear "missiles of intermediate range". It is alleged that the USSR has always had this "monopoly" and is going to retain it in future, too. This allegation is utterly groundless. It was concocted by American propaganda. In real fact, the USSR never had, nor has, any "missile monopoly." Let's study the facts.

The United States brought its medium-range missiles to Europe way back in the middle 1950s. These were the Matador, Mace, Thor and Jupiter missiles. The Soviet Union did not have medium-range missiles up to the late 1950s. At that time the United States had missile monopoly in Europe. In the early 1960s, the United States sited a large batch of solid fuel mobile Pershing I missiles with a range of almost 800 kilometers, which noticeably destabilized the situation. A little bit later Britain and France acquired sea-launched missiles. At the same time NATO's missile potential in Europe sharply grew when American submarine-launched ballistic missiles were placed under direct NATO command.

In the circumstances, the USSR was compelled to build weapons for its own defense. It built such weapons--the SS-4 and SS-5 missiles, and deployed an adequate number of them on its territory to offset the counterpart nuclear armaments of the United States and NATO in Europe. In the face of the growing nuclear threat the Soviet Union was later on compelled to embark on the modernization of its medium-range missiles by replacing the obsolete SS-4 and SS-5 with the new SS-20 missiles. This replacement did not change the strategic situation in Europe, however: the overall number of Soviet missiles even decreased, and the alignment of the sides' medium-range nuclear armaments as a whole remained on the same level. In the present situation the Soviet SS-20s merely offset the medium-range weapons of the United States and NATO in Europe, in particular, the nuclear missiles of Britain and France.

The allegations of Western propaganda that the USSR is supposedly craving for "missile monopoly" do not hold water. It is common knowledge that the USSR is ready to retain in its European part only just as many missiles as Britain and France have. The USSR has voiced its readiness to negotiate the equality of nuclear potentials in Europe not only in delivery vehicles (missiles and aircraft), but also on the warheads carried by them. "...On this basis we are prepared to begin levelling out the number of missiles of the sides even tomorrow," said Soviet Defense Minister, Marshall of the Soviet Union Dmitry Ustinov. So, the alleged Soviet missile monopoly simply does not exist.

The United States stubbornly insists that British and French nuclear missiles should not be counted in the European balance of forces on the side of NATO. But why? Aren't Britain and France members of the Atlantic Alliance? The the U.S. side claims that their weapons should not be counted because these countries are not party to the Geneva talks, and because they do not want to reduce their nuclear weapons. It is argued that taking these weapons into account means affecting the sovereignty of the said countries. Besides, missiles belonging to Britain and France are said to be designed for the defense of these countries alone, not of Western Europe as a whole. And, finally, these weapons are described as strategic, and, as such, not subject to consideration at the talks on limiting medium-range nuclear weapons.

Similar arguments may mislead some people in the West if they tend to take an abstract view of the matter. But if one considers the British and French missiles realistically and objectively analyzes their place and role in the European nuclear balance, an entirely different picture results.

The fact that Britain and France do not take part in the talks does not at all mean that these countries do not exist in Europe, nor does it belittle in any way the contribution made by their nuclear missiles to the balance of forces on the side of NATO. This is an objective fact and it does not depend one iota on whether negotiations are being held or not. Meanwhile, we are being told categorically not to notice more than 400 warheads on British and French missiles trained on the Soviet Union and other socialist countries just because British and French nuclear weapons are under national command. But this fact makes no difference for the "potential enemy." One hundred and sixty two missiles, capable of delivering hundreds of nuclear warheads to targets, are in readiness. It is no fiction. It is a threat which must be parried.

The Soviet proposal to take British and French nuclear missiles on the NATO side in the balance of forces does not affect the sovereignty of Britain and France in any way. The Soviet Union has never doubted their sovereignty. But it is public knowledge that these countries are U.S. allies in NATO. Britain is an active member of the alliance, and consistently supports U.S positions and implements U.S. plans both at negotiations, and in the military sphere. Formally, France is not a member of NATO's military structure, but it nonetheless continues developing extensive military cooperation with the North Atlantic Treaty and its member-countries.

The Pentagon itself invariably counts the nuclear armaments of the U.S. allies in Europe in the balance on its side as an integral component of the West's nuclear forces. For instance, a session of NATO's nuclear planning group on finalizing the plan of using nuclear weapons against the Warsaw Treaty member countries was held in Portugal not long ago. The Britts took a most active part in it. If we take the White Paper of the British Government, it says in no uncertain terms that the British nuclear forces can do such damage to the USSR that the Soviet leaders must take them into account. It is only natural to ask: What does it have to do with Britain's sovereignty if NATO has the single plan of using nuclear weapons against the USSR and other socialist countries, the plan which provides for the employment of British nuclear missiles?

As far as France is concerned, as newspaper FRANCE-SOIR wrote, "There is no doubt that the French military potential, no matter whether it has been integrated or not, serves the interests of the Western alliance.... The French nuclear forces make a considerable contribution to the total potential as well as to maintaining equilibrium with the Soviet forces". According to newspaper LE MONDE, there is an accord with the United States and Britain on additionally deploying French nuclear weapons against the USSR parallel with the respective programmes in the sphere of NATO's "rearmament" in reply to a mythical "Soviet military threat".

In an interview given to radio Deutsche Welle on July 11 West German's Minister of Defense Manfred Woerner stated quite competently that in the event of an armed conflict "from the very first seconds France will be on NATO's side. This is beyond doubt".

So, it is a fact that Britain and France as the U.S. allies in NATO jointly plan the use of their nuclear arms against the USSR and other socialist countries. Evidence of this can be found in many official sources of the West--in the reports of the U.S. Defense Department to Congress on the budget for 1981, 1982 and 1983, in Britain's White Paper for 1978, in the White Paper of the FRG for 1979, in a number of annual bulletins of the London International Institute for Strategic Studies (for instance for 1982-1983), and others.

The "argument" that the British and French missiles, being "strategic", should not be taken into account at the talks on limiting medium-range nuclear weapons in Europe is not serious either. Juggling with terms cannot alter the fact that the British and French missiles are weapons of a regional, European scale. The missile-carrying submarines of Britain and France patrol the water area near Europe and are meant for use in Europe alone. Having a range of 3,000-4,600 kilometers, the missiles of thes submarines can reach targets on the whole European territory of the USSR.

The stubborn unwillingness of the Reagan administration to change its approach to taking the nuclear missiles of Britain and France into account can be explained only by one thing--by the fact that the entire U.S. unrealistic stand is based on not taking these missiles into consideration. Once this artificially raised barrier is removed, nothing will be left either from the false "zero option", or from the deceptive "interim variant" or from the phrasemongering about the USSR's "missile monopoly". This is the main reason why the United States has turned the question of the British and French nuclear missiles into a stumbling-block at the talks, clearly seeking to protract them and then to deploy its new missiles in Western Europe, pleading "the Russian' intransigence".

Keeping nuclear forces not only on its own territory but also in other areas adjoining the socialist countries, the United States is, in effect, devoting its effort to trying to formalize its rights to preserve the existing situation on a treaty basis, at the same time ignoring the existence in NATO of substantial British and French nuclear forces, apart from the American ones.

The USSR does not claim military superiority either on a global scale or in Europe. But this does not mean that it must have in Europe only exactly the same number of medium-range nuclear weapons as the United States would have there. In actual fact, such "parity" would signify great imparity in favour of the United States and its confederates. This is the aim of the "rearmament" of Europe with new American missiles. But it has nothing to do with the actual security needs of the West European countries--members of NATO. We are witnessing the attempts of the United States to gain military superiority over the USSR and to menace the security of the USSR and its allies.

Hence, if one speaks about monopoly, it is the American side that would like to retain the privilege of keeping its nuclear weapons near the Soviet borders, the weapons which constitute a strategic factor to the Soviet Union, and not only to preserve this unfair monopoly position, but also to consolidate, to strengthen it. As Y. V. Andropov, general secretary of the CPSU Central Committee and president of the USSR Supreme Soviet Presidium, has pointed out, "the United States would like to win the monopoly position by placing at the USSR's side nuclear weapons capable of hitting targets deep in Soviet territory whereas the USSR does not have and, of course, according to the American logic, should not have a comparable potential anywhere near the United States."

The question of the nuclear armaments of Britain and France was raised by the Soviet side as early as 1980, at the very beginning of the talks with the United States. And if today some people, trying to present black as white, are willing to produce the impression that the demand to take these weapons into consideration emerged not long ago, allegedly by a whim of the Soviet Union, this can be qualified solely as an intentional distortion of the truth. The nuclear armaments of Britain and France should be taken into account--this is the stand of principle which the Soviet side has adhered to from the very beginning.

The bilateral character of the Soviet-U.S. talks in Geneva does not give grounds to leave out the nuclear arms of Britain and France. Any serious proposal on limiting nuclear weapons in Europe must be based on taking into account the whole complex of the weapons which are components of the correlation of forces between the Warsaw Treaty Organization and NATO in the region, and must meet the demand of reciprocity. This is the basic principle.

Ignoring the British and French missiles in the course of resolution of the problem of nuclear arms reduction in Europe means jeopardizing our security and the security of our allies. As it has been repeatedly stated at the top level, the Soviet Union will not abandon its stand in this question. The demand to count the nuclear missiles of Britain and France on NATO's side is not just a request but objective necessity arising from the need to ensure our security. In any case the Soviet Union must and will have an equivalent to the above-said missiles. This is what Y. V. Andropov said in no uncertain terms to this effect: "Try to look at the situation from the viewpoint of the Soviet Union, its lawful interests: on what grounds, by what right are we to be left disarmed in the face of these British and French nuclear missiles aimed at our country?

"It is clear that we cannot agree and never will agree to this. The Soviet people have the same right to security as the peoples of America, Britain, France and other countries."

ZIONISM, 'WORLD JEWISH CAPITAL' ASSAILED FOR ANTICOMMUNISM

Moscow APN DAILY REVIEW in English 18 Aug 83 pp 1-5

[Article by R. Nikolayev: "Shock Detachment of World Reaction"]

[Text] World reaction headed by U.S. imperialism is making desperate attempts to go on a counter-offensive against the socialist world, against the international working-class and national liberation movements. International Zionism is one of this reaction's shock detachments. Characterising it, the French newspaper TEMOIGNAGE CHRETIEN emphasised that "the world Zionist movement is, above all, a huge financial undertaking."

One cannot but agree with that point. If in any individual capitalist country Jewish capital is as a rule less than "national" capital, the "world" Jewish capital is cumulatively larger than the "national" capital of any capitalist country. This state of things enables major representatives of Jewish capital to exercise a significant influence on political and economic decision-making by the ruling circles of the Western countries.

A very potent contingent of the Jewish bourgeoisie has taken shape in the United States. Suffice it to say that in that country, where the Jews make up three percent of the population, 20 percent of the millionaires and billionaires are Jews. The aggregate capital of the Jewish bourgeoisie in the United States, according to the American press itself, is 150 billion dollars. Jewish capital is also strong in Belgium, Holland, France, Britain, Sweden, Switzerland and other capitalist countries. And it is no accident that in all these states there are many Zionist parties and organizations belonging to the World Zionist Organisation (WZO). The WZO and the Jewish Agency for Israel (JAI), closely linked to it, have branches in more than 40 countries and represent the leading centre of international Zionism. At the head of the WZO is an executive committee with two headquarters, in New York and in Jerusalem. Its activities range from "religious-cultural" to those designed to involve the Jewish population in subversive acts against world revolutionary forces.

Jewish bourgeois-nationalist organisations that proclaim themselves "non-Zionist" affiliate with the World Jewish Congress (WJC), which is actually a subsidiary of the WZO and which is in close touch with the WZO and the JAI, taking an active part in all Zionist propaganda and other campaigns. On the whole, the Zionists have their reactionary ideas spread now through their international organisations in almost 70 countries.

The ideology of Zionism is the ideology of the proimperialist Jewish bourgeoisie, not of all the Jews, as is claimed without argument by its advocates. T. Herzl, "father" of Zionism, in his book "The Jewish State" made it clear whose interests are met by his teaching: "Rich Jews, who are now compelled to hide their treasures and to feast behind drawn curtains, will be able to enjoy life freely there."

Vague and slippery though many of the Zionist dogmas are, the gist of Zionist ideology is brutally and manifestly evident--it is extreme chauvinism and rabid anti-Communism. What worth, for instance, is a fable, borrowed from Judaism, about Jews as a "God-chosen people?"

It is in our time that the Israeli Ministry of Education has approved as a secondary school textbook the work by medieval Talmud scholar Halevi, who says, among other things: "The Jews are the elite of mankind. They must have slaves. The slaves must not be Jews."

Such theories the militant Zionists are trying to put into practice. Most glaringly it is obvious in the policy pursued by Israeli rulers in relation to Arab peoples, especially with regard to the Arab people of Palestine. It was not by chance that the world community, as represented by the United Nations, has censured Zionism and, consequently, the Zionist regime in Israel, branding it in 1975 as a form of racism and racial discrimination.

Anti-communist and anti-Soviet acts of Zionism, the hatred of its politicians for communism and the Land of the Soviets, which was the first to start building it, are due to class reasons. The Great October Socialist Revolution weakened and then eliminated a major element in the system of the global Zionist "concern." It created a new society which gave freedom to the oppressed peoples, including the Jews; it proved in practice the hollowness of Zionism and opened up the historical way to final eradication of all forms of racism. All that evoked intensive animal-like hatred of the Zionists.

The Zionists' subversive activity against the Soviet Union has also been extended to other socialist states. International Zionism openly supported the counter-revolutionaries in Czechoslovakia and Poland, attempting to interfere in the affairs of these countries. To this day the widely ramified network of mass media of propaganda, owned or controlled by the Zionists, is persistently conducting an unbridled anti-socialist campaign.

Even these facts show the aggressive nature of the political practice of Zionism. This practice is being carried out within the framework of world imperialist strategy. "There is no imperialist power," says one of the documents of the Communist Party of Israel, "on which Zionism has not pinned its hopes, and there is no imperialist power which does not try one way or another to use Zionism for its own purposes."

In this ominous symbiosis there can be traced the following hierarchy (along an ascending line): the Zionist ruling circles of Israel--world Zionism--world imperialism with the United States in the lead. The junior partner of this triad obsequiously takes up any filthy work that is entrusted to it. Apart from attacks on the world of socialism and provocations against the international communist and working-class movements, Israel is waging a struggle on a broad front against national-liberation movements and coming out in support of reactionary regimes.

Thus, Tel Aviv did everything it could to prevent the collapse of the shah's regime in Iran, and up to the last minute took enormous pains to save the blood-drenched regime of Somoza in Nicaragua. Israel has its military instructors in El Salvador, Chile, Guatemala, Uruguay, Haiti and is selling arms to their fascist regimes. The Zionist top leadership of Israel maintains the most intimate relations with South Africa's racist regime, even as far as cooperating with it in the military, including nuclear, field. Israel has signed an agreement with Honduras, assuming the role of a supplier of arms to the Honduras army and the bands of Nicaraguan counter-revolutionaries that are on the territory of that state.

In most of these cases the directing hand of Washington is clearly visible. And not only directing, but also feeding-up. It is obvious that Israel could not either economically or militarily fulfill the instructions of the U.S. imperialists if it did not receive generous financial and military aid from them. And this aid, according to a recently-published official report in Washington, has since 1948 come to as much as 25.3 billion dollars. Some sources even put the whole of financial aid to Israel from the United States over the past 30 years at 60 billion dollars.

The Zionist Israeli regime has always been forced to work for the liberal handouts from its imperialist backer, which at the same time is also a direct accomplice of many criminal actions of Israel, primarily in the Middle East. As the Central Committee of the Communist Party of Israel stressed, the aggression unleashed against the Arab states in 1967 "was not just Israeli, but Israeli-American." It remains such to this day. Washington along with Tel Aviv bears the full responsibility for all the crimes against the Arab peoples, which the Zionist-imperialist alliance is committing.

The conversion of Israel into a barracks-type state that is in a state of permanent aggression against neighbour Arab countries not only weighs heavily on its people in the economic regard, but also enables the Israeli Zionist ruling circles to conduct an on-slaught on its social and political freedoms. The example of present-day Israel thus shows very definitely that the policy of the Zionist top leadership ruling in it stands in glaring contradiction with the interests of the popular masses of the country, just as Zionism as a whole, which runs counter to the genuine interests of the working Jews in whatever country they live.

IRANIAN SAVAK 'REVIVED,' 'FULFILLS FORMER FUNCTIONS'

Moscow APN DAILY REVIEW in English 26 Aug 83 pp 2-3

[Article under the rubric: "APN Informs and Comments"]

[Text] The Evin prison for condemned men in Teheran is filled to overflowing, APN's political analyst Vladimir Nakaryakov writes. Shah's secret police (SAVAK) which is hated by the people, has actually been revived, and fulfills its former functions under a slightly changed name (it is called SAVAMA in the West). The Islamic authorities have restored its 5th Section that "fights against communists and subversive elements." Former SAVAK men are employed there, including General Hosein Fardust who was in control of the Shah's secret political police.

This section has been actively "working on" the leaders and active members of the Tudeh Party in the Evin prison in recent months. Professionals from the secret police have tortured them into false "confessions," and now a trial is being prepared to make short work of those who supported Khomeini in a bid to defend the working people's rights, preserve and deepen the Iranian revolution's anti-imperialist essence, and implement progressive reforms.

The senseless war with Iraq, now nearly three years old, has already cost hundreds of thousands of young and healthy men their lives, and keeps swallowing huge material resources. Each of the sides spends one billion dollars a month on war. All efforts of the United Nations, other international organizations and a number of countries, aimed at ending the conflict and beginning negotiations, have failed because of the Iranian side's stubborn intractability.

Observers say that the government of Iran is making use of the war to distract attention from a multitude of problems and the hard plight of the working people, and to eliminate its political opponents in the country.

Absolutely immoral methods are recommended for persecuting the dissidents. A ranking Iranian leader said recently: "To control the opposition the Islamic Republic needs no additional policemen, as the Shah did. We have an army of 36 million informers. Let people follow each other in their residential areas and families, and inform the police about everything suspicious. We have professional investigators," this statesman added, "and they shall do the rest." As for "the rest," that seems to signify goals, torture and death.

WESTERN SCIENTISTS CITED ON ENVIRONMENTAL EFFECTS OF NUCLEAR WAR

Moscow APN DAILY REVIEW in English 18 Aug 83 pp 5-6

[Article under the rubric: "APN Informs and Comments"]

[Text] Over the past few years new risk factors have been added to the numerous possible effects of the nuclear strike (light emission, shock wave and radiation). The recent research work showed that forest fires caused by a five megaton nuclear explosion would fill the air with so much smoke and soot that a dense layer of combustion products will form above the Earth and will not disperse until several months afterwards, said Bernard Lown, a prominent American cardiologist and Co-Chairman of International Physicians for the Prevention of Nuclear War, in a Novosti interview. Over this period, the Earth temperature will drop by an average of 30 degrees Centigrade, destroying crops and causing famine. After the clouds of nuclear soot have dispersed, the Sun, punishing the irresponsible people, will direct its ultra-violet killer-rays on our planet, burning everything on its way, because the ozone layer, protecting the Earth from the lethal effect of ultra-violet radiation, will have been badly damaged by that time.

A Dutch philosopher once said that the gravest trouble of the people today is their inability to see the reality of the post-nuclear period, i.e., the disasters awaiting mankind after the thermo-nuclear war. As one of the medical profession and a man studying this problem, I can say that scientific research and forecasts show that in the post-nuclear era the Earth will cease to be a home of intelligent beings.

Today, there is no alternative to peaceful coexistence, for we have very much in common with the Siamese twins: in case one of them dies, the other inevitably dies, too. I think mankind is reasonable enough to make its only possible choice--peace and life.

SEVERER MEASURES AGAINST PARASITISM URGED

Moscow PRAVDA in Russian 4 Aug 83 p 3

[Article by S. Troitskiy: "The Invulnerable Parasite--Returning to a Subject"]

[Text] Millions of people work in various sectors of the public economy; they produce a significant amount of material values. But more can be done if socially useful work can be made available to the so-called parasites. By not working, these people break off a rather large and toothsome morsel from the public loaf.

However, we sometimes make too many allowances for these people and don't wage a decisive battle against them and, as it has become clear, we do not even know exactly how many of these people there are.

This was discussed in the article "Ignorant Loafers," published on 19 May (STRANITSA NK No 9).

Workers for the Committee of People's Control of the USSR have reported that the number of persons illegally avoiding work and arrested by police agencies in three cities in Novosibirsk Oblast alone exceeds the work resource deficit for the oblast as a whole. Things are no better in several other regions that were investigated. Moreover, there are still many loafers who do not end up at the police station and who live without being noticed.

Thus, "Help Wanted" notices are not at all directed toward a void. There are many vacant positions in factories, plants and construction for people to fill.

And the affair must begin with a strict and complete count of all who are avoiding work for no reason. B. Kychanov (Omsk), for example, reports about four men who are able to work but have not done so for 5 years, and also that the number of loafers registered with Omsk police agencies alone is equal to the number of employees in an average industrial enterprise. At the same time, 14 percent of the equipment in local plants is idle due to lack of personnel.

Letter writers criticize the practice of comprising work force balances according to oblasts, cities and rayons. These documents today do not give a complete representation of numerical and qualitative composition of the unemployed. Someone works a total of 2 or 3 months and he is considered to have a permanent production job.

Each of us is required to work by law. Measures for punishing parasitism have also been devised, but it turns out in practice that there are many ways to avoid responsibility for long-term idleness and to easily keep it a secret.

When a man is discharged from work, it becomes practically impossible to check on him. His service record is in his hands, and what is more, he can leave it in any personnel department: no one will look for the owner anyway, and if necessary they can always issue a new one at his new place of employment. After finishing secondary school it is also possible to go for months without work and no one asks about this either.

Readers are giving concrete proof that the system for obtaining population employment statistics is imperfect. Although previously there was a place on the passport for place of employment, this no longer exists. If an idler happens to be investigated, he names at random any establishment where he supposedly works.

The parasite, like the gingerbread man, can chant: "I ran from the grandfather...." In our case the grandfather is the labor collective, which lets a man go and bears no responsibility whatsoever for his eventual fate. Indeed, the zhek [possibly housing commission] could be the grandmother. It would seem that at home, where everyone is in view of his neighbors and the old people on porches and at home, it would not be easy to avoid public control. But they do avoid it, and easily. A. Biryukova (Moscow) told of this. The housing committees know basically who the drunks are. They are not difficult to find, but one does not find the quiet loafers.

Meanwhile, to start work a man needs a certificate from his dwelling place, and if someone does this too often then he stands to draw attention to himself to find out the reasons, and this is an opportunity for establishing control.

V. Blokhina (Gorkiy) relates that in the municipal housing administrations there are large debts for rent and public utilities. Many do not pay them off for a year or more. And just try to get it. Neither the court nor a notary will help. The majority of debtors, as it later becomes clear, do not work anywhere. What is particularly surprising is that some parasites often live in nice apartments. However, it is impossible to evict them or to move them into places that are not as nice; to turn off the heat, electricity or gas is illegal as well. This is how the idler's rights to live at the expense of others are protected!

His rights are actually set down by law. He is permitted by law not to work for 3 months. Then, since he was "kind" enough to work for 10 to 15 days, he once again gets a free, legal means of support. Our excessive humanism suits them very well, however such behavior does not correspond to the socialist form of life and moreover it contradicts it.

Certain letter writers suggest counting how long a person has been unemployed in the course of an entire year. If it works out, let us say, to be 8 months, then legal responsibility for parasitism is in order.

While the suggestion is perhaps not a perfect one, it is worthy of attention.

It is a known fact that a rather large percentage of loafers abuse alcohol. The microrayon population often knows them personally and wonders: how is it possible to live, drink, not work anywhere and have no responsibility for this? It turns out that it is possible.

It is simply not an easy matter to send an alcoholic to a work-treatment dispensary; the drinker's health must first be evaluated. However, he will not go to a hospital by himself. The district police staff worker must put pressing business aside to literally lead him by the hand to doctors' offices, laboratories and dispensaries.

One would agree that it is very odd to hope that the drinker will be in good health: he will have either an enlarged liver or high blood pressure--it will generally be impossible to send him to a work-treatment dispensary. And there he is, protected by the medical commission certificate--he has become invulnerable. In the final analysis he has actually become an invalid. Vodka leads to no good.

An honest man does not tolerate such a state of affairs, where someone against all of our principles does not work but eats, and sometimes even better than those who work.

Some live off of their parents and relatives, others engage in speculation and various machinations--some even steal. Readers cite the lives of many who do not work. They all emphasize the same thing, however: in the final analysis parasitism gives rise to crime.

Many suggestions on how to put a quick end to such a harmful phenomenon as malicious avoidance of socially useful labor continue to appear in print.

In June (1983) the CPSU Central Committee Plenum noted: "The raising of a new man is inseparable from a most energetic struggle against drunkenness, hooliganism and parasitism...."

Deputy Chief of the USSR TsSU [Central Statistical Administration] V. Gur'yev answered in the publication "Ignorant loafers." He reported that there would be a count of the parasites, but an investigation proved that this was not so. The editors were duped, to put it mildly. And yet a solution to the problem of keeping track of parasites is of the utmost necessity. Readers V. Minin (Volgodonsk), P. Sinyavskiy (Sevastopol), S. Karlyuk (Kiev), N. Obraz (Vladimir) and A. Nikitin (Saratov) and others write convincingly on this point.

Right now there are a large number of measures in existence for the fight against such ugly manifestations as malicious avoidance of socially useful labor, laxity and lack of discipline--all the things that prevent our forward progress. Local soviets and police and public agencies are faced with a large task and we repeat that this must be done with an accounting. Every parasite must be visible and under control and in the final analysis be useful and not harmful to society.

ANTI-ALCOHOL PROPAGANDA, RAISED ALCOHOL PRICES MAY BE COUNTERPRODUCTIVE

Moscow ZHURNALIST in Russian No 5, May 83 pp 48-51

[Article by Vadim Ol'shanskiy, leader of group on study of socio-psychological aspects of combating drunkenness and alcoholism among the youth, Scientific Research Institute for General and Pedagogical Psychology, USSR Academy of Pedagogical Sciences: "Let Us Investigate Together"; passages rendered in all capital letters printed in italics in source]

[Text] There are really not many publications which would not concern themselves with anti-alcohol propaganda on their pages. A passing glance at them is sufficient to say that in the last 2 or 3 years this section of publicism has deepened and expanded noticeably and has become richer and more ingenious in its forms for presenting material. But nevertheless, as formerly, the importance of the subject forces us to approach this work and its results with strict criteria.

To Believe or Not Believe

An important direction of anti-alcohol propaganda is instructive. The press systematically publishes articles by specialists--most often by physicians and jurists and more rarely than would be desired by teachers and educators--which disclose the negative consequences of drunkenness with greater or less scientific depth.

At times, which is incomparably more difficult, the authors attempt to analyze the sources of drunkenness as a social phenomenon. Success was achieved here, in my opinion, for example, by Candidate of Medical Sciences Ya. Girich who published the article "The Family Microclimate" in KRASNOYARSKIY RABOCHIY [Krasnoyarsk Worker]. The article is actually capable of expanding the horizons of even a well-read audience.

But, as far as I can judge, the basic mass of the publications is reduced to two rather stereotyped theses: "alcohol--the path to crime" and "alcohol--the enemy of health."

First the criminal fact: someone took a fairly large dose of alcohol (usually the amount drunk is reported) and committed a crime. Frequently there are picturesque details: "he grabbed a knife lying on the table, struck Tsvetkova about 20 times, and then he strangled his wife with a rubber hose" (NOVGORODSKAYA PRAVDA, 10 June 1982) and information on what punishment the criminal received. The second part of the publications are generalizing data: "In our kray almost all premeditated murders, more than half the hooliganism, and one out of three road and transportation accidents are committed by persons who are intoxicated" (KRASNOYE ZNAMYA [Red Banner], Vladivostok, 5 August 1981). In conclusion, there is a call for the broad public to struggle against evil.

The second stereotype is devoid of such a pointed subject but, in return, it presumes the author's high erudition. For example, STAVROPOL'SKAYA PRAVDA (11 December 1981) published and commented upon ancient Russian sayings and French proverbs and made reference to the Spartan laws of Lycurgus, the customs of Ancient Rome, and the edict of the Chinese emperor Vu Vong issued in 1220 B.C. where it was pointed out that all those convicted of drunkenness are subject to the death penalty.... And the finale--frightening medical data: "The average life's duration of an alcoholic is 20 years less than that of nondrinkers, abuse of alcohol was noted in 38 percent of patients with stomach cancer, 44--with gum cancer, 58--with cancer of the nasopharnyx, 65 percent--of the tongue...."

For an analysis of these stereotypes of the instructive article, I selected what in my opinion were the best publications. No doubts are caused by either the competence of the authors or by their sincere striving to enrich the reader and equip him with material for instructive talks at production, in the family, or in school. But exactly because these stereotypes of anti-alcohol propaganda received such broad dissemination, it seems necessary to me to investigate the psychological mechanism of their influence on the readers.

I will begin with an experiment which acquired worldwide fame. Information based on facts and logic which convinces that smoking increases the danger of lung cancer was communicated to a large group of people being tested and then the reaction to this information by various groups of people--smokers and nonsmokers--was recorded.

I will use a table for clarity.

	Considered This Situation Unconvincing (in percent)	Did Not Have Own Opinion in This Regard (in percent)
Nonsmokers	55	16
Occasional smokers	68	18
Average smokers	75	9
Heavy smokers	86	7

This experiment, just as a great many others, proved that the human mind is "automatically" protected from information which causes the sensation of threat or fear. An active protective reaction may cause an effect which is opposite to the one which the propagandist achieves.

It is necessary to take into consideration one more widespread form of psychological defense--dismissal. A person agrees with the content of a report but sincerely believes that it does not pertain to him. The author's desire to use an exceptional fact which causes a striking emotional reaction is natural. But it is namely the singularity and exclusiveness of the situation which help the reader to protect himself internally against unpleasant analogies and comparisons: this is not about me. Receiving stereotyped information which does not influence his attitude toward alcohol, a person is imbued with the conviction that he already knows all about this. It is a negative effect which can now be designated by the word "inoculation": now you will in no way catch the reader. He simply does not wish to return to this subject any more. And therefore, it seems to me, it is worth asking ourselves the question: are many readers attracted or, on the contrary, repelled by the rubrics: "Fight Drunkenness!" and "Lessons of Sobriety," and the title of a television program, "A Physician's Talks on Alcoholism?"

It is the task of the propagandist to overcome the psychological barrier and force the addressee to sense a personal interest in the report.

SOVETSKAYA KULTURA [Soviet Culture] (6 April 1982) mentioned a curious experiment in two schools of the city of Kirov. It is only a pity that the bureaucratic style of the article, in my opinion, hinders the perception and comprehension of what was said. The essence of the experiment: first teenagers answered the questions of a questionnaire concerning interest in alcoholic beverages and familiarity with them, and then the parents filled out the same questionnaire independent of them--each for his child. When the result was compared, the mothers gasped: they never even suspected that their offspring had already been involved in the use of alcohol! In this way, the psychological barrier was destroyed: the parents felt a burning requirement to prevent alcoholism, several "realized the harm from drunkenness and quit drinking, and 150 fathers began going to parents' meetings."

Of the material which was looked over, that prepared by the writer Z. Balayan, "The Victim--One's Own Child" (LITERATURNAYA GAZETA, 12 January 1982), seems to be very successful, perhaps the best, of those which were looked at. The main thought is placed at the beginning: "Millions of fathers and mothers must know: one shotglass of vodka is sufficient for their son or daughter to be born incurably sick." This is not the heading "For a Healthy Life!" for you. For you see, we are discussing facts which have long been known. "According to my calculations alone." the author notes, "about 30 publications have been written on this subject during the last 10 years. Many--several times. The total number printed--a little less than a billion. At the same time, of 196 pairs of parents with whom I had the occasion to talk, 177 (90 percent) never read even a line about the 'drunken conception'...."

There it is, the might of the psychological barrier. And at the same time, there it is, an example which proves that anti-alcohol propaganda requires true skill. The content of Z. Balayan's article was retold with the addition of some data (including about Lycurgus and about Ancient Rome) by the Smolensk newspaper RABOCHIY PUT' [Workers' Path] (30 January 1982). But one-fourth less space was allotted to this material than in LITERATURNAYA GAZETA. They placed the heading, "With the Entire World--Against Drunkenness." And the subject withered. If the LITERATURNAYA GAZETA had been transfered from hand to hand and been forwarded by mail this article, I fear, was not even read by all the subscribers.

By the way, it cannot be excluded that I am making a mistake. I belong namely to that social group on which LITERATURNAYA GAZETA is oriented first of all. And RABOCHIY PUT' has its own readership which, possibly, does not like the style of LITERATURNAYA GAZETA. I am ready to make my apologies if I am incorrect in my conclusion. However, the main thought remains as formerly: it is necessary to learn to overcome psychological barriers, not in a haughty manner but unobtrusively, to speak with the reader "as equals," to strive to help him, and to win his confidence. But for this to be possible, journalists and authors should delve into the psychology of social groups which comprise the readership of their newspapers and the audience of television broadcasts.

The Experience of the Struggle: To Convince or Compel?

In 1982, I had the occasion to give two lecture cycles in Kirov. One of them--"The Socio-Psychological Aspects of Control"--was heard by middle-level managers and secretaries of party organizations of a number of enterprises. The second cycle--"Man Among People"--was given for education, public health, and cultural personnel and trade union activists. I asked all my listeners to fill out a questionnaire. Along with other problems, the attitude toward drunkenness was touched upon. The material which was collected--448 filled questionnaires--is curious because it records the opinion of those who constantly work with other people and know their thoughts and feelings. All those who participated in the questioning are, unquestionably, readers of our newspapers and journals.

"IN WHAT PLACE AMONG OUR PROBLEMS WOULD YOU PLACE THE STRUGGLE AGAINST DRUNKENNESS?"--was asked in the questionnaire. A little less than half of those answering indicate: in first place. "This question is the most important, more important than the food problem," wrote a male, 35 years of age, the chief power specialist of one of the plants. Almost as many people allocate "one of the leading places" to this problem. "In second place--after mismanagement" (a woman, 32 years of age, a teacher), "After instilling respect for work--second" (male, 51 years of age, an electrical engineer), "First--peace, second--nutrition, third--fighting drunkenness" (a woman, 54 years of age, worker in an OTK [technical checking department]). Only one-tenth of those who filled out the questionnaire consider this problem "far from the most important."

The second question: "IN THE LAST 1 OR 2 YEARS IN YOUR CITY HOW HAS PUBLIC OPINION CHANGED RELATIVE TO THE CONSUMPTION OF ALCOHOL?"--caused some disagreement. Favorable changes are noted in one-fourth of the answers: "A very decisive struggle against drunkenness is felt at the enterprises" (a woman, 40 years of age, department head). However, many sense differences between word and deed. "Censure intensified, drunkenness increased" (male, 35 years of age, engineer); "Yes, they have begun to say a lot but thus far have not found effective measures to combat drunkenness" (male, 32 years of age, deputy secretary of a party committee). Sixty percent of those who expressed an opinion are inclined toward the thought that the desired changes have not occurred, and some people even note undesirable changes: "A further growth in the use of alcohol is noted, especially among women" (a woman, 43 years of age, economist).

The third question was as specific as possible: "HOW DID THE RECENT INCREASE IN PRICES FOR ALCOHOLIC DRINKS INFLUENCE THE STRUGGLE AGAINST DRUNKENNESS?"

Only 8 percent of those questioned responded favorably concerning this measure. The majority held to another opinion. "They drink as before," "The speculators are becoming rich," "They are drinking alcoholic beverages of poorer quality and are poisoned even more," "They drink in places not allotted for this and they drink moonshine," and "Only the family budget and the children suffer." Twenty-three percent of those questioned point to the negative consequences from raising the prices. Sometimes, dissatisfaction is expressed directly: "It had no influence on drinkers. For people who sometimes take wine for celebrations, it is even vexing" (a woman, 54 years of age, OTK worker).

Of course, the questioning took place in a specific audience. Nevertheless, this clearly expressed requirement to see the result seems to me to be extremely characteristic. Not simply to fight against drunkenness, but to seek more effective forms of fighting.

Judging from the publications, the workers of the press are also feeling this requirement more and more persistently. This makes the second line of the newspaper attack--participation in specific anti-alcoholic actions--more and more noticeable.

SOVETSKAYA ESTONIA (27 April 1982) publishes a letter: "I read an interesting article, 'Best of All, Absolute Sobriety,' in your newspaper. Please excuse me for my abruptness, but I would like to ask: aren't you tired of shuffling paper? Glance around you: wherever you go--wine and vodka bottles in a broad variety. Not everyone can resist such temptation." This abrupt opinion gives the newspaper the opportunity to report unobtrusively that for a period of 10 years the number of stores which sell alcoholic beverages in the city was reduced from 128 to 24 and that "since 1980 the sum obtained from the sale of wine and vodka articles is not included in the plan for basic commodity turnover and this means that it does not influence the bonus of trade workers." The solution of other problems is also reported at the same time: "Eleven narcological offices are now operating in the city, and nine more will be added to them in the immediate future," and collectives where the prevention of drunkenness is well organized are presented as an example. Thus, the reader gets the impression of a broad attack against drunkenness: they took up this cause! In addition, I believe that this publication also assisted in the solution of many practical problems.

And here is another publication of almost the same volume--in the Khabarovsk newspaper TIKHOOKEANSKAYA ZVEZDA [Pacific Star] (1 December 1981). The heading--"Give Battle to Drunkenness!" Correspondence describes thoroughly and even meticulously how a railroad ORS [worker supply department] violates the rules of trade in wine and vodka articles. It turns out that the newspaper had already criticized this organization. Now new facts are presented.

Such publications inspire thoughts. On the one hand, supervision of the execution of laws and moral standards is an important task for the press. Publishing exposing material a second time, the newspaper lets us understand that "we will not leave the matter as it is" and thereby reinforces certain of the reader's ideals. Some violator, perhaps will hasten to turn over a new leaf; who wants to "castigate" him? But there is also another aspect of the problem, of which it is also of some use to ponder. Doesn't the newspaper undermine its own authority in reporting that they do not react to its criticism? Isn't the impression created, namely because of such publications, that we only "began to chatter more" but actually are unable to do anything? And here the Kostroma SEVERNAYA PRAVDA [Northern Pravda] (19 August 1981) recalls the well-known fable, "And Vas'ka listens but eats on..." in connection with such violations of the alcoholic beverage trade regulations.

In my opinion, it would be better, having received and checked certain material, not to release it for publication immediately but first to bring about order and achieve actual changes and only then inform the readers what has been done and what punishment the guilty parties received. The Soviet state can force each salesman, each militiaman, and each of its employees to implement official instructions.

In those places where explanatory work--in particular also by the means of the press--is reinforced by organizational work the public joins in the struggle for a healthy life with enthusiasm. And this can also be sensed from the nature of newspaper statements. More and more often the newspapers are turning from edifying monologues on the harm of alcoholism to a dialogue with the reader. Surveys of letters and reflections on letters strengthen feedback and increase the effectiveness of the influence.

The Tactics of the Struggle: We and They

Using sociological terminology, I will note the important socio-integrative role of the means of mass information and propaganda. With their assistance, people are united more closely and interact more successfully, realizing the community of their goals, thoughts, and ideals. Psychologists stress the importance of the feeling of "we" (the opposite--"they," "you"), which insures the protection of the personality and association. M. I. Kalinin taught the propagandists: do not set yourself off against the audience, do not say "I will teach you," better say: "Let us examine together."

Just how is this watershed noted--between "them" and "we," those who are struggling and those with whom the struggle is being waged--in anti-alcohol propaganda?

From the viewpoint of the attitude toward alcohol the population can arbitrarily be divided approximately as A. S. Makarenko classified pupils: assets--sound liabilities--morass--rabble.

Let me stipulate at once: the word "rabble" may seem out of place to some. I am ready to replace it with any other. But doesn't it seem to you even more out of place, and even insulting, that people who have become inveterate drunkards, lost a human cast of mind, who designate themselves with the nickname "bich" [scourge] (sometimes this is interpreted as "former intelligent person"), and make ends meet by earnings which turned up by chance only because it is usually connected with physical labor, pass as "workers" in accordance with all legal and statistical clauses? Let us call things by their names: these are socially degraded people; it is not the working class, not the peasantry, it is "they" and not "we."

But, of course, it is not a matter of words; the fact is that the four groups which I named actually exist. And most reasonable appears to be the tactic of education in which the assets unite around themselves the first three categories in a single powerful "we"--both the "sound liabilities" (capable of action!) and even the "morass" (not hopeless!) against the fourth group--those who have become inveterate drunkards.

Today, any other tactic for combating drunkenness would prove to be less successful. And we can consider clearly erroneous the extremist position of persons who consider themselves assets of the teetotalers ("we") and as such contrasted themselves to all the other ("they") categories. And not considering the socio-psychological situation which has developed historically, these people put forth demands which are unacceptable for the majority of the adult population: "complete, unconditional, 100-percent temperance." They are trying to change public opinion, tendentiously setting forth facts and exaggerating. Not relying on the possibility to carry the majority along behind them, they demand radical compulsory measures of the state (a "dry law" in its extreme forms and so forth) which are directed against those who think (drink?) differently....

This extreme position has already been subjected to criticism in the press. But even up to now, articles by supporters of such views are encountered.

I believe that these people are absolutely sincere, that they want "what is best." But it is well known that shortcomings are only excessively developed virtues. If the extreme "teetotaler" position received broader propagation in our press, it would bring harm to the cause of combating drunkenness.

Long ago psychologists studied the so-called "boomerang effect"--a situation where as a result of excessive frequency or intensity of certain "convincing reports" a result is obtained which is the opposite of the propagandist's intention. The excessive exaggeration of even a correct proposition can convert it into an absurdity. And when the reader runs into an obvious absurdity--calls to strike the word "wine" from poetry or remove goblets from the stage and from the screen--this causes the desire, even among nondrinkers, to object to such (and it happens, at the same time also to other) demands of anti-alcohol propaganda.

The other extreme is just as harmful. "It makes no difference whether he (a drinker--V.O.) is 15 or 50 years of age," write L. Gudkovich and V. Zhel'vis, "maximum kindness of people who love him--mother, wife, sister--is needed.... Make it seem that for him each return home is a celebration, and he will never go to his friends. Love him as you loved him at one time and it will be repaid with interest. Will be repaid!" (STAVROPOL'SKAYA PRAVDA, 18 June 1982). On the whole, the article is quite good and humane. If only this humaneness had not been transformed by the authors into a call for connivance. If formerly talk concerned the shifting of the boundary between "we" and "they," there are no boundaries at all here. What a universal embrace!

Great danger is concealed in the psychological feature of some people which F. M. Dostoyevskiy designated as "administrative ecstacy." They willingly join in social work because it permits them to feel their own significance. The struggle for temperance also gives people of such a mentality the possibility to be drunk with the authority which has been obtained.

UCHITEL'SKAYA GAZETA [Teachers' Newspaper] mentioned one such case (9 October 1982). An "unhappy" pupil and his parents were summoned to a meeting which was attended by 29 parents and representatives of the school, housing and housing-maintenance office, and the militia. Neither the class leader, nor the chief of the teaching department, nor the parents' committee became acquainted ahead of time with the situation in the family of this teenager. Enthusiasts organized a tribunal concerning his mother. "I still remember this meeting with shame," the author writes. "Adults, without shame, lectured another adult knowing only the external aspect of the matter and not being interested in and not examining the life of the boy and his family." They began to examine--and became ashamed, but only when the teenager quit school.

I should like to conclude the talk about the tactics of the struggle against drunkenness by referring to international experience. The journal UNESCO COURIER (No 2, 1982, p 7) related, in particular, how a burst of uncontrollable enthusiasm engendered by the striving to put an end to drunkenness led to such lamentable results that it compelled the governments of several countries to adopt strict measures which brought the corresponding work into a certain channel. Specialists who are professionally engaged in the study of alcoholism and methods for combating this evil came to replace the amateurs.

Scientific data define more accurately and sometimes even refute those truths on which a person who is guided only by his own notion of the state of things frequently relies in his actions.

Why Is It Bad To Drink?

There is the term "substantiations" in psychology. They connect opinions on various problems which are urgent at a given moment with steadier and deeper ideas about life and about human relations.

A person believes that one can drink. A person believes that one should not drink. In order to support or destroy this conviction of his, one should know well the ideals and values on which he relies when substantiating his attitude toward the consumption of alcohol. For example, in the conduct of preventive work with schoolchildren they often speak of the pernicious effect of alcohol on the health. But here, our study showed that this misses the target. Of 252 Moscow schoolchildren whom we investigated, thoughts of health arise in only 2 in connection with the use of alcohol. And this can be understood! People do not value and, at times, simply do not notice what they have in plenty. It is useless to frighten teenagers, for whom problems of health do not exist, with diseases of the heart and the liver. So is it worth trying when these talks only strengthen in the youngsters a lack of receptivity toward any attempts to divert them from wine?

The journalist, just as the psychologist, must look attentively at the values of various groups of the population and at their dynamics. Then the anti-alcohol propaganda will become both more varied and more effective.

For the present, journalists have found (and are exploiting mercilessly) perhaps, only one indisputable basis: children are a valuable thing. The drunkenness of adults spoils a child. "Cure my daddy" (NA SMENU! [The Replacement], Sverdlovsk, 23 February 1982), "Daddy. I'm afraid of you!" (SOVETSKAYA ESTONIA, Tallinn, 27 April 1982).

The Moscow newspaper LENINSKOYE ZNAMYA (22 August 1982) successfully substantiates the condemnation of drunkenness, connecting the latter with the plundering of public valuables. Under the heading: "From the Judge's Chambers" it tells of how provisions obtained in a criminal manner were sold to get money for drink. During a search a moonshiner was found to have 2,500 kilograms of mixed feed, 120 kilograms of corn, 60 kilograms of wheat, and--an exchange fund: 21 liters of moonshine, 125 liters of home-brew beer, yeast, and other products and equipment by means of which the proprietress made alcoholic drinks and obtained cheap feed for her 5 pigs, cow, ducks, feeling of hatred for moonshiners would arise without which propaganda of this type is transformed into simple instruction.

Here we find one extremely vulnerable place in our anti-alcohol propaganda. Alarm for one's own health, for the well-being of one's close ones, fear of a crime (but again, fear of oneself).... All these are our allies in the struggle against drunkenness. Reliable allies! But you see, all these feelings and incentives do not emerge beyond the limits of individual values. Just why does the press appeal so seldom to civic feelings--to conscience, honor, and morals? But you see, in our anti-alcohol propaganda of the 1930's it was namely social values which occupied the central place ("You don't get to communism with a drunken face!").

Anti-alcohol propaganda cannot fail to appeal to social values and spiritual ideals. It is a deep layer of the social consciousness, basic in the meaning that the substantiations of all deeds are based on it. The strengthening of this layer is the most important task of our ideological work and of organizational work, too.

Tell Us Who Your Friend Is...

In our questioning, which I mentioned cursorily, not only was the attitude toward the use of alcohol disclosed. The attitude of a person toward the world, toward other people, and toward problems of his own life was recorded simultaneously. It turned out that these, it would appear, very different things are closely interconnected. For example, among some schoolgirls hostility toward their own drunkard-father was intertwined with a condemnation of drunkenness.

Such a mechanism comprises one of the important springs of human behavior. Let us assume that I am very fond of one person. But I know that he cannot tolerate alcohol and I, you see, love to drink. Psychological discomfort arises. And the logic of emotions is such that either the hostility toward alcohol arises in me, too, or I stop being attracted to this person or, what also is not excluded, I try to develop alcoholic inclinations in him. In analyzing any episode from your own life, you become convinced of the validity of this psychological law.

I do not know whether it is consciously or intuitively, but I see that the authors of the most successful materials use this property of the mind successfully in their work.

KOMSOMOL'SKAYA PRAVDA (11 November 1981) published a feature story by A. Levina, "Thank You, Doctor." The author succeeded in creating the mode of a most fascinating young person, a promising surgeon. A misfortune occurs--the surgeon is left without hands. The reader cannot fail to sympathize, he already came to love this person. But the hero did not stop being a doctor. He goes to work in a narcological office and gives all the strength of his soul to this office. The propagandist service of the story is that it causes a favorable attitude toward a new type of medical institution. It is well known: a drunkard will hardly read an article about the harm of drunkenness. But here such a story about a person who also suffered greatly, you see, perhaps he will read such a story. And perhaps it will be easier for him to cross the threshold of the narcological office.

And one more article--from the newspaper TRUD (12 October 1982), the heading--not this tedious "School of Temperance," but the interesting "Courage!" "At the price of his own life Private of the Militia Kamil' Bashirov saved people who were standing at a bus stop." The authors convinced me that a remarkable person died through the fault of a violator, and now a strongly negative feeling toward the drunken driver arises in me. Thus an emotional background is created and the soil is prepared for subsequent anti-alcohol influences.

And if a method existed to measure the effectiveness of material, who knows, perhaps the greatest anti-alcohol charge would be discovered in material where there is no discussion in general about drunkenness and drunkards and the words "vodka," "wine," "breaking the law because of intoxication," and so forth are not used. But in return, propagandizing of the socialist way of life is conducted vividly, convincingly, and infectiously--as masters of publicism are able to do.

One can frequently hear: a broad campaign of struggle against drunkenness has been initiated in the newspapers. A campaign, campaign-like--we have a skeptical attitude toward these concepts. And precisely: an analysis of newspaper publications provides grounds for philosophic doubt. Under conditions where it is necessary to publish much, regularly, and systematically, at times criteria are lowered unintentionally. There are not enough masters who master the art of persuasion -- and consequently, apprentices help out whose writings the reader "scans" superficially in the best case. I see loud "banner headlines" that cloak a rather primitive content; I see one author publish one of his articles in four different newspapers.

And at the same time, it is namely the campaign in the anti-alcohol struggle--it is what is necessary for us now most of all. In individual newspapers and in the press as a whole. Precisely worked out, deliberate, planned, and executed in accordance with all laws of propaganda art, relying on a profound knowledge of the laws of perception and the psychology of people.

AYTMATOV PRAISES YEVTUSHENKO'S POETIC CONTRIBUTION

Moscow SOVETSKAYA KUL'TURA in Russian 21 Jul 83 p 6

[Article by Chingiz Aytmatov: "The Sail of Poetry"]

[Excerpts] When a poet reaches the age of 50, that's the time to say something about him, for one mustn't forget that everything has its time. And there wouldn't be anything wrong with that. Harvest follows harvest, then is collected into the granaries. Yevgeniy Yevtushenko, unquestionably, also deserves such an attitude. But the triumph has never gone to the poet's own person, for if he is a true poet, he is first of all a thinker, knowing the value and place of the word, and for a poet, the word, like God, is never to be taken in vain. If he is a true poet, he is a toiler of the spirit, which constantly suffers, responding, like a pain, to everything it comes into contact with, and as the years pass the poet becomes more and more the martyr of other people's troubles and his own doubts. The great poet cannot be spoiled by fortune, and though favored by the public, the great poet cannot exult in his luck even when he is known by millions.

I speak of this because the creative fortune of Yevgeniy Yevtushenko was unique, and the fact that he has managed to cope with this fortune is likewise an example which is unique and instructive in the highest degree.

To Yevtushenko's credit, he was able to control this elusive element, able to distinguish the genuine from the sham, able to preserve the natural health of his extraordinary talent, to take root in tradition while being an innovator and, despite the fact that his boat has not always sailed placidly through the turbulent waves of life, and that he sometimes acted strangely, Yevgeniy Yevtushenko, trying at one and the same time to be both apostle and rebel, dwelling in the most complex contradictions of the spirit, grew into a major figure and became a famous and beloved poet.

That is a fact! It is impossible to deny it. I said grew, meaning by this not only the concept of gradual forward movement--which, incidentally, is not at all the rule in art--I meant one of the most striking features of Yevtushenko's talent--the capacity for uninterrupted personal development, continuous enrichment and mastery of ever new aspects of the human condition, ceaseless renewal of feelings and attitudes toward the world and consequently the content and forms of his work. As an artist, Yevtushenko looks at the world always with the eagerness of a discoverer, as if it were each time new, able to make a precise impression of the complexity of the everyday, and the premonitions of life's future. And here one must recall that literature, in one of its manifestations, is intended to arrest time in its all-obliterating flight.

There is not space in a short essay to go into detail about Yevtushenko's work; that is a special task which cannot be rushed. But there are parameters of poetry which you cannot get around even in this type of piece. Civic spirit and lyricism, or lyricism and civic spirit--it's the same thing--these are the two supporting "structures," the two criteria which always have been and always will be the highest measure of the universality of poetic art, including both personal feelings and the party-mindedness, national character, and epic nature of the work. In this sense, Yevgeniy Yevtushenko is a poet of exceptional capacity and range; it is surprising that his meter encompasses the street and something ineffable, something of celestial mechanics; it is surprising that in his rhymes modern man is presented from the scarcely audible "murmurings of the spirit" to his globally significant space launches, the times when he, like Michelangelo's figures creating the world, seeks out the foundations of life on high and on the earth, when he is a creator and builder, and the times when he is just a tired man. All of this has a place in the master's poetry.

Poetry should be beautiful--that is its distinguishing feature! Poetry should be courageous, like a soldier--that is its strength! Poetry should be musical--that is its fascination, for there is no limit to the revelations of the human spirit... I think of this when I read the great poets, and I am three times happy when I discover for myself the harmonies of my contemporaries--excuse me for saying "for myself," but there is no art which is not "for oneself," for art is effective only when we are with it, only with a living people. And if suddenly everyone turns away, then even Leonardo's Gioconda ceases to be the Gioconda... By this I mean to say that only poetry which is inseparably linked with the life of the people and fixes their gaze upon itself can be true art. This doesn't mean popularity, but something much greater, though less sensational.

Yevtushenko's sensational period is long past, like a dream, although this too is still part of his account, and if you asked me which I read more--the earlier or later Yevtushenko--of course the later, wiser one, the somehow (if you will) more tragic one, but nostalgia for his early things suddenly catches at the throat, moving one to tears. We were all young then, that is probably why. And here before us we see the new Yevtushenko, embodying the experience of the modern artist of the word, a poet in whose work pulses the nerve of our great time, a poet who has arrived at a profound understanding of the world by struggling with himself, by mastering the national experience of culture from Pushkin and Nekrasov to Mayakovskiy and Tvardovskiy, by experiencing world literature and art, and in whom we see the influence, whether direct of indirect, of all the best, the ones who gave us the culture of the 20th century: Picasso, Gor'kiy, Hemingway, Shostakovich, Neruda, Eisenstein, Khikmet, Fellini, Louis Aragon, Thomas Mann. For great art is always art which has significance for all mankind.

And if Thomas Mann was right in saying that literature is humanism plus politics, then the best evidence for it is Soviet literature, and within it, in particular, the work of Yevgeniy Yevtushenko.

In the poet's art our understanding and ideological convictions find reflection, and in the process, what is dear to us is not only that which touches on us directly, our society, our problems and concerns, but also that which is an organic part of the nature of his humanistic work, the fact that he is able to take on himself the troubles of the world and that the antennae of his restless spirit are always on the alert, listening sensitively to the whole world.

This capacity for empathy, this state of spiritual blood transfusion from one man to another, is one of the most important results of the development of the modern consciousness.

The central task of modern art is to awaken in man such feelings and thoughts that the world becomes an object of personal concern for each of us. It is this which holds salvation of the world from impending nuclear catastrophe. In our time art is becoming the medium of the struggle for peace, and many of Yevtushenko's poems are direct appeals to this theme, revealing him to be tribune and publicist.

Yevtushenko is a poet of Russia, and that is his joy.

CHIVILIKHIN WORK LAUDED FOR DEFENDING RUSSIAN PAST, CULTURE

Moscow SOVETSKAYA ROSSIYA in Russian 27 Jul 83 p 4

[Review by L. Volkov of novel-essay by V. Chivilikhin, 'Memory': "Legacies of History"]

> [Text] A readers' correspondence conference on the novel/essay "Memory" [Pamyat'] by V. Chivilikhin.

The ever-growing interest in the historical past is a characteristic of our times. This is evidenced by the instant sellouts of historical publications (literary as well as scientific), by the intense interest by our artists in historical subjects, and by the spread of the movement for the preservation of memorials.

In the pages of the novel-essay by V. Chivilikhin "Memory," "events from days gone by" come alive and are brought closer, different time periods turn out to be connected to one another by the fates of people and nations. Decembrists and devotees of science, heroes of the Kulikovo battle and heroes of the Great Patriotic War are all bound together by the binding network of time that we call memory. Each foregoing generation creates a moral ideal for those who follow by their zeal, heroic struggle and their labor. Whereas according to historians "not one city or one prince gave up" during the grim years of the invasion of the Golden Horde, 700 years later soldiers fought down to their last cartridge and last drop of blood. At the front lines of the Great Patriotic War, those who were fighting remembered the terrible legacy of Aleksandr Nevskiy: "He who comes into Russia with a sword will die by the sword." Thus, the people's memory has become a weapon. The feeling of pride in our predecessors and responsibility to those who left our country to us and entrusted it to our care--this is also a weapon. Only those who are strong in spirit, strong because of memory will be the victors.

Chivilikhin rebuffs attempts of pseudoscientific theoreticians to misinterpret the history of our nation and belittle its contribution to world culture and the evolution of human society. It is well known that Russophobia (i.e., fear and hatred of anything Russian) in the West has become one of the widespread forms of antisovietism and anticommunism. Our ideological enemies would like to depict the Russian people as an aggressive nation of barbarians without their own deeply rooted national culture. It is no accident that every now and then the provocative cry, "The Russians are coming!" emanates from the White House.

The moral position of the author is in his long-standing internationalism and deep respect for the historical fate of every nation and every national culture. Indeed, national culture is the spiritual environment for the development of personality. Just as a man's body cannot exist without air, water and food, his spirit will decay if he is surrounded by trinkets of a mass consumer culture with which the average man in the West so zealously stuffs himself. Indeed, its appearance in our country is not a rarity. We must think about whom we are raising. A patriot? No. He is rather a cosmopolitan Philistine for whom his native land is the place where they pay more and where it is easier to lead a mindless existence.

V. Chivilikhin's book also forces us to think about where the native land starts for us. With every page the author affirms that it begins not "with the spring song of the starling" and not even with "true comrades" but with its centuries-long history, and with man's consciousness of his place in a society of people who are close to him in spirit and in blood.

It seems to me that the lines from the last letter of Vasiliy Makrovich Shukshin could serve as an epigraph to the novel-essay of V. Chivilikhin: "Make sure that everything was not in vain: our songs, our stories, our incredible difficulties in victory, our suffering--do not give all of this away for a pinch of tobacco. We knew how to live. Remember that. Be a man."

ESTONIAN RAYKOM SECRETARY ON PYARNU AGROINDUSTRIAL ASSOCIATION

Tallinn SOVETSKAYA ESTONIYA in Russian 17 Jun 83 p 3

[Interview with V. Udam, first secretary of the Pyarnuskiy Party Raykom, by M. Roginskiy and L. Sher: "Man is the Basis for Everything"]

[Text] At the Plenum of the CPSU Central Committee that just took place a high evaluation was given to the work of several rural party raykoms, including the Pyarnuskiy. It was emphasized that they approached the creation of agro-industrial associations primarily as a problem of establishing new relations among people who are joined together by a single goal, a single interest and responsibility for the final results of common work. The Plenum noted the special concerns manifested by these workers for satisfying the social and cultural demands of the people and the development of democratic fundamentals in the administration of production.

Today the first secretary of the Pyarnuskiy Party Raykom, V. Udam, answers the questions of correspondents of SOVETSKAYA ESTONIYA.

[Question] We have prepared for this meeting for a long time, Val'ter Yaanovich, since the time of the creation of the Pyarnuskiy Rayon agro-industrial association. It was just before that that you were elected first secretary in this rayon and it's no accident that we're connecting these events, is it?

[Answer] (smiling) It's no accident. As you know I worked previously in Vilyandi. A rayon agro-industrial association was created there. Much has been written about its operation. Mainly about its successes. But we sensed a certain narrowness of the structure at that time. And here in Pyarnu we decided to develop an experiment.

[Question] We know what this led to. The annual milk production in the rayon increased from 77,000 to 87,500 tons, and meat--from 16,800 to 18,500 tons . . .

[Answer] The dynamics could have been even more impressive were it not for the extreme conditions in animal husbandry last year.

/Question/ Even at the time of the creation of the Pyarnuskiy RAPO you made what one might call a program statement: the development of agricultural production in the rayon will be provided primarily as a result of bringing up backward farms.

/Answer/ This course is understandable. It is more economical to bring the yields, weight gains and milk production up to the average level than to proceed from high achievements to higher ones. Let us take a statistic now. Four years ago of the 30 farms in the rayon 9 had a level of profitability of less than 7 percent. And today there are none like this, and only 4 have not reached the 25 percent profitability level, that is, as is generally thought, the level that provides for normal reproduction.

/Question/ Hence the question--about the mechanism of the influence of the RAPO . . .

/Answer/ We proceed from this principle: man is the basis for everything. And therefore the key to advancement is the retention of rural personnel. From the centralized fund of the association, which the agricultural administration did not have previously, the first thing was to supplement the material incentive funds of the backward farms. In order to stop the migration of labor force. And the state resources and limits on the construction were redistributed in favor of those same backward farms. Here we took advantage of the association's right to determine the structure of capital investments. Previously 20 percent went for social development, but now about 50 percent does. And if, for example, during the years of the 9th Five-Year Plan they constructed roughly 300 apartments on the farms of the rayon, under the 10th Five-Year Plan they constructed twice as many, and almost 400 of them were constructed in the last 2 years of the five-year plan, that is, after the creation of the RAPO. And under this five-year plan it is intended to put 1,000 apartments into operation.

/Question/ Things have been augmented, redistributed and changed . . . from your words one can conclude that it is enough for the RAPO council to make a business decision and everything will proceed smoothly. But we know, for example, what it means to suggest to interkolkhoz construction workers that they construct not large farms from prefabricated structures, but residential buildings made of brick and other labor-intensive objects . . .

/Answer/ Yes, the plan is indeed more difficult for these objects. But it is not by accident that the interkolkhoz construction organization is a full-fledged member of the association. The builders know that the RAPO will look out for their concerns. Although they do not yet deposit their funds into the centralized RAPO funds, even their bonuses are paid from these funds.

/Question/ We have traveled throughout the rayon many times. We have seen new residential settlements such, for example, as on the Edazi Kolkhoz, secondary schools in Audru and Tystamaa, regional kindergartens and store-dining rooms. And everywhere the achievements have begun precisely with new construction in the social sphere.

Here we should like to refer to the example of the Khalinga kolkhoz, one of our neighbors, which is undoubtedly well known, but we are assuming that it will not be without interest to the readers.

Even when approaching Pyarnu-Yaagupi, where the kolkhoz center is located, attention is drawn to a whole area of multi-apartment buildings and cottages that are already completed or under construction. One can see that in many places the level of comfort is much greater than in new construction projects in cities. We have in mind the spacious kitchens and subsidiary facilities, the quality of finishing, and the sound insullation. And the cottages have everything that a rural resident can need. For example, 2 kitchens--one for the family and one, with an exit to the yard, for the cattle. A boiler room with 2 boilers--for liquid and solid fuel. Cellars for keeping potatoes, vegetables and other supplies. Not to mention the bath, the spacious foyer faced with stone, 4 large rooms, and 2 attic rooms--for a shop and for drying laundry.

Directly from the house is an individual exit into the hothouse which has pipes for central heating. Such a structure costs a good deal--30,000 rubles. But the kolkhoz pays half of this sum, the owner deposits 6,000 rubles immediately, and the remainder is paid off in 20 years. "A reliable anchor for the kolkhoz family. Nothing can entice them to move from here," the secretary of the Khalinga party committee, Yu. Leppik, remarked to us.

But the almost completed technical center of the kolkhoz made perhaps no less of an impression on us than these cottages did.

Here you must imagine an immense building intended for preventive maintenance and repair of the entire complicated fleet of machines and mechanisms of a large farm: in this case approximately 200 tractors, trucks and combines plus plows, seeders and so forth. The building is unique in its own way since the standard design was essentially perfected and expanded not only to increase the production capacity of the center, but also to create conditions for the labor and life of the workers that fully meet the criteria of a modern industrial enterprise. There are no extras like a rose garden, a swimming pool or goldfish, but it shows maximum concern for the human being who is supposed to be working here.

/Answer/ One must say that here we are dealing with a very interesting phenomenon. There is a merging, an interweaving of two infrastructures--production and social. Working conditions in our day are a social factor. And the chairman of Khalinga, Lembit Tamvere, who was previously the head engineer of the neighboring advanced kolkhoz Edazi is well aware of this.

/Question/ The achievements of Khalinga during the 6 years of management by L. Tamvere are beyond doubt. We were given some information: the volume of products sold more than doubled, the milk yield per cow increased from 3,000 to 4,000 kilograms, the net income more than tripled and amounted to 1,144,000 rubles last year, and the profitability reached 44.2 percent. And this is on a kolkhoz which has less than 400 workers. But we also noted a coincidence: the years of the especially intensive advancement of the farm are also the years of the activity of the Pyarnuskiy RAPO.

/Answer/ There is nothing to hide here. The Khalinga, being a backward farm at one time, was one of the first to experience the advantages of the association. Primarily in the form of the same limits and funds. We now collect them from it according to the norms for an advanced farm.

/Question/ It turns out that you have been less concerned about the leading farms than about the backward ones?

/Answer/ That is the crux. They are capable of being concerned about themselves. On a shared basis with other farms of the region, the Khalinga, for example, is constructing a kindergarten, has completed renovation of the hospital and has constructed a music school. With this I want to emphasize that the redistribution of state capital investments has not led to a reduction of construction on strong farms--they have begun to utilize their own funds more extensively for this. And now, in the 5th year of operation of the association, we can say that the majority of the regions have secondary schools, houses of culture or clubs, sports facilities, kindergartens, consumer service centers and medical institutions.

/Question/ There is also another side to the inclination to give priority to regional centers. What about the so-called unpromising settlments? For instance, the former centers of farms that are now consolidated? We have seen what they have become in many rayons of the republic . . .

/Answer/ You have touched on one of our key problems. I will say frankly that it was extremely difficult to make a decision here. The Vilyandi experience helped. It showed that the course toward creating regional centers must be combined with a certain decentralization. For instance, in the vicinity of a large farm there absolutely must be a well-arranged village for animal husbandry workers. Nor can one forget about our land which is broken into small pieces. If, say, on the Don a farm has a dozen or so large areas, here even a small farm has several hundred areas. And this involves daily trips for the people and driving technical equipment several dozens of kilometers...this is why a decision was made to restore small villages and even farmsteads [khutora]. And we began with the schools because it is precisely the consolidation of the schools that led to a situation where dozens of families were taken away from their familiar places.

/Question/ On the Kyul'vaya kolkhoz we discussed the history of the restoration of the school there. Without it a farm that was once prosperous was declared "unpromising" and completely went to pieces. It is good that the people there turned out to stubborn. Officially, the school was closed and the teachers were transfered. But the kolkhoz chairman and the specialists themselves began to conduct lessons and thus retained the farm's personnel. Now the republic Ministry of Education has recognized this school not only de facto, but also de jure.

/Answer/ A far-sighted decision was made on Kyul'vaya, and we have supported it as much as we could. But our support is not always earned. The construction of schools relies on departmental barriers: the Ministry of Education has no funds, and the farms have money, but there are no limits to "pledge" it.

In general it is absolutely clear to us that each farm should have at least an 8-year school. In principle, rural children should receive a secondary education in a rural school. This is the only way it is possible to attract young personnel.

We also think that the children should generally not be transported to school. It is necessary to have more flexible children's day nurseries with 3 classes of primary school.

/Question/ But you have extra room in the kindergartens.

/Answer/ And at the same time there are long waiting lists. This is another consequence of consolidation. Children are transported to a remote kindergarten for the entire week. And not every mother will agree to this. This means that it is necessary to construct kindergarten-day nurseries not for 280 or even for 140 children, but for 50. A good solution, in our opinion, would be to create day groups of children on the basis of the standard apartment. Imagine, 10-12 children and with them 1 pensioner, who, naturally, would receive additional payment.

/Question/ This practice has been adopted, as we know, in Czechoslovakia and the GDR . . .

/Answer/ But our sanitary rules will not permit it. They say there are not enough toilets or washrooms, and the beds will be crowded. But is it better to leave the children without supervision?

/Question/ As we understand it, Val'ter Yaanovich, decentralization and development of the regions not only impedes, but also augment one another.

/Answer/ Undoubtedly. For this same Vilyandi experience has convinced us of a number of important advantages of regionalization. They are manifested, for example, in the sphere of socialist competition. A regional level has appeared. Two or 3 farms that have approximately equal conditions "compete" fairly successfully themselves. And when all 3 were competing with dozens of farms the backward ones simply had no chances of taking prizes and, consequently, they lost their incentives. And the possibilities of mutual supervision and exchange of experience were much more limited. Now a psychological community of interests has appeared in the regions. New traditions have arisen.

The regions have formed new social agencies--councils for coordination of economic and educational work and councils for propaganda. They include managers of farms and party, trade-union and Komsomol workers. Such councils have made it possible to step up educational work in the collectives and to reach each worker. Regions have also combined the forces of propagandists and lecturers, and they have strengthened the material and technical base for party and economic education. In the regions training days are held first on one, and then on another farm. They prepare for them. This is useful for the organizing farm and it also makes it possible to find out what the neighbors are doing and how they are doing it. Or there is the tradition of the going-to-pasture day. This is a business holiday. They discuss tasks and problems of the forthcoming pasture period. Of course there is also the festive part.

In the Toriskiy region, for example, the machine operators gather together before planting. And every 10 days they sum up the results of their competition, and each time they gather the results from another farm. The region council issues bonuses. They may not be very large, but they play a great stimulating role.

/Question/ Well, let us summarize. We know that this year you have "set aim" to obtain from each of 100 hectares of agricultural land 1,060 quintals of milk and 214 quintals of meat. This is a very high goal. And more than 20 million rubles in profit. This means that there will also be considerably greater possibilities of social development. Why do you think that you have managed to succeed where others have not managed yet so far?

/Answer/ You noted this correctly: "so far." Our RAPO is 5 years old, you know. Naturally we have managed to achieve more. And, of course, it is very important that we managed to form the RAPO as an actual collective agency and to select for the association staff enthusiastic people who think the same way. This, incidentally, is not simple. One cannot mechanically transfer the work habits of agricultural administrations to the RAPO. The RAPO is an economic agency. And every worker in it is the master of his section and is obligated to think about how to manage best, least expensively and most effectively.

/Question/ And we assume that a high rating was given to the efforts of the Pyarnuskiy RAPO by those 200 people who last year moved here to live and work on the farms of the rayon.

ARMENIAN SUPREME SOVIET PRESIDIUM DISCUSSES CPSU CC JUNE 1983 PLENUM

GR160830 Yerevan KOMMUNIST in Russian 5 Aug 83 pp 1, 2

[Text] The Armenian SSR Supreme Soviet Presidium has held a routine meeting. The presidium discussed a question about measures for propagating the material of the June 1983 CPSU Central Committee Plenum, the Eighth Session of the USSR Supreme Soviet, and the June 1983 Plenum of the Armenian Communist Party Central Committee. The presidium also discussed the question of verification of the adopted decisions and laws.

It was noted in the adopted resolution of the presidium that the decisions of the June 1983 CPSU Central Committee Plenum, the program suggestions and conclusions contained in the speech of Comrade Y. U. V. Andropov, general secretary of the CPSU Central Committee at the plenum and the results of the Eighth Session of the USSR Supreme Soviet and the June 1983 Plenum of the Armenian Communist Party Central Committee are highly significant to the solution of the political, economic and sociocultural tasks. Wide-ranging tasks were specified in these documents. These tasks will require strengthening ideological and political work in all spheres of life and present the people's deputies council with an action program and an active and purposeful mission to educate workers in the spirit of strengthening discipline and improving organization and responsibility in every sector of work. The presidium envisaged measures aimed at implementing the activity of the people's deputies councils and their executive committees in the spirit of these decisions.

It was recommended that deputies of the Supreme Soviet and the republic's local councils meet periodically with voters to clarify this material and to elucidate matters related to the questions of fulfilling the decisions of the June 1983 CPSU Central Committee Plenum.

The meeting discussed a question about the organization and implementation of proposals and remarks that came up during the discussion of the USSR draft law on labor collectives and improvement of the role of these collectives in managing enterprises, institutions and organizations. The executive committees of the rayon and city people's deputies councils are tasked with reviewing the proposals for questions concerning their spheres and with taking the necessary measures on them. As for remarks and laws falling under the authority of other organs and organizations, these executive committees are to submit proposals.

B. E. Sarkisov, chairman of the Armenian SSR Supreme Soviet Presidium, delivered a speech on these two questions.

The meeting heard a report by F. T. Sarkisyan, chairman of the Armenian SSR Council of Ministers, on the progress made in fulfilling the Armenian SSR Law on the State Plan for Economic and Social Development of the Armenian SSR for 1983. The presidium tasked the rayon and city people's deputies councils with maintaining control over the decisions of the May and November 1983 and June 1983 CPSU Central Committee plenums; with giving guidance on the instructions of Comrade Y. U. V. Andropov, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, and with taking the necessary measures to maintain the fulfillment of the socioeconomic development plans and socialist pledges of the rayons and cities during this year. They were also tasked with devoting special attention to the practical implementation of the Food Program, to the growth of production efficiency, to the rational use of labor and material resources, and to the strengthening of contractual discipline and labor discipline.

The presidium discussed reports by S. S. Melkonyan, chairman of the Aragatsk Rayon People's Deputies Council Executive Committee, and by V. A. Sukiasyna, chairman of the Executive Committee of the Kalininsk People's Deputies Council, on the work for international education of the population and adopted a relevant resolution. Referring to the positive work done in this regard, this resolution stressed the necessity of further implementing this work in light of the decisions and material of the June 1983 CPSU Central Committee Plenum.

The meeting also heard a report by G. R. Barihyan, chairman of the construction and construction materials industry commission of the Armenian SSR Supreme Soviet, on the progress made in fulfilling the plans for the construction and opening of schools, kindergartens, institutes, and public health centers in the republic. The presidium noted that the councils' executive committees together with the ministries of industry and agricultural construction and the subordiante organizations are doing positive work in the field of fulfilling on a timely basis 1983 plans for the construction and opening of the specified projects and drew their attention to the elimination of shortcomings existing in this work.

The presidium heard a report by P. R. Amiryan, chairman of the planning and budget commission of the Armenian SSR Supreme Soviet, on the work of the executive committees of the Kafansk and Kadzharansk city People's Deputies Councils for consistent use of the means allocated to the social development of cities, enterprises and organizations in the cities and adopted a relevant resolution. The resolution noted that the executive committees of the said city councils, in general, had fulfilled the plans for social development and for the consistent use of the means allocated for this purpose. It also approved the recommendations of the commission for further implementing the work for fulfilling the tasks of social development.

CHECHEN-INGUSHETIA TAKES MEASURES AGAINST BAD LEADERS

Moscow PRAVDA in Russian 6 Aug 83 First Edition p 2

[Article by V. Artemenko: "Party Life: Style and Methods of Leadership": "References"]

[Excerpts] Chechen-Ingush ASSR--For several years now, before promoting a particular worker in Chechen-Ingushetia, the party committees have not only asked for references from the primary party organization but have also taken account of opinions of the people working alongside him and the opinion of the collective. This helps them to get to know the person better and to avoid blunders. Every appointment to a post is preceded by painstaking preparatory checking.

In short, much is being done in the republic to improve cadre selection. Yet infringements have not been eradicated either. Recently, for example, A. Yusupov, former second secretary of Nozhay-Yurtovskiy Raykom, and Z. Kadiyev, former deputy chairman of the Rayispolkom, were expelled from the party and convicted for bribetaking. How could such a thing happen? I spoke about this with hero of socialist labor N. Vedernikov, senior operator of Groznyy's V. I. Lenin Oil Refinery and member of the party obkom bureau:

"We always see to it that a leader is versed in production matters and fulfills the plan. Of course, this principle is basically sound. But something else also must not be overlooked--what is the person's moral makeup? I will state frankly that a skilled organizer does not always make a good educator."

Of course, the honored worker is right. It is precisely the moral maturity of certain executives that has been found wanting. There are still many instances in the republic of manifestations of private-ownership mentality, thefts of socialist property, and abuses of official positions. Mutual covering up, bribetaking, and speculation have not been eradicated. It happens that a person tries to get a leading post at all costs. Frequently, he even openly solicits it. This stems, as a rule, not from the interests of the common cause but from personal gain. Approximately 300 such good-for-nothing leaders, who used their official position for mercenary motives, have been dismissed in the republic in the course of 5 years.

The party obkom is increasing its exactingness toward leading cadres. Thus, the leaders of enterprises, ministries, and departments who failed to ensure the fulfillment of the plans and pledges for the first 2 years of the 5-year plan were called to account at one of the bureau sessions. Their work received an impartial evaluation. Construction Administration Chief E. Ismailov and Agriculture Minister S. Kirillov were severely warned. A. Almaskhanov, leader of Chechingavtodor, M. Visaitov, leader of Checheningushvodstroy, and Sh. Matsayev, General Director of the Terek Association, were reprimanded for serious omissions. The obkom bureau obliged G. Yatsenko, Director of Groznefteorgsintez, to ensure the maximum use of capacities.

It was decided at the bureau session to reflect the leaders' unsatisfactory work in their personal files. Here, for example, is what was written about Food Industry Minister T. Bogatyrev: "He has shown himself to be a poor organizer and an unenterprising, incompetent leader, whose words are frequently at variance with his actions. He evaluates his activity uncritically and exercises superficial leadership of subordinate enterprises. He is arrogant in his treatment of subordinates. T. Bogatyrev has repeatedly been reprimanded by obkom secretaries and the bureau for these and other shortcomings, but he has still not drawn conclusions from the criticism...."

It should be noted that, while making a critical assessment of the leaders' work, the obkom bureau also paid very serious attention to the activity of the Republic Council of Ministers and obliged it to give its subdivisions businesslike assistance in organizing rhythmic, stable work. The obkom intends to return soon to the work of laggard ministries and departments. And, if the situation does not change, those workers of the council of ministers who are directly responsible for a given sector will be called strictly to account.

The party obkom and raykoms have analyzed their own work over the past year. Their executives also received corresponding assessments. Reports by farm leaders who fail to fulfill the plans were heard at a session of the party gorkom and raykom bureaus and in primary party organizations. The activity of the leader of every subdivision was evaluated. Measures of party influence were adopted against negligent people.

All this enables party committees to tackle the education of leaders more concretely. The assessments, it must be said, have "worked." And this has a positive impact on matters.

PRAVDA CORRESPONDENT EXAMINES AZERBAIJAN RUSSIAN LANGUAGE TEACHING

PM261426 Moscow PRAVDA in Russian 22 Aug 83 First Edition p 7

[Report by own correspondent L. Tairov: "I Would Love To Learn Russian, but..."]

[Excerpts] Baku—Many Azerbaijanis develop an affection and a love for the Russian language from early childhood. They hear it spoken on the street, at work—whether in the workshop, the oilfield, or the plantation—at home, and in the theater.

Many teachers specializing in Russian have now been trained from the ranks of the republic's Azerbaijanis. Azerbaijan's M. F. Akhundov Russian Language and Literature Pedagogical Institute plays the main role in this. A large detachment of academic cadres and a strong teaching staff have been concentrated there. The institute's alumni are working all over Azerbaijan—in big cities and in tiny and remote villages.

The teaching of Russian to schoolchildren, especially in rural areas, still leaves much to be desired however. And it is not so much the teachers' fault as their misfortune. Those who train local school specialist cadres are most to blame, for nowadays you cannot get by with only the services of specialists trained in vuzes in other republics. The main emphasis should be put on training [a] highly skilled teacher of one's own in the republic's Russian Language Institute.

Several years ago the institute at long last began enrolling mainly ruraly school leavers. We will not reappraise this good intention now, but it offers many advantages. First, youngsters from rural areas invariably return home to the village or rayon (since their families and relatives are there and they are attached to their birthplace, circle of friends and so on). Second, who could be more well liked by children in rural areas than a local who has had a higher education? The institute now sends about 500 of its graduates a year to rural areas.

But if you walk along a corridor or visit the institute's libraries and hostel, it is clear that Russian speech does not predominate. Why not? The answer is painfully simple: after having no local Russian-speaking environment, many schoolchildren in rural areas also, unfortunately, have none in college either.

As a result, a proportion of students have an imperfect command of the spoken language even after several years' study. What can you subsequently expect of such a teacher? And in some cases such a teacher's students can neither speak Russian nor understand spoken Russian even in their 10th year.

The Azerbaijan Communist Party Central Committee recently thoroughly and fully examined the M. I. Akhundov Institute's work. It transpired that the students' results were poor and that academic standards and vocational training were not up to scratch. The blame was laid at the door of the Nasiminskiy party raykom and the Azerbaijan Ministry of Higher and Secondary Specialized Education.

Steps are now being taken at the institute to radically improve the teaching and educational process. In particular, work has begun on creating a genuinely Russian linguistic environment there. A range of issues in helping to raise the standard of vocational training and the teaching and education of specialists is being examined. This includes increasing the enrollment and selection of matriculants and organizing a "foundation" course for those students who require it. More visits are being made to the country's other specialized academic institutions. It is believed that Communists will display great energy and persistence in these useful changes.

It is thought that this policy will enable the Institute to train the fully fledged teaching cadres needed in cities and rural areas and to fully satisfy Azerbaijanis' increasing desire to study the language of internation intercourse and the language of the friendship of our motherland's peoples.

BELORUSSIAN CP CENTRAL COMMITTEE EMPHASIZES RUSSIAN IN SCHOOLS

Minsk SOVETSKAYA BELORUSSIYA in Russian 10 Jul 83 p 1

[Article: "In the Bureau of the Central Committee of the Belorussian Communist Party"]

[Text] At its regular meeting, the Bureau of the BCP Central Committee [Communist Party of Belorussia] considered the question of additional measures for improving the study of the Russian language in the schools of general education and other educational institutions of the republic. Under conditions of the country's unified popular economics makeup, internationalization of all aspects of public life, acceleration of scientific and technical progress, and the mutual enrichment and blossoming of the cultures of the peoples of the USSR, free command of the Russian language in addition to one's native tongue has become a vital necessity and a demand for each inhabitant of the republic.

A decree by the BCP Central Committee and the BSSR Council of Ministers on this question set down measures aimed at increasing the effectiveness of teaching the Russian language in institutions of learning and particularly in schools where Belorussian is the teaching language, at improving the quality of training and retraining of teaching staff, at increasing the output of textbooks, handbooks, dictionaries and literary works to completely satisfy the young people who are aspiring to have a thorough command of the Russian language.

The Bureau of the BCP Central Committee discussed progress of the implementation of the republic's intended comprehensive scientific and technical program, "Quality" [Kachestvo] and determined additional measures for increasing the technical level and quality of products made by republic enterprises. It was noted that in the republic 3,970 types of articles bearing the state emblem of quality are produced.

At the same time, a number of associations and enterprises are not providing the planned production volume growth rate of the higher category of quality. Republic ministries and departments are not exercising effective control over fulfillment of the quotas established by the program. Individual types of products with the state emblem of quality do not conform to the best domestic and worldwide specimens. The technological level of bicycles, cameras, watches and certain other goods for popular consumption is slowly improving. Quotas presented by the BSSR Council of Ministers for further improving the technological level and quality of production during the current 5-year plan were approved.

The question of facts on the diversion of facilities intended for the development of agriculture was discussed at the meeting. The Bureau of the BCP Central Committee made it incumbent upon the ministries and departments of the agroindustrial complex, the party obkoms and obispolkoms to take decisive measures to eliminate disruptions in this regard.

The Bureau of the BCP Central Committee considered other questions of economic and social life and party organizational and ideological work.

UKRAINIAN CP CENTRAL COMMITTEE VIEWS 1983 HARVEST PREPARATIONS

Kiev PRAVDA UKRAINY in Russian 9 Jun 83 p 1

[Report: "In the Central Committee of the Ukrainian Communist Party"]

[Text] Preparations for and the accomplishment of the 1983 harvest were considered in the Ukrainian Communist Party Central Committee, with the participation of leaders of the republic's ministries and departments which are a part of the agroindustrial complex, the Trade-Union Council of the Ukrainian SSR, the Ukrainian Komsomol Central Committee and the mass media and means of propaganda. Participants were briefed by Yu.A. Kolomiyets, candidate member of the Politburo of the Ukrainian Communist Party Central Committee and first deputy chairman of the Ukrainian SSR Council of Ministers.

It was noted during the discussion that this year, 1983, is the first year of practical implementation of the principles worked out at the May 1982 Plenum of the CPSU Central Committee and of the National Food Program approved at the plenum. The end results in agriculture will be determined to a crucial degree by the pace and the quality of the harvesting operations.

In view of the fact that this year's harvest will be started considerably earlier than usual, the following task has been set for us: to assure that all of the harvesting machinery and transport equipment, threshing and storage facilities are readied within the next few days for the mowing, threshing and storage of the early grain crops. The threshing of the grain crops must be accomplished within a period of no more than 10-12 workdays on each farm. Ministry and department leaders A.I. Tovstanovskiy, N.A. Korzh, V.A. Lisitsyn, N.F. Kulinich, I.I. Shmatol'yan, F.P. Golovchenko and V.L. Filonenko, and the chairmen of the oblispolkoms have been charged with personal responsibility for the timely preparation of all the elements in the harvesting process.

Attention was also directed to the need to accelerate the preparation of all the equipment and materials for harvesting the late crops--sugar beets, corn, sunflowers, potatoes and other vegetables and fruits.

It has been recommended that the councils of the agroindustrial associations universally establish the progressive methods and forms of labor organization for the machine operators, the brigade contract, harvesting and transport complexes and groups. They are to assure highly productive operation of the transport equipment, the extensive adoption of centralized shipments of grain, sugar beets and other freight and the delivery of products by tractor-trailer rigs according to fixed timetables.

The importance of preserving all of the crop was especially stressed. Everything raised must be harvested promptly and well. Everything harvested must be preserved reliably and well.

The party obkoms are required to strictly monitor the work of the republic's industrial enterprises to see that each of them scrupulously fulfills its assignments for the shipment of machinery, equipment, spare parts, mineral fertilizers and other materials and supplies for agriculture and seeks possibilities for moving up the target dates for their delivery to the kolkhozes and sovkhozes as much as possible.

The leaders of the ministries and departments concerned and the procurement and processing enterprises are assigned the task of assuring the precise and uninterrupted functioning of elevators, depots and other storage facilities, sugar refineries and canning plants, improving the technology used for storing and processing the products, and expanding the procurement of crops where they are grown.

It was pointed out that we have to improve the use of irrigated land and set up round-the-clock operation of all the sprinkler equipment.

It is very important, the fact was underscored in the discussion, to assure the timely and good preparation of the soil for the winter crops, to stockpile the required quantity of seed for the zoned and projected varieties of winter and spring crops for next year.

It is extremely important this year to provide adequate quantities of coarse and succulent feed for the livestock on each kolkhoz and sovkhoz. It has been recommended that a double-shift operation be set up for the preparation, haylage and silage, and a 24-hour operation for the production of grass meal and cuttings. In all cases, wages are to be based not only on the amount of feed stockpiled, but also on its quality.

The primary party organizations have a special role during the important period. The results of the harvest campaign are the indicator of the aggressiveness of the party organizations, of their ability to conduct mass political work, to assure good organization and discipline, to mobilize the workers to accomplish their tasks. Party, trade union and Komsomol organizations are expected to organize effective socialist competition in the harvest work.

The oblispolkoms and rayispolkoms, the ministries and departments involved and the trade union organs have been charged with providing proper trade, personal and medical services and cultural activities for the workers engaged in harvesting and hauling the crops.

The Central Committee of the Ukrainian Communist Party heard a report from the Vinnitsa Oblast party committee on the organizational and political work being performed by oblast party organizations to mobilize the working collectives to fulfill the plans for 1983 and for the 11th five-year period, and to enhance the effectiveness of industrial production.

A resolution adopted on this matter states that in accordance with decisions coming out of the 26th party congress and the November 1982 Plenum of the CPSU Central Committee, and with instructions from Comrade Yu.V. Andropov, general secretary of the CPSU Central Committee, the party obkom, gorkoms and raykoms and the primary party organizations of enterprises and associations are to focus the efforts of oblast workers upon the fulfillment of plans for economic and social development and for the enhancement of production effectiveness. In certain of the collectives, however, the tasks involved in converting the economy to the intensive path development and the strengthening of planning and labor discipline are not being carried out with adequate persistence.

The party obkom and the oblispolkom are required to take effective steps to make up the lag which has developed for a number of indices in the fulfillment of plans for the five-year period, and to achieve more efficient use of materials and labor. Together with the Ukrainian SSR Gosplan and the Ukrainian SSR Ministry of the Food Industry, they have been assigned the task of determining the causes of the unsatisfactory performance by a number of enterprises in the oblast sugar industry, to achieve better utilization of their capacities and to prepare them promptly and well for processing the 1983 beet crop. Attention was directed to the need to perfect the style and the methods employed for overseeing the economy, to enhance the responsibility of the cadres for their assigned jobs and to increase party influence in the crucial production sectors.

UKRAINE 'ZNANIYE' SOCIETY URGES IMPROVEMENT IN PROPAGANDA WORK

Kiev PRAVDA UKRAINY in Russian 24 Jul 83 p 3

[Article by RATAU: "To Increase the Effectiveness of Lecture Propaganda"]

[Text] The tasks of further improvement of the activities of republic 'Znaniye' Society organizations and the increase in quality and effectiveness of the lecture propaganda in the light of the decisions of the June (1983) Plenum of the CPSU Central Committee were discussed at the joint Plenum of the Board of Administration of the 'Znaniye' Society of the Ukraine SSR and the republic Council of People's Universities, which took place on 22 July in Kiev.

The speaker: chairman of the Board of Administration of the 'Znaniye' Society of the Ukraine SSR, Academician of the Ukraine SSR Academy of Sciences I. I. Lyashko and other speakers noted that now the main task for the society members is to considerably improve the lecture propaganda of the society organizations and the people's universities with the consideration of the major and complex tasks which the party deals with in the process of perfecting developed socialism. The most important purpose of the lecture propaganda is the explanation of the decisions of the June Plenum of the CPSU Central Committee, of its statements and conclusions, presented in the speech of the Secretary General of the CPSU Central Committee Comrade Yu. V. Andropov. The provisions for the high level of propaganda in those areas of knowledge, which form the ideological-political conscience of the people should be made. For the purpose of this goal, communal-political readings on the theoretical and socioeconomic problems of mature socialism are being organized in the oblast centers. So are Days of Science and scientific-theoretical conferences.

The necessity of strengthening the connection between the lecture work and the tasks of labor collectives, and of the utilization of the effective forms of such work for the propaganda of the achievements of science, technology and the experiences of the front-rank workers and initiators was noted. The primary purpose of the lecturers is to increase the propaganda of knowledge which assists in speeding-up scientific-technological progress, and in shifting the economy to the intensive path of development, an increase in labor productivity, rational utilization of production potential, economizing in all types of resources, and improvement in the quality of work. The Kiev city organization of the 'Znaniye' Society can serve as an example. There are more than 450 lecture halls and lecture series in the city; extensive propaganda work is carried out by the scientists of the Ukraine SSR Academy of Sciences institutes, or many VUZes and the branch scientific-research institutes.

The plenum addressed its attention in particuar to the tasks of reinforcement of the work in regard to forming the scientific Marxist-Leninist views of the workers, especially, that of youth, and to the perfecting of labor education. The military-patriotic education of workers and the propaganda of Leninist national policies of the CPSU will be reinforced; the deeper uncovering of the humanistic meaning of internationalism, and the integral unity of national and all-state interests will be carried out.

The important directions of the lecturers' work in the 'Znaniye' Society are the propaganda of the socialist way of life and norms, and the principles of communist morality, and forming the spiritual culture of the Soviet people, their exposure to the better samples of literature and art of socialist realism.

The necessity to increase the effectiveness and aggressiveness in the lecture propaganda was discussed at the plenum. The high mission of the lecturers is, as the speakers noted, to carry to the people the truth about the peace-loving Leninist international policies and the peace initiatives of the CPSU and the Soviet State, which are directed towards arms race control and the fundamental normalization of international relations.

There are more than 11,000 people's universities working in the republic. They have become an important form of the workers' education. Together with this, the speakers noted, the level of the learning process is not high in some universities; the utilization of active learning forms, such as seminars, preparation of reports, and course and diploma projects is weak.

The question of improvement of the lecturers' work to insure the high quality of their presentations and perfecting of the forms of oral propaganda, and the increase in the effectiveness of publications of the society were in the center of attention of the plenum.

The plenum asserted the actions concerning the further perfecting of the activities of the 'Znaniye' Society and the people's universities, and the increase in quality and effectiveness of the lecture propaganda in the light of the decisions of the June (1983) Plenum CC CPSU.

The Head of the Propaganda and Agitation Department of the Central Committee of the Communist Party of Ukraine Comrade L. M. Kravchuk spoke at the plenum.

OBKOM CHIEF SEES TIE BETWEEN LAX LABOR HABITS, VESTIGES OF PAST

[Editorial Report] Moscow EKONOMICHESKAYA GAZETA in Russian No 19, May 1983 (signed to press 3 May 1983) published on page 5 an 1800 word article entitled "The Collective Educates" by I. I. Skiba, first secretary of the Ivano-Frankovsk Obkom. Skiba's article focuses on the importance of the collective in strengthening labor discipline and organization in order to increase national wealth without resorting to capital investment. He writes that party, trade union, and economic management organizations should take a "complex approach" to the problems of educating workers and exert the influence of the collective on their "hearts and minds." Good results have been obtained in some of the oblast's industrial associations, he says, by the "creative" application of the Shchekino method and by the use of moral encouragement in conjunction with material incentives. However, the agricultural sector presents different problems. "A special approach, approrpiate to the specific conditions and social structure" in the Sub-Carpathian region is needed, he says. Skiba explains that the Sub-Carpathian region and surrounding oblasts were in the past characterized by seasonal migrating labor, and that later many had become accumtomed to leading this kind of life. Many people in rural areas, he says, do not work in the public economy and lead an "idle" way of life. Purely administrative measures have not been successful in overcoming this problem. Local party committees have been conducting meetings and discussions with rural inhabitants, particularly the youth, about the necessity of engaging in socially useful work. In some rayons workers and service personnel in rural areas have been drawn into agricultural work, and individual farmers have been drawn into non-agricultural work in order to ensure more regular and useful employment for the inhabitants. In this connection, Skiba comments on what he calls a "very important factor." "Where this work has been conducted weakly, private ownership, religion and other vestiges of the past and national narrowmindedness have been manifesting themselves to a significantly greater degree. This proves once again that the indivdual acquires an effective tempering in citizenship, discipline, and organization more quickly when the collective assumes the role of educator. We do not consider this work completed," Skiba says, "and we will continue it patiently and persistently."

IVANOVO OBKOM CHIEF ON EDUCATING WORKERS

[Editorial Report] Moscow PRAVDA in Russian 15 August 1983 publishes on page 2 a 1,400-word article entitled "Fostering Activity" by V. Klyuyev, first secretary of Ivanovo Obkom. He writes about the educational and ideological work being conducted among the labor force of the oblast in order to strengthen labor discipline and improve production. Klyuyev states that, because light industry prevails in the oblast and women predominate in the labor force, a differentiated approach is being followed in which the special needs of women are taken into account.
